RELIGION.] This is a copious article, but I ſhall confine myſelf to what is moſt neceſſary to be known. Before the Reformation introduced by Luther, the German biſhops were poſſeſſed (as indeed many of them are at this day) of prodigious power and revenues, and were the tyrants of the emperors as well as the people. Their ignorance was only equalled by their ſuperſtition. The Bohemians were the firſt who had an idea of reformation, and made ſo glorious a ſtand for many years againſt the errors of Rome, that they were indulged in the liberty of taking the ſacrament in both kinds, and other freedoms not tolerated in the Romiſh church. This was in a great meaſure owing to the celebrated Engliſhman John Wickliff, who went farther in reforming the real errors of popery than Luther himſelf, though he lived about a century and a half before him. Wickliff was ſeconded by John Huſs, and Jerome of Prague, who, notwithſtanding the emperor's ſafe-conduct, were infamouſly burnt at the council of Conſtance.

The reformation introduced afterwards by Luther *, of which we have ſpoken in the Introduction, though it ſtruck at the chief abuſes of the church of Rome, was thought in ſome points (particularly that of conſubſtantiation, by which the real body of Chriſt, as well as the elements of bread and wine, is ſuppoſed to be taken in the ſacrament) to be imperfect. Calviniſm †, therefore, or the religion of Geneva (as now practiſed in the church of Scotland), was introduced into Germany, and is the religion profeſſed in the territories of the king of Pruſſia, the landgrave of Heſſe, and ſome other princes, who maintain a parity of orders in the church. Some go ſo far as to ſay, that the numbers of Proteſtants and Papiſts in the empire are now almoſt equal. Germany, particularly Moravia and the Palatinate, as alſo Bohemia, is over-run with ſectaries of all kinds; and Jews abound in the empire. At preſent, the modes of worſhip and forms of church government are by the Proteſtant German princes conſidered in a civil rather than a religious light. The Proteſtant clergy are learned and exemplary in their deportment, but the popiſh ignorant and libertine.

ARCHBISHOP AND BISHOP-SEES.] Theſe are differently repreſented by authors, ſome of whom repreſent Vienna, as being a ſuffragan to the archiepiſcopal ſee of Saltzburg, and others as being an archbiſhoprick, but depending immediately upon the pope. The others are the archbiſhop of Mentz, who has under him twelve ſuffragans; but one of them, the biſhop of Bamburg, is ſaid to be exempted from his juriſdiction;—Triers has three ſuffragans;—Cologne has four;—Magdeburg has five;—Saltzburgh has nine, beſides Vienna; and Bremen three.

At different periods ſince the Reformation, it has been found expedient, to ſatisfy the claims of temporal princes, to ſeculariſe the following biſhop-ſees, Bremen, Verden, Madgeburg, Halberſtadt, Minden, Lubec and Oſnaburg, which laſt goes alternately to the houſes of Bavaria and Hanover, and is at preſent held by his Britannic majeſty's ſecond ſon. Such of thoſe ſees as were archbiſhops are now conſidered as duchies, and the biſhopricks, as principalities.

LANGUAGE.] The Teutonic part of the German tongue is an original language, and has no relation to the Celtic. It is called High Dutch, and is the mother

* Born in Saxony, in the year 1483, began to diſpute the doctrines of the Romiſh church 1517, and died, 1546, in the 63d year of his age.

† John Calvin was born in the province of Picardy, in the north of France, anno 1506. Being obliged to fly from that kingdom, he ſettled at Geneva, 1539, where he eſtabliſhed a new form of church diſcipline, which was ſoon after embraced by ſeveral nations and ſtates, who are now denominated Preſbyterians, and from their doctrinal articles, Calviniſts He died at Geneva, in the year 1564; and his writings make nine volumes in folio.

tongue of all Germany; but varies much in its dialect in different provinces. Latin and French are the moſt uſeful languages in Germany, when a traveller is ignorant of High Dutch.

The German Pater Noſter is as follows: *Unſer Vater, der du biſt im himmel, Geheiliget werd dein name. Zukomme dein reich. Dein wille geſchehe, wie im himmel alſo auch auf erden. Unſer tâglich brodt gib uns heute. Und vergib uns unſer ſchuld, als wir vergeben unſern ſchuldigern. Unde fubre uns nicht in verſuchung. Sondern erlôſe uns von dem boſen. Den dein is das reich, und die krafft, and die herrlichkeit, en ewigheit.* Amen.

LEARNING, LEARNED MEN, AND UNIVERSITIES. No country has produced a greater variety of authors than Germany, and there is no where a more general taſte for reading, eſpecially in the proteſtant countries. Printing is encouraged to a fault; almoſt every man of letters is an author; they multiply books without number; thouſands of theſes and diſputations are annually publiſhed; for no man can be a graduate in their univerſities, who has not publiſhed one diſputation at leaſt. In this country there are 36 univerſities, of which 17 are proteſtant, 17 Roman catholic, and two mixed; beſides a vaſt number of colleges, gymnaſia, pedagogies, and Latin ſchools. There are alſo many academies and ſocieties for promoting the ſtudy of natural philoſophy, the belles lettres, antiquities, painting, ſculpture, architecture, &c. as the Imperial Leopoldine academy of the *naturæ curioſi*; the academy of ſciences at Vienna, at Berlin, at Gottingen, at Erfurth, at Leipſic, and Duiſburgh, at Gieſen, and at Hamburg. At Dreſden and Nuremburg are academies for painting; at Berlin a royal military academy; and at Augſburg is the Imperial Franciſcan academy of fine arts; to which we may add the Latin ſociety at Jena. Of the public libraries the moſt celebrated are thoſe of Vienna, Berlin, Halle, Wolfenbuttle, Hanover, Gottingen, Weymar, and Leipſic.

Many of the Germans have greatly diſtinguiſhed themſelves in various branches of learning and ſcience. They have written largely upon the Roman and canon laws. Stahl, Van Swieten, Storck, Hoffman, and Haller, have contributed greatly to the improvement of phyſic; Ravinus and Dillenius, of botany; Heiſter, of anatomy and ſurgery; and Newman, Zimmerman, Pott, and Margraaff, of chemiſtry. In aſtronomy, Kepler deſervedly obtained a great reputation; and Puffendorf is one of the firſt writers on the law of nature and nations, and has alſo merit as an hiſtorian. But at the end of the laſt century, and the beginning of the preſent, Germany, by her divines, and by her religious ſects, was ſo much involved in diſputes about ſyſtematical theology, that few comparatively paid any attention to other parts of learning, or to polite literature. The language alſo, and the ſtyle of writing in German books, which at the time of the Reformation was pure and original, became ridiculous, by a continual intermixture of Latin and French words; and though they were not underſtood by the people in general, were thought to give an air of ſuperiority to the writers, and were therefore much affected. For an opinion prevailed among the learned in Germany, and many have not yet diveſted themſelves of it, that compiling huge volumes, and larding them with numberleſs quotations from all ſorts of authors, and from all languages, was the true teſt of great erudition. Their productions, therefore, became heavy and pedantical, and were in conſequence diſregarded by other nations.

It was about the year 1730, that the proſpects of literature in Germany began to brighten. Leibnitz and Wolfius opened the way to a better philoſophy than had hitherto prevailed. Gottſched, an author and profeſſor at Leipſic, who has been greatly honoured by the late king of Pruſſia, introduced a better taſte of writing, by publiſhing a German grammar, and by inſtituting a literary ſociety, for poliſhing and reſtoring to its purity the German language, and by promoting the ſtudy

of the *belles lettres*. We may conſider this as the epocha, from which the Germans began to write with elegance in their own language, upon learned ſubjects, and to free themſelves, in a conſiderable degree, from that verboſeneſs and pedantry by which they had been characteriſed. About this time ſeveral young men in the univerſity of Leipſic, and other parts of Lower Germany, united in publiſhing ſome periodical works, calculated for the general entertainment of perſons of a literary taſte. Some of theſe gentlemen afterwards became eminent authors; and their works are held in Germany in high eſtimation.

The ſtyle of preaching among the German divines alſo underwent a conſiderable change. They began to tranſlate the beſt Engliſh and French ſermons, particularly thoſe of Tillotſon, Sherlock, Saurin, Bourdaloue, and others They improved by theſe models: and Moſheim, Jeruſalem, Spalding, Zollikofer, and others, have publiſhed ſermons which would do credit to any country; though they ſtill retain too much of that prolixity, for which German divines and commentators have been ſo much cenſured. Nor can it be denied, that great numbers of the German preachers, even in large and opulent towns, are ſtill too much diſtinguiſhed by vulgar language, abſurd opinions, and an inattention to the dictates of reaſon and good ſenſe.

Some of the Engliſh periodical writings, ſuch as the Spectator, Tatler, and Guardian, being tranſlated into the German language, excited great emulation among the writers of that country, and a number of periodical papers appeared, of various merit. One of the firſt and beſt was publiſhed at Hamburg, under the title of "The Pariot;" in which Dr. Thomas, the late biſhop of Saliſbury, was concerned; he being at that time chaplain to the Britiſh factory at Hamburg, and a conſiderable maſter of the German language. The late profeſſor Gellert, who is one of the moſt elegant of the German authors, and one of the moſt eſteemed, has greatly contributed to the improvement of their taſte. His way of writing is particularly adapted to touch the heart, and to inſpire ſentiments of morality and piety. His fables and narrations, written in German verſe, his letters, and his moral romances, are ſo much read in Germany, that even many of the ladies have them almoſt by heart, His comedies are alſo very popular; though they are rather too ſentimental, and better adapted for the cloſet than for the ſtage.

Haller, the famous phyſician, Hagedorn, Uz, Cronegh, Leſſing, Gleim, Gerſtenberger, Kleiſt, Klopſtock Ramler, Zacariae, Wieland, and others, have excelled in poetry. Schlegel, Cronegh, Leſſing, Wieland, and Wieſe, have acquired fame by their dramatic writings. Rabener has, by his ſatirical works, immortalized his name among the Germans: though ſome of his pieces are of too local a nature, and too much confined to German cuſtoms, manners, and characters, to be read with any high degree of pleaſure by perſons of other nations. Geſner, whoſe Idylls and death of Abel have been tranſlated into the Engliſh language, is known among us in a more favourable light.

In chemiſtry, and in medicine, the merit of the Germans is very conſpicuous; and Reimarus, Zimmerman, Abt, Kaeſtner, Segner, Lambert, Mayer, Kruger, and Sulger, have acquired fame by their philoſophical writings. Buſching is an excellent geographical writer; and Maſco, Bunau, Putter, Gatterer, and Gebaur, have excelled in hiſtorical works. But it cannot be denied that the Germans, in their romances, are a century behind us. Moſt of their publications of this kind are imitations of ours, or elſe very dry and unintereſting; which perhaps is owing to education, to falſe delicacy, or to a certain taſte of knight-errantry, which is ſtill predominant among ſome of their novel writers.

In works relating to antiquity, and the arts known among the ancients, the names of Winckelman, Klog, and Leſſing, are familiar with thoſe who are ſkilled in this branch

branch of literature. In eccleſiaſtical, philoſophical, and literary hiſtory, the names of Albertus Fabricius, Moſheim, Semler, and Brucker, are well known among us. Raphelius, Michaelis, and Walch, are famous in ſacred literature. Cellarius, Burman, Taubman, Reiſke, Erneſti, Reimarus, Havercamp, and Hayne, have publiſhed ſome of the beſt editions of the Greek and Latin Claſſics.

It is an unfavourable circumſtance for German literature, that the French language ſhould be ſo faſhionable in the German courts inſtead of the German, and that ſo many of their princes ſhould give it ſo decided a preference. Even the late king of Pruſſia ordered the Philoſophical Tranſactions of his royal ſociety at Berlin, from the begining of its inſtitution, to be publiſhed in the French tongue: by which, ſome of the Germans think, his majeſty has caſt a very undeſerved reproach upon his native language.

With reſpect to the fine arts, the Germans have acquitted themſeles tolerably well. Germany has produced ſome good painters, architects, ſculptors, and engravers. They even pretend to have been the firſt inventors of engraving, etching, and mezzotinto. Printing, if firſt invented in Holland, was ſoon after greatly improved in Germany. The Germans are generally allowed to be the firſt inventors of great guns; as alſo of gunpowder in Europe, about the year 1320. Germany has likewiſe produced ſome excellent muſicians; particularly Handel, Bach, and Heſſe; of whom Handel ſtands at the head. It is acknowledged that he arrived at the ſublime of muſic, but he had not the ſmalleſt idea between muſic and ſentimental expreſſion.

CITIES, TOWNS, FORTS, AND other EDIFICES, PUBLIC AND PRIVATE; with occaſional eſtimates of REVENUES AND POPULATION.

This is a copious head in all countries, but more particularly ſo in Germany, on account of the numerous independent ſtates it contains.

Though Berlin is accounted the capital of all his Pruſſian majeſty's dominions, and exhibits perhaps the moſt illuſtrious example of ſudden improvement that this age can boaſt of; yet, during the late war, it was found a place of no ſtrength, and fell twice, almoſt without reſiſtance, into the hands of the Auſtrians, who, had it not been for the politeneſs of their generals, and the love of the fine arts, which always preſerves mankind from barbarity and inhumanity, would have levelled it to the ground.

Berlin lies on the river Spree, and, beſides a royal palace, has many other ſuperb palaces; it contains fourteen Lutheran, and eleven Calviniſt churches, beſides a popiſh one. Its ſtreets and ſquares are ſpacious, and built in a very regular manner: but the houſes, though neat without, are ill-furniſhed and ill-finiſhed within; and the town is but thinly inhabited. The king's palace here, and that of prince Henry are very magnificent buildings. The opera-houſe is alſo a beautiful ſtructure: and the arſenal, which is handſomely built in the form of a ſquare, contains arms for 200,000 men. There are ſundry manufactures in Berlin, and ſeveral ſchools, libraries, and charitable foundations. The number of its inhabitants, according to Buſching, in 1755, was 126,661, including the garriſon. In the ſame year, and according to the ſame author, there were no fewer than 443 ſilk looms, 149 of half ſilks, 2858 for woollen ſtuffs, 453 for cotton, 248 for linen, 454 for lace work, 39 frames for ſilk-ſtockings, and 310 for worſted ones. They have here manufactures of tapeſtry, gold and ſilver lace, and mirrors.

The electorate of Saxony is, by nature, the richeſt country in Germany, if not in Europe: it eontains 210 walled towns, 61 market-towns, and about 3000 villages, according to the lateſt accounts of the Germans themſelves (to which, however, we are not to give an implicit belief); and the revenue, eſtimating each ſix-dollar at four ſhillings and ſix pence, amounts to 1,350,000l. This ſum is ſo moderate,

moderate, when compared to the richneſs of the ſoil, which, if we are to believe Dr. Buſching, produces even diamonds, and almoſt all the precious ſtones to be found in the Eaſt Indies and elſewhere, and the variety of ſplendid manufactures, that I am apt to believe the Saxon princes to have been the moſt moderate and patriotic of any in Germany.

Dreſden, the elector of Saxony's capital, is remarkable for its palaces, public buildings, churches, and charitable foundations: it is beautifully ſituated on both ſides the Elbe; and is the ſchool of Germany for ſtatuary, painting, enamelling, and carving; not to mention its mirrors, and founderies for bells and cannon, and its foreign commerce carried on by means of the Elbe. The inhabitants of Dreſden, by the lateſt accounts, amount to 110,000.

The city of Leipſic in Upper Saxony, 46 miles diſtant from Dreſden, is ſituated in a pleaſant and fertile plain on the Pleiſſe, and the inhabitants are ſaid to amount to about 40,000. There are alſo large and well-built ſuburbs, with handſome gardens. Between theſe ſuburbs and the town is a fine walk of lime-trees, which was laid out in the year 1702, and encompaſſes the city. Mulberry-trees are alſo planted in the town-ditches; but the fortifications ſeem rather calculated for the uſe of the inhabitants to walk on, than for defence. The ſtreets are clean, commodious, and agreeable, and are lighted in the night with ſeven hundred lamps. They reckon 436 merchants' houſes, and 192 manufactures of different articles, as brocades, paper, cards, &c. Leipſic has long been diſtinguiſhed for the liberty of conſcience allowed here to perſons of different ſentiments in religious matters. Here is an univerſity, which is ſtill very conſiderable, with ſix churches for the Lutherans, theirs being the eſtabliſhed religion, one for the Calviniſts, and a chapel in the caſtle for thoſe of the Romiſh church. The univerſity-library, conſiſts of about 26,000 volumes, 6000 of which are folios. Here is alſo a library for the magiſtrates, which conſiſts of about 36,000 volumes and near 2000 manuſcripts, and contains cabinets of urns, antiques, and medals with many curioſities of art and nature. The exchange is an elegant building.

The city of Hanover, the capital of that electorate, ſtands on the river Leine. and is a neat, thriving, and agreeable city. Its preſent name was given from a ferry over the Leine; the name Hanover, being the ſame with Have-over in Engliſh. It is divided by the river on which it ſtands into two parts, called the Old and New Towns; the former but indifferently built, but the new adorned with handſome ſtructures and continually improving. The ſtreets are ſpacious, regular, and well lighted with lanthorns in the night time. It contains about twelve hundred houſes, among which there is an electoral palace. It carries on ſome manufactures; and in its neighbourhood lie the palace and elegant gardens of Herenhauſen. The dominions of the elector of Hanover contain about ſeven hundred and fifty thouſand people, who live in fifty-eight cities, and ſixty market-towns, beſides villages. The city and ſuburbs of Bremen, belonging by purchaſe to the ſaid elector, contain about fifty thouſand inhabitants, and have a conſiderable trade by the Weſer. The other towns belonging to this electorate have trade and manufactures; but in general, it muſt be remarked, that the electorate has ſuffered greatly by the acceſſion of the Hanover family to the crown of Great Britain. The electoral forces are ſaid to be 24,000, and the revenue to be 70,000l. a conſiderable part of which ariſes from the ſilver mines. I ſhall here juſt mention, on account of its relation to our royal family, the ſeculariſed biſhoprick of Oſnaburg, lying between the rivers Weſer and Ems. The chief city, Oſnaburg, has been long famous all over Europe for the manufacture known by the name of the duchy, and for the manufacture of the beſt Weſtphalia hams. The whole revenue of the biſhoprick amounts to about 30,000l.

Breſlaw, the capital of Sileſia, which formerly belonged to the kingdom of Bohemia, lies on the river Oder, and is a fine city, where all ſects of Chriſtians and Jews are tolerated, but the magiſtracy is Lutheran. Since Sileſia fell under the Pruſſian dominion, its trade is greatly improved, having been very inconſiderable before. The manufactures of Sileſia, which principally centre at Breſlaw, are numerous. The revenue of the whole is ſaid to bring his Pruſſian majeſty in near a million ſterling; but this ſum ſeems to be exaggerated; if, as other authors of good note write, it never brought into the houſe of Auſtria above 500,000l. yearly.

Frankfort on the Maine, ſo called to diſtinguiſh it from another of the ſame name on the Oder, is ſituated in a healthful, fertile, and delightful country, on the river juſt mentioned, by which it is divided into two parts, diſtinguiſhed by the names of Frankfort and Saxenhauſen. The former of theſe, being the largeſt, is divided into twelve wards, and the latter into two; and both were computed to contain about three thouſand houſes. The fortifications, which are both regular and ſolid form a decagon, or figure conſiſting of ten baſtions, faced with hewn ſtone; the ditches are deep, and filled with freſh water; and all the outworks are placed before the gates. The government here, as in Breſlaw, is in the hands of the Lutherans; but there are alſo many Papiſts and Calviniſts. The Papiſts have the great church of St. Bartholemew, with three convents for men, and one for women; but are not allowed to make any proceſſions through the town. The Calviniſts are generally merchants, and very rich; whence it is a common ſaying, that at Franckfort, the Roman Catholics poſſeſs the churches; the Lutherans the dignities; and the Calviniſts, the riches. The laſt, however, are not allowed a church in town, but are obliged to go about three miles off for their worſhip, to a village called *Bokenheim*. The Jews are allowed a ſynagogue, but in other reſpects, are miſerably ill treated. They are confined to a particular diſtrict of the town; and ſubſiſt by ſelling things to ſtrangers. They are greatly deſpiſed, and employed in the meaneſt drudgeries, being likewiſe obliged to wear a piece of yellow cloth, to diſtinguiſh them from the other inhabitants; and notwithſtanding the extreme humiliation to which they are reduced, theſe poor people are often plundered by their German neighbours during the time of an inſurrection. Franckfort is the uſual place of the election and coronation of the kings of the Romans, and is alſo a free and imperial city. It is of a circular form, without any ſuburbs; but the ſtreets are generally narrow, and the houſes are moſtly built of timber and plaiſter, and covered with ſlate; though there are ſome handſome private ſtructures, of a kind of red marble, that deſerve the name of palaces; as the buildings called the Compeſtel and Fronhof, the Trierſhof, the Cullenhof, the German-houſe, an auguſt edifice, ſituated near the the bridge over the Maine, the Heſſe-Darmſtadthof, the palace of the prince de la Tours, and the houſes of the counts of Solms, Schauenhurg, and Schonborn; and there are three principal ſquares.

Frankfort on the Oder, is a city on that river, in the circle of Upper Saxony. It is divided into two parts by the river, which are joined together by a wooden bridge. The houſes are tolerably well built, the ſtreets ſpacious, and they have a pretty good trade in woollen and linen goods, with two fairs a year, which invite a vaſt number of merchants, particularly Jews, from Poland. They have a communication with the Baltic ſea by the river Oder, as well as with the Spree and Havel by canals. Here is an univerſity erected in 1506, by Joachim I. marquis of Brandenburg. There is likewiſe a handſome market-place ſurrounded with very good houſes.

Vienna is the capital of the circle of Auſtria, and being the reſidence of the emperor, is conſidered as the capital of Germany. It is a noble and a ſtrong city, and the princes of the houſe of Auſtria have omitted nothing that could contribute

to its grandeur and riches. Vienna, which takes its name from the little river *Wien*, which runs on the eaſt of the city, and falls into the Danube a little below it, contains an excellent univerſity, a bank, which is in the management of her own magiſtrates, and a court of commerce immediately ſubject to the aulic council. Its religious buildings, with the walks and gardens, occupy a ſixth part of the town; but the ſuburbs are larger than the city. It would be endleſs to enumerate the many palaces of this capital, two of which are imperial; its ſquares, academies, and libraries; and, among others, the fine one of prince Eugene, with his and the imperial cabinets of curioſities. An academy was erected by the emperor Joſeph in 1706, for painting, ſculpture and architecture.

In no place of the world do people live more luxurioufly than at Vienna; and in this they are plentifully ſupplied by the vaſt produce of the neighbouring country. So great is their extravagance, that people of fortune will have 18 or 20 different ſorts of wine; and a note of every ſort which may be called for is laid upon the plates. Notwithſtanding this abundance of wine, it is not reckoned very good, and their beer is ſtill more unpalatable.

Among the rich convents, of this city is one for the Scotch nation, built in honour of their countryman St. Colman, the patron of Auſtria; and one of the ſix gates of this city is called the Scots gate, in remembrance of ſome notable exploit performed there by the troops of that nation. The inhabitants of Vienna, including the ſuburbs, are computed at about three hundred thouſand; and the encouragement given them by their ſovereigns, has rendered this city the rendezvous of foreigners.

After all that has been ſaid of this magnificent city, the moſt candid and ſenſible of thoſe who have viſited it, are far from being laviſh in its praiſe. The ſtreets, except thoſe in the ſuburbs, are narrow and dirty. The houſes of this city are generally of ſtone, five or ſix ſtories high, and flat roofed. They have three or four cellars under one another, with an open ſpace in the middle of each arched roof, for the communication of air, and from the lowermoſt of all, there is a tube to the top, to let in air from the ſtreet. The air, however, is far from being either agreeable or wholeſome; ſo that its bad qualities have even become a proverb, and it is ſaid that Vienna is either windy or poiſonous. Indeed, for the greateſt part of the year, the winds blow ſo hard, that it is troubleſome to walk the ſtreets. A remarkable prerogative of the ſovereign here is, that the ſecond floor of every houſe belongs to him, and is aſſigned to whomſoever he thinks proper; and hence there is no part of Germany, where lodging is ſo dear as at Vienna. An odd cuſtom prevails here of putting iron bars to all their windows up to the very tops of their houſes, which makes them all look like ſo many priſons. The houſes and furniture of the citizens are greatly diſproportioned to the magnificence of the palaces, ſquares, and other public buildings; but above all, the exceſſive impoſts laid by the houſe of Auſtria upon every commodity in its dominions, muſt always keep the manufacturing part of their ſubjects poor. His late imperial majeſty became ſenſible of truths which were plain to all the world but his predeceſſors and their counſellors; he examined things with his own eyes, and deſcended from that haughtineſs of demeanour which rendered the imperial court ſo long diſagreeable, and indeed ridiculous, to the reſt of Europe. In general, the condition of the Auſtrian ſubjects has been greatly meliorated ſince his acceſſion to the imperial throne; great encouragement has been given to the proteſtants, and many of the popiſh religious houſes, convents, &c. were ſuppreſſed by him.

ANTIQUITIES AND CURIOSITIES, NATURAL AND ARTIFICIAL. In deſcribing the mineral and other ſprings, I anticipated great part of this article, which is of itſelf very copious. Every court of Germany produces a cabinet of curioſities,

artificial and natural, ancient and modern. The tun at Heidelburgh holds 800 hogſheads, and is generally full of the beſt Rheniſh wine, from which ſtrangers are ſeldom ſuffered to retire ſober. Vienna itſelf is a curioſity; for here you ſee the greateſt variety of inhabitants that is to be met with any where, as Greeks, Tranſylvanians, Sclavonians, Turks, Tartars, Hungarians, Croats, Germans, Poles, Spaniards, French, and Italians, in their proper habits. The imperial library at Vienna is a great literary rarity, on account of its ancient manuſcripts. It contains upwards of 80,000 volumes, among which are many valuable manuſcripts in Hebrew, Syriac, Arabic, Turkiſh, Armenian, Coptic, and Chineſe; but the antiquity of ſome of them is queſtionable, particularly a New Teſtament in Greek, ſaid to have been written 1500 years ago, in gold letters, upon purple. Here are likewiſe many thouſand Greek, Roman, and Gothic coins and medals; with a vaſt collection of other curioſities in art and nature. The vaſt Gothic palaces, cathedrals, caſtles, and, above all, townhouſes, in Germany, are very curious; they ſtrike the beholder with an idea of rude magnificence; and ſometimes have an effect that is preferable even to Greek architecture. The chief houſes in great cities and villages have the ſame appearance, probably, as they had 400 years ago; and their fortifications generally conſiſt of a brick-wall, trenches filled with water, and baſtions or half-moons.

Next to the lakes and waters, the caves and rocks are the chief natural curioſities of Germany. Mention is made of a cave near Blackenburg, in Hartz-foreſt, of which none have yet found the end, though many have advanced into it for 20 miles; but the moſt remarkable curioſity of that kind is near Hammelen, about 30 miles from Hanover, where at the mouth of a cave ſtands a monument which commemorates the loſs of 130 children, who were there ſwallowed up in 1284. Though this fact is very ſtrongly atteſted, it has been diſputed by ſome critics. Frequent mention is made of two rocks near Blackenburg, exactly repreſenting two monks in their proper habits; and of many ſtones which ſeem to be petrifactions of fiſhes, frogs, trees, and leaves.

COMMERCE AND MANUFACTURES.] Germany has vaſt advantages in point of commerce, from its ſituation in the heart of Europe, and being interſected with great rivers. Its native materials for commerce (beſides the mines and minerals I have already mentioned) are hemp, hops, flax, aniſe, cummin, tobacco, ſaffron, madder, truffles, variety of excellent roots and pot-herbs, and fine fruits, equal to thoſe of France and Italy. Germany exports to other countries corn, tobacco, horſes, lean cattle, butter, cheeſe, honey, wax, wines, linen, and woollen yarn, ribbands, ſilk and cotton ſtuffs, toys, turnery wares, in wood, metals, and ivory, goat-ſkins, wool, timber both for ſhip-building and houſes, cannon, and bullets, bombs, and bomb-ſhells, iron plates and ſtoves, tinned plates, ſteel work, copper, braſs-wire, porcelain the fineſt upon earth, earthen-ware, glaſſes, mirrors, hogs briſtles, mum, beer, tartar, ſmalts, zaffer, Pruſſian blue, printer's ink, and many other articles.

The revocation of the edict of Nantes, by Lewis XIV. which obliged French Proteſtants to ſettle in different parts of Europe, was of infinite ſervice to the German manufactures. They now make velvets, ſilks, ſtuffs of all kinds, fine and coarſe; linen and thread, and every thing neceſſary for wear, to great perfection. The porcelain of Meiſſen, in the electorate of Saxony, and its paintings, exceed that of all the world.

TRADING COMPANIES.] The Aſiatic company of Embden, eſtabliſhed by his late Pruſſian majeſty, was, excluſive of the Hanſeatic league, the only commercial company in Germany; but no ſhips have been ſent out ſince the year 1760. The heavy taxes that his majeſty laid on the company, has been the cauſe of its total

annihilation. In the great cities of Germany very large and extenſive partnerſhips in trade ſubſiſt.

CONSTITUTION AND GOVERNMENT.] Almoſt every prince in Germany (and there are about 300 of them) is arbitrary with regard to the government of his own eſtates; but the whole of them form a great confederacy, governed by political laws, at the head of which is the emperor, and whoſe power in the collective body, or the diet, is not directorial, but executive: but even that gives him vaſt influence. The ſupreme power in Germany is the diet, which is compoſed of the emperor, or, in his abſence, of his commiſſary, and of the three colleges of the empire. The firſt of theſe is the electoral college; the ſecond is the college of princes; and the third, the college of Imperial towns. The empire was hereditary under the race of Charlemagne, but after this, became elective; and, in the beginning, all the princes, nobility, and deputies of cities enjoyed the privilege of voting. In the reign of Henry V. the chief officers of the empire altered the mode of election in their own favour. In the year 1239 the number of electors was reduced to ſeven. One elector was added in 1649, and another in 1692.

The dignity of the empire, though elective, has for ſome centuries belonged to the houſe of Auſtria, as being the moſt powerful of the German princes; but by French management, upon the death of Charles VI. grandfather by the mother's ſide, to the preſent emperor, the elector of Bavaria was choſen to that dignity, and died, as is ſuppoſed, heart-broken, after a ſhort uncomfortable reign.

The election of the emperor is proceeded to after the following manner. The elector of Mentz, before the lapſe of a month after the death of the emperor, ſummons, as great chancellor of the empire, the reſt of the electors, to attend on ſome fixed day within the ſpace of three months from the date of the ſummons. The electors generally ſend their ambaſſadors to the place of election, which is held at Frankfort on the Maine; but ſaving the right of the city of Frankfort, it may be held elſewhere.

When the diet of electors is aſſembled, they proceed to compoſe the capitulation, to which the emperor, when elected, is to ſwear. The capitulation, being adjuſted, the elector of Mentz appoints a day for the election.

When this day arrives, the gates of the city are ſhut, and the keys delivered to the elector of Mentz. The electors or their ambaſſadors, proteſtants excepted, repair in great pomp to maſs, and after its celebration they take a ſolemn oath to chooſe, unbiaſſed, and uninfluenced, the perſon that appears moſt proper for the imperial dignity. After this, they repair to the ſacriſty, where the elector of Mentz, firſt, aſks if there be any impediment known againſt their proceeding at preſent to an election? And next, he obtains a promiſe that the perſon elected by the majority ſhall be received as emperor. The declarations of the electoral ambaſſadors, in reſpect to theſe two points, are recorded by two notaries of the empire. Then all witneſſes withdraw; and the elector of Mentz collecting the ſuffrages, which are *viva voce*, and giving his own laſt, the witneſſes are recalled, and he declares the perſon whom the electors have choſen. But the election is not complete, nor is the new emperor proclaimed, until the capitulation be ſworn to, either by himſelf, or by his ambaſſadors, if he be abſent.

From this time he is ſtyled king of the Romans, until the coronation takes place; which ceremony confers the title of emperor. According to the golden bull (ſo called from the great golden ſeal of the emperor affixed to it; it was publiſhed at the diet of Nuremberg, in the year 1356, and in the reign of Charles IV. It ſettles every thing relating to the election and coronation of the emperor, and the rights of the electors; the Latin original is preſerved at Frankfort on the Maine) it ſhould be celebrated at Aix-la-Chapelle out of reſpect to Charlemagne, who

who reſided there. The coronation is performed by the archbiſhop of Mentz, or elector of Cologne.

For the benefit of the empire, during the reign of an emperor, his preſumptive ſucceſſor may be elected king of the Romans. But this election confers at firſt a mere title; for by an expreſs article in his capitulation, the king of the Romans ſwears not to interfere with the government during the life of the emperor; but, on his deceaſe, the coronation confirms him emperor without a ſecond election.

Should there not be a king of the Romans, and the throne become vacant, the government is adminiſtered by vicars of the empire, who are the electors of Saxony and of Bavaria, who have juriſdiction, the former over the northern, and the lat-latter over the ſouthern circles. By the golden bull it is eſtabliſhed, that all acts of the vicars are valid; but they are all fully confirmed by the emperor; which confirmation, by an article of his capitulation, he is bound to give.

The power of the emperor is regulated by the capitulation he ſigns at his election. He can confer titles and enfranchiſments upon cities and towns; but as emperor he can levy no taxes, nor make war nor peace without the conſent of the diet. When that conſent is obtained, every prince muſt contribute his quota of men and money, as valued in the matriculation roll, though perhaps, as an elector or prince, he may eſpouſe a different ſide from that of the diet. This forms the intricacy of the German conſtitution; for George II. of England was obliged to furniſh his quota againſt the houſe of Auſtria, and alſo againſt the king of Pruſſia, while he was fighting for them both. The emperor claims a precedency for his ambaſſadors in all Chriſtian courts.

The nine electors of the empire have each a particular office in the Imperial court, and they have the ſole election of the emperor. They are in order,

Firſt, The archbiſhop of Mentz, who is high chancellor of the empire when in Germany.

Second, The archbiſhop of Treves, who is high chancellor of France and Arelat, a dignity, which, ſince the ſeparation of France from the empire, is merely nominal.

Third, the archbiſhop of Cologne, who is the ſame in Italy, a mere title alſo.

The king, or rather elector of Bohemia, who is cup-bearer.

The elector of Bavaria, who is grand ſewer, or officer who ſerves out the feaſts.

The elector of Saxony who is great marſhal of the empire.

The elector of Brandenburgh (now king of Pruſſia), who is great chamberlain.

The elector Palatine, who is great ſteward; and,

The elector of Hanover (king of Great Britain), who claims the poſt of arch-treaſurer.

It is neceſſary for the emperor, before he calls a diet, to have the advice of thoſe members.

The eccleſiaſtical princes are as abſolute as the temporal ones in their ſeveral dominions. The chief of theſe, beſides the three eccleſiaſtical electors already mentioned, are the archbiſhop of Saltzburgh, the biſhops of Liege, Munſter, Spire, Worms, Wirtſburg, Straſburg, Oſnaburg, Bamberg, and Paderborn. Beſides theſe, are many other eccleſiaſtical princes. Germany abounds with many abbots and abbeſſes, whoſe juriſdictions are likewiſe abſolute and ſome of them very conſiderable, and all of them are choſen by their ſeveral chapters. The chief of the ſecular princes are the Landgrave of Heſſe, the dukes of Brunſwic, Wirtemberg, Mecklenburgh, Saxe-Gotha, the marquiſſes of Baden and Culmbach, with the princes of Naſſau, Anhalt, Furſtenburg, and many others, who have all high titles, and are ſovereigns in their own dominions. The free cities are likewiſe ſovereign ſtates; thoſe which are Imperial, or compoſe a part of the diet, bear the Imperial eagle

in

in their arms; thoſe which are Hanſe-towns, of which we have ſpoken in the Introduction, have ſtill great privileges and immunities, but they ſubſiſt no longer as a political body.

Having ſpoken of the rights and privileges of the electors, princes, &c. of the empire, it may be neceſſary here to give ſome account of the ban, or proſcription to which the electors and ſtates of the empire are ſubject. The ban is of two ſorts; —the one is privatory; the other proviſionary. The firſt conſiſts in depriving a prince or ſtate of the empire of all their rights, privileges, dignities, &c. &c. The ſecond conſiſts in taking away the actual government of the ſtates, and committing them to the care of ſome other, until it be otherwiſe ordered.

Every ſtate which acts directly or indirectly againſt the fundamental laws of the empire, or the religious peace, is ſubject to the puniſhment of the ban. But this ſentence of proſcription is difficult to obtain, becauſe it is difficult to unite all the orders of the empire in the ſame point of view. The execution of it belongs to the captain of the circle where the prince is ſituated, and every feudal ſtate of the empire is ſubject to it.

The Imperial chamber, and that of Vienna, which is better known by the name of the Aulic council, are the two ſupreme courts for determining the great cauſes of the empire, ariſing between its reſpective members. The Imperial council conſiſts of fifty judges or aſſeſſors. The preſident and four of them are appointed by the emperor, and each of the electors chooſes one, and the other princes and ſtates the reſt. This court is at preſent held at Wetzlar, but formerly it reſided at Spire; and cauſes may be brought before it by appeal. The Aulic council was originally no better than a revenue court of the dominions of the houſe of Auſtria. As that family's power increaſed, the juriſdiction of the Aulic council was extended; and at laſt, to the great diſguſt of the princes of the empire, it uſurped upon the powers of the Imperial chamber, and even of the diet. It conſiſts of a preſident, a vice-chancellor, a vice-preſident, and a certain number of Aulic-counſellors, of whom ſix are proteſtants, beſides other officers, but the emperor in fact is maſter of the court. Theſe courts follow the ancient laws of the empire for their guides, the golden bull, the pacification of Paſſau, and the civil law.

Beſides theſe courts of juſtice, each of the nine circles I have already mentioned has a director to take care of the peace and order of the circle. Theſe directors are commonly as follow. For Weſtphalia, the biſhop of Munſter, or duke of Newburg. For Lower Saxony, the elector of Hanover or Brandenburg. For Upper Saxony, the elector of Saxony. For the Lower Rhine, the archbiſhop of Mentz. For the Upper Rhine, the elector Palatine, or biſhop of Worms. For Franconia, the biſhop of Bamburg, or marquis of Culmbach. For Swabia, the duke of Wirtemberg, or biſhop of Conſtance. For Bavaria, the elector of Bavaria, or archbiſhop of Saltzburg; and for Auſtria, the archduke of Auſtria, his Imperial majeſty.

Upon any great emergency, after the votes of the diet are collected, and ſentence pronounced, the emperor by his prerogative commits the execution of it to a particular prince, whoſe troops live at free quarter upon the eſtate of the delinquent party, and he is obliged to make good all expences: upon the whole, the conſtitution of the Germanic body is of itſelf a ſtudy of no ſmall difficulty. But however plauſibly invented the ſeveral checks upon the imperial power may be, it is certain that the houſe of Auſtria has more than once endangered the liberties of the empire, and that they have been ſaved by France. Lately, indeed, the houſe of Auſtria has met with a powerful oppoſition from the houſe of Brandenburg, in conſequence of the activity and abilities of the late king of Pruſſia. Before I cloſe this head, it may be neceſſary to inform the reader of the meaning of a term which has of late frequently

quently appeared in the German hiſtory, I mean that of the *Pragmatic Sanction*. This is no other than a proviſion made by the emperor Charles VI. for preſerving the indiviſibility of the Auſtrian dominions in the perſon of the next deſcendant of the laſt poſſeſſor, whether male or female. This proviſion has been often diſputed by other branches of the houſe of Auſtria, who have been occaſionally ſupported by France from political views, though the pragmatic ſanction is ſtrongly guaranteed by almoſt all the powers of Europe. The late emperor, elector of Bavaria, and the late king of Poland attempted to overthrow it, as being deſcended from the daughters of the emperor Joſeph, elder brother to Charles VI. It has likewiſe been again and again oppoſed by the court of Spain.

Few of the territories of the German princes are ſo large as to be aſſigned to viceroys, to be oppreſſed and fleeced at pleaſure; nor are they entirely without redreſs when they ſuffer any grievance; they may appeal to the general diet or great council of the empire for relief. The ſubjects of the petty princes in Germany are generally the moſt unhappy: for theſe princes, affecting the grandeur and ſplendor of the more powerful, in the number and appearance of their officers and domeſtics, in their palaces, gardens, pictures, curioſities, guards, bands of muſic, tables, dreſs, and furniture, are obliged to ſupport all this vain pomp and parade at the expence of their vaſſals and dependants. With reſpect to the burghers and peaſants of Germany, the former in many places enjoy great privileges; the latter alſo, in ſome parts, in Franconia, Swabia, and on the Rhine, are generally a free people, or perform only certain ſervices to their ſuperiors, and pay the taxes; whereas in the marquiſate of Brandenburg, Pomerania, Luſatia, Moravia, Bohemia, Auſtria, &c. they may juſtly be denominated ſlaves, though in different degrees.

REVENUES.] The only revenue falling under this head is that of the emperor, who, as ſuch, hath an annual income of about 5 or 6000 pounds ſterling, ariſing from ſome inconſiderable fiefs in the Black Foreſt. The Auſtrian revenues are immenſe, and are thought to amount to 7,000,000l. ſterling, in Germany and Italy; a ſum that goes far in thoſe countries. The father of the late king of Pruſſia, whoſe revenues were not near ſo extenſive as thoſe of his ſon, though he maintained a large army, was ſo good an œconomiſt that he left 7,000,000l. ſterling in his coffers, and ſome have thought that Sileſia alone brings above half a million ſterling every year to this king. To behold the magnificence of many of the German courts, a ſtranger is apt to conceive very high ideas of the incomes of their princes; which is owing to the high price of money in that country, and conſequently the low price of proviſions and manufactures. In fact, though it is plain that ſome princes have much larger revenues than others, yet we cannot ſpeak with any tolerable preciſion on a ſubject of ſuch variety and uncertainty, and which comprehends ſo many independent ſtates.

MILITARY STRENGTH.] During the two laſt wars, very little regard was paid in carrying them on, to the ancient German conſtitutions, the whole management being engroſſed by the head of the houſe of Auſtria. The elector of Mentz keeps what is called a matriculation-book or regiſter, which, among other letters, contains the aſſeſſments of men and money, which every prince and ſtate, who are members of the empire, is to advance when the army of the empire takes the field. The contributions in money are called Roman months, on account of the monthly aſſeſſments paid to the emperors when they viſited Rome. Thoſe aſſeſſments, however, are ſubject to great mutability. It is ſufficient here to ſay, that upon a moderate computation the ſecular princes of the empire can bring to the field 379,000 men, and the eccleſiaſtical 74,500 in all 453,500; of thoſe the emperor, as the head of the houſe of Auſtria, is ſuppoſed to furniſh 90,000.

The

The ſecular princes	379000
The eccleſiaſtical princes	74500
	453500

By this computation, which is far from being exaggerated, it appears that the emperor and empire form the moſt powerful government in Europe; and if the whole force was united, and properly directed, Germany would have nothing to fear from any of its ambitious neighbours. But the different intereſts purſued by the ſeveral princes of Germany, render the power of the emperor of little conſequence, except with regard to his own forces, which are indeed very formidable. The army of the late emperor was computed, in 1775, to amount to two hundred thouſand.

IMPERIAL, ROYAL, AND OTHER TITLES, ARMS, AND ORDERS. The emperor of Germany pretends to be ſucceſſor to the emperors of Rome, and has long, on that account, been admitted to a tacit precedency on all public occaſions among the powers of Europe. Auſtria is but an archdukedom; nor has he, as the

head of that houſe, a vote in the election of emperor, which is limited to Bohemia. Innumerable are the titles of principalities, dukedoms, baronies, and the like, with which he is veſted as archduke. The arms of the empire are a black eagle with two heads, hovering with expanded wings, in a field of gold; and over the heads of the eagle is ſeen the imperial crown. On the breaſt of the eagle is an eſcutcheon quarterly of eight, for Hungary, Naples, Jeruſalem, Arragon, Anjou, Gelders, Brabant, and Barr. It would be as uſeleſs as difficult to enumerate all the different quarterings and armorial bearings of the archducal family. Every elector and indeed every independent prince of any importance in Germany, claims a right of inſtituting orders; but the emperors pretend that they are not admiſſible unleſs confirmed by them. The emperors of Germany, as well as the kings of Spain, confer the order the Golden Fleece, as deſcended from the houſe of Burgundy. The empreſs dowager Eleonora, 1662 and 1666, created two orders of ladies, or female knights; and the late empreſs-queen inſtituted the order of St. Tereſa.

The order of the "*Golden Fleece*" was inſtituted at Bruges, in Flanders, on the 10th of January 1429, by Philip duke of Burgundy, on the day of his marriage with his third wife. It is ſuppoſed that he choſe the badge, it being the chief of the ſtaple manufactures of his country. It at firſt conſiſted of thirty knights, including the ſovereign, who were of the firſt families in the Low Countries, and it ſtill continues to be claſſed with the moſt illuſtrious orders of knighthood in Europe. At preſent there are two branches of it; of the one, the emperor is ſovereign, and the king of Spain of the other; all muſt prove their noble deſcent from the twelfth century. They uſually wear a Golden Fleece, proper, pendent to a broad plain red ribband round their necks; but on days of ceremony, they wear the collar of the order, which is compoſed of double ſteels, interwoven with flint ſtones emitting ſparks of fire, the whole enamelled with their proper colours, at the end of which hangs on the breaſt a Golden Fleece. The fuſils are joined two and two, as if they were double B B's, the cypher of Burgundy, and the flint ſtones the ancient arms of the ſovereigns of that duchy, with their motto, "*Ante ferit quam flamma micet.*" The motto of the order is "*Pretium non vile laborum.*"

The Teutonic order owed its origin to ſome religious Germans in Jeruſalem during the cruſades, who aſſumed the title of "Teutonic knights, or brethren of the hoſpital of our Lady of the Germans at Jeruſalem." They wear a white mantle, and had for their badge a croſs potent, ſable. The original badge aſſigned by the emperor Henry VI. was a croſs, potent, black; John king of Jeruſalem added thereto the croſs double potent, gold; the emperor Frederic II. gave them the imperial eagle, and St. Lewis augmented the badge with ſemé of fleurs-de-lis on a chief, blue. Conrade duke of Swabia invited them into Pruſſia about the year 1230: ſoon after they conquered Pruſſia for themſelves, and became one of the moſt powerful orders in Europe. By the order dividing againſt itſelf, they afterwards loſt their power and poſſeſſions; and Albert marquis of Brandenburg, grand-maſter of the order, on his abjuring popery, abdicated the grand-maſterſhip, ſubdued Pruſſia, and expelled all the papiſts who followed not his example. The order is now divided into two branches: the proteſtant branch, who have a houſe at Utrecht, have been noticed in our account of orders in the Netherlands—that for papiſts, hath a houſe at Mergenheim in Germany, and the members muſt take the oath of celibacy. The enſign worn by this branch is as above deſcribed, worn round the neck pendent to a gold chain.

The time of the inſtitution of the "*Order of the Red Eagle*" is uncertain. The margrave of Bareith is ſovereign thereof, and it is generally beſtowed on general officers. The badge is a golden ſquare medal enamelled white, on which is an eagle diſplayed, red. It is worn pendent to a broad red watered ribband, edged with yellow, and worn ſcarfwiſe. In the year 1690, John George, elector of Saxony, and

Frederick

Frederick III. elector of Brandenburg, on terminating their diſputes, eſtabliſhed the "*Order of Sincerity*," as a confirmation and ſecurity hereafter of their amity. The knights of this order wear a bracelet of gold, on one ſide are the names of the two princes with this device, "*Amitié ſincere*; on the other ſide are two armed hands, joined together, and placed on two ſwords, with two palm branches croſſed, with this motto, "*Unis pour jamais.*"

John George, duke of Saxe Weiſſenfels, inſtituted the "*Order of the Noble Paſſion*," in the year 1704, of which the duke is the ſovereign. The badge is a gold medal enamelled white, on which is a ſtar of eight points, gold, charged with a croſs, red, ſurmounted with an oval, blue, on which are the letters J. G. in a cypher, the whole encircled with theſe words, "*J' aime l'honneur qui vient par la vertu.*" Each knight of the order is to contribute to the maintenance of the maimed or decayed ſoldiers in the ſervice of the ſovereign. In the year 1709, Louiſe Elizabeth, widow of Philip duke of Saxe Merſburg, revived the "*Order of the Death's Head*," firſt inſtituted in 1652, by her father the duke of Wirtemburg. A princeſs of that houſe alone can be ſovereign of it, and none but women of virtue and merit (birth and fortune not regarded) can be received into it. They are to avoid gaming, theatrical amuſements, and luxuries of all kinds. The badge of the order is a death's head enamelled white, ſurmounted with a croſs pattée, black: above the croſs pattée, another croſs compoſed of five jewels, by which it hangs to a black ribband edged with white, and on the ribband theſe words, "*Memento mori*," worn at the breaſt.

The great order of Wirtemburgh, is that "*of the Chace*" inſtituted in the year 1702, by the then duke, and improved in the year 1719. The badge of the order is a golden croſs of eight points enamelled, red, in the ſpaces between the branches of the croſs is an eagle diſplayed, red, and between the points of each traverſe a bugle horn, and in the centre the letter W. and over it a ducal coronet enamelled in proper colours. It is worn pendent to a broad ſcarlet watered ribband, paſſing ſcarfwiſe from the left ſhoulder to the right ſide. On the left ſide of the coat is a ſilver ſtar embroidered, of the ſame figure as the badge, in the middle a green circle with the motto "*Amicitiæ, virtutiſque fœdus.*" The feſtival of this order is on St. Hubert's day, he being the patron of ſportſmen.

In the year 1709, the elector Palatine revived the "*Order of St. Hubert*," firſt inſtituted by a duke of Juliers and Cleves, in memory of a victory gained by him on St. Hubert's day, in 1447. The number of counts and barons of the order, who enjoyed the memorial lands annexed to it, is limited to twelve, but the number of princes and private gentlemen is not fixed. All are to prove the nobility of their deſcent for four generations, and on the day of reception are to pay 100 ducats to the poor. The elector Palatine is grand-maſter of the order. The badge is a croſs of eight points, from the angles iſſue rays, and in the middle of a circle is enamelled the figure of St. Hubert kneeling before a crucifix, placed between the horns of a ſtag ſtanding in a wood, having in the centre this device in the Runic language, "*Conſtans in fidelitate*," on a red ground. All the knights have either military employments or penſions.

The archbiſhop of Saltſburgh in 1701, inſtituted the "*Order of St. Rupert*," in honour of the founder and patron of the ſee he held, and as the apoſtle of his country. It is compoſed of twelve knights, diſtinguiſhed by a chain of gold round the neck to which is pendent the badge, which is a croſs of eight points enamelled blue, and on the centre the image of St. Rupert. As the archbiſhop is the richeſt and moſt powerful prince of Bavaria next to the elector, his order is in good eſteem. In the year 1729, Albert elector of Bavaria inſtituted the order of "*St. George the Defender of the Immaculate Conception.*" The knights of which are obliged to prove their

nobility by father and mother for five generations: the badge they wear is a ſtar of eight points, and on the centre is enamelled the image of St. George on horſeback ſlaying a dragon. The croſs is enamelled blue edged with white. On days of ceremony they wear the badge pendent to a collar compoſed of oblong plates with crowns at each end, and columns ſurmounted with globes, each column ſupported by two lions holding in their exterior paws two ſcymitars, the whole joined together with lozenge chains, enamelled blue with white—on the oblong plates, is this motto, "*In fide, juſtitia, et fortitudine.*"

The "*Order of the Golden Lion,*" was inſtituted by the preſent landgrave of Heſſe Caſſel; is equally a military and civil order, but moſtly conferred on general officers. The badge is an octagonal medal enamelled red, in the centre a lion rampant, gold, ducally crowned; it is pendent to a broad watered crimſon ribband, worn ſcarfwiſe. The preſent landgrave hath alſo inſtituted the military "*Order of Merit,*" the badge of which is a gold croſs of eight points enamelled white, and in the centre is this motto, "*Pro virtute et fidelitate;*" it is worn at the coat buttonhole, pendent to a blue ribband edged with ſilver.

HISTORY.] The manners of the ancient Germans are well deſcribed by the elegant and manly pencil of Tacitus, the Roman hiſtorian. They were a brave and independent race of men, and peculiarly diſtinguiſhed by their love of liberty and arms. They oppoſed the force of the Roman empire, not in its original or its decline, but after it had arrived at maturity, and ſtill continued in its full vigour. The country was divided into a number of principalities, independent of each other, though occaſionally connected by a military union for defending themſelves againſt ſuch enemies as threatened the liberty of them all. At length, the Roman power, directed by policy, prevailed over a great part of Germany, which was reduced to the condition of a province. When the Roman empire was invaded by the northern barbarians, Germany was over-run by the Franks, about the year 480, and a conſiderable part of it long remained in ſubjection to earls and marquiſſes of that nation. In this ſituation Germany continued, notwithſtanding the efforts of particular chieftains, or princes, to reduce the reſt into ſubjection, until the beginning of the ninth century: then it was that Charlemagne, one of thoſe eccentric and ſuperior geniuſſes who ſometimes ſtart up in a barbarous age, firſt extended his military power, and afterwards his civil authority, over the whole of this empire. The poſterity of Charlemagne inherited the empire of Germany until the death of Lewis III. in the year 911, at which time the different princes, aſſuming their original independence, rejected the Carlovinian line, and placed Conrade, duke of Franconia, on the throne. Since this time, Germany has ever been conſidered as an elective monarchy. Princes of different families, according to the prevalence of their intereſt and arms, have mounted the throne. Of theſe, the moſt conſiderable, until the Auſtrian line acquired the imperial power, were the houſes of Saxony, Franconia, and Swabia. The reigns of thoſe emperors contain nothing more remarkable than the conteſts between them and the popes. From hence, in the beginning of the thirteenth century, aroſe the factions of the Guelphs and Gibbelines, of which the former was attached to the pope, and the latter to the emperor; and both, by their violence and inveteracy, tended to diſquiet the empire for ſeveral ages. The emperors too were often at war with the Turks, and the German princes often contended for the ſucceſſion to the imperial dignity. But what more deſerves the attention of a judicious reader than all thoſe noiſy but unintereſting diſputes, is the progreſs of government in Germany, which was in ſome meaſure oppoſite to that of the other kingdoms of Europe. When the empire, raiſed by Charlemagne, fell aſunder, all the different independent princes aſſumed the right of election; and thoſe now diſtinguiſhed by the name of electors, had no peculiar or legal influence in appointing

ing a ſucceſſor to the imperial throne: they were only the officers of the king's houſehold, his ſecretary, his ſteward, chaplain, marſhal, or maſter of his horſe, &c. By degrees, as they lived near the king's perſon, and had, like all the other princes, independent territories belonging to them, they increaſed their influence and authority; and in the reign of Otho III. of the houſe of Saxony, in the year 984, acquired the ſole right of electing the emperor*. Thus while, in other kingdoms of Europe, the dignity of the great lords, who were all originally allodial, or independant barons, was diminiſhed by the power of the king, as in France, and by the influence of the people, as in Great Britain; in Germany, on the other hand, the power of the electors was raiſed upon the ruins of the emperor's ſupremacy, and of the people's rights. Otho I. having, in the year 962, united Italy to the empire of Germany, procured a decree from the clergy that he and his ſucceſſors ſhould have the power of nominating the pope and of granting inveſtitures to biſhops. Henry V. a weak and wicked prince, in the year 1122, ſurrendered up the right of inveſtiture and other powers, to the diſgrace of the imperial dignity: but pope Benedict XII. refuſing abſolution to Lewis V. of Bavaria, in 1338, it was declared in the diet of the empire, that the majority of ſuffrages of the electoral college ſhould confer the empire without the conſent of the pope; that he had no ſuperiority over the emperor, nor any right to reject or to approve of elections. In 1438, Albert II. archduke of Auſtria, was elected emperor, and the imperial dignity continued in the male line of that family for three hundred years. One of his ſucceſſors Maximilian, married the heireſs of Charles duke of Burgundy, whereby Burgundy, and the ſeventeen provinces of the Netherlands, were annexed to the houſe of Auſtria. Charles V. grandſon of Maximilian, and heir to the kingdom of Spain, in right of his mother, was elected emperor in the year 1519. Under him Mexico and Peru were conquered by the Spaniards, and in his reign happened the reformation of religion in ſeveral parts of Germany, which, however, was not confirmed by public authority till the year 1648, by the treaty of Weſtphalia, and in the reign of Ferdinand III. The reign of Charles V. was continually diſturbed by his wars with the German princes and the French king, Francis I. Though ſucceſsful in the beginning of his reign, his good fortune, towards the concluſion of it, began to forſake him; which, with other reaſons, occaſioned his abdication of the crown.

His brother, Ferdinand I. who in 1558, ſucceeded to the throne, proved a moderate prince with regard to religion. He had the addreſs to get his ſon Maximilian declared king of the Romans in his own life-time, and died in 1564. By his laſt will he ordered, that if either his own male iſſue, or that of his brother Charles, ſhould fail, his Auſtrian eſtates ſhould revert to his ſecond daughter Anne, wife of the elector of Bavaria, and her iſſue. I mention this deſtination, as it gave riſe to the late oppoſition made by the houſe of Bavaria to the pragmatic ſanction, in favour of the empreſs-queen of Hungary, on the death of her father Charles VI. The reign of Maximilian II. was diſturbed with internal commotions, and an invaſion from the Turks; but he died in peace in 1576. He was ſucceeded by his ſon Rodolph, who was involved in wars with the Hungarians, and in differences with his brother Matthias, to whom he ceded Hungary and Auſtria in his life-time. He was ſucceeded in the empire by Matthias, under whom the reformers, who went under the names of Lutherans and Calviniſts, were ſo much divided among themſelves, as to threaten the empire with a civil war. The ambition of Matthias, at laſt, reconciled them; but the Bohemians revolted, and threw the imperial com-

* Wiquefort ſaith, that nothing was ſettled as to the number of electors, or the electorial dignity, till Charles IV. who was choſen emperor in 1347, and made that famous conſtitution for the election of emperors, called the *Golden Bull*.

miſſaries,

miſſaries, out of a window at Prague. This gave riſe to a ruinous war, which laſted thirty years. Matthias thought to have exterminated both parties; but they formed a confederacy, called the *Evangelic League*, which was counterbalanced by a *Catholic League*.

Matthias dying in 1618, was ſucceeded by his couſin Ferdinand II. but the Bohemians offered their crown to Frederic the elector Palatine, the moſt powerful proteſtant prince in Germany, and ſon-in-law to his Britannic majeſty, James I. That prince was incautious enough to accept of the crown; but he loſt it, being entirely defeated by the duke of Bavaria and the imperial generals, at the battle of Prague; and he was alſo deprived of his own electorate, the beſt part of which was given to the duke of Bavaria. The proteſtant princes of Germany, however, had among them at this time many able commanders, who were at the head of armies, and continued the war with great firmneſs and intrepidity; among them were the margrave of Baden Dourlach; Chriſtian, duke of Brunſwick, and count Mansfield; the laſt was one of the beſt generals of the age. Chriſtian IV. king of Denmark declared for them; and Richelieu, the French miniſter, was not fond of ſeeing the houſe of Auſtria aggrandiſed. The emperor, on the other hand, had excellent generals; and Chriſtian having put himſelf at the head of the Evangelic league, was defeated by Tilly, an imperialiſt of great reputation in war. Ferdinand ſo groſsly abuſed the advantages obtained over the proteſtants, that they formed a freſh confederacy at Leipſic, of which the celebrated Guſtavus Adolphus, king of Sweden, was the head. I have already deſcribed his amazing victories and progreſs, till he was killed at the battle of Lutzen, in 1632. But the proteſtant cauſe did not die with him. He had brought up a ſet of heroes, ſuch as the duke of Saxe Weimar, Torſtenſon, Banier, and others, who ſhook the Auſtrian power, till under the mediation of Sweden, a general peace was concluded among all the powers at war, at Munſter, in the year 1648; which forms the baſis of the preſent political ſyſtem of Europe.

Ferdinand II. died in 1637, and was ſucceeded by his ſon Ferdinand III. who died in 1657, and was ſucceeded by the emperor Leopold, a ſevere, unamiable, and unfortunate prince. He had two great powers to contend with; France on the one ſide, and the Turks on the other; and was a loſer in his war with both. France took from him Alſace, and many other frontier places of the empire; and the Turks would have taken Vienna, had not the ſiege been raiſed by John Sobieſki, king of Poland. Prince Eugene, of Savoy, was a young adventurer in arms about the year 1697; and being one of the imperial generals, gave the Turks the firſt checks they received in Hungary, and by the peace of Carlowitz in 1699, Tranſylvania was ceded to the emperor. The empire, however, could not have withſtood the power of France, had not the prince of Orange, afterwards king William the IIId. of England, laid the foundation of the grand confederacy againſt the French power, the conſequences of which have been already deſcribed. The Hungarians, ſecretly encouraged by the French, and exaſperated by the unfeeling tyranny of Leopold, were ſtill in arms, under the protection of the Porte, when that prince died in 1705.

He was ſucceeded by his ſon Joſeph, who put the electors of Cologne and Bavaria to the ban of the empire; but being very ill ſerved by prince Lewis of Baden, the general of the empire, the French partly recovered their affairs, notwithſtanding their repeated defeats. The duke of Marlborough, though he obtained very ſplendid victories, had not all the ſucceſs he expected or deſerved. Joſeph himſelf was ſuſpected of a deſign to ſubvert the Germanic liberties; and it was plain by his conduct, that he expected England ſhould take the labouring oar in the war, which was chiefly carried on for his benefit. The Engliſh were diſguſted at his ſlowneſs and ſelfiſhneſs; but he died in 1711, before he had reduced the Hungarians; and leaving no male iſſue, he was ſucceeded in the empire by his brother Charles VI.

whom the allies were endeavouring to place on the throne of Spain, in oppoſition to Philip duke of Anjou, grandſon to Lewis XIV.

When the peace of Utrecht took place in 1713, Charles at firſt made a ſhew as if he would continue the war; but found himſelf unable, now that he was forſaken by the Engliſh. He therefore was obliged to conclude a peace with France at Baden, in 1714, that he might attend the progreſs of the Turks in Hungary, where they received a total defeat, from prince Eugene, at the battle of Peterwaradin. They received another of equal importance from the ſame general in 1717, before Belgrade, which fell into the hands of the Imperialiſts: and next year the peace of Paſſarowitz, between them and the Turks, was concluded. Charles employed every minute of his leiſure in making arrangements for increaſing and preſerving his hereditary dominions in Italy and the Mediterranean. Happily for him, the crown of Britain devolved to the houſe of Hanover; an event which gave him a very deciſive weight in Europe, by the connections of George I. and II. with the empire. Charles was ſenſible of this, and carried matters with ſo high a hand, that about the years 1724 and 1725, a breach enſued between him and George I.; and ſo unſteady was the ſyſtem of affairs all over Europe at that time, that the capital powers often changed their old alliances, and concluded new ones contradictory to their intereſt. Without entering into particulars, it it ſufficient to obſerve, that the ſafety of Hanover, and its aggrandiſement, was the main object of the Britiſh court; as that of the emperor was the eſtabliſhment of the pragmatic ſanction, in favour of his daughter, the late empreſs-queen, he having no male iſſue. Mutual conceſſions upon thoſe great points reſtored a good underſtanding between George II. and the emperor Charles; and the elector of Saxony, allured by the proſpect of gaining the throne of Poland, relinquiſhed the great claims he had upon the Auſtrian ſucceſſion.

The emperor, after this, had very bad ſucceſs in a war he entered into with the Turks, which he had undertaken chiefly to indemnify himſelf for the great ſacrifices he had made in Italy to the princes of the houſe of Bourbon. Prince Eugene was then dead, and he had no general to ſupply his place. The ſyſtem of France under cardinal Fleury, happened at that time to be pacific, and ſhe obtained for him, from the Turks, a better peace than he had reaſon to expect. Charles, to keep the German and other European powers eaſy, had, before his death, given his eldeſt daughter, the late empreſs-queen, in marriage to the duke of Lorrain, a prince who could bring no acceſſion of power to the Auſtrian family. Charles died in 1740.

He was no ſooner in the grave, than all he had ſo long laboured for muſt have been overthrown, had it not been for the firmneſs of George II. The pragmatic ſanction was attacked on all hands. The young king of Pruſſia, with a powerful army entered, and conquered Sileſia, which he ſaid had been wrongfully diſmembered from his family. The king of Spain and the elector of Bavaria ſet up claims directly imcompatible with the pragmatic ſanction, and in this they were joined by France; though all thoſe powers had ſolemnly guaranteed it. The imperial throne, after a conſiderable vacancy, was filled up by the elector of Bavaria, who took the title of Charles VII. in January 1742. The French poured their armies into Bohemia, where they took Prague; and the queen of Hungary, to take off the weight of Pruſſia, was forced to cede to that prince the moſt valuable part of the duchy of Sileſia by a formal treaty.

Her youth, her beauty, and ſufferings, and the noble fortitude with which ſhe bore them, touched the hearts of the Hungarians into whoſe arms ſhe threw herſelf and her little ſon; and though they had been always remarkable for their diſaffection to the houſe of Auſtria, they declared unanimouſly in her favour. Her generals drove the French out of Bohemia; and George II. at the head of an Engliſh and Hanoverian army, gained the battle of Dettingen, in 1743. Charles VII. was

at

at this time miſerable on the imperial throne, and driven out of his electoral dominions, as had been his anceſtor in queen Anne's reign, for ſiding with France, and would have given the queen of Hungary almoſt her own terms; but ſhe haughtily and impoliticly rejected all accommodation, though adviſed to it by his Britannic majeſty, her beſt, and indeed only friend. This obſtinacy gave a colour for the king of Pruſſia to invade Bohemia, under pretence of ſupporting the imperial dignity: but though he took Prague, and ſubdued the greateſt part of the kingdom, he was not ſupported by the French; upon which he abandoned all his conqueſts, and retired to Sileſia. This event confirmed the obſtinacy of the queen of Hungary, who came to an accommodation with the emperor, that ſhe might recover Sileſia. Soon after, his imperial majeſty, in the beginning of the year 1745, died; and the duke of Lorrain, then grand duke of Tuſcany, conſort to her Hungarian majeſty, after ſurmounting ſome difficulties, was choſen emperor, by the title of Francis I.

The bad ſucceſs of the allies againſt the French and Bavarians in the Low Countries, and the loſs of the battle of Fontenoy, retarded the operations of the empreſs-queen againſt his Pruſſian majeſty. The latter beat the emperor's brother, prince Charles of Lorrain, who had before driven the Pruſſians out of Bohemia; and the conduct of the empreſs-queen was ſuch, that his Britannic majeſty thought proper to guarantee to him the poſſeſſion of Sileſia, as ceded by treaty. Soon after, his Pruſſian majeſty pretended that he had diſcovered a ſecret convention which had been entered into between the empreſs-queen, the empreſs of Ruſſia, and the king of Poland, as elector of Saxony, to ſtrip him of his dominions, and to divide them among themſelves. Upon this his Pruſſian majeſty, all of a ſudden, drove the king of Poland out of Saxony, defeated his troops, and took poſſeſſion of Dreſden; which he held till a treaty was made under the mediation of his Britannic majeſty, by which the king of Pruſſia acknowledged the duke of Lorrain, now become great-duke of Tuſcany, for emperor. The war continued in the Low Countries, not only to the diſadvantage, but to the diſcredit of the Auſtrians and Dutch, till it was finiſhed by the treaty of Aix-la-Chapelle, in April 1748. By that treaty, Sileſia was once more guaranteed to the king of Pruſſia. It was not long before that monarch's jealouſies were renewed and verified; and the empreſs of Ruſſia's views falling in with thoſe of the empreſs-queen and the king of Poland, who were unnaturally ſupported by France in their new ſchemes, a freſh war was kindled in the empire, in the year 1756. The king of Pruſſia declared againſt the admiſſion of the Ruſſians into Germany, and his Britannic majeſty againſt that of the French. Upon theſe principles all former differences between thoſe monarchs were forgotten, and the Britiſh parliament agreed to pay an annual ſubſidy of 670,000l. to his Pruſſian majeſty during the continuance of the war, the flames of which were now re-kindled with more fury than ever.

His Pruſſian majeſty once more broke into Saxony, defeated the Imperial general Brown at the battle of Lowoſitz, forced the Saxons to lay down their arms, though almoſt impregnably fortified at Pirna, and the elector of Saxony again fled to his regal dominions in Poland. After this, his Pruſſian majeſty was put to the ban of the empire; and the French poured, by one quarter, their armies, as the Ruſſians did by another, into the empire. The conduct of his Pruſſian majeſty on this occaſion is the moſt amazing that is to be met with in hiſtory. He broke once more into Bohemia with inconceivable rapidity, and defeated an army of 100,000 Auſtrians, under general Brown, who was killed, as the brave maſhal Schwerin was on the ſide of the Pruſſians. He then beſieged Prague, and plied it with a moſt tremendous artillery; but juſt as he was beginning to imagine that his troops were invincible, they were defeated at Colin, by the Auſtrian general Daun, obliged to raiſe

the ſiege, and to fall back upon Eiſenach. The operations of the war now multiplied every day. The Imperialiſts, under count Daun, were formed into excellent troops: but they were beaten at the battle of Liſſa, and the Pruſſians took Breſlau, and obtained many other great advantages. The Ruſſians, after entering Germany, gave a new turn to the aſpect of the war; and the cautious, yet enterpriſing genius of count Daun, laid his Pruſſian majeſty under infinite difficulties, notwithſtanding all his amazing victories. At firſt he defeated the Ruſſians at Zorndorff; but an attack made upon his army, in the night-time, by count Daun, at Hockkirchen, had almoſt proved fatal to his affairs, though he retrieved them with admirable preſence of mind. He was obliged, however, to ſacrifice Saxony, for the ſafety of Sileſia; and it has been obſerved, that few periods of hiſtory afford ſuch room for reflection as this campaign did; ſix ſieges were raiſed almoſt at the ſame time; that of Colberg, by the Ruſſians; that of Leipſic, by the duke of Deux-Ponts, who commanded the army of the empire; that of Dreſden, by Daun; and thoſe of Neiſs, Coſel, and Torgau, by the Auſtrians.

Brevity obliges me to omit many capital ſcenes which paſſed at the ſame time in Germany, between the French, who were driven out of Hanover, and the Engliſh, or their allies. The operations on both ſides were of little importance to hiſtory, becauſe nothing was done that was deciſive, though extremely burdenſome and bloody to Great Britain. Great was the ingratitude of the empreſs-queen to his Britannic majeſty, and his allies, who were now daily threatened with the ban of the empire. The Ruſſians had taken poſſeſſion of all the kingdom of Pruſſia, and laid ſiege to Colberg, the only port of his Pruſſian majeſty in the Baltic. Till then, he had entertained too mean an opinion of the Ruſſians; but he ſoon found them by far the moſt formidable enemies he had, advancing under count Soltikoff, in a body of 100,000 men, to Sileſia. In this diſtreſs he acted with a courage and reſolution that bordered upon deſpair; but was, at laſt, totally defeated by the Ruſſians, with the loſs of 20,000 of his beſt men, in a battle near Frankfort. He became now the tennis-ball of fortune. Succeeding defeats ſeemed to announce his ruin, and all avenues towards peace were ſhut up. He had loſt, ſince the firſt of October 1756, the great marſhal Keith, and forty brave generals, beſides thoſe who were wounded and made priſoners. At Landſhut the imperial general Laudohn defeated his army under Fouquet, on which he had great dependence, and thereby opened to the Auſtrians a ready gate into Sileſia. None but his Pruſſian majeſty would have thought of continuing the war under ſuch repeated loſſes; but every defeat he received ſeemed to give him freſh ſpirits. It is not perhaps very eaſy to account for the inactivity of his enemies after his defeat near Frankfort, but by the jealouſy which the Imperial generals entertained of their Ruſſian allies. They had taken Berlin, and laid the inhabitants under pecuniary contribution; but towards the end of the campaign, he defeated the Imperialiſts in the battle of Torgau, in which count Daun was wounded. This was the beſt fought action the king of Pruſſia had ever been engaged in, but it coſt him 10,000 of his beſt troops, and was attended with no great conſequences in his favour. New reinforcements which arrived every day from Ruſſia, the taking of Colberg by the Ruſſians, and of Schweidnitz by the Auſtrians, ſeemed almoſt to have completed his ruin, when his moſt formidable enemy, the empreſs of Ruſſia, died, January 5, 1762; George II. had died on the 25th of October, 1760.

The deaths of thoſe illuſtrious perſonages were followed by great conſequences. The Britiſh miniſtry of George III. were ſolicitous to put an end to the war, and the new emperor of Ruſſia recalled his armies. His Pruſſian majeſty was, notwithſtanding, ſo very much reduced by his loſſes, that the empreſs-qneen, probably, would have completed his deſtruction, had it not been for the backwardneſs of the other German princes to annihilate the houſe of Brandenburgh. At firſt the empreſs-queen rejected all terms propoſed to her, and ordered 30,000 men to be added to

her armies. The viſible unwillingneſs of her generals to execute her orders, and the ſucceſſes obtained by his Pruſſian majeſty, at laſt prevailed upon her to agree to an armiſtice, which was ſoon followed by the treaty of Hubertſburg, February 15, 1763, which again ſecured to his Pruſſian majeſty the poſſeſſion of Sileſia.

Upon the death of the emperor, her huſband, in 1765, her ſon Joſeph, who had been crowned king of the Romans in 1764, ſucceeded him in the empire. His imperial majeſty, ſoon after his acceſſion, diſcovered great talents for government, and for partitioning other countries. He joined in the diſmemberment of Poland, with Ruſſia and Pruſſia. He paid a viſit incognito, and with moderate attendants, to Rome and the principal courts of Italy; and had a perſonal interview with his Pruſſian majeſty, though this did not prevent hoſtilities from being commenced between Auſtria and Pruſſia, on account of the ſucceſſion to the electorate of Bavaria. The Auſtrian claims on this occaſion were very unjuſt, but in the ſupport of them, while the conteſt continued, the emperor diſplayed great military ſkill. Though vaſt armies were brought into the field on both ſides, no action happened of much importance, and an accommodation at length took place. After that event, the emperor was much better employed than in the operations of war, excepting his demand, on the Dutch for the free navigation of the Scheld, &c. contrary to the ſtipulation of former treaties; in the obſervance of which, to ſupport his anceſtors, the Dutch as well as Engliſh ſpent many millions of money, and ſacrificed thouſands of ſouls. He endeavoured, however, to promote the happineſs of his ſubjects, granted a moſt liberal religious toleration, ſuppreſſed moſt of the religious orders of both ſexes, as utterly uſeleſs and even pernicious to ſociety; and in 1783, by an edict, he aboliſhed the remains of ſervitude and villanage, and fixed alſo the fees of the lawyers at a moderate amount, granting them a penſion in lieu. He alſo aboliſhed the uſe of torture in his hereditary dominions, and removed many of the grievances under which the peaſants and common people laboured. He was a prince of a philoſophic turn of mind, and mixed with his ſubjects with an eaſe and affability that are very uncommon in perſons of his rank. He loved the converſation of ingenious men, and appeared ſolicitous to cultivate that extenſive knowledge, which enobles thoſe who adorn the elevated ſtation to which he had been raiſed.

Notwithſtanding this, he was far from fortunate. He pronounced his own ſatire in the epitaph which he wrote for himſelf— "Here lies Joſeph II. unhappy in all his undertakings." Unhappy, becauſe unſucceſsful, and unſucceſsful becauſe his imagination outran his judgement. To render religion independent, ſcience free, laws and legiſlation more perfect and vigorous, were great and laudable objects—but he failed in all. And the moment before his death, he endured every aggravation of misfortune: Brabant torn from him, Hungary bearing off in noiſy triumph its crown from his palace, while he lay ſuffering the pangs of death; his family connection with Ruſſia cut aſunder, and the views of ambition cloſed by the death of the princeſs Elizabeth; his own death, too, pronounced inevitable to him before he could view the ſucceſs of his arms at Belgrade, and the ſingle ſucceſs of his life. Again, that ſucceſs thrown into ſuſpence, and rendered doubtful before his expiring eyes, by the terrible news of the danger and expected defeat of Coburg. Thus, did he drink the cup of bitterneſs to the very dregs.

Joſeph Benedict Auguſtus, late emperor of Germany, was born in 1741, crowned king of the Romans in 1764, ſucceeded his father as emperor in 1765, married the ſame year the princeſs Joſephina Maria, of Bavaria, who died in 1767. He had by his firſt wife (the princeſs of Parma) a daughter, Thereſa Elizabeth, born in 1762, but ſhe is dead, and the emperor had no iſſue by his laſt conſort. He died at Vienna, on Feb. 20, 1790, in the forty-ninth year of his age, in the twenty-ſixth of his reign, as emperor of the Romans; and the tenth as king of Hungary and Bohemia. He is ſucceeded by his brother Leopold Joſeph, grand duke of Tuſcany.

THE KINGDOM OF PRUSSIA, FORMERLY DUCAL PRUSSIA.

SITUATION, BOUNDARIES, AND EXTENT. } THIS country is bounded to the North by part of Samogitia; to the ſouth, by Poland Proper and Maſovia; to the eaſt, by part of Lithuania; and to the Weſt, by Poliſh Pruſſia and the Baltic. Its greateſt length is about 160 miles, and breadth about 112.

NAME, AIR, SOIL, PRODUCE, AND RIVERS. } The name of Pruſſia is probably derived from the Boruſſi, the ancient inhabitants of the country. The air, upon the whole, is wholeſome, and the ſoil fruitful in corn and other commodities, and affords plenty of pit-coal and fuel. Its animal productions are horſes, ſheep, deer and game, wild boars and foxes. Its rivers and lakes are well ſtored with fiſhes; and amber, which is thought to be formed of an oil coagulated with vitriol, is found on its coaſt towards the Baltic. The woods furniſh the inhabitants with wax, honey, and pitch, beſides quantities of pot-aſhes. The rivers here ſometimes do damage by inundations; and the principal are, the Viſtula, the Pregel, the Memel or Mammel, the Paſſarge, and the Elbe.

POPULATION, INHABITANTS, MANNERS, CUSTOMS, AND DIVERSIONS. } As Pruſſia, ſince the beginning of the preſent century, has become a moſt reſpectable power upon the continent of Europe, I ſhall, for the information of my readers, deviate from my uſual plan, that I may bring before their eyes the whole of his Pruſſian majeſty's territories, which lie ſcattered in other diviſions of Germany, Poland, Switzerland, and the northern kingdoms, with their names; all which they will find in the following table.

Proteſtants.	Countries Names.	Square Miles.	Length.	Breadth.	Chief Cities.	
Poland.	Ducal Pruſſia	9,950	260	112	KONINGSBERG	54-43 N. Lat.
	Royal Pruſſia	6,400	118	104	Elbing	21-35 E. Lon.
Up. Saxony.	Brandenburg	10,910	215	110	Berlin	
	Pomerania	4,820	150	63	Camin	
	Swediſh Pomerania	2,991	90	48	Stetin	
Lo. Saxony.	Magdeburg	1,535	63	50	Magdeburg	
	Halberſtadt	450	42	17	Halberſtadt	
Bohemia.	Glatz	550	38	23	Glatz	
	Sileſia	10,000	196	92		
Weſtphalia.	Minden.	595	42	26	Minden.	
	Ravenſburg	525	38	34	Ravenſburg	
	Lingen	120	15	11	Lingen	
	Cleves	630	43	21	Cleves	
	Meurs	35	10	6	Meurs	
	Mark	980	52	43	Ham	
	Eaſt Frieſland	690	46	32	Emden	
	Lippe	25	8	4	Lipſtadt	
	Gulich	528	44	24	Gulich	
	Tecklenburg	36	12	6	Tecklenburg	
Netherlands.	Gelder	360	34	23	Gelders	
Switzerland.	Neufchatel.	320	32	20	Neufchatel	
	Total—	51,281				

Beſides a great part of Sileſia, which the late king of Pruſſia, under various pretences, hath wreſted from Auſtria; availing himſelf alſo of the internal troubles in Poland, he, by virtue of no other right than that which a powerful army confers on every tyrant, ſeized upon Thorn, with the countries on the Viſtula, the Neiſter, and other territories contiguous to his own dominions, cloſe to the walls of Dantzie. Theſe acquiſitions may be traced in the map.

I ſhall here confine myſelf to Pruſſia as a kingdom, becauſe his Pruſſian majeſty's other dominions fall under the deſcription of the countries where they lie.

The inhabitants of this kingdom alone, were, by Dr. Buſching, computed to amount to 635,998 perſons capable of bearing arms: and if ſo (for I greatly doubt that this computation is exaggerated), it muſt then be more populous than is generally imagined. Since the year 1719, it is computed that about 34,000 coloniſts have removed thither from France, Switzerland, and Germany; of which number 17,000 were Saltzburghers. Theſe emigrants have built 400 ſmall villages, 11 towns, 86 ſeats, and 50 new churches; and have founded 1000 village ſchools, chiefly in that part of the country named Little Lithuania.

The manners of the inhabitants differ but little from thoſe of the other inhabitants of Germany. The ſame may be ſaid of their cuſtoms and diverſions.

RELIGION, SCHOOLS, AND ACADEMIES.] The religion of Pruſſia is very tolerant. The eſtabliſhed religions are thoſe of the Lutherans and Calviniſts, but chiefly the former; but papiſts, antipœdo-baptiſts, and almoſt all other ſects, are here tolerated. The country, as well as the towns, abounds in ſchools. An univerſity was founded at Koningſberg in 1544; but we know of no very remarkably learned men that it has produced.

CITIES.] The kingdom of Pruſſia is divided into the German and Lithuanian departments; the former of which contain 280 pariſhes, and the latter 105.

Koningſberg, the capital of the whole kingdom, ſeated on the river Pregel, over which it has ſeven bridges, is about 84 miles from Dantzic. According to Dr. Buſching, this city is ſeven miles in circumference, and contains 3,800 houſes, and about 60,000 inhabitants. This computation, I doubt, is a little exaggerated likewiſe, becauſe it ſuppoſes, at an average, near ſixteen perſons in every houſe. Koningſberg has ever made a conſiderable figure in commerce and ſhipping, its river being navigable for ſhips; of which 493 foreign ones arrived here in the year 1752, beſides 298 coaſters; and 373 floats of timber were, in the compaſs of that year, brought down the Pregel. This city, beſides its college or univerſity, which contains 38 profeſſors, boaſts of magnificent palaces, a town-houſe, and exchange; not to mention gardens and other embelliſhments. It has a good harbour and citadel, which is called Fredericſburg, and is a regular ſquare.

ANTIQUITIES AND CURIOSITIES, NATURAL AND ARTIFICIAL.] See Germany.

COMMERCE AND MANUFACTURES.] The late king of Pruſſia endeavoured to increaſe the commerce of his kingdom; but the deſpotic nature of his government was not favourable to trade and manufactures. The Pruſſian manufactures, however, are not inconſiderable: they conſiſt of glaſs, iron-work, paper, gunpowder, copper, and braſs mills; manufactures of cloth, camblet, linen, ſilk, ſtockings, and other articles. The inhabitants export variety of naval ſtores, amber, linſeed and hempſeed, oatmeal, fiſh, mead, tallow, and caviar; and it is ſaid that 500 ſhips are loaded every year with thoſe commodities, chiefly from Koningſberg.

CONSTITUTION AND GOVERNMENT.] His Pruſſian majeſty is abſolute through all his dominions, and he avails himſelf to the full of his power. The government of this kingdom is by a regency of four chancellors of ſtate, viz. 1. The great maſter; 2. The great burgrave; 3. The great chancellor; and, 4. The great marſhal. There are alſo ſome other councils, and 37 bailiwicks. The ſtates conſiſt, 1. Of counſellors of ſtate; 2. Of deputies from the nobility; and, 3. From the commons. Beſides theſe inſtitutions, his late majeſty erected a board for commerce and navigation.

REVENUES.] His Pruſſian majeſty, by means of the happy ſituation of his country, its inland navigation, and his own ſkilful political regulations, derives an

amazing revenue from this country, which, about a century and a half ago, was the ſeat of boors and barbariſm. It is ſaid, that amber alone brings him in 26,000 dollars annually. His other revenues ariſe from his demeſnes, his duties of cuſtoms and tolls, and the ſubſidies yearly granted by the ſeveral ſtates; but the exact ſum is not known: though we may conclude that it is very conſiderable, from the immenſe charges of the late war. His revenues now, ſince the acceſſion of Poliſh or Royal Pruſſia, muſt be greatly increaſed: excluſive of its fertility, commerce, and population, its local ſituation was of vaſt importance, as it lay between his German dominions and his kingdom of Pruſſia. By this acquiſition, his dominions are compact, and his troops may march from Berlin to Koninſberg without interruption.

MILITARY STRENGTH.] The Pruſſian army, even in time of peace, conſiſts of about 180,000 of the beſt diſciplined troops in the world; and, during the laſt war, that force was augmented to 300,000 men. But this great military force, however it may aggrandize the power and importance of the king, is utterly inconſiſtent with the intereſts of the people. The army is chiefly compoſed of provincial regiments; the whole Pruſſian dominions being divided into circles or cantons; in each of which, one or more regiments, in proportion to the ſize and populouſneſs of the diviſion, have been originally raiſed, and from it the recruits continue to be taken; and each particular regiment is always quartered, in the time of peace, near the canton from which its recruits are drawn. Whatever number of ſons a peaſant may have, they are all liable to be taken into the ſervice except one, who is left to aſſiſt in the management of the farm. The reſt wear badges from their childhood, to mark that they are deſtined to be ſoldiers, and obliged to enter into the ſervice whenever they are called upon. But the maintaining ſo large an army, in a country naturally ſo little equal to it, has occaſioned ſuch a drain from population, and ſuch a withdrawing of ſtrength from the labours of the earth, that the late king endeavoured in ſome degree to ſave his own peaſantry, by drawing as many recruits as he could from other countries. Theſe foreign recruits remain continually with the regiments in which they are placed; but the native Pruſſians have every year ſome months of furlough, during which they return to the houſes of their fathers or brothers, and work at the buſineſs of the farm, or in any other way they pleaſe.

ARMS, AND ORDERS OF KNIGHTHOOD.] The royal arms of Pruſſia are argent, an eagle diſplayed ſable, crowned, or, for Pruſſia. Azure, the imperial ſceptre, or, for Courland. Argent, an eagle diſplayed, gules, with ſemicircular wreaths, for the marquiſate of Brandenburg. To theſe are added the reſpective arms of the ſeveral provinces ſubject to the Pruſſian crown.

There are four orders of knighthood; the order of "*Concord*," inſtituted by Chriſtian Erneſt, margrave of Brandenburg, in the year 1660, to diſtinguiſh the part he had acted in reſtoring peace to many of the princes of Europe. The badge is a gold croſs of eight points, enamelled white; in the centre a medal bearing two olive branches paſſing ſaltier-wiſe through two crowns, and circumſcribed with the word "*Concordans*." The croſs is ſurmounted with an electoral crown, and is worn pendent to an orange ribband. Frederic III. elector of Brandenburgh, and afterwards king of Pruſſia, inſtituted, in 1685, the order of "*Generoſity*." The knights wear a croſs of eight points enamelled blue, having in the centre this motto, "*La Generoſité*," pendent to a blue ribband.

The ſame prince inſtituted the order of the "*Black Eagle*" on the day of his coronation at Koningſberg, in the year 1700; the ſovereign is always grand-maſter, and the number of knights, excluſive of the royal family, is limited to thirty, who muſt all be admitted into the order of "*Generoſity*," previous to their receiving

ing this, unleſs they be ſovereign princes. The enſign of the order is a gold croſs, of eight points, enamelled blue, having at each angle a ſpread eagle, enamelled black, being the arms of Pruſſia, and charged in the centre with a cypher of the letters *F. R.* Each knight commonly wears this pendent to a broad orange ribband (out of reſpect to the Orange family) worn ſaſh-wiſe over the left ſhoulder, and a ſilver ſtar embroidered on the left ſide of the coat, whereon is an eſcutcheon, containing a ſpread eagle, holding in one claw a chaplet of laurel, and in the other a thunderbolt, with this motto in gold letters round "*Suum cuique.*". On days of ceremony, the knights wear the badge pendent to a collar, compoſed of round pieces of gold, each enamelled with four cyphers of the letters *F. R.* in the centre of the piece is ſet a diamond, and over each cypher a regal crown, intermixed alternately with eagles diſplayed, enamelled, black, and holding in their claws thunderbolts of gold. The knights' caps are of black velvet with white plumes.

The order of "*Merit*" was inſtituted by the late king in the year 1740, to reward the merit of perſons either in arms or arts, without diſtinction of birth, religion, or country; the king is ſovereign, and the number of knights unlimited. The enſign is a croſs of eight points, enamelled blue, and edged with gold, having in the centre a cypher of the letters *F. R.* and in each angle an eagle diſplayed, black, on the two upper points the regal crown of Pruſſia; on the reverſe, the motto "*Pour le Merite.*" The badge is worn round the neck, pendent to a black ribband, edged with ſilver.

HISTORY.] The ancient hiſtory of Pruſſia, like that of other kingdoms, is loſt in the clouds of fiction and romance. The inhabitants appear to have been a brave and warlike people, deſcended from the Sclavonians, and refuſed to ſubmit to the neighbouring princes, who, on pretence of converting them to Chriſtianity, wanted to ſubject them to ſlavery. They made a noble ſtand againſt the kings of Poland; one of whom, Boleſlaus IV. was by them defeated and killed in 1163. They continued independent, and pagans, till the time of the cruſades, when the German knights of the Teutonic order, about the year 1227, undertook their converſion by the edge of the ſword, but upon condition of having, as a reward, the property of the country when conquered. A long ſeries of wars followed, in which the inhabitants of Pruſſia were almoſt extirpated by the religious knights, who in the thirteenth century, after committing the moſt incredible barbarities, peopled the country with Germans. After a vaſt waſte of blood, in 1466, a peace was concluded between the knights of the Teutonic order and Caſimir IV. king of Poland, who had undertaken the cauſe of the oppreſſed people, by which it was agreed, that the part now called Poliſh Pruſſia ſhould continue a free province, under the king's protection; and that the knights and the grand maſter ſhould poſſeſs the other part, but were to acknowledge themſelves vaſſals of Poland. This gave riſe to freſh wars, in which the knights endeavoured, but unſucceſsfully, to throw off their vaſſalage to Poland. In 1525, Albert, margrave of Brandenburg, and the laſt grand-maſter of the Teutonic order, laid aſide the habit of his order, embraced Lutheraniſm, and concluded a peace at Cracow, by which the margrave was acknowledged duke of the eaſt part of Pruſſia (formerly called, for that reaſon, Ducal Pruſſia), but to be held as fief of Poland, and to deſcend to his male heirs; and upon failure of his male iſſue, to his brothers and their male heirs. Thus ended the ſovereignty of the Teutonic order in Pruſſia, after it had ſubſiſted near 300 years. In 1657, the elector Frederic-William of Brandenburg, deſervedly called the Great, had Ducal Pruſſia confirmed to him; and by the conventions of Welau and Bromberg, it was freed, by John Caſimir, king of Poland, from vaſſalage; and he and his deſcendants were declared independent and ſovereign lords of this part of Pruſſia.

As the proteſtant religion had been introduced into this country by the margrave Albert, and the electors of Brandenburgh were now of that perſuaſion, the proteſtant intereſt favoured them ſo much, that Frederic, the ſon of Frederic-William the Great, was raiſed to the dignity of king of Pruſſia, in a ſolemn aſſembly of the ſtates, and proclaimed January 18, 1701, and ſoon after acknowledged as ſuch by all the powers of Chriſtendom. His grandſon, the late king of Pruſſia, in the memoirs of his family, gives us no idea of this firſt king's talents for government, but expatiates on thoſe of his own father, Frederic-William, who ſucceeded in 1713. He certainly was a prince of ſtrong natural parts, and performed prodigious ſervices to his country, but too often at the expence of humanity, and the magnanimity which ought to adorn a king. At his death, which happened in 1740, he is ſaid to have left ſeven millions ſterling in his treaſury, which enabled his ſon, by his wonderful victories, and the more wonderful reſources by which he repaired his defeats, to become the admiration of the preſent age. He improved the arts of peace, as well as of war, and diſtinguiſhed himſelf as a poet, philoſopher, and legiſlator. Some of the principal tranſactions of his reign have already been related in our account of the hiſtory of Germany. In the year 1783 he publiſhed a reſcript, ſignifying his pleaſure that no kneeling in future ſhould be practiſed in honour of his perſon, aſſigning for his reaſon, that this act of humiliation was not due but to the divinity: and near 2,000,000 of crowns were expended by him in 1782 in draining marſhes, eſtabliſhing factories, ſettling colonies, relieving diſtreſs, and in other purpoſes of philanthropy and policy.

The Pruſſian is not one of thoſe ancient monarchies which had their origin in the diſtant ages of confuſion, and which eſtabliſhed and gradually aggrandized themſelves, rather by accidental events and the changes of time, or the weakneſs of nations, than by the extraordinary genius of their ſovereigns. It is a new monarchy like that of Macedon, under Philip and Alexander, which has been created in a ſhort ſpace of time; not by thoſe great means that hazard and good fortune, and, above all, the marriages of ſovereigns occaſion; but principally by the ſuperior qualities of a creative genius; by exalted virtues, civil and military; by the employment of politics juſt, ſafe and active; by that vaſtneſs of head and heart, which knows how to tranſpoſe itſelf into the people, and inſpire a national caſt for courage, induſtry, activity and glory. The Pruſſian monarchy ſhines to-day without diſpute in the firſt claſs of ſovereignties, and can take a decided part for the preſervation of the equilibrium in Germany and Europe. A concluſion then can be drawn with tolerable certainty, that a monarch of Pruſſia merits preferably the ſuffrage and confidence of Europe, and all the princes of Germany, for it is his proper intereſt to be juſt, to be the defender of the balance and of general liberty.

The celebrated Germanic union, for the preſervation of the conſtitution, concluded in the laſt year of the life of Frederic III. is ſaid to be in part the work of that great man. He conceived the firſt idea of it in the year 1784, and it was publicly concluded in July 1785.

This patriotic union, which has no other object but to ſecure and preſerve the ſupport of the ancient and venerable conſtitution of the empire, and keep up an efficacious harmony among all its members, gathers daily additional ſtrength under the new reign.

It is ſelf evident that the happy ſtate of the Pruſſian monarchy will depend always on the genius and activity of its ſovereigns: a Frederic III. was abſolutely neceſſary in order to give to his ſtate (ſo inconſequential for its extent and the quality of its ſoil) a degree of power which puts it on a level with the firſt monarchies of Europe; to aſſure it a conſiſtence, which will be ſo long permanent as the maxims of good government be obſerved; and to make it perform the brilliant,

although

although dangerous and difficult part, which it is obliged to ſuſtain on account of the local poſition of the monarchy, for its own proper preſervation, that of the balance of Germany and of Europe.

Frederic III. king of Pruſſia, and elector of Brandenburgh, was born in 1712, married in 1733, to Elizabeth-Chriſtina of Brunſwic Wolfenbuttel, born in 1714, by whom he had no iſſue. He died Auguſt 17, 1786, aged 75, having reigned 46 years, 2 months, 17 days, and was ſucceeded by

Frederic William, his nephew, and ſon of his brother William Auguſtus. His preſent majeſty hath not, as yet, attempted any military atchievement, farther than marching his troops into Holland, as hath been related in the hiſtory of that country. He was born in 1744, and married in 1765 to the princeſs Elizabetha Chriſtina Ulrica, of Brunſwic Wolfenbuttel; and ſecondly in 1769, to Frederica Louiſa, of Heſſe Darmſtadt. Iſſue by the firſt, a princeſs; by the ſecond, Frederic-William, prince royal, and ſeveral other children. Frederica Sophia Wilhelmina, his majeſty's ſiſter, was married in 1767 to the prince of Orange.

The KINGDOM of BOHEMIA.

Situation and Extent.

	Miles.		Degrees.	
Length	478	between	48 and 52	North latitude.
Breadth	322		12 and 19	Eaſt longitude.

Boundaries. BOUNDED by Saxony and Brandenburg, on the North; by Poland and Hungary, on the Eaſt; by Auſtria and Bavaria, on the South; and by the palatinate of Bavaria, on the Weſt; formerly comprehending, 1. Bohemia Proper; 2. Sileſia; and, 3. Moravia.

Diviſions.	Chief Towns.	Miles.	Sq. M.
1. Bohemia Proper, W. moſtly ſubject to the Houſe of Auſtria.	Prague, E. lon. 14-20. N. lat. 50. Koningſgratz, E. Glatz, E. ſubject to the king of Pruſſia. Egra, W.	Length 162 Breadth 142	12,060
2. Sileſia, Eaſt, moſtly ſubject to the king of Pruſſia.	Breſlaw, E. lon. 17. N. lat. 51-15. Glogaw, N. Croſſen, N. Jagendorf, S. Tropaw, S. ſubject to the houſe of Auſtria. Teſchen, S. ſubject to the houſe of Auſtria.	Length 196 Breadth 92	10,250
3. Moravia, S. entirely ſubject to the houſe of Auſtria.	Olmutz, E. lon. 16-45. N. lat. 49-40. Brin, middle Igla, S. W.	Length 120 Breadth 88	5,424

Soil.

SOIL AND AIR.] The air of Bohemia Proper is not thought ſo wholeſome as that of the reſt of Germany, though its ſoil and produce are pretty much the ſame.

MOUNTAINS AND RIVERS.] Bohemia, though almoſt ſurrounded with mountains, contains none of note or diſtinction; its woods are many, and the chief rivers are the Elbe, Muldaw, and Eger.

METALS AND MINERALS.] This kingdom contains rich mines of ſilver, quickſilver, copper, iron, lead, ſulphur, and ſaltpetre. Its chief manufactures are linen, copper, iron, and glaſs.

POPULATION, INHABITANTS, MANNERS, CUSTOMS, AND DIVERSIONS.] We have no certain account of the preſent population of Bohemia; about 150 years ago, it was computed to contain near 3,000,000 of inhabitants; but they are thought at preſent not to exceed 2,100,000. The Bohemians, in their perſons, habits, and manners, reſemble the Germans. There is, among them, no middle ſtate of people; for every lord is a ſovereign, and every tenant a ſlave. But the late emperor generouſly diſcharged the Bohemian peaſants, on the Imperial demeſnes, from the ſtate of villanage in which they had been ſo long and ſo unjuſtly retained; and it will be happy if his Imperial majeſty's example ſhould be followed by the Bohemian nobility. Although the Bohemians, at preſent, are not remarkable either for arts or arms, yet they formerly diſtinguiſhed themſelves as the moſt intrepid aſſertors of civil and religious liberty in Europe; witneſs the early introduction of the reformed religion into their country, when it was ſcarcely known in any other; the many glorious defeats they gave to the Auſtrian power, and their generous ſtruggles for independency. Their virtues may be conſidered as the cauſes of their decay; as no means were left unemployed by their deſpotic maſters for breaking their ſpirit: though it is certain their internal jealouſies and diſſenſions greatly contributed to their ſubjection. Their cuſtoms and diverſions are the ſame as in Germany.

RELIGION.] Though popery is the eſtabliſhed religion of Bohemia, yet there are many proteſtants among the inhabitants, who are now tolerated in the free exerciſe of their religion; and ſome of the Moravians have embraced a viſionary unintelligible proteſtantiſm, if it deſerves that name, which they have propagated, by their zealous miſſionaries, in ſeveral parts of the globe; ſome of whom a few years ago made proſelytes in Great Britain; they have ſtill a meeting-houſe in London, and have obtained an act of parliament for a ſettlement in the plantations.

ARCHBISHOPRICK AND BISHOPRICKS.] Prague is the only Bohemian archbiſhoprick. The biſhopricks are Koningſgratz, Breſlaw, and Olmutz.

LANGUAGE.] The proper language of the Bohemians is a dialect of the Sclavonian, but they generally ſpeak German.

UNIVERSITY.] The only univerſity in Bohemia is that of Prague.

CITIES AND TOWNS.] Prague, the capital of Bohemia, is one of the fineſt and moſt magnificent cities in Europe, and famous for its noble bridge. Its circumference is ſo large, that the grand Pruſſian army, in its laſt ſiege, could never completely inveſt it. The inhabitants ſcarcely exceed 70,000 Chriſtians, and about 13,000 Jews. It contains 92 churches and chapels, and 40 cloiſters. It is a place of little or no trade, and therefore the middling inhabitants are not wealthy; but the Jews are ſaid to carry on a large commerce in jewels. Bohemia contains many other towns, ſome of which are fortified, but they are neither remarkable for ſtrength nor manufactures. Olmutz is the capital of Moravia: it is well fortified, and has manufactures of woollen, iron, glaſs, paper, and gunpowder. Breſlaw, the capital of Sileſia, hath been already deſcribed.

COMMERCE AND MANUFACTURES.] See Germany.

CONSTITUTION AND GOVERNMENT.] The forms, and only the forms, of the old Bohemian conſtitution ſtill ſubſiſt; but the government, under the houſe of Auſtria, is deſpotic. Their ſtates are compoſed of the clergy, nobility, gentry, and repreſentatives of towns. Their ſovereigns, of late, have not been fond of provoking them by ill uſage, as they have a general averſion to the Auſtrians. This kingdom is frequently deſcribed as part of Germany, but with little reaſon, for it is not in any of the nine circles, nor does it contribute any thing towards the forces or revenues of the empire, nor is it ſubject to any of its laws. What gives ſome colour to this miſtake is, that the king of Bohemia is the firſt ſecular elector of the empire, and their kings have been elected emperors of Germany for many years.

REVENUES.] The revenues of Bohemia are whatever the ſovereign is pleaſed to exact from the ſtates of the kingdom, when they are annually aſſembled at Prague. They may perhaps amount to 500,000l. a year.

ARMS.] The arms of Bohemia are, argent, a lion gules, the tail moved, and paſſed in ſaltier, crowned, langued, and armed, or.

HISTORY.] The Bohemian nobility uſed to elect their own princes, though the emperors of Germany ſometimes impoſed a king upon them, and at length uſurped that throne themſelves. In the year 1438, Albert II. of Auſtria, received three crowns, Hungary, the Empire, and Bohemia.

In 1414 John Huſs and Jerome of Prague, two of the firſt reformers, and Bohemians, were burnt at the council of Conſtance, though the emperor of Germany had given them his protection. This occaſioned an inſurrection in Bohemia: the people of Prague threw the emperor's officers out of the windows of the council-chamber; and the famus Ziſca, aſſembling an army of 40,000 Bohemians, defeated the emperor's forces in ſeveral engagements, and drove the Imperialiſts out of the kingdom. The diviſions of the Huſſites among themſelves enabled the emperors to keep poſſeſſion of Bohemia, though an attempt was made to throw off the Imperial yoke, by electing, in the year 1618, a proteſtant king in the perſon of the prince Palatine, ſon-in-law to James I. of England. The misfortunes of this prince are well known. He was driven from Bohemia by the emperor's generals, and, being ſtripped of his other dominions, was forced to depend on the court of England for ſubſiſtence. After a war of 30 years duration, which deſolated the whole empire, the Bohemians, ſince that time, have remained ſubject to the houſe of Auſtria.

HUNGARY.

SITUATION AND EXTENT.

	Miles.		Degrees.	Sq. Miles.
Length	300	between	17 and 23 east longitude.	36,060.
Breadth	200		45 and 49 north latitude.	

BOUNDARIES.] THAT part of Hungary which belongs to the houſe of Auſtria (for it formerly included Tranſylvania, Sclavonia, Croatia, Morlachia, Servia, Walachia, and other countries), is bounded by Poland, on the North; by Tranſylvania and Walachia, Eaſt; by Sclavonia, South; and by Auſtria and Moravia, Weſt.

The

The kingdom of Hungary is uſually divided into the Upper and Lower Hungary.

Upper HUNGARY, North of the Danube.	Lower HUNGARY, South of the Danube.
Chief Towns.	Chief Towns.
Preſburg, ſituate on the Danube, E. lon. 17-30. N. lat. 48-20.	Buda, on the Danube, E. long. 19-20 N. lat. 47-40.
Newhauſel, N. W.	Gran, on the Danube, above Buda.
Leopolſtadt, N. W.	Comorra, on the Danube, in the iſland of Schut.
Chremnits, N. W.	Raab, on the Danube, oppoſite to the iſland of Schut.
Schemnits, in the middle.	Atlenburg, W. oppoſite to the iſland of Schut.
Eſperies, N.	Weiſſenburg, or Alba Regalis, ſituated E. of the lake called the Platten ſea.
Caſchaw, N.	Kaniſba, S. W. of the Platten ſea.
Tokay, N. E.	Five churches, N. of the river Drave.
Zotmar, N. E.	
Unguar, N. E.	
Mongats, N. E.	
Waradin, Great, E.	
Segedin, S. E.	
Agria, in the middle.	
Peſt, on the Danube, oppoſite to Buda.	

To which may be added Temeſwar, which has been conſidered as diſtinct from Hungary, becauſe it was formerly governed by an independent king; and it has ſeveral times been in poſſeſſion of the Turks; but the Auſtrians gaining poſſeſſion of it, it was incorporated into the kingdom of Hungary in 1778. The province of Temeſwar is 94 miles long, and 67 broad, containing about 3850 ſquare miles: it has been divided into four diſtricts, Cſadat, Temeſwar, Werſchez, and Lugos. Temeſwar, the principal town, is ſituated E. lon. 22-15. N. lat. 45-54.

Air, soil, and produce.] The air, and conſequently the climate of the ſouthern parts of Hungary, is found to be unhealthful, owing to its numerous lakes, ſtagnated waters, and marſhes; but the northern parts being mountainous and barren, the air is ſweet and wholeſome. No country in the world can boaſt a richer ſoil than that plain which extends 300 miles from Preſburg to Belgrade, and produces corn, graſs, eſculent plants, tobacco, ſaffron, aſparagus, melons, hops, pulſe, millet, buck-wheat, delicious wine, fruits of various kinds, peaches, mulberry-trees, cheſnuts, and wood: corn is in ſuch plenty, that it ſells for one-ſixth part of its price in England.

Rivers.] Theſe are the Danube, Drave, Save, Teyſſe, Meriſh, and the Temes.

Water.] Hungary contains ſeveral lakes, particularly four among the Carpathian mountains of conſiderable extent, and abounding with fiſh. The Hungarian baths and mineral waters are eſteemed the moſt ſovereign of any in Europe; but their magnificent buildings, raiſed by the Turks when in poſſeſſion of the country, particularly thoſe of Buda, are ſuffered to go to decay.

Mountains.] The Carpathian mountains, which divide Hungary from Poland on the north, are the chief in Hungary, though many detached mountains are found in the country. Their tops are generally covered with wood, and on their ſides grow the richeſt grapes in the world.

METALS AND MINERALS.] Hungary is remarkably well ſtocked with both. It abounds not only with gold and ſilver mines, but with plenty of excellent copper, vitriol, iron, orpiment, quickſilver, cryſocolla, and terra ſigillata. Before Hungary became the ſeat of deſtructive wars between the Turks and Chriſtians, or fell under the power of the houſe of Auſtria, thoſe mines were furniſhed with proper works and workmen, and produced vaſt revenues to the native princes. The Hungarian gold and ſilver employed mint-houſes, not only in Hungary, but in Germany, and other parts of Europe; but all thoſe mines are now greatly diminiſhed in their value, their works being deſtroyed or demoliſhed; ſome of them, however, ſtill ſubſiſt, to the great emolument of the natives.

VEGETABLE AND ANIMAL PRODUCTIONS.] Hungary is remarkable for a fine breed of horſes, generally mouſe-coloured, and highly eſteemed by military officers, ſo that great numbers of them are exported. There is a remarkable breed of large rams in the neighbourhood of Preſburg. Its other vegetable and animal productions are in general the ſame with thoſe of Germany, and the neighbouring countries. The Hungarian wines, however, particularly Tokay, are preferable to thoſe of any other country, at leaſt in Europe.

POPULATION, INHABITANTS, MANNERS, CUSTOMS, AND DIVERSIONS.] It was late before the northern barbarians drove the Romans out of Hungary, and ſome of the deſcendants of their legionary forces are ſtill to be diſtinguiſhed in the inland parts, by their ſpeaking Latin. Be that as it will, before the Turks got poſſeſſion of Conſtantinople, Hungary was one of the moſt populous and powerful kingdoms in Europe; and if the houſe of Auſtria ſhould give proper encouragement to the inhabitants to repair their works, and clear their fens, it might become ſo again, in about a century hence. Both Hungaries at preſent, excluſive of Tranſylvania and Croatia, are thought to contain about two millions and a half of inhabitants. The Hungarians have manners peculiar to themſelves. They pique themſelves on being deſcended from thoſe heroes, who formed the bulwark of Chriſtendom againſt the infidels. In their perſons they are well made. Their fur caps, their cloſe-bodied coats, girded by a ſaſh, and their cloak or mantle, which is ſo contrived as to buckle under the arm, ſo that the right hand may be always at liberty, give them an air of military dignity. The men ſhave their beards, but preſerve their whiſkers on their upper lips. Their uſual arms are a broad ſword, and a kind of pole-ax, beſides their fire arms. The ladies are reckoned handſomer than thoſe of Auſtria, and their ſable dreſs with ſleeves ſtrait to their arms, and their ſtays faſtened before with gold, pearl, or diamond little buttons, are well known to the French and Engliſh ladies. Both men and women, in what they call the mine-towns, wear fur and even ſheep-ſkin dreſſes. The inns upon the roads are miſerable hovels, and even thoſe ſeldom to be met with. The hogs, which yield the chief animal food for their peaſants, and their poultry, live in the ſame apartment with their owners. The gout and the fever, owing to the unwholeſomeneſs of the air, are the predominant diſeaſes in Hungary. The natives in general are indolent, and leave trade and manufactures to the Greeks and other ſtrangers ſettled in their country, the flatneſs of which renders travelling commodious, either by land or water. The diverſions of the inhabitants are of the warlike and athletic kind. They are in general a brave and magnanimous people. Their anceſtors, even ſince the beginning of the preſent century, were ſo jealous of their liberties, that, rather than be tyranniſed over by the houſe of Auſtria, they often put themſelves under the protection of the Ottoman court; but their fidelity to the late empreſs-queen, notwithſtanding the provocations they received from her houſe, will be always remembered to their honour.

The inhabitants of Temeſwar, a province lately incorporated into the kingdom of Hungary, are computed at about 450,000. There are in this country many

faraons,

faraons, or gypſies, ſuppoſed to be real deſcendants of the ancient Egyptians. They are ſaid to reſemble the ancient Egyptians in their features, in their propenſity to melancholy, and in many of their manners and cuſtoms; and it is aſſerted, that the laſcivious dances of Iſis, the worſhip of onions, many famous Egyptian ſuperſtitions and ſpecifics, and the Egyptian method of hatching eggs by means of dung are ſtill in uſe among the female gypſies in Temeſwar.

RELIGION.] The eſtabliſhed religion of the Hungarians is the Roman-catholic, though the major part of the inhabitants are Proteſtants, or Greeks; and they now enjoy the full exerciſe of their religious liberties.

ARCHBISHOPRICKS AND BISHOPRICKS.] The archbiſhopricks are Preſburg, Gran, and Colocza. The biſhopricks are, Great Waradin, Agria, Veſprin, Raab, and Five Churches.

LANGUAGE.] As the Hungarians are mixed with Germans, Sclavonians, and Walachians, they have a variety of dialects, and one of them is ſaid to approach near the Hebrew. The better and the middlemoſt rank ſpeak German, and almoſt all even of the common people ſpeak Latin, either pure or barbarous, ſo that the Latin may be ſaid to be here ſtill a living language.

UNIVERSITIES.] In the univerſities (if they can properly be ſo called) of Firnan, Buda, Raab, and Caſchaw, are profeſſors of the ſeveral arts and ſciences, who uſed generally to be Jeſuits; ſo that the Lutherans and Calviniſts, who are more numerous than the Roman Catholics in Hungary, go to the German and other univerſities.

ANTIQUITIES AND CURIOSITIES, NATURAL AND ARTIFICIAL.] The artificial curioſities of this country conſiſt of its bridges, baths, and mines. The bridge of Eſſeck built over the Danube, and Drave is, properly ſpeaking, a continuation of bridges, five miles in length, fortified with towers at certain diſtances. It was an important paſs during the wars between the Turks and Hungarians. A bridge of boats runs over the Danube, half a mile long, between Buda and Peſt; and about twenty Hungarian miles diſtant from Belgrade, are the remains of a bridge, erected by the Romans, judged to be the moſt magnificient of any in the world. The baths and mines here have nothing to diſtinguiſh them from the like works in other countries.

One of the moſt remarkable natural curioſities of Hungary is a cavern in a mountain near Szelitze; the aperture of this cavern, which fronts the ſouth, is eighteen fathoms high, and eight broad; its ſubterraneous paſſages conſiſt entirely of ſolid rock, ſtretching away farther ſouth than has been yet diſcovered; as far as it is practicable, to go, the height is found to be 50 fathoms and the breadth 26. Many other wonderful particulars are related of this cavern, which is an article of great curioſity. Aſtoniſhing rocks are common in Hungary, and ſome of its churches are of admirable architecture.

CITIES, TOWNS, FORTS, AND OTHER EDIFICES, PUBLIC AND PRIVATE.] Theſe are greatly decayed from their ancient magnificence, but many of the fortifications are ſtill very ſtrong, and kept in good order. Preſburg is fortified. In it the Hungarian regalia were kept, but were lately removed to Vienna. The crown was ſent, in the year 1000, by pope Sylveſter II. to Stephen King of Hungary, and was made after that of the Greek emperors; it is of ſolid gold, weighing nine marks and three ounces, ornamented with 53 ſapphires, 50 rubies, one large emerald, and 338 pearls. Beſides theſe ſtones are the images of the apoſtles and the patriarchs. The pope added to this crown a ſilver patriarchal croſs, which was afterwards inſerted in the arms of Hungary. At the ceremony of the coronaiton a biſhop carries it before the king. From the croſs is derived the title of apoſtolic king; the uſe of which was renewed under the reign of the empreſs-queen Maria

Thereſa. The ſceptre and the globe of the kingdom are Arabian gold; the mantle, which is of fine linen, is the work of Giſele, ſpouſe of St. Stephen, who embroidered in gold the image of Jeſus Chriſt crucified, and many other images of the patriarchs and apoſtles, with a number of inſcriptions. The ſword is two-edged, and rounded at the point. Buda, formerly the capital of Hungary, retains little of its ancient magnificence but its ſtrength and fortifications; and the ſame may be ſaid of Peſt, which lies on the oppoſite ſide of the Danube. Raab is likewiſe a ſtrong city, as are Gran and Comorra. Tokay has been already mentioned for the excellency of its wines.

COMMERCE AND MANUFACTURES.] After having mentioned the natural produce of the country, it is ſufficient to ſay, that the chief manufactures and exports of the natives conſiſt of metals, drugs, and ſalt.

CONSTITUTION AND GOVERNMENT.] The Hungarians diſlike the term of queen and even called their late ſovereign king Thereſa. Their government preſerves the remains of many checks upon the regal power. They have a diet of parliament, a Hungary-office, which reſembles our chancery, and which reſides at Vienna; as the ſtadtholder's council, which comes pretty near the Britiſh privy-council, but has a municipal juriſdiction, does at Preſburg. Every royal town has its ſenate; and the Geſpan chatts reſemble our juſtices of the peace. Beſides this, they have an exchequer and nine chambers, and other ſubordinate courts.

MILITARY STRENGTH.] The emperor can bring to the field, at any time, 50,000 Hungarians in their own country, but ſeldom draws out of it above 10,000; theſe are generally light-horſe, and well known to modern times by the name of Huſſars. They are not near ſo large as the German horſe; and therefore the Huſſars ſtand upon their ſhort ſtirrups when they ſtrike. Their expedition and alertneſs have been found ſo ſerviceable in war, that the greateſt powers in Europe have troops that go by the ſame name. Their foot are called Heydukes, and wear feathers in their caps, according to their number of enemies they pretend to have killed: both horſe and foot form an excellent militia, very good at a purſuit, or ravaging and plundering a country, but not equal to regular troops in a pitched battle.

COINS.] Hungary was formerly remarkable for its coinage, and there are ſtill extant, in the cabinets of the curious, a complete ſeries of coins of their former kings. More Greek and Roman medals have been diſcovered in this country than perhaps in any other in Europe.

ARMS.] The emperor, as king of Hungary, for armorial enſigns, bears quarterly, barwiſe argent, and gules of eight pieces.

HISTORY.] The Huns, after ſubduing this country in the middle of the third century, communicated their name to it, being then part of the ancient Pannonia. they were ſucceeded by the furious Goths; the Goths were expelled by the Lombards, they by the Avari, who were followed by the Sclavi, in the beginning of the ninth century. At the cloſe of it, the Anigours emigrated from the banks of the Volga, and took poſſeſſion of the country. Hungary was formerly an aſſemblage of different ſtates, and the firſt who aſſumed the title of king, was Stephen, in the year 997, when he embraced Chriſtianity. In his reign, the form of government was eſtabliſhed, and the crown rendered elective. About the year 1310, king Charles Robert aſcended the throne, and ſubdued Bulgaria, Servia, Croatia, Dalmatia, Sclavonia, and many other provinces; but many of thoſe conqueſts were afterwards reduced by the Venetian, Turks, and other powers. In the fifteenth century, Huniades, who was guardian to the infant king Ladiſlaus, bravely repulſed the Turks, when they invaded Hungary; and upon the death of Ladiſlaus, the Hungarians, in 1438, raiſed Matthius Corvinus, ſon of Huniades, to their throne. Lewis king of Hungary, in 1526, was killed in a battle, fighting againſt Solyman, emperor of the Turks.

This battle had almoſt proved fatal to Hungary; but the archduke Ferdinand, bother to the emperor Charles V. having married the ſiſter of Lewis, he claimed the title of Hungary, in which he ſucceeded, with ſome difficulty, and that kingdom has ever ſince belonged to the houſe of Auſtria, though by its conſtitution its crown ought to be elective. For the reſt of the Hungarian hiſtory, ſee Germany.

TRANSYLVANIA, SCLAVONIA, CROATIA, AND HUNGARIAN DALMATIA.

I HAVE thrown theſe countries under one diviſion, for ſeveral reaſons, and particularly becauſe we have no account ſufficiently exact of their extent and boundaries. The beſt account of them is as follows: TRANSYLVANIA belongs to the houſe of Auſtria, and is bounded on the North by the Carpathian mountains, which divide it from Poland; on the Eaſt by Moldavia aad Walachia; on the South by Walachia; and on the Weſt by Upper and Lower Hungary. It lies between 22 and 25 degrees of eaſt longitude, and 45 and 48 of north latitude. Its length is extended about 180, and its breadth 120 miles; and contains nearly 14,400 ſquare miles, ſurrounded on all ſides by high mountains. Its produce, vegetables and animals, are almoſt the ſame with thoſe of Hungary. The air is wholeſome and temperate; but their wine, though good, is not equal to the Hungarian. Its chief city is Hermanſtadt, and its interior government ſtill partakes greatly of the ancient feudal ſyſtem, being compoſed of many independent ſtates and princes. They owe not much more than a nominal ſubjection to the Auſtrians, who leave them in poſſeſſion of moſt of their privileges. Papiſts, Lutherans, Calviniſts, Socinians, Arians, Greeks, Mahometans, and other ſectaries, here enjoy their ſeveral religions. Tranſylvania is thought to add but little to the Auſtrian revenue, though it exports ſome metals and ſalt to Hungary. The other large places are Sageſwar, Millenback, and Newmark. All ſorts of proviſions are very cheap, and excellent in their kinds. Hermanſtadt is a large, ſtrong, and well built city, as are Clauſenburg and Weiſſeburg. The ſeat of government is at Hermanſtadt, and the governor is aſſiſted by a council made up of Roman catholics, Calviniſts, and Lutherans. The diet, or parliament, meets by ſummons, and receives the commands of the ſovereign, to whom of late they have been more devoted than formerly. They have a liberty of making remonſtrances and repreſentations in caſe of grievances.

Tranſylvania is part of the ancient Dacia, the inhabitants of which long employed the Roman arms, before they could be ſubdued. It was over-run by the Goths on the decline of the Roman empire, and then by the Huns. Their deſcendants retain the ſame military character. The population of the country is not aſcertained; but if the Tranſylvanians can bring to the field, as has been aſſerted, 30,000 troops, the whole number of inhabitants muſt be conſiderable. At preſent its military force is reduced to ſix regiments of 1500 men each; but it is well known, that during the laſt two wars, in which the houſe of Auſtria was engaged, the Tranſylvanians did great ſervices. Hermanſtadt is its only biſhoprick; and the Tranſylvanians at preſent ſeem to trouble themſelves little either about learning or religion, though the Roman catholic is the eſtabliſhed church. Stephen I. king of Hungary, introduced Chriſtianity there about the year 1000, and it was afterwards governed by a Hungarian vaivod, or viceroy. The various revolutions in their government prove their impatience under ſlavery; and though the treaty of Carlowitz,

in

in 1699, gave the ſovereignty of Tranſylvania, as alſo of Sclavonia, to the houſe of Auſtria, yet the natives enjoy what we may call a loyal ariſtocracy, which their ſovereigns do not think proper to invade. In October, 1784, on accountof the rea or feigned oppreſſions of the nobility, near 16,000 aſſembled and committed great depredations on thoſe whoſe conduct had been reſented. Several had their palaces burnt, and were glad to eſcape with their lives. The revolters were diſappointed in their attempt on Clauſenburg; and afterwards offered to ſeparate and go home in peace, on the terms of a general pardon, better treatment from the nobility, and a freedom from vaſſalage. In the preſent ſituation of the Auſtrians lenient terms, have been granted to them, and with the puniſhment of a few, the inſurrection is ſuppreſſed.

SCLAVONIA lies between the 16th and 23d degrees of eaſt longitude, and the 45th and 47th of north latitude. It is thought to be about 200 miles in length, and 60 in breadth, and contains about 10,000 ſquare miles. It is bounded by the Drave on the North, by the Danube on the Eaſt, by the Save on the South, and by Kiria in Auſtria on the Weſt. The reaſon why Hungary, Tranſylvania, Sclavonia, and the other nations, ſubject to the houſe of Auſtria in thoſe parts, contain a ſurpriſing variety of people, differing in name, language, and manners, is becauſe liberty here made its laſt ſtand againſt the Roman arms, which by degrees forced the remains of the different nations they had conquered into thoſe quarters. The thickneſs of the woods, the rapidity of the rivers, and the ſtrength of the country, favoured their reſiſtance; and their deſcendants, notwithſtanding the power of the Turks, the Auſtrians, the Hungarians, and the Poles, ſtill retain the ſame ſpirit of independency. Without minding the arrangements made by the ſovereigns of Europe, they are quiet under the government that leaves them moſt at liberty. That they are generous as well as brave, appears from their attachment to the houſe of Auſtria, which, till the laſt two wars, never was ſenſible of their value and valour; inſomuch that it is well known, that they preſerved the pragmatic ſanction, and kept the imperial crown in that family. The Sclavonians formerly gave ſo much work to the Roman arms, that it is thought the word *ſlave* took its original from them, on account of the great numbers of them who were carried into bondage, ſo late as the reign of Charlemagne. Though Sclavonia yields neither in beauty nor fertility to Hungary and Tranſylvania, yet the ravages of war are ſtill viſible in the face of the country, which lies in a great meaſure unimproved. The Sclavonians, from their ignorance, perhaps, are zealous Roman catholics, though Greeks and Jews are tolerated. Here we meet with two biſhopricks; that of Poſega, which is the capital of the country, and Zagrab, which lies on the Drave; but we know of no univerſities. Eſſeck is a large and ſtrong town, remarkable, as before noticed, for a wooden bridge over the Drave, and adjoining marſhes five miles long, and fifteen paces broad, built by the Turks. Waradin and Peterwaradin are places noted in the wars between the Auſtrians and Turks. The inhabitants are compoſed of Servians, Radzians, Croats, Walachians, Germans, Hungarians, and a vaſt number of other people, whoſe names were never known even to the Auſtrians themſelves, but from the military muſter-rolls, when they poured their troops into the field during the two laſt wars. In 1746, Sclavonia was united to Hungary, and the Sates ſend repreſentatives to the diet of Hungary.

CROATIA lies between the 15th and 17th degrees of eaſt longitude, and the 45th and 47th of north latitude. It is 80 miles in length, and 70 in breadth, and about 2500 ſquare miles. The manners, government, religion, language and cuſtoms of the Croats, are ſimilar to thoſe of the Sclavonians and Tranſylvanians, who are their neighbours. They are excellent irregular troops, and as ſuch are famed in modern hiſtory, under the name of Pandours, and various other deſignations.

nations. The truth is, the houſe of Auſtria finds its intereſt in ſuffering them, and the neighbouring nations, to live in their own manner. Their towns are blended with each other, there ſcarcely being any diſtinction of boundaries. Carolſtadt is a place of ſome note, but Zagrab (already mentioned) is the capital of Croatia. All the ſovereignty exerciſed over them by the Auſtrians ſeems to conſiſt in the military arrangements for bringing them occaſionally into the field. A viceroy preſides over Croatia, jointly with Sclavonia, and

Hungarian DALMATIA: this lies in the upper part of the Adriatic ſea, and conſiſts of five diſtricts, in which the moſt remarkable places are the two following: Segna, which is a royal free town, fortified both by nature and art, and is ſituated near the ſea, in a bleak, mountainous, and barren ſoil. The biſhop of this place is a ſuffragan to the archbiſhop of Spalatro. Here are twelve churches, and two convents. The governor reſides in the old palace, called the Royal Caſtle. 2. Ottoſchatz, a frontier fortification on the river Gatzka. That part of the fortreſs where the governor, and the greateſt part of the garriſon reſide, is ſurrounded with a wall, and ſome towers: but the reſt of the buildings, which are mean, are erected on piles in the water; ſo that one neighbour cannot viſit another without a boat.

Near Segna dwell the Uſcocs, a people, who being galled by oppreſſion, eſcaped out of Dalmatia, from whence they obtained, the name of Uſcocs, from the word Scoco, which ſignifies a *deſerter*. They are alſo called ſpringers, or leapers, from the agility with which they leap, rather than walk, along this rugged and mountainous country. Some of them live in ſcattered houſes, and others in large villages. They are a rough, ſavage people, large bodied, courageous, and given to rapine; but their viſible employment is grazing. They uſe the Walachian language, and in their religious ſentiments and mode of worſhip approach neareſt to the Greek church; but ſome of them are Roman catholics.

A part of Walachia belongs alſo to the emperor, as well as to the Turks, which lies to the eaſt of Tranſylvania, and its principal towns are Tregonitz, Buchareſt, and Severin.

POLAND, INCLUDING LITHUANIA.

SITUATION AND EXTENT.

Miles.		Degrees.
Length 700	between	16 and 34 eaſt longitude.
Breadth 680		46 and 57 north latitude.

BOUNDARIES.] BEFORE the late extraordinary partition of this country, the kingdom of Poland, with the great duchy of Lithuania annexed (part of ancient Sarmatia) was bounded on the North by Livonia, Muſcovy, and the Baltic ſea; on the Eaſt, by Muſcovy; on the South, by Hungary, Turkey, and Little Tartary; on the Weſt, by Germany: and had the form of its government been as perfect as its ſituation was compact, it might have been one of the moſt powerful kingdoms in Europe. Its grand diviſions were,

	Poland.	Square Miles	Length	Breadth	Chief Cities.	
Proteſtants.	Courland, ſubject to Ruſſia.	4,414	174	80	Mittaw	
Papiſts.	Lithuania,	64,800	333	310	Wilna	Great part of this diſtrict is now poſſeſſed by Ruſſia.

	Polachia,	4,000	133	42	Bielh	
	Total—	226,414				

Dantzic, Thorn, and Elbing, in Pruſſia Royal, are ſtyled free cities, and were under the protection of Poland; the two laſt have been ſeized by the King of Pruſſia, and moſt of the privileges of the firſt.

NAME.] It is generally thought that Poland takes its name from Polu, or Pole, a Sclavonian word, ſignifying a country fit for hunting, for which none was formerly more proper, on account of its plains, woods, and game of every kind.

CLIMATE.] The air of Poland is ſuch as may be expected from ſo extenſive but level a climate. In the northern parts it is cold, but healthy. The Carpathian mountains, which ſeparate Poland from Hungary, are covered with everlaſting ſnow, which has been known to fall in the midſt of ſummer. Upon the whole, however, the climate of Poland is temperate, but the air is rather inſalubrious by reaſon of the numerous woods and moraſſes.

SOIL, PRODUCE, AND WATERS.] Poland is in general a level country, and the ſoil is fertile in corn, as appears from the vaſt quantities that are ſent from thence down the Viſtula, to Dantzic, and which are bought up by the Dutch, and other nations. The paſtures of Poland, eſpecially in Podolia, are extremely rich. Here are mines of ſilver, copper, iron, ſalt, and coals; Lithuania abounds in iron ochre, black agate, ſeveral ſpecies of copper and iron pyrites, and red and grey granite: falſe precious ſtones, and marine petrifactions. The interior parts of Poland contain foreſts which furniſh timber in ſuch great quantities, that it is employed in houſe building, inſtead of bricks, ſtone, and tyles. Various kinds of fruits and herbs, and ſome grapes, are produced in Poland, and are excellent when they meet with culture, but their wine ſeldom or never comes to perfection. Poland produces various kinds of clay fit for pipes and earthern ware. The water of many ſprings is boiled into ſalt. The virtues of a ſpring, in the Palatine of Cracow, which increaſes and decreaſes with the moon, are ſaid to be wonderful for the preſervation of life; and it is reported, that the neighbouring inhabitants commonly live to 100, and ſome of them to 150 years of age. This ſpring is inflammable, and by applying a torch to it, it flames like the ſubtleſt ſpirit of wine. The flame, however, dances on the ſurface, without heating the water; and if left unextinguiſhed, it communicates itſelf, by ſubterraneous conduits, to the roots of trees, in a neighbouring wood, which it

it conſumes; and about 35 years ago, the flames are ſaid to have laſted for three years, becauſe they could be entirely extinguiſhed.

RIVERS.] The chief rivers of Poland are, the Viſtula or Weyſel, the Neiſter, Neiper, or Boriſthenes, the Bog, and Dwina.

LAKES.] The chief of the few lakes contained in Poland, is Gopto, in the Palatinate of Byzeſty; and Birals, or the White Lake, which is ſaid to dye thoſe who waſh in it of a ſwarthy complexion.

VEGETABLE AND ANIMAL PRODUCTIONS.] The vegetable productions of Poland have been already mentioned under the article of SOIL, though ſome are peculiar to itſelf, particularly a kind of manna (if it can be called a vegetable) which in May and June the inhabitants ſweep into ſieves with the dew, and it ſerves for food, dreſſed various ways. A great quntity of yellow amber is frequently dug up in Lithuania, in pieces as large as a man's fiſt, ſuppoſed to be the production of a reſinous pine.

The foreſts of Warſovia, or Maſovia, contain plenty of uri, or buffaloes, whoſe fleſh the Poles powder, and eſteem it an excellent diſh. Horſes, wolves, boars, the glouton, lynx, elks, and deer, all of them wild, are common in the Poliſh foreſts; and there is a ſpecies of wild horſes and aſſes, and wild oxen, that the nobility of the Ukraine, as well as natives, are fond of. A kind of wolf, reſembling a hart, with ſpots on his belly and legs, is found here, and affords the beſt furs in the country. The fleſh of the Poliſh elk forms the moſt delicious part of their greateſt feaſts. His body is of the deer-make, but much thicker and longer; the legs high, and feet broad and cloven, the horns large, rough and broad, like a wild goat's. Naturaliſts have obſerved, that upon diſſecting an elk, there was found in its head ſome large flies with its brains almoſt eaten away; and it is an obſervation ſufficiently atteſted, that in the large woods and wilderneſſes of the North, this poor animal is attacked, towards the winter chiefly, by a larger ſort of flies, that, through its ears, attempt to take up their winter quarters in its head. This perſecution is thought to affect the elk with the falling-ſickneſs, by which means it is taken which would otherwiſe prove no eaſy matter.

Poland produces a creature called bohac: it reſembles a guinea-pig, but ſeems to be of the beaver kind. They are noted for digging holes in the ground, which they enter in October, and do not come out, except occaſionally for food, till April: they have ſeparate apartments for their proviſions, lodgings, and their dead; they live together by 10 or 12 in a herd. We do not perceive that Poland contains any ſpecies of birds peculiar to itſelf; only we are told that the quails there have green legs, and that their fleſh is reckoned unwholeſome. Lithuania is rich in birds; among thoſe of prey, are the eagle and vulture. The *remiz*, or little ſpecies of titmouſe, is frequently found in thoſe parts, famous for the wonderous ſtructure of its pendent neſt, formed in the ſhape of a long purſe, with amazing art.

POPULATION, INHABITANTS, MANNERS, CUSTOMS, AND DIVERSIONS.] Some authors have ſuppoſed Poland and Lithuania to contain 14,000,000 of inhabitants: and when we conſider that the Poles have no colonies, and ſometimes have enjoyed peace for many years together, and that no fewer than 2,000,000 of Jews are ſaid to inhabit there, perhaps this calculation is not exaggerated. But ſince the partition and diſmemberment of the kingdom, the number is only 9,000,000 of which 600,000 are Jews. The provinces taken by Ruſſia are the largeſt, by the Auſtrian the moſt populous, and by the Pruſſian the moſt commercial. The Ruſſian contain 1,500,000; the Auſtrian 2,500,000; and the Pruſſian about 860,000, amounting to about 5,000,000 of ſouls ſeparated from their ancient kingdom.

The poles, in their perſons, make a noble appearance; their complexion is fair, and their ſhapes are well proportioned. They are brave, honeſt, and hoſpitable:

and their women ſprightly, yet modeſt, and ſubmiſſive to their huſbands. Their diverſions are warlike and manly; vaulting, dancing, and riding the great horſe, hunting, ſkaiting, bull and bear beating. They uſually travel on horſeback: a Poliſh gentleman will not travel a ſtone's-throw without his horſe; and they are ſo hardy, that they will ſleep upon the ground, without any bed or covering, in froſt and ſnow. The Poles never lie above ſtairs, and their apartments are not united; the kitchen is on one ſide, the ſtable on another, the dwelling-houſe on the third, and the gate in the front. They content themſelves with a few ſmall beds, and if any lodge at their houſes, they muſt carry their bedding with them. When they ſit down to dinner or ſupper, they have their trumpets and other muſic playing, and a number of gentlemen to wait on them at table, all ſerving with the moſt profound reſpect; for the nobles, who are poor, frequently find themſelves under the neceſſity of ſerving them that are rich: but their patron uſually treats them with civility, and permits the eldeſt to eat with him at his table, with his cap off; and every one of them has his peaſant boy to wait on him, maintained by the maſter of the family. At an entertainment, the Poles lay neither knives, forks, nor ſpoons, but every gueſt brings them with him; and they no ſooner ſit down to table, than all the doors are ſhut, and not opened till the company return home. It is uſual for a nobleman to give his ſervant part of his meat, which he eats as he ſtands behind him, and to let him drink out of the ſame cup with himſelf: but this is the leſs extraordinary, if it be conſidered that theſe ſervants are eſteemed his equals. Bumpers are much in faſhion, both here and in Ruſſia; nor will they eaſily excuſe any perſon from pledging them. It would exceed the bounds of this work to deſcribe the grandeur and equipages of the Poliſh nobility; and the reader may figure to himſelf an idea of all that is faſtidious, ceremonious, expenſive and ſhewy in life, to have any conception of their way of living. They carry the pomp of their attendance, when they appear abroad, even to ridicule; for it is not unuſual to ſee the lady of a Poliſh grandee, beſides a coach and ſix, with a great number of ſervants, attended by an old gentleman-uſher, an old gentlewoman for her governante, and a dwarf of each ſex to hold up her train; and if it be night, her coach is ſurrounded by a great number of flambeaux. The figure of their pomp, however, is proportioned to their eſtates; but each perſon goes as far as his income can afford.

The Poles are divided into nobles, clergy, citizens, and peaſants: the peaſants are divided into two ſorts, thoſe of the crown, and thoſe belonging to individuals. Though Poland has its princes, counts, and barons, yet the whole body of the nobility are naturally on a level, except the difference that ariſes from the public poſts they enjoy. Hence all who are of noble birth call one another *brothers*. They do not value titles of honour, but think a *gentleman of Poland* is the higheſt appellation they can enjoy. They have many conſiderable privileges; and indeed the boaſted Poliſh liberty is properly liberty to them alone, partly by the indulgence of former kings, but more generally from ancient cuſtom and preſcription. They have a power of life and death over their tenants and vaſſals, pay no taxes, are ſubject to none but the king, may chuſe whom they will for their king, and lay him under what reſtraint they pleaſe by the *pacta conventa*; and none but they, and the burghers of ſome particular towns, can purchaſe lands. In ſhort, they are almoſt entirely independent, enjoying many other privileges entirely incompatible with a well regulated ſtate; but if they engage in trade, they forfeit their nobility. Theſe great privileges make the Poliſh gentry powerful; and many of them have large territories, and, as we have ſaid, with a deſpotic power over their tenants, whom they call their ſubjects, and transfer or aſſign over with the lands, cattle, and furniture. Until Caſimir the Great, the lord could put his peaſant to death with impunity,

and

and when the latter had no children, conſidered himſelf as the heir, and ſeized all his effects. In 1347, Caſimir preſcribed a fine for the murder of a peaſant, and enacted, that in caſe of his deceaſe without iſſue, his next heir ſhould inherit. But theſe and other regulations have proved ineffectual againſt the power and tyranny of the nobles, and have been either abrogated or eluded. Some of them have eſtates of from five to thirty leagues in extent, and are alſo hereditary ſovereigns of cities, with which the king has no concern. One of their nobles poſſeſſes above 4000 towns and villages. Some of them can raiſe 8 or 10,000 men. The houſe of a nobleman is a ſecure aſylum for perſons who have committed any crime; for none muſt preſume to take them from thence by force. They have their horſe and foot guards, which are upon duty day and night before their palaces and in their antichambers, and march before them when they go abroad. They make an extraordinary figure when they come to the diet, ſome of them having 5000 guards and attendants; and their debates in the ſenate are often determined by the ſword. When great men have ſuits at law, the diet, or other tribunals decide them; yet the execution of the ſentence muſt be left to the longeſt ſword, for the juſtice of the kingdom is commonly too weak for the grandees. Sometimes they raiſe 5 or 6000 men of a ſide, plunder and burn one another's cities, and beſiege caſtles and forts; for they think it below them to ſubmit to the ſentence of judges, without a field-battle. As to the peaſants, they are born ſlaves, and have no notion of liberty. If one lord kills the peaſant of another, he is not capitally convicted, but only obliged to make reparation, by another peaſant equal in value. A nobleman who is deſirous of cultivating a piece of land builds a little wooden houſe, in which he ſettles a peaſant and his family, giving him a cow, two horſes, a certain number of geeſe, hens, &c. and as much corn as is ſufficient to maintain him the firſt year, and to improve for his own future ſubſiſtence and the advantage of his lord.

The peaſants having no property, all their acquiſitions ſerve only to enrich their maſter. They are indiſpenſably obliged to cultivate the earth; they are incapable of entering upon any condition of life that might procure them freedom, without the permiſſion of their lords; and they are expoſed to the diſmal, and frequently fatal effects of the caprice, cruelty, and barbarity of their tyrannical maſters who oppreſs them with impunity; and having the power of life and property in their hands, too often abuſe it in the moſt groſs and wanton manner, their wives and daughters being expoſed to the moſt brutal treatment. One bleſſing, however, attends the wretched ſituation of the Poliſh peaſants, which is their inſenſibility. Born ſlaves, and accuſtomed from their infancy to hardſhips and ſevere labour, the generality of them ſcarcely entertain an idea of better circumſtances and more liberty. They regard their maſters as a ſuperor order of beings, and hardly ever repine at their ſevere lot. Chearful and contented with their condition, they are ready, upon every occaſion, to ſacrifice themſelves and their families for their maſter, eſpecially if the latter takes care to feed them well. Moſt of them ſeem to think that a man can never be very wretched while he has any thing to eat. I have been the more circumſtantial in deſcribing the manners and preſent ſtate of the Poles, as they bear a near reſemblance, in many particulars, to thoſe of Europe in general during the feudal ages; but their tyranny over their tenants and vaſſals ſeems to be carried to a much greater height. Lately indeed, a few nobles of enlightened underſtandings, have ventured to give liberty to their vaſſals. The firſt who granted this freedom, was Zamoiſki, formerly great chancellor, who, in 1760, enfranchiſed ſix villages in the palatine of Maſovia, and afterwards on all his eſtates.

Upon ſigning the deed of enfranchiſement of the ſix villages, their benevolent maſters intimated ſome apprehenſions to the inhabitants, leſt encouraged by their freedom, they ſhould fall into every ſpecies of licentiouſneſs, and commit more diſ-

orders

orders than when they were ſlaves. The ſimplicity and good ſenſe of their anſwer is remarkable, " when we had no other property," returned they, " than the ſtick which we hold in our hands, we were deſtitute of all encouragement to a right conduct; and, having nothing to loſe, acted on all occaſions in an inconſiderate manner; but as ſoon as our houſes, our lands, and our cattle, are our own, the fear of forfeiting them will be a conſtant reſtraint upon our actions."

The ſincerity of this anſwer was manifeſted by the event which hath ſhewn the project to be no leſs judicious than humane; friendly to the noble's own intereſts as well as the happineſs of the peaſants, for it appears, that in the diſtricts which the new arrangement hath been introduced, the population of the villages is conſiderably increaſed, and the revenues of their eſtates augmented in a triple proportion. Prince Staniſlaus, nephew to the king of Poland, hath very lately enfranchiſed four villages near Warſaw, and hath not only emancipated his peaſants from ſlavery, but condeſcends to direct their affairs.

The inns in this country are long ſtables built with boards and covered with ſtraw, without furniture or windows; there is a chamber at one end, but none can lodge there, becauſe of flies and other vermin; ſo that ſtrangers generally chooſe rather to lodge among the horſes. Travellers are obliged to carry proviſions with them; and when foreigners want a ſupply, they apply to the lord of the village, who forthwith provides them with neceſſaries.

It may be proper to obſerve, in this place, that in this country, there are ſeveral perſons with matted or clotted hair, which conſtitutes a diſorder called *Plica Polonica*; it receives that denomination, becauſe it is conſidered as peculiar to Poland; although it is not unfrequent in Hungary, Tartary, and ſeveral adjacent nations, and inſtances of it are occaſionally to be found in other countries.

According to the obſervations of Dr. Vicat, an ingenious Swiſs phyſician long reſident in Poland, and who has publiſhed a ſatisfactory treatiſe upon this ſubject; the *Plica Polonica* is ſuppoſed to proceed from an acrid humour penetrating into the hair, which is tubular: it then exudes either from its ſides or extremities, and clots the whole together, either in ſeparate folds, or in one undiſtinguiſhed maſs. Its ſymptoms, more or leſs violent, according to the conſtitution of the patient, or malignity of the diſeaſe, are itchings, ſwellings, eruptions, ulcers, intermitting fevers, pains in the head, languor, lowneſs of ſpirits, rheumatiſm, gout, and ſometimes even convulſions, palſy, and madneſs. Theſe ſyſtems gradually decreaſe as the hair becomes affected. If the patient is ſhaved in the head, he relapſes into all the dreadful complaints which preceded the eruption of the *Plica*; and he continues to labour under them, until a freſh growth of hair abſorbs the acrid humour. This diſorder is thought hereditary, and is proved to be contagious when in a virulent ſtate.

Many phyſical cauſes have been ſuppoſed to concur in rendering the *Plica* more frequent in theſe regions than in other parts. The *firſt* cauſe is the nature of the Poliſh air, which is rendered inſalubrious by the numerous woods and moraſſes; and occaſionally derives an uncommon keenneſs even in the midſt of ſummer from the poſition of the Carpathian mountains; for the ſouthern and ſouth-eaſterly winds, which uſually convey warmth in other regions, are in this chilled in the paſſage over their ſnowy ſummits. The *ſecond* is unwholeſome water; for although Poland is not deficient in good ſprings, yet the common people uſually drink that which is neareſt at hand. The *third* cauſe is the groſs inattention of the natives to cleanlineſs; for experience ſhews, that thoſe who are not negligent in their perſons and habitations, are leſs liable to be afflicted with the plica, than others who are deficient in that particular. All theſe cauſes, and particularly the laſt, aſſiſt its propagation, inflame its ſymptoms, and protract its cure.

In

In a word, the *Plica Polonica* appears to be a contagious diſtemper; which, like the leproſy, ſtill prevails among a people ignorant in medicine, and inattentive to check its progreſs; but is rarely known in thoſe countries, where proper precautions are taken to prevent its ſpreading.

DRESS.] The dreſs of the Poles is pretty ſingular. They cut the hair of their heads ſhort, and ſhave their beards, leaving only large whiſkers. They wear a veſt which reaches down to the middle of the leg, and a kind of gown over it lined with fur and girded with a ſaſh, but the ſleeves fit as cloſe to their arm as a waiſtcoat. Their breeches are wide, and make but one piece with their ſtockings. They wear a fur cap or bonnet; their ſhirts are without collar or wriſtbands, and they wear neither ſtock nor neckcloth. Inſtead of ſhoes, they wear Turkey leather boots, with thin ſoles, and deep iron heels bent like an half moon. They carry a pole-ax, and a ſabre or cutlaſs, by their ſides. When they appear on horſeback, they wear over all a ſhort cloak, which is commonly covered with furs both within and without. The people of the beſt quality wear ſables, and others the ſkins of tygers, leopards, &c. Some of them have fifty ſuits of cloaths, all as rich as poſſible, and which deſcend from father to ſon.

Were it not for our own partiality to ſhort dreſſes, we muſt acknowledge that of the Poles to be pictureſque and majeſtic. Charles II. of England thought of introducing the Poliſh dreſs into his court, and after his reſtoration wore it for two years, chiefly for the encouragement of Engliſh broad-cloth; but diſcontinued it through his connections with the French.

The habit of the women comes very near to that of the men, a ſimple Polonaiſe, or long robe edged with fur; but ſome people of faſhion, of both ſexes, affect the French or Engliſh modes. As to the peaſants, in winter they wear a ſheep's-ſkin with the wool inwards, and in ſummer a thick coarſe cloth; but as to linen, they wear none. Their boots are the rinds of trees wrapped about their legs, with the thicker parts to guard the ſoles of their feet. The women have a watchful eye over their daughters, and in the diſtrict of Samogitia particularly, make them wear little bells before and behind, to give notice where they are, and what they are doing.

RELIGION.] The number of Proteſtants, conſiſting of Lutherans and Calviniſts, in the republic of Poland, is very conſiderable; and when theſe are joined to the Greek church, the whole are called DISSIDENTS. At the ſame time, the Poliſh nobility, and the bulk of the nation, are tenacious of the Roman catholic religion, even to enthuſiaſm. The treaty of Oliva, which was concluded in 1660, and tolerated the Diſſidents, was guaranteed by the principal powers in Europe; but has ſince been ſo far diſregarded by the Poles, that about the year 1724, they made a public maſſacre under the ſanction of law, of the proteſtants at Thorn, for which no ſatisfaction has been as yet obtained. The ſame may be ſaid of the other numerous proviſions made for the protection of the Proteſtants, who were perſecuted, when Jews, Turks, and infidels of every kind, have been tolerated and encouraged. The monaſteries in Poland are by ſome writers ſaid to be 576, and the nunneries 177, beſides 246 ſeminaries or colleges, and 31 abbeys. The clergy are poſſeſſed of a very large proportion of the lands and revenues of the kingdom. The Poliſh clergy, in general, are illiterate bigots, and the monks are ſome of the moſt profligate of mankind. They are often ſeen drunk, and led from taverns, without apprehending any diſgrace to their order, or dreading the cenſure of their ſuperiors, who require equal indulgence. After what has been ſaid, the reader cannot be at a loſs to account for the vaſt ſway which the popiſh clergy have had in Poland at different periods, notwithſtanding the treaties and capitulations which have been made in favour of the proteſtants and the members of the Greek church. Indeed,

it has been chiefly owing to the influence and conduct of the popiſh clergy, that the peaſants in Poland have been reduced to ſuch a ſtate of wretched ſlavery.

The principles of Socinianiſm made a very early and conſiderable progreſs in Poland. However, before Socinus came into Poland, it is computed that there were thirty-two congregations in that republic who denied the doctrine of the Trinity. A tranſlation of the Bible into the Poliſh language was publiſhed in 1572; and two years after, under the direction of the ſame perſons, the catechiſm, or confeſſion of the Unitarians, was publiſhed at Cracow. The abilities and writings of Socinus greatly contributed to the extenſive propagation of his opinions; but though the Socinians in Poland have been very numerous, they have at different times been greatly perſecuted. However, it was lately reſolved between the republic and the partitioning powers, that all Diſſidents ſhould henceforth enjoy the free exerciſe of their religion, but continue excluded from the diet, the ſenate, and the permanent council. They are to have churches, but without bells; alſo ſchools and ſeminaries of their own, and are capable of ſitting in the inferior courts of juſtice.

ARCHBISHOPRICKS AND BISHOPRICKS.] Poland contains two archbiſhopricks; Gneſna and Lemburg. The archbiſhop of Gneſna, beſides being primate, and, during an inter-reign, prince-regent of the kingdom, is always a cardinal. The other biſhops, particularly of Cracow, enjoy great privileges and immunities.

LANGUAGE.] The Poliſh language is a dialect of the Sclavonic, and is both harſh and unharmonious, on account of the vaſt number of conſonants it employs, ſome of their words having no vowels at all. The Lithuanians and Livonians have a language full of corrupted Latin words; but the Ruſſian and German tongues are underſtood in the provinces bordering on thoſe countries.

LEARNING AND LEARNED MEN.] Though Copernicus, the great reſtorer of the true aſtronomical ſyſtem, Vorſtius, and ſome other learned men, were natives of Poland, yet many circumſtances in this country are far from being favourable to learning. Latin is ſpoken, though incorrectly, by the common people in ſome provinces. But the contempt which the nobility, who place their chief importance in the privileges of their rank, have ever ſhewn for learning, the ſervitude of the lower people, and the univerſal ſuperſtition among all ranks of men, theſe circumſtances have wonderfully retarded, and, notwithſtanding the liberal efforts of his preſent majeſty, ſtill continue to retard the progreſs of letters in this kingdom. However, of late, a taſte for ſcience hath ſpread itſelf among the nobles, and begins to be regarded as an accompliſhment.

UNIVERSITIES.] The univerſities of Poland are thoſe of Cracow, Wilna, and Poſna or Poſen. The firſt conſiſts of eleven colleges, and has the ſuperviſorſhip of fourteen grammar-ſchools diſperſed through the city, the number of ſtudents in 1778, amounted to 600. Wilna was under the ſuperintendance of the Jeſuits, but ſince their ſuppreſſion the king hath eſtabliſhed a committee of education, who appoint profeſſors, and direct their ſalaries and ſtudies: that of Poſna, was rather a Jeſuit's college than an univerſity.

ANTIQUITIES AND CURIOSITIES, NATURAL AND ARTIFICIAL.] The frequent incurſions of the Tartars, and other barbarous nations into Poland, probably forced the women ſometimes to leave their children expoſed in the woods, where we muſt ſuppoſe they were nurſed by bears and other wild beaſts, otherwiſe it is difficult to account for their ſubſiſtence. It is certain that ſuch beings have been found in the woods both of Poland and Germany, diveſted of almoſt all the properties of humanity but the form. When taken, they generally went on all fours: but it is ſaid that ſome of them have, by proper management, attained to the uſe of ſpeech.

The

The ſalt mines of Poland conſiſt of wonderful caverns, ſeveral hundred yards deep, at the bottom of which are many intricate windings and labyrinths. Out of theſe are dug four different kinds of ſalts; one extremely hard, like cryſtal; another ſofter, but clearer; a third white, but brittle; theſe are all brackiſh, but the fourth is ſomewhat freſher. Theſe four kinds are dug in different mines, near the city of Cracow; on one ſide of them is a ſtream of ſalt-water, and on the other one of freſh. The revenue ariſing from thoſe, and other ſalt-mines, is very conſiderable, and formed part of the royal revenue before ſeized by Auſtria; the annual average profit of thoſe of Wiclitzka, eight miles from Cracow, was about 98,000l. ſterling. Out of ſome mines at Itza, about 70 miles north-eaſt of Cracow, are dug ſeveral kinds of earth, which are excellently adapted to the potter's uſe, and ſupply all Poland with earthen ware. Under the mountains adjoining to Kiow, in the deſerts of Podolia, are ſeveral grottos, where a great number of human bodies are preſerved, though buried a vaſt number of years ſince, being neither ſo hard nor ſo black as the Egyptian mummies. Among them are two princes, in the habits they uſed to wear. It is thought that this preſerving quality is owing to the nature of the ſoil, which is dry and ſandy. Poland can boaſt of few antiquities, as old Sarmatia was never perfectly known to the Romans themſelves. Its artificial rarities are but few, the chief being the gold, ſilver, and enamelled veſſels, preſented by the kings and prelates of Poland, and preſerved in the cathedral of Gneſna.

CITIES, TOWNS, FORTS, AND OTHER EDIFICES, PUBLIC AND PRIVATE. Warſaw lies on the Viſtula, and almoſt in the centre of Poland. It is the royal reſidence, and contains many magnificent palaces, and other buildings, beſides churches and convents. It is ſaid to contain near 70,000 inhabitants, but a great number are foreigners. The ſtreets are ſpacious but ill paved, and the greateſt part of the houſes, particularly the ſuburbs, are mean wooden hovels. The city exhibits a ſtrong contraſt of wealth and poverty, as doth every part of this unhappy country. It has little or no commerce. The ſame may be ſaid of Cracow, the ancient capital; for we are told, that notwithſtanding it lies in the neighbourhood of the rich ſalt mines, and it is ſaid to contain fifty churches and convents, its commerce is inconſiderable. The city ſtands in an extenſive plain watered by the Viſtula, and with the ſuburbs occupies a vaſt ſpace of ground, but all together ſcarcely contain 16,000 ſouls. It is ſurrounded with high brick walls, ſtrengthened with round and ſquare towers in the ancient ſtyle of fortification, and is garriſoned with 600 Ruſſians. Grodno, though not the capital, is the principal town in Lithuania, containing ruined palaces, falling houſes, and wretched hovels, with about 7000 inhabitants; 1000 of which are Jews, and 3000 are employed in new manufactures of cloths, camblets, linen, cotton, ſilk, ſtuffs, &c. eſtabliſhed there by the king in 1776. He hath alſo eſtabliſhed in this place an academy of phyſic for Lithuania, in which ten ſtudents are inſtructed for phyſic, and twenty for ſurgery, all taught and maintained at his own expence.

Dantzic is the capital of Poliſh Pruſſia, and is famous in hiſtory on many accounts, particularly that of its being formerly at the head of the Hanſeatic aſſociation, commonly called the Hanſe-towns. It is ſituated on the Viſtula, near five miles from the Baltic, and is a large, beautiful, populous city; its houſes generally are five ſtories high; and many of its ſtreets are planted with cheſnut-trees. It has a fine harbour, and is ſtill a moſt eminent commercial city, although it ſeems to be ſomewhat paſt its meridian glory, which was probably about the time that the preſident de Thou wrote his much eſteemed *Hiſtoria ſui Temporis*, wherein, under the year 1607, he ſo highly celebrates its commerce and grandeur. It is a republic, claiming a ſmall adjacent territory about forty miles round it, which were under the protection of the king and the republic of Poland. Its magiſtracy, and the majority of its inhabitants, are Lutherans; although the Romaniſts and Calviniſts are

equally tolerated in it. It is rich, and has 26 pariſhes, with many convents and hoſpitals. The inhabitants have been computed to amount to 200,000; but later computations fall very conſiderably ſhort of it; as appears by its annual bill of mortality, exhibited by Dr. Buſching, who tells us, that in the year 1752, there died but 1846 perſons. Its own ſhipping is numerous; but the foreign ſhips conſtantly reſorting to it are more ſo, whereof 1014 arrived there in the year 1752; in which year alſo 1288 Poliſh veſſels came down the Viſtula, chiefly laden with corn, for its matchleſs granaries; from whence that grain is diſtributed to many foreign nations: Poland being juſtly deemed the greateſt magazine of corn in all Europe, and Dantzic the greateſt port for diſtributing it: beſides which, Dantzic exports great quantities of naval ſtores, and vaſt varieties of other articles. Dr. Buſching affirms, that it appears from ancient records, as early as the year 997, that Dantzic was a large commercial city, and not a village or inconſiderable town, as ſome pretend.

The inhabitants of Dantzic have often changed their maſters, and have ſometimes been under the protection of the Engliſh and Dutch; but generally have ſhewn a great predilection for the kingdom and republic of Poland, as being leſs likely to rival them in their trade, or abridge them of their immunities, which reach even to the privilege of coining money. Though ſtrongly fortified, and poſſeſſed of 150 large braſs cannon, it could not ſtand a regular ſiege, being ſurrounded with eminences. In 1734, the inhabitants diſcovered a remarkable attachment and fidelity towards Staniſlaus, king of Poland, not only when his enemies, the Ruſſians, were at their gates, but even in poſſeſſion of their city.

The reaſon why Dantzic, Thorn, and Elbing, have enjoyed privileges, both civil and religious, very different from thoſe of the reſt of Poland, is, becauſe not being able to endure the tyranny of the Teutonic knights, they put themſelves under the protection of Poland, reſerving to themſelves large and ample privileges.

This city, as well as that of Thorn, was exempted by the late king of Pruſſia from thoſe claims which he made on the neighbouring countries; notwithſtanding which, his Pruſſian majeſty, ſoon after, thought proper to ſeize on the territories belonging to Dantzic, under pretence of their having been formerly part of Poliſh Pruſſia. He then proceeded to poſſeſs himſelf of the port-duties belonging to that city, and erected a cuſtom-houſe in the harbour, where he laid arbitrary and inſupportable duties upon goods exported and imported. To complete the ſyſtem of oppreſſion, cuſtom-houſes were erected at the very gates of Dantzic, ſo that no perſons could go in or out of the town, without being ſearched in the ſtricteſt manner. Such is the treatment which the city of Dantzic has received, though few cities have ever exiſted, which have been comprehended in ſo many general and particular treaties, and whoſe rights and liberties have been ſo frequently ſecured, and guaranteed by ſo many great powers, and by ſuch a long and regular ſucceſſion of public acts, as that of Dantzic has been. In the year 1784, it was blockaded by his troops on various pretences; by the interpoſition of the empreſs of Ruſſia, and of the king of Poland, they were withdrawn, and a negociation carried on by deputies at Warſaw; which was concluded on the 7th of September, by which, as now acceded to by the citizens, the place and trade of the city are to be reſtored to its former ſtability. The city of Thorn was alſo treated by the king of Pruſſia in the ſame unjuſt and oppreſſive manner, and is now added to his dominions.

COMMERCE AND MANUFACTURES.] Some linen and woollen cloths, and hard wares, are manufactured in the interior parts of Poland; but commerce is entirely confined to the city of Dantzic, and other towns on the Viſtula and the Baltic.

The

The exports are corn, hemp, flax, horſes, about 100,000 oxen yearly, peltry, timber, honey, and other leſs conſiderable articles; the value of which amounted in 1777, to thirty millions of dollars. The imports, conſiſting of wines, and other foreign luxuries, conſiderably exceeded that ſum.

CONSTITUTION AND GOVERNMENT.] Whole volumes have been written upon this ſubject. It differs little from an ariſtocracy, hence Poland has been called a kingdom and commonwealth. The king is the head of the republic, and is elected by the nobility and clergy in the plains of Warſaw. They elect him on horſeback; and in caſe there ſhould be a refractory minority, the majority has no control over them, but to cut them in pieces with their ſabres; but if the minority are ſufficiently ſtrong, a civil war enſues. Immediately after his election, he ſigns the *pacta conventa* of the kingdom, by which he engages to introduce no foreigners into the army or government; ſo that in fact he is no more than the preſident of the ſenate, which is compoſed of the primate, the archbiſhop of Lemburg, fifteen biſhops, and 130 laymen, conſiſting of the great officers of ſtate, the Palatines, and Caſtellans.

The diets of Poland are ordinary and extraordinary; the former meet once in two, and ſometimes three years; the latter is ſummoned by the king, upon critical emergencies; but one diſſenting voice renders all their deliberations ineffectual.

The ſtaroſts properly are governors and judges, in particular ſtaroſties or diſtricts, though ſome enjoy this title without any juriſdiction at all. The Palatines and Caſtellans, beſides being ſenators, are lord lieutenants, and deputy-lieutenants, in their reſpective Palatinates.

Previous to a general diet, either ordinary or extraordinary, which can ſit but ſix weeks, there are dietines, or provincial diets, held in different diſtricts. The king ſends them letters containing the heads of the buſineſs that is to be treated of in the general diet. The gentry of each palatinate may ſit in the dietine, and chuſe nuncios or deputies, to carry their reſolutions to the grand diet. The great diet conſiſts of the king, ſenators, and deputies from provinces and towns, viz. 178 for Poland and Lithuania, and ſeventy for Pruſſia; and it meets twice at Warſaw, and once at Grodno, by turns, for the conveniency of the Lithuanians, who made this one of the articles of their union with Poland.

The king may nominate the great officers of ſtate, but they are accountable only to the ſenate; neither can he diſplace them when once appointed. When he is abſent from Poland, his place is ſupplied by the archbiſhop of Gneſna, and if that ſee is vacant, by the biſhop of Ploſko.

The ten great officers of ſtate in Poland, who are ſenators, are, the two great marſhals, one of Poland, the other of Lithuania; the chancellor of the kingdom, and the chancellor of the duchy; the vice-chancellor of the kingdom, and the vice-chancellor of the duchy; the great general, the great treaſurer of the kingdom, and the ſub-marſhal, or marſhal of the court of the duchy.

Such are the outlines of this motley conſtitution, which was new-modelled with almoſt every new king, according to the *pacta conventa* which he is obliged to ſign; ſo that nothing can be ſaid of it with certainty, there being lately a total diſſolution of all order in Poland, through the influence of ſome of the neighbouring powers, intereſted to foment anarchy and confuſion in the Poliſh councils: and many of the firſt nobility do not bluſh to receive penſions from foreign courts. It muſt, however, be acknowledged, that in the imperfect ſketch I have exhibited, we can diſcern the great outlines of a noble and free government. The precautions taken to limit the king's power, and yet inveſt him with an ample prerogative, are worthy of a wiſe people. The inſtitutions of the diet and dietines are favourable to public liberty, as are many other proviſions in the republic: but it laboured even in its beſt ſtate under incurable diſorders. The exerciſe of the *veto*, or the

tribunitial negative, that is veſted in every member of a diet or dietine, muſt always be deſtructive of order and goverment. It is founded, however, upon Gothic principles, and that unlimited juriſdiction which the great lords, in former ages, uſed to enjoy all over Europe. According to Mr. Coxe, the privilege in queſtion is not to be found in any period of the Poliſh hiſtory antecedent to the reign of John Caſimir. It was under his adminiſtration, in the year 1652, when the diet of Warſaw was debating upon tranſactions of the utmoſt importance which required a ſpeedy determination, that Sicinſki, nuncio of Upita in Lithuania, cried out, "I ſtop the proceedings." Having uttered theſe words, he quitted the aſſembly, and, repairing immediately to the chancellor, proteſted, that as many acts as had been propoſed and carried contrary to the conſtitution of the republic, if the diet continued to ſit, he ſhould conſider it as an infringement of the laws. The members were thunderſtruck at a proteſt of this nature, hitherto unknown. Warm debates took place about the propriety of continuing or diſſolving the diet; at length, however, the venal and diſcontented faction, who ſupported the proteſt, obtained the majority; and the aſſembly broke up in great confuſion. Such inſolence in an individual, taking upon him to diſſolve the ſupreme aſſembly of the kingdom, could never have been ſuffered, had it it not been for the venal and diſcontented factions, with which the nation was at that time diſtracted. Ever ſince that time, the privilege of every member to ſtop the proceedings of the diet has continued, which is done by the ſingle word *veto*, "I forbid."

The want of ſubordination in the executive parts of the conſtitution, and the rendering noblemen independent and unaccountable for their conduct, is a blemiſh which perhaps may be impracticable to remove, as it can be done only with their own conſent. After all, when we examine the beſt accounts of the preſent conſtitution of Poland, and compare them with the ancient hiſtory of Great Britain, and other European kingdoms, we may perceive a wonderful ſimilarity between what theſe were formerly, and what Poland is at preſent. This naturally leads us to infer, that the government of Poland cannot be otherwiſe improved than by the introduction of arts, manufactures, and commerce, which would render the common people independent on the nobility, and prevent the latter from having it in their power to annoy their ſovereign, and ſo maintain thoſe unequal privileges which are ſo hurtful to the community. If a nobleman of great abilities, and who happened to poſſeſs an extenſive territory within the kingdom, ſhould be elected ſovereign, he might perhaps, by a proper uſe of the prerogatives of diſpoſing of all places of truſt and profit, and of ennobling the plebeians, eſtabliſh the ſucceſſion in his own family, and deliver the Poles from thoſe perpetual convulſions which generally attend elective kingdoms.

Indeed the partitioning powers, beſide diſmembering the beſt provinces of Poland, proceeded to change and fix the conſtitution and government, under pretence of amending it; confirming all its defects, and endeavouring to perpetuate the principles of anarchy and confuſion. They inſiſted upon four cardinal laws to be ratified, which was at laſt obtained. *Firſt*, "that the crown of Poland ſhall be for ever elective, and all order of ſucceſſion proſcribed:" thus the excluſion of a king's ſon and grandſon, removes the proſpect of an hereditary ſovereignty, and entails upon the kingdom all the evils inſeparable from an elective monarchy. By the *ſecond*, "that foreign candidates to the throne ſhall be excluded, and for the future, no perſon can be choſen king of Poland, except a native Pole of noble origin, and poſſeſſing land in the kingdom," the houſe of Saxony, and all foreign princes who might be likely to give weight to Poland by their hereditary dominions, and reſtore its provinces and liberties, are ſet aſide. By the *third*, "the goverment of Poland ſhall

be

be for ever free, independent, and of a republican form; the *liberum veto*, and all the exorbitant privileges of the equeſtrian order are confirmed in their utmoſt latitude. And by the *fourth*, "a permanent council ſhall be eſtabliſhed, in which the executive power ſhall be veſted;" and in this council the equeſtrian order, hitherto excluded from the adminiſtration of affairs in the interval of diets, ſhall be admitted, ſo that the prerogatives of the crown are ſtill farther diminiſhed: but this change of the conſtitution was intended by the partitioning powers to ſerve their own purpoſes, and give a large ſcope to influence and faction over that part of the kingdom they had not ſeized.

REVENUES.] Though the king of Poland is ſtinted in the political exerciſe of his prerogative, yet his revenue is ſufficient to maintain him and his houſehold with great ſplendor, as he pays no troops, or officers of ſtate, nor even his body-guards. The preſent king had 1,000,000 and a half of florins ſettled upon him by the commiſſion of ſtate; and the income of his predeceſſors generally amounted to 140,000l. ſterling. The public revenues aroſe chiefly from the crown-lands, the ſalt-mines in the palatinate of Cracow, now in Auſtrian Poland, which alone amounted to nearly 100,000l. ſterling; ancient tolls and cuſtoms, particularly thoſe of Elbing and Dantzic, the rents of Marienburg, Dirſhau, and Rogenhus, and of the goverment of Cracow and diſtrict of Niepoliomicz.

Weſtern Pruſſia was the greateſt loſs to Poland, as by the diſmemberment of that province, the navigation of the Viſtula depends entirely upon the king of Pruſſia. This was a fatal blow to the trade of Poland, for Pruſſia has laid ſuch heavy duties on the merchandize paſſing to Dantzic, as greatly to diminiſh the trade of that town, and to transfer a conſiderable part of it to Memel and Koningſburgh.

By the diſmemberment, Poland loſt near half her annual income. To ſupply this deficiency, it became neceſſary to new-model and increaſe the taxes.	£.	ſterl.	
In 1775, all the impoſts amounted to -	323,012	0	0
The neat revenue of the king is - -	194,500	0	0
Out of which he only pays his houſehold expences, and menial ſervants. It ariſes from his royal demeſnes, ſtaroſties, and 74,074l. out of the treaſury.			
Whole revenue - - -	443,938	0	0
Deduct the king's revenue for privy purſe -	194,500	0	0
For army, ſtate officers, and all other charges -	249,438	0	0

MILITARY STRENGTH.] The innate pride of the Poliſh nobility is ſuch, that they always appear in the field on horſeback; and it is ſaid that Poland can raiſe 100,000, and Lithuania 70,000 cavalry, and that with eaſe; but it muſt be underſtood that ſervants are included. As to their infantry, they are generally hired from Germany, but are ſoon diſmiſſed, becauſe they muſt be maintained by extraordinary taxes, of which the Poliſh grandees are by no means fond. As to the ordinary army of the Poles, it conſiſted in 1778, of 12,310 men in Poland, and 7465 in Lithuania. The empreſs of Ruſſia maintains in the country 10,000 ſoldiers, and every garriſon is compoſed of Ruſſians and natives; 1,000 of the former are ſtationed at Warſaw. Theſe hold the nobles in ſubjection, and the king himſelf is little more than a viceroy, while the Ruſſian ambaſſador regulates the affairs of the kingdom under the direction of his court. The poſpolite conſiſts of all the nobility of the kingdom and their followers, except the chancellor, and the ſtaroſts or governors of frontier places; and they may be called by the king into the field upon

upon extraordinary occaſions; but he cannot keep them above ſix weeks in arms, neither are they obliged to march above three leagues out of the kingdom.

The Poliſh huſſars are the fineſt and moſt ſhowy body of cavalry in Europe; next to them are the pancerns; and both theſe bodies wear defenſive armour of coats of mail and iron caps. The reſt of their cavalry are armed with muſkets and heavy ſcymitars. After all that has been ſaid, the Poliſh cavalry are extremely inefficient in the field; for though the men are brave, and their horſes excellent, they are ſtrangers to diſcipline; and when drawn out, notwithſtanding all the authority their crown-general, their other officers, and even the king himſelf, have over them, they are oppreſſive and deſtructive to the court. It is certain, notwithſtanding, that the Poles may be rendered excellent troops by diſcipline, and that on various occaſions, particularly under John Sobieſki, they made as great a figure in arms as any people in Europe, and proved the bulwark of Chriſtendom againſt the infidels. It did not ſuit the Saxon princes, who ſucceeded that hero, to encourage a martial ſpirit in the Poles, whom they perpetually overawed with their electoral troops; nor indeed to introduce any reformation among them, either civil or military; the effects of which conduct have been ſince ſeverely felt in that country.

ORDERS.] The order of the "*White Eagle*," was firſt inſtituted by Uladiſlaus in the year 1325, but revived by Auguſtus I. in the year 1705, to attach to him ſome of the Poliſh nobles who, he feared, were inclined to Staniſlaus his competitor; it was conferred alſo on the czar Peter the Great of Ruſſia. The collar is compoſed of eagles diſplayed, and annulets linked together, having pendent to it the badge, which is a croſs of eight points enamelled, gold, bordered white and cantoned with a ſmaller croſs, having a bead on each point charged on one ſide with an eagle, white diſplayed, having over its head an imperial crown, and on the reverſe the king's cypher with this motto, "*Pro fide, rege, et lege.*" The knights commonly wear the badge pendent to a broad blue ribband, worn ſaſh-ways from the right ſhoulder and under the left arm, and a ſtar of eight points embroidered in gold and ſilver alternately on the left ſide of their coat. The preſent king inſtituted the order of "*St. Staniſlaus*," ſoon after his election to the crown in 1765. The badge is a gold croſs enamelled red, and on the centre of it is a medallion with the image of St. Staniſlaus enamelled in proper colours. It is worn pendent to a red ribband edged with white. The ſtar of the order is ſilver, and in the centre is a cypher of S. A. R. (Staniſlaus Auguſtus Rex) encircled with the motto "*Præmiando incitat.*"

HISTORY.] Poland of old was poſſeſſed by the Vandals, who were afterwards partly expelled by the Ruſs and Tartars. It was divided into many ſmall ſtates or principalities, each almoſt independent of another, though they generally had ſome prince who was paramount over the reſt. In the year 700, the people through the oppreſſion of their petty chiefs, gave the ſupreme command, under the title of duke, to Cracus, the founder of the city of Cracow. His poſterity failing, in the year 830, a peaſant, one Piaſtus, was elected to the ducal dignity. He lived to the age of 120 years, and his reign was ſo long and auſpicious, that every native Pole who has been ſince elected king is called a Piaſt. From this period, for ſome centuries, we have no very certain records of the hiſtory of Poland. The title of duke was retained till the year 999, when Boleſlaus aſſumed the title of king, and conquered Moravia, Pruſſia, and Bohemia, making them tributary to Poland. Boleſlaus II. added Red Ruſſia to Poland, by marrying the heireſs of that duchy, anno 1059. Jagello, who in 1384, mounted the throne, was grand-duke of Lithuania, and a Pagan; but on his being elected king of Poland, he not only became a Chriſtian, but was at pains to bring over his ſubjects to that religion. He united his hereditary dominions to thoſe of Poland, which gave ſuch influence to his poſterity over the hearts

of the Poles, that the crown was preſerved in his family until the male line became extinct in Sigiſmund Auguſtus, in 1572. At this time two powerful competitors appeared for the crown of Poland. Theſe were Henry, duke of Anjou, brother to Charles IX. king of France, and Maximilian of Auſtria. The French intereſt prevailed; but Henry had not been four months on the throne of Poland, when his brother died, and he returned privately to France, which kingdom he governed by the name of Henry III. The party who had eſpouſed Maximilian's intereſt endeavoured once more to revive his pretenſions; but the majority of the Poles being deſirous to chuſe a prince who might reſide among them, made choice of Stephen Batori prince of Tranſylvania; who, in the beginning of his reign, meeting with ſome oppoſition from the Auſtrian faction, took the wiſeſt method to eſtabliſh himſelf on the throne, by marrying Anne, the ſiſter of Sigiſmund Auguſtus, and of the royal houſe of the Jagellons. Stephen produced a great change in the military affairs of the Poles, by eſtabliſhing a new militia, compoſed of the Coſſacs, a rough and barbarous race of men, on whom he beſtowed the Ukraine. Upon his death, in 1586, the Poles choſe Sigiſmund, ſon of John king of Sweden, by Catharine ſiſter of Sigiſmund II. for their king.

Sigiſmund was crowned king of Sweden after his father's death; but being expelled, as we have already ſeen in the hiſtory of Sweden, by the Swedes, a long war enſued between them and the Poles, and terminated in favour of the latter. Sigiſmund being ſecured in the throne of Poland, aſpired to that of Ruſſia as well as Sweden; but after long wars, he was defeated in both views. He was afterwards engaged in a variety of unſucceſsful wars with the Turks and the Swedes. At laſt a truce was concluded under the mediation of France and England; but the Poles were forced to agree, that the Swedes ſhould keep Elbing, Memel, Branuſberg and Pillau, together with all they had taken in Livonia. In the year 1623, Sigiſmund died, and Uladiſlaus his ſon ſucceeded. This prince was ſucceſsful both againſt the Turks and the Ruſſians, and obliged the Swedes to reſtore all the Poliſh dominions they had taken in Pruſſia. His reign, however, was unfortunate, by his being inſtigated, through the avarice of his great men, to encroach upon the privileges of the Coſſacs in the Ukraine. As the war which followed was carried on againſt the Coſſacs upon ambitious and perfidious principles, the Coſſacs, who are naturally a brave people, became deſperate; and upon the ſucceſſion of John II. brother to Uladiſlaus, the Coſſac general Schmielinſki defeated the Poles in two great battles, and at laſt forced them to a diſhonourable peace. It appears that, during the courſe of this war, the Poliſh nobility behaved like the worſt of ruffians, and their conduct being highly condemned by John, they as highly condemned the peace he had concluded. While the jealouſy hereby occaſioned, continued, the Ruſſians came to a rupture with the Poles; and being joined by many of the Coſſacs, they, in the year 1654, took Smolenſko. This was followed by the taking of Wilna, and other places; and they committed horrid ravages in Lithuania. Next year, Charles X. of Sweden, after over-running Great and Little Poland, entered into Poliſh Pruſſia, all the towns of which received him, except Dantzic. The reſiſtance made by that city gave the Poles time to re-aſſemble, and their king, John Caſimir, who had fled into Sileſia, was joined by the Tartars, as well as Poles; ſo that the Swedes, who were diſperſed through the country, were every where cut in pieces. The Lithuanians, at the ſame time, diſowned the allegiance they had been forced to pay Charles, who returned to Sweden with no more than a handful of his army. It was during this expedition, that the Dutch and Engliſh protected Dantzic, and the elector of Brandenburgh acquired the ſovereignty of Ducal Pruſſia, which had ſubmitted to Charles. Thus the latter loſt Poland, of which he had made an almoſt complete conqueſt.

The

The treaty of Oliva was begun after the Swedes had been driven out of Cracow and Thorn, by which Royal Pruſſia was reſtored to the Poles. They were, however, forced to quit all pretenſions to Livonia, and to cede Smolenſko, Kiow, and the duchy of Siveria, to the Ruſſians.

During theſe tranſactions, the Poliſh nobility grew very uneaſy with their king. Some of them were diſſatisfied with the conceſſions he had made to the Coſſacs, many of whom had thrown off the Poliſh yoke; others taxed him with want of capacity; and ſome with an intention to rule by a mercenary army of Germans. Caſimir, who very poſſibly had no ſuch intentions, and was fond of retirement and ſtudy, finding that cabals and factions increaſed every day, and that he himſelf might fall a ſacrifice to the public diſcontent, abdicated his throne, and died abbot of St. Germains in France, having employed his latter days in Latin poetical compoſitions, which are far from being deſpicable.

The moſt remote deſcendants of the ancient kings ending in John Caſimir, many foreign candidates preſented themſelves for the crown of Poland; but the Poles choſe for their king a private gentleman of little intereſt, and leſs capacity, one Michael Wieſnowiſki, becauſe he was deſcended from a Piaſt. His reign was diſgraceful to Poland. Large bodies of the Coſſacs had put themſelves under the protection of the Turks, who conquered all the provinces of Podolia, and took Kaminieck, till then thought impregnable. The greateſt part of Poland was then ravaged, and the Poles were obliged to pay an annual tribute to the ſultan. Notwithſtanding thoſe diſgraceful events, the credit of the Poliſh arms was in ſome meaſure maintained by John Sobieſki, the crown-general, a brave and active commander, who had given the Turks ſeveral defeats. Michael dying in 1673, Sobieſki was choſen king; and, in 1676, he was ſo ſucceſsful againſt the infidels, that he forced them to remit the tribute they had impoſed upon Poland; but they kept poſſeſſion of Kaminieck. In 1683, Sobieſki, though he had not been well treated by the houſe of Auſtria, was ſo public-ſpirited, as to enter into the league that was formed for the defence of Chriſtendom againſt the infidels, and acquired immortal honour, by obliging the Turks to raiſe the ſiege of Vienna, and making a terrible ſlaughter of the enemy; for all which glorious ſervices, and driving the Turks out of Hungary, he was ungratefully requited by the emperor Leopold.

Sobieſki returning to Poland, continued the war againſt the Turks, but unfortunately quarrelled with the ſenate, who ſuſpected that he wanted to make the crown hereditary in his family. He died, after a glorious reign, in 1696.

Poland fell into great diſtractions upon Sobieſki's death. Many confederacies were formed, but all parties ſeemed inclined to exclude the Sobieſki family. In the mean while, Poland was inſulted by the Tartars, and her crown was in a manner put up to ſale. The prince of Conti, of the blood royal of France, was the moſt liberal bidder; but while he thought the election almoſt ſure, he was diſappointed by the intrigues of the queen-dowager, in favour of her younger ſon prince Alexander Sobieſki, for which ſhe was driven from Warſaw to Dantzic. All of a ſudden, Auguſtus, elector of Saxony, ſtarted up as a candidate, and after a ſham election, being proclaimed by the biſhop of Cujavia, he took poſſeſſion of Cracow with a Saxon army, and actually was crowned in that city in 1697. The prince of Conti made ſeveral unſucceſsful efforts to re-eſtabliſh his intereſt, and pretended that he had been actually choſen; but he was afterwards obliged to return to France, and the other powers of Europe ſeemed to acquieſce in the election of Auguſtus. The manner in which he was driven from the throne by Charles XII. of Sweden (who procured the advancement of Staniſlaus), and afterwards reſtored by the czar, Peter the Great, has been already related in the hiſtory of Sweden. It was not till the year 1712 that Auguſtus was fully confirmed on the throne, which he held upon

rious and diſagreeable terms. The Poles were naturally attached to Staniſlaus, and were perpetually forming conſpiracies and plots againſt Auguſtus, who was obliged to maintain his authority by means of his Saxon guards and regiments. In 1725, his natural ſon, prince Maurice, afterwards the famous count Saxe, was choſen duke of Courland; but Auguſtus was not able to maintain him in that dignity againſt the power of Ruſſia and the jealouſy of the Poles. Auguſtus died, after an unquiet reign, in 1733, having done all he could to inſure the ſucceſſion of Poland, to his ſon Auguſtus II. (or, as he is called by ſome, III.) This occaſioned a war, in which the French king maintained the intereſt of his father-in-law Staniſlaus, who was actually re-elected to the throne by a conſiderable party, of which the prince primate was the head. But Auguſtus, entering Poland with a powerful army of Saxons and Ruſſians, compelled his rival to retreat into Dantzic, from whence he eſcaped with great difficulty into France. I have, in the hiſtory of Germany, mentioned the war between Auguſtus II. as elector of Saxony, or rather as the ally of Ruſſia and Auſtria, and his late Pruſſian majeſty. It is ſufficient to ſay, that though Auguſtus was a mild, moderate prince, and did every thing to ſatisfy the Poles, he never could gain their hearts: and all he obtained from them was merely ſhelter, when his Pruſſian majeſty drove him from his capital and electorate. Auguſtus died at Dreſden, in 1763, upon which count Staniſlaus Poniatowſki was choſen king, by the name of Staniſlaus Auguſtus; though it is ſaid that the election was conducted irregularly, and that he obtained the crown chiefly through the influence of the empreſs of Ruſſia. He is a man of abilities and addreſs; but from various concurring cauſes, he has had the unhappineſs to ſee Poland, during his reign, a ſcene of deſolation and calamity. In 1766, two Poliſh gentlemen preſented a petition to the king, in the name of all the proteſtant nobility, and in behalf alſo of the members of the Greek church, wherein they demanded to be re-inſtated in their ancient rights and privileges, and to be placed upon the ſame footing in every reſpect with the Roman catholic ſubjects of the kingdom. "The difference of ſentiments upon ſome points of religion among Chriſtians," ſaid they in their petition, "ought not to interfere with employments of the ſtate. The different ſects of Chriſtians, although they differ in opinion among themſelves with reſpect to ſome points of doctrine, agree all in one point, that of being faithful to their ſovereign, and obedient to his orders: all the Chriſtian courts are convinced of this truth; and therefore, without having any regard to the religion they profeſs, Chriſtian princes ought only to ſeek after thoſe whoſe merit and talents make them capable of ſerving their country properly." The king gave no anſwer at this time to the petition of the diſſidents; but the matter was referred to the diet, which was held the following year, when the miniſters of the courts of Ruſſia, of London, of Berlin, and of Copenhagen, ſupported their pretenſions. The diet appeared to treat the complaints of the diſſidents with great moderation, which gave ſome flattering expectations that the affair would be happily terminated. But the intrigues of the late king of Pruſſia appear to have prevented this: for that prince, though he openly profeſſed to be a zealous defender of the cauſe of the diſſidents, yet it was manifeſt from the event, that his great aim was to promote the views of his own ambition. The intervention of the Ruſſians in the affairs of Poland alſo gave great diſguſt to all parties in the kingdom. The whole nation run into confederacies formed in diſtinct provinces; the popiſh clergy were active in oppoſing the cauſe of the diſſidents; and this unfortunate country became the theatre of the moſt cruel and complicated of all wars; partly civil, partly religious, and partly foreign. The confuſion, and devaſtation, continued in Poland during the years 1769, 1770, and 1771, whereby the whole face of the country was almoſt deſtroyed; many of the principal Poliſh families retired into foreign ſtates with their effects; and had it not

been for a body of Ruſſian troops which acted as guards to the king at Warſaw, that city had likewiſe exhibited a ſcene of plunder and maſſacre. To theſe complicated evils, were added, in the year 1770, that moſt dreadful ſcourge the peſtilence, which ſpread from the frontiers of Turkey to the adjoining provinces of Podolia, Volhinia, and the Ukraine; and in theſe provinces it is ſaid to have ſwept off 250,000 of the people. Meanwhile, ſome of the Poliſh confederates interceded with the Turks to aſſiſt them againſt their powerful oppreſſors; and a war enſued between the Ruſſians and the Turks on account of Poland. But it has been obſerved, that the conduct of the Grand Signior and of the Ottoman Porte towards the diſtreſſed Poles, were ſtrictly juſt and honourable, and the very reverſe of that of their Chriſtian, Catholic, and Apoſtolic neighbours *.

In the midſt of thoſe turbulent and diſaſtrous ſcenes, the confederates (who ever conſidered the king as unlawfully elected, and who imputed to his fatal elevation and direction, or approbation, all the various ills under which the kingdom groaned from the Ruſſian oppreſſion) planned and executed one of the moſt daring enterprizes of which modern hiſtory makes mention. I mean the attempt to aſſaſſinate the king by Kozinſki and two other chiefs, who choſe thirty-ſeven other perſons to accompany them. They obtained admiſſion into Warſaw unſuſpected or undiſcovered, by the following ſtratagem. They diſguiſed themſelves as peaſants who came to ſell hay, and artfully concealed their ſaddles, arms, and cloaths, ununder the loads of hay which they brought in waggons, the more effectually to eſcape detection.

It was on Sunday night, the 3d of September 1771, between nine and ten o'clock, when the king was returning to the palace from a viſit to his uncle prince Czartoriſki, grand chancellor of Lithuania, that he was attacked by the conſpirators, in the very ſtreets of Warſaw, who ordered his coachman to ſtop upon pain of inſtant death. They fired ſeveral ſhot into the carriage, one of which paſſed through the body of a heyduc, who endeavoured to defend his maſter from the violence of the aſſaſſins. Though fifteen or ſixteen other perſons attended his majeſty, they all baſely abandoned him. Mean while, the king had opened the door of his carriage, with a deſign of effecting his eſcape under ſhelter of the night, which was very dark. He had even alighted, when the aſſaſſins ſeized him by the hair, exclaiming in Poliſh, with horrible execrations, "We have thee now;

* In 764, the empreſs of Ruſſia tranſmitted to the court of Warſaw an act of renunciation, ſigned with her own hand, and ſealed with the ſeal of the empire, wherein ſhe declares, "That ſhe did by no means arrogate either to herſelf, her heirs and ſucceſſors, or to her empire, any right or claim to the diſtricts or territories, which were actually in poſſeſſion, or ſubject to the authority of the kingdom of Poland, or great duchy of Lithuania; but that, on the contrary, her ſaid majeſty would guarantee to the ſaid kingdom of Poland and duchy of Lithuania, all the immunities, lands, territories, and diſtricts, which the ſaid kingdom and duchy ought by right to poſſeſs, or did now actually poſſeſs; and would at all times, and for ever, maintain them in the full and free enjoyment thereof, againſt the attempts of all and every one who ſhould at any time, or on any pretext, endeavour to diſpoſſeſs them of the ſame." In the ſame year did the king of Pruſſia ſign, with his own hand, an act, wherein he declared, that he had no claims, formed no pretenſions on Poland, or any part thereof: that he renounced all claims on that kingdom, either as king of Pruſſia, elector of Brandenburg, or duke of Pomerania." In the ſame inſtrument he guarantees, in the moſt ſolemn manner, the territories and rights of Poland againſt every power whatever. The empreſs-queen of Hungary, ſo late as the month of January 1771, wrote a letter with her own hand to the king of Poland, in which ſhe gave him the ſtrongeſt aſſurances, "That her friendſhip for him and the republic was firm and unalterable: that the motion of her troops ought not to alarm him: that ſhe had never entertained a thought of ſeizing a part of his dominions, nor would even ſuffer any other power to do it."—From which, according to the political creed of princes, we may infer, that to guarantee the rights, liberties, and revenues of a ſtate, means to annihilate thoſe liberties, ſeize upon thoſe rights, and appropriate thoſe revenues to their own uſe. Such is the faith of princes, the inſtability of human politics, and of human affairs!

thy hour is come." One of them diſcharged a piſtol at him ſo very near, that he felt the heat of the flaſh, while another cut him acroſs the head with a ſabre which penetrated to the bone. They then laid hold of his majeſty by the collar, and, mounting on horſeback, dragged him along the ground between their horſes at full gallop for near five hundred paces through the ſtreets of Warſaw.

The king, after ſuffering incredible hardſhips, at laſt obtained from Kozinſki an inſtant's repoſe. They ſat down together on the ground, and his majeſty employed theſe moments in endeavouring to ſoften his conductor, in which he moſt fortunately ſucceeded, after having given him the ſtrongeſt aſſurances of his pardon and ſafety. Judging, however, that it was prudent to gain ſome aſylum without delay, and recollecting that there was a mill at ſome conſiderable diſtance, he immediately made towards it. Kozinſki knocked, but in vain; no anſwer was given: he then broke a pane of glaſs in the window, and intreated for ſhelter to a nobleman who had been plundered by robbers. The miller refuſed, ſuppoſing them to be banditti, and continued for more than half an hour to perſiſt in his denial. At length the king approached, and ſpeaking through the broken pane, endeavoured to perſuade him to admit them under his roof, adding, "If we were robbers, as you ſuppoſe, it would be very eaſy for us to break the whole window, inſtead of one pane of glaſs." This argument prevailed. They at length opened the door, and admitted his majeſty. He immediately wrote a note to general Coccei, colonel of the foot-guards. It was literally as follows: "Par une eſpece de miracle, "Je ſuis ſauvé des mains des aſſaſſins, Je ſuis ici au petit moulin de Mariemont. "Venez au plutôt me tirer d'ici. Je ſuis bleſsé, mais pas fort *.

When the meſſenger arrived with the note, the aſtoniſhment and joy was incredible. Coccei inſtantly rode to the mill, not above half a league from Warſaw, followed by a detachment of the guards. He met Kozinſki at the door with his ſabre drawn, who admitted him as ſoon as he knew him. The king had ſunk into a ſleep, cauſed by his fatigue; and was ſtretched on the ground, covered with the miller's cloak. Coccei immediately threw himſelf at his majeſty's feet, calling him his ſovereign, and kiſſing his hand. It is not eaſy to paint or deſcribe the aſtoniſhment of the miller and his family, who inſtantly imitated Coccei's example by throwing themſelves on their knees. The king returned to Warſaw in general Coccei's carriage, and reached the palace about five in the morning. His wound was found not to be dangerous, and he ſoon recovered the bruiſes and injuries which he had ſuffered during this memorable night.

So extraordinary an eſcape is ſcarce to be paralleled in hiſtory, and affords ample matter of wonder and ſurpriſe. Scarce could the nobility or people at Warſaw credit the evidence of their ſenſes, when they ſaw him return. Certainly, neither the eſcape of the king of France from Damien, or of the king of Portugal from the conſpiracy of the duke d'Aveiro, were equally amazing or improbable, as that of the king of Portugal, which I have related from authorities the higheſt and moſt inconteſtible, as well deſerving a place in this work.

The mill, rendered memorable by ſo ſingular an event, is a wretched Poliſh hovel, at a diſtance from any houſe. But the king has rewarded the miller to the extent of his wiſhes in building him a mill upon the Viſtula, and allowing him a ſmall penſion. From the relentings of Kozinſki, and his poſterior good conduct, as above related, his own life was ſaved, and he now reſides in the papal territories, with an annual penſion from the king. Pulaſki, another of the conſpirators,

* "By a kind of miracle I am eſcaped from the hands of aſſaſſins. I am now at the mill of Mariemont. Come as ſoon as poſſible, and take me from hence. I am wounded, but not dangerouſly."

diſtinguiſhed himſelf in the American ſervice, and was killed in attacking the Britiſh lines at Savannah, in 1779.

The following year, 1772, it appeared, that the king of Pruſſia, the emperor and empreſs-queen, and the empreſs of Ruſſia, had entered into an alliance to diſmember the kingdom of Poland; though Pruſſia was formerly in a ſtate of vaſſalage to Poland, and the title of king of Pruſſia was never acknowledged by the Poles till 1746. Ruſſia in the beginning of the ſeventeenth century ſaw its capital and throne poſſeſſed by the Poles, while Auſtria in 1683 was indebted to a king of Poland for the preſervation of its metropolis, and almoſt for its very exiſtence. The three allied powers, acting in concert, ſet up their formal pretenſions to the reſpective diſtricts which they had allotted for, and guaranteed to, each other: Poliſh or Weſtern Pruſſia, and ſome diſtricts bordering upon Brandenburg, for the king of Pruſſia, almoſt all the ſouth-eaſt parts of the kingdom bordering upon Hungary, together with the rich ſalt-works of the crown, for the empreſs-queen of Hungary, and Bohemia *; and a large diſtrict of country about Mohilow, upon the banks of the Dnieper, for the empreſs of Ruſſia †. But though each of theſe powers pretended to have a legal title to the territories which were allotted them reſpectively, and publiſhed manifeſtos in juſtification of the meaſures which they had taken, yet as they were conſcious that the fallacies by which they ſupported their pretenſions were too groſs to impoſe upon mankind, they forced the Poles to call a new diet, and threatened them, that if they did not conſent unanimouſly to ſign a treaty for the ceding of thoſe provinces to them reſpectively, the whole kingdom would be laid under a military execution, and treated as a conquered ſtate. In this extremity of diſtreſs, ſeveral of the Poliſh nobility proteſted againſt this violent act of tyranny, and retired into foreign ſtates, chuſing rather to live in exile, and to have all their landed property confiſcated, than to be the inſtruments of bringing their country to utter ruin; but the king of Poland was prevailed upon to ſign this act, and his example was followed by many of his ſubjects.

As to the king of Pruſſia, his conduct in Poland was highly tyrannical and oppreſſive. In the year 1771, his troops entered into Great Poland, and carried off from that province, and its neighbourhood, at a moderate computation, 12,000 families. On the 29th of October, in the ſame year, an edict was publiſhed by his Pruſſian majeſty, commanding every perſon, under the ſevereſt penalties, and even corporal puniſhment, to take in payment for forage, proviſions, corn, horſes, &c. the money offered by his troops and commiſſaries. This money was either ſilver, bearing the impreſſion of Poland, and exactly worth one-third of its nominal value, or ducats ſtruck in imitation of Dutch ducats, ſeventeen per cent, inferior to the real ducats of Holland. With this baſe money he bought up corn and forage enough, not only to ſupply his army for two whole years, but to ſtock magazines in the country itſelf, where the inhabitants were forced to come and re-purchaſe corn for their daily ſubſiſtence at an advanced price, and with good money, his

* The diſtrict claimed by Auſtria, was "all that tract of land lying on the right ſide of the Viſtula, from Sileſia above Sandomir to the mouth of the San, and from thence by Franepole, Zamoiſc, and Rubieſſow, to the Bog: from the Bog along the frontiers of Red Ruſſia to Zabras, on the borders of Volhinia and Podolia, and from Zabras in a ſtrait line to the Nieper, where it receives the Sbrytz, taking in a part of Podolia, and then along the boundaries ſeparating Podolia, from Moldavia. This country is now incorporated with Auſtria, under the appellation of the kingdoms of Galicia and Lodomeria.

† The Ruſſian claims compriſe Poliſh Livonia, that part of the palatinate of Polotſk to the eaſt of the Duna—the palatinates of Vitepſk, Miciſlaw, and two portions of the palatinate of Minſk. This tract of land (Poliſh Livonia excepted) is ſituated in White Ruſſia, and includes full one third of Lithuania. It is now divided into the two governments of Polotſk and Mohilef.

com-

commiſſaries refuſing to take the ſame coin they had paid. At the loweſt calculation he gained, by this maſterly and honeſt manœuvre, ſeven millions of dollars. Having ſtripped the country of money and proviſions, his next attempt was to thin it ſtill more of its inhabitants. To people his own dominions, at the expence of Poland, had been his great aim; for this purpoſe he hit upon a new contribution; every town and village was obliged to furniſh a certain number of marriageable girls; the parents to give as a portion, a feather-bed, four pillows, a cow, two hogs, and three ducats in gold. Some were bound hand and foot, and carried off as criminals. His exactions from the abbeys, convents, cathedrals, and nobles, were ſo heavy, and exceeded at laſt their abilities ſo much, that the prieſts abandoned their churches, and the nobles their lands. Theſe exactions continued with unabated rigour, from the year 1771, to the time the treaty of partition was declared, and poſſeſſion taken of the provinces uſurped. From theſe proceedings it would appear that his Pruſſian majeſty knew no rights but his own; no pretenſions but thoſe of the houſe of Brandenburg; no other rule of juſtice but his own pride and ambition.

The violent diſmemberment and partition of Poland has juſtly been conſidered as the firſt great breach in the modern political ſyſtem of Europe. The ſurprize of a town, the invaſion of an inſignificant province, or the election of a prince, who had neither abilities to be feared, nor virtues to be loved, would ſome years ago have armed one half of Europe, and called forth all the attention of the other. But the deſtruction of a great kingdom, with the conſequent diſarrangement of power, dominion, and commerce, has been beheld by neutral nations with the moſt aſtoniſhing indifference and unconcern. The courts of London, Paris, Stockholm, and Copenhagen, remonſtrated againſt the uſurpations, but that was all. Poland was forced to ſubmit, and the partition was ratified by their diet, held under the bribes and threats of the three powers. In the ſenate there was a majority of six, but in the lower houſe, the aſſembly of nuncios, there was but one vote in favour of the meaſure, 54 againſt 53. This is a very alarming circumſtance, and ſhews that a moſt important, though not happy change, has taken place in that general ſyſtem of policy, and arrangement of power and dominion, which had been for ſome ages an object of unremitting attention. Our anceſtors might, perhaps, on ſome occaſions, diſcover rather more anxiety about preſerving the balance of power in Europe than was neceſſary: but it has been well remarked, that the idea of conſidering Europe as a vaſt commonwealth, of the ſeveral parts being diſtinct and ſeparate, though politically and commercially united, of keeping them independent though unequal in power, and of preventing any one from becoming too powerful for the reſt, was great and liberal. It appears to be owing to this ſyſtem, that this ſmall part of the weſtern world has acquired ſo aſtoniſhing a ſuperiority over the reſt of the globe. The fortune and glory of Greece proceeded from a ſimilar ſyſtem of policy, though formed upon a ſmaller ſcale. Both her fortune and glory expired with that ſyſtem.

So great has been the ſpread of the principles of liberty in the preſent age, and ſo cordially have they been received and embraced, that this will leſſen the ſurpriſe of the reader to find that they have made their way into Poland, and that, on the 3d of May 1791, a moſt important revolution took place at Warſaw.

At three o'clock in the morning a numerous aſſembly of Patriots was held in the royal preſence; and at the opening of the ſeſſion of the diet, deſtined to treat of the affairs of the finance, his majeſty himſelf changed the buſineſs of the day by ſaying, that he had planned a conſtitution, and requeſted the ſtates to ſign it. The conſtitution was then read, and conſiſted of ſome pages.

The baſis was that the elector of Saxony be declared ſucceſſor to the crown; and in caſe of his death without male iſſue, that the princeſs his daughter be declared infanta of Poland, and whom ſhe ſhall marry (with conſent of the republic) declared

to

to be king, and their iſſue ſucceſſors to the crown. The queen to be regent till the king is of age, which is to be at 18 years.—The Roman-Catholic faith ſhall be the national religion; but peace is offered to all people, of whatever perſuaſion, and the protection of government.—The lawgiving, the judicial, and the executive powers are ſeparated for ever. The former is to remain deciſive and ſuſpenſive with the ſenate in the diet, or national aſſembly; the latter is to be exerciſed by the king with the ſenators, from whom and others a council of ſix reſponſible miniſters are to be choſen, to which council the king is to be added.——The king has great prerogatives granted him, which give him much weight, but are only calculated to do good. He is to have the nomination of biſhops, ſenators, (or members of the upper houſe, called the houſe of ſenate), and all civil and military officers; and to appoint miniſters as prime agents of the executive power, but they ſhall always be reſponſible and liable to be diſmiſſed.—The perſon of the king ſhall be ſacred and inviolable, and entirely free from reſponſibility, which is equal to the Engliſh maxim that the king can do no wrong.—In times of war he ſhall command and direct all military operations. His title ſhall be "Staniſlaus Auguſtus, by the grace of God, and the wiſhes of the nation, king of Poland." There will be three eſtates, the nobility, the citizens, and the peaſants; the two laſt have every advantage ſecured to them, and the late decrees in their favour have been confirmed. A new code of civil and criminal law is making out. The army is under the executive power.—His majeſty declared that the conſtitution had been framed out of the Engliſh and American forms of government. When the conſtitution was read, the tumult in the diet was very great, ſome for, and others againſt it. However, it was at laſt carried, and the king was requeſted to ſwear to it, which he did in the hands of the biſhop of Cracow, and was followed by moſt of the members. His majeſty then ſaid aloud, "Thoſe who are friends to their country, follow me, and confirm the oath at the altar." All the biſhops, all the ſenators, and moſt of the members followed the king, and took this important oath. A hundred cannon announced to the public the ſwearing to the new conſtitution.—The oath is as follows, "We ſwear before God and the country, to maintain and defend, with all poſſible human power, the preſent conſtitution." The army throughout the kingdom were ordered to take this oath, within one month from the date of the preſent law. And that future ages may know and feel that it is by the aſſiſtance of the Supreme Diſpoſer of nations, that the greateſt obſtacles and difficulties have been ſurmounted, and this happy revolution effected, it was decreed, that a church ſhall be erected and conſecrated to divine Providence, in memory of this event, and at the expence of the ſtates.

Staniſlaus Auguſtus (late count Poniatowſki) was born in 1732, and crowned king of Poland in 1764. This prince, while a private nobleman, reſided ſome time in London, and is a fellow of the Royal Society.

AIR, CLIMATE, SOIL, AND FACE OF THE COUNTRY. This being a mountainous country, lying upon the Alps (which form an amphitheatre of more than 100 miles) the froſts are conſequently bitter in winter, the hills being covered with ſnow ſometimes all the year long. In ſummer the inequality of the ſoil renders the ſame province very unequal in its ſeaſons; on one ſide of thoſe mountains the inhabitants are often reaping, while they are ſowing on another. The vallies,

vallies, however, are warm and fruitful, and well cultivated, and nothing can be more delightful than the ſummer months in this charming country. It is ſubject to rains and tempeſts; for which reaſon public granaries are every where erected to ſupply the failure of their crops. The water of Switzerland is generally excellent, and often deſcends from the mountains in large or ſmall cataracts which have a delightful effect.

There is, perhaps, no country in the world wherein the advantageous effects of unwearied and perſevering induſtry are more remarkably conſpicuous than in Switzerland. In paſſing over the mountainous parts thereof, the traveller is ſtruck with admiration, to obſerve rocks that were formerly barren, now planted with vines, or abounding with rich paſture; and to mark the traces of the plough along the ſides of ſteep precipices. The inhabitants ſeem to have ſurmounted every obſtruction which ſoil, ſituation, and climate had thrown in their way, and to have ſpread fertility over various ſpots of the country, which nature ſeemed to have conſigned to everlaſting barrenneſs. The feet of the mountains, and ſometimes alſo the very ſummits, are covered with vineyards, cornfields, meadows, and paſture-grounds. Other parts of this country are more dreary, conſiſting almoſt entirely of barren and inacceſſible rocks, ſome of which are continually covered with ſnow or ice. The vallies between theſe icy and ſnowy mountains appear like ſo many ſmooth frozen lakes, and from them vaſt fragments of ice frequently fall down into the more fruitful ſpots beneath. In ſome parts, there is a regular gradation from extreme wildneſs to high cultivation; in others the tranſitions are very abrupt, and very ſtriking. Sometimes a continued chain of cultivated mountains, richly cloathed with woods, and ſtudded all over with hamlets, cottages above the clouds, paſtures which appear ſuſpended in the air, exhibit the moſt delightful landſcape that can be conceived; and in other places appear rugged rocks, cataracts, and mountains of a prodigious height, covered with ice and ſnow. "Behold our walls and bulwarks," exclaimed a Swiſs peaſant, pointing to the mountains, "Conſtantinople is not ſo ſtrongly fortified." In ſhort, Switzerland abounds with the moſt pictureſque ſcenes; and here are to be found ſome of the moſt ſublime exhibitions of nature, in her moſt awful and tremendous forms, and in thoſe ſtupendous Alps, "whoſe heads touch heaven."

Glaciers.] No ſubject in natural hiſtory is more curious than the origin of theſe glaciers, which are immenſe fields of ice. If a perſon could be conveyed to ſuch an elevation as to embrace at one view the Alps of Switzerland, Savoy, and Dauphine, he would behold a vaſt chain of mountains, interſected by numerous vallies, and compoſed of many parallel chains, the higheſt occupying the center, and the others gradually diminiſhing, in proportion to their diſtance from that center.

The moſt elevated, or central chain would appear briſtled with pointed rocks, and covered, even in ſummer, with ice and ſnow, in all parts that are not abſolutely perpendicular. On each ſide of this chain he would diſcover deep vallies clothed with verdure, peopled with numerous villages, and watered by many rivers. In conſidering theſe objects with greater attention, he would remark that the central chain is compoſed of elevated peaks and diverging ridges, whoſe ſummits are overſpread with ſnow; that the declivities of the peaks and ridges, excepting thoſe parts that are extremely ſteep, are covered with ſnow and ice; and that the intermediate depths and ſpaces between them are filled with immenſe fields of ice, terminating in thoſe cultivated vallies which border the great chain.

Theſe immenſe fields of ice uſually reſt on an inclined plain: being puſhed forwards by the preſſure of their own weight, and but weakly ſupported by the rugged rocks beneath, they are interſected by large tranſverſe crevices; and preſent the appear-

ance of walls, pyramids, and other fantaſtic ſhapes, obſerved at all heights and in all ſituations, wherever the declivity is beyond thirty or forty degrees.

Mr. Coxe deſcribes the method of travelling over theſe glaciers. "We had each of us a long pole ſpiked with iron; and, in order to ſecure us as much as poſſible from ſlipping, the guides faſtened to our ſhoes *crampons*, or ſmall bars of iron, provided with four ſmall ſpikes of the ſame metal. At other times inſtead of *crampons*, we had large nails in our ſhoes, which more effectually anſwered our purpoſe. The difficulty of croſſing theſe valleys of ice, ariſes from the immenſe chaſms. We rolled down large ſtones into ſeveral of them; and the great length of time before they reached the bottom, gave us ſome conception of their depth: our guides aſſured us, that in ſome places they are not leſs than five hundred feet deep. I can no otherwiſe convey to you an image of this body of ice, broken into irregular ridges and deep chaſms, than by comparing it to a lake inſtantaneouſly frozen in the midſt of a violent ſtorm." In ſpeaking of an unſucceſsful attempt of ſome gentlemen to reach the ſummit of Mount Blanc, he preſents to his readers a moſt horrid image of the danger of theſe chaſms. "As they were returning in great haſte, (owing to the day being far advanced) one of the party ſlippid in attempting to leap over a chaſm of ice. He held in his hand a long pole, ſpiked with iron, which he ſtruck into the ice; and upon this he hung dreadfully ſuſpended for a few moments, until he was releaſed by his companions."

It is a very curious queſtion amongſt the lovers of natural hiſtory, which is the moſt rational ſyſtem concerning the formation of the glaciers? Are they in a ſtate of augmentation, or diminution; or do they remain within the ſame limits? For the ſolution of this, we refer our inquiſitive readers to the ingenious traveller before mentioned, vol. ii. p. 22—35.

Mountains.] In this mountainous country, where nature is all upon a grand ſcale, Mont Blanc is particularly diſtinguiſhed from other mountains, by having its ſummits and ſides clothed to a conſiderable depth with a mantle of ſnow, almoſt without the intervention of the leaſt rock to break the glare of the *white* appearance. According to the calculations of Mr. De Luc, (by whoſe improvement of the barometer elevations are taken with a degree of accuracy before unattainable), the height of this mountain above the level of the ſea is 2,391$\frac{1}{2}$ French toiſes, or 15,304 Engliſh feet; or according to ſir George Shuckburgh of 15,662 feet, which gives a difference of only 358 feet.—It appears, that the Peak of Teneriff and Ætna have been frequently ſuppoſed to be the higheſt points of the globe, but from the moſt accurate obſervations it will be found that Mont Blanc is of much more conſiderable elevation.

	Feet.
Mont Blanc is above the level of the ſea, according to ſir George Shuckburgh's menſuration, which agrees with M. de Sauſſure's obſervations,	15,662
The peak of Teneriff, according to Feuille - -	13,248
Ætna according to ſir George Shuckburgh - -	10,954
Canigou, the higheſt of the Pyrenees - - -	9,222
Ben-nevis, the higheſt mountain in Scotland - -	4,387
Veſuvius according to M. de Sauſſure - - -	3,900
Snowden in Wales	3,555

Hence it will appear that there are no mountains (except thoſe in America, particularly Chimboraco, the higheſt point of the Cordelleras, the elevation of which, according to Condamine, ſurpaſſes 3,000 toiſes, or 19,200 feet, but according to others, 20,608 feet) which are equal to the lattitude of Mont Blanc. Some philoſophers, upon conſidering the great ſuperiority of the Eaſtern rivers over the European, both in depth and breadth, have drawn a preſumptive argument, that the Aſiatic mountains are much more lofty than thoſe of Europe. But conjectures are

now baniſhed from natural philoſophy: and until it ſhall be proved from undoubted calculations that the higheſt part of the Caucaſus riſes more than 15,000 feet above the level of the ſea, Mont Blanc may be fairly conſidered as more elevated.

The ſummit of this mountain was deemed inacceſſible before Dr. Pacard attempted to reach it in 1786, and ſucceeded in the attempt; ſoon after which the ſame journey was undertaken by M. de Sauſſure, the famous philoſopher of Geneva, who publiſhed a very intereſting account of his journey. It was on the firſt of Auguſt 1787 that he began his march from the Priory of Chamouni, accompanied by a ſervant and eighteen guides, to carry a tent, proviſions, inſtruments, &c. M. de Sauſſure paſſed the firſt night at the top of the mountain of la Côte, ſituated to the ſouth of the priory; and 779 toiſes above the village. Hitherto there is no trouble or danger, the aſcent is either on turf, or on rock, and it is eaſily accompliſhed in 5 or 6 hours.

The ſecond day's journey is not ſo eaſy. The glacier of la Côte is to be paſſed, which is difficult and dangerous, being croſſed by wide, deep, and irregular crevices, which frequently cannot be paſſed but over bridges of ſnow, ſometimes very ſlight, and ſuſpended over deep abyſſes. A guide narrowly eſcaped periſhing in one of theſe; he went in the evening with two others to reconnoitre the paſſage; fortunately they had taken the precaution of faſtening themſelves together with cords; the ſnow gave way in the middle of a wide deep crevice, wherein the man was ſuſpended between his two companions. At four o'clock in the afternoon of the ſecond day they again encamped, 1455 toiſes above the priory, 1995 above the ſea, 90 toiſes higher than the pike of Teneriff. Here they ſoon felt the rarity of the air: the barometer was down to 17 inches 10 lines $\frac{29}{31}$. Thoſe hardy fellows, who accompanied our philoſopher, to whom the ſeven or eight hours march, which they had juſt made, was no ſort of fatigue, had ſcarcely thrown up five or ſix ſpadefuls of ſnow, to prepare for fixing the tent, before they were utterly unable to proceed, without reſting every moment. M. de Sauſſure himſelf, who is ſo much accuſtomed to the mountain air, was quite exhauſted with fatigue only in obſerving with his meteorological inſtruments. They were troubled with an inceſſant thirſt, which they had no means of allaying but by melting the ſnow. From the midſt of this plain, encloſed by the higheſt ſummit of Mont Blanc to the ſouth, its lofty ſteps to the eaſt, and the dome of Gouté to the weſt, ſcarcely any thing is to be ſeen but ſnow, pure, and of a moſt dazzling whiteneſs, forming on the higheſt pikes a moſt ſingular contraſt with the almoſt black ſky of thoſe exalted regions. No living creature is to be ſeen, no appearance of vegetation; it is the abode of cold and ſilence.

The guides, fearful of cold, cloſed the openings of the tent ſo carefully, that M. de Sauſſure ſuffered ſo much from heat, and air corrupted by reſpiration, as to be obliged to go out during the night, in order to breathe. He found the moon ſhining with moſt aſtoniſhing brightneſs, in the midſt of an ebony ſky, whilſt Jupiter iſſued all radiant from behind the loftieſt pike to the eaſt of Mont Blanc.—As ſoon as it was light, they found the thermometer 3 degrees below the freezing point. On the third day they ſafely arrived at the ſummit at about eleven o'clock. There is no plain, but it is a long ridge nearly horizontal, in a direction from eaſt to weſt. This ridge is ſo narrow, that two perſons cannot walk a-breaſt on it; eſpecially at the weſt end, where it reſembles the roof of a houſe. In this ſtate of awful elevation, as M. de Sauſſure was putting his inſtruments in order, to obſerve with them, he was obliged every moment to interrupt his obſervations, in order to take breath. If we reflect that the barometer was, on the ſummit, down to 16 inches 1 line, and conſequently that the air was only of about half the common denſity, we ſhall eaſily under-

underſtand, that it was neceſſary to ſupply the defect of denſity by more frequent inſpirations. Now this accelerated the motion of the blood, and the more, becauſe the arteries no longer ſuſtained their ordinary preſſure, inſomuch, that they were all in a fever. M. de Sauſſure continued upon the ſummit of Mont Blance till half an hour paſt three in the afternoon, during which time he carefully made thoſe experiments which were the moſt eſſential, but which the nature of this work will not permit us to inſert. We ſhall only obſerve, that our travellers all returned ſafe and ſound, with their eyes and faces uninjured, which was owing to their having put black crape over their faces; whereas they who had gone up before them returned almoſt blind, and with their ſkin terribly burnt by the reflection of the ſnow.

RIVERS AND LAKES.] The chief rivers are the Rhine, which riſes in the chain of mountains bordering on St. Gothard, the Aar, the Reuſs, the Teſin, the Oglio, and the Rhone. The lakes are thoſe of Geneva, Conſtance, Thun, Lucerne, Zurich, Biel and Brien.

METALS AND MINERALS.] The mountains contain mines of iron, cryſtal, virgin ſulphur, and ſprings of mineral waters.

VEGETABLE AND ANIMAL PRODUCTIONS.] Switzerland produces ſheep and cattle, wine, wheat, barley, oats, rye, flax, and hemp; plenty of apples, pears, nuts, cherries, plums, and cheſnuts; the parts towards Italy abound in peaches, almonds, figs, citrons, and pomegranates; and moſt of the cantons abound in timber. Beſides game, fiſh, and fowl, are alſo found, in ſome of the higher and more inacceſſible parts of the Alps, the bouquetin and the chamois; whoſe activity in ſcouring along the ſteep and craggy rocks, and in leaping over the precipices, is hardly conceivable. The blood of both theſe animals is of ſo hot a nature, that the inhabitants of ſome of theſe mountains, who are much ſubject to pleurifies, take a few drops of it, mixed with water, as a remedy for that diſorder. The fleſh of the chamois is eſteemed very delicious. Among the Alps is likewiſe found a ſpecies of hares, which in ſummer is ſaid to reſemble other hares, but in winter become all over white, ſo that they are ſcarcely diſtinguiſhable among the ſnow. But this idea hath been lately exploded, nor is it certain whether the two ſpecies ever copulate together. The white hare ſeldom quits his rocky reſidence. Here are alſo yellow and white foxes, which in winter ſometimes come down into the vallies.

POPULATION, INHABITANTS, MANNERS, CUSTOMS, AND DIVERSIONS.] According to the beſt accounts, the cantons of Switzerland contain about 2,000,000 of inhabitants, who are a brave, hardy, induſtrious people, remarkable for their fidelity, and their zealous attachment to the liberties of their country. Like the old Romans, they are equally inured to arms and agriculture. A general ſimplicity of manners, an open and unaffected frankneſs, together with an invincible ſpirit of freedom, are their moſt diſtinguiſhing characteriſtics. A very ſtriking proof of the ſimplicity and openneſs of manners of this people, and of aſtoniſhing confidence, is mentioned by Mr. Coxe, who ſays, upon the authority of general Pfiffer, that, on each ſide of the road that runs through the valley of Muotta, in the canton of Schweitz, there are ſeveral ranges of ſmall ſhops uninhabited, yet filled with various goods, of which the prices are marked: any paſſengers, who wiſh to become purchaſers, enter the ſhops, take away the merchandize, and depoſit the price, which the owners call for in the evening. They are likewiſe a very enlightened nation; their common people are far more intelligent than the ſame rank of men in moſt other countries; a taſte for literature is very prevalent among thoſe who are in better circumſtances, and even among many of the loweſt rank; and a genuine and unartful good breeding is extremely conſpicuous in the Swiſs gentry. On the firſt entrance into this country, the traveller cannot but obſerve the air of

content and ſatisfaction which appears in the countenances of the inhabitants. The cleanlineſs of the houſes and of the people is peculiarly ſtriking; and in all their manners, behaviour, and dreſs, ſome ſtrong outlines may be traced, which diſtinguiſh this happy people from the neighbouring nations, who labour under the oppreſſions of deſpotic government. Even the Swiſs cottages convey the livelieſt image of cleanlineſs, eaſe, and ſimplicity, and cannot but ſtrongly impreſs upon the obſerver a moſt pleaſing conviction of the peaſant's happineſs. In ſome of the cantons each cottage has its little territory, conſiſting generally of a field or two of fine paſture ground, and frequently ſkirted with trees, and well ſupplied with water. Sumptuary laws are in force in moſt parts of Switzerland. Silk, lace, and ſeveral other articles of luxury, are totally prohibited in ſome of the cantons; and even the head-dreſſes of the ladies are regulated. All games of hazard are alſo ſtrictly prohibited; and in other games, the party who loſes above ſix florins, which is about nine ſhillings of our money, incurs a conſiderable fine. Their diverſions, therefore, are chiefly of the active and warlike kind; and as their time is not waſted in games of chance, many of them employ part of their leiſure hours in reading. The youth are generally trained to all the martial exerciſes, ſuch as running, wreſtling, throwing the hammer, and ſhooting, both with the croſs-bow and the muſket.

GOITERS AND IDIOTS.] The inhabitants in one part of this country, particularly in the republic of Vallais, are very much ſubject to *goiters*, or large excreſcences of fleſh that grow from the throat, and often increaſe to a moſt enormous ſize: but what is more extraordinary, idiotiſm alſo remarkably abounds among them. "I ſaw," ſays Mr. Coxe, "many inſtances of both kinds, as I paſſed through Sion: ſome idiots were baſking in the ſun with their tongues out, and their heads hanging down, exhibiting the moſt affecting ſpectacle of intellectual imbecillity that can poſſibly be conceived. The cauſes which produce a frequency of theſe phenomena in this country, form a very curious queſtion."

The notion that ſnow-water occaſions theſe excreſcences is totally void of foundation. For on that ſuppoſition, why are the natives of thoſe places that lie moſt contiguous to the glaciers, and who drink no other water than what deſcends immediately from thoſe immenſe reſervoirs of ice and ſnow, free from this malady? And why are the inhabitants of thoſe countries in which there is no ſnow, afflicted with it? For, theſe guttural tumours are to be found in the environs of Naples, in the iſland of Sumatra, and at Patna, and Purnea in the Eaſt Indies, where ſnow is unknown.

The ſprings, that ſupply drink to the natives, are impregnated with a calcareous matter, called in Switzerland *tuf*, nearly ſimilar to the incruſtations of Matlock in Derbyſhire, ſo minutely diſſolved as not in the leaſt to affect the tranſparency of the water. It is not improbable, that the impalpable particles of this ſubſtance, thus diſſolved, ſhould introduce themſelves into the glands of the throat and produce goiters, for the following reaſons; becauſe *tuf*, or this calcareous depoſition, abounds in all thoſe diſtricts, where goiters are common. There are goitrous perſons and much *tuf* in Derbyſhire, in various parts of the Vallais, in the Valteline, at Lucerne, Friburgh, and Berne, near Aigle and Bex, in ſeveral places of the Pays de Vaud, near Dreſden, in the valleys of Savoy and Piedmont, near Turin and Milan. But the ſtrongeſt proof in favour of this opinion, ſays our author, is derived from the following facts. A ſurgeon, whom I met at the baths of Leuk, informed me that he had not unfrequently extracted concretions of *tuf-ſtone* from ſeveral goiters; and that from one in particular, which ſuppurated, he had taken ſeveral flat pieces, each about half an inch long. He added, that the ſame ſubſtance is found in the ſtomachs of cows, and in the goitrous tumours, to which even the dogs of the coun-

country are ſubject. He had diminiſhed and cured the goiters of many young perſons by emollient liquors, and external applications; and prevented them in future by removing his patients from the places where the ſprings are impregnated with *tuf*; and, if that could not be contrived, by forbidding the uſe of water which was not purified.

Children are occaſionally born with guttural ſwellings, but this may ariſe from the aliment of the mother. It is to be preſumed, that a people accuſtomed to theſe excreſcences will not be ſhocked at their deformity, but it does not appear as ſome writers aſſert, that they conſider them as beauties. To judge from the accounts of many travellers, it might be ſuppoſed that the natives, without exception, were either idiots or goitrous: whereas in fact, the Valaiſans, in general, are a robuſt race; and all that with truth can be affirmed, is, that goitrous perſons and idiots are more abundant in ſome diſtricts of the Vallais, than perhaps in any other part of the globe. It has been aſſerted that the people very much reſpect theſe ideots, and even conſider them as *bleſſings from heaven*. The common people, it is certain, eſteem them ſo, for they call them "*Souls of God, without ſin*; and many parents prefer theſe idiot-children to thoſe whoſe underſtandings are perfect; becauſe as they are incapable of intentional criminality, they conſider them as certain of happineſs in a future ſtate. Nor is this opinion entirely without its good effect, as it diſpoſes the parents to pay greater attention to ſuch helpleſs beings. Theſe idiots are ſuffered to marry, as well among themſelves as with others *.

RELIGION.] Though all the Swiſs cantons form but one political republic, yet they are not united in religion, as the reader, in the table prefixed, may perceive. Thoſe differences in religion formerly created many public commotions, which ſeem now to have ſubſided, and the two ſects live together in the moſt perfect harmony; an union the more remarkable, when we conſider the fatal quarrels that have been kindled in Switzerland on account of religious tenets. In ſeveral parts of the canton of Glarus, the Proteſtants and Catholics ſucceſſively perform ſervice in the ſame church; and all the offices of ſtate are amicably adminiſtered by the two parties. Zuinglius was the apoſtle of proteſtantiſm in Switzerland. He was a moderate reformer, and differed from Calvin and Luther only in a few ſpeculative points; ſo that Calviniſm is ſaid to be the religion of the proteſtant Swiſſes. But this muſt be underſtood chiefly with reſpect to the mode of church government; for in ſome doctrinal points they are far from being univerſally Calviniſtical. There is, however, too much religious bigotry prevalent among them; and though they are ardently attached to the intereſt of civil liberty, their ſentiments on the ſubject of religious toleration are in general much leſs liberal.

LANGUAGE.] Several languages prevail in Switzerland; but the moſt common is German. The Swiſſes who border upon France ſpeak a baſtard French, as thoſe near Italy do a corrupted Latin or Italian.

LEARNING AND LEARNED MEN.] Calvin, whoſe name is ſo well known in all proteſtant countries, inſtituted laws for the city of Geneva, which are held in high eſteem by the moſt learned of that country. The ingenious and eloquent Rouſſeau too, whoſe works the preſent age have received with ſo much approbation, was a citizen of Geneva. Rouſſeau gave a force to the French language, which it was thought incapable of receiving. In England he is generally known as a proſe writer only, but the French admire him as a poet. His opera of the *Devin de la Village* in particular is much eſteemed. M. Bonnet, and Meſſ. de Sauſſure and de Luc, deſerve to be mentioned with applauſe, and will be remembered till the Alps ſhall be no more. The juſtly celebrated Haller, a native of Berne, deſerves the higheſt

* COXE's Travels through Switzerland, vol. i. p. 385, &c.

eulogy

eulogy as a poet, a phyſiologiſt, and a philoſopher, to whom Michaelis, the eminent orientaliſt, juſtly applies an obſervation which had been made on the genius of Ariſtotle; "*Neque cælo, neque terrâ, neque mari quicquam relinquere voluit incognitum, indole præterea adeo mirabili, ut ad ſingula natum præcipue dicas*;" i. e. He left nothing unexplored, either in the heavens, on the earth, or in the ſea, and was of ſuch a wonderful capacity, that he ſeemed born for the object of his purſuit.

UNIVERSITIES.] The univerſity of Baſil, which was founded in 1459, has a very curious phyſic-garden, which contains the choiceſt exotics; and adjoining to the library, which contains ſome valuable manuſcripts, is a muſeum well furniſhed with natural and artificial curioſities, and with a great number of medals and paintings. In the cabinets of Eraſmus and Amerbach, which alſo belong to this univerſity, there are no leſs than twenty original pieces of Holbein; for one of which, repreſenting a dead Chriſt, a thouſand ducats have been offered. The other univerſities, which indeed are commonly only ſtyled colleges, are thoſe of Bern, Lauſanne, and Zurich.

ANTIQUITIES AND CURIOSITIES, NATURAL AND ARTIFICIAL.] Every diſtrict of a canton in this mountainous country preſents the traveller with a natural curioſity; ſometimes in the ſhape of wild but beautiful proſpects, interſperſed with lofty buildings, and wonderful hermitages, eſpecially one, two leagues from Friburg. This was formed by the hands of a ſingle hermit, who laboured on it for 25 years, and was living in 1707. It is the greateſt curioſity of the kind perhaps in the world, as it contains a chapel, a parlour 28 paces in length, 12 in breadth, and 20 feet in height, a cabinet, a kitchen, a cellar, and other apartments, with the altar, benches, flooring, cieling, all cut out of the rock.

At Shaffhauſen is a very extraordinary bridge over the Rhine, juſtly admired for the ſingularity of its architecture. The river is extremely rapid, and had already deſtroyed ſeveral ſtone bridges of the ſtrongeſt conſtruction, when a carpenter of Appenzel offered to throw a wooden bridge, of a ſingle arch, acroſs the river, which is near four hundred feet wide. The magiſtrates, however required that it ſhould conſiſt of two arches, and that he ſhould for that purpoſe employ the middle pier of the old bridge. Accordingly the architect was obliged to obey; but he has contrived to leave it a matter of doubt, whether the bridge is ſupported by the middle pier, and whether it would not have been equally as ſafe if formed ſolely of one arch. The ſides and top are covered, and it is what the Germans call a *hænge-werk*, or hanging bridge; the road, which is almoſt level, is not carried, as uſual, over the top of the arch; but if the expreſſion may be allowed, is let into the middle of it and there ſuſpended. A man of the ſlighteſt weight feels it almoſt tremble under him, yet waggons heavily laden paſs over without danger. It has been compared to a tight rope, which trembles when ſtruck, but ſtill preſerves its firm and equal tenſion. On conſidering the greatneſs of the plan, and the boldneſs of the conſtruction, it is matter of aſtoniſhment that the architect was originally a carpenter, without the leaſt tincture of literature, totally ignorant of mathematics, and not verſed in the theory of mechanics. His name was Ulric Grubenman. The bridge was finiſhed in leſs than three years, and coſt about 8000l. ſterling.

At the famous paſs of the *Pierre Pertuis*, the road is carried through a ſolid rock near 50 feet thick, the height of the arch 26, and its breadth 25. The marcaſites, falſe diamonds, and other ſtones, found in theſe mountains, are juſtly ranked among the natural curioſities of the country. The ruins of Cæſar's wall which extended 18 miles in length, from Mount Jura to the banks of Lake Leman are diſcernible. Many monuments of antiquity have been diſcovered near the baths of Baden, which were known to the Romans in the time of Tacitus, and at Avanche in the canton of Bern. Switzerland boaſts of many noble religious buildings,

ings, particularly a college of Jeſuits; and many cabinets of valuable manuſcripts, antiques, and curioſities of all kinds. At Lucerne, (ſays Mr. Coxe) is to be ſeen a topographical repreſentation of the moſt mountainous part of Switzerland, by general Pfiffer, a native of this town, and an officer in the French ſervice. It is a model in relief, and well deſerves the attention of the curious traveller. What was finiſhed in 1776, comprized about 60 ſquare leagues, in the cantons of Lucerne, Zug, Berne, Uri, Schweitz, and Underwalden. The model was twelve feet long, and nine and a half broad. The compoſition is principally a maſtic of charcoal, lime, clay, a little pitch, with a thin coat of wax; and is ſo hard as to be trod upon without receiving the leaſt damage. The whole is painted with different colours, repreſenting the objects as they exiſt in nature. It is worthy of particular obſervation, that not only the woods of oak, beech, pine, and other trees are diſtinguiſhed; but alſo that the ſtrata of the ſeveral rocks are marked, each being ſhaped upon the ſpot, and formed with granite, gravel, calcareous ſtone, or ſuch other natural ſubſtances as compoſe the original mountains. The plan is indeed ſo minutely exact, that it comprizes not only all the mountains, lakes, towns, villages, and foreſts; but every cottage, every torrent, every road, and even every path is diſtinctly and accurately repreſented. The general takes his elevations from the level of the lake of Lucerne, which, according to M. de Sauſſure, is about fourteen hundred and eight feet above the Mediterranean. This model, exhibiting the moſt mountainous parts of Switzerland, conveys a ſublime picture of immenſe Alps piled one upon another: as if the ſtory of the Titans were realized, and they had ſucceeded (at leaſt in one ſpot of the globe) in heaping Oſſa upon Pelion, and Olympus upon Oſſa. From the account of this officer it appears, that there are continued chains of mountains of the ſame elevation, riſing in progreſſion to the higheſt range, and from thence gradually deſcending in the ſame proportion to Italy. Near Roſiniere, is a famous ſpring which riſes in the middle of a natural baſon of twelve ſquare feet—the force that acts upon it muſt be prodigious; after a great ſhower of rain, it carries up a column of water as thick as a man's thigh, nearly a foot above its ſurface. Its temperature never varies, its ſurface is clear as cryſtal, and its depth unfathomable; perhaps it is the end of ſome ſubterraneous lake that hath here found an iſſue for its waters.

Cities.] Of theſe the moſt conſiderable is the city of Bern, ſtanding on the river Aar. This city and canton, it is ſaid, forms almoſt a third of the Helvetic confederacy, and can, upon occaſion, fit out 100,000 armed men. All the other cities in Switzerland are excellently well provided with arſenals, bridges, and public edifices. Baſil is ſituated in a fertile and delightful country, on the banks of the Rhine, and the confines of Alſace and the empire. It contains two hundred and twenty ſtreets, and ſix market places. The town-houſe, which ſtands on the river Birſec, is ſupported by very large pillars, and its great hall is finely painted by the celebrated Hans Holbein, who was a native of this city. This ſituation of Baſil is pleaſing: the Rhine divides it into the upper and lower town, and it is conſidered as one of the keys of Switzerland. Baden is famous for its antiquity and baths. Zurich is far leſs conſiderable than Bern, but in the arſenal is ſhewn the bow of the famous William Tell, and in the library is a manuſcript of excellent letters written by the unfortunate Lady Jane Grey, to the judicious reformer Bullinger, in elegant Latin and German.

To prevent a repetition, I ſhall here mention the city of Geneva, which is an aſſociate of Switzerland, and is under the protection of the Helvetic body, but within itſelf is an independent ſtate and republic. The city is well built and well fortified, and contains 24,000 inhabitants. It is ſituated upon the Rhone where it flows from the fine lake of Geneva. It is celebrated for the learning of the profeſſors of its univerſity, and the good government of its colleges, the purity of its

its air, and the politeneſs of its inhabitants. By its ſituation, it is a thoroughfare from Germany, France, and Italy. It contains a number of fine manufactures and artiſts; ſo that the proteſtants, eſpecially ſuch as are of a liberal turn, eſteem it a moſt delightful place. But the fermentation of their politics, and particularly the uſurpation of the ſenate, hath divided the inhabitants into parties, and the late ſtruggle of patricians and plebeians had nearly ruined all. Many of its valuable citizens have left the place, and ſought refuge and protection in foreign countries.

COMMERCE AND MANUFACTURES.] The productions of the loom, linen, dimity, lace, ſtockings, handkerchiefs, ribbands, ſilk and printed cottons, and gloves, are common in Switzerland, and the inhabitants are now beginning, notwithſtanding their ſumptuary laws, to fabricate ſilks, velvets, and woollen manufactures. Their great progreſs in thoſe manufactures, and in agriculture, gives them a proſpect of being able ſoon to make conſiderable exports.

CONSTITUTION AND GOVERNMENT]. Theſe are very conplicated heads, though belonging to the ſame body, being partly ariſtocratical, and partly democratical. Every canton is abſolute in its own juriſdiction, but thoſe of Bern, Zurich, and Lucerne, with their dependencies, are ariſtocratical, with a certain mixture of democracy, Bern excepted. Thoſe of Uri, Schweitz, Underwald, Zug, Glaris, and Appenzel, are democratical. Baſil, though it has the appearance of an ariſtocracy, rather inclines to a democracy. But even thoſe ariſtocracies and democracies differ in their particular modes of government. However, in all of them the real intereſts of the people appear to be much attended to, and they enjoy a degree of happineſs not to be expected in deſpotic governments. Each canton hath prudently reconciled itſelf to the errors of its neighbour, and cemented on the baſis of affection, a ſyſtem of mutual defence.

The confederacy, conſidered as a republic, comprehends three diviſions. The firſt are Swiſſes, properly ſo called. The ſecond are the Griſons, or the ſtates, confederated with the Swiſſes, for their common protection. The third are thoſe prefectures, which, though ſubject to the other two, by purchaſe or otherwiſe, preſerve each its own particular magiſtrates. Every canton forms within itſelf a little republic; but when any controverſy ariſes that may affect the whole confederacy, it is referred to the general diet, which ſits at Baden, where each canton having a vote, every queſtion is decided by the majority. The general diet conſiſts of two deputies from each canton, beſides a deputy from the abbot of St. Gall, and the cities of St. Gall and Bien. It is obſerved by Mr. Coxe, to whom the public are indebted for the beſt account of Switzerland that has appeared, that there is no country in which happineſs and content more univerſally prevail among the people. For whether the government be ariſtocratical, democratical, or mixed, a general ſpirit of liberty pervades and actuates the ſeveral conſtitutions; ſo that even the oligarchichal ſtates (which, of all others are uſually the moſt tyrannical) are here peculiarly mild; and the property of the ſubject is ſecurely guarded againſt every kind of violation. A harmony is maintained by the concurrence of their mutual felicity; and their ſumptuary laws, and equal diviſion of their fortunes among their children, ſeem to enſure its continuance. There is no part of Europe which contains, within the ſame extent of region, ſo many independent commonwealths, and ſuch a variety of different governments, as are collected together in this remarkable and delightful country; and yet, with ſuch wiſdom was the Helvetic union compoſed, and ſo little have the Swiſs, of late years, been actuated by the ſpirit of conqueſt, that ſince the firm and complete eſtabliſhment of their general confederacy, they have ſcarcely ever had occaſion to employ their arms againſt a foreign enemy; and have had no hoſtile commotions among themſelves, that were not very ſoon happily terminated.

REVENUES AND TAXES.] The variety of cantons that conſtitute the Swiſs confederacy, renders it difficult to give a preciſe account of their revenues. Thoſe of the canton of Berne are ſaid to amount annually to 300,000 crowns, and thoſe of Zurich to 150,000; the other cantons in proportion to their produce and manufactures. Whatever is ſaved, after defraying the neceſſary expences of government, is laid up as a common ſtock; and it has been ſaid, that the Swiſſes are poſſeſſed of 500,000l. ſterling in the Engliſh funds, beſides money in other banks.

The revenues ariſe, 1. From the profits of the demeſne lands; 2. The tenth of the produce of all the lands in the country; 3. Cuſtoms and duties on merchandize; 4. The revenues ariſing from the ſale of ſalt, and ſome caſual taxes.

MILITARY STRENGTH.] The internal ſtrength of the Swiſs cantons, independent of the militia, conſiſts of 13,400 men, raiſed according to the population and abilities of each. The œconomy and wiſdom with which this force is raiſed and employed, are truly admirable, as are the arrangements which are made by the general diet, for keeping up that great body of militia, from which foreign ſtates and princes are ſupplied, ſo as to benefit the ſtate, without any prejudice to its population. Every burgher, peaſant, and ſubject, is obliged to exerciſe himſelf in the uſe of arms; appear on the ſtated days for ſhooting at a mark; furniſh himſelf with proper clothing, accoutrements, powder and ball; and to be always ready for the defence of his country. The Swiſs engage in the ſervice of foreign princes and ſtates, either as guards, or as marching regiments. In the latter caſe, the government permits the enliſting volunteers, though only for ſuch ſtates as they are in alliance with, or with whom they have entered into a previous agreement on that article. But no ſubject is to be forced into foreign ſervice, or even to be enliſted without the concurrence of the magiſtracy.

HISTORY.] The preſent Swiſſes and Griſons, as has been already mentioned, are the deſcendants of the ancient Helvetii, ſubdued by Julius Cæſar. Their mountainous, uninviting ſituation, formed a better ſecurity for their liberties, than their forts or armies; and the ſame is the caſe at preſent. They continued long under little better than nominal ſubjection to the Burgundians and Germans, till about the year 1300, when the emperor Albert I. treated them with ſo much rigour, that they petitioned him againſt the cruelty of his governors. This ſerved only to double the hardſhips of the people; and one of Albert's Auſtrian governors, Greſler, in the wantonneſs of tyranny, ſet up a hat upon a pole, to which he ordered the natives to pay as much reſpect as to himſelf. The famous William Tell, being obſerved to paſs frequently without taking notice of the hat, and being an excellent markſman, the tyrant condemned him to be hanged, unleſs he cleft an apple upon his ſon's head, at a certain diſtance, with an arrow. Tell cleft the apple; and Greſler aſking him the meaning of another arrow he ſaw ſtuck in his belt, he bluntly anſwered, that it was intended to his [Greſler's] heart, if he had killed his ſon. Tell was immediately ſent to priſon; but making his eſcape, he watched his opportunity, and ſhot the tyrant, and thereby laid the foundations of the Helvetic liberty.

It appears, however, that before this event, the revolt of the Swiſſes from the Auſtrian tyranny had been planned by ſome noble patriots among them. Their meaſures were ſo juſt, and their courſe ſo intrepid, that they ſoon effected a union of ſeveral cantons.

Zurich, driven by oppreſſion, ſought firſt an alliance with Lucerne, Uri, Suiſſe, and Underwald, on the principles of mutual defence; and the frequent ſucceſſes of their arms againſt Albert, duke of Auſtria, inſenſibly formed the grand Helvetic union. They firſt conquered Glaris and Zug, and admitted them to an equal participation of their rights. Berne joined them in 1353; Friburg, and Soleure 130

years after; Basil and Scaffhausen in 1501; and Appenzel in 1513 completed the confederacy, which repeatedly defeated the united powers of France and Germany; till by the treaty of Westphalia in 1648, their confederacy was declared to be a free and independent state.

Neufchatel, since the year 1707, hath been under the protection of the king of Prussia, but the inhabitants are free to serve any prince whatever, and by no means bound to take an active part in his wars. The king hath the power of recruiting among them, and of naming a governor, but the revenue he derives is not above 5000l. yearly, great part of which is laid out on the roads and other public works of the country. With regard to the military character, and great actions of the Swisses, I must refer the reader to the histories of Europe.

SPAIN.

ANCIENT NAMES AND DIVISIONS.] Spain formerly included Portugal, and was known to the ancients by the names of Iberia, and Heſperia, as well as Hiſpania. It was, about the time of the Punic wars, divided into Citerior and Ulterior; the Citerior contained the provinces lying north of the river Ebro; and the Ulterior, which was the largeſt part, comprehended all that lay beyond that river. Innumerable are the changes that it afterwards underwent; but there is no country, of whoſe ancient hiſtory, at leaſt the interior part of it, we know leſs than that of Spain.

CLIMATE, SOIL, AND WATER.] Excepting during the equinoctial rains, the air of Spain is dry and ſerene, but exceſſively hot in the ſouthern provinces in June, July, and Auguſt. The vaſt mountains that run through Spain are, however, very beneficial to the inhabitants, by the refreſhing breezes that come from them in the ſouthernmoſt parts; though thoſe towards the north and north-eaſt are in the winter very cold, and in the night make a traveller ſhiver.

Such is the moiſture of the hills, bounded on the north by the bay of Biſcay, and to the ſouth by ſnowy mountains, that no care is ſufficient to preſerve their fruits, their grain, their inſtruments of iron, from mould, from rot, and from ruſt. Both the acetous and the putrid fermentation here make a rapid progreſs. Beſides the relaxing humidity of the climate, the common food of the inhabitants contributes much to the prevalence of moſt diſeaſes which infeſt the principality of Aſturia. Yet, although ſubject to ſuch a variety of endemical diſeaſes, few countries can produce more inſtances of longevity: many live to the age of a hundred, ſome to a hundred and ten, and others much longer. The ſame obſervation may be extended to Gallicia, where, in the pariſh of St. Juan de Poyo, A. D. 1724, the curate adminiſtered the ſacrament to thirteen perſons, whoſe ages together made one thouſand four hundred and ninety-nine, the youngeſt of theſe being one hundred and ten, and the oldeſt one hundred and twenty-ſeven. But in Villa de Foſinanes, one Juan de Outeyro, a poor labourer, died in the year 1726, aged more than one hundred and forty-ſix years.

The ſoil of Spain was formerly very fruitful in corn, but the natives have lately ſuffered much through their indolence; the cauſes of which I ſhall explain afterwards. It produces, in many places, almoſt ſpontaneouſly, the richeſt and moſt delicious fruits that are to be found in France and Italy, oranges, lemons, prunes, citrons, almonds, raiſins, and figs. Her wines, eſpecially ſack and ſherry, are in high requeſt among foreigners. There are, in the diſtrict of Malaga, (according

to Mr. Townſend, the lateſt traveller) fourteen thouſand vine preſſes, chiefly employed in making the rich wines, which, if white, from the nature of the country, is called *mountain*; if red, from the colour, *vino tinto*, known in England by the name of *tent*. Good mountain is ſold from thirteen to ſixteen pounds the butt, of one hundred and thirty-five gallons, according to quality and age. It is reckoned that from eight hundred to a thouſand veſſels enter this port every year, of which about one-tenth are Spaniſh, and the exports in wine, fruit, oil and fiſh, are computed at about 375,000*l.* per annum; but there have been times when it has been conſiderably more.

Spain indeed offers to the traveller large tracts of unpromiſing, becauſe uncultivated ground; but no country perhaps maintains ſuch a number of inhabitants, who neither toil nor work for their food; ſuch are the generous qualities of its ſoil. Even ſugar-canes thrive in Spain; and it yields ſaffron, honey, and ſilk, in great abundance. A late writer, Uſtariz, a Spaniard, computes the number of ſhepherds in Spain to be 40,000; and has given us a moſt curious detail of their œconomy, their changes of paſture at certain times of the year, and many other particulars unknown till lately to the public. Thoſe ſheep-walks afford the fineſt of wool, and are a treaſure in themſelves. Some of the mountains in Spain are cloathed with rich trees, fruits, and herbage, to the tops; and Seville oranges are noted all over the world. No country produces a greater variety of aromatic herbs, which renders the taſte of their kids and ſheep exquiſitely delicious. The kingdom of Murcia abounds ſo much with mulberry-trees, that the product of its ſilk amounts to 200,000l. a year. Upon the whole, few countries in the world owe more than Spain does to nature, and leſs to induſtry.

The waters, of Spain eſpecially thoſe that are medicinal, are little known; but many ſalutiferous ſprings are found in Granada, Seville, and Cordova. All over Spain the waters are found to have ſuch healing qualities, as are outdone by thoſe of no country in Europe; and the incloſing, and encouraging a reſort to them, becomes daily more prevalent, eſpecially at Alhamar in Granada.

MOUNTAINS.] It is next to impoſſible to ſpecify theſe, they are ſo numerous: the chief and the higheſt, are the Pyrenees, near 200 miles in length, which extend from the bay of Biſcay to the Mediterranean, and divide Spain from France. Over theſe mountains there are only five narrow paſſages to France, and the road over the paſs that ſeparates Rouſſillon from Catalonia reflects great honour on the engineer who planned it. It formerly required the ſtrength of 30 men to ſupport, and nearly as many oxen to drag up, a carriage, which four horſes now do with eaſe. The Cantabrian mountains (as they are called) are a kind of continuation of the Pyrenees, and reach to the Atlantic Ocean, ſouth of Cape Finiſterre. No Engliſhman ought to be unacquainted with Mount Calpe, now called the Hill of Gibraltar, and in former times, one of the Pillars of Hercules; the other, Mount Abyla, lying oppoſite to it in Africa.

Among the mountains in Spain, Montſerrat is particularly worthy the attention of the curious traveller; one of the moſt ſingular in the world, for ſituation, ſhape, and compoſition. It ſtands in a vaſt plain, about thirty miles from Barcelona, and nearly in the centre of the principality of Catalonia. It is called by the Catalonians Monte ſerrado, or Mount Scie, words which ſignify a cut, or ſawed mountain; and is ſo called from its ſingular and extraordinary form: for it is ſo broken and divided, and ſo crowned with an infinite number of ſpiring cones, or pine heads, that it ſeems, at a diſtant view, to be the work of man; but upon a nearer approach, appears to be evidently the production of the God of nature. It is a ſpot ſo admirably adapted for retirement and contemplation, that it has, for many ages, been inhabited only by monks and hermits, whoſe firſt vow is, never to forſake it.

When the mountain is firſt ſeen at a diſtance, it has the appearance of an infinite number of rocks cut into conical forms, and built one upon another to a prodigious height, or like a pile of grotto work, or Gothic ſpires. Upon a nearer view, each cone appears of itſelf a mountain, and the whole compoſes an enormous maſs, about 14 miles in circumference, and the Spaniards compute it to be two leagues in height*. As it is like no other mountain, ſo it ſtands quite unconnected with any, though not very diſtant from ſome that are very lofty. A convent is erected on the mountain, dedicated to our lady of Montſerrat, to which pilgrims reſort from the fartheſt parts of Europe. All the poor who come here are fed gratis for three days, and all the ſick received into the hoſpital. Sometimes, on particular feſtivals, ſeven thouſands perſons arrive in one day; but people of condition pay a reaſonable price for what they eat. On different parts of the mountain are a number of hermitages, all of which have their little chapels, ornaments for ſaying maſs, water-ciſterns, and moſt of them little gardens. The inhabitant of one of theſe little hermitages, which is dedicated to St. Benito, has the privilege of making an annual entertainment on a certain day, on which day all the other hermits are invited, when they receive the ſacrament from the hands of the mountain vicar; and after divine ſervice dine together. They meet alſo at this hermitage, on the days of the ſaints to which their ſeveral hermitages are dedicated, to ſay maſs, and commune with each other. But at other times they live in a very ſolitary and recluſe manner, perform various penances, and adhere to very rigid rules of abſtinence, never eating fleſh. Nor are they allowed to keep within their walls either dog, cat, bird, or any living thing, leſt their attention ſhould be withdrawn from heavenly to earthly objects. The number of profeſſed monks there, is 76, of lay-brothers 28, and of ſinging boys 25, beſides phyſician, ſurgeon, and ſervants. Mr. Thickneſſe, who has publiſhed a very particular deſcription of this extraordinary mountain, was informed by one of the hermits, that he often ſaw from his habitation the iſlands of Minorca, Majorca, and Ivica, and the kingdoms of Valencia, and Murcia.

RIVERS, LAKES, STRAITS AND CURRENTS. Of rivers the principal are the Duero, formerly Durius, which falls into the Atlantic Ocean below Oporto, in Portugal; the Tajo, or Tagus, which falls into the Atlantic Ocean below Liſbon; the Guadiana falls into the ſame ocean near Cape Finiſterre; as does the Guadalquiver, now Turio, at St. Lucar; and the Ebro, the ancient Iberus, falls into the Mediterranean ſea below Tortoſa.

The river Tinto, the qualities of which are very extraordinary, riſes in Sierra Morena, and empties itſelf into the Mediterranean near Huelva, having the name of Tinto given it, from the tinge of its waters, which are as yellow as a topaz, hardening the ſand, and petrifying it in a moſt ſurpriſing manner. If a ſtone happens to fall in, and reſt upon another, they both become in a year's time perfectly united and conglutinated. This river withers all the plants on its banks, as well as the roots of trees, which it dyes of the ſame hue as its waters. No kind of verdure will come up where it reaches, nor any fiſh live in its ſtream. It kills worms in cattle when given them to drink; but in general, no animals will drink out of this river, except goats, whoſe fleſh nevertheleſs has an excellent flavour. Theſe ſingular properties continue till other rivulets run into it, and alter its nature: for when it paſſes by Niebla, it is not different from other rivers, and falls into the Mediterranean ſea ſix leagues lower down.

Several lakes in Spain, eſpecially that of Beneventa, abound with fiſhes, particularly excellent trout. The water of a lake near Antiquera is made into ſalt by the heat of the ſun.

* Mr. Swinburne eſtimates its height at only 3,300 feet, and obſerves that the arms of the convent are, the Virgin Mary ſitting at the foot of a rock, half cut through by a ſaw.

It may be neceſſary to inform the reader of the extent and breadth of the Straits of Gibraltar, and acquaint him at the ſame time with the opinions of different writers concerning the perpetual current that ſets into the Mediterranean ſea from the great Atlantic Ocean, which has ſo long engaged the attention of many celebrated natural philoſophers.

The Straits of Gibraltar (formerly known by the name of the Herculean Straits) are about twelve leagues in extent, from Cape Spartel to Ceuta Point, on the African coaſt; and from Cape Trafalgar to Europa Point, on the coaſt of Spain. At the weſtern entrance, they are in breadth about eight leagues, but diminiſh conſiderably about the middle, oppoſite Tarifa (a ſmall fiſhing town on the Spaniſh coaſt, originally a place of great conſequence) though they widen again between Gibraltar and Ceuta, where they are about five leagues broad.

Philoſophers, who have communicated their ſentiments on the extraordinary phenomenon of a conſtant current through the Straits of Gibraltar into the Mediterranean, differ widely in accounting for the diſpoſition of that continual influx of waters, which, it is natural to ſuppoſe, would, without ſome conſumption or return, ſoon overflow the boundaries of the Mediterranean Sea. The late ingenious Dr. Halley was of opinion, that this perpetual ſupply of water from the vaſt Atlantic Ocean was intended by nature to recruit what was daily exhaled in vapour: others again think, the waters that roll in with the centre current are returned, by two counter ſtreams, along the African and Spaniſh ſhores. That there are two counter-ſtreams is without doubt; but their rapidity and breadth bear little proportion to the principal current. A third claſs ſuppoſe a counter-current beneath, and of equal ſtrength with the uppper ſtream; and this opinion appears confirmed by a circumſtance related by colonel James, in his deſcription of the Herculean Straits, of a Dutch ſhip being ſunk in an action by a French privateer off Tarifa, which ſome time afterwards was caſt up near Tangier, four leagues to the *weſtward* of the place where ſhe diſappeared, and directly againſt the upper current. This hypotheſis receives alſo additional ſupport from the repeated diſappointments which have been experienced by many naval officers, in attempting to ſound the depth of the Straits with the longeſt lines; for the oppoſition between the currents might carry the line in ſuch directions as to defeat the intention of the experiment.

Theſe facts ſeem ſtrongly to indicate a recurrency to the weſtward; which, though it may not be ſo rapid as the upper ſtream, yet with the aſſiſtance of the currents along the Spaniſh and Barbary ſhores, and the neceſſary exhalations, may account for the Mediterranean ſea never increaſing by the conſtant ſupply received from the Atlantic Ocean. The rapidity of the ſuperior current renders the paſſage from the Mediterranean to the weſtward very precarious and uncertain, as ſhips never can ſtem the ſtream without a briſk Levanter, or eaſterly wind. Veſſels, therefore, are often detained weeks, and ſometimes months, waiting for a favourable breeze; in which caſe they find a comfortable birth in the Bay of Gibraltar.

BAYS.] The chief bays are thoſe of Biſcay, Ferrol, Corunna (commonly called the Groyne), Vigo, Cadiz, Gibraltar, Carthagena, Alicant, Altea, Valencia, Roſes, Majorca in that iſland, and the harbour of Port-Mahon, in the iſland of Minorca. The ſtrait of Gibraltar divides Europe from Africa.

METALS AND MINERALS.] Spain abounds in both, and in as great variety as the other countries of Europe. Cornelian, agate, loadſtones, jacinths, turquois ſtones, quickſilver, copper, lead, ſulphur, alum, calamine, cryſtal, marbles of ſeveral kinds, porphyry, the fineſt jaſper, and even diamonds, emeralds, and amethyſts, are found here. The Spaniſh iron, next to that of Damaſcus, furniſhes the beſt arms in the world; and in former times, brought in a vaſt revenue to the

the crown; the art of working it being here in great perfection. Even to this day, Spaniſh gun barrels, and ſwords of Toledo, are highly valued. Amongſt the ancients, Spain was celebrated for gold and ſilver mines; and ſilver was in ſuch plenty, that Strabo, who was contemporary with Auguſtus Cæſar, informs us, that when the Carthaginians took poſſeſſion of Spain, their domeſtic and agricultural utenſils were made of that metal. Theſe mines have now diſappeared; but whether by their being exhauſted, or through the indolence of the inhabitants in not working them, we cannot ſay; though the latter cauſe ſeems to be the moſt probable.

ANIMAL PRODUCTIONS BY SEA AND LAND. } The Spaniſh horſes, eſpecially thoſe of Andaluſia, are thought to be the handſomeſt of any in Europe, and at the ſame time very fleet and ſerviceable. The king does all he can to monopoliſe the fineſt breeds for his own ſtables and ſervice. Spain furniſhes likewiſe mules and black cattle; and their wild bulls have ſo much ferocity, that their bull-feaſts were the moſt magnificent ſpectacle the court of Spain could exhibit, nor are they now diſuſed. Wolves are the chief beaſts of prey that peſter Spain, which is well ſtored with all game and wild fowl, that are to be found in the neighbouring countries already deſcribed. The Spaniſh ſeas afford excellent fiſh of all kinds, eſpecially anchovies, which are here cured in great perfection.

This country is much infeſted with locuſts; and Mr. Dillon obſerves, that in 1754, La Mancha was covered with them, and the horrors of famine aſſailed the fruitful provinces of Andaluſia, Murcia, and Valencia. They have ſometimes appeared in the air in ſuch number as to darken the ſky; the clear atmoſphere of Spain has become gloomy; and the fineſt ſummer day of Eſtremadura been rendered more diſmal than the winter of Holland. Their ſenſe of ſmelling is ſo delicate, that they can diſcover a corn field or a garden, at a conſiderable diſtance; which they ravage almoſt in an inſtant. Mr. Dillon is of opinion, that the country people, by timely attention and obſervation, might deſtroy the eggs of theſe formidable inſects, and thereby totally extirpate them.

Mr. Townſend confirms the above account, and obſerves that theſe inſects commit the greateſt devaſtations in the ſouth of Spain, and this proceeds not merely from the warmth of climate, but from want of cultivation, becauſe the females never depoſit their eggs in arable land, but always in the deſerts. For this reaſon Galicia, where agriculture prevails, is little infeſted with the locuſt. Of the locuſt tribe Linnæus reckons twenty ſpecies. Their jaw bones are ſtrong and dented like a ſaw. Their head bears a ſtriking reſemblance to that of the horſe, and this ſimilitude has been remarked in the whole genus. The ſound of their wings is ſaid to be like the noiſe of diſtant chariots. They are not always conſidered as a plague, being commonly ſeen only in the foreſts, but when the ſeaſon has been peculiarly favourable for their propagation, when theſe rapicious inſects darken the air; when their aſſembled hoſts fall upon the rich paſtures; when they rob the vines and olives of their foliage; when they devour the corn; when they enter the houſes, and lay waſte every thing before them, they are then univerſally regarded as the ſcourge of heaven. As ſuch they were conſidered, when, for four ſucceſſive years, from 1754 to 1757, they ravaged all the ſouthern provinces of Spain and Portugal.

The deſcription of this gloomy ſcene, at leaſt of one ſimilar to it, which a prophet has given us, is ſcarcely to be equalled for beauty and poetic fire. He calls upon the people to lament becauſe a nation, ſtrong and without number, whoſe teeth are the teeth of lions, had ſuddenly invaded them. Then, turning to the heralds, "Blow ye the trumpet, &c." which will richly compenſate the reader for the trouble of conſulting it. Joel, ii. 1—11.

POPULATION, INHABITANTS, MANNERS, CUSTOMS, DIVERSIONS, AND DRESS. } Spain, formerly the moſt populous kingdom in Europe, is now but

It may be neceſſary to inform the reader of the extent and breadth of the Straits of Gibraltar, and acquaint him at the ſame time with the opinions of different writers concerning the perpetual current that ſets into the Mediterranean ſea from the great Atlantic Ocean, which has ſo long engaged the attention of many celebrated natural philoſophers.

The Straits of Gibraltar (formerly known by the name of the Herculean Straits) are about twelve leagues in extent, from Cape Spartel to Ceuta Point, on the African coaſt; and from Cape Trafalgar to Europa Point, on the coaſt of Spain. At the weſtern entrance, they are in breadth about eight leagues, but diminiſh conſiderably about the middle, oppoſite Tariſa (a ſmall fiſhing town on the Spaniſh coaſt, originally a place of great conſequence) though they widen again between Gibraltar and Ceuta, where they are about five leagues broad.

Philoſophers, who have communicated their ſentiments on the extraordinary phenomenon of a conſtant current through the Straits of Gibraltar into the Mediterranean, differ widely in accounting for the diſpoſition of that continual influx of waters, which, it is natural to ſuppoſe, would, without ſome conſumption or return, ſoon overflow the boundaries of the Mediterranean Sea. Then, turning to the heralds, "Blow ye the trumpet, &c." which will richly compenſate the reader for the trouble of conſulting it. Joel, ii. 1—11.

POPULATION, INHABITANTS, MANNERS, CUSTOMS, DIVERSIONS, AND DRESS. Spain, formerly the moſt populous kingdom in Europe, is now but

thinly inhabited. This is owing partly to the great drains of people ſent to America, and partly to the indolence of the natives, who are at no pains to raiſe food for their families. Another cauſe may be aſſigned, and that is, the vaſt numbers of eccleſiaſtics, of both ſexes, who lead a life of celibacy. Some writers have given ſeveral other cauſes, ſuch as their wars with the Moors, and the final expulſion of that people. The preſent inhabitants of this kingdom have been computed by Feyjoo, a Spaniſh writer, to amount to 9,250,000; ſo that England is three times as populous as Spain, conſidering its extent.

The perſons of the Spaniards are generally tall, eſpecially the Caſtilians; their hair and complexions ſwarthy, but their countenances are very expreſſive. The court of Madrid has of late been at great pains to clear their upper lips of muſtachoes, and to introduce among them the French dreſs, inſtead of their black cloaks, ſhort jerkins, ſtrait breeches, and long Toledo ſwords, which dreſs is now chiefly confined to the lower ranks. The Spaniards before the acceſſion of the houſe of Bourbon to their throne, affected that antiquated dreſs, in hatred and contempt of the French; and the government, probably, will find ſome difficulty in aboliſhing it quite, as the ſame ſpirit is far from being extinguiſhed. An old Caſtillian, or Spaniard, who ſees none above him, thinks himſelf the moſt important being in nature; and the ſame pride is commonly communicated to his deſcendants. This is the true reaſon why many of them are ſo fond of removing to America, where they can retain all their native importance, without the danger of ſeeing a ſuperior.

Throughout the whole of Spain (ſays Mr. Townſend) I cannot recollect to have ſeen a ſingle country reſidence, like thoſe which every where abound in England: the great nobility ſurround the ſovereign, and are attracted by the court; the nobles of inferior rank or fortune are either aſſembled at Madrid, or eſtabliſh themſelves in the great cities of the diſtant provinces. This deſertion of the country has ariſen, not as in other countries, from the oppreſſions of the great barons, and from the franchiſes enjoyed by cities, but from two other cauſes more extenſive in their operations. The firſt of theſe was the diſtracted condition of the empire till the reign of Ferdinand and Iſabella, divided into ſeparate kingdoms of ſmall extent, all engaged in never-ceaſing wars againſt each other, which drove men of property into the cities; the ſecond was the jealouſy of the court, which ſoon followed the expulſion of the Moors; a jealouſy which for more than a century and an half was merely political, leſt the grandees, ſupported by the people, ſhould endeavour to regain their conſequence. To this fear, at the acceſſion of the preſent family, ſucceeded one of a more alarming nature; from the attachment which many of the great families had diſcovered to the houſe of Auſtria. For this reaſon they were aſſembled round the throne, and kept conſtantly in ſight. In France ſome inhabited caſtles are to be found in every province. But, in this reſpect, no country can be compared to England. If the cauſes were to be aſſigned for this equal diſſemination of wealth, which appears in the delightful manſions of the great, and the ſeats of country gentlemen, ſcattered over the face of the whole iſland; of that which is to be ſeen in all our cities, great towns, and country villages; which meet the eye in every farm-houſe, and which ſhews itſelf in the high ſtate of cultivation, in our agricultural improvements, in the flocks, the herds, and the luxuriant crops with which our fields are covered, the leading cauſe would probably be found in the conſtitution of our government, not merely as ſecuring life, liberty, and property, but as making it neceſſary for the firſt nobility to cultivate their intereſt in the country, if they will extend their influence at court. By reſiding on their own eſtates, they not only ſpend money among their tenants, which by its circu-

circulation, ſets every thing in motion, and becomes productive of new wealth, but their amuſement is to make improvements.

Ridiculous, however, as thier pride is, it is productive of the moſt exalted qualities. It inſpires the nation with generous, humane, and virtuous ſentiments; it being ſeldom found that a Spaniſh nobleman, gentleman, or even trader is guilty of a mean action. During the moſt embittered wars they have had with England for near 70 years paſt, we know no inſtance of their taking advantage (as they might eaſily have done) of confiſcating the Britiſh property on board their galleons and plate fleet, which was equally ſecure in time of war as peace. This is the more ſurpriſing, as Philip V. was often needy, and his miniſters were far from being ſcrupulous of breaking their good faith with Great Britain.

By the beſt and moſt credible accounts of the late wars, it appears that the Spaniards in America gave the moſt humane and noble relief to all Britiſh ſubjects who were in diſtreſs, and fell into their hands, not only by ſupplying them with neceſſaries, but money; and treating them in the moſt hoſpitable manner while they remained amongſt them.

Having ſaid thus much, we are carefully to diſtinguiſh between the Spaniſh nobility, gentry, and traders, and their government, which are not to be put on the ſame footing with the lower ranks of Spaniards, who are as mean and rapacious as thoſe of any other country. The kings of Spain of the houſe of Bourbon, have ſeldom ventured to employ native Spaniards of great families, as their miniſters. Theſe are generally French or Italians, but moſt commonly the latter, who riſe into power by the moſt infamous arts, and of late times from the moſt abject ſtations. Hence it is that the French kings of Spain, ſince their acceſſion to that monarchy, have been but very indifferently ſerved in the cabinet. Alberoni, who had the greateſt genius among them, embroiled his maſter with all Europe, till he was driven into exile and diſgrace; and Grimaldi, the laſt of their Italian miniſters, hazarded a rebellion in the capital, by his oppreſſive and unpopular meaſures.

The common people who live on the coaſts, partake of all the bad qualities that are to be found in other nations. They are an aſſemblage of Jews, French, Ruſſians, Iriſh adventurers, and Engliſh ſmugglers; who being unable to live in their own country, mingle with the Spaniards. In time of war, they follow privateering with great ſucceſs; and when peace returns, they engage in all illicit practices, and often enter into the Iriſh and Walloon guards in the Spaniſh ſervice. There are about 40,000 gypſies, who, beſides their trade of fortune-telling, are inn-keepers in the ſmall towns and villages.—The character of the Spaniards, is thus drawn by Mr. Swinburne, after his late travels through the country: "The Catalans appear to be the moſt active ſtirring ſet of men, the beſt calculated for buſineſs, travelling, and manufactures. The Valencians a more ſullen, ſedate race, better adapted to the occupations of huſbandmen, leſs eager to change place, and of a much more timid, ſuſpicious caſt of mind than the former. The Andaluſians ſeem to be the greateſt talkers and rhodomontadors of Spain. The Caſtilians have a manly frankneſs, and leſs appearance of cunning and deceit. The New Caſtilians are perhaps the leaſt induſtrious of the whole nation: the Old Caſtilians are laborious, and retain more of the ancient ſimplicity of manners; both are of a firm determined ſpirit. The Arragoneſe are a mixture of the Caſtilian and Catalan, rather inclining to the former. The Biſcayners are acute and diligent, fiery and impatient of control, more reſembling a colony of republicans than the province of an abſolute monarchy: and the Galicians are a plodding pains-taking race of mortals, that roam over Spain in ſearch of an hardly earned ſubſiſtence."

The beauty of the Spaniſh ladies reigns moſtly in their novels and romances; for though it muſt be acknowledged, that Spain produces as fine women as any country

in the world, yet beauty is far from forming their general character. In their perſons they are commonly ſmall and ſlender; but they are ſaid to employ vaſt art in ſupplying the defects of nature. If we are to hazard a conjecture, we might reaſonably ſuppoſe that thoſe artifices rather diminiſh than increaſe their beauty, eſpecially when they are turned of 25. Their indiſcriminate uſe of paint, not only upon their faces, but their necks, arms, and hands, undoubtedly diſfigures their complexions, and ſhrivels their ſkin. It is at the ſame time univerſally allowed, that they have great wit and vivacity.

After all I have ſaid, it is more than probable, that the vaſt pains taken by the government of Spain, may at laſt eradicate thoſe cuſtoms and habits among the Spaniards that ſeem ſo ridiculous to foreigners. They are univerſally known to have refined notions and excellent ſenſe; and this, if improved by ſtudy and travelling, which they now ſtand in great need of, would render them ſuperior to the French themſelves. Their ſlow, deliberate manner of proceeding, either in council or war, has of late years worn off to ſuch a degree, that during the two laſt wars, they were found to be as quick both in reſolving and executing, if not more ſo than their enemies. Their ſecrecy, conſtancy, and patience, have always been deemed exemplary; and in ſeveral of their provinces, particularly Galicia, Granada, and Andaluſia, the common people have, for ſome time, affiduouſly applied themſelves to agriculture and labour.

Among the many good qualities poſſeſſed by the Spaniards, their ſobriety in eating and drinking is remarkable. They frequently breakfaſt, as well as ſup in bed; their breakfaſt is uſually chocolate, tea being very ſeldom drank. Their dinner is generally beef, mutton, veal, pork, and bacon, greens, &c. all boiled together. They live much upon garlic, chives, ſalad, and radiſhes; which, according to one of their proverbs, are food for a gentleman. The men drink very little wine; and the women uſe water or chocolate. Both ſexes uſually ſleep after dinner, and take the air in the cool of the evening. This is the common practice in warm countries, ſuch as Italy, Spain, and Portugal, where generally ſpeaking, the weather is clear and the inhabitants are moſtly in the habit of riſing much earlier than in England. The human body cannot furniſh ſpirits ſufficient to reſiſt the effects of the violent heat through the whole day, without ſome refreſhment; it is therefore the univerſal practice to go to ſleep for ſome hours after dinner, which in thoſe countries is over early, and this time of repoſe, which laſts for two or three hours, is in Spain called *the Sieſta*, and in Portugal *the Seſta*. Dancing is ſo much their favourite entertainment, that you may ſee a grandmother, mother, and daughter, all in the ſame country-dance. Many of their theatrical exhibitions are inſipid and ridiculous bombaſt. The prompter's head ſometimes appears through a trap-door above the level of the ſtage, and he reads the play loud enough to be heard by the audience. Gallantry is a ruling paſſion in Spain. Jealouſy, ſince the acceſſion of the houſe of Bourbon, has ſlept in peace. The nightly muſical ſerenades of miſtreſſes by their lovers are ſtill in uſe. The fights of the cavaliers, or bull-feaſts, are almoſt peculiar to this country and Portugal, and make a capital figure in painting the genius and manners of the Spaniards. On theſe occaſions, young gentlemen have an opportunity of ſhewing their courage and activity before their miſtreſſes; and the valour of the cavalier is proclaimed, honoured, and rewarded, according to the number and fierceneſs of the bulls he has killed in theſe encounters. Great pains are uſed in ſettling the form and weapons of the combat, ſo as to give a relief to the gallantry of the cavalier. The diverſion itſelf, which is attended with circumſtances of great barbarity, is undoubtedly of Mooriſh original, and was adopted by the Spaniards when upon good terms with that nation, partly through complaiſance, and partly through rivalſhip.

There is ſcarcely a town in Spain but what has a large ſquare for the purpoſe of exhibiting bull-feaſts; and it is ſaid that even the pooreſt inhabitants of the ſmalleſt villages will often club together in order to procure a cow or an ox, and fight them riding upon aſſes, for want of horſes.

Religion.] The horrors of the Romiſh religion, the only one tolerated in Spain, have been greatly leſſened, by moderating the penalties of the inquiſition, a tribunal diſgraceful to human nature; but though diſuſed, it is not abrogated; only the eccleſiaſtics and their officers can carry no ſentence into execution without the royal authority: it is ſtill in force againſt the Mooriſh and Jewiſh pretended converts. The Spaniards, however, embrace and practiſe the Roman catholic religion with all its abſurdities; and in this they have been ſo ſteady, that their king is diſtinguiſhed by the epithet of *Moſt Catholic*. It appears, however, that the burning zeal which diſtinguiſhed their anceſtors above the reſt of the catholic world hath loſt much of its activity, and ſeems nearly extinguiſhed, and the power of the clergy hath been much reduced of late years. A royal edict has alſo been iſſued, to prevent the admiſſion of noviciates into the different convents, without ſpecial permiſſion, which has a great tendency to reduce the monaſtic orders. It is ſaid, that there are now, in the kingdom of Spain, 54,000 friars, 34,000 nuns, and 20,000 ſecular clergy, but as little true moral religion as in any country under heaven.

In Catalonia, the confidence of the people on the interceſſion of ſaints has at all periods been a ſource of conſolation to them, but upon ſome occaſions, has betrayed them into miſchief. Every company of artiſans, and every ſhip that ſails, is under the immediate protection of ſome patron. Beſides folio volumes, which teſtify the innumerable miracles performed by our lady of Montſerrat, every ſubordinate ſhrine is loaded with votive tablets. This has been the parent of preſumption, and among the merchants has brought many families to want. The companies of inſurance in the laſt war, having each of them its favourite ſaint, ſuch as San Ramon de Penaforte, la Virgin de la Merced, and others, aſſociated in form by the articles of partnerſhip, and named in every policy of inſurance, and having with the moſt ſcrupulous exactneſs allotted to them their correſpondent dividend, the ſame as to any other partner, they concluded that with ſuch powerful aſſociates it was not poſſible for them to ſuffer loſs. Under this perſuaſion they ventured, about the year 1779, to inſure the French Weſt-Indiamen at fifty per cent. when the Engliſh and the Dutch had refuſed to do it at any premium; and, indeed, when moſt of the ſhips were already in the Engliſh ports. By this fatal ſtroke all the inſuring companies, except two, were ruined; yet, notwithſtanding this misfortune, this ſuperſtition remains in force.

Archbishopricks and bishopricks.] In Spain there are eight archbiſhopricks and forty-ſix biſhopricks. The archbiſhop of Toledo is ſtyled the Primate of Spain; he is great chancellor of Caſtile, and hath a revenue of 100,000l. ſterling per annum, but the Spaniſh court hath now many ways of leſſening the revenues of the church, as by penſions, donations to hoſpitals, &c. and premiums to the ſocieties of agriculture. This archbiſhoprick pays annually 15,000 ducats to the monks of the Eſcurial, beſides other penſions; and it is aſſerted, that there is not a biſhoprick in Spain but hath ſome body or other quartered upon it, and the ſecond-rate benefices are believed to be in the ſame predicament. Out of the rich canonries and prebends are taken the penſions of the new order of knights of Carlos Tercero. The riches of the Spaniſh churches and convents are the unvarying objects of admiration to travellers as well as natives: but there is a ſameneſs in them all, except that they differ in the degrees of treaſure and jewels they contain.

The

The ſums which are given away in charity, by the archbiſhops, biſhops, and convents, from their ample revenues, are immenſe; but the effects of it are moſt deplorable in promoting indolence, poverty, and every ſpecies of wretchedneſs. In traverſing the ſtreets of Seville (ſays Mr. Townſend) I was ſtruck with the multitude of beggars clothed in rags; and was at firſt inclined to attribute this to the decay of trade; but, upon examination, I found a more abiding cauſe in the diſtribution of alms at the archbiſhop's palace, and at the gates of twenty convents, daily, and without diſtinction, to all who make application for relief. Such miſplaced benevolence is a bar to induſtry, and multiplies the objects of diſtreſs, whoſe numbers bear exact proportion to the proviſion made for their ſupport. This is the caſe not in one, but in every place, where beggars abound, for by the miſtaken benevolence of the biſhop, of the canons, and of the convents, in diſtributing alms to all who aſk, there is ſuch ample proviſion made for lazineſs, that every ſtreet ſwarms with vagabonds, not merely with thoſe who are proper objects of compaſſion, but with wretches, who, if compelled to work, would be found abundantly able to maintain themſelves. What incitement can there be here to induſtry? Hence it comes to paſs, that wherever theſe indiſcriminate charities abound, few traces of it are to be ſeen, whilſt filth and naſtineſs, immorality and vice, wretchedneſs and poverty, the inevitable conſequences of undiſtinguiſhing benevolence, prevail. How evident it is from hence, that he who finds employment for the poor is their greateſt friend; whilſt he who indiſcriminately feeds them, ſhould be ranked amongſt their enemies.

LANGUAGE.] The ground-work of the Spaniſh language, like that of the Italian, is Latin; and it might be called a baſtard Latin, were it not for the terminations, and the exotic words introduced into it by the Moors and Goths, eſpecially the former. It is at preſent a moſt majeſtic and expreſſive language: and it is remarkable, that foreigners who underſtand it the beſt, prize it the moſt. It makes but a poor figure even in the beſt tranſlations; and Cervantes ſpeaks almoſt as awkward Engliſh as Shakeſpeare does French. It may, however, be conſidered as a ſtandard tongue, having retained its purity for upwards of 200 years. Their Paternoſter runs thus; *Padre nueſtro, que eſtas en el cielo, ſanctificado ſe el tu nombre; venga a nos el tu reyno; hagaſe tu voluntad, aſſien la tierra como en el cielo; el pan nueſtro de cada dia das nos le oy; y perdna nos nueſtras deudas aſſi como nos otros perdonamos a nueſtros deudores; no nos dexes cair en la tentacion, mas libra nos de mal, porque tao es le reyno; y la potencia; y la gloria per los ſiglos.* Amen.

LEARNING AND LEARNED MEN.] Spain has not produced learned men in proportion to the excellent capacities of its natives. This defect may, in ſome meaſure, be owing to their indolence and bigotry, which prevents them from making that progreſs in the polite arts which they otherwiſe would: but the greateſt impediment to literature in Spain, is the deſpotic nature of its government. Several old fathers of the church were Spaniards; and learning owes a great deal to Iſidore, biſhop of Seville, and cardinal Ximenes. Spain has likewiſe produced ſome excellent phyſicians. Such was the gloom of the Auſtrian government, that took place with the emperor Charles V. that the inimitable Cervantes, the author of Don Quixote, born at Madrid, in 1549, liſted in a ſtation little ſuperior to that of a common ſoldier, and died neglected, after fighting bravely for his country at the battle of Lepanto, in which he loſt his left hand. His ſatire upon knight-errantry, in his adventures of Don Quixote, did as much ſervice to his country by curing them of that ridiculous ſpirit, as it now does honour to his own memory. He was in priſon for debt when he compoſed the firſt part of this hiſtory, and is perhaps to be placed at the head of moral and humorous ſatiriſts.

The viſions of Quevedo, and ſome other of his humorous and ſatirical pieces, having been tranſlated into the Engliſh language, have rendered that author well known in this country. He was born at Madrid in the year 1570, and was one of the beſt writers of his age, excelling equally in verſe and in proſe. Beſides his merit as a poet, he was well verſed in the oriental languages, and poſſeſſed great erudition. His works are compriſed in three volumes, 4to. two of which conſiſt of poetry, and the third of pieces in proſe. As a poet he excelled both in the ſerious and burleſque ſtyle, and was happy in a turn of humour ſimilar to that which we admire in Butler and Swift.

Poetry was cultivated in Spain at an early period. After the Saracens had ſettled themſelves in this kingdom, they introduced into it their own language, religion, and literature; and the oriental ſtyle of poetry very generally prevailed. Before this period, the Spaniards had addicted themſelves much to Roman literature: but Alvaro of Cordova complains, that in his time, the Spaniards had ſo totally forgotten the Latin tongue, and given the preference to Arabic, that it was difficult, even amongſt a thouſand people, to find one who could write a Latin letter. The attachment of many of the inhabitants of Spain to oriental literature was then ſo great, that they could write Arabic with remarkable purity, and compoſe verſes with as much fluency and elegance as the Arabians themſelves. About this time the Spaniſh Jews made a conſiderable figure in literature, which was promoted by maſters from Babylon, where they had academies ſupported by themſelves. In the year 967, Rabbi Moſes, and his ſon Rabbi Enoch, having been taken by pirates, were ſold as ſlaves at Cordova, and redeemed by their brethren, who eſtabliſhed a ſchool in that city, of which Rabbi Moſes was appointed the head: that learned Jew was, however, deſirous of returning back to his own country; but the Mooriſh king of Cordova would not give his conſent, rejoicing that his Hebrew ſubjects had maſters of their own religion at home, without being under the neceſſity of receiving them from a foreign univerſity, and every indulgence was granted them with reſpect to their worſhip. In 1039, Rabbi Ezechias was put to death at Babylon, and the college, over which he had preſided, was transferred to Cordova, from whence a number of Hebrew poets iſſued forth, who have been noticed by various learned writers. The Spaniſh Jews had alſo flouriſhing ſchools at Seville, Granada, and Toledo, and from hence aroſe the numerous Hebrew proverbs, and modes of ſpeech, that have crept into the Caſtilian language, and form a conſpicuous part of its phraſeology. To theſe Jews the Spaniſh language is indebted for a curious verſion of the Hebrew books of the Old Teſtament, which was afterwards printed at Ferrara, in 1553, in a Gothic-Spaniſh letter.

The Spaniſh writers alſo boaſt of their Troubadours as high as the twelfth or thirteenth centuries, the Provençal and Galician dialects being then very prevalent. The marquis of Villena, who died in 1434, was the author of that famous work the *Arte de la Gaya Sciencia*, which comprehends a ſyſtem of poetry, rhetoric, and oratory, beſides deſcribing all the ceremonies of the Troubadours at their public exhibitions. That nobleman was alſo the author of a tranſlation of the Æneid of Virgil into Spaniſh verſe. Juan de Mena, of Cordova, was alſo much celebrated as a poet in his own time: his poems have paſſed through a variety of editions, the firſt of which was printed at Saragoſſa in 1515. Juan de la Encina was alſo a poet of conſiderable merit; he tranſlated ſome of the Latin poems into Spaniſh, and publiſhed a piece on the art of poetry, and other works, which were printed at Saragoſſa in 1516. Boſcan, Ercilla, Villegas, and other Spaniſh poets, alſo obtained great reputation in their own country. But the moſt diſtinguiſhed dramatic poet of this nation was Lopez de Vega, who was contemporary with our Shakſpeare. He poſſeſſed an imagination aſtoniſhingly fertile, and wrote with great facility; but in his

his dramatic works he diſregarded the unities, and adapted his works more to the taſte of the age than to the rules of criticiſm. His lyric compoſitions, and fugitive pieces, with his proſe eſſays, form a collection of fifty volumes, beſides his dramatic works, which make twenty-ſix volumes more; excluſive of four hundred ſcriptural dramatic pieces, called in Spain *Autos Sacramentales*. Calderon was alſo a dramatic writer of conſiderable note, but many of his plays are very licentious in their tendency.

Toſtatus, a divine, the moſt voluminous perhaps that ever wrote, was a Spaniard; but his works have been long diſtinguiſhed only by their bulk. Herrera, and ſome other hiſtorians, particularly De Solis, have ſhewn great abilities in hiſtory, by inveſtigating the antiquities of America, and writing the hiſtory of its conqueſt by their countrymen. Among the writers who have lately appeared in Spain, Father Feyjoo has been one of the moſt diſtinguiſhed. His performances diſplay great ingenuity, very extenſive reading and uncommon liberality of ſentiment, eſpecially when his ſituation and country are conſidered. Many of his pieces have been tranſlated into Engliſh, and publiſhed in four volumes, 8vo. Don Franciſco Perez Bayer, archdeacon of Valencia, and author of a diſſertation on the Phœnician language, may be placed in the firſt line of Spaniſh literati. Spain has likewiſe produced many travellers and voyagers to both the Indies, ſome of whom are amuſing and inſtructive. Should the Spaniards diſengage themſelves from their abſtracted metaphyſical turn of thinking, and from their preſent tyrannical form of government, they certainly would make a capital figure in literature. At preſent, it ſeems, that the common education of an Engliſh gentleman would conſtitute a man of learning in Spain, and ſhould he underſtand Greek, he would be quite a phænomenon.

Some of the Spaniards have diſtinguiſhed themſelves in the polite arts, and not only the cities, but the palaces, eſpecially the Eſcurial, diſcover many ſtriking ſpecimens of their abilities as ſculptors and architects; Palomino, in an elaborate treatiſe on the art of painting, in two volumes, folio, has inſerted the lives of two hundred and thirty-three painters and ſculptors, who flouriſhed in Spain from the time of Ferdinand the Catholic, to the concluſion of the reign of Philip the Fourth. Among the moſt eminent Spaniſh painters, were Velaſques, Murillo, who is commonly called the Spaniſh Vandyke, Ribeira and Glaudio Coello, whoſe ſtyle of painting was very ſimilar to that of Paul Veroneſe.

UNIVERSITIES.] In Spain are reckoned 24 univerſities, the chief of which is Salamanca, founded by Alphonſus, ninth king of Leon, in the year 1200. It contains 21 colleges, ſome of which are very magnificent. Many of the nobility of Spain ſend their ſons to be educated here. The reſt are, Seville, Granada, Compoſtella, Toledo, Valadolid, Alcala, Siguenza, Valencia, Lerida, Hueſca, Saragoſſa, Tortoſa, Oſſuna, Onata, Candia, Barcelona, Murcia, Taragona, Baeza, Avila, Oriuela, Oviedo, and Palencia.

ANTIQUITIES AND CURIOSITIES, ARTIFICIAL AND NATURAL.] The former of theſe conſiſt chiefly of Roman and Mooriſh antiquities. Near Segovia, a grand aqueduct, erected by Trajan, extends over a deep valley, between two hills, and is ſupported by a double row of 159 arches. It reaches about 140 yards, and where it croſſes the valley it is ſomething more than 94 feet high. Its ſolidity, which has braved upwards of ſixteen centuries, ſeems inexplicable on cloſely obſerving the ſimplicity of its conſtruction. It is compoſed of ſquare ſtones, placed one upon another, without any exterior appearance of cement, though we cannot now be certain whether they were really united without this aid, by being cut and placed with peculiar art, or whether the cement has been deſtroyed by time. Other Roman aqueducts, theatres, and circi, are to be found at Terrago, and different

parts

parts of Spain. A ruinous watch-tower near Cadiz is vulgarly, but erroneouſly, thought to be one of the pillars of Hercules. Near the city of Salamanca are the remains of a Roman way, paved with large flat ſtones; it was continued to Merida, and from thence to Seville. At Toledo are the remains of an old Roman theatre, which is now converted into a church, ſaid to be one of the greateſt curioſities of antiquity. It is 600 feet in length, 500 in breadth, and of a proportionable height: the roof, which is amazingly bold and lofty, is ſupported by 350 pillars of fine marble, in ten rows, forming eleven ailes, in which are 366 altars, and 24 gates; every part being enriched and adorned with the moſt noble and coſtly ornaments. At Martorel, a large town, where much black lace is manufactured, is a very high bridge, built in 1768, out of the ruins of a decayed one that had exiſted 1985 years from its erection by Hannibal. At the north end is a triumphal arch or gateway, ſaid to have been raiſed by that general in honour of his father Hamilcar. It is almoſt entire, well proportioned, and ſimple, without any kind of ornament, except a rim or two of hewn ſtone. Near Morviedro (once the faithful Saguntum) deſtroyed by Hannibal, are ſome Roman remains—as the ruins of the theatre, an exact ſemicircle about 82 yards diameter, ſome of the galleries are cut out of the rock, and 9000 perſons might attend the exhibitions without inconvenience.

The Mooriſh antiquities are rich and magnificent. Among the moſt diſtinguiſhed of theſe is the royal palace of the Alhambra at Granada, which is one of the moſt entire, as well as the moſt ſtately, of any of the edifices which the Moors erected in Spain. It was built in 1280, by the ſecond Mooriſh king of Granada; and, in 1492, in the reign of their eighteenth king, was taken by the Spaniards. It is ſituated on a hill, which is aſcended by a road bordered with hedges of double or imperial myrtles, and rows of elms. On this hill, within the walls of the Alhambra, the emperor Charles V. began a new palace in 1568, which was never finiſhed, though the ſhell of it remains. It is built of yellow ſtone; the outſide forms a ſquare of one hundred and ninety feet. The inſide is a grand circular court, with a portico of the Tuſcan, and a gallery of the Doric order, each ſupported by thirty-two columns, made of as many ſingle pieces of marble. The grand entrance is ornamented with columns of jaſper, on the pedeſtals of which are repreſentations of battles, in marble baſſo relievo. The Alhambra itſelf is a maſs of many houſes and towers, walled round, and built of large ſtones of different dimenſions. Almoſt all the rooms have ſtucco walls and cielings, ſome carved, ſome painted, and ſome gilt, and covered with various Arabic ſentences. Here are ſeveral baths, the walls, floor, and cieling of which are of white marble. The gardens abound with orange and lemon trees, pomegranates, and myrtles. At the end of the gardens is another palace called Ginaraliph, ſituated on a more elevated ſtation than the Alhambra. From the balconies of this palace is one of the fineſt proſpects in Europe, over the whole fertile plain of Granada, bounded by the ſnowy mountains. The Moors to this day regret the loſs of Granada, and ſtill offer up prayers to God for the recovery of the city. Many other noble monuments, erected in the Mooriſh times, remain in Spain; ſome of them in tolerable preſervation, and others exhibiting ſuperb ruins.

Among the natural curioſities, the medicinal ſprings, and ſome noiſy lakes, form a principal part; but we muſt not forget the river Guadiana, which, like the Mole in England, runs under ground, and afterwards emerges. The royal cabinet of natural hiſtory at Madrid was opened to the public by his majeſty's orders in 1775. Every thing in this collection is ranged with neatneſs and elegance, and the apartments are opened twice a week for the public, beſides being ſhewn privately to ſtrangers of rank. The mineral part of the cabinet, containing precious ſtones, marbles, ores, &c. is very perfect; but the collection of birds and beaſts at preſent

is not large, though it may be expected to improve apace, if care be taken to get the productions of the Spaniſh American colonies. Here is alſo a curious collection of vaſes, baſons, ewers, cups, plates, and ornamental pieces of the fineſt agates, amethyſts, rock cryſtals, &c. mounted in gold, and enamel, ſet with cameos, intaglios, &c. in an elegant taſte, and of very fine workmanſhip, ſaid to have been brought from France by Philip V. The cabinet alſo contains ſpecimens of Mexican and Peruvian vaſes and utenſils.

In blowing up the rock of Gibraltar, many pieces of bones and teeth have been found incorporated with the ſtone, ſome of which have been brought to England, and depoſited in the Britiſh Muſeum. On the weſt ſide of the mountain is the cave called St. Michael's, eleven hundred and ten feet above the horizon. Many pillars of various ſizes, ſome of them two feet in diameter, have been formed in it by the droppings of water, which have petrified in falling. The water perpetually drips from the roof, and forms an infinite number of ſtalactitæ, of a whitiſh colour, compoſed of ſeveral coats or cruſts, and which, as well as the pillars, continually increaſe in bulk, and may probably in time fill the whole cavern. From the ſummit of the rock, in clear weather, not only the town of Gibraltar may be ſeen, but the bay, the ſtraits, the towns of St. Roque and Algeſiras, and the Alpuxarra mountains, mount Abyla on the African ſhore, with its ſnowy top, the cities of Ceuta, Tangier, and great part of the Barbary coaſt.

CHIEF CITIES, &c.] Madrid is the capital of Spain, and contains about 300,000 inhabitants. It is ſurrounded with very lofty mountains, whoſe ſummits are frequently covered with ſnow. It is well paved and lighted, and ſome of the ſtreets are ſpacious and handſome. The houſes of Madrid are of brick, and are laid out chiefly for ſhew, conveniency being little conſidered: thus you will paſs through uſually two or three large apartments of no uſe, in order to come at a ſmall room at the end, where the family ſit. The houſes in general look more like priſons than the habitations of people at their liberty; the windows, beſides having a balcony, being grated with iron bars, particularly the lower range, and ſometimes all the reſt. Separate families generally inhabit the ſame houſe, as in Paris and Edinburgh. Foreigners are very much diſtreſſed for lodgings at Madrid, as the Spaniards are not fond of taking ſtrangers into their houſes, eſpecially if they are not catholics. Its greateſt excellency is the cheapneſs of its proviſions; but neither tavern, coffee-houſe, nor newſpaper, except the Madrid Gazette, are to be found in the whole city. The royal palace ſtands on an eminence, on the weſt ſide of the city; it is a ſpacious magnificent ſtructure, conſiſting of three courts, and commands a very fine proſpect. Each of the fronts is 470 feet in length and 100 high, and there is no palace in Europe fitted up with greater magnificence; the great audience chamber eſpecially, which is 120 feet long, and hung with crimſon velvet richly embroidered with gold; ornamented alſo with 12 looking-glaſſes made at St. Ildefonſo, each 10 feet high, with 12 tables of the fineſt Spaniſh marbles. The other royal palaces round it are deſigned for hunting-ſeats, or houſes of retirement for their kings. Some of them contain fine paintings and good ſtatues. The chief of thoſe palaces are the Buen Retiro (now ſtripped of all its beſt pictures and furniture), Caſa del Campo, Aranjuez, and St. Ildefonſo.

A late traveller has repreſented the palace of Aranjuez, and its gardens, as extremely delightful. Here is alſo a park many leagues round, cut acroſs in different parts, by alleys of two, three, and even four miles extent. Each of thoſe alleys is formed by two double rows of elm trees. The alleys are wide enough to admit of four coaches abreaſt, and betwixt each double row there is a narrow channel, through which runs a ſtream of water. Between thoſe alleys there are thick

thick groves of ſmaller trees of various kinds, and thouſands of deer and wild boars wander at large, beſides numberleſs hares, rabbits, pheaſants, partridges, and other kinds of birds. The river Tagus runs through this place, and divides it into two unequal parts. The central point of this great park is the king's palace, which is partly ſurrounded by the garden, and is adorned with fountains and ſtatues; it alſo contains a vaſt variety of the moſt beautiful flowers, both American and European. As to the palace of Aranjuez itſelf, it is rather an elegant than a magnificent building.

The palace of St. Ildefonſo is built of brick, plaiſtered, and painted, but no part of the architecture is agreeable. It is two ſtories high, and the garden-front has thirty-one windows, and twelve rooms in a ſuite. The gardens are on a ſlope, on the top of which is a great reſervoir of water, called here *El Mar*, the ſea, which ſupplies the fountains: this reſervoir is furniſhed from the torrents which pour down the mountains. The water-works are excellent, and far ſurpaſs thoſe at Verſailles. The great entry of the palace is ſomewhat ſimilar to that of Verſailles, and with a large iron palliſade. In the gardens are twenty-ſeven fountains: the baſons are of white marble, and the ſtatues, many of which are excellent, are of lead, bronzed and gilt. Theſe gardens are in the formal French ſtyle, but ornamented with ſixty-one very fine marble ſtatues, as large as the life, with twenty-eight marble vaſes, and twenty leaden vaſes gilt. The upper part of the palace contains many valuable paintings, and the lower part antique ſtatues, buſts, and baſſo relievos. The expence laid out in this palace and gardens was immenſe; but when we conſider, ſays Mr. Townſend, that the whole of the garden was a barren rock, that the very ſoil is brought from a great diſtance, and that water is conveyed to every tree; when we reflect upon the quantity of lead uſed for the images, and of caſt iron for the pipes, with the expence of workmanſhip for both, together with all the other elegancies, correſponding to ſuch an undertaking, we ſhall not wonder to hear that this place coſt forty-five millions of piaſtres, or, in Engliſh money, near ſix millions and an half.

The pride of Spain, however, is the Eſcurial; and the natives ſay, perhaps, with juſtice, that the building of it coſt more than that of any other palace in Europe. The deſcription of this palace forms a fizeable quarto volume, and it is ſaid, that Philip II. who was its founder, expended upon it ſix millions of ducats. It contains a prodigious number of windows, 200 in the weſt front, and in the eaſt 366, and the apartments are decorated with an aſtoniſhing variety of paintings, ſculpture, tapeſtry, ornaments of gold and ſilver, marble, jaſper, gems, and other curious ſtones. This building, beſides its palace, contains a church, large and richly ornamented, a mauſoleum, cloiſters, a convent, a college, and a library, containing about thirty thouſand volumes; but it is more particularly valuable for the Arabic and Greek manuſcripts with which it is enriched. Above the ſhelves are paintings in freſco by Barthelemi Carducho, the ſubjects of which are taken from ſacred or profane hiſtory, or have relation to the ſciences of which the ſhelves below preſent to us the elements. Thus the council of Nice is repreſented above the books which treat of theology; the death of Archimedes at the ſiege of Syracuſe, indicates thoſe which relate to mathematics; and Cicero pronouncing his oration in favour of Rabirius, the works relative to eloquence and the bar. A very ſingular circumſtance in this library may be agreeable to the curious reader to know, which is, that, on viewing the books, he will find them placed the contrary way, ſo that the edges of the leaves are outwards, and contain their titles written on them. The reaſon for this cuſtom is, that Arias Montanus, a learned Spaniard of the ſixteenth century, whoſe library had ſerved as a foundation for that of the Eſcurial, had all his books placed and inſcribed in that manner, which no doubt ap-

peared to him to be the moſt commodious method of arranging them; that he had introduced his own method into the Eſcurial, and ſince his time, and for the ſake of uniformity, it had been followed with reſpect to the books afterwards added. Here are alſo large apartments for all kinds of artiſts and mechanics, noble walks, with extenſive parks and gardens, beautified with fountains and coſtly ornaments. The fathers that live in the convent are 200, and they have an annual revenue of 12,000l. The mauſoleum, or burying-place of the kings and queens of Spain, is called the Pantheon, becauſe it is built upon the plan of that temple at Rome, as the church to which it belongs is upon the model of St. Peter's. It is 36 feet diameter, incruſted with fine marbles.

Allowing to the Spaniards their full eſtimate of the incredible ſums beſtowed on this palace, and on its furniture, ſtatues, paintings, columns, vaſes, and the like decorations, which are moſt amazingly rich and beautiful, yet we hazard nothing in ſaying, that the fabric itſelf diſcovers a bad taſte. The conceit of building it in the form of a gridiron, becauſe St. Laurence, to whom it is dedicated, was broiled on ſuch an utenſil, and multiplying the ſame figure through its principal ornaments, upon the doors, windows, altars, rituals, and ſacerdotal habits, could have been formed only in the brain of a taſteleſs bigot, ſuch as Philip II. who erected it to commemorate the victory he obtained over the French (but by the aſſiſtance of the Engliſh forces) at St. Quintin, on St. Laurence's day, in the year 1557. The apartment where the king reſides forms the handle of the gridiron. The building is a long ſquare of 640 feet by 580. The height to the roof is 60 feet. It has been enriched and adorned by his ſucceſſors; but its outſide has a gloomy appearance, and the inſide is compoſed of different ſtructures, ſome of which are maſter-pieces of architecture, but forming a diſagreeable whole. It muſt however be confeſſed, that the pictures and ſtatues that have found admiſſion there, are excellent in their kind, and ſome of them ſcarcely to be equalled even in Italy itſelf.

Cadiz is the great emporium of Spaniſh commerce. It ſtands on an iſland ſeparated from the continent of Andaluſia, without the ſtraits of Gibraltar, by a very narrow arm of the ſea, over which a fortified bridge is thrown, and joins it to the main land. The entrance into the bay is about 500 fathoms wide, and guarded by two forts called the Puntals. The entrance has never been of late years attempted by the Engliſh, in their wars with Spain, becauſe of the vaſt intereſt our merchants have in the treaſures there, which they could not reclaim from the captors. The ſtreets are narrow, ill paved, and filthy, and full of rats in the night. The houſes lofty with flat roofs, and few are without a turret for a view of the ſea. The population is reckoned at 140,000 inhabitants, of which 12,000 are French, and as many Italians. The cathedral hath been already 50 years building, and the roof is not half finiſhed. The environs are exceedingly beautiful.

Cordova is now an inconſiderable place; ſtreets crooked and dirty, and but few of the public or private buildings conſpicuous for their architecture. The palaces of the inquiſition and of the biſhops are extenſive and well ſituated. The cathedral was formerly a moſque, divided into ſeventeen ailes by rows of columns of various marbles, and is very rich in plate; four of the ſilver candleſticks coſt 850l. a-piece. The revenue of the ſee amounts to 3500l. per ann. but as the biſhops cannot deviſe by will, all they die poſſeſſed of eſcheates to the king.

Seville, the Julia of the Romans, is, next to Madrid, the largeſt city in Spain, but is greatly decayed both in riches and population. The ſhape is circular, and the walls ſeem of Mooriſh conſtruction; its circumference is five miles and a half. The ſuburb of Triana is as large as many towns, and remarkable for its gloomy Gothic caſtle, where, in 1481, the inquiſition was firſt eſtabliſhed in Spain. Its manu-

manufactures in wool and ſilk, which formerly amounted to 76,000, are now reduced to 400, and its great office of commerce to Spaniſh America is removed to Cadiz. The cathedral of Seville is a fine Gothic building, with a curious ſteeple or tower, having a moveable figure of a woman at top, called La Giralda, which turns round with the wind, and which is referred to in Don Quixote. This ſteeple is reckoned one of the greateſt curioſities in Spain, and is higher than St. Paul's in London, but the cathedral, in Mr. Swinburne's opinion, is by no means equal to York-miniter for lightneſs, elegance, or Gothic delicacy. The firſt clock made in the kingdom was ſet up in this cathedral in the year 1400, in the preſence of king Henry III. The proſpect of the country round this city, beheld from the ſteeple of the cathedral, is extremely delightful.

Barcelona, formerly Barcino, ſaid to be founded by Hamilcar Barcas, is a large circular trading city, containing 15,000 houſes, is ſituated in the Mediterranean facing Minorca, and is ſaid to be the handſomeſt place in Spain; the houſes are lofty and plain, and the ſtreets well lighted and paved. The citadel is ſtrong, and the place and inhabitants famous for the ſiege they ſuſtained in 1714 againſt a formidable army, when deſerted both by England and the Emperor, for whom they had taken up arms. The number of inhabitants is ſuppoſed to be nearly 150,000, and they ſupply Spain with moſt of the clothing and arms for the troops. A ſingular cuſtom prevails among them on the firſt of November, the eve of All Souls; they run about from houſe to houſe to eat cheſnuts, believing that for every cheſnut they ſwallow, with proper faith and unction, they ſhall deliver a ſoul out of purgatory.

Valencia is a large and almoſt circular city, with lofty walls. The ſtreets are crooked and narrow, and not paved, the houſes ill built and filthy, and moſt of the churches tawdry. Prieſts, nuns, and friars, of every dreſs ſwarm in this city, whoſe inhabitants are computed at 80,000. Its archbiſhoprick is one of the beſt in Spain, to the amount of 40,000l. ſterling a year.

Carthagena is a large city, but very few good ſtreets, and fewer remarkable buildings. The port is very complete, formed by nature in the figure of a heart, and the arſenal is a ſpacious ſquare ſouth-weſt of the town, with 40 pieces of cannon to defend it towards the ſea. When Mr. Swinburne viſited it, in 1775, there were 800 Spaniſh criminals, and 600 Barbary ſlaves working at the pumps to keep the docks dry, &c. and treated with great inhumanity. The crimes for which the Spaniards were ſent there, deſerved indeed exemplary puniſhments.

Granada ſtands on two hills, and the ancient palace of the Alhambra crowns the double ſummit between two rivers, the Dauro and the Xenil. The former glories of this city are paſſed away with its old inhabitants; the ſtreets are now filthy, and the aqueducts crumbled to duſt, and its trade loſt. Of 50,000 inhabitants, only 18,000 are employed in labour, the ſurplus is made up of clergy, lawyers, children, and beggars. The amphitheatre, for bull-feaſts, is built of ſtone, and one of the beſt in Spain, and the environs of the city are ſtill pleaſing and healthful.

Bilboa is ſituated on the banks of the river Ybaizabal, and is about two leagues from the ſea. It contains about eight hundred houſes, with a large ſquare by the water ſide, well ſhaded with pleaſant walks, which extend to the outlets, on the banks of the river, where there are great numbers of houſes and gardens, which form a moſt pleaſing proſpect, particularly in ſailing up the river: for, beſides the beautiful verdure, numerous objects open gradually to the eye, and the town appears as an amphitheatre, which enlivens the landſcape, and completes the ſcenery. The houſes are ſolid and lofty, and the ſtreets well paved and level; and the water is ſo conveyed into the ſtreets, that they may be waſhed at pleaſure; which renders Bilboa one of the neateſt towns in Europe.

Malaga is an ancient city, and not leſs remarkable for its opulence and extenſive commerce than for the luxuriance of its ſoil, yielding in great abundance the moſt delicious fruits; whilſt its rugged mountains afford thoſe luſcious grapes, which give ſuch reputation to the Malaga wine, known in England by the name of Mountain. The city is large and populous, and of a circular form, ſurrounded with a double wall, ſtrengthened by ſtately towers, and has nine gates. A Mooriſh caſtle on the point of a rock commands every part of it. The ſtreets are narrow, and the moſt remarkable building in it is a ſtupendous cathedral, begun by Philip II. ſaid to be as large as that of St. Paul's in London. The biſhop's income is 16,000. ſterling.

The city of Salamanca is of a circular form, built on three hills and two vallies, and on every ſide ſurrounded with proſpects of fine houſes, noble ſeats, gardens, orchards, fields, and diſtant villages; and is ancient, large, rich, and populous. There are ten gates to this city, and it contains twenty-five churches, twenty-five convents of friars, and the ſame number of nunneries. The moſt beautiful part of this city is the great ſquare, built about forty years ago. The houſes are of three ſtories, and all of equal height and exact ſymmetry, with iron balconies, and a ſtone baluſtrade on the top of them: the lower part is arched, which forms a piazza all round the ſquare, which extends two hundred and ninety-three feet on each ſide. Over ſome of the arches are medallions, with buſts of the kings of Spain, and of ſeveral eminent men, in ſtone baſſo-relievo, among which are thoſe of Ferdinando Cortez, Francis Pizarro, Davila, and Cid Ruy. In this ſquare the bull-fights are exhibited for three days only, in the month of June. The river Tormes runs by this city, and has a bridge over it of twenty-five arches, built by the Romans, and yet entire.

Toledo is one of the moſt ancient cities in Spain, and during ſeveral centuries it held the rank of its metropolis. But the neighbourhood of Madrid has by degrees ſtripped it of its numerous inhabitants, and it would have been almoſt entirely deſerted but for its cathedral, the income of which being in great part ſpent here, contributes chiefly to the maintenance of the few thouſands that are left, and aſſiſts, in ſome degree, thoſe ſmall manufactures of ſword-blades and ſilk-ſtuffs that are eſtabliſhed in this city. It is now exceedingly ill-built, poor, and mean, and the ſtreets very ſteep.

Burgos was the ancient capital of the kingdom of Caſtile, but now in obſcurity. The cathedral is one of the moſt magnificent ſtructures of the Gothic kind in Europe: its form is exactly the ſame as that of York minſter, and on the eaſt end is an octagon building exactly like the chapter-houſe at York.

Gibraltar, once a celebrated town and fortreſs of Andaluſia, is at preſent in poſſeſſion of Great Britain. Till the arrival of the Saracens in Spain, which took place in the year 711, or 712, the rock of Gibraltar went by the name of *Mons Calpe*. On their arrival a fortreſs was built upon it, and it obtained the name of *Gibel Tarif*, from the name of their general, and thence Gibraltar. It was in the poſſeſſion of the Spaniards and Moors by turns, till it was taken from the former by a combined fleet of Engliſh and Dutch ſhips, under the command of ſir George Rooke, in 1704; and this rather through accident than any thing elſe. The prince of Heſſe, with 1800 men, landed on the iſthmus, but an attack on that ſide was found to be impracticable on account of the ſteepneſs of the rock. The fleet fired 15,000 ſhot without making any impreſſion on the works, ſo that the fortreſs ſeems to be equally impregnable both to the Britiſh and Spaniards, except by famine. At laſt, a party of ſailors, having got merry with grog, rowed cloſe under the New Mole in their boats, and as they ſaw that the garriſon, who conſiſted only of 100 men, did not mind them, they were encouraged to attempt a landing; and having mount-

ed

ed the mole, hoiſted a red jacket as a ſignal of poſſeſſion. This being immediately obſerved from the fleet, more boats and ſailors were ſent out, who, in like manner, having aſcended the works, got poſſeſſion of a battery, and ſoon obliged the town to ſurrender. After many fruitleſs attempts to recover it, it was confirmed to the Engliſh by the treaty of Utrecht, in 1713. Repeated endeavours have been ſince made to wreſt it from England, but without ſucceſs: the laſt war hath made it more famous than ever, when it underwent a long ſiege againſt the united forces of Spain and France by land and ſea, and was gallantly defended by general Elliot and his garriſon, to the great loſs and diſgrace of the aſſailants: though it muſt be granted, the place is by nature almoſt impregnable. Near 300 pieces of cannon of different bores, and chiefly braſs, which were ſunk before the port in the floating batteries, have been raiſed, and ſold, to be diſtributed among the garriſon. It is a commodious port, and formed naturally for commanding the paſſage of the Straits, or, in other words, the entrance into the Mediterranean and Levant ſeas. But the road is neither ſafe againſt an enemy nor ſtorms: the bay is about twenty leagues in circumference. The ſtraits are 24 miles long, and 15 broad; through which ſets a current from the Atlantic ocean into the Mediterranean. The town was neither large nor beautiful, and in the laſt ſiege was totally deſtroyed by the enemies' bombs, but, on account of its fortifications, is eſteemed the key of Spain, and is always furniſhed with a garriſon well provided for its defence. The harbour is formed by a mole, which is well fortified and planted with guns. Gibraltar is acceſſible on the land ſide only by a narrow paſſage between the rock and the ſea, but that is walled and fortified both by art and nature, and ſo incloſed by high ſteep hills, as to be almoſt inacceſſible that way. It has but two gates on that ſide, and as many towards the ſea. Acroſs this iſthmus, the Spaniards have drawn a fortified line, chiefly with a view to hinder the garriſon of Gibraltar from having any intercourſe with the country behind them: notwithſtanding which they carry on a clandeſtine trade, particularly in tobacco. The garriſon is, however, confined within very narrow limits; and, as the ground produces ſcarcely any thing, all their proviſions are brought them either from England, or from Ceuta, on the oppoſite coaſt of Barbary. Formerly Gibraltar was entirely under military government; but that ſyſtem being productive of abuſes, the parliament thought proper to erect it into a body corporate, and the civil power is now lodged in its magiſtrates.

The chief iſlands belonging to Spain in Europe, are thoſe of Majorca, Minorca, and Yvica. Minorca was taken by the Engliſh, under general Stanhope, in 1708, and confirmed to Great Britain, by the treaty of Utrecht, in 1713; but it was retaken by the Spaniards in the laſt war, on February 15, 1782, and confirmed to them by the definitive treaty of peace, ſigned at Paris, September 3, 1783. Thus, it is now become a Spaniſh iſland again, containing about 27,000 inhabitants.

Notwithſtanding the pride and oſtentation of the Spaniards, their penury is eaſily diſcernible, but their wants are few, and their appetites eaſily ſatisfied. The inferior orders, even in the greateſt cities, are miſerably lodged, and thoſe lodgings wretchedly furniſhed. Many of the poorer ſort, both men and women, wear neither ſhoes nor ſtockings, and coarſe bread ſteeped in oil, and occaſionally ſeaſoned with vinegar, is the common food of the country people through ſeveral provinces. A traveller in Spain muſt carry proviſions and bedding with him, and if perchance he meets with the appearance of an inn, he muſt even cook his victuals, it being beneath the dignity of a Spaniard to perform theſe offices to ſtrangers; but lately ſome tolerable inns have been opened by Iriſh and Frenchmen in cities, and upon the high roads. The pride, indolence, and lazineſs of the Spaniards, are powerful inducements to their more induſtrious neighbours the French, who are to be found in all parts of the kingdom; and here a wonderful contraſt diſtinguiſhes the cha-

nafter of two neighbouring nations. The Spaniard ſeldom ſtirs from home, or puts his hand to work of any kind. He ſleeps, goes to maſs, takes his evening walk, while the induſtrious Frenchman becomes a thorough domeſtic; he is butcher, cook, and taylor, all in the ſame family; he powders the hair, cuts the corns, wipes the ſhoes, and, after making himſelf uſeful in a thouſand different ſhapes, he returns to his native country loaded with dollars, and laughs out the remainder of his days at the expence of his proud benefactor.

COMMERCE AND MANUFACTURES.] The Spaniards, unhappily for themſelves, make gold and ſilver the chief branches both of their exports and imports. They import it from America, from whence they export it to other countries of Europe. Cadiz is the chief emporium of this commerce. "Hither (ſays Mr. Anderſon, in his Hiſtory of Commerce) other European nations ſend their merchandiſe, to be ſhipped off in Spaniſh bottoms for America, ſheltered (or, as our old Engliſh phraſe has it, coloured) under the names of Spaniſh factors. Thoſe foreign nations have here their agents and correſpondents, and the conſuls of thoſe nations make a conſiderable figure. Cadiz has been ſaid to have the fineſt ſtorehouſes and magazines for commerce of any city in Europe; and to it the fleta and galleons regularly import the treaſures of Spaniſh America. The proper Spaniſh merchandiſe exported from Cadiz to America are of no great value; but the duty on the foreign merchandiſe ſent thither would yield a great revenue, (and conſequently the profits of merchants and their agents would ſink), were it not for the many fraudulent practices for eluding thoſe duties."

At St. Ildefonſo the glaſs manufacture is carried on to a degree of perfection unknown in England. The largeſt mirrors are made in a braſs frame, 162 inches long, 93 wide, and ſix deep, weighing near 9 tons. Theſe are deſigned wholly for the royal palaces, and for preſents from the king. Yet even for ſuch purpoſes it is ill placed, and proves a devouring monſter in a country where proviſions are dear, fuel ſcarce, and carriage exceedingly expenſive.—Here is alſo a royal manufacture of linen, employing about fifteen looms; by which, as it is ſaid, the king is a conſiderable loſer.

In the city of Valencia there is a very reſpectable ſilk manufacture, in which five thouſand looms, and three hundred ſtocking-frames, give employment to upwards of twenty thouſand of the inhabitants, without enumerating thoſe who exerciſe profeſſions relative to the manufacture, ſuch as perſons who prepare the wood and iron work of ſo great a number of machines, or ſpin, wind, or dye the ſilk.—At Alcora, in the neighbourhood of Valencia, a manufacture of porcelain has been ſucceſſfully eſtabliſhed; and they very much excel in painted tiles. In Valencia, their beſt apartments are floored with theſe, and are remarkable for neatneſs, for coolneſs, and for elegance. They are ſtronger and much more beautiful than thoſe of Holland.

At Carthagena, they make great quantities of the *eſparto* ropes and cables, ſome of them ſpun like hemp, and others platted. Both operations are performed with ſingular rapidity. Theſe cables are excellent, becauſe they float on the ſurface of the water, and are not therefore liable to be cut by the rocks on a foul coaſt. The eſparto ruſh makes good matts for houſes, *alpargates* or ſhort trowſers and buſkins for peaſants, and latterly it has been ſpun into fine thread for the purpoſe of making cloth. If properly encouraged, there is no doubt that the manufacture may be brought to ſuch perfection, as to make this once uſeleſs ruſh a ſource of abundant wealth to the ſouthern provinces of Spain, for it is the peculiar and natural production of all the high and uncultivated mountains in the ſouth.

As to the hempen cordage which is made in Spain for the uſe of the royal navy, M. *de* Bourgoanne obſerves that it is better and more durable than that of the principal

cipal dock-yards and magazines in Europe; becauſe, in combing the hemp, all the towy part we leave in it was taken out, and made uſe of in caulking, whence reſults the double advantage of more ſolid cordage, and the better caulking of veſſels. Another cuſtom in our rope-yards, which the Spaniards have avoided adopting, is the tarring the cordage and keeping it a long time piled up. In this ſtate the tar ferments, and eats the hemp, and the cordage is extremely apt to break, after being uſed but a ſhort ſpace of time.

The Spaniards formerly obtained their hemp from the north; at preſent they are able to do without the aſſiſtance, in this article, of any other nation. The kingdom of Granada already furniſhes them with the greateſt part of the hemp they uſe, and in caſe of need, they may have recourſe to Arragon and Navarre. All the ſail-cloth and cordage in the magazines at Cadiz are made with Spaniſh hemp; the texture of which is even, cloſe, and ſolid.

The moſt important production of this country, and the moſt valuable article of commerce, is barilla, a ſpecies of pot-aſh, procured by burning a great variety of plants almoſt peculiar to the kingdoms of Valencia and Murcia; ſuch as *ſoza*, *algazul*, *ſuzon*, *ſayonnes*, *ſalicornia*, with *barilla*. It is uſed for making ſoap, for bleaching, and for glaſs. All the nations in Europe, by the combuſtion of various vegetable ſubſtances, make ſome kind of pot-aſh; but the ſuperior excellence of the barilla has hitherto ſecured the preference. The country producing it is about ſixty leagues in length and eight in breadth, on the borders of the Mediterranean. The quantity exported annually from Spain (according to the teſtimonies of both Mr. Townſend, and M. de Bourgoanne) is about a hundred and fifty quintals, moſt of which is ſent to France and England, and a ſmall quantity to Genoa, and Venice.

Spain is one of the richeſt countries in Europe in ſalt-petre, a moſt important article of commerce. The account of this ſurpriſing manufacture we ſhall abridge from Mr. Townſend. "I obſerved, ſays he, a large incloſure, with a number of mounts of about twenty feet high, at regular diſtances from each other. Theſe were collected from the rubbiſh of the city of Madrid, and the ſcrapings of the highways. They had remained all the winter piled up in the manner in which I found them. At this time men were employed in wheeling them away, and ſpreading abroad the earth to the thickneſs of about one foot, whilſt others were turning what had been previouſly expoſed to the influence of the ſun and air. The preceding ſummers theſe heaps had been waſhed, and being thus expoſed, would yield the ſame quantity of ſalt again, and, as far as appears, the produce would never fail; but after having been waſhed, no ſalt-petre can be obtained without a ſubſequent expoſure." Some of this earth they can lixiviate once a year, ſome they have waſhed twenty times in the laſt ſeven years, and ſome they have ſubjected to this operation fifteen times in one year, judging always by their eye when they may waſh it to advantage, and by their taſte if it has yielded a lixivium of a proper ſtrength; from which, by evaporating the water in boiling, they obtain the ſalt-petre.

The other manufactures of Spain are chiefly of wool, copper, and hard-ware. Great efforts have been made by the government to prevent the other European nations from reaping the chief advantage of the American commerce; but theſe never can be ſucceſsful, till a ſpirit of induſtry is awakened among the natives, ſo as to enable them to ſupply their American poſſeſſions with their own commodities and merchandize. Meanwhile, the good faith and facility with which the Engliſh, French, Dutch, and other nations carry on this contraband trade, render them greater gainers by it than the Spaniards themſelves are, the clear profits ſeldom amounting to leſs than 20 per cent. This evidently makes it an important concern that thoſe immenſe riches ſhould belong to the Spaniards, rather than to any active Euro-

racter of two neighbouring nations. The Spaniard ſeldom ſtirs from home, or puts his hand to work of any kind. He ſleeps, goes to maſs, takes his evening walk, while the induſtrious Frenchman becomes a thorough domeſtic; he is butcher, cook, and taylor, all in the ſame family; he powders the hair, cuts the corns, wipes the ſhoes, and, after making himſelf uſeful in a thouſand different ſhapes, he returns to his native country loaded with dollars, and laughs out the remainder of his days at the expence of his proud benefactor.

COMMERCE AND MANUFACTURES.] The Spaniards, unhappily for themſelves, make gold and ſilver the chief branches both of their exports and imports. They import it from America, from whence they export it to other countries of Europe. Cadiz is the chief emporium of this commerce. "Hither (ſays Mr. Anderſon, in his Hiſtory of Commerce) other European nations ſend their merchandiſe, to be ſhipped off in Spaniſh bottoms for America, ſheltered (or, as our old Engliſh phraſe has it, coloured) under the names of Spaniſh factors. Thoſe foreign nations have here their agents and correſpondents, and the conſuls of thoſe nations make a conſiderable figure. Cadiz has been ſaid to have the fineſt ſtorehouſes and magazines for commerce of any city in Europe; and to it the fleta and galleons regularly import the treaſures of Spaniſh America. The proper Spaniſh merchandiſe exported from Cadiz to America are of no great value; but the duty on the foreign merchandiſe ſent thither would yield a great revenue, (and conſequently the profits of merchants and their agents would ſink), were it not for the many fraudulent practices for eluding thoſe duties."

At St. Ildefonſo the glaſs manufacture is carried on to a degree of perfection unknown in England. The largeſt mirrors are made in a braſs frame, 162 inches long, 93 wide, and ſix deep, weighing near 9 tons. Theſe are deſigned wholly for the royal palaces, and for preſents from the king. Yet even for ſuch purpoſes it is ill placed, and proves a devouring monſter in a country where proviſions are dear, fuel ſcarce, and carriage exceedingly expenſive.—Here is alſo a royal manufacture of linen, employing about fifteen looms; by which, as it is ſaid, the king is a conſiderable loſer.

In the city of Valencia there is a very reſpectable ſilk manufacture, in which five thouſand looms, and three hundred ſtocking-frames, give employment to upwards of twenty thouſand of the inhabitants, without enumerating thoſe who exerciſe profeſſions relative to the manufacture, ſuch as perſons who prepare the wood and iron work of ſo great a number of machines, or ſpin, wind, or dye the ſilk.—At Alcora, in the neighbourhood of Valencia, a manufacture of porcelain has been ſucceſſfully eſtabliſhed; and they very much excel in painted tiles. In Valencia, their beſt apartments are floored with theſe, and are remarkable for neatneſs, for coolneſs, and for elegance. They are ſtronger and much more beautiful than thoſe of Holland.

At Carthagena, they make great quantities of the *eſparto* ropes and cables, ſome of them ſpun like hemp, and others platted. Both operations are performed with ſingular rapidity. Theſe cables are excellent, becauſe they float on the ſurface of the water, and are not therefore liable to be cut by the rocks on a foul coaſt. The eſparto ruſh makes good matts for houſes, *alpargates* or ſhort trowſers and buſkins for peaſants, and latterly it has been ſpun into fine thread for the purpoſe of making cloth. If properly encouraged, there is no doubt that the manufacture may be brought to ſuch perfection, as to make this once uſeleſs ruſh a ſource of abundant wealth to the ſouthern provinces of Spain, for it is the peculiar and natural production of all the high and uncultivated mountains in the ſouth.

As to the hempen cordage which is made in Spain for the uſe of the royal navy, M. de Bourgoanne obſerves that it is better and more durable than that of the principal

cipal dock-yards and magazines in Europe; becauſe, in combing the hemp, all the towy part we leave in it was taken out, and made uſe of in caulking, whence reſults the double advantage of more ſolid cordage, and the better caulking of veſſels. Another cuſtom in our rope-yards, which the Spaniards have avoided adopting, is the tarring the cordage and keeping it a long time piled up. In this ſtate the tar ferments, and eats the hemp, and the cordage is extremely apt to break, after being uſed but a ſhort ſpace of time.

The Spaniards formerly obtained their hemp from the north; at preſent they are able to do without the aſſiſtance, in this article, of any other nation. The kingdom of Granada already furniſhes them with the greateſt part of the hemp they uſe, and in caſe of need, they may have recourſe to Arragon and Navarre. All the ſail-cloth and cordage in the magazines at Cadiz are made with Spaniſh hemp; the texture of which is even, cloſe, and ſolid.

The moſt important production of this country, and the moſt valuable article of commerce, is barilla, a ſpecies of pot-aſh, procured by burning a great variety of plants almoſt peculiar to the kingdoms of Valencia and Murcia; ſuch as *ſoza*, *algazul*, *ſuzon*, *ſayonnes*, *ſalicornia*, with *barilla*. It is uſed for making ſoap, for bleaching, and for glaſs. All the nations in Europe, by the combuſtion of various vegetable ſubſtances, make ſome kind of pot-aſh; but the ſuperior excellence of the barilla has hitherto ſecured the preference. The country producing it is about ſixty leagues in length and eight in breadth, on the borders of the Mediterranean. The quantity exported annually from Spain (according to the teſtimonies of both Mr. Townſend, and M. de Bourgoanne) is about a hundred and fifty quintals, moſt of which is ſent to France and England, and a ſmall quantity to Genoa, and Venice.

Spain is one of the richeſt countries in Europe in ſalt-petre, a moſt important article of commerce. The account of this ſurpriſing manufacture we ſhall abridge from Mr. Townſend. "I obſerved, ſays he, a large incloſure, with a number of mounts of about twenty feet high, at regular diſtances from each other. Theſe were collected from the rubbiſh of the city of Madrid, and the ſcrapings of the highways. They had remained all the winter piled up in the manner in which I found them. At this time men were employed in wheeling them away, and ſpreading abroad the earth to the thickneſs of about one foot, whilſt others were turning what had been previouſly expoſed to the influence of the ſun and air. The preceding ſummers theſe heaps had been waſhed, and being thus expoſed, would yield the ſame quantity of ſalt again, and, as far as appears, the produce would never fail; but after having been waſhed, no ſalt-petre can be obtained without a ſubſequent expoſure." Some of this earth they can lixiviate once a year, ſome they have waſhed twenty times in the laſt ſeven years, and ſome they have ſubjected to this operation fifteen times in one year, judging always by their eye when they may waſh it to advantage, and by their taſte if it has yielded a lixivium of a proper ſtrength; from which, by evaporating the water in boiling, they obtain the ſalt-petre.

The other manufactures of Spain are chiefly of wool, copper, and hard-ware. Great efforts have been made by the government to prevent the other European nations from reaping the chief advantage of the American commerce; but theſe never can be ſucceſsful, till a ſpirit of induſtry is awakened among the natives, ſo as to enable them to ſupply their American poſſeſſions with their own commodities and merchandize. Meanwhile, the good faith and facility with which the Engliſh, French, Dutch, and other nations carry on this contraband trade, render them greater gainers by it than the Spaniards themſelves are, the clear profits ſeldom amounting to leſs than 20 per cent. This evidently makes it an important concern that thoſe immenſe riches ſhould belong to the Spaniards, rather than to any active Euro-

pean nation: but I ſhall have occaſion to touch on this ſubject in the account of America.

CONSTITUTION AND GOVERNMENT.] Spain, from being the moſt free, is now the moſt deſpotic kingdom in Europe; and the poverty which is ſo viſible in moſt parts of the country is in a great degree the reſult of its government, in the adminiſtration of which no proper attention is paid to the intereſts and welfare of the people. The monarchy is hereditary, and females are capable of ſucceſſion. It has even been queſtioned, whether his catholic majeſty may not bequeath his crown, upon his demiſe, to any branch of the royal family he pleaſes. It is at leaſt certain, that the houſe of Bourbon mounted the throne of Spain in virtue of the laſt will of Charles II.

The cortes of Spain, which formerly, eſpecially in Caſtile, had greater power and privileges than the parliament of England, are now aboliſhed, but ſome faint remains of their conſtitution are ſtill diſcernible in the government, though all of them are ineffectual, and under the control of the king.

The privy-council, which is compoſed of a number of noblemen or grandees, nominated by the king, ſits only to prepare matters, and to digeſt papers for the cabinet-council or junta, which conſiſts of the firſt ſecretary of ſtate, and three or four more named by the king, and in them reſides the direction of all the executive part of government. The council of war takes cogniſance of military affairs only. The council of Caſtile is the higheſt law tribunal of the kingdom. The ſeveral courts of the royal audiences, are thoſe of Galicia, Seville, Majorca, the Canaries, Saragoſſa, Valencia, and Barcelona. Theſe judge primarily in all cauſes within 15 miles of their reſpective cities or capitals, and receive appeals from inferior juriſdictions. Beſides theſe, there are many ſubordinate tribunals, for the police, the finances, and other branches of buſineſs.

The government of Spaniſh America forms a ſyſtem apart, and is delegated to viceroys, and other magiſtrates, who are in their reſpective diſtricts almoſt abſolute. A council for the Indies is eſtabliſhed in Old Spain, and conſiſts of a governor, four ſecretaries, and twenty-two counſellors, beſides officers. Their deciſion is final in matters relating to America. The members are generally choſen from the viceroys and magiſtrates who have ſerved in that country. The two great viceroyalties of Peru and Mexico are ſo conſiderable, that they are ſeldom truſted to one perſon for more than three years; and their emoluments are ſufficient to make his fortune in that time.

The foreign poſſeſſions of the crown of Spain, beſides thoſe in America, are the towns of Ceuta, Oran, and Maſulquivir, on the coaſt of Barbary in Africa; and the iſlands of St. Lazaro, the Philippines, and Ladrones, in Aſia.

REVENUES.] The revenues ariſing to the king from Old Spain, yearly amount to 5,000,000l. ſterling, ſome writers ſay eight; and they form the ſureſt ſupport of his government. His American income, it is true, is immenſe, but it is generally embezzled or anticipated before it arrives in Old Spain. The king has a fifth of all the ſilver mines that are worked; but little of it comes into his coffers. He falls upon means, however, in caſe of a war, or any public emergency, to ſequeſter great part of the American treaſures belonging to his ſubjects, who never complain, becauſe they are always punctually repaid with intereſt. The finances of his preſent catholic majeſty are in excellent order, and on a better footing, both for himſelf and his people, than thoſe of any of his predeceſſors.

As to the taxes from whence the internal revenues ariſe, they are various, arbitrary, and ſo much dependant on emergencies, that they cannot be accurately aſcertained. They fall upon all kinds of goods, houſes, lands, timber, and proviſions; the clergy and military orders are likewiſe taxed.

MILI-

MILITARY AND MARINE STRENGTH.] The land forces of the crown of Spain, in time of peace, are never fewer than 70,000; but, in caſe of war they amount, without prejudice to the kingdom, to 110,000. The great dependence of the king, however, is upon his Walloon or foreign guards. His late catholic majeſty was at great care and expence to raiſe a powerful marine; and the Spaniſh fleet in Europe and America at preſent exceeds 70 ſhips of the line. All along the coaſts of Spain are watch-towers from mile to mile, with lights and guards at night, ſo that from Cadiz to Barcelona, and from Bilboa to Ferrol, the whole kingdom may be ſoon alarmed in caſe of an invaſion.

Nature, which has ſo liberally beſtowed on Spain all the neceſſaries and luxuries of life, and has ſcarcely refuſed that kingdom any of the enjoyments that peace permits to be taſted, has been equally laviſh in beſtowing all the materials of which war compoſes the means of deſtruction; ſhe has given iron in abundance, copper, lead, and ſaltpetre, ſo that this country need not be indebted to any other to ſupply its artillery with theſe deſtructive treaſures. Spain alſo (ſays M. de Bourgoanne) poſſeſſes within herſelf every thing neceſſary to her navy, and after having long neglected theſe benefactions of nature, ſhe now makes ſucceſsful efforts to render it independent of other nations.

ROYAL ARMS, TITLES, NOBILITY, AND ORDERS.] Spain formerly comprehended twelve kingdoms, all which, with ſeveral others, were by name entered into the royal titles, ſo that they amounted in all to about 32. This abſurd cuſtom is ſtill occaſionally continued, but the king is now generally contented with the title of His Catholic Majeſty. The kings of Spain are inaugurated by the delivery of a ſword, without being crowned. Their ſignature never mentions their name, but, I THE KING. The king's eldeſt ſon is called prince of Aſturias, and his younger children, of both ſexes, are by way of diſtinction called infants, or infantas, that is, children.

The armorial bearings of the kings of Spain, like their title, is loaded with the arms of all their kingdoms. It is now a ſhield, divided into four quarters, of which the uppermoſt on the right hand and the loweſt on the left contain a caſtle, or, with three towers, for Caſtile: and in the uppermoſt on the left, and the loweſt on the right, are the three lions gules for Leon; with three lilies in the centre for Anjou.

The general name for thoſe Spaniſh nobility and gentry, who are unmixed with the Mooriſh blood, is Hidalgo. They are divided into princes, dukes, marquiſſes, counts, viſcounts, and other inferior titles. Such as are created grandees, may ſtand covered before the king, and are treated with princely diſtinctions. A grandee cannot be apprehended without the king's order; and cardinals, archbiſhops, ambaſſadors, knights of the Golden Fleece, and certain other great dignitaries, both in church and ſtate, have the privilege as well as the grandees, to appear covered before the king.

The order of the "*Golden Fleece*," particularly deſcribed before in the orders of Germany, is generally conferred on princes and ſovereign dukes; but the Spaniſh branch of it hath many French and Italian nobility: there are no commanderies or revenues annexed to it.

The order of "*St. James*," or *St. Jago de Compoſtella*, is the richeſt of all the orders of Spain. Some attribute its inſtitution to Remira, king of Leon, in the year 837, and others to later princes, as an encouragement to valour in the long wars between the Chriſtians and Moors. They were divided into two branches, each under a grand-maſter, but the office of both were given by Pope Alexander VI. to the kings of Spain and Portugal, as grand-maſter in their reſpective dominions. The badge is a croſs of gold enamelled crimſon, edged with gold, and worn round

the neck, pendent to a broad ribband; it is charged on the center with an eſcalop-ſhell white. The order is highly eſteemed in Spain, and only conferred on perſons of noble families. The ſame may be ſaid of the order of "*Calatrava*," firſt inſtituted by Sanchio, king of Toledo: it took its name from the caſtle of Calatrava, which was taken from the Moors, and here began the order, which became very powerful. Their number, influence, and poſſeſſions were ſo conſiderable as to excite the jealouſy of the crown, to which at length their revenues and the office of grand maſter were annexed by pope Innocent VIII. Their badge is, a croſs fleury, red, worn at the breaſt, pendent to a broad ribband, the whole differing only in colour from the badge of Alcantara: the ceremonial mantle is of white ſilk, tied with a cordon and taſſels, like thoſe of the Garter, and on the left arm a croſs fleury embroidered, gules. The celebrated order of "*Alcantara*" derived its origin from the order of St. Julian, or of the Pear-tree; but after Alcantara was taken from the Moors, and made the chief ſeat of the order, they aſſumed the name of Knights of the order of Alcantara, and laid aſide the old device of a pear-tree. They were ſubject to the order of Calatrava, till the year 1411, when, by the ſanction of the pope, they became independent. They choſe their own grand-maſter, and acquired vaſt poſſeſſions: but, in 1495, pope Alexander VI. conferred the office on king Ferdinand of Arragon, and annexed it unalienably to the Spaniſh crown. Since that time the kings of Spain have enjoyed the revenues of the grand-maſter, and the commanderies, belonging to the order. The badge is a gold croſs, fleury, enamelled green, and worn pendent to a broad ribband on the breaſt. On days of ceremony, they wear a mantle of red ſilk, on the left ſide of which is embroidered, in ſilver, a ſtar of five points. This order is highly eſteemed, and conferred only on perſons of ancient and illuſtrious families.

The order of the "*Lady of Mercy*," is ſaid to have been inſtituted by James I. king of Arragon, about the year 1218, on account of a vow made by him to the Virgin Mary, during his captivity in France, and was deſigned for the redemption of captives from the Moors, in which they expended large ſums of money. It was at firſt confined to men, but a lady of Barcelona afterwards got women included in it: the badge, which is common to both, is a ſhield per feſs, red and gold; in chief a croſs pattee, white; in baſeé four pallets red, for Arragon, and the ſhield crowned with a ducal coronet. This order poſſeſſes conſiderable revenues in Spain. The order of "*Monteſa*," was inſtituted at Valencia, at the cloſe of the thirteenth century, in the place of the Templars, and enjoyed their poſſeſſions. Their chief ſeat being the town of Monteſa, the order from thence derived its name, and choſe St. George for patron. About a century afterwards, it was united to the order of St. George of Alfama, by pope Benedict XIII. and ſo hath continued ever ſince. The badge is a plain red croſs enamelled on gold, worn pendent to a broad red ribband, ſaſh-wiſe, and a plain red croſs embroidered on the left breaſt of the outer garment. In the year 1771, the late king inſtituted, after his own name, the order of "*Charles III.*" in commemoration of the birth of the infant. The badge is, a ſtar of eight points enamelled white, and edged with gold: in the centre of the croſs is the image of the Virgin Mary, veſtments white and blue. On the reverſe, the letters C. C. with the number III. in the centre, and this motto, *Virtuti & Merito*. The order is compoſed of four claſſes; the firſt claſs are ſtyled Grand Croſſes, and wear the badge pendent to a ribband, ſtriped blue and white, over the right ſhoulder, and have a ſtar of ſilver, with the badge embroidered on the left ſide of the coat. The knights of the ſecond claſs wear the badge and ribband like the firſt, but have no ſtar. The third and and fourth claſſes wear the badge in the button-hole of the coat, pendent to a narrow ſtriped ribband. The knights of the third claſs have

penſions

penſions on the revenues of the order. None but perſons of noble deſcent can belong to this order.

History of Spain.] Spain was probably firſt peopled by the Celtæ, from Gaul, to which it lies contiguous; or from Africa, from which it is only ſeparated by the narrow ſtrait of Gibraltar. The Phœnicians ſent colonies thither, and built Cadiz and Malaga. Afterwards, upon the riſe of Rome and Carthage, the poſſeſſions of this kingdom became an object of contention between thoſe powerful republics; but at length the Roman arms prevailed, and Spain remained in their poſſeſſion until the fall of that empire, when it became a prey to the Goths. In the beginning of the fifth century the Suevi, the Vandals, and the Alani, divided this kingdom among them, but in the year 584, the Goths again became the maſters. Theſe in their turn were invaded by the Saracens, who, about the end of the ſeventh century, had poſſeſſed themſelves of the fineſt kingdoms of Aſia and Africa; and not content with the immenſe regions that formerly compoſed great part of the Aſſyrian, Perſian, Macedonian, and Roman empires, croſſed the Mediterranean, ravaged Spain, and eſtabliſhed themſelves in the ſoutherly provinces of that kingdom.

Don Pelago is mentioned as the firſt Old Spaniſh prince who diſtinguiſhed himſelf againſt theſe Infidels (who were afterwards known by the name of Moors, the greater part of them having come from Mauritania), and he took the title of king of Aſturia about the year 720. His ſucceſſes animated other Chriſtian princes to take arms likewiſe, and the two kingdoms of Spain and Portugal were for many ages perpetually embroiled in bloody wars.

The Moors in Spain were ſuperior to all their cotemporaries in arts and arms, and the Abdoulrahman line kept poſſeſſion of the throne near 300 years. Learning flouriſhed in Spain, while the reſt of Europe was buried in ignorance and barbarity. But the Mooriſh princes by degrees became weak and effeminate, and their chief miniſters proud and inſolent. A ſeries of civil wars continued, which at laſt overturned the throne of Cordova, and the race of Abdoulrahman. Several petty principalities were formed on the ruins of this empire, and many cities of Spain had each an independent ſovereign. Now, every adventurer was entitled to the conqueſts he made upon the Moors, till Spain was at laſt divided into 12 or 14 kingdoms; and about the year 1095, Henry of Burgundy was declared by the king of Leon, count of Portugal; but his ſon Alphonſo threw off the dependence on Leon, and declared himſelf king. A ſeries of brave princes gave the Moors repeated overthrows in Spain, till about the year 1492, when all the kingdoms of Spain, Portugal excepted, were united by the marriage of Ferdinand, king of Arragon, and Iſabella the heireſs, and afterwards queen of Caſtile, who took Granada, and expelled out of Spain the Moors and Jews, who would not be converts to the Chriſtian faith, to the number of 170,000 families.

The expulſion of the Moors and Jews in a manner depopulated Spain of artiſts, labourers, and manufacturers; and the diſcovery of America not only added to that calamity, but rendered the remaining Spaniards moſt deplorably indolent. To complete their misfortunes, Ferdinand and Iſabella introduced the Popiſh inquiſition, with all its horrors, into their dominions, as a ſafeguard againſt the return of the Moors and Jews.

Charles V. of the houſe of Auſtria, and the emperor of Germany, ſucceeded to the throne of Spain, in right of his mother, who was the daughter of Ferdinand and Iſabella, in the year 1516. The extenſive poſſeſſions of the houſe of Auſtria in Europe, Africa, and, above all, America, from whence he drew immenſe treaſures, began to alarm the jealouſy of neighbouring princes, but could not ſatisfy the ambition of Charles; and we find him conſtantly engaged in foreign wars, or with his

own proteſtant ſubjects, whom he in vain attempted to bring back to the catholic church. He alſo reduced the power of the nobles in Spain, abridged the privileges of the commons, and greatly extended the regal prerogative. At laſt, after a long and turbulent reign, he came to a reſolution that filled all Europe with aſtoniſhment, the withdrawing himſelf entirely from any concern in the affairs of this world, in order that he might ſpend the remainder of his days in retirement and ſolitude *.

Agreeably to this reſolution, he reſigned Spain and the Netherlands, with great formality, in the preſence of his principal nobility, to his ſon Philip II. but could not prevail on the princes of Germany to elect him emperor, which dignity they conferred on Ferdinand, Charles's brother, thereby dividing the dangerous power of the houſe of Auſtria into two branches; Spain, with all its poſſeſſions in Africa and the New World, alſo the Netherlands, and ſome Italian ſtates, remained with the elder branch; whilſt the Empire, Hungary, and Bohemia, fell to the lot of the younger, which they ſtill poſſeſs.

* Charles, of all his vaſt poſſeſſions, reſerved nothing for himſelf but an annual penſion of 100,000 crowns; and choſe for the place of his retreat, a vale in Spain, of no great extent, watered by a ſmall brook, and ſurrounded by riſing grounds, covered with lofty trees. He gave ſtrict orders, that the ſtyle of the building which he erected there, ſhould be ſuch as ſuited his preſent ſituation rather than his former dignity. It conſiſted only of ſix rooms, four of them in the form of friars cells, with naked walls; and the other two, each twenty feet ſquare, were hung with brown cloth, and furniſhed in the moſt ſimple manner: they were all level with the ground, with a door on one ſide into a garden, of which Charles himſelf had given the plan, and had filled it with various plants, which he propoſed to cultivate with his own hands. After ſpending ſome time in the city of Ghent in Flanders, the place of his nativity, he ſet out for Zealand in Holland, where he prepared to embark for Spain, accompanied by his ſon, and a numerous retinue of princes and nobility; and taking an effectionate and laſt farewel of Philip and his attendants, he ſet out, on the 17th of September 1556, under convoy of a large fleet of Spaniſh, Flemiſh, and Engliſh ſhips. As ſoon as he landed in Spain, he fell proſtrate on the ground; and conſidering himſelf now as dead to the world, he kiſſed the earth, and ſaid, "Naked came I out of my mother's womb, and naked I now return to thee, thou common mother of mankind." Some of the Spaniſh nobility paid their court to him as he paſſed along to the place of his retreat; but they were ſo few in number, and their attendance was ſo negligent, that Charles obſerved it, and felt, for the firſt time, that he was no longer a monarch. But he was more deeply affected with his ſon's ingratitude; who, forgetting already how much he owed to his father's bounty, obliged him to remain ſome weeks on the road, before he paid him the firſt moiety of that ſmall portion, which was all that he had reſerved of ſo many kingdoms. At laſt the money was paid; and Charles having diſmiſſed a great number of his domeſtics, whoſe attendance he thought would be ſuperfluous, he entered into his humble retreat with twelve domeſtics only. Here he buried in ſolitude, and ſilence, his grandeur, his ambition, together with all thoſe vaſt projects which, during half a century, had alarmed and agitated Europe; filling every kingdom in it, by turns, with the terror of his arms, and the dread of being ſubjected to his power. Here he enjoyed, perhaps, more complete ſatisfaction than all his grandeur had ever yielded him. Far from taking any part in the political tranſactions of the princes of Europe, he reſtrained his curioſity even from any enquiry concerning them; and he ſeemed to view the buſy ſcene which he had abandoned, with all the contempt and indifference ariſing from his thorough experience of its vanity, as well as from the pleaſing reflection of having diſengaged himſelf from its cares.

New amuſements and new objects now occupied his mind; ſometimes he cultivated the plants in his garden with his own hands; ſometimes he rode out to the neighbouring wood on a little horſe, the only one that he kept, attended by a ſingle ſervant on foot. When his infirmities confined him to his apartment, he either admitted a few gentlemen who reſided in the neighbourhood, and entertained them familiarly at his table; or he employed himſelf in ſtudying the principles, and in forming curious works of, mechaniſm, of which he had always been remarkably fond. He was particularly curious with regard to the conſtruction of clocks and watches; and having found, after repeated trials, that he could not bring any two of them to go exactly alike, he reflected, it is ſaid, with a mixture of ſurpriſe and regret, on his own folly, in having beſtowed ſo much time and labour on the more vain attempt of bringing mankind to a preciſe uniformity of ſentiment concerning the intricate and myſterious doctrines of religion. And here, after two years retirement, he was ſeized with a fever, which carried him off, in the 59th year of his age.

Philip

Philip II. inherited all his father's vices, with few of his good qualities. He was auſtere, haughty, immoderately ambitious, and through his whole life a cruel bigot in the cauſe of popery. His marriage with queen Mary of England, an unfeeling bigot like himſelf, his unſucceſsful addreſſes to her ſiſter Elizabeth, his reſentment and unfortunate wars with that princeſs, his tyranny and perſecutions in the Low Countries, the revolt and loſs of the United Provinces, with other particulars of his reign, have been already mentioned, in the hiſtory of thoſe countries.

In Portugal he was more ſucceſsful. That kingdom, after being governed by a race of wiſe and brave princes, fell to Sebaſtian, about the year 1557. Sebaſtian loſt his life and a fine army, in a headſtrong, unjuſt, and ill-concerted expedition againſt the Moors in Africa; and in the year 1580, Philip united Portugal to his own dominions, though the Braganza family of Portugal aſſerted a prior right. By this acquiſition Spain became poſſeſſed of the Portugueſe ſettlements in India, ſome of which ſhe ſtill holds.

The deſcendents of Philip proved to be very weak princes; but Philip and his father had ſo totally ruined the ancient liberties of Spain, that they reigned almoſt unmoleſted in their own dominions. Their viceroys, however, were at once ſo tyrannical and inſolent over the Portugueſe, that in the reign of Philip IV. in the year 1640, the nobility of that nation, by a well-conducted conſpiracy, expelled their tyrants, and placed the duke of Braganza, by the title of John IV. upon their throne; and ever ſince, Portugal has been a diſtinct kingdom from Spain.

The kings of Spain, of the Auſtrian line, failing in the perſon of Charles II. who left no iſſue, Philip duke of Anjou, ſecond ſon to the dauphin of France, and grandſon to Lewis XIV. mounted that throne by virtue of his predeceſſor's will, in the name of Philip V. anno 1701. After a long and bloody ſtruggle with the German branch of the houſe of Auſtria, ſupported by England, he was confirmed in his dignity, at the concluſion of the war by the ſhameful peace of Utrecht, 1713. And thus Lewis XIV. through a maſterly train of politics (for in his wars to ſupport his grandſon, as we have already obſerved, he was almoſt ruined), accompliſhed his favourite project of transferring the kingdom of Spain, with all its rich poſſeſſions in America and the Indies, from the houſe of Auſtria to that of his own family of Bourbon. In 1734, Philip invaded Naples, and got that kingdom for his ſon Don Carlos, the Sicilians readily acknowledging him for their ſovereign, through the oppreſſion of the Imperialiſts.

After a long and turbulent reign, which was diſturbed by the ambition of his wife, Elizabeth of Parma, Philip died in 1746, and was ſucceeded by his ſon Ferdinand VI. a mild and pacific prince, who reformed many abuſes, and endeavoured to promote the commerce and proſperity of his kingdom. In 1759, he died without iſſue, through melancholy for the loſs of his wife. Ferdinand was ſucceeded by his brother, Charles III. then king of Naples and the Two Sicilies, late king of Spain, ſon to Philip V. by his wife, the princeſs of Parma.

He was ſo warmly attached to the family compact of the houſe of Bourbon, that two years after his acceſſion, he even hazarded his American dominions to ſupport it. War being declared between him and England, the latter took from him the famous port and city of Havannah, in the iſland of Cuba, and thereby rendered herſelf entirely miſtreſs of the navigation of the Spaniſh plate fleets. Notwithſtanding the ſucceſs of the Engliſh, their miniſtry thought proper haſtily to conclude a peace, in conſequence of which the Havannah was reſtored to Spain. In 1775, an expedition was concerted againſt Algiers by the Spaniſh miniſtry, which had a moſt

unſucceſsful termination. The troops, which amounted to upwards of 24,000, and who were commanded by lieutenant-general Conde de O'Reilly, landed about a league and a half to the eaſtward of the city of Algiers; but were diſgracefully beaten back, and obliged to take ſhelter on board their ſhips, having 27 officers killed, and 191 wounded; and 501 rank and file killed, and 2088 wounded. In the years 1783, and 1784, they renewed their attacks againſt Algiers by ſea, but after ſpending much ammunition, and loſing many lives, were forced to retire without doing that place much injury.

When the war between Great Britain and her American colonies had ſubſiſted for ſome time, and France had taken part with the latter, the court of Spain was alſo prevailed upon to commence hoſtilities againſt Great Britain. In particular, the Spaniards, in 1779, began their firſt operations, by cloſely beſieging Gibraltar, both by ſea and land; it having been always a great mortification to them, that this fortreſs ſhould be poſſeſſed by the Engliſh.

The ſiege was continued throughout the war with occaſional fierce attacks on both ſides, though what the garriſon had chiefly to dread was famine, and ſo ſoon did this begin to make its appearance, that about the middle of January, 1780, not only bread, but every article neceſſary to the ſupport of life, was hard to be procured, and only to be purchaſed at exorbitant prices. Captain Drinkwater, in his moſt intereſting hiſtory of this ſiege, informs us that veal, mutton, and beef, ſold from two ſhillings and ſixpence, to four ſhillings per pound; freſh pork from two to three ſhillings; ſalt beef and pork, one ſhilling and three pence per pound; fowls, eighteen ſhillings per couple; ducks, a guinea; and other articles in proportion. And though they were frequently relieved, yet the ſame difficulties very frequently returned. However, the garriſon ſtill held out; and though the Spaniſh army and train of artillery continued daily to increaſe, the utmoſt efforts of their power ſeemed to be inſufficient to make the leaſt impreſſion on this impregnable fortreſs. So little regard indeed was paid to the formidable preparations of the Spaniards, that even from the beginning of the ſiege, it had been cuſtomary with general Elliot, the governor, to allow them to bring their works to perfection and then to demoliſh them. The more frequently the beſiegers were diſappointed, the more eager they ſeemed to accompliſh their point. The moſt prodigious number of cannon, mortars, and all other deſtructive engines of that kind, that perhaps ever were aſſembled in any one enterpriſe, were now brought before a ſingle fortreſs, without being able to make the leaſt impreſſion upon it. By the violence of their fire, indeed, the houſes were reduced to ruins, and the inhabitants were obliged to remove to England; but the fortifications of the place were ſcarce ever damaged in the leaſt. The ſoldiers were ſo much accuſtomed to ſhells falling and burſting near them, that they became in a manner inſenſible of danger; and their officers were frequently obliged to call to them to avoid them, when juſt ready to burſt at their feet. Our hiſtorian gives many inſtances of their deſtructive power, particularly in a wounded matroſs, when a ſhell from the mortar-boats fell into the ward of the hoſpital, and rebounding fell upon the bed where he lay. The convaleſcents and ſick, in the ſame room, inſtantly ſummoned up ſtrength to crawl out on hands and knees, whilſt the fuſe was burning, but this wretched victim was kept down by the weight of the ſhell, which after ſome ſeconds burſt, took off both his legs, and ſcorched him in a dreadful manner; he ſurvived for ſome time, and only regretted that he had not been killed on the batteries. What was more ſurpriſing, though the ſhells, by reaſon of their fiery train, were viſible in the air, and from the length of way they had to go, might have been avoided, the ſight of them was attended with a kind of faſcination in the beholder, ſo as to deprive him of motion, of which ſeveral inſtances are related. Amidſt this dreadful ſcene there were two boys who proved of ſingular

gular uſe to the garriſon, the acuteneſs of their ſight being ſuch that they could trace the ſhot directly from the mouth of the cannon, and thus give warning to the ſoldiers of their danger.

But the grand attack was on the 13th of September 1782, under the command of the duke de Crillon, by 10 battering ſhips, from 600 to 1400 tons burden, carrying in all 212 braſs guns entirely new, and diſcharging ſhot of 26 pounds weight. The ſhowers of ſhot and ſhells which were directed from them, from their land-batteries, and on the other hand from the various works of the garriſon, exhibited a ſcene, of which perhaps neither the pen nor the pencil can furniſh a competent idea. It is ſufficient to ſay, that *four hundred pieces* of the heavieſt artillery were playing at the ſame moment; an inſtance which has ſcarcely occurred in any ſiege ſince the invention of thoſe wonderful engines of deſtruction.

The irreſiſtible impreſſion of the red-hot balls, which were ſent from the garriſon in ſuch numbers, and in ſuch directions, was ſoon conſpicuous; for in the afternoon ſmoke was perceived to iſſue from the admiral's ſhip and another; and by one in the morning ſeveral were in flames, and numbers of rockets were thrown up from each of their ſhips as ſignals of diſtreſs. To reſcue from the flames thoſe who were now incapable of acting as enemies, could not be done without the greateſt hazard, by reaſon of the blowing up of the ſhips, and the previous diſcharge of the guns as the fire reached them. Yet, in defiance of every danger, brigadier Curtis diſtinguiſhed himſelf in an eminent manner in this humane undertaking, and with 12 gun-boats ſaved 9 officers, 2 prieſts, and 334 men, all Spaniards, beſides 1 officer, and 11 Frenchmen, who had floated in the preceding evening.

Thus ended all the hopes of the Spaniards of reducing the fortreſs of Gibraltar. But great as was the bravery of the Britiſh garriſon, which deſerves every encomium, the ſmall numbers of the killed and wounded are alone ſufficient to ſhew that they muſt have been aſſiſted by very ſtrong fortifications, or it was impoſſible that any ſkill whatever could have reſiſted ſuch a tremendous power. Some trifling operations continued on the ſide of the Spaniards till the reſtoration of peace in 1783.

In other enterpriſes, however, the Spaniards proved more ſucceſsful. The iſland of Minorca was ſurrendered to them on the 6th of February 1782, after having been beſieged for 171 days. The garriſon conſiſted of no more than 2692 men, while the forces of the enemy amounted to 16,000, under the command of the duke de Crillon. The Spaniſh commander at firſt attempted to corrupt the gover nor (general Murray); but this being rejected with indignation, the ſiege was commenced in form; and the garriſon would have ſhewed themſelves equally invincible with thoſe of Gibraltar, had it been poſſible to relieve them in the ſame manner. The ſcurvy ſoon made its appearance, and reduced them to ſuch a deplorable ſituation, that they were at laſt obliged to ſurrender, in ſpite of every effort of human fortitude or ſkill; and ſo ſenſible were both parties that this was the true cauſe, that the Spaniſh general allowed them to march out with their arms ſhouldered, drums beating, and colours flying, while the diſconſolate Britiſh ſoldiers proteſted that they ſurrendered their arms to God, and not to the Spaniards.

His late catholic majeſty uſed much pains to oblige his ſubjects to deſiſt from their ancient dreſs and manners, and carried his endeavours ſo far, that it occaſioned an inſurrection at Madrid, and obliged him to part with his miniſter, the marquis of Squillace; thereby affording an inſtance of the neceſſity that even deſpotic princes are under, of paying ſome attention to the inclinations of their ſubjects.

Charles III. late king of Spain, was born in 1716, ſucceeded to the throne in 1759, and died November 13, 1788. He was ſucceeded by his ſecond ſon, Charles Anthony, prince of Aſturias; the eldeſt, who died in 1775, having been declared incapable of inheriting the crown, through an invincible weakneſs of underſtanding.

Charles IV. preſent king of Spain, was born November 11, 1748, was married

September 4, 1765, to princeſs Louiſa of Parma, born December 9, 1751; and has had iſſue ſix children.

PORTUGAL.

Situation and Extent.

Miles.		Degrees.
Length 300	between	37 and 42 north lat.
Breadth 100		7 and 10 weſt long.

Boundaries.] It is bounded by Spain on the North and Eaſt, and on the South and Weſt by the Atlantic Ocean, being the moſt weſterly kingdom on the continent of Europe.

Ancient names and divisions.] This kingdom was, in the time of the Romans, called Luſitania. The etymology of the modern name is uncertain. It moſt probably is derived from ſome noted harbour or port, to which the Gauls (for ſo ſtrangers are called in the Celtic) reſorted. By the form of the country, it is naturally divided into three parts; the northern, middle, and ſouthern provinces.

	Provinces.	Chief Towns.	Sq. M.
The Northern Diviſion contains	Entre Minho	Braga	6814
	Douro and	Oporto and Viana	
	Tralos Montes	Miranda and Villa Real.	
The Middle Diviſion contains	Beira	Coimbra	12640
		Guarda Caſtel Rodigro	
		Liſbon 38-42 N. lat. 8-53 W. lon.	
	Eſtremadura	St. Ubes and Leira.	
The Southern Diviſion contains	Entre Tajo	Ebora, or Evora	8397
	Guadiana	Portalegre, Elvas, Beja	
	Alentejo	Lagos	
	Algarva	Faro, Tavora, and Silves.	

Soil, air, and productions.] The ſoil of Portugal is not in general equal to that of Spain for fertility, eſpecially in corn, which they import from other countries. Their fruits are the ſame as in Spain, but not ſo highly flavoured. The Portugueſe wines, when old and genuine, are eſteemed to be very friendly to the conſtitution, and ſafe to drink *. Portugal contains mines, but they are not worked; variety of gems, marbles, and mill-ſtones, and a fine mine of ſalt-petre, near Liſbon. Their cattle and poultry are but indifferent eating. The air, eſpecially about Liſbon, is reckoned ſoft and beneficial to conſumptive patients; it is not ſo ſearching as that of Spain, being refreſhed by the ſea breezes.

Mountains.] The face of Portugal is mountainous, or rather rocky, for their mountains are generally barren: the chief are thoſe which divide Algarva from Alentejo; thoſe of Tralos Montes, and the rock of Liſbon, at the mouth of the Tagus, or, according to its lateſt name, Tajo.

Water and rivers.] Though every brook in Portugal is reckoned a river, yet the chief Portugueſe rivers are mentioned in Spain, all of them falling into the Atlantic Ocean. The Tagus, or Tajo, was celebrated for its golden ſand.

* The port-wines are made in the diſtrict round Oporto, which does not produce one half the quantity that is conſumed under that name in the Britiſh dominions only. The merchants in that city haye very ſpacious wine vaults, capable of holding 6 or 7000 pipes, and it is ſaid that 20,000 are yearly exported from Oporto.

Portugal contains ſeveral roaring lakes and ſprings; ſome of them are abſorbent even of the lighteſt ſubſtances, ſuch as wood, cork, and feathers; ſome, particularly one about 45 miles from Liſbon, are medicinal and ſanative; and ſome hot baths are found in the little kingdom, or rather province, of Algarva.

PROMONTORIES AND BAYS.] The promontories or capes of Portugal are Cape Mondego, near the mouth of the river Mondego; Cape Roca, at the north entrance of the river Tajo; Cape Eſpithel, at the ſouth entrance of the river Tajo; and Cape St. Vincent, on the ſouth-weſt point of Algarva. The bays are thoſe of Cadoan, or St. Ubes, ſouth of Liſbon, and Lagos Bay in Algarva.

ANIMALS.] The ſea-fiſh, on the coaſt of Portugal, are reckoned excellent; on the land, the hogs and kids are tolerable eating. Their mules are ſure, and ſerviceable both for draught and carriage; and their horſes, though ſlight, are lively.

POPULATION, INHABITANTS, MANNERS, AND CUSTOMS.] According to the beſt calculation, Portugal contains near two millions of inhabitants. By a ſurvey made in the year 1732, there were in that kingdom 3344 pariſhes and 1,742,230 lay perſons (which is but 522 laity to each pariſh on a medium), beſides about 300,000 eccleſiaſtics of both ſexes.

The modern Portugueſe retain nothing of that adventurous enterpriſing ſpirit that rendered their forefathers ſo illuſtrious 300 years ago. Ever ſince their conqueſt by Spain, they have degenerated in all their virtues; though ſome noble exceptions are ſtill remaining among them, and no people are ſo little obliged as the Portugueſe are to the reports of hiſtorians and travellers. Their degeneracy is evidently owing to the weakneſs of their monarchy, which renders them inactive, for fear of diſobliging their powerful neighbours; and that inactivity has proved the ſource of pride, and other unmanly vices. Treachery has been laid to their charge, as well as ingratitude, and above all, an intemperate paſſion for revenge. They are, if poſſible, more ſuperſtitious, and, both in high and common life, affect more ſtate than the Spaniards themſelves. Among the lower people, thieving is often practiſed; and all ranks are accuſed of being unfair in their dealings, eſpecially with ſtrangers. It is hard, however, to ſay, what alteration may be made in the character of the Portugueſe, by the expulſion of the Jeſuits, and the diminution of the papal influence among them, but above all, by that ſpirit of independency, with regard to commercial affairs, upon Great Britain, which, not much to the honour of their gratitude, though to the intereſt of their own country, is now ſo much encouraged by their court and miniſtry.

The Portugueſe are neither ſo tall nor ſo well made as the Spaniards, whoſe habits and cuſtoms they imitate, the nobility however affecting to be more gaily and richly dreſſed. The characteriſtical diſtinction between the Spaniards and Portugueſe, is thus deſcribed by Mr. Coſtigan, "In Spain the *(Hidalgo)* nobleman is what he ought to be; brave, ſincere, and liberal, both in his ſentiments and actions—in this country he is perfectly the reverſe. As you deſcend among the Spaniards, the national character vitiates, and it is well known the Spaniſh peaſant is a proud, beggarly, inſolent, brutal animal—in this country (Portugal) the lower you deſcend in rank, the perſonal character riſes and improves upon you; and you will hardly meet with a peaſant who is not courteous and affable to a degree hardly to be found in any other country." The Portugueſe ladies are thin and ſmall of ſtature. Their complexion is olive, their eyes black and expreſſive, and their features generally regular. They are eſteemed generous, modeſt, and witty. They dreſs like the Spaniſh ladies, with much awkwardneſs and affected gravity, but in general more magnificently; and they are taught by their huſbands to exact from their ſervants an homage, that in other countries is paid only to royal perſonages. The furniture of the houſes, eſpecially of their grandees, is rich and ſuperb to exceſs; and they

an incredible number of domeſtics, as they ſeldom diſcharge any who ſurvive, after ſerving their anceſtors. The poorer ſort have ſcarcely any furniture at all, for they, in imitation of the Moors, ſit always croſs-legged on the ground.

The Portugueſe peaſant has never reaped any advantage from the benefits of foreign trade, and of the fine and vaſt countries the kings of Portugal poſſeſſed in Africa, and the Eaſt, or of thoſe ſtill remaining to them in South America. The only foreign luxury he is yet acquainted with is tobacco; and when his feeble purſe can reach it, he purchaſes a dried Newfoundland cod-fiſh; but this is a regale he dares ſeldom aſpire to. A piece of bread made of Indian corn, and a ſalted pilchard, or a head of garlick, to give that bread a flavour, compoſe his ſtanding diſh; and if he can get a bit of the hog, the ox, or the calf he himſelf fattens, to regale his wretched family at Chriſtmas or Eaſter, he has reached the pinnacle of happineſs in this world; and indeed, whatever he poſſeſſed beyond this habitual penury, according to the preſent ſtate and exertions of his intellects, would be quickly taken from him, or rather he would willingly part with it, being taught by his numberleſs ghoſtly comforters, with which his country ſwarms, to look forward for eaſe and happineſs to another ſtate of exiſtence, to which they are themſelves the infallible guides and conductors.

Religion.] The eſtabliſhed religion of Portugal is popery in the ſtricteſt ſenſe. The Portugueſe have a patriarch, but formerly he depended entirely upon the pope, unleſs when a quarrel ſubſiſted between the courts of Rome and Liſbon. The power of his holineſs in Portugal has been of late ſo much curtailed, that it is difficult to deſcribe the religious ſtate of that country: what is certain is, that the royal revenues are greatly increaſed, at the expence of the religious inſtitutions in the kingdom. The power of the inquiſition is now taken out of the hands of the eccleſiaſtics, and converted to a ſtate-trap for the benefit of the crown.

The baneful influence of their religion is, however, too obvious; for, ſays a late traveller, this little country preſents a ſtriking inſtance how far the human mind and character may be depraved and corrupted, by the unhappy effects of a domineering and fictitious mode of worſhip, which has almoſt ſuppreſſed every ſentiment of virtue. Here the practice and exerciſe of thoſe diſpoſitions of piety, gratitude, generoſity, benevolence, and univerſal charity, which would often ariſe naturally in the breaſts of moſt men, if only left to themſelves, are diverted, and another and moſt pernicious direction is given to their effects. The ardour of the pious and devout is directed to adore, at the ſhrine of the ſaint in the neighbourhood, moſt famous for having performed ſome wretched miracle, too ridiculous to detain even the attention of an old woman, or an infant; and it is here alſo where generoſity and gratitude are taught to leave their preſents and make their offerings. The firſt and great object of charity, all over this country and Spain, is the relieving of the ſouls in purgatory, by laviſhing money on churches and convents for maſſes to be ſaid on that account: and ſuch an influence has the belief of that ideal place of torment, that it will ſqueeze hard caſh from between the fingers of many a miſer, when no other conſideration could have produced that effect; nay, ſo depraved are the underſtandings of the beſt intentioned people, by the perverſe leſſons of their ſpiritual directors, that their charitable donations to people in diſtreſs are unaccompanied with thoſe liberal and diſintereſted motives of relieving the neceſſitous and comforting the afflicted, which are the beſt ſtimulatives to ſuch actions, and are diveſted of much of their excellency, by being beſtowed from perſonal and ſelfiſh conſiderations. As the interceſſions of others, eſpecially of perſons who have once addreſs enough to be looked on by the multitude as of extraordinary ſanctity, are reckoned of the greateſt avail; ſo wherever ſuch a perſon or perſons appear, they are

frequented by thoſe whoſe conſciences accuſe them of any deadly ſins, who load ſuch devotees with alms and charitable gifts, charging them at the ſame time to intercede earneſtly in their favour with the Virgin, or with their particular ſaint or angel, to repreſent the charities they have done, and to requeſt that, in conſideration of theſe, ſo much may be diſcounted from the degree of puniſhment their ſins may be found to deſerve, eſtabliſhing by this means a ſort of account current of debtor and creditor, between themſelves and the Almighty, or his agents. And ſo univerſal is this notion among the people, that when they give charity to a common beggar in the ſtreets, they charge that beggar to pray for them, that ſuch charity may be admitted in diſcount of their tranſgreſſions, and which you may believe the beggar faithfully engages to do.

ARCHBISHOPRICKS AND BISHOPRICKS.] The archbiſhopricks are thoſe of Braga, Evora, and Liſbon. The firſt of theſe has ten ſuffragan biſhops; the ſecond two; and the laſt ten, including thoſe of the Portugueſe ſettlements abroad. The patriarch of Liſbon is generally a cardinal, and a perſon of the higheſt birth.

LANGUAGE.] The Portugueſe language differs but little from that of Spain, and that provincially. Their Pater-noſter runs thus: *Padre noſſo que eſtas nos Ceos, ſanctificado ſeio o tu nome; venha a nos tua reyno, ſeia feita a tua votade, aſſi nos Ceos, commo na terra. O paoneſſa de cadadia, dano lo oei neſtro dia. E perdoa nos ſenhor, as noſſas dividas, aſſi como nos perdo amos a nos noſſos devedores. E nao nos dexes cahir om tentatio, mas libra nos do mal.* Amen.

LEARNING AND LEARNED MEN.] Theſe are ſo few, that they are mentioned with indignation, even by thoſe of the Portugueſe themſelves, who have the ſmalleſt tincture of literature. Some efforts, though very weak, have of late been made by a few, to draw their countrymen from this deplorable ſtate of ignorance. It is univerſally allowed that the defect is not owing to the want of genius, but of a proper education. The anceſtors of the preſent Portugueſe were certainly poſſeſſed of more true knowledge, with regard to aſtronomy, geography, and navigation, than any European nation, about the middle of the ſixteenth century, and for ſome time after. Camoens, who himſelf was a great adventurer and voyager, was poſſeſſed of a true, but neglected poetical genius.

UNIVERSITIES.] Theſe are Coimbra, founded in 1291 by king Dennis; and which had fifty profeſſors; but it has been lately put under ſome new regulations. Evora, founded in 1559; and the college of the nobles at Liſbon, where the young nobility have an opportunity (of which few of them profit) of being educated in every branch of polite learning, and the ſciences. All the books that did belong to the baniſhed Jeſuits are kept here, which compoſe a very large library. The Engliſh language is likewiſe taught in this college. Here is alſo a college where young gentlemen are educated in the ſcience of engineering, and when qualified get commiſſions in that corps.

CURIOSITIES.] The lakes and fountains which have been already mentioned, form the chief of theſe. The remains of ſome caſtles in the Mooriſh taſte are ſtill ſtanding. The Roman bridge and aqueduct at Coimbra are almoſt entire, and deſervedly admired. The walls of Santareen are ſaid to be of Roman work likewiſe. The church and monaſtery near Liſbon, where the kings of Portugal are buried, are inexpreſſibly magnificent, and ſeveral monaſteries in Portugal are dug out of the hard rock. The chapel of St. Roch is probably one of the fineſt and richeſt in the world; the paintings are Moſaic work, ſo curiouſly wrought with ſtones of all colours, as to aſtoniſh the beholders. To theſe curioſities we may add, that the king is poſſeſſed of the largeſt, though not the moſt valuable diamond, in the world. It was found in Braſil.

CHIEF CITIES.] Liſbon is the capital of Portugal, and is thought to contain 200,000 inhabitants. Great part of it was ruined by an earthquake, which alſo ſet the remainder on fire, upon All-Saints-day, 1755. It ſtill contains many magnificent palaces, churches, and public buildings. Its ſituation (riſing from the Tagus in the form of a creſcent) renders its appearance at once delightful and ſuperb, and it is deſervedly accounted the greateſt port in Europe, next to London and Amſterdam. The harbour is ſpacious and ſecure, and the city itſelf is guarded from any ſudden attack towards the ſea by forts, which could make however but a poor defence againſt ſhips of war. All that part of the city that was demoliſhed by the earthquake, is planned out in the moſt regular and commodious form. Some large ſquares and many ſtreets are already built. The ſtreets form right angles, and are broad and ſpacious. The houſes are lofty, elegant and uniform; and being built of white ſtone, make a beautiful appearance. The ſecond city in this kingdom is Oporto, which is computed to contain 30,000 inhabitants. The chief article of commerce in this city is wine; and the inhabitants of half the ſhops in the city are coopers. The merchants aſſemble daily in the chief ſtreet to tranſact buſineſs; and are protected from the ſun by ſail-cloths hung acroſs from the oppoſite houſes. About thirty Engliſh families reſide here, who are chiefly concerned in the wine trade.

COMMERCE AND MANUFACTURES.] With regard to agriculture, this country is in a moſt wretched ſtate, producing grain for only three months conſumption, which renders corn the moſt conſiderabe article of importation. Notwithſtanding this is the caſe, it is to be aſcribed to the baneful influence which a deſpotic government has upon the ſpirit of a people, for ſuch is the natural fertility of the ſoil of this country, that there is one province alone capable of producing double the quantity of wheat neceſſary to ſupply the whole nation yearly.

The Portugueſe exchange their wine, ſalt, fruits, and moſt of their own materials, for foreign manufactures. They make a little linen, and ſome coarſe ſilk and woollen, with a variety of ſtraw work, and are excellent in preſerving and candying fruits. The commerce of Portugal, though ſeemingly extenſive, proves of little ſolid benefit to her, as the European nations, trading with her, engroſs all the productions of her colonies, as well as her own native commodities, as her gold, diamonds, pearls, ſugars, cocoa-nuts, fine red-wood, tobacco, hides, and the drugs of Braſil; her ivory, ebony, ſpices, and drugs of Africa and Eaſt India, in exchange for the almoſt numberleſs manufactures, and the vaſt quantities of corn and ſalt fiſh, ſupplied by thoſe European nations, and by the Engliſh North American colonies.

The Portugueſe foreign ſettlements are, however, not only of immenſe value, but vaſtly improveable: Braſil, the iſles of Cape Verd, Madeira, and the Azores. They bring gold from their plantations on the eaſt and weſt coaſt of Africa, and likewiſe ſlaves for manufacturing their ſugars and tobacco in Braſil and their South American ſettlements.

What the value of theſe may be, is unknown, perhaps, to themſelves; but they certainly abound in all the precious ſtones, and rich mines of gold and ſilver, and other commodities that are produced in the Spaniſh dominions there. It is computed that the king's fifth of gold ſent from Braſil amounts annually to 300,000l. ſterling, notwithſtanding the vaſt contraband trade. The little ſhipping the Portugueſe have is chiefly employed in carrying on the ſlave trade; and in a correſpondence with Goa, their chief ſettlement in the Eaſt Indies, and their other poſſeſſions there, as Dieu, Daman, Macao, &c.

CONSTITUTION AND GOVERNMENT.] The crown of Portugal is abſolute; but the nation ſtill preſerves an appearance of its ancient free conſtitution, in the meeting

ing of the cortes or ſtates, conſiſting, like our parliaments, of clergy, nobility, and commons. They pretend to a right of being conſulted upon the impoſition of new taxes, but the only real power they have is, that their aſſent is neceſſary in every new regulation, with regard to the ſucceſſion. In this they are indulged, to prevent all future diſputes on that account.

The nature of this government may be fairly pronounced the moſt deſpotic of any kingdom in Europe. The eſtabliſhed law is generally a dead letter, excepting where its decrees are carried into execution by the ſupplementary mandates of the ſovereign, which are generally employed in defeating the purpoſes of ſafety and protection, which law is calculated to extend equally over all the ſubjects.

Here the people have no more ſhare in the direction of government, in enacting of laws, and in the regulating of agriculture and commerce, than they have in that of Ruſſia, or China. The far greater part know nothing of what is done in that reſpect. Every man has no other alternative but to yield a blind and ready obedience, in whatever concerns himſelf, to the decrees and laws of the deſpot, as promulgated from time to time by his ſecretaries of ſtate. How would an Engliſhman, alive to all the feelings of civil liberty, tremble at reading the preamble of every new law publiſhed here! and which runs thus, "*I, the king, in virtue of my own certain knowledge, of my royal will and pleaſure, and of my full, ſupreme, and arbitrary power, which I hold only of God, and for which I am accountable to no man on earth, I do in conſequence order and command*, &c. &c."

All great preferments, both ſpiritual and temporal, are diſpoſed of in the council of ſtate, which is compoſed of an equal number of the clergy and nobility, with the ſecretary of ſtate. A council of war regulates all military affairs, as the treaſury courts do the finances. The council of the palace is the higheſt tribunal that can receive appeals; but the Caſa da Supplicaçao is a tribunal from which no appeal can be brought. The laws of Portugal are contained in three duodecimo volumes, and have the civil law for their foundation.

REVENUES AND TAXES.] The revenues of the crown amount to above 3,000,000 and a half ſterling annually. The cuſtoms and duties on goods exported and imported are exceſſive, and farmed out; but if the Portugueſe miniſtry ſhould ſucceed in all their projects, and in eſtabliſhing excluſive companies, to the prejudice of the Britiſh trade, the inhabitants will be able to bear theſe taxes without murmuring. Foreign merchandiſe pays 23 per cent. on importation, and fiſh from Newfoundland 25 per cent. Fiſh taken in the neighbouring ſeas and rivers pay 27 per cent. and the tax upon lands and cattle that are ſold is 10 per cent. The king draws a conſiderable revenue from the ſeveral orders of knighthood, of which he is grand maſter. The pope, in conſideration of the large ſums he draws out of Portugal, gives the king the money ariſing from indulgences to eat fleſh at times prohibited, &c. The king's revenue is now greatly increaſed by the ſuppreſſion of the Jeſuits, and other religious orders and inſtitutions.

MILITARY AND MARINE STRENGTH.] The Portugueſe government uſed to depend chiefly for protection on England; and therefore, for many years, they greatly neglected their army and fleet: but the ſame friendly connection between Great Britain and Portugal does not at preſent ſubſiſt. In the late reign, though they received the moſt effectual aſſiſtance from England, when invaded by the French and Spaniards, his moſt faithful majeſty judged it expedient to raiſe a conſiderable body of troops, who were chiefly diſciplined by foreign officers. Since that period the army has been again neglected, no proper encouragement being given to foreign officers, and little attention paid to the diſcipline of the troops; ſo that the military force of Portugal is now again inconſiderable, amounting, it is ſaid, to

25,000

25,000 men. The naval force of this kingdom is about ſeventeen ſhips of war, including ſix frigates.

ROYAL TITLES AND ARMS.] The king's titles are, king of Portugal and the Algarves, lord of Guinea, and of the navigation, conqueſt, and commerce of Ethiopia, Arabia, Perſia, and Braſil. The laſt king was complimented by the pope, with the title of His Moſt Faithful Majeſty. That of his eldeſt ſon is prince of Braſil.

The arms of Portugal are, argent, five eſcutcheons, azure, placed croſs-wiſe, each charged with as many beſants as the firſt, placed ſaltier-wiſe, and pointed, ſable, for Portugal. The ſhield bordered, gules, charged with ſeven towers, or, three in chief, and two in each flanch. The ſupporters are two winged dragons, and the creſt a dragon, or, under the two flanches, and the baſe of the ſhield appears at the end of it; two croſſes, the firſt flower-de-luce, vert, which is for the order of Aviez, and the ſecond patee, gules, for the order of Chriſt; the motto is changeable, each king aſſuming a new one; but it is frequently theſe words, *Pro Rege et Grege*, "For the King and the People."

NOBILITY AND ORDERS.] The titles and diſtinctions of their nobility are much the ſame with thoſe of Spain. Their orders of knighthood are three; 1. That of *Avis*, or *Aviez*, firſt inſtituted by Alphonſus Henriquez, king of Portugal, in the year 1147, as a military and religious order, on account of his taking Evora from the Moors. In 1213, it was ſubject to the order of Calatrava in Spain, but when Don John of Portugal ſeized the crown, he made it again independent. The badge is a croſs fleury, enamelled green, and between each angle a fleur-de-lis, gold: it is worne pendent to a green ribbon round the neck. 2. The "Order of St. *James*," inſtituted by Dennis I. king of Portugal, in the year 1310, becauſe under that ſaint's protection he became victorious over the Moors; he endowed the order with great privileges. The knights profeſs chaſtity, hoſpitality, and obedience, and none are admitted till they prove the gentility of their blood. Their enſign is a red ſword, the habit white, and their principal convent is at Dalmela. 3. The "Order of *Chriſt*," was inſtituted in 1317, by Dennis I. of Portugal, to engage the nobility to aſſiſt him more powerfully againſt the Moors. The knights obtained great poſſeſſions, and elected their grand maſter, till 1522, when Pope Adrian VI. conferred that office on John III. and his ſucceſſors to the crown of Portugal. This order is under the ſame regulations, and enjoys the ſame privileges as that of Calatrava in Spain: the badge is a croſs pattée, red, charged with a croſs, white, worne pendent to a broad ſcarlet ribbon round the neck, and on days of ceremony to a collar compoſed of three chains of gold. By the ſtatutes, the knights ſhould prove the nobility of their deſcent for four generations, but the order is now indiſcriminately given to all kinds of people who profeſs the Roman Catholic religion, and is very little regarded. Theſe orders have ſmall commanderies and revenues annexed to them, but are in ſmall eſteem. The "Order of *Malta*" hath likewiſe 23 commanderies in Portugal.

HISTORY OF PORTUGAL.] This kingdom comprehends the greateſt part of the ancient Luſitania, and ſhared the ſame fate with the other Spaniſh provinces in the conteſts between the Carthaginians and Romans; and in the decline and fall of the Roman empire, was ſucceſſively conquered by the Suevi, Alans, Viſigoths, and Moors. In the eleventh century, Alphonſus VI. king of Caſtile and Leon, rewarded Henry, grandſon of Robert king of France, for his bravery and aſſiſtance againſt the Moors, with his daughter, and that part of Portugal then in the hands of the Chriſtians. Henry was ſucceeded by his ſon Alphonſus Henry, in the year 1095, who gained a deciſive victory over five Mooriſh kings, in July 1139. This victory proved the origin of the monarchy of Portugal, for Alphonſus was then proclaimed king by his ſoldiers. He reigned 45 years, and was eſteemed for his courage

rage and love of learning. His deſcendants maintained themſelves on the throne for ſome centuries; indeed Sancho II. was expelled from his dominions for cowardice in the year 1240.

Dennis I. or Dionyſius, was called the *Father of his Country*; he built and rebuilt 44 cities and towns in Portugal, founded the military order of Chriſt, and was a very fortunate prince. He reigned 46 years. Under his ſucceſſor Alphonſus IV. happened ſeveral earthquakes at Liſbon, which threw down part of the city, and deſtroyed many lives. John I. was illuſtrious for his courage, prudence, and conqueſts in Africa; under him Madeira was firſt diſcovered in the year 1420, and the Canaries; he took Ceuta, and after a reign of 49 years, died in the year 1433. In the reign of Alphonſo V. about 1480, the Portugueſe diſcovered the coaſt of Guinea; and in the reign of his ſucceſſor John II. they diſcovered the Cape of Good Hope, and the kingdom of Moni-Congo, and ſettled colonies, and built forts in Africa, Guinea, and the Eaſt Indies. Emanuel, ſurnamed the Great, ſucceeded him in 1495, and adopted the plan of his predeceſſors, fitting out fleets for new diſcoveries. Vaſco de Gama, under him, cruiſed along the coaſt of Africa and Ethiopia, and landed in Indoſtan; and in the year 1500 Alvarez diſcovered Braſil.

John III. ſucceeded in 1521, and while he loſt ſome of his African ſettlements, made new acquiſitions in the Indies. He ſent the famous Xavier, as a miſſionary to Japan, and in the height of his zeal, eſtabliſhed that infernal tribunal, the inquiſition in Portugal, anno 1526, againſt the entreaties and remonſtrances of his people. Sebaſtian, his grandſon, ſucceeded him in 1557, and undertook a cruſade againſt the Moors in Africa. In 1578, in a battle with the king of Fez and Morocco, on the banks of the river Lucco, he was defeated, and either ſlain or drowned. Henry, a cardinal, and uncle to the unfortunate Sebaſtian, being the ſon of Emanuel, ſucceeded, but died without iſſue in the year 1580; on which, Anthony, prior of Crato, was choſen king, by the ſtates of the kingdom, but Philip II. of Spain, as has been obſerved in our hiſtory of that country, pretended that the crown belonged to him, becauſe his mother was the eldeſt daughter of the grandmother of the princes of Braganza, and ſent the duke of Alva, with a powerful force, who ſubdued the country, and proclaimed his maſter king of Portugal, the 12th of September, 1580.

The viceroys under Philip and his two ſucceſſors, Philip III. and Philip IV. behaved towards the Portugueſe with great rapacity and violence. The Spaniſh miniſters treated them as vaſſals of Spain, and by their repeated acts of oppreſſion and tyranny, they ſo kindled the hatred and courage of the Portugueſe, as to produce a revolt at Liſbon, the 1ſt of December, 1640. The people obliged John duke of Braganza, the legitimate heir to the crown, to accept it, and he ſucceeded to the throne by the title of John IV. almoſt without bloodſhed, and the foreign ſettlements alſo acknowledged him as their ſovereign. A fierce war ſubſiſted for many years between the two kingdoms, and all the efforts of the Spaniards to reunite them proved vain, ſo that a treaty was concluded in February, 1668, by which Portugal was declared to be free and independent.

The Portugueſe could not have ſupported themſelves under their revolt from Spain, had not the latter power been engaged in wars with England and Holland; and upon the reſtoration of Charles II. of England, that prince having married a princeſs of Portugal, prevailed with the crown of Spain, to give up all pretenſions to that kingdom. Alphonſo, ſon to John IV. was then king of Portugal. He had the misfortune to diſagree at once with his wife and his brother Peter; and they uniting their intereſts, not only forced Alphonſo to reſign his crown, but

obtained a diſpenſation from the pope for their marriage, which was actually conſummated. They had a daughter; but Peter, by a ſecond marriage, had ſons, the eldeſt of whom was John, his ſucceſſor, and father to the late king of Portugal. John, like his father, joined the grand confederacy formed by king William; but neither of them were of much ſervice in humbling the power of France. On the contrary, he almoſt ruined the allies, by occaſioning the loſs of the great battle of Almanza, in 1707. John died in 1750, and was ſucceeded by his ſon Joſeph, whoſe reign was neither happy to himſelf, nor fortunate for his people. The fatal earthquake, in 1755, overwhelmed his capital, and ſhook his kingdom to the centre. His ſucceeding adminiſtration was not diſtinguiſhed by the affection that it acquired at home, or the reputation which it ſuſtained abroad. It was deeply ſtained with domeſtic blood, and rendered odious by exceſſive and horrible cruelty. In September, 1758, the king was attacked by aſſaſſins, and narrowly eſcaped with his life, in a ſolitary place near his country palace of Belem. The families of Aveira, and Tavora, were deſtroyed by torture, in conſequence of an accuſation exhibited againſt them of having conſpired againſt the king's life. But they were condemned without any proper evidence, and their innocence has been ſince publicly and authentically declared. From this ſuppoſed conſpiracy is dated the expulſion of the Jeſuits (who were conjectured to have been at the bottom of the plot) from all parts of the Portugueſe dominions.

The abolition of the order of the Jeſuits, being one of the moſt important events which have hitherto occurred in the eighteenth centry, and it having originated in the court of Portugal, deſerves ſome notice in this place. The active genius of this order, which penetrated the remoteſt countries of Aſia, at a very early period of the preceding century, directed their attention to the extenſive continent of America, as a proper object of their miſſions. Conducted by their diſtinguiſhed leader, St. Francis Xavier, they formed a conſiderable ſettlement in the province of Paraguay, and made a rapid progreſs in inſtructing the Indians in arts, religion, and the more ſimple manufactures, and accuſtoming them to the bleſſings of ſecurity and order. A few Jeſuits preſided over many thouſand Indians; they ſoon, however, altered their views, and directed them altogether to the increaſe of the opulence and power of their order. Immenſe quantities of gold were annually tranſported to Europe; and in the deſign of ſecuring to themſelves an independent empire in theſe regions, they induſtriouſly cut off all communication with both the Spaniards and the Portugueſe in the adjacent provinces, and inſpired the Indians with the moſt determined oppoſition to thoſe nations. Such was the ſtate of affairs, when, in the year 1750, a treaty was concluded between the courts of Liſbon and Madrid, which aſcertained the limits of their reſpective dominions in South America. Such a treaty was death to the projects of the Jeſuits, and the conſequence was a violent conteſt between the united forces of the two European powers, and the Indians of Paraguay, incited by the Jeſuits. The crafty and vindictive marquis of Pombal, who had raiſed himſelf from performing the duties of a common ſoldier, in the character of a cadet, to be abſolute miniſter of the kingdom of Portugal, could not eaſily forget this refractory conduct; and perhaps he might apprehend the downfall of his own authority, unleſs ſome deciſive check was given to the growing influence of this dangerous ſociety. Whether there was a foundation or not for the report of the conſpiracy againſt the life of the king, or whether the diſcontented Jeſuits were really concerned with the unfortunate noblemen, who ſuffered on that account, or not, is difficult to determine. It was ſufficient that it afforded

a ſpecious pretence for this expert, but unprincipled ſtateſman, to rid himſelf of enemies, whom he could not regard in any other than a formidable light. In the beginning of the year 1759, therefore, the Jeſuits of all deſcriptions were baniſhed the kingdom of Portugal, on the plea that certain of their order were concerned in the attempt upon the life of the king in 1758, and their effects were confiſcated. The hoſtilities which commenced, not long after, between Portugal and Spain, ſerved a little to protract the exiſtence of the Jeſuits in the latter kingdom; the jealouſy, however, which their conduct had excited in the court of Madrid, lay dormant only for a while, and when a fit opportunity preſented, no nation in Europe was more clamorous for their abolition.

In 1762, when a war broke out between Spain and England, the Spaniards, and their allies the French, pretended to force his faithful majeſty into their alliance, and to garriſon his ſea-towns againſt the Engliſh with their troops. The king of Portugal rejected this propoſal, and declared war againſt the Spaniards, who, without reſiſtance, entered Portugal with a conſiderable army, while a body of French threatened it from another quarter. Some have doubted whether any of theſe courts were in earneſt upon this occaſion, and whether the whole of the pretended war was not concerted to force England into a peace with France and Spain, in conſideration of Portugal's apparent danger. It is certain, that both the French and Spaniards carried on the war in a very dilatory manner, and that had they been in earneſt, they might have been maſters of Liſbon long before the arrival of the Engliſh troops to the aſſiſtance of the Portugueſe.

Be that as it will, a few Engliſh battalions put an effectual ſtop, by their courage and manœuvres, to the progreſs of the invaſion. Portugal was ſaved, and a peace was concluded at Fontainbleau in 1763. Notwithſtanding this eminent ſervice, and favours of a ſimilar kind often performed by the Engliſh to the Portugueſe, who had been often ſaved before in the like manner, the latter, ever ſince that period, cannot be ſaid to have beheld their deliverers with a friendly eye. The moſt captious diſtinctions, and frivolous pretences, have been invented by the Portugueſe miniſters for cramping the Engliſh trade, and depriving them of their privileges.

His Portugueſe majeſty having no ſon, his eldeſt daughter was married, by diſpenſation from the pope, to Don Pedro, her own uncle, to prevent the crown from falling into a foreign family. The late king died on the 24th of February, 1777, and was ſucceeded by his daughter, the preſent queen. One of the firſt acts of her majeſty's reign was the removal from power of the marquis de Pombal, an event which excited general joy throughout the kingdom, as might naturally be expected from the arbitrary and oppreſſive nature of his adminiſtrarion, though it has been alleged in his favour, that he adopted ſundry public meaſures, which were calculated to promote the real intereſts of Portugal.

Maria-Frances-Iſabella, queen of Portugal, born in 1734, married, 1760, to her uncle, Don Pedro, who was born 1717, by whom ſhe has iſſue:

1. Joſeph-Francis-Xavier, prince of Braſil, born in 1761, married in 1777 to his aunt Mary-Franciſca-Benedicta, born 1746.
2. Infant John-Maria-Joſeph, 1767.
3. Infanta Maria-Anna-Victoria, 1768.
4. Infanta Maria-Clementina, 1774.

obtained a diſpenſation from the pope for their marriage, which was actually conſummated. They had a daughter; but Peter, by a ſecond marriage, had ſons, the eldeſt of whom was John, his ſucceſſor, and father to the late king of Portugal. John, like his father, joined the grand confederacy formed by king William; but neither of them were of much ſervice in humbling the power of France. On the contrary, he almoſt ruined the allies, by occaſioning the loſs of the great battle of Almanza, in 1707. John died in 1750, and was ſucceeded by his ſon Joſeph, whoſe reign was neither happy to himſelf, nor fortunate for his people. The fatal earthquake, in 1755, overwhelmed his capital, and ſhook his kingdom to the centre. His ſucceeding adminiſtration was not diſtinguiſhed by the affection that it acquired at home, or the reputation which it ſuſtained abroad. It was deeply ſtained with domeſtic blood, and rendered odious by exceſſive and horrible cruelty. In September, 1758, the king was attacked by aſſaſſins, and narrowly eſcaped with his life, in a ſolitary place near his country palace of Belem. The families of Aveira, and Tavora, were deſtroyed by torture, in conſequence of an accuſation exhibited againſt them of having conſpired againſt the king's life. But they were condemned without any proper evidence, and their innocence has been ſince publicly and authentically declared. From this ſuppoſed conſpiracy is dated the expulſion of the Jeſuits (who were conjectured to have been at the bottom of the plot) from all parts of the Portugueſe dominions.

The abolition of the order of the Jeſuits, being one of the moſt important events which have hitherto occurred in the eighteenth centry, and it having originated in the court of Portugal, deſerves ſome notice in this place. The active genius of this order, which penetrated the remoteſt countries of Aſia, at a very early period of the preceding century, directed their attention to the extenſive continent of America, as a proper object of their miſſions. Conducted by their diſtinguiſhed leader, St. Francis Xavier, they formed a conſiderable ſettlement in the province of Paraguay, and made a rapid progreſs in inſtructing the Indians in arts, religion, and the more ſimple manufactures, and accuſtoming them to the bleſſings of ſecurity and order. A few Jeſuits preſided over many thouſand Indians; they ſoon, however, altered their views, and directed them altogether to the increaſe of the opulence and power of their order. ITALY.

Situation and Extent.

Miles.		Degrees.
Length 600	between	38 and 47 north latitude.
Breadth 400		7 and 19 east longitude.

THE form of Italy renders it very difficult to aſcertain its extent and dimenſions; for, according to ſome accounts, it is, from the frontiers of Switzerland to the extremity of the kingdom of Naples, about 750 miles in length; and from the frontiers of the duchy of Savoy, to thoſe of the dominions of the ſtates of Venice, which is its greateſt breadth, about 400 miles, though in ſome parts it is ſcarcely 100.

Boundaries.] Nature has fixed the boundaries of Italy; for towards the Eaſt it is bounded by the Gulf of Venice, or Adriatic ſea; on the South and Weſt by the Mediterranean ſea; and on the North, by the lofty mountains of the Alps, which divide it from France and Switzerland.

The whole of the Italian dominions, comprehending Corſica, Sardinia, the Venetian and other iſlands, are divided and exhibited in the following table.

Italy	Countries Names.	Square Miles.	Length.	Breadth.	Chief Cities.
Papiſts. To the king of Sardinia	Piedmont	6619	140	98	Turin

SUBDIVISIONS.

The King of SARDINIA poſſeſſes PIEDMONT, SAVOY, MONTSERRAT, the ISLAND of SARDINIA, part of the MILANESE, and of GENOA.

The ſubdiviſions in theſe territories are,

	Subdiviſion.	Titles.	Chief Towns.
Piedmont	Piedmont	Proper	Turin, Pignerol, Carignan
	Verceil	Lordſhip	Verceil
	Maſſeran	Principality	Maſſeran
	Ivrea	Marquiſate	Ivrea
	Aſti	County	Aſti
	Suſa	Marquiſate	Suſa
	Saluzzo	Marquiſate	Saluzzo, Coni
	Vaudois	Vallies	Pragelas, or Cluſon
	Nice	Territory	Nice
	Tende	County	Tende
	Aouſte	County	Aouſte
Savoy	Savoy	Proper	Chambery, Montmelian
	Geneva	County	Annacy
	Chablais	County	Tonor, or Thonon
	Tarantaiſe		Mouſtriers
	Maurienne	Valley	St. John de Maurienne
	Foſſigny		Bonneville
Mont-ſerrat	Montſerrat	Duchy	Caſal, Albi, Aquì
Milaneſe	Tortoneſe		Tortona
	Aleſſandrine		Alexandria
	Laumelin		Laumello
Genoa	Oneglia	Territory	Oneglia

The dominions of the King of NAPLES.

Subdiviſions.	Chief Towns.	Subdiviſions.	Chief Towns.
Lavora	Naples, Capua, Gaeta	Ult. Calabria	Reggio
		Ult. Abruzzo	Aquila
Ultra Princip.	Benevento	Citra Abruzzo	Chieti
Citra Princip.	Salerno	Capitinate, or Apulia	Manfredonia
			Lucera

SOIL AND AIR.] The happy ſoil of Italy produces the comforts and luxuries of life in great abundance; each diſtrict has its peculiar excellency and commodity; wines, the moſt delicious fruits, and oil, are the moſt general productions. As much corn grows here as ſerves the inhabitants; and were the ground properly cultivated, the Italians might export it to their neighbours. The Italian cheeſes, particularly thoſe called Parmeſans, and their native ſilk, form a principal part of their commerce. There is here a great variety of air: and ſome parts of Italy bear

bear melancholy proof of the alterations that accidental cauſes make on the face of nature; for the Campagna di Roma, where the ancient Romans enjoyed the moſt ſalubrious air of any place perhaps on the globe, is now almoſt peſtilential, through the decreaſe of inhabitants, which has occaſioned a ſtagnation of waters, and putrid exhalations. The air of the northern parts, which lie among the Alps or in their neighbourhood, is keen and piercing, the ground being in many places covered with ſnow in winter. The Appennines, which are a ridge of mountains that longitudinally almoſt divide Italy, have great effects on its climate; the countries on the South being warm, thoſe on the North mild and temperate. The ſea-breezes refreſh the kingdom of Naples ſo much, that no remarkable inconveniency of air is found there, notwithſtanding its ſouthern ſituation. In general, the air of Italy may be ſaid to be dry and pure.

MOUNTAINS.] We have already mentioned the Alps and Appennines, which form the chief mountains of Italy. The famous volcano of Mount Veſuvius lies in the neighbourhood of Naples.

RIVERS AND LAKES.] The rivers of Italy are the Po, the Var, the Adige, the Trebia, the Arno, and the Tiber which runs through the city of Rome. The famous Rubicon forms the ſouthern boundary between Italy and the ancient Ciſalpine Gaul.

The lakes of Italy are, the Maggiore, Lugano, Como, Iſco, and Garda, in the North; the Perugia or Thraſimene, Bracciana, Terni, and Celano, in the middle.

SEAS, GULFS OR BAYS, CAPES, PROMONTORIES, AND STRAITS. } Without a knowledge of theſe, neither the ancient Roman authors, nor the hiſtory nor geography of Italy, can be underſtood. The ſeas of Italy are, the gulfs of Venice, or the Adriatic ſea; the ſeas of Naples, Tuſcany, and Genoa; the bays or harbours of Nice, Villa Franca, Oneglia, Final, Savona, Vado, Spezzia, Lucca, Piſa, Leghorn, Piombino, Civita Vecchia, Gaeta, Naples, Salerno, Policaſtro, Rhegio, Quilace, Tarento, Manfredonia, Ravenna, Venice, Trieſte, Iſtria, and Fiume; Cape Spartavento, del Alice, Otranto, and Ancona; and the ſtrait of Meſſina, between Italy and Sicily.

The gulfs and bays in the Italian iſlands are thoſe of Fiorenzo, Baſtia, Talada, Porto Novo, Cape Corſo, Bonifacio, and Ferro, in Corſica; and the ſtrait of Bonifacio, between Corſica and Sardinia. The bays of Cagliari and Oriſtagni; Cape de Sardis, Cavello, Monte Santo, and Polo, in Sardinia. The gulfs of Meſſina, Melazzo, Palermo, Mazara, Syracuſe, and Catania; Cape Faro, Melazzo, Orlando, Gallo, Trapano, Paſſaro, and Aleſſia, in Sicily; and the bays of Porto Feraio, and Porto Longone, in the iſland of Elba.

METALS AND MINERALS.] Many places of Italy abound in mineral ſprings; ſome hot, ſome warm, and many of ſulphureous, chalybeat, and medicinal qualities. Many of its mountains abound in mines that produce great quantities of emeralds, jaſper, agate, porphyry, lapis lazuli, and other valuable ſtones. Iron and copper-mines are found in a few places; and a mill for forging and fabricating theſe metals is erected near Tivoli, in Naples. Sardinia is ſaid to contain mines of gold, ſilver, lead, iron, ſulphur, and alum, though they are now neglected; and curious cryſtals and coral are found on the coaſt of Corſica. Beautiful marble of all kinds is one of the chief productions of Italy.

VEGETABLE AND ANIMAL PRODUCTIONS, BY SEA AND LAND. } Beſides the rich vegetable productions mentioned under the article of ſoil, Italy produces

duces citrons, and ſuch quantities of cheſnuts, cherries, plums, and other fruits, that they are of little value to the proprietors.

There is little difference between the animal productions of Italy, either by land or ſea, and thoſe of France and Germany, already mentioned.

POPULATION, INHABITANTS, MANNERS, CUSTOMS, AND DIVERSIONS. } Authors are greatly divided on the head of Italian population. This may be owing to the partiality which every Italian has for the honour of his own province. The number of the king of Sardinia's ſubjects in Italy is about 2,300,000. The city of Milan itſelf, by the beſt accounts, contains 300,000, and the duchy is proportionably populous. As to the other provinces of Italy, geographers and travellers have paid very little attention to the numbers of natives that live in the country, and inform us by conjecture only of thoſe who inhabit the great cities. Some doubts have ariſen whether Italy is as populous now as it was in the time of Pliny, when it contained 14,000,000 of inhabitants. I am apt to believe that the preſent inhabitants exceed that number. The Campagna di Roma, indeed, and ſome other of the moſt beautiful parts of Italy, are at preſent in a manner deſolate; but we are to conſider that the modern Italians are in a great meaſure free from the unintermitting wars, not to mention the tranſmigration of colonies, which formerly, even down to the ſixteenth century, depopulated their country. Add to this, that the princes and ſtates of Italy now encourage agriculture and manufactures of all kinds, which undoubtedly promotes population; ſo that it may not perhaps be extravagant, if we aſſign to Italy 20,000,000 of inhabitants; but ſome calculations greatly exceed that number *. The Italians are generally well proportioned, and have ſuch meaning in their looks, that they have greatly aſſiſted the ideas of their painters. Their women are well ſhaped, and ſprightly. The marriage ties, eſpecially of the higher claſs, are ſaid to be of little force. Every wife has been repreſented to have her gallant or ciciſbeo, with whom ſhe keeps company, and ſometimes cohabits, with very little ceremony, and no offence on either ſide. But this practice is chiefly remarkable at Venice; and, indeed, the repreſentations which have been made of this kind by travellers, appear to have been much exaggerated. With regard to the modes of life, the beſt quality of a modern Italian is ſobriety, and they ſubmit very patiently to the public government. With great taciturnity they diſcover but little reflection. They are rather vindictive than brave, and more ſuperſtitious than devout. The middling ranks are attached to their native cuſtoms, and ſeem to have no ideas of improvement. Their fondneſs for greens, fruits, and vegetables of all kinds, contributes to their contentment and ſatisfaction; and an Italian gentleman, or peaſant can be luxurious at a very ſmall expence. Though perhaps all Italy does not contain many deſcendants of the ancient Romans, yet the preſent inhabitants ſpeak of themſelves as ſucceſſors to the conquerors of the world, and look upon the reſt of mankind as their inferiors.

The dreſs of the Italians is little different from that of the neighbouring countries, and they affect a medium between the French volatility and the ſolemnity of the Spaniards. The Neapolitans frequently dreſs in black, in compliment to the Spaniards. It cannot be denied that the Italians excel in the fine arts; though they make at preſent but a very inconſiderable figure in the ſciences. They cultivate and enjoy vocal muſic at a very dear rate, by emaſculating their males when young; to which their mercenary parents agree without remorſe.

* Mr. Swinburne ſaith, that in 1779, the number of inhabitants in the kingdom of Naples amounted to 4,249,430, excluſive of the army and naval eſtabliſhment.

The Italians, the Venetians eſpecially, have very little or no notion of the impropriety of many cuſtoms that are conſidered as criminal in other countries. Parents, rather than their ſons ſhould throw themſelves away by unſuitable marriage, or contract diſeaſes by promiſcuous amours, hire miſtreſſes for them, for a month, or a year, or ſome determined time; and concubinage, in many places of Italy, is an avowed licenſed trade. The Italian courtezans, or *bona robas*, as they are called, make a kind of profeſſion in all their cities. Maſquerading and gaming, horſe-races without riders, and converſations or aſſemblies, are the chief diverſions of the Italians, except religious exhibitions, in which they are pompous beyond all other nations.

A modern writer, deſcribing his journey through Italy, gives us a very unfavourable picture of the Italians, and their manner of living. Give what ſcope you pleaſe to your fancy, ſays he, you will never imagine half the diſagreeableneſs that Italian beds, Italian cooks, and Italian naſtineſs, offer to an Engliſhman. At Turin, Milan, Venice, Rome, and perhaps two or three other towns, you meet with good accommodations; but no words can expreſs the wretchedneſs of the other inns. No other beds than thoſe of ſtraw, with a matreſs of ſtraw, and next to that a dirty ſheet, ſprinkled with water, and conſequently damp: for a covering, you have another ſheet as coarſe as the firſt, like one of our kitchen jack towels, with a dirty coverlet. The bedſtead conſiſts of four wooden forms or benches: an Engliſh peer and peereſs muſt lie in this manner, unleſs they carry an upholſterer's ſhop with them. There are, by the bye, no ſuch things as curtains; and in all their inns the walls are bare, and the floor has never once been waſhed ſince it was firſt laid. One of the moſt indelicate cuſtoms here is, that men, and not women, make the ladies beds, and would do every office of a maid ſervant, if ſuffered. They never ſcour their pewter; their knives are of the ſame colour. In theſe inns they make you pay largely, and ſend up ten times as much as you can eat. The ſoup, like waſh, with pieces of liver ſwimming in it; a plate full of brains, fried in the ſhape of fritters; a diſh of livers and gizzards; a couple of fowls (always killed after your arrival) boiled to rags, without any the leaſt kind of ſauce or herbage; another fowl, juſt killed, ſtewed, as they call it; then two more fowls, or a turkey roaſted to rags. All over Italy, on the roads, the chickens and fowls are ſo ſtringy you may divide the breaſt into as many filaments as you can a halfpenny-worth of thread. Now and then we get a little piece of mutton or veal; and, generally ſpeaking, it is the only eatable morſel that falls in our way. The bread all the way is exceedingly bad; and the butter ſo rancid, that it cannot be touched, or even borne within the reach of your ſmell. But what is a greater evil to travellers than any of the above recited, are the infinite number of gnats, bugs, fleas, and lice, which infeſt us by day and night.

We beg leave to add a ſtill more modern deſcription of the national character of the Italians, given lately by the abbé Jagemann, member of the Florentine Academy of Agriculture; "Conſidering the mildneſs of the climate, the uncommon fertility of the ſoil, the ſituation of moſt towns and boroughs on hills, the excellent ſpring-water from the Alps and the Apennines, the number of mineral waters and baths, the ſpaciouſneſs of the ſtreets and houſes, the delightful views, the frequent reſidence of the Italians on their villas, the fragrancy and healthineſs of the air, the temperate diet, the facility of getting cured of diſeaſes in the hoſpitals, one is inclined to think that the corporeal frame of an Italian, if not enervated in early youth, cannot but be ſtrong, healthy, and beautiful. The handſomeſt perſons of either ſex are found in Tuſcany. The Italians, in general, are alſo endowed with good ſenſe and diſcernment; apt to deſpiſe mere theoretical ſpeculations, and

to

to judge by their own feelings and experience: but education is rather neglected. The chief part of their religion conſiſts in an external obſervance and practice of eccleſiaſtical rites, ceremonies, and injunctions. An Italian, not enlightened by reflexion and experience, will ſooner commit adultery than eat any fleſh-meat on a Friday; but a foreigner, who wiſhes to paſs for a Roman catholic, needs only to ſtick to his window an atteſtation, by a phyſician, that his ſtate of health requires a fleſh-meat diet; and he may, without any riſk, eat fleſh-meat in Lent. Such atteſtations may be purchaſed in coffee-houſes, at Florence. The Italians are very ſenſual; exceedingly fond of muſic; little addicted to drunkenneſs and coarſe jokes; impatient of delay in their paſſions for the fair ſex; jealous of the French; but fond of the national characters of the Engliſh and the Germans. They ſtill breathe their ancient ſpirit of liberty and republicaniſm, and are averſe to monarchical government, to which they were ſubjected by force. Hence, a true born Italian, of an independent fortune, ſeldom courts public employments; hence their beſt geniuſes too are little known; hence alſo their almoſt general inclination to ſatire, and the bitterneſs of their ſatires. Hence their general hatred and comtempt for the military ſervice, and for the miniſters and executors of criminal juriſdiction. Their dreſs and their whole conduct prove their fondneſs of liberty and eaſe, and their averſion to conſtraint, ceremony, and compliments. As ſo great a variety of enjoyments and conveniencies are, for an Italian, ſo many neceſſaries of life, he muſt be a rigid œconomiſt; but thoſe moſt famous for their œconomical management, are the Florentines and the Genoeſe. Hence their habitual cuſtom of entering into the moſt minute details and calculations, and of ſtrictly adhering to rules. Hence their peculiar talents and ſkill for commerce, trade, political œconomy, finances, their avidity for gain, and their envy at the proſperity of other people. Their reſentment laſts only till they have produced a ſatisfaction adequate to a wrong ſuſtained; they are leſs iraſcible than many other nations; but when groſsly injured in their character or fortunes, they are capable of every exceſs. Of aſſaſſinations, however, abbé Jagemann recollects only three inſtances in Tuſcany, in fifteen years. From their mutual diſtruſt, an Italian indeed ſeldom becomes an intimate friend to another Italian; but then their friendſhip proves the more cordial and laſting. No nation is more compaſſionate to the diſtreſſed, or more ready to ſerve ſtrangers; yet letters of recommendation ought not to be neglected by travellers."

RELIGION.] The religion of the Italians is Roman-catholic. The inquiſition here is little more than a ſound; and perſons of all religions live unmoleſted in Italy, provided no groſs inſult is offered to their worſhip. In the Introduction, we have given an account of the riſe and eſtabliſhment of popery in Italy, from whence it ſpread over all Europe; likewiſe of the cauſes and ſymptoms of its decline. The eccleſiaſtical government of the papacy has employed many volumes in deſcribing it. The cardinals, who are next in dignity to his holineſs, are ſeventy: but that number is ſeldom or never complete: they are appointed by the pope, who takes care to have a majority of Italian cardinals, that the chair may not be removed from Rome, as it was once to Avignon in France, the then pope being a Frenchman. In promoting foreign prelates to the cardinalſhip, the pope regulates himſelf according to the nomination of the princes who profeſs that religion. His chief miniſter is the cardinal patron, generally his nephew, or near relation, who improves the time of the pope's reign by amaſſing what he can. When met in a conſiſtory, the cardinals pretend to control the pope, in matters both ſpiritual and temporal, and have been ſometimes known to prevail. The reign of a pope is ſeldom of long duration, being generally old men at the time of their election. The conclave is a ſcene where the cardinals principally endeavour to diſplay their

parts, and where many tranſactions paſs which hardly ſhew their inſpiration to be from the Holy Ghoſt. During the election of a pope in 1721, the animoſities ran ſo high, that they came to blows with both their hands and feet, and threw the ink-ſtandiſhes at each other. We ſhall here give an extract from the creed of pope Pius IV. 1560, before his elevation to the chair, which contains the principal points wherein the church of Rome differs from the proteſtant churches. After declaring his belief in one God, and other heads wherein Chriſtians in general are agreed, he proceeds as follows:

"I moſt firmly admit and embrace the apoſtolical and eccleſiaſtical traditions, and all other conſtitutions of the church of Rome.

"I do admit the holy ſcriptures in the ſame ſenſe that holy mother-church doth, whoſe buſineſs it is to judge of the true ſenſe and interpretation of them; and I will interpret them according to the unanimous conſent of the fathers.

"I do profeſs and believe that there are ſeven ſacraments of the law, truly and properly ſo called, inſtituted by Jeſus Chriſt our Lord, and neceſſary to the ſalvation of mankind, though not all of them to every one; namely, baptiſm, confirmation, euchariſt, penance, extreme unction, orders, and marriage, and that they do confer grace; and that of theſe, baptiſm, confirmation, and orders, may not be repeated without ſacrilege. I do alſo receive and admit the received and approved rites of the catholic church in her ſolemn adminiſtration of the aboveſaid ſacraments.

"I do embrace and receive all and every thing that hath been defined and declared by the holy council of Trent * concerning original ſin and juſtification.

"I do alſo profeſs, that in the maſs there is offered unto God a true, proper, and propitiatory ſacrifice for the quick and the dead; and that in the moſt holy ſacrament of the euchariſt there is truly, really, and ſubſtantially, the body and blood, together with the ſoul and divinity, of our Lord Jeſus Chriſt; and that there is a converſion made of the whole ſubſtance of the bread into the body, and of the whole ſubſtance of the wine into the blood; which converſion the catholic church calls Tranſubſtantiation. I confeſs that under one kind only, whole and entire, Chriſt and a true ſacrament is taken and received.

"I do firmly believe that there is a purgatory; and that the ſouls kept priſoners there do receive help by the ſuffrages of the faithful.

"I do likewiſe believe that the ſaints, reigning together with Chriſt, are to be worſhipped and prayed unto; and that they do offer prayers unto God for us, and that their relics are to be had in veneration.

"I do moſt firmly aſſert, that the images of Chriſt, of the bleſſed Virgin the mother of God, and of other ſaints, ought to be had and retained, and that due honour and veneration ought to be given unto them †.

* A convocation of Roman-catholic cardinals, archbiſhops, biſhops, and divines, who aſſembled at Trent, by virtue of a bull from the pope, anno 1546, and devoted to him, to determine upon certain points of faith, and to ſuppreſs what they were pleaſed to term the Riſing Hereſies in the church.

† An Engliſh traveller, ſpeaking of a religious proceſſion ſome years ago at Florence, in Italy, deſcribes it as follows: I had occaſion, ſays he, to ſee a proceſſion, where all the nobleſſe of the city attended in their coaches. It was the anniverſary of a charitable inſtitution in favour of poor maidens, a certain number of whom are portioned every year. About two hundred of theſe virgins walked in proceſſion, two and two together. They were preceded and followed by an irregular mob of penitents, in ſack-cloth, with lighted tapers, and monks carrying crucifixes, bawling and bellowing the litanies; but the greateſt object was the figure of the Virgin Mary, as big as the life, ſtanding within a gilt frame, dreſſed in a gold ſtuff, with a large hoop, a great quantity of falſe jewels, her face painted and patched, and her hair frizzled and curled in the very extremity of the faſhion. Very little regard had been paid to the image of our Saviour on the croſs; but when the Lady Mother appeared on the ſhoulders of three or four luſty friars, the whole populace fell upon their knees in the dirt.

"I do

"I do likewiſe affirm, that the power of indulgencies was left by Chriſt to the church, and that the uſe of them is very beneficial to Chriſtian people *.

"I do acknowledge the holy, catholic, and apoſtolical Roman church to be the mother and miſtreſs of all churches; and I do promiſe and ſwear true obedience to the biſhop of Rome, the ſucceſſor of St. Peter, the prince of the apoſtles, and vicar of Jeſus Chriſt.

"I do undoubtedly receive and profeſs all other things which have been delivered, defined, and declared by the ſacred canons and œcumenical councils, and eſpecially by the holy ſynod of Trent. And all other things contrary thereto, and all hereſies condemned, rejected, and anathematiſed by the church, I do likewiſe condemn, reject, and anathematiſe."

ARCHBISHOPRICKS.] There are thirty-eight archbiſhopricks in Italy, but the ſuffragans annexed to them are too indefinite and arbitrary for the reader to depend upon, the pope creating or ſuppreſſing them as he pleaſes.

LANGUAGE.] The Italian language is remarkable for its ſmoothneſs, and the facility with which it enters into muſical compoſitions. The ground-work of it is Latin, and it is eaſily maſtered by a good claſſical ſcholar. Almoſt every ſtate in Italy has a different dialect; and the prodigious pains taken by the literary ſocieties there, may at laſt fix the Italian into a ſtandard language. At preſent the Tuſcan ſtyle and writing is moſt in requeſt.

The Lord's Prayer runs thus: *Padre noſtro, che ſei nel cielo, ſia ſanctificato il tuo nome; il tuo regno venga; la tua volunta ſia fatta, ſi come in cielo coſi anche in terra; dacci oggi il noſtro pane cotidiano; e rimettici i noſtri debiti, ſiccome noi ancora rimettiamo a' noſtri debitori: e non inducici in tentatione, ma liberaci dal maligno; perciochè tuo è il regno, è la potenza, è la gloria in ſempiterno.* Amen.

LEARNING AND LEARNED MEN, PAINTERS, STATUARIES, ARCHITECTS, AND ARTISTS.] In the Introduction, we have particulariſed ſome of the great men which ancient Italy produced. In modern times, that is, ſince the revival of learning, ſome Italians have ſhone in controverſial learning; but they are chiefly celebrated by bigots of their own perſuaſion. The mathematics and natural philoſophy

* A long liſt of indulgencies, or fees of the pope's chancery, may be ſeen in a book printed 150 years ago, by authority of the then pope. It has been tranſlated into Engliſh, under the title of *Rome a great Cuſtom-Houſe for Sin*; from which we ſhall give a few extracts.

ABSOLUTIONS.

For him that ſtole holy or conſecrated things out of a holy place. 10s. 6d.
For him who lies with a woman in the church, 9s.
For a layman for *murdering* a layman, 7s. 6d.
For him that killeth his father, mother, wife, or ſiſter, 10s. 6d.
For laying violent hands on a *clergyman*, ſo it be without effuſion of blood, 10s. 6d.
For a prieſt that keeps a concubine: as alſo his diſpenſation for being irregular, 10s. 6d.
For him that lyeth with his *own mother*, *ſiſter*, or *godmother*, 7s. 6d.
For him that *burns* his neighbour's houſe, 12s.
For him that forgeth the pope's hand, 1l. 7s.
For him that forgeth letters apoſtolical, 1l. 7s.
For him that takes two holy orders in one day, 2l. 6s.
For a king for going to the holy ſepulchre without licence, 7l. 10s.

DISPENSATIONS.

For a baſtard to enter all holy orders, 18s.
For a man or woman that is found hanged, that they may have Chriſtian burial, 1l. 7s. 6d.

LICENCES.

For a layman to change his vow of going to Rome to viſit the apoſtolic churches, 18s.
To eat fleſh and white meats in Lent, and other faſting days, 10s. 6d.
That a king or queen ſhall enjoy ſuch indulgencies, as if they went to Rome, 15l.
For a queen to adopt a child, 300l.
To marry in times prohibited, 2l. 5s.
To eat fleſh in times prohibited, 1l. 4s.
Not to be tied to faſting days, 1l. 4s.
For a town to take out of a church them (murderers) that have taken ſanctuary therein, 4l. 10s.

FACULTIES.

To abſolve all the delinquents, 3l.
To diſpenſe with irregularities, 3l.

owe much to Galileo, Toricelli, Malpighi, Borelli, and ſeveral other Italians. Strada is an excellent hiſtorian; and the hiſtory of the council of Trent, by the celebrated Father Paul, is a ſtandard work. Guicciardini, Bentivoglio, and Davila, have been much commended as hiſtorians by their ſeveral admirers. Machiavel is equally famous as an hiſtorian and as a political writer. His comedies have much merit; and the liberality of his ſentiments, for the age in which he lived, is amazing. Among the proſe writers in the Italian language, Boccace has been thought one of the moſt pure and correct in point of ſtyle: he was a very natural painter of life and manners, but his productions are too licentious. Petrarch, who wrote both in Latin and Italian, revived among the moderns the ſpirit and genius of ancient literature: but among the Italian poets, Dante, Arioſto, and Taſſo, are the moſt diſtinguiſhed. There are ſaid to be upwards of a thouſand comedies in the Italian language, though not many that are excellent: but Metaſtaſio has acquired a great reputation by writing dramatic pieces ſet to muſic. Sannazarius, Fracaſtorius, Bembo, Vida, and other natives of Italy, have diſtinguiſhed themſelves by the elegance, correctneſs, and ſpirit of their Latin poetry, many of their compoſitions approaching in ſome degree to the claſſics themſelves. Socinus, who was ſo much diſtinguiſhed by his oppoſition to the doctrine of the Trinity, was a native of Italy.

The Italian painters, ſculptors, architects, and muſicians, are unrivalled, not only in their numbers, but their excellencies. The revival of learning, after the ſack of Conſtantinople by the Turks, revived taſte likewiſe, and gave mankind a reliſh for truth, and beauty in deſign and colouring. Raphael, from his own ideas, aſſiſted by the ancients, ſtruck out a new creation by his pencil, and ſtill ſtands at the head of painting. Michael Angelo Buonarotti excelled at once in painting, ſculpture, and architecture. The colouring of Titian has perhaps never yet been equalled. Bramante, Bernini, and many other Italians, carried ſculpture and architecture to an amazing height. Julio Romano, Correggio, Caraccio, Veroneſe, and others, are, as painters, unequalled in their ſeveral manners. The ſame may be ſaid of Corelli, and other Italians, in muſic. At preſent, Italy cannot juſtly boaſt of any paramount genius in the fine arts.

UNIVERSITIES.] Thoſe of Italy are, Rome, Venice, Florence, Mantua, Padua, Parma, Verona, Milan, Pavia, Bologna, Ferrara, Piſa*, Naples, Salerno, and Peruſia.

ANTIQUITIES AND CURIOSITIES, NATURAL AND ARTIFICIAL.] Italy is the native country of all that is ſtupendous, great, or beautiful, either in ancient or modern times. A library might be filled by deſcriptions and delineations of all that is rare and curious in the arts; but the bounds of this work admit not of enlarging upon this ſubject. We can give but a very brief account of thoſe objects that are moſt diſtinguiſhed either for antiquity or excellence.

The amphitheatres claim the firſt rank, as a ſpecies of the moſt ſtriking magnificence: there are at Rome conſiderable remains of that which was erected by Veſpaſian, and finiſhed by Domitian, called the Coliſſeo. Twelve thouſand Jewiſh captives were employed by Veſpaſian in this building; and it is ſaid to have been capable of containing eighty-ſeven thouſand ſpectators ſeated, and twenty thouſand ſtanding. The architecture of this amphitheatre is perfectly light, and its proportions are ſo juſt, that it does not appear near ſo large as it really is. But it has been ſtripped of all its magnficent pillars and ornaments, at various times, and by various enemies. The Goths, and other barbarians, began its deſtruction, and popes and cardinals have endeavoured to complete its ruin. Car-

* Piſa hath 46 profeſſors.

ninal Farneſe, in particular, robbed it of ſome fine remains of its marble cornices, friezes, &c. and, with infinite pains and labour, got away what was practicable of the outſide caſing of marble, which he employed in building the palace of Farneſe. The amphitheatre of Verona, erected by the conſul Flaminius, is thought to be the moſt entire of any in Italy. There are forty-five rows of ſteps carried all round, formed of fine blocks of marble about a foot and a half high each, and above two feet broad. Twenty-two thouſand perſons may be ſeated here at their eaſe, allowing one foot and a half for each perſon. This amphitheatre is quite perfect, and has been lately repaired with the greateſt care, at the expence of the inhabitants. They frequently exhibited in it plays, combats of wild beaſts, and other public ſpectacles. The ruins of theatres and amphitheatres are alſo viſible in other places. The triumphal arches of Veſpaſian, Septimius Severus, and Conſtantine the Great, are ſtill ſtanding, though decayed. The ruins of the baths, palaces, and temples, anſwer all the ideas we can form of the Roman grandeur. The Pantheon, which is at preſent converted into a modern church, and which, from its circular figure, is commonly called the Rotunda, is more entire than any other Roman temple now remaining. There are ſtill left ſeveral of the niches which anciently contained the ſtatues of the Heathen deities. The outſide of the building is of Tivoli free-ſtone, and within, it is encruſted with marble. The roof of the Pantheon is a round dome, without pillars, the diameter of which is a hundred and forty-four feet; and though it has no windows, but only a round aperture in the centre of this dome, it is very light in every part. The pavement conſiſts of large ſquare ſtones and porphyry, ſloping round towards the centre, where the rain-water, falling down through the aperture on the top of the dome, is conveyed away by a proper drain covered with a ſtone full of holes. The colonade in the front, which conſiſts of ſixteen columns of granite, thirty-ſeven feet high, excluſive of the pedeſtals and capitals, each cut out of a ſingle block, and which are of the Corinthian order, can hardly be viewed without aſtoniſhment. The entrance of the church is adorned with columns forty-eight feet high, and the architrave is formed of a ſingle piece of granite. On the left hand, on entering the portico, is a large antique vaſe of Numidian marble; and in the area before the church is a fountain, with an antique baſon of porphyry. The pillars of Trajan and Antonine, the former 175 feet high, and the latter covered with inſtructive ſculptures, are ſtill remaining. A traveller forgets the devaſtations of the northern barbarians, when he ſees the roſtrated column erected by Duillius, in commemoration of the firſt naval victory the Romans gained over the Carthaginians: the ſtatue of the wolf giving ſuck to Romulus and Remus, with viſible marks of the ſtroke of lightning, mentioned by Cicero; the very original braſs plates containing the laws of the twelve tables; and a thouſand other identical antiquities, tranſmitted unhurt to the preſent times; not to mention the infinite variety of medals, ſeals, and engraved ſtones which abound in the cabinets of the curious. Many palaces, all over Italy, are furniſhed with buſts and ſtatues fabricated in the times of the republic and the higher empire.

The Appian, Flaminian, and Æmilian roads, the firſt 200 miles, the ſecond 130, and the third 50 miles in length, are in many places ſtill entire; and magnificent ruins of villas, reſervoirs, bridges, and the like, preſent themſelves all over Italy.

The ſubterraneous conſtructions of Italy are as ſtupendous as thoſe above ground; witneſs the cloacæ, and the catacombs, or repoſitories for dead bodies, in the neighbourhood of Rome and Naples. It is not above thirty years ſince a painter's apprentice diſcovered the ancient city of Pæſtum or Poſidonia, in the kingdom of Naples, ſtill ſtanding; for ſo indifferent are the country people of Italy about objects of antiquity

tiquity, that it was a new diſcovery to the learned. An inexhauſtible mine of curioſities are daily dug out of the ruins of Herculaneum, a city lying between Naples and Veſuvius, which in the reign of Nero was almoſt deſtroyed by an earthquake, and afterwards, in the firſt year of the reign of Titus, anno 79, overwhelmed by a ſtream of the lava of Veſuvius. The melted lava in its courſe filled up the ſtreets in ſome places to the height of ſixty-eight feet above the tops of the latter, and in others one hundred and ten feet. The lava is now of a conſiſtency which renders it extremely difficult to be removed or cleared away: it is compoſed of bituminous particles, mixed with cinders, minerals, metallics, and vitrified ſandy ſubſtances, which altogether form a cloſe and heavy maſs. In the revolution of ſo many ages, the ſpot it ſtood upon was entirely forgotten; but in the year 1713, upon digging in theſe parts, ſomewhat of this unfortunate city was diſcovered, and many antiquities were dug out; but the ſearch was afterwards diſcontinued, till the year 1736, when the king of Naples employed men to dig perpendicularly eighty feet deep, whereupon not only the city made its appearance, but alſo the bed of the river which ran through it. The temple of Jupiter was then brought to light, and the whole of the theatre. In the temple was found a ſtatue of gold, and the inſcription that decorated the great doors of entrance. In the theatre, the fragments of a gilt chariot of bronze, with horſes of the ſame metal, likewiſe gilt: this had been placed over the principal door of entrance. They likewiſe found among the ruins of this city multitudes of ſtatues, buſts, pillars, paintings, manuſcripts, furniture, and various utenſils; and the ſearch is ſtill continued. The ſtreets of the town appear to have been quite ſtraight and regular, and the houſes well built, and much alike; ſome of the rooms paved with moſaic, others with fine marbles, others again with bricks, three feet long and ſix inches thick. It appears that the town was not filled up ſo unexpectedly with the melted lava, as to prevent the greateſt part of the inhabitants from eſcaping with many of their rich effects; for when the excavations were made, there were not more than a dozen ſkeletons found, and but little of gold, ſilver, or precious ſtones. The difficulty of removing the rubbiſh induced his majeſty to fill it up again as he went on, after collecting all the moveables of any conſequence. The theatre alone is left open. It is larger than any in England; and the ends of the beams burnt to coal, are ſtill ſeen ſticking in the walls; but all the ornaments that withſtood the eruption are removed to Portici.

The town of Pompeia was deſtroyed by the ſame eruption of Mount Veſuvius, which occaſioned the deſtruction of Herculaneum; but it was not diſcovered till near forty years after the diſcovery of the latter. One ſtreet, and a few detached buildings of this town, have been cleared; and that with more facility than at Herculaneum, no lava having ever gone over the aſhes which buried Pompeia. The ſtreet is well paved with the ſame kind of ſtone of which the ancient roads are made, and narrow cauſeways are raiſed a foot and a half on each ſide for the conveniency of foot paſſengers. The ſtreet itſelf is not ſo broad as the narroweſt part of the Strand, and is ſuppoſed to have been inhabited by trades-people. The traces of wheels of carriages are to be ſeen on the pavement. The houſes are ſmall, but give an idea of neatneſs and conveniency. The ſtucco on the walls is ſmooth and beautiful, and as hard as marble. Some of the rooms are ornamented with paintings, moſtly ſingle figures, repreſenting ſome animal. They are tolerably well executed, and on a little water being thrown on them, the colours appear ſurpriſingly freſh. Moſt of the houſes are built on the ſame plan, and have one ſmall room from the paſſage, which is conjectured to have been the ſhop, with a window

to

to the ſtreet, and a place which ſeems to have been contrived for ſhewing the goods to the greateſt advantage. In another part of the town is a rectangular building, with a colonade towards the court, ſomething in the ſtyle of the Royal Exchange at London, but ſmaller. This has every appearance of a barrack and guard-room; the pillars are of brick, covered with ſhining ſtucco, elegantly fluted; the ſcrawlings and drawings ſtill viſible on the walls, are ſuch as might be naturally expected on the walls of a guard-room, where ſoldiers are the deſigners, and ſwords the engraving tools. They conſiſt of gladiators fighting, ſome with each other, ſome with wild beaſts; the games of the circus, as chariot races, wreſtling, and the like; a few figures in caricatura, deſigned probably by ſome of the ſoldiers in ridicule of their companions, or perhaps of their officers; and there are many names inſcribed on various parts of the wall. At a conſiderable diſtance from the barrack is a temple of the goddeſs Iſis, the pillars of which are of brick, ſtuccoed like thoſe of the guard-room; but there is nothing very magnificent in the appearance of this edifice. The beſt paintings, hitherto found at Pompeia, are thoſe of this temple; they have been cut out of the walls, and removed to Portici. Few ſkeletons were found in the ſtreets of this town, but a conſiderable number in the houſes. In one apartment (ſays Mr. Sutherland) we ſaw the ſkeletons of ſeventeen poor wretches, who were confined by the ancles in an iron machine. Many other bodies were found, ſome of them in circumſtances which plainly ſhew that they were endeavouring to eſcape, when the eruption overtook them.

With regard to modern curioſities in Italy, they are as bewildered as the remains of antiquity. Rome itſelf contains 300 churches, filled with all that is rare in architecture, painting, and ſculpture. Each city and town of Italy contains a proportionable number. The church of St. Peter, at Rome, is the moſt aſtoniſhing, bold, and regular fabric, that ever perhaps exiſted; and when examined by the rules of art, it may be termed faultleſs. The houſe and chapel of Loretto is rich beyond imagination, notwithſtanding the ridiculous romance that compoſes its hiſtory.

The natural curioſities of Italy, though remarkable, are not ſo numerous as its artificial. Mount Veſuvius, which is five Italian miles diſtant from the city of Naples, and Mount Ætna, in Sicily, are remarkable for emitting fire from their tops. The declivity of Mount Veſuvius towards the ſea, is every where planted with vines and fruit-trees, and it is equally fertile towards the bottom. The circumjacent plain affords a delightful proſpect, and the air is clear and wholeſome. The South and Weſt ſides of the mountain form very different views, being, like the top, covered with black cinders and ſtones. The height of Mount Veſuvius has been computed to be 3900 feet above the ſurface of the ſea. It hath been a volcano beyond the reach of hiſtory or tradition. An animated deſcription of its ravages in the year 79, is given by the younger Pliny, who was a witneſs to what he wrote. From that time to the year 1631, its eruptions were but ſmall and moderate, however then it broke out with accumulated fury, and deſolated miles around. In 1694, was a great eruption, which continued near a month, when burning matter was thrown out with ſo much force, that ſome of it fell at thirty miles diſtance, and a vaſt quantity of melted minerals, mixed with other matter, ran down like a river for three miles, carrying every thing before it which lay in its way. In 1707, when there was another eruption, ſuch quantities of cinders and aſhes were thrown out, that it was dark at Naples at noon-day. In 1767, a violent eruption happened, which is reckoned to be the twenty-ſeventh from that which deſtroyed Herculaneum in the time of Titus. In this laſt eruption the aſhes, or rather ſmall cinders, ſhowered down ſo faſt at Naples, that the people in the ſtreet were obliged to uſe umbrellas, or adopt ſome other expedient, to guard themſelves againſt them.

The tops of the houſes, and the balconies, were covered with theſe cinders; and ſhips at ſea, twenty leagues from Naples, were covered with them, to the great aſtoniſhment of the ſailors. An eruption happened alſo in 1766, and another in 1779, which has been particularly deſcribed by ſir William Hamilton, in the Philoſophical Tranſactions.

This gentleman, the Britiſh envoy at the court of Naples, has been at great pains to inveſtigate the phænomena of this volcano. From the time of his arrival at Naples, in 1764, he paid particular regard to the ſtate of the mountain at all times, and obſerves that the ſmoke is much more conſiderable in bad, than in fair weather; and that the inward exploſions of the mountain are often heard at Naples in bad weather, which is ſix miles diſtant. On looking into the mouth from whence the fire iſſues, in fair weather the ſmoke has ſometimes been ſo little, that he has ſeen a great way down, and obſerved the ſides to be incruſted with ſalts and minerals of various colours, white, green, deep and pale yellow. In bad weather alſo the ſmoke was moiſt, white, and much leſs offenſive than the ſteams which iſſued from the cracks in the ſides of the mountain. The ſigns of an approaching eruption are an increaſe of the ſmoke in fair weather; and after this has continued for ſome time, a puff of black ſmoke is frequently ſeen to ſhoot up in the middle of the white kind to a prodigious height; and theſe puffs are attended with conſiderable exploſions. While Veſuvius was in this ſtate, ſir William aſcended to the top. It was about the beginning of November, and the upper part of the mountain was then covered with ſnow. A little hillock of ſulphur, about ſix feet high, had been thrown up by the mountain, and burned with a blue flame at the top; but while our author was examining this phænomenon, a ſudden and loud report was heard, a column of black ſmoke ſhot up with violence, and was followed by a reddiſh flame. A ſhower of ſtones fell, which obliged him to retire; and he informs us, that it is by no means ſafe to approach too near to the mountain in this ſtate, as ſome gentlemen, whom he mentions, were wounded by the ſtones which were thrown out by an exploſion of this kind. As the eruption proceeds, the ſmoke becomes totally black in the day time, and at night appears like clouds tinged by the ſetting ſun. Afterwards it appears like flame in the night; ſhowers of aſhes are thrown out, earthquakes are produced, and great volleys of red-hot ſtones are diſcharged to an immenſe height in the air. The height and diſtance to which theſe ſtones are thrown is generally in proportion to the magnitude of the volcano which emits them, and hence the exploſions of Veſuvius are for the moſt part leſs terrible than thoſe of Ætna, though this is not always the caſe; and the eruption in 1779 from Veſuvius ſeems to have been as violent as we have an account of in any volcano whatever. The largeſt ſtone thrown out by Veſuvius, whoſe dimenſions have been meaſured, was 12 feet in length, and 45 in circumference. It was projected to the diſtance of a quarter of a mile from the place where it was emitted; but much larger ones have been thrown out from volcanoes of a ſuperior magnitude; and Mr. Brydone was aſſured by the Canon Recupero, that he had ſeen ſtones of immenſe magnitude thrown out from Ætna, to the height of more than 7,000 feet above the top of the mountain, as he calculated from the time they took in falling. Along with theſe dreadful phænomena, the ſmoke which iſſues from the mountain is in a highly electrified ſtate: the ſmall aſhes which the mountain continually throws out, along with the ſtones and cinders, are attracted by the ſmoke, and form with it one vaſt, and, to appearance, denſe column, from whence continual flaſhes of forked, or zig-zag lightning iſſue, ſometimes attended with thunder, and ſometimes not, but equally powerful with the ordinary lightning. This phænomenon has been taken notice of in the accounts of all volcanoes. Pliny

men-

mentions it in his account of the great eruption in 79; it has been obſerved in thoſe of the Icelandic volcanoes; in Ætna; and Sir William Hamilton has more than once ſeen it proceed from the ſmoke of Veſuvius.

The eruption of lava in 1766 took place on the 28th of March, about ſeven at night. The lava began to boil over in one ſtream, but ſoon after divided itſelf into two. It was preceded by a partial earthquake in the neighbourhood of the mountain, occaſioned by a violent exploſion, and a ſhower of red-hot ſtones and cinders were thrown up to a conſiderable height. The lava had the appearance of red-hot and liquid metal, ſuch as the vitrified matter of the glaſs-houſes, on which were large floating cinders half lighted, and rolling one over another down the mountain with great precipitation, forming a moſt beautiful and uncommon caſcade. The colour of the fire was much paler and brighter the firſt night than any of the ſubſequent ones, when it became of a deep red, probably owing, ſays Sir William, to its having been more impregnated with ſulphur at firſt than afterwards. In the day time, unleſs you are very near it, the lava has no appearance of fire, but its courſe is marked by a thick white ſmoke.

The heat of the lava was ſuch, that one could not approach nearer than within ten feet of the ſtream, and of ſuch conſiſtence (though it appeared as liquid as water) as almoſt to reſiſt the impreſſion of a long ſtick, with which the experiment was made. Large ſtones thrown upon it with all his force did not ſink; but, making a ſlight impreſſion, floated on the ſurface, and were carried out of ſight in a ſhort time; for, notwithſtanding the conſiſtency of the matter, it ran with great velocity; not leſs, in our author's opinion, than that of the river Severn at the paſſage near Briſtol. The ſtream was about ten feet wide at its ſource, but ſoon extended itſelf, dividing into three branches, ſo that theſe rivers of fire, communicating their heat to the cinders of former lavas, between one branch and the other, had the appearance at night of a continued ſheet of fire, four miles long, and in ſome places near two in breadth.

Next year there was a much more violent eruption of the mountain; and the frequent emiſſions of red-hot ſtones and cinders, which took place previous to the eruption, had at laſt formed a ſmall mountain within the mouth of the great one, by their continually falling back into the place from whence they were emitted; and from the top of this little mountain the ſmoke iſſued ſo thick, that it ſeemed to have a difficulty in effecting a paſſage; while volleys of great ſtones were every minute thrown up to an immenſe height. At laſt the whole took the ſhape of a huge pine tree, which appearance was taken notice of by Pliny in his account of the eruption in 79. The column aſcended to ſuch an extraordinary height, as, when bent by the wind, to reach the iſland of Caprea, not leſs than 28 miles from Veſuvius. Theſe violent ſymptoms ceaſed on the burſting forth of the lava; after which our author, ſuppoſing the danger was over, went to the mountain to make his obſervations. But while he was employed in this manner, a violent noiſe was heard within the mountain, immediately after which the lava broke out from a new mouth only a quarter of a mile diſtant from where he ſtood, ſpringing up to a conſiderable height in the air, and rolling directly towards him. He was now in extreme danger, the earth ſhaking with ſuch violence as to endanger the fall of ſome of the rocks under which he muſt neceſſarily paſs, while the ſhowers of cinders and pumice-ſtone threatened to overwhelm him; and the clouds of ſmoke produced ſuch an intenſe darkneſs, that he could not ſee which way to go. The ſulphureous ſmell was likewiſe very offenſive, and the exploſions of the mountain were much louder than thunder. In this ſituation he ran three miles before he got out of danger, and afterwards perceived that the lava had actually covered the road by which he retreated, and

that to the depth of no leſs than 60 or 70 feet. The concuſſions of the air were ſo violent upon this occaſion, that windows and doors of houſes, even though locked, were burſt open. There was likewiſe a continual and rumbling ſubterraneous noiſe; which laſted for ſeveral hours, and which ſir William conjectured to have been owing to rain-water lodged in the cavities of the mountain, and meeting with the lava.

The eruption of 1779 was much more violent than that already deſcribed. It commenced in the month of Auguſt, and beſides the uſual ſymptoms of volleys of ſtones, immenſe clouds of ſmoke, &c. a moſt extraordinary ſcene was preſented by the approach of a thunder cloud. No ſooner did this come over the mouth of the inflamed volcano, than the fire from its bowels ſpouted out in a vaſt column to meet that in the cloud; both together producing an appearance not to be paralleled. Next night the lava, which had not hitherto got ſufficient vent, after a moſt aſtoniſhing exploſion, ſpouted up to the height of at leaſt 10,000 feet above the ſummit of the mountain, while the ſmoke around it, emitting continual flaſhes of zig-zag lightning, gave an appearance much more awful and tremendous, though, according to ſir William, leſs beautiful than that of the preceding evening. On this occaſion the town of Ottaiano, upon which the volcanic ſhower was driven by the wind, narrowly eſcaped the fate of Herculaneum and Pompeii of old. The vaſt ſtream of lava indeed did not reach them, otherwiſe it muſt have been irreſiſtible.

To the ſubterraneous fires by which the volcanoes are produced, we muſt undoubtedly aſcribe the frequency of earthquakes in this country. In the year 1783, the ſouthern part of Italy was ruined by one of the moſt violent earthquakes mentioned in hiſtory. It affected alſo the iſland of Sicily, but leſs violently than the country already mentioned. Its extent, however, was much leſs than that of ſeveral others. Sir William Hamilton fixes the centre of its force at the town of Oppido; and from the ſurvey which he made of the country which had ſuffered, computes that its violent effects were confined within a circle whoſe circumference is 220 Italian miles, and its centre the town of Oppido; nor did it produce any ſenſible effects beyond the circumference of a circle whoſe radius was 72 ſuch miles, and Oppido the centre.

The moſt violent ſhock happened about noon on the 5th of February; it came on inſtantaneouſly, without any warning, and the ſhock ſeemed to be directed perpendicularly upwards. The city of Oppido is ſituated on a mountain, ſurrounded by two rivers, in a very broad and deep ravine. Into this there were vaſt pieces of the plain detached, in ſuch a manner as to ſtop the courſe of both the rivers, and to form two great lakes. Part of the rock on which Oppido ſtood was alſo precipitated into the ſame hollow, with ſeveral houſes which had been built upon it. Vaſt tracts of land, with large plantations of vines and olive trees, were thrown from one ſide of the hollow to the other, though the diſtance was more than half a mile; and with one of theſe vaſt pieces of earth a countryman was tranſported along with his field and two oxen, who were dragging a plough, to the diſtance above mentioned, without receiving any hurt. The moſt extraordinary circumſtance, however, was, that a hill about 250 feet high, and 1300 in circumference, was moved from its place near four miles down this ravine, before it ſettled. In ſeveral places alſo the ſoil, though there was no appearance of fire upon it, had run like the lava of a volcano, and overflowed, like it, the neighbouring grounds.

At Terra Nuova, the ground on which the town ſtood was ſplit under it, and many hundred houſes, with the earth on which they ſtood, were in a ſimilar manner thrown about half a mile from the place where they ſtood; and, what is very extraordinary, ſome of the inhabitants were dug out of the ruins alive, and even unhurt.

At

At Caſal Nuova, the princeſs Gerace Grimaldi, with more than 4000 of her ſubjects, were deſtroyed in a moment. Some of the inhabitants, who had been dug alive out of the ruins, declared that they felt their houſes ſuddenly lifted from the foundation, without having had the leaſt previous warning. An inhabitant of the place, who happened to be on an hill which overlooks the town, at that time, turned about on feeling the ſhock, but, inſtead of the town, ſaw only a vaſt cloud of white duſt in the place where it had been. The whole indeed was ſo effectually overthrown, that no veſtige of houſe or ſtreet remained, all being converted into one promiſcuous heap of ruins.

Near Scilla, a mountain fell into the ſea, and raiſed ſuch a vaſt wave, as ſwept away the prince of Scilla, with 2473 of his ſubjects at once. A great part of the town of Meſſina was overthrown. The part of Calabria which was moſt affected by this grievous calamity, was that which is comprehended between 38 and 39 degrees.

Such were ſome of the particulars of this earthquake, remarkable not only for its violence, but for the number and continnance of its ſhocks, which ſcarcely ceaſed for a whole year after its commencement. The number of perſons who loſt their lives was computed not to be leſs than 40,000, and the damage in other reſpects was prodigious.

It has been obſerved by a modern traveller, that though Mount Veſuvius often fills the neighbouring country with terror, yet as few things in nature are ſo abſolutely noxious as not to produce ſome good; even this raging volcano, by its ſulphureous and nitrous manure, and the heat of its ſubterraneous fires, contributes not a little to the uncommon fertility of the country around it, and to the profuſion of fruits and herbage with which it is every where covered. Beſides, it is ſuppoſed that the mountain, being open and active, proves leſs hoſtile to Naples, than it would be, if its erruptions were to ceaſe, and its ſtruggles confined to its own bowels, for then might enſue the moſt fatal ſhocks to the unſtable foundation of the whole diſtrict of Terra di Lavora *.

The plain of Solfaterra, (ſo called from the vaſt quantities of ſulphur, which are continually forced out of the cliffs by ſubterranean fires), which is juſtly conſidered as one of the natural curioſities of Italy, and is ſituated between the lakes Agnano and Puzuoli, is no other than the crater of an ancient volcano, or the hollow from whence its eruptions formerly iſſued. In the plain within the hollow, ſmoke ſtill iſſues from many parts, as well as from many places in the ſides. From theſe places they collect a kind of ſal ammoniac, but in a very aukward manner, by heaping ſtones upon one another to collect the vapours as they riſe. From the ſoil of the plain, ſulphur and alum are extracted; and our author is of opinion, that by careful management this ſpot might produce a very conſiderable revenue, though at preſent it does not yield above 200l. annually. The hollow ſound produced by throwing a heavy ſtone upon the plain of Solfaterra, ſeems to indicate that it is ſupported by a kind of vault; and it is alſo probable, that there is underneath it a pool

* Sir William Hamilton, in his account of the earthquakes in Calabria Ultra, and Sicily, from February 5th, to May 1783, gives ſeveral reaſons for believing that they were occaſioned by the operation of a volcano, the ſeat of which lay deep either under the bottom of the ſea, between Stromboli, and the coaſt of Calabria, or under the parts of the plain towards Oppido and Terra Nuova. He plainly obſerved a gradation in the damage done to the buildings, as alſo in the degree of mortality, in proportion as the countries were more or leſs diſtant from this ſuppoſed centre of the evil. One circumſtance he particularly remarked: if two towns were ſituated at an equal diſtance from this centre, the one on a hill, the other on the plain, or in a bottom, the latter had always ſuffered greatly more by the ſhocks of the earthquakes than the former: a ſufficient proof to him of the cauſe coming from beneath.

of

of water, which boils by the heat of a ſubterraneous fire ſtill deeper. This ſuppoſition is confirmed by the very moiſt ſteam which iſſues from the cracks in the ground, and runs off in great drops from a piece of cold iron preſented to it. On the outſide, and towards the lake Agnano, water guſhes out of the rock ſo hot as to raiſe the quickſilver in Fahrenheit's thermometer to the boiling point. After a great deal of rain, however, the heat of this fountain is much leſs. When you hold your ear near the rocks from whence the water iſſues, you hear a horrid boiling noiſe, which ſeems to proceed from the huge cauldron that may be ſuppoſed to be under the Solfaterra.

Mount Ætna is 10,954 feet in height, and has been computed to be 60 miles in circumference. It ſtands ſeparate from all other mountains, its figure is circular, and it terminates in a cone. The lower parts of it are very fruitful in corn and ſugar-canes; the middle abounds with woods, olive-trees, and vines; and the upper part is almoſt the whole year covered with ſnow. Its fiery eruptions have always rendered it famous: in one of theſe, which happened in 1669, fourteen towns and villages were deſtroyed, and there have been ſeveral terrible eruptions ſince that time. There is generally an earthquake before any great eruption. In 1693, the port-town of Catania was overturned, and 18,000 people periſhed.

The grotto del Cane is remarkable for its poiſonous ſteams, and is ſo called from their killing dogs that enter it, if forced to remain there; and doubtleſs, it would have the ſame effect on man, or any other animal, whoſe head was held near to the ground. This noxious vapour is no other than fixed air, which is produced probably from the efferveſcence of an acid and alkaline mixture; and this being heavier than common air, is near the earth, and fatal to thoſe animals whoſe heads are ſo low as to breathe it. Scorpions, vipers, and ſerpents, are ſaid to be common in Apulia.

Among the natural curioſities of Italy, thoſe vaſt bodies of ſnow and ice, which are called the Glaciers of Savoy, deſerve to be particularly mentioned. There are five glaciers, which incloſe the vale of Chamouny, and are ſeparated by wild foreſts, corn-fields, and rich meadows; ſo that immenſe tracts of ice are blended with the higheſt cultivation, and perpetually ſucceed to each other, in the moſt ſingular and ſtriking viciſſitude. All theſe ſeveral vallies of ice, which lie chiefly in the hollows of the mountains, and are ſome leagues in length, unite together at the foot of Mont Blanc; the higheſt mountain in Europe, and probably of the ancient world: but for a fuller deſcription of this celebrated mountain, and of the glaciers that ſurround it, we refer our readers to the account of Switzerland.

STATES OF ITALY, CONSTITUTION, AND CHIEF CITIES.

Thus far, of Italy in general; but as the Italian ſtates are not, like the republics of Holland, or Swizerland, or the empire of Germany, cemented by a political confederacy, to which every member is accountable (for every Italian ſtate has diſtinct forms of government, trade, and intereſts) I ſhall be obliged to take a ſeparate view of each, to aſſiſt the reader in forming an idea of the whole.

The duke of SAVOY, or, as he is now ſtyled, king of SARDINIA *, taking his royal title from that iſland, is a powerful prince in Italy, of which he is called

* Victor-Amadeus-Maria, king of Sardinia and duke of Savoy, born June 26, 1726; married, April 12, 1750, to Maria-Antonietta-Ferdinanda, infanta of Spain; aſcended the throne on the death of his father, February 20, 1773. Their iſſue are,

1. Charles-Emanuel-Ferdinard-Maria, prince of Piedmont, born May 24, 1751.
2. Maria-Joſepha-Louiſa, born September 2, 1753; married to the count de Provence.

the

the Janus, or keeper, againſt the French. His capital, Turin, is ſtrongly fortified, and one of the fineſt cities in Europe; but the country of Savoy is mountainous and barren, and its natives are forced to ſeek their bread all over the world. They are eſteemed a ſimple but very honeſt people. The king is ſo abſolute, that his revenues conſiſt of what he pleaſes to raiſe upon his ſubjects. His ordinary income, beſides his own family provinces, cannot be leſs than 500,000l. ſterling, out of which he maintains 15,000 men in time of peace. During a war, he can bring into the field 40,000 men. The aggrandizement of his preſent Sardinian majeſty is chiefly owing to England, to whom, by his ſituation, he was eſteemed a natural ally, for the preſervation of the balance of power in Europe. Savoy is celebrated for its breed of mules; and Piedmont raiſes large quantities of ſilk. Its wines and *liqueurs* are likewiſe highly eſteemed.

The MILANESE, belonging to the houſe of Auſtria, is a conſiderable ſtate, and formerly gave law to all Italy, when under the government of its own dukes. The fertility and beauty of the country are almoſt incredible. Milan, the capital, and its citadel, is very ſtrong, and furniſhed with a magnificent cathedral in the Gothic taſte, which contains a very rich treaſury, conſiſting chiefly of eccleſiaſtical furniture, compoſed of gold, ſilver, and precious ſtones. The revenue of the duchy is above 300,000l. annually, which is ſuppoſed to maintain an army of 30,000 men. The natives are fond of literary and political aſſemblies. With all its natural and acquired advantages, the natives of Milan make but few exports; ſo that its revenue, unleſs the court of Vienna ſhould purſue ſome other ſyſtem of improvement, cannot be much bettered. The duchy of Mantua, being now incorporated with it, the province is to take the name of Auſtrian Lombardy.

The republic of GENOA is vaſtly degenerated from its ancient power and opulence, though the ſpirit of trade ſtill continues among its nobility and citizens. Genoa is a ſuperb city, and contains ſeveral magnificent palaces, particularly thoſe of Doria *, and Durazzo. The inhabitants of diſtinction dreſs in black, in a plain if not an uncouth manner, perhaps to ſave expences. Their chief manufactures are velvets, damaſks, gold and ſilver tiſſues, and paper. The city of Genoa contains about 150,000 inhabitants (but ſome writers greatly diminiſh that number), among whom are many rich trading individuals. Its maritime power is dwindled down to ſix gallies. The chief ſafety of this republic conſiſts in the jealouſy of other European powers, becauſe to any one of them it would be a moſt valuable acquiſition. The common people are wretched beyond expreſſion, as is the ſoil of its territory. Near the ſea ſome parts are tolerably well cultivated. The government of Genoa is ariſtocratical, being veſted in the nobility: the chief perſon is called the Doge, or Duke; to which dignity no perſon is promoted till he is fifty years of age. Every two years a new doge is choſen, and the former is incapable,

3. Maria-Thereſa, born January 31, 1756; married to the count D'Artois.
4. Anna-Maria-Carolina, born December 17, 1757.
5. Victor-Emanuel Cajetan duc d'Aoſte, born July 24, 1759.
6. Maurice-Joſeph-Maria, duc de Montſerrat, born September 12, 1762.
7. Maria-Charlotta, born January 17, 1764.
8. Charles-Joſeph, duc de Genevois, born April 6, 1765.
9. Joſeph-Benedict, comte de Maurienne, born October 5, 1766.

* Andrew Doria, the head of this family, famous for his military exploits, and the deliverer of Genoa, was born in the territory of Genoa, in the year 1468: he was offered the ſovereignty of the ſtate, but refuſed it, and gave to the people that republican form of government which ſtill ſubſiſts: he lived to the age of 93, the refuge and friend of the unfortunate.

during five years, of holding the ſame poſt again. The doge gives audience to ambaſſadors; all orders of government are iſſued in his name, and he is allowed a body-guard of two hundred Germans.

VENICE is one of the moſt celebrated republics in the world, on account both of its conſtitution and former power. It is compoſed of ſeveral fine provinces on the continent of Italy, ſome iſlands in the Adriatic, and part of Dalmatia. The city of Venice is ſeated on 72 iſlands at the bottom of the north end of the Adriatic ſea, and is ſeparated from the continent by a marſhy lake of five Italian miles in breadth, too ſhallow for large ſhips to navigate, which forms its principal ſtrength. Venice preſerves the veſtiges of its ancient magnificence, but is in every reſpect degenerated, except in the paſſion which its inhabitants ſtill retain for muſic and mummery during their carnivals. They ſeem to have loſt their ancient taſte for painting and architecture, and to be returning to Gothiciſm. They have had however lately ſome ſpirited differences with the court of Rome, and ſeem to be diſpoſed to throw off their obedience to its head. As to the conſtitution of the republic, it was originally democratical, the magiſtrates being choſen by a general aſſembly of the people, and ſo continued for one hundred and fifty years; but various changes afterwards took place; doges, or dukes, were appointed, who were inveſted with great power, which they often groſſly abuſed, and ſome of them were aſſaſſinated by the people. By degrees a body of hereditary legiſlative nobility was formed; progreſſive encroachments were made on the rights of the people, and a complete ariſtocracy was at length eſtabliſhed upon the ruins of the ancient popular government. The nobility are divided into ſix claſſes, amounting in the whole to 2500, each of whom, when twenty-five years of age, has a right to be a member of the grand council. Theſe elect a doge or chief magiſtrate, in a peculiar manner, by ballot, which is managed by gold and ſilver balls. The doge is inveſted with great ſtate, and with emblems of ſupreme authority, but has very little power, and is not permitted to ſtir from the city without the permiſſion of the grand-council. The government and laws are managed by different councils of the nobles.

The college, otherwiſe called the ſeigniory, is the ſupreme cabinet council of the ſtate, and alſo the repreſentative of the republic. This court gives audience, and delivers anſwers, in the name of the republic, to foreign ambaſſadors, to the deputies of towns and provinces, and to the generals of the army. It alſo receives all requeſts and memorials on ſtate affairs, ſummons the ſenate at pleaſure, and arranges the buſineſs to be diſcuſſed in that aſſembly. The council of ten takes cognizance of ſtate crimes, and has the power of ſeizing accuſed perſons, examining them in priſon, and taking their anſwers in writing, with the evidence againſt them. But the tribunal of ſtate inquiſitors, which conſiſts only of three members, and which is in the higheſt degree deſpotic in its manner of proceeding, has the power of deciding without appeal, on the lives of every citizen belonging to the Venetian ſtate; the higheſt of the nobility, even the doge himſelf, not being excepted. To theſe three inquiſitors is given the right of employing ſpies, and iſſuing orders to ſeize all perſons whoſe words or actions they think reprehenſible, and afterwards trying them, and ordering them to be executed, when they think proper. They have keys to every apartment of the ducal palace, and can, whenever they pleaſe, penetrate into the very bed-chamber of the doge, open his cabinet, and examine his papers; and of courſe, they may command acceſs to the houſe of every individual in the ſtate. They continue in office only one year, but are not reſponſible afterwards for their conduct whilſt they were in authority. So much diſtruſt and

jealouſy are diſplayed by this government, that the noble Venetians are afraid of having any intercourſe with foreign ambaſſadors, or with foreigners who viſit them.

All the orders of Venetian nobility are dreſſed in black gowns, large wigs, and caps which they hold in their hands. The ceremony of the doge's marrying the Adriatic once a year, by dropping into it a ring, from his bucentaur or ſtate-barge, attended by thoſe of all the nobility, is the moſt ſuperb exhibition in Venice, but not comparable for magnificence to a lord-mayor's ſhew. The inhabitants of Venice are ſaid to amount to 200,000. The grandeur and convenience of the city, particularly the public palaces, the treaſury, and the arſenal, are beyond expreſſion. Over the ſeveral canals of Venice, are laid near 500 bridges, the greateſt part of which are ſtone. The Venetians ſtill have ſome manufactures in ſcarlet cloth, gold and ſilver ſtuffs, and above all, fine looking-glaſſes, which bring in a conſiderable revenue to the owners; that of the ſtate annually is ſaid to amount to 8,000,000 of Italian florins, each valued at twenty pence of our money. Out of this are defrayed the expences of the ſtate and the pay of the army, which in time of peace conſiſts of 16,000 regular troops (always commanded by a foreign general), and 10,000 militia. They keep up a ſmall fleet for curbing the inſolences of the piratical ſtates of Barbary, and they have among them ſome orders of knighthood, the chief of which are thoſe of the *Stola d'oro*, ſo called from the robe they wear, which is conferred only on the firſt quality, and the military order of St. Mark, of which in the proper place.

In eccleſiaſtical matters the Venetians have two patriarchs; the authority of one reaches over all the provinces, but neither of them have much power; and both of them are choſen by the ſenate; and all religious ſects, even the Mahometan and Pagan, excepting Proteſtants, are here tolerated in the free exerciſe of their religion.

The Venetians are a lively, ingenious people, extravagantly fond of public amuſements, with an uncommon reliſh for humour. They are in general tall and well made; and many fine manly countenances are met with in the ſtreets of Venice, reſembling thoſe tranſmitted to us by the pencils of Paul Veroneſe and Titian. The women are of a fine ſtyle of countenance, with expreſſive features, and are of an eaſy addreſs. The common people are remarkably ſober, obliging to ſtrangers, and gentle in their intercourſe with each other. As it is very much the cuſtom to go about in maſks at Venice, and great liberties are taken during the time of the carnival, an idea has prevailed, that there is much more licentiouſneſs of manners here than in other places: but this opinion ſeems to have been carried too far. Great numbers of ſtrangers viſit Venice during the carnival, and eight or nine theatres are then open.

The dominions of Venice conſiſt of a conſiderable part of Dalmatia, of four towns in Greece, and of the iſlands of Corfu, Pachſu, Antipachſu, Santa Maura, Curzolari, Val di Compare, Cephalonia, and Zante. The Venetian territories in Italy contain the duchy of Venice, the Paduaneſe, the peninſula of Rovigo, the Veroneſe, the territories of Vicenza and Breſcia, the diſtricts of Bergamo, Cremaſco, and the Marca Trevigiana, with part of the country of Friuli. The ſubjects of the Venetian republic are not oppreſſed: the ſenate has found, that mild treatment and good uſage are the beſt policy, and more effectual than armies in preventing revolts.

The principal city of TUSCANY is Florence, which is now poſſeſſed by a younger branch of the houſe of Auſtria, after being long held by the illuſtrious

houſe of Medicis, who made their capital the cabinet of all that is valuable, rich, and maſterly in architecture, literature, and the arts, eſpecially thoſe of painting and ſculpture. It is thought to contain above 70,000 inhabitants. The beauties and riches of the grand duke's palaces have been often deſcribed; but all deſcription falls ſhort of their contents, ſo that in every reſpect it is reckoned, after Rome, the ſecond city in Italy. The celebrated Venus of Medicis, which, take it all in all, is thought to be the ſtandard of taſte in female beauty and proportion, ſtands in a room called the Tribunal. The inſcription on its baſe mentions its being made by Cleomenes, an Athenian, the ſon of Apollodorus. It is of white marble, and ſurrounded by other maſter-pieces of ſculpture, ſome of which are ſaid to be the works of Praxiteles, and other Greek maſters. Every corner of this beautiful city, which ſtands between mountains covered with olive-trees, vineyards, and delightful villas, and divided by the Arno, is full of wonders in the arts of painting, ſtatuary, and architecture. It is a place of ſome ſtrength, and contains an archbiſhop's ſee, and an univerſity. The inhabitants boaſt of the improvements they have made in the Italian tongue, by means of their Academia della Cruſca; and ſeveral other academies are now eſtabliſhed at Florence. Though the Florentines affect great ſtate, yet their nobility and gentry drive a retail trade in wine, which they ſell from their cellar-windows, and ſometimes they even hang out a broken flaſk, as a ſign where it may be bought. They deal, beſides wine and fruits, in gold and ſilver ſtuffs. Since the acceſſion of the archduke Peter Leopold, brother to the late emperor, to this duchy, a great reformation has been introduced, both into the government and manufactures, to the great benefit of the finances. It is thought that the great-duchy of Tuſcany could bring to the field, upon occaſion, 30,000 fighting men, and that its preſent revenues are above 500,000l. a year. The other principal towns of Tuſcany, are Piſa, Leghorn, and Sienna; the firſt and laſt are much decayed; but Leghorn is a very handſome city, built in the modern taſte, and with ſuch regularity that both gates are ſeen from the market-place. It is well fortified, having two forts towards the ſea, beſides the citadel. The ramparts afford a very agreeable proſpect of the ſea, and of many villas on the land ſide. Here all nations, and even the Mahometans, have free acceſs, and may ſettle. The number of inhabitants is computed at 40,000, among whom are ſaid to be 20,000 Jews, who live in a particular quarter of the city, have a handſome ſynagogue, and, though ſubject to very heavy impoſts, are in a thriving condition, the greateſt part of the commerce of this city going through their hands.

The inhabitants of LUCCA, a ſmall free commonwealth, lying on the Tuſcan ſea, in a delightful plain, are the moſt induſtrious of all the Italians. They have improved their country into a beautiful garden, ſo that though they do not exceed 120,000, their annual revenue amounts to 80,000l. ſterling. Their capital is Lucca, which contains about 40,000 inhabitants, who deal in mercery goods, wines, and fruits, eſpecially olives. This republic is under the protection of the emperor. The vicinity of the grand-duchy of Tuſcany keeps the people of Lucca conſtantly on their guard, in order to preſerve their freedom; for in ſuch a ſituation, an univerſal concord and harmony can alone enable them to tranſmit to poſterity the bleſſings of their darling Liberty, whoſe name they bear on their arms, and whoſe image is not only impreſſed on their coin, but alſo on the city gates, and all their public buildings. It has been remarked that the inhabitants of this little republic, being in poſſeſſion of freedom, appear with an air of cheerfulneſs and plenty, ſeldom to be found among thoſe of the neighbouring countries.

The republic of St MARINO is here mentioned as a political curioſity. Its territories conſiſt of a high craggy mountain, with a few eminences at the bottom, and the inhabitants boaſt of having preſerved their liberties, as a republic, for 1300 years. It is under the protection of the pope; and the inoffenſive manners of the inhabitants, who are not above 5000 in all, with the ſmall value of their territory, have preſerved its conſtitution.

The duchy and city of PARMA, together with the duchies of Placentia and Guaſtalla, now form one of the moſt flouriſhing ſtates in Italy. The ſoils of Parma and Placentia are fertile, and produce the richeſt fruits and paſturages, and contain conſiderable manufactures of ſilk. Parma is a biſhop's ſee, and has an univerſity; and ſome of its magnificent churches are painted by the famous Correggio. The preſent duke of Parma is a prince of the houſe of Bourbon, and ſon to the late Don Philip, the king of Spain's younger brother. This country was, ſome years paſt, the ſeat of a bloody war between the Auſtrians, Spaniards, and Neapolitans. The cities of Parma and Placentia are enriched with magnificent buildings; but his catholic majeſty, on his acceſſion to the throne of Naples, is ſaid to have carried with him thither the moſt remarkable pictures and moveable curioſities. The duke's court is deemed the politeſt of any in Italy, and his revenues are ſaid to exceed 100,000l. ſterling a year, a ſum rather exaggerated. The city of Parma is ſuppoſed to contain 50,000 inhabitants.

MANTUA, formerly a rich duchy, bringing to its own dukes 500,000 crowns a year, is now much decayed. The government of it is annexed to that of the Milaneſe, in poſſeſſion of the houſe of Auſtria. The capital is one of the ſtrongeſt fortreſſes in Europe, and contains about 16,000 inhabitants, who boaſt that Virgil was a native of their country. By an order of the emperor in 1785, this duchy is incorporated with that of Milan into one province, and is now to be called Auſtrian Lombardy.

The duchy of MODENA (formerly Mutina) is ſtill governed by its own duke, the head of the houſe of Eſte, from whom the family of Brunſwic deſcended. The duke is abſolute within his own dominions, which are fruitful. The duke is under the protection of the houſe of Auſtria, and is a vaſſal of the empire. His dominions are far from being flouriſhing, though very improveable, they having been alternately waſted by the late belligerent powers in Italy.

The ECCLESIASTICAL STATE, which contains Rome, formerly the capital of the world, lies about the middle of Italy. The bad effects of Popiſh tyranny, ſuperſtition, and oppreſſion, are here too viſible. Thoſe ſpots which, under the maſters of the world, were formed into ſo many terreſtrial paradiſes, ſurrounding their magnificent villas, and enriched with all the luxuries that art and nature could produce, are now converted into noxious peſtilential marſhes and quagmires; and the Campagna di Roma, that formerly contained a million of inhabitants, affords a ſcanty ſubſiſtence to a thouſand miſerable peaſants. Notwithſtanding this, the pope is a conſiderable temporal prince, and ſome ſuppoſe that his annual revenue amounts to above a million ſterling: other authors rate it much higher. When we ſpeak comparatively, the ſum of a million ſterling is too high a revenue to ariſe from his territorial poſſeſſions; his accidental income, which formerly far exceeded that ſum, is now diminiſhed, by the ſuppreſſion of the order of Jeſuits, from whom he drew vaſt ſupplies, and the meaſures taken by the popiſh powers

for preventing the great eccleſiaſtical iſſues of money to Rome. According to the beſt and lateſt accounts, the taxes upon the proviſions and lodgings furniſhed to foreigners, who ſpend immenſe ſums in viſiting his dominions, form now the greateſt part of his accidental revenues. From what has happened within theſe thirty years paſt, there is reaſon to believe that the pope's territories will be reduced to the limits which the houſes of Auſtria and Bourbon ſhall pleaſe to preſcribe. Some late popes have aimed at the improvement of their territories, but their labours have had no great effect. The diſcouragement of induſtry and agriculture ſcems to be interwoven in the conſtitution of the papal government, which is veſted in proud, lazy eccleſiaſtics. Their indolence, and the fanaticiſm of their worſhip, infect their inferiors, who prefer begging, and impoſing upon ſtrangers, to induſtry and agriculture, eſpecially as they muſt hold their properties by the precarious tenure of the will of their ſuperiors. In ſhort, the inhabitants of many parts of the eccleſiaſtical ſtate muſt periſh through their ſloth, did not the fertility of their ſoil ſpontaneouſly afford them ſubſiſtence. However, it may be proper to make one general remark on Italy, which is, that the poverty and ſloth of the lower ranks do not take their riſe from their natural diſpoſitions.

This obſervation is not confined to the papal dominions. The Italian princes affected to be the patrons of all the curious and coſtly arts, and each vied with the other to make his court the repoſitory of taſte and magnificence. This paſſion diſabled them from laying out money upon works of public utility, or from encouraging the induſtry, or relieving the wants of their ſubjects; and its miſerable effects are ſeen in many parts of Italy. The ſplendour and furniture of churches in the papal dominions are inexpreſſible, and partly account for the miſery of the ſubjects.

Modern Rome contains, within its circuit, a vaſt number of gardens and vineyards. I have already touched upon its curioſities and antiquities. It ſtands upon the Tiber, an inconſiderable river when compared to the Thames, and navigated by ſmall boats, barges, and lighters. The caſtle of St. Angelo, though its chief fortreſs, would be found to be a place of ſmall ſtrength, were it regularly beſieged. The city ſtanding upon the ruins of ancient Rome lies much higher, ſo that it is difficult to diſtinguiſh the ſeven hills on which it was originally built. When we conſider Rome as it now ſtands, there is ſome reaſon to believe that it equals ancient Rome itſelf in the magnificence of its ſtructures; nothing in the old city, when miſtreſs of the world, could come in competition with St. Peter's church; and perhaps many other churches in Rome exceed in beauty of architecture, and value of materials, utenſils, and furniture, her ancient temples. The inhabitants of Rome, in 1714, amounted to 143,000. If we conſider that the ſpirit of travelling is much increaſed ſince that time, we cannot reaſonably ſuppoſe them to be diminiſhed at preſent.

There is nothing very particular in the pope's temporal government at Rome. Like other princes, he has his guards, or ſbirri, who take care of the peace of the city, under proper magiſtrates, both eccleſiaſtical and civil. The Campagna di Roma, which contains Rome, is under the inſpection of his holineſs. In the other provinces he governs by legates and vice-legates. He monopoliſes all the corn in his territories, and has always a ſufficient number of troops on foot, under proper officers, to keep the provinces in awe. Pope Clement XIV. wiſely diſclaimed all intention of oppoſing any arms to the neighbouring princes, but thoſe of prayers and ſupplications.

We have under the head of religion mentioned the eccleſiaſtical government of the papacy. As to the rota, and other ſubordinate chambers of this complicated

jurisdiction, they are too numerous to be even named, and do not fall properly under our plan. Under a government so constituted, it cannot be supposed that the commercial exports of the ecclesiastical state are of much value.

Next to Rome, Bologna, the capital of the Bolognese, is the most considerable city in the ecclesiastical state, and an exception to the indolence of its other inhabitants. The government is under a legate *à latere*, who is always a cardinal, and changed every three years. The people here live more sociably and comfortably than the other subjects of the pope; and perhaps their distance of near two hundred miles from Rome, has contributed to their ease. The rest of the ecclesiastical state contains many towns celebrated in ancient history, and even now exhibiting the most striking vestiges of their flourishing state about the beginning of the sixteenth century; but they are at present little better than desolate, though here and there a luxurious magnificent church and convent may be found, which is supported by the toil and sweat of the neighbouring peasants.

The grandeur of FERRARA, RAVENNA, RIMINI, URBINO (the native city of the celebrated painter Raphael), ANCONA, and many other states and cities, illustrious in former times, are now to be seen only in their ruins and ancient history. LORETTO, on the other hand, an obscure spot never thought or heard of in times of antiquity, is now the admiration of the world for the riches it contains, and the prodigious resort to it of pilgrims, and other devotees, from a notion industriously propagated by the Romish clergy, that the house in which the Virgin Mary is said to have dwelt at Nazareth, was carried thither through the air by angels, attended with many other miraculous circumstances, such as that all the trees, on the arrival of the sacred mansion, bowed with the profoundest reverence; and great care is taken to prevent any bits of the materials of this house from being carried to other places, and exposed as relics, to the prejudice of Loretto. The image of the Virgin Mary, and of the divine Infant, are of cedar, placed in a small apartment, separated from the others by a silver ballustrade, which has a gate of the same metal. It is impossible to describe the gold chains, the rings and jewels, emeralds, pearls, and rubies, wherewith this image is or was loaded; and the angels of solid gold, who are here placed on every side, are equally enriched with the most precious diamonds. To the superstition of Roman catholic princes, Loretto is indebted for this mass of treasure. It has been matter of surprize, that no attempt has yet been made by the Turks or Barbary states upon Loretto, especially as it is badly fortified, and stands near the sea; but it is now generally supposed, that the real treasure is withdrawn, and metals and stones of less value substituted in its place.

The king of NAPLES and SICILY, or, as he is more properly called, the King of the Two Sicilies (the name of Sicily being common to both), is possessed of the largest dominions of any prince in Italy, as they comprehend the ancient countries of Samnium, Campania, Apulia, Magna Græcia, and the island of Sicily, containing in all about 32,000 square miles. They are bounded on all sides by the Mediterranean and the Adriatic, except on the north-east, where Naples terminates on the ecclesiastical state. The Apennine runs through it from North to South, and its surface is estimated at 3500 square leagues. The air is hot, and its soil fruitful of every thing produced in Italy. The wines, called Vino Græco and Lachryma Christi, are excellent. The city of Naples, its capital, which is extremely superb, and adorned with all the profusion of art and riches, and its neighbourhood, would be one of the most delightful places in Europe to live in, were it not for their vicinity to the volcano of Vesuvius, which sometimes threatens the city with

with deſtruction, and the ſoil being peſtered with inſects and reptiles, ſome of which are venomous. The houſes in Naples are inadequate to the population, but in general are five or ſix ſtories in height, and flat at the top: on which are placed numbers of flower vaſes, or fruit-trees, in boxes of earth, producing a very gay and agreeable effect. Some of the ſtreets are very handſome: no ſtreet in Rome equals in beauty the Strada di Toledo at Naples; and ſtill leſs can any of them be compared with thoſe beautiful ſtreets that lie open to the bay. The richeſt and moſt commodious convents in Europe, both for male and female votaries, are in this city; the moſt fertile and beautiful hills of the environs are covered with them; and a ſmall part of their revenue is ſpent in feeding the poor, the monks diſtributing bread and ſoup to a certain number every day before the doors of the convents.

Though above two-thirds of the property of the kingdom are in the hands of the eccleſiaſtics, the proteſtants live here with great freedom; and though his Neapolitan majeſty preſents to his holineſs every year a palfrey, as an acknowledgment that his kingdom is a fief of the pontificate, yet no inquiſition is eſtabliſhed in Naples. The preſent revenues of that king amount to above 750,000l. ſterling a year; but it is more than probable that, by the new eſtabliſhed police purſued by the princes of the houſe of Bourbon, of abridging the influence and revenues of the clergy, his Neapolitan majeſty's annual income will conſiderably exceed a million ſterling. The exports of the kingdom are legumes, hemp, aniſeeds, wool, oil, wine, cheeſe, fiſh, honey, wax, manna, ſaffron, gums, capers, macaroni, ſalt, pot-aſh, flax, cotton, ſilk, and divers manufactures. The king has a numerous but generally poor nobility, conſiſting of princes, dukes, marquiſſes, and other high-ſounding titles; and his capital, by far the moſt populous in Italy, contains, at leaſt 350,000 inhabitants. Among theſe are about 30,000 lazaroni, or blackguards, the greater part of whom have no dwelling-houſes, but ſleep every night in ſummer under porticos, piazzas, or any kind of ſhelter they can find, and in the winter or rainy time of the year, which laſts ſeveral weeks, the rain falling by pailfuls, they reſort to the caves under Capo di Monte, where they ſleep in crowds like ſheep in a penfold. Thoſe of them who have wives and children, live in the ſuburbs of Naples, near Pauſilippo, in huts, or in caverns or chambers dug out of that mountain. Some gain a livelihood by fiſhing, others by carrying burthens to and from the ſhipping; many walk about the ſtreets ready to run on errands, or to perform any labour in their power for a very ſmall recompence. As they do not meet with conſtant employment, their wages are not ſufficient for their maintenance; but the deficiency is in ſome degree ſupplied by the ſoup and bread which are diſtributed at the doors of the convents.

But though there is ſo much poverty among the lower people, there is a great appearance of wealth among the great. The Neapolitan nobility are exceſſively fond of ſhow and ſplendour. This appears in the brilliancy of their equipages, the number of their attendants, the richneſs of their dreſs, and the grandeur of their titles. According to Mr. Swinburne, luxury of late hath advanced with gigantic ſtrides in Naples. Forty years ago, the Neapolitan ladies wore nets and ribbands on their heads, as the Spaniſh women do to this day, and not twenty of them were poſſeſſed of a cap: but hair plainly dreſt is a mode now confined to the loweſt order of inhabitants, and all diſtinction of dreſs between the wife of a nobleman and that of a citizen is entirely laid aſide. Expence and extravagance are here in the extreme. The great families are oppreſſed with a load of debt; the working part of the community always ſpend the price of their labour before they receive it; and the citizen is reduced to great parſimony, and almoſt penury, in

his houſe-keeping, in order to anſwer theſe demands of external ſhew: ſhort commons at home whet his appetite when invited out to dinner; and it is ſcarcely credible what quantities of victuals he will devour. The nobility in general are well ſerved, and live comfortably; but it is not their cuſtom to admit ſtrangers to their table; the number of poor dependents who dine with them, and cannot properly be introduced into company, prevents the great families from inviting foreigners: another reaſon may be, their ſleeping after dinner in ſo regular a manner as to undreſs and go to bed: no ladies or gentlemen finiſh their toilet till the afternoon, on which account they dine at twelve or one o'clock. The great officers of ſtate, and miniſters, live in a different manner, and keep ſumptuous tables, to which ſtrangers and others have frequent invitations.

Through every ſpot of the kingdom of Naples, the traveller may be ſaid to tread on claſſic ground, and no country preſents the eye with more beautiful proſpects. There are ſtill traces of the memorable town of Cannæ; as fragments of altars, cornices, gates, walls, vaults, and under-ground granaries: and the ſcene of action between Hannibal and the Romans is ſtill marked out to poſterity by the name of *pezzo di ſangue*, "field of blood." Taranto, a city that was once the rival of Rome, is now remarkable for little elſe than its fiſheries. Sorento is a city placed on the brink of ſteep rocks, that over-hang the bay, and, of all the places in the kingdom, hath the moſt delightful climate. Nola, once famous for its amphitheatres, and as the place where Auguſtus Cæſar died, is now hardly worth obſervation.

Brunduſium, now Brindiſi, was the great ſupplier of oyſters for the Roman tables. It hath a fine port, but the buildings are poor and ruinous; and the fall of the Grecian empire under the Turks reduced it to a ſtate of inactivity and poverty, from which it hath not yet emerged. Except Rome, no city can boaſt of ſo many remains of ancient ſculpture as Benevento; here the arch of Trajan, one of the moſt magnificent remains of Roman grandeur, erected in the year 114, is ſtill in tolerable preſervation. Reggio hath nothing remarkable but a Gothic cathedral. The town was deſtroyed by an earthquake before the Marſian war, and rebuilt by Julius Cæſar; part of the wall ſtill remains, and was much damaged by the earthquake in 1783, but not deſtroyed: only 126 loſt their lives out of 16,000 inhabitants. The ancient city of Oppido was entirely ruined by the earthquake of the 5th of February, and the greateſt force thereof ſeems to have been exerted near that ſpot, and at Caſal Nuova, and Terra Nuova. From Tropea to Squillace, moſt of the towns and villages were either totally or in part overthrown, and many of the inhabitants buried in the ruins. To aſcertain the extent of the ravages, ſir William Hamilton, who ſurveyed it, gives the following deſcription: "If on a map of Italy, and with your compaſſes on the ſcale of Italian miles, you were to meaſure off 22, and then fixing your central point in the city of Oppido (which appeared to me to be the ſpot on which the earthquake had exerted its greateſt force) form a circle (the radii of which will be, as I juſt ſaid, 22 miles) you will then include all the towns and villages that have been utterly ruined, and the ſpots where the greateſt mortality has happened, and where there have been the moſt viſible alterations on the face of the earth. Then extend your compaſs on the ſame ſcale to 72 miles, preſerving the ſame centre, and form another circle, you will include the whole of the country that has any mark of having been affected by the earthquake."

The iſland of SICILY, once the granary of the world for corn, ſtill continues to ſupply Naples, and other parts, with that commodity: but its cultivation, and conſequently fertility, is greatly diminiſhed. Its vegetable, mineral, and animal productions, are pretty much the ſame with thoſe of Italy.

Both

Both the ancients and moderns have maintained, that Sicily was originally joined to the continent of Italy, but gradually ſeparated from it by the encroachments of the ſea, and the ſhocks of earthquakes, ſo as to become a perfect iſland. The climate of Sicily is ſo hot, that even in the beginning of January the ſhade is refreſhing; and chilling winds are only felt a few days in March, and then a ſmall fire is ſufficient to baniſh the cold. The only appearance of winter is found towards the ſummit of Mount Ætna, where ſnow falls, which the inhabitants have a contrivance for preſerving. Churches, convents, and religious foundations, are extremely numerous here: the buildings are handſome, and the revenues conſiderable. If this iſland were better cultivated, and its government more equitable, it would in many reſpects be a delightful place of reſidence. There are a great number of fine remains of antiquity here. Some parts of this iſland are remarkable for the beauty of the female inhabitants. Palermo, the capital of Sicily, is computed to contain 120,000 inhabitants. The two principal ſtreets, and which croſs each other, are very fine. This is ſaid to be the only town in all Italy which is lighted at night at the public expence. It carries on a conſiderable trade. The dead at Pelermo are never buried; but their bodies are carried to the Capuchin convent, where, after the funeral ſervice is performed, they are dried in a ſtove, heated by a compoſition of lime, which makes the ſkin adhere to the bones. They are then placed erect in niches, and faſtened to the wall by the back or neck. A piece of coarſe drab is thrown over the ſhoulders and round the waiſt, and their hands are tied together, holding a piece of paper with their epitaph, which is ſimply their names, age, and when they died. "We of courſe" (ſays Mr. Sutherland) "viſited this famous repoſitory, and it is natural to ſuppoſe that ſo many corpſes would impreſs one with reverence and awe. It was near duſk when we arrived at the convent. We paſſed the chapel, where one of the order had juſt finiſhed ſaying veſpers, by the gloomy glimmering of a dying lamp. We were then conducted through a garden, where the yew, the cypreſs, and the barren orange, obſcured the remaining light, and where melancholy ſilence is only diſturbed by the hollow murmuring of a feeble water-fall. All theſe circumſtances tuned our minds for the diſmal ſcene we were going to behold, but we had ſtill to deſcend a flight of ſteps impervious to the ſun; and theſe at laſt conveyed us to the dreary manſion of the dead. But notwithſtanding the chilling ſcene we had gone through; notwithſtanding our being in the midſt of more than a thouſand lifeleſs bodies, we could not help ſmiling. For the phyſiognomies of the deceaſed are ſo ludicrouſly mutilated, and their muſcles ſo contracted and diſtorted in the drying, that no French mimick could equal their grimaces. Moſt of the corpſes have loſt the lower part of the noſe—their necks are generally a little twiſted—their mouths drawn awry in one direction—their noſes in another—their eyes ſunk and pointed different ways—one ear perhaps turned up—the other drawn down. The relations of the deceaſed are bound to ſend two wax tapers every year for the uſe of the convent; in default of which the corpſe is taken down and thrown into the charnel houſe. Women are dried as well as the men, but are not expoſed. Nobles are ſhut up in cheſts.

Meſſina was formerly a place of conſiderable trade, and before the earthquake in 1783, was a large and well-built city, containing many churches and convents, generally elegant ſtructures. By that earthquake a great part of the lower diſtrict of the city and of the port was deſtroyed, and conſiderable damage done to the lofty uniform buildings called the *Palazzata*, in the ſhape of a creſcent, which extended along the water ſide, for above two thouſand yards, adorned with pilaſters and pediments, and a grand eſplanade open to the ſea, which at once formed a noble pier,

and

and a delightful public walk, flanked by a fort at each end. The houſes were built with great taſte, all four ſtories high, and nearly alike. Of this beautiful and magnificent range, only the outſide ſhell remains; the reſt, with all the town, except one or two of the ſtrongeſt churches, was entirely deſtroyed; but the force of the earthquake, though violent, was nothing at Meſſina or Reggio, to what it was in the plain; for of 30,000, the ſuppoſed population, of the city, only 700 are ſaid to have periſhed *.

The iſland of SARDINIA, which gives a royal title to the duke of Savoy, lies about 150 miles ſouth by weſt of Leghorn, and hath ſeven cities or towns. Its capital, Cagliari, is an univerſity, an archbiſhoprick, and the ſeat of the viceroy, containing about 15,000 inhabitants. It is thought that his Sardinian majeſty's revenues, from this iſland, do not exceed 5000l. ſterling a year, though it yields plenty of corn and wine, and has a coral fiſhery. Its air is bad, from its marſhes and high mountains on the North, and therefore was a place of exile for the Romans. It was formerly annexed to the crown of Spain, but at the peace of Utrecht it was given to the emperor, and in 1719 to the houſe of Savoy.

The iſland of CORSICA lies oppoſite to the Genoeſe continent, between the gulf of Genoa and the iſland of Sardinia, and is better known by the noble ſtand which the inhabitants made for their liberty againſt their Genoeſe tyrants, and afterwards, though unſucceſsfully, againſt the baſe and ungenerous meaſures of the French to enſlave them, than from any advantages they enjoy from nature or ſituation. Though mountainous and woody, it produces corn, wine, figs, almonds, cheſnuts, olives, and other fruits. It has alſo ſome cattle and horſes, and is plentifully ſupplied, both by ſea and rivers, with fiſh. The inhabitants are ſaid to amount to 120,000. Baſtia, the capital, is a place of ſome ſtrength; though other towns of the iſland, that were in poſſeſſion of the malecontents, appear to have been but poorly fortified.

CAPRI, the ancient CAPREA, is an iſland to which Auguſtus Cæſar often came for his health and recreation, and which Tiberius made a ſcene of the moſt infamous pleaſures. It lies three Italian miles from that part of the main land which projects fartheſt into the ſea. It extends four miles in length from Eaſt to Weſt, and about one in breadth. The weſtern part is, for about two miles, a continued rock, vaſtly high, and inacceſſible next the ſea; yet Ano Capri, the largeſt town of the iſland, is ſituated here; and in this part are ſeveral places covered with a very fruitful ſoil. The eaſtern end of the iſland alſo riſes up in precipices that are nearly as high, though not quite ſo long as the weſtern. Between the rocky mountains, at each end, is a ſlip of lower ground that runs acroſs the iſland, and is one of the pleaſanteſt ſpots that can eaſily be conceived. It is covered with myrtles, olives, almonds, oranges, figs, vineyards, and corn-fields, which look extremely freſh and beautiful, and afford a moſt delightful little landſcape, when viewed from the tops of the neighbouring mountains. Here is ſituated the town of Caprea, two or three convents, and the biſhop's palace. In the midſt of this fertile tract riſes a hill, which in the reign of Tiberius was probably covered with buildings, ſome re-

* Ferdinand IV. king of the Two Sicilies, third ſon of the preſent king of Spain, was born in 1751, and married, 1768, to the archduchеſs Maria-Caroline-Louiſa, ſiſter to the emperor of Germany, born in 1752; by whom he hath iſſue,

1. Maria-Thereſa-Caroline, born June 6, 1772.
2. Louiſa-Maria-Amelia, born July 28, 1773.
3. Mary-Anne-Joſepha, born 1775.
4. Francis-Janvier, born 1777.
5. Mary-Chriſtina, born 1779.

mains of which are ſtill to be ſeen. But the moſt conſiderable ruins are at the very extremity of the eaſtern promontory; from which there is a very noble proſpect; on one ſide of it the ſea extends farther than the eye can reach; juſt oppoſite is the green promontory of Sarentum, and on the other ſide the bay of Naples.

ISCHIA, and ſome other iſlands on the coaſts of Naples and Italy, have nothing to diſtinguiſh them but the ruins of their antiquities, and their being now beautiful ſummer retreats for their owners. ELBA hath been renowned for its mines from a period beyond the reach of hiſtory. Virgil and Ariſtotle mention it. Its ſituation is about ten miles S. W. from Tuſcany, and 80 miles in circumference, containing near 7000 inhabitants; it is divided between the king of Naples, to whom Porto Longone belongs, and the great duke of Tuſcany, who is maſter of Porto Ferraio, and the prince of Piombino. The fruits and wine of the iſland are very good, and the tunnery, fiſhery, and ſalt, produce a good revenue.

I ſhall here mention the iſle of MALTA, though it is not properly ranked with the Italian iſlands. It was formerly called Melita, and is ſituated in 15 degrees E. lon. and 45 degrees N. lat. 60 miles ſouth of Cape Paſſaro in Sicily, and is of an oval figure, 20 miles long, and 12 broad. Its air is clear, but exceſſively hot: the whole iſland ſeems to be a white rock covered with a thin ſurface of earth, which is however amazingly productive of excellent fruits and vegetables, and garden-ſtuff of all kinds. This iſland, or rather rock, was given to the knights of St. John of Jeruſalem, in 1530, by the emperor Charles V. when the Turks drove them out of Rhodes, under the tender of one falcon yearly to the viceroy of Sicily, and to acknowledge the kings of Spain and Sicily for their protectors: they are now known by the diſtinction of the Knights of Malta. They are under vows of celibacy and chaſtity; but they keep the former much better than the latter. They have conſiderable poſſeſſions in the Roman catholic countries on the continent, and are under the government of a grand-maſter, who is elected for life. The lord-prior of the order was formerly accounted the prime baron in England. The knights are in number 1000: 500 are to reſide on the iſland, the remainder are in their ſeminaries in other countries, but at any ſummons are to make a perſonal appearance. They had a ſeminary in England, till it was ſuppreſſed by Henry VIII. They are conſidered as the bulwark of Chriſtendom againſt the Turks on that ſide. They wear the badge of the order, a gold croſs of eight points enamelled white, pendent to a black watered ribband at the breaſt, and the badge is decorated ſo as to diſtinguiſh the country of the knight. They are generally of noble families, or ſuch as can prove their gentility for ſix deſcents, and are ranked according to their nations. There are 16 called the great croſſes, out of whom the officers of the order, as the marſhal, admiral, chancellor, &c. are choſen. When the great-maſter dies, they ſuffer no veſſel to go out of the iſland till another is choſen, to prevent the pope from interfering in the election. Out of the 16 great croſſes, the great-maſter is elected, whoſe title is, "The moſt illuſtrious, and moſt reverend prince, the lord friar A. B. great maſter of the hoſpital of St. John of Jeruſalem, prince of Malta, and Gaza." All the knights are ſworn to defend the church, to obey their ſuperiors, and to live on the revenues of their order only. Not only their chief town Valetta, or Malta, and its harbour, but their whole iſland, is ſo well fortified, as to be deemed impregnable. On the 8th of September, there is an annual proceſſion at Malta, in memory of the Turks raiſing the ſiege on that day, 1563, after four months aſſault, leaving their artillery, &c. behind.

ARMS AND ORDERS.] The chief armorial bearings in Italy are as follow: The pope, as ſovereign prince over the land of the church, bears for his eſcutcheon, gules, conſiſting of a long headcape, or ſurmounted with a croſs, pearled and garniſhed with three royal crowns, together with the two keys of St. Peter, placed in ſaltier. The arms of Tuſcany, or, five roundles, gules, two, two, and one, and one in chief, azure, charged with three fleurs-de-lis, or. Thoſe of Venice, azure, a lion winged, ſejant, or, holding under one of his paws a book covered, argent. Thoſe of Genoa, argent, a croſs, gules, with a crown cloſed for the iſland of Corſica; and for ſupporters, two griffins, or. The arms of Naples, are, azure, ſemée of fleurs-de-lis, or, with a label of five points, gules.

The order of "*St. Januarius*" was inſtituted by the preſent king of Spain, when king of Naples, in July, 1738. The number of knights is limited to 30. They muſt prove the nobility of their deſcent for four centuries, and are to be addreſſed by the title of excellency. The badge of the order is a croſs of eight points, enamelled white, edged with gold, and in the centre is a biſhop holding in his left hand a book and croſier, and below his waiſt is this motto, "*In ſanguine foedus*;" on the reverſe is a book, on which are two red pillars ſurmounted with palms, enamelled in their proper colours. The knights wear the badge of the order pendent to a broad red ribband, worn ſcarfwiſe, and a gold ſtar of eight points with fleurs-de-lis at the angles embroidered on their outer garment. St. Januarius the celebrated patron of Naples, is the patron of the order. The order of "*Annunciation*," was inſtituted in the year 1355, by Amadeus V. count of Savoy, in memory of Amadeus I. who bravely defended Rhodes againſt the Turks, and with thoſe arms which are now borne by the duke of Savoy, gules, a croſs argent. It at firſt conſiſted of 15 knights, but afterwards the number was enlarged. At preſent their number is ſmall, limited by the will of the prince, ſovereign of the order. It is counted amongſt the moſt reſpectable orders in Europe; the knight muſt not only be of a noble family, but alſo a papiſt. The colour of the order is compoſed of golden roſes, enamelled red and white, with lovers' knots of the ſame. To the end of the middle roſe is pendent the badge, which conſiſts of three chains of gold, encircling an oval, and diſpoſed in knots. On the oval is repreſented the ſalutation, as deſcribed by St. Luke, enamelled in proper colours. In the year 1572, Emanuel Philibert, duke of Savoy, inſtituted the order of "*St. Lazarus*" and revived and united the obſolete order of St. Maurice to it; which was confirmed by the pope on the condition of maintaining two gallies againſt the Turks. The badge of the order is a croſs pomette, white, upon a croſs of eight points, green, and is worn pendent to a green ribband.

In the year 828, it is pretended, that the body of St. Mark was removed from Alexandria, in Egypt, to Venice. Accordingly this ſaint has been taken for their tutelar ſaint and guardian, and his picture was formerly painted on their enſigns and banners. When the order of "*St. Mark*," was firſt inſtituted, is uncertain, but it is an order conferred by the doge, or duke of Venice, and the ſenate, on perſons of eminent quality, or who have done ſome ſignal ſervice to the republic. The knights when made, if preſent, are dubbed with a ſword on their ſhoulders, the duke ſaying, "*Eſto miles fidelis*," (be a faithful ſoldier;) abſent perſons are inveſted by letters patent; but their title, "Knights of St. Mark," is merely honorary: they have no revenue, nor are they under any obligations by vows as other orders. The badge is a medal of gold, pendent to a gold chain: on one ſide is the emblem of St. Mark, a winged lion ſejant with elevated wings, holding in his ſiniſter paw a drawn ſword erect, and in his right an open book with the words, "*Pax tibi*,

Marce Evangeliſta meus;" on the reverſe, the portrait of the reigning doge, with the image of St. Mark, delivering a ſtandard to him.

About the year 1460, Frederick III. emperor of Germany, inſtituted the order of "*St. George*" and dedicated it to St. George, tutelar ſaint and patron of Genoa. The doge is perpetual grand maſter; the badge a plain croſs, enamelled, gules, pendent to a gold chain, and worn about their necks. The croſs is alſo embroidered on their cloaks. In the year 1561, Coſmo of Medicis, firſt grand duke of Tuſcany, inſtituted the order of "*St. Stephen*," in memory of a victory, which ſecured to him the ſovereignty of that province. He and his ſucceſſors were to be grand maſters. The knights are allowed to marry, and their two principal conventual houſes are at Piſa. It is a religious as well as military order, but the knights of Juſtice and the Eccleſiaſtics, are obliged to make proof of nobility of four deſcents. They wear a red croſs with right angles, orled or, on the left ſide of their habit, and on their mantle.

The order of the "*Holy Ghoſt*," was founded with their chief ſeat, the hoſpital of that name in Rome, by pope Innocent III. about the year 1198. They have a grand maſter, and profeſs obedience, chaſtity, and poverty. Their revenue is eſtimated at 24,000 ducats daily, with which they entertain ſtrangers, relievo the poor, train up deſerted children, &c. Their enſign is a white patriarchial croſs with twelve points ſewed on their breaſt on the left ſide of a black mantle. The order of "*Jeſus Chriſt*," inſtituted by pope John XXII. was reformed and improved by pope Paul V. The reigning pope was to be always ſovereign of it, and it was deſigned as a mark of diſtinction for the pope's Italian nobility, but on account of its frequent proſtitution, it hath fallen into diſcredit. The order of the "*Golden Spur*" is ſaid, to have been inſtituted by pope Pius IV. 1559, and to have been connected with the order of Pius, inſtituted a year afterwards; but the badges were different. The knights of Pius are ſuppreſſed, and all that the knights of the Golden Spur have preſerved to themſelves, is the title of counts of the ſacred palace of the Lateran. The badge is a ſtar of eight points, white; and between the two bottom points, a ſpur, gold.

HISTORY.] Italy was probably firſt peopled from Greece, as we have mentioned in the Introduction, to which we refer the reader for the ancient hiſtory of this country, which, for many ages, gave law to the then known world under the Romans.

The empire of Charlemagne, who died in 814, ſoon experienced the ſame fate with that of Alexander. Under his ſucceſſors it was in a ſhort time entirely diſmembered. His ſon, Lewis le Debonair, ſucceeded to his dominions in France and Germany, while Bernard, the grandſon of Charlemagne, reigned over Italy and the adjacent iſlands. But Bernard having loſt his life by the cruelty of his uncle, againſt whom he had levied war, and Lewis himſelf dying in 840, his dominions were divided among his ſons, Lothario, Lewis, and Charles. Lothario, with the title of emperor, retained Italy, Provence, and the fertile countries ſituated between the Saone and the Rhine; Lewis had Germany; and France fell to the ſhare of Charles, the youngeſt of the three brothers. Shortly after this, Italy was ravaged by different contending tyrants; but in 964, Otho the Great re-united Italy to the Imperial dominions. Italy afterwards ſuffered much by the conteſts between the popes and the emperors; it was harraſſed by wars and internal diviſions; and at length various principalities and ſtates were erected under different heads.

Savoy and Piedmont, in time, fell to the lot of the counts of Maurienne, the anceſtors of his preſent Sardinian majeſty, whoſe father became king of Sardinia, in virtue of the quadruple alliance concluded in 1718.

The great duchy of Tuſcany belonged to the emperors of Germany, who governed it by deputies to the year 1240, when the famous diſtinctions of the Guelphs, who were the partizans of the pope, and Gibellines, who were in the emperor's intereſt, took place. The popes then perſuaded the imperial governors in Tuſcany, to put themſelves under the protection of the church; but the Florentines, in a ſhort time, formed themſelves into a free commonwealth, and bravely defended their liberties againſt both parties by turns. Faction at laſt ſhook their freedom; and the family of Medici, long before they were declared either princes or dukes, in fact governed Florence, though the rights and privileges of the people ſeemed ſtill to exiſt. The Medici, particularly Coſmo, who was deſervedly called the Father of his Country, being in the ſecret, ſhared with the Venetians in the immenſe profits of the Eaſt India trade, before the diſcoveries made by the Portugueſe. His revenue, in ready money, which exceeded that of any ſovereign prince in Europe, enabled his ſucceſſors to riſe to ſovereign power; and pope Pius V. gave one of his deſcendants, Coſmo, (the great patron of the arts), the title of Great Duke of Tuſcany in 1570, which continued in his family to the death of Gaſton de Medicis in 1737, without iſſue. The great duchy was then claimed by the emperor Charles VI. as a fief to the empire, and given to his ſon-in-law, the duke of Lorrain, father of the late emperor, in lieu of the duchy of Lorrain, which was ceded to France by treaty. Leopold, his ſecond ſon, king of Hungary, is now grand duke, and Tuſcany has aſſumed a new face. Leghorn, which belongs to him, carries on a great trade; and ſeveral ſhips of very conſiderable force are now ſtationed on the Tuſcan coaſts, to prevent the depredations of the Barbary rovers and pirates.

No country has undergone greater viciſſitudes of government than Naples or Sicily, chiefly owing to the inconſtancy of the natives, which ſeems to be incorporated with their air. Chriſtians and Saracens by turns conquered it. The Normans under Tancred drove out the Saracens, and by their connections with the Greeks, eſtabliſhed there, while the reſt of Europe was plunged in monkiſh ignorance, a moſt reſpectable monarchy flouriſhing in arts and arms. About the year 1166, the popes being then all-powerful in Europe, their intrigues broke the ſucceſſion of Tancred's line, and Naples and Scicily at laſt came into the poſſeſſion of the French; and the houſe of Anjou, with ſome interruptions, and tragical revolutions, held it till the Spaniards drove them out in 1504, and it was then annexed to the crown of Spain.

The government of the Spaniards under the Auſtrian line was ſo oppreſſive, that it gave riſe to the famous revolt, headed by Maſſaniello, a young fiſherman, without ſhoes or ſtockings, in the year 1647. His ſucceſs was ſo ſurpriſing, that he obliged the haughty Spaniards to aboliſh the oppreſſive taxes, and to confirm the liberties of the people. Before theſe could be re-eſtabliſhed perfectly, he turned delirious, through his continual agitations of body and mind, and he was put to death at the head of his own mob. Naples and Sicily continued with the Spaniards till the year 1700, when the extinction of the Auſtrian line opened a new ſource of litigation. In 1706, the archduke Charles, afterwards emperor, took poſſeſſion of the kingdom. By virtue of various treaties, which had introduced Don Carlos, the king of Spain's ſon, to the poſſeſſion of Parma and Placentia, a new war broke

out

out in 1733, between the houſes of Auſtria and Bourbon, about the poſſeſſion of Naples; and Don Carlos was received into the capital, where he was proclaimed king of both Sicilies: this was followed by a very bloody campaign, which terminated in a peace between France and the emperor, to which the courts of Madrid and Naples at firſt demurred, but afterwards acceded in 1736, and Don Carlos remained king of Naples. Upon his acceſſion to the crown of Spain, in 1759, it being found, by the inſpection of phyſicians, and other trials, that his eldeſt ſon was by nature incapacitated for reigning, and his ſecond ſon being heir apparent to the Spaniſh monarchy, he reſigned the crown of Naples to his third ſon, Ferdinand IV. who married an archducheſs of Auſtria.

The Milaneſe, the faireſt portion of Italy, went through ſeveral hands; the Viſcontis were ſucceeded by the Galeazzos and the Sforzas, but fell at laſt into the hands of the emperor Charles V. about the year 1525, who gave it to his ſon Philip II. king of Spain. It remained with that crown till the French were driven out of Italy, in 1706, by the Imperialiſts. They were diſpoſſeſſed of it in 1743; but by the emperor's ceſſion of Naples and Sicily to the preſent king of Spain, it returned to the houſe of Auſtria, who governs it by a viceroy.

The duchy of Mantua was formerly governed by the family of Gonzaga, who adhering to France, the territory was forfeited, as a fief of the empire to the houſe of Auſtria, which now poſſeſſes it, the laſt duke dying without male iſſue; but Guaſtalla was ſeparated from it in 1748, and made part of the duchy of Parma.

The firſt duke of Parma was natural ſon to pope Paul III. the duchy having been annexed to the holy ſee, in 1545, by pope Julius II. The deſcendants of the houſe of Farneſe terminated in the late queen dowager of Spain, whoſe ſon, his preſent catholic majeſty, obtained that duchy; and his nephew now holds it, with the duchy of Placentia.

The Venetians were formerly the moſt formidable maritime power in Europe. In 1194, they conquered Conſtantinople itſelf, and held it for ſome time, together with great part of the continent of Europe and Aſia. They were more than once brought to the brink of deſtruction, by the confederacies formed againſt them among the other powers of Europe, eſpecially by the league of Cambray, in 1509, but were as often ſaved by the diſunion of the confederates. The diſcovery of a paſſage to India, by the Cape of Good Hope, gave the firſt blow to their greatneſs, as it loſt them the Indian trade. By degrees the Turks took from them their moſt valuable poſſeſſions on the continent; and ſo late as the year 1715, they loſt the Morea.

The Genoeſe, for ſome time, diſputed the empire of the Mediterranean ſea with the Venetians, but were ſeldom or never able to maintain their own independency by land, being generally protected, and ſometimes ſubjected, by the French and Imperialiſts. Their doge, or firſt magiſtrate, uſed to be crowned king of Corſica, though it does not clearly appear by what title: that iſland is now ceded to the French by the Genoeſe. The ſucceſsful effort they made in driving the victorious Auſtrians out of their capital, during the war which was terminated by the peace of Aix-la-Chapelle in 1748, has few parallels in hiſtory, and ſerves to ſhew the effects of deſpair under oppreſſion. At preſent they are poſſeſſed of revenue barely ſufficient to preſerve the appearance of a ſovereign ſtate.

The

The hiſtory of the Papacy is connected with that of Chriſtendom itſelf. The moſt ſolid foundations for its temporal power were laid by the famous Matilda, counteſs of Tuſcany, andheir eſs to the greateſt part of Italy, who bequeathed a large portion of her dominions to the famous pope Gregory VII. (who, before his acceſſion in 1073, was ſo well known by the name of Hildebrand.) It is not to be expected that I am here to enter into a detail of the ignorance of the laity, and the other cauſes that operated to the aggrandizement of the papacy, previous to the Reformation. Even ſince that era the ſtate of Europe has been ſuch, that the popes have had more than once great weight in its public affairs, chiefly through the weakneſs and bigotry of temporal princes, who ſeem now to be recovering from their religious deluſions.

The papal power is evidently now at a low ebb. The order of Jeſus, who were not improperly called its Janizaries, has been exterminated in France, Spain, Naples, and Portugal; and is but juſt tolerated in other popiſh countries. The pope himſelf is treated by Roman catholic princes with very little more ceremony than is due to him as biſhop of Rome, and poſſeſſed of a temporal principality. This humiliation, it is reaſonable to believe, will terminate in a total ſeparation from the holy ſee of all its foreign emoluments, which even, ſince the beginning of the preſent century, were immenſe, and the reducing his holineſs to the exerciſe of his eccleſiaſtical functions as firſt biſhop of Chriſtendom.

John Angelo Braſchi, born in 1717, was elected pope in 1775, and took upon him the name of Pius VI.

SOIL, AIR, SEASONS, AND WATER.] Nature has lavished upon the inhabitants of Turkey, all her blessings in those four particulars. The soil, though unimproved, is luxuriant beyond description. The air is salubrious, and friendly to the imagination, unless when it is corrupted from the neighbouring countries, or through the indolence or uncleanness of the Turkish manner of living. The seasons are here regular, and the climate has been celebrated from the remotest antiquity. The Turks are invited to frequent bathings, by the purity and wholesomeness of the water all over their dominions.

MOUNTAINS.] These are the most celebrated in the world, and at the same time the most fruitful. Mount Athos lies on a peninsula, running into the Egean Sea; the Mounts Pindus and Olympus, celebrated in Grecian fables, separate Thessaly from Epirus. Parnassus, in Achaia, so famous for being consecrated to the Muses, is well known. Mount Haemus is likewise often mentioned by the poets; but most of the other mountains have changed their names; witness the mountains Shua, Witoska, Staras, Plamina, and many others. Even the most celebrated mountains abovementioned, have modern names imposed upon them by the Turks, their new masters, and others in their neighbourhood.

geographers part of Turkey in Europe, is not under the Turkish government. It is an aristocratical state, formed nearly after the model of that of Venice. The government is in the hands of the nobility; and the chief of the republic, who is styled rector, is changed every month, and elected by scrutiny or lot. During his short administration, he lives in the palace, and wears a ducal habit. As the Ragusans are unable to protect themselves, they make use of their wealth to procure them protectors, the chief of whom, for many years, was the grand signior. They endeavoured also to keep upon good terms with the Venetians, and other neighbouring states. But in the year 1783, a dispute arose between them and the king of Naples, respecting a claim of right to his appointing a commander of the Ragusan troops. It was terminated by the republic's putting itself under that king's protection. The city of Ragusa is not above two miles in circumference, but it is well built, and contains some handsome edifices. The ancient Epidaurus was situated not far from this city. The Ragusans profess the Romish religion, but Greeks, Armenians, and Turks, are tolerated. Almost all the citizens are traders, and they keep so watchful an eye over their freedom, that the gates of the city of Ragusa are allowed to be open only a few hours in the day. The language chiefly in use among the Ragusans is the Sclavonian, but the greatest part of them speak the Italian. They have many trading vessels, and are carriers in the Mediterranean, like the Dutch, bring constantly at peace with the piratical states of Barbary. The city of Gravosa, and Stagno, 30 miles N. E. of Ragusa, are within the territories of this republic, and there are also five small islands belonging to it, the principal of which is Melida.

SEAS.] The Euxine or Black Sea; the Palus Mæotis, or Sea of Aſoph; the Sea of Marmora, which ſeparates Europe from Aſia; the Archipelago; the Ionian Sea, and the Levant, are ſo many evidences that Turkey in Europe, particularly that part of it where Conſtantinople ſtands, of all other countries, had the beſt claim to be miſtreſs of the world.

STRAITS.] Thoſe of the Helleſpont and Boſphorus are joined to the ſea of Marmora, and are remarkable in modern as well as ancient hiſtory. The former, viz. the Helleſpont, or Dardanelles, is only two miles and an half in breadth, and is famous for the paſſage of Xerxes over it when about to invade Greece, and of Alexander in his expedition againſt Aſia. Xerxes, for the more eaſy tranſportation of his numerous forces, laid a bridge of boats over it. It is alſo celebrated by the poets in the ſtory of two lovers, Hero and Leander, of whom the latter ſwam acroſs it to his miſtreſs; but one night was unhappily drowned. The Boſphorus is about the ſame breadth, but has not been ſo much celebrated by hiſtorians and poets.

RIVERS.] The Danube, the Save, the Neiſter, the Neiper, and the Don, are the beſt known rivers in this country; though many others have been celebrated by poets and hiſtorians.

LAKES.] Theſe are not extremely remarkable, nor are they mentioned with any great applauſe, either by the ancients or moderns. The Lago di Scutari, lies in Albania. It communicates with the Lago di Plave and the Lago di Holti. The Stymphalus, ſo famous for its harpies and ravenous birds, lies in the Morea; and Peneus, from its qualities, is thought to be the lake from which the Styx iſſues, conceived by the ancients to be the paſſage into hell.

METALS AND MINERALS.] Turkey in Europe contains a variety of all ſorts of mines, and its marbles are eſteemed the fineſt in the world.

VEGETABLE PRODUCTIONS.] Theſe are excellent all over the European Turkey, eſpecially when aſſiſted by the ſmalleſt degree of induſtry. Beſides pot and garden herbs of almoſt every kind, this country produces in great abundance and perfection, oranges, lemons, citrons, pomegranates, grapes of an uncommon ſweetneſs, excellent figs, almonds, olives, and cotton. Beſides theſe, many drugs, not common in other parts of Europe, are produced here.

ANIMALS.] The Theſſalian or Turkiſh horſes, are excellent both for their beauty and ſervice. The black cattle are large, eſpecially in Greece. The goats are a moſt valuable part of the animal creation to the inhabitants, for the nutrition they afford, both of milk and fleſh. The large eagles which abound in the neighbourhood of Badadagi, furniſh the beſt feathers for arrows for the Turkiſh archers, and they ſell at an uncommon price. Partridges are very plentiful in Greece; as are all other kinds of fowls and quadrupeds all over Turkey in Europe; but the Turks and Mahometans in general are not very fond of animal food.

ANTIQUITIES AND CURIOSITIES, NATURAL AND ARTIFICIAL.] Almoſt every ſpot of ground, every river and every fountain of Greece preſents the traveller with celebrated antiquities. On the iſthmus of Corinth, the ruins of Neptune's temple, and the theatre where the Iſthmian games were celebrated, are ſtill viſible. Athens, which contains at preſent above 10,000 inhabitants, is a fruitful ſource of the moſt magnificent ruins in the world, a minute account of which would exceed the limits of this work; but it will be proper to mention ſome of the moſt conſiderable. Among the antiquities of this once ſuperb city, are the remains of the temple of Minerva, built of white marble, and encompaſſed with forty-ſix fluted columns of the Doric order, forty-two feet high, and ſeven feet and a half in circumference: the architrave is adorned with baſſo-relievos, admirably executed, repreſenting the wars of the Athenians. To the ſouth-eaſt of the Acropolis, a citadel

which

which defends the town, are ſeventeen beautiful columns of the Corinthian order, thought to be the remains of the emperor Adrian's palace. They are of fine white marble, about fifty feet high, including the capitals and baſes. Juſt without the city ſtands the temple of Theſeus, ſurrounded with fluted columns of the Doric order: the portico at the weſt end is adorned with the battle of the Centaurs, in baſſo-relievo; that at the eaſt end appears to be a continuation of the ſame hiſtory; and on the outſide of the porticos, in the ſpaces between the triglyphs, are repreſented the exploits of Theſeus. On the ſouth-weſt of Athens is a beautiful ſtructure, commonly called the Lantern of Demoſthenes: this is a ſmall round edifice of white marble, the roof of which is ſupported by ſix fluted columns of the Corinthian order, nine feet and an half high; in the ſpace between the columns are pannels of marble; and the whole is covered with a cupola, carved with the reſemblance of ſcales; and on the frieze are beautifully repreſented in relievo the labours of Hercules. Here are alſo to be ſeen the temple of the Winds; the remains of the theatre of Bacchus; of the magnificent aqueduct of the emperor Adrian; and of the temples of Jupiter Olympius, and Auguſtus. The remains of the temple of the oracle of Apollo are ſtill viſible at Caſtri, on the ſouth ſide of mount Parnaſſus; and the marble ſteps that deſcend to pleaſant running water, ſuppoſed to be the renowned Caſtalian ſpring, with the niches for ſtatues in the rock, are ſtill diſcernible. The famous cave of Trophonius is ſtill a natural curioſity in Livadia, the old Bœotia.

Mount Athos, which has been already mentioned, and which is commonly called Monto Santo, lies on a peninſula which extends into the Ægean ſea, and is indeed a chain of mountains, reaching the whole length of the peninſula, ſeven Turkiſh miles in length and three in breadth: but it is only a ſingle mountain that is properly called Athos. This is ſo lofty, that on the top, as the ancients relate, the ſun-riſing was beheld four hours ſooner than by the inhabitants of the coaſt; and, at the ſolſtice, its ſhade reached into the Agora or market-place of Myrina, a town in Lemnos, which iſland was diſtant eighty-ſeven miles eaſtward. There were twenty-two convents on mount Athos, beſides a great number of cells and grottos, with the habitations of no leſs than ſix thouſand monks and hermits; though the proper hermits, who live in grottos, are not above twenty; the other monks are anchorites, or ſuch as live in cells. Theſe Greek monks, who call themſelves the inhabitants of the holy mountain, are ſo far from being a ſet of ſlothful people, that, beſides their daily offices of religion, they cultivate the olive and vineyards, are carpenters, maſons, ſtone-cutters, cloth-workers, taylors, &c. They alſo live a very auſtere life; their uſual food, inſtead of fleſh, being vegetables, dried olives, figs, and other fruit; onions, cheeſe, and on certain days, Lent excepted, fiſh. Their faſts are many and ſevere; which, with the healthfulneſs of the air, renders longevity ſo common there, that many of them live above an hundred years. It appears from Ælian, that anciently the mountain in general, and particularly the ſummit, was accounted very healthy, and conducive to long-life: whence the inhabitants were called Macrobii, or long-lived. We are farther informed by Philoſtratus, in the life of Apollonius, that numbers of philoſophers uſed to retire to this mountain, for the better contemplation of the heavens, and of nature; and after their example the monks doubtleſs built their cells.

CITIES.] Conſtantinople, the capital of this great empire, is ſituated on the European ſide of the Boſphorus. It was built upon the ruins of the ancient Byzantium, by the Roman emperor Conſtantine the Great, as a more inviting ſituation than Rome for the ſeat of empire. It became afterwards the capital of the Greek empire, and having eſcaped the deſtructive rage of the barbarous nations,

was the greateſt as well as the moſt beautiful city in Europe, and the only one during the Gothic ages, in which there remained any image of the ancient elegance in manners and arts. While it remained in the poſſeſſion of the Greek emperors, it was the only mart in Europe for the commodities of the Eaſt Indies. It derived great advantages from its being the rendezvous of the cruſaders; and being then in the meridian of its glory, the European writers, in the ages of the cruſades, ſpeak of it with aſtoniſhment. "O what a vaſt city is Conſtantinople! (exclaims one when he firſt beheld it), and how beautiful! How many monaſteries are there in it, and how many palaces built with wonderful art! How many manufacturers are there in the city amazing to behold! It would be aſtoniſhing to relate how it abounds with all the good things, with gold, ſilver, and ſtuffs of various kinds; for every hour ſhips arrive in the port with all things neceſſary for the uſe of man." Conſtantinople is at this day one of the fineſt cities in the world by its ſituation and its port. The proſpect from it is noble. The moſt regular part is the Beſeſtin, incloſed with walls and gates, where the merchants have their ſhops excellently ranged. In another part of the city is the Hippodrome, an oblong ſquare of 400 paces by 200, where they exercíſe on horſeback. The Meidan, or parade, is a large ſpacious ſquare, the general reſort of all ranks. On the oppoſite ſide of the port are four towns, but conſidered as a part of the ſuburbs, their diſtance being ſo ſmall, a perſon may eaſily be heard on the other ſide. They are named Pera, Galata, Pacha, and Tophana. In Pera, the foreign ambaſſadors and all the Franks or ſtrangers reſide, not being permitted to live in the city; Galata alſo is moſtly inhabited by Franks and Jews, and is a place of great trade. The city abounds with antiquities: the tomb of Conſtantine the Great is ſtill preſerved. The moſque of St. Sophia, once a Chriſtian church, is thought in ſome reſpects to exceed in grandeur of architecture St. Peter's at Rome. It is very advantageouſly ſituated in the fineſt part of Conſtantinople, upon an eminence, with a gradual deſcent to the ſea. It is of a long ſquare form, about 100 paces in length, and 80 in breadth, but in the inſide it is round. A portico, or piazza, about 36 feet in breadth, ſupported by marble pillars, extends the whole length of the front. This communicates with the body of the church by nine folding-doors of braſs, the middlemoſt of which has ſome remains of Moſaic work and paintings, which are almoſt entirely defaced by the Turks. This portico is joined to another which has five brazen doors. The body of the church is almoſt covered by a cupola of admirable ſtructure, at the foot of which runs a colonnade ſupporting a gallery of nine yards broad, formerly ſet apart for the women. Over this run two baluſtrades, juſt broad enough for one perſon to paſs; which, in the time of their Ramaſan, or Lent, are adorned with lamps, and make a fine appearance. The dome is 34 yards from ſide to ſide, and reſts upon four vaſt pillars, at leaſt 15 yards in circumference. It is a perfect hemiſphere, illuminated by 24 windows placed at equal diſtances from one another. In the inſide are upwards of 100 pillars of various kinds of marble, ſome of which are porphyry, and others Egyptian granite. The whole dome, and indeed all the walls, are curiouſly lined with marble, and the incruſtations of the gallery are Moſaic, generally done with ſmall glaſs cubes, which are continually looſened from their cement, but the colours are unchangeable. The Turks have added four minarets, or tall ſlender ſteeples, ſomewhat reſembling the monument in London, and terminating in ſpires, with gilded creſcents on the top.

The city is built in a triangular form, with the ſeraglio ſtanding on a point of one of the angles, from whence there is a proſpect of the delightful coaſt of the Leſſer Aſia, which is not to be equalled. When we ſpeak of the ſeraglio, we do not mean the apartments in which the grand ſignior's women are confined, as is com-

commonly imagined, but the whole incloſure of the Ottoman palace, which might well ſuffice for a moderate town. The wall which ſurrounds the Seraglio is thirty feet high, having battlements, embraſures, and towers, in the ſtyle of ancient fortifications. There are in it nine gates, but only two of them magnificent; and from one of theſe the Ottoman court takes the name of the *Porte*, or the *Sublime Porte*, in all public tranſactions and records. The town is ſurrounded by a high and thick wall with battlements after the Oriental manner, and towers, defended by a lined but ſhallow ditch, the works of which are double on the land-ſide. The beſt authors think that it does not contain above 800,000 inhabitants, three-fourths of whom are ſaid to be Greeks and Armenians, and the reſt are Jews and Turks. Others ſuppoſe the inhabitants not to exceed 600,000. The city hath been frequently aſſailed by fires, either owing to the narrowneſs of the ſtreets and the ſtructure of the houſes, or the arts of the Janizaries. In Auguſt, 1784, a fire broke out in the quarter ſituated towards the harbour, and ſpread into other quarters, and about 10,000 houſes (moſt of which had been rebuilt ſince the fire in 1782) were conſumed.

Oppoſite to the ſeraglio, on the Aſian ſide, and about a mile and a half diſtant acroſs the water, is Scutari, adorned with a royal moſque, and a pleaſure-houſe of the grand ſignior. On the brow of an adjacent hill is a grand proſpect: in one view are the cities of Conſtantinople, Galata, and Pera, the ſmall ſeas of the Boſphorus and Propontis, with the adjacent countries on each ſhore.

As to the population, manners, religion, government, revenues, learning, military ſtrength, commerce, and manufactures of the Turks, theſe ſeveral heads depending on the ſame principles all over the empire, ſhall be mentioned under TURKEY in ASIA.

CRIM-TARTARY, or the CRIMEA, is the ancient Taurica Cherſoneſus, and is a peninſula, lying on the Euxine or Black Sea, by which it is bounded on the Weſt and South, and on the Eaſt and North Eaſt, by that of Aſoph. It is between 44 and 46 degrees of north latitude, and 34 and 37 degrees of eaſt longitude.

This Peninſula was eſteemed a part of Turkey in Europe, until it was ceded to Ruſſia in conſequence of the peace in 1784. Many cities were built on it by the Greeks, particularly thoſe of Kherſon, Theodoſia, Panticapeum, and ſome others, which carried on a great trade with the Scythians, as well as with the Greek cities, on the continent. It is probable, however, that the modern towns of this country are not ſituated exactly in the ſame places with thoſe built by the Greeks. Eupatoria, now Koſleo, is but at a ſmall diſtance from the ſeat of the ancient Eupatorium, if not exactly in the ſame ſpot; and Sebaſtool ſtands but a very little way from the Kherſon of the Greeks; the ruins of which laſt are ſtill extant. Strabo mentions a place, named Portus Symbolon, which is probably the ſame with that named *Symbol*, by the Genoeſe, and in more modern times *Balylava*; Janikale is the Panticapeum of the ancients; and Theodoſia, lately called Kaffa, has now received its ancient appellation of Theodoſia again.

The moſt conſiderable rivers in the Crimea are thoſe of Karaſu and Salagir, both which, taking an eaſterly courſe, and uniting their ſtreams, at the diſtance of more than 20 werſts from the ſea, run into the gulf of the ſea of Aſoph, which is interpoſed between the main land of Crimea, and a long narrow peninſula.

Of the towns in this part of the world we have but very ſlight deſcriptions; and indeed where the country has been ſo often the ſeat of war, and the inhabitants are ſtill ſo rude, very little can be expected from their buildings. Lady Craven

ven, who, without doubt, had acceſs to the beſt lodgings in the country, informs us, that " a Tartar's houſe is a very ſlight building of only one ſtory, without any chair, table, or piece of wooden furniture. Large cuſhions are ranged round the room for ſeats; but what is extremely convenient, there is more than double the ſpace of the room behind the wainſcoat, which draws back in moſt places; ſo that in a place where the room appears exceedingly ſmall and confined, there is yet every conveniency to be met with. A Tartar houſe has always another building, at a ſmall diſtance from it, for the convenience of ſtrangers or travellers, whom the noble Tartar always treats with the greateſt hoſpitality. The palace of the khan at Bacziſeria is an irregular building; the greateſt part of it is of one floor, raiſed upon pillars of wood, arched and gilt in a fanciful and lively manner; the arch, or laſt door-way, is finely proportioned, and is adorned with an inſcription in letters of gold. The whole was entirely in ruins, but the governor cauſed it to be repaired, and new gilt and painted for the reception of the empreſs. Court within court, and garden within garden, make a variety of apartments, where the khan walked from his own reſidence to the haram, which is ſpacious, and higher than the reſt of the buildings. Several of the ſquare places under his apartment were paved with marble, and have in the centre fountains which play conſtantly.

Among the curioſities in this country, we may reckon the ſource of the river Karaſu, which is ſituated among rocks, in a very romantic manner, and riſes in a conſiderable ſtream. It was viſited by Lady Craven in 1786. No leſs wonderful are thoſe lakes which receive the rivulets, without any viſible outlet. This celebrated female traveller mentions a houſe, near Sebaſtopool, ſituated in a very romantic manner, at the foot of ſome works, from which iſſue many clear ſprings that amply ſupply the houſes and baths with water. On the ſummit of theſe rocks, there are places where immenſe cables have certainly paſſed and been tied. The Tartars inſiſt that the ſea was once cloſe to the foot of them, and ſhips were faſtened there. Near Bacziſeria there is a mine of earth, exactly like ſoap, which is reckoned very good for the ſkin, and vaſt quantities of it are conſumed by the women at Conſtantinople. Lady Craven beſtows the greateſt encomiums on the ſheep, which in this peninſula are innumerable, and afford the moſt beautiful and coſtly fleeces. The ſheep are all ſpotted; the lambkins very beautiful, and they kill the ewes to have them before birth, when their ſkins have ſmall ſpots, and are ſmooth like the fineſt and lighteſt ſattins. Coats lined with theſe ſkins are called Peliſſes; and as a great number of theſe ſmall animals muſt be killed to make the lining of one coat, this is one of the fineſt preſents the empreſs can make to an ambaſſador. Throughout the whole of this peninſula, there are many ruins of ancient towns. Lady Craven mentions one at Soudak, which was rebuilt by the Genoeſe on the deſcent of ſteep rocks. The ſummit of theſe overlooks the ſea; and here there is a chapel, with a granite pillar, ſituated in ſuch a manner that on the firſt ſhake it muſt fall perpendicularly into it.

The peninſula of the Crimea has a conſiderable trade in what is called Morocco leather, of various colours, which is to be had very cheap, and like ſattin. At Bacziſeria there is a great trade of ſword-blades, knives, and hangers, many of which are not to be diſtinguiſhed from ſuch as are made at Damaſcus.

ISLANDS BELONGING TO TURKEY IN EUROPE, BEING PART OF ANCIENT GREECE.

I Shall mention theſe iſlands chiefly for the uſe of ſuch readers as are converſant with ancient hiſtory, of which they make ſo diſtinguiſhed a part.

NEGROPONT, the ancient Eubœa, ſtretches from the ſouth-eaſt to the north-weſt, and lies on the eaſtern coaſt of Achaia or Livadia. It is 90 miles long, and 25 broad, and contains about 1300 ſquare miles. Here the Turkiſh gallies lie. The tides on its coaſts are irregular; and the iſland itſelf is very fertile, producing corn, wine, fruit, and cattle, in ſuch abundance, that all kinds of proviſions are extremely cheap. The chief towns in the iſland are, Negropont, called by the Greeks, Egripos, ſituated on the ſouth-weſt coaſt of the iſland, on the narroweſt part of the ſtrait; and Caſtel Roſſo, the ancient Caraiſtus.

LEMNOS, or STALIMENE, lies in the northern part of the Ægean ſea or Archipelago, and is almoſt a ſquare of 25 miles in length and breadth. Though it produces corn and wine, yet its principal riches ariſe from its mineral earth, much uſed in medicine, ſometimes called *terra Lemnia*, or *ſigillata*, becauſe it is ſealed up by the Turks, who receive from it a conſiderable revenue.

TENEDOS is remarkable only for its lying oppoſite to old Troy, and its being mentioned by Virgil as the place to which the Greeks retired, and left the Trojans in a fatal ſecurity; it hath a town of the ſame name.

SCYROS is about 60 miles in circumference, and is remarkable chiefly for the remains of antiquity which it contains: about 300 Greek families inhabit it.

LESBOS, or MYTELENE, is about 60 miles long, and is famous for the number of philoſophers and poets it produced. The inhabitants were formerly noted for their prodigality.

SCIO, or CHIOS, lies about 80 miles weſt of Smyrna, and is about 100 miles in circumference. This iſland, though rocky and mountainous, produces excellent wine, but no corn. It is inhabited by 100,000 Greeks, 10,000 Turks, and above 3,000 Latins. It hath 300 churches beſides chapels and monaſteries; and a Turkiſh garriſon of 1400 men. The inhabitants have manufactures of ſilk, velvet, gold and ſilver ſtuffs. The iſland likewiſe produces oil and ſilk, and the lentiſk-tree, or maſtic, from which the government draws its chief revenue. The women of this, and almoſt all the other Greek iſlands, have in all ages been celebrated for their beauty, and their perſons have been the moſt perfect models of ſymmetry to painters and ſtatuaries. A late learned traveller, Dr. Richard Chandler, ſays, "The beautiful Greek girls are the moſt ſtriking ornaments of Scio. Many of theſe were ſitting at the doors and windows, twiſting cotton or ſilk, or employed in ſpinning and needle-work, and accoſted us with familiarity, bidding us welcome, as we paſſed. The ſtreets on Sundays and holidays are filled with them in groups. They wear ſhort petticoats, reaching only to their knees, with white ſilk or cotton hoſe. Their head-dreſs, which is peculiar to the iſland, is a kind of turban, the linen ſo white and thin, it ſeemed ſnow. Their ſlippers are chiefly yellow, with a knot of red fringe at the heel. Some wore them faſtened with a thong. Their

garments were of ſilk of various colours; and their whole appearance ſo fantaſtic and lively, as to afford us much entertainment. The Turks inhabit a ſeparate quarter, and their women are concealed." Among the poets and hiſtorians ſaid to be born here, the inhabitants reckon Homer, and ſhew a little ſquare houſe, which they call Homer's ſchool.

SAMOS lies oppoſite to Epheſus, on the coaſt of the Leſſer Aſia, about ſeven miles from the continent. It is 30 miles long, and 15 broad. This iſland gave birth to Pythagoras, and is inhabited by Greek Chriſtians, who are well treated by the Turks, their maſters. The muſcadine Samian wine is in high requeſt; and the iſland alſo produces wool, which they ſell to the French; oil, pomegranates, and ſilk. This iſland is ſuppoſed to have been the native country of Juno; and ſome travellers think that the ruins of her temple, and of the ancient city Samos, are the fineſt remains of antiquity in the Levant.

To the ſouth of Samos lies PATMOS, about 20 miles in circumference, but ſo barren and dreary, that it may be called a rock rather than an iſland. It has, however, a convenient haven; and the few Greek monks who are upon the iſland ſhew a cave where St. John is ſuppoſed to have written the Apocalypſe.

The CYCLADES iſlands lie like a circle round Delos, the chief of them, which is ſouth of the iſlands Mycone and Tirſe, and almoſt midway between the continents of Aſia and Europe. Though Delos is not above ſix miles in circumference, it is one of the moſt celebrated of all the Grecian iſlands, as being the birth-place of Apollo and Diana, the magnificent ruins of whoſe temples are ſtill viſible. This iſland is almoſt deſtitute of inhabitants.

PAROS lies between the iſlands of Luxia and Melos. Like all the other Greek iſlands, it contains the moſt ſtriking and magnificient ruins of antiquity; but is chiefly renowned for the beauty and whiteneſs of its marble.

CERIGO, or CYTHERA, lies ſouth-eaſt of the Morea, and is about 50 miles in circumference, but rocky and mountainous, aud chiefly remarkable for being the favourite reſidence of Venus.

SANTORIN is one of the moſt ſouthern iſlands in the Archipelago, and was formerly called Caliſta, and afterwards Thera. Though ſeemingly covered with pumice-ſtones, yet, through the induſtry of the inhabitants, who are about 10,000, it produces barley and wine, with ſome wheat. One third of the people are of the Latin church, and ſubject to a popiſh biſhop. Near this iſland another aroſe of the ſame name, from the bottom of the ſea, in 1707. At the time of its birth there was an earthquake, attended with moſt dreadful lightnings and thunders, and boilings of the ſea for ſeveral days, ſo that when it roſe out of the ſea, it was a mere volcano, but the burning ſoon ceaſed. It is about 200 feet above the ſea; and at the time of its firſt emerging, was about a mile broad, and five miles in circumference, but it has ſince increaſed. * Several other iſlands of the Archipelago appear to have had the like original, although the ſea in their neighbourhood is ſo deep as not to be fathomed.

The famous iſland of RHODES is ſituated in the 28th degree of eaſt longitude, and 36 degrees 20 minutes north latitude, about 20 miles ſouth-weſt of the continent

nent of Leſſer Aſia, being about 60 miles long, and 25 broad. This iſland is healthful and pleaſant, abounds in wine, and many of the neceſſaries of life; but the inhabitants import their corn from the neighbouring country. The chief town of the ſame name, ſtands on the ſide of a hill fronting the ſea, and is three miles in circumference, interſperſed with gardens, minarets, churches, and towers. The harbour is the Grand Signior's principal arſenal for ſhipping, and the place is eſteemed among the ſtrongeſt fortreſſes belonging to the Turks. The coloſſus of braſs which anciently ſtood at the mouth of the harbour, was 50 fathom wide, and deſervedly accounted one of the wonders of the world: one foot being placed on each ſide of the harbour, ſhips paſſing between its legs; and it held in one hand a light-houſe for the direction of mariners. The face of the coloſſus repreſented the ſun, to whom this image was dedicated; and its height was about 135 feet. The inhabitants of this iſland were formerly maſters of the ſea; and the Rhodian law was the directory of the Romans in maritime affairs. The knights of St. John of Juruſalem, after loſing Paleſtine, took this iſland from the Turks in 1308, but loſt it to them in 1522 after a brave defence, and afterwards retired to Malta.

CANDIA, the ancient Crete, is ſtill renowned for its hundred cities, for its being the birth-place of Jupiter, the ſeat of legiſlature to all Greece, and many other hiſtorical and political diſtinctions. It lies between 35 and 36 degrees of north latitude, being 200 miles long, and 60 broad, almoſt equally diſtant from Europe, Aſia, and Africa, and contains 3220 ſquare miles. The famous Mount Ida ſtands in the middle of the iſland, and is no better than a barren rock; and Lethe, the river of oblivion, is a torpid ſtream. Some of the vallies of this iſland produce wine, fruits, and corn; all of them remarkably excellent in their kinds. The ſiege of Candia, the capital of the iſland, in modern times, was far more wonderful and bloody than that of Troy. The Turks inveſted it in the beginning of the year 1645, and its Venetian garriſon, after bravely defending itſelf againſt 56 ſtorms, till the latter end of September 1669, made, at laſt, an honourable capitulation. The ſiege coſt the Turks 180,000 men, and the Venetians 80,000.

CYPRUS lies in the Levant ſea, about 30 miles diſtant from the coaſt of Syria and Paleſtine. It is 150 miles long, and 70 broad, and lies at almoſt an equal diſtance from Europe and Africa. It was formerly famous for the worſhip of Venus, the Cyprian goddeſs; and, during the time of the Cruſades, was a rich flouriſhing kingdom, inhabited by Chriſtians. Its wine, eſpecially that which grows at the bottom of the celebrated Mount Olympus, is the moſt palatable and the richeſt of any that grows in the Greek iſlands. Ticoſia is the capital, in the midſt of the country, and the ſee of a Greek archbiſhop; indeed moſt part of the inhabitants of the iſlands are Greeks. Famaguſta, its ancient capital, has a good harbour; and the natural produce of the iſland is ſo rich, that many European nations find their account in keeping conſuls reſiding upon it; but the oppreſſions of the Turks have depopulated and impoveriſhed it to ſuch a ſurpriſing degree, that the revenue they get from it does not exceed 1250l. a year. The iſland produces great quantities of grapes, from which excellent wine is made, and alſo cotton of a very fine quality is here cultivated, and oil, ſilk, and turpentine. Its female inhabitants do not degenerate from their anceſtors as devotees to Venus; and Paphos, that ancient ſeat of pleaſure and corruption, is one of the diviſions of the iſland. Richard I. king of England, ſubdued Cyprus, on account of its king's treachery; and its royal title was transferred to Guy Luſignan, king of Jeruſalem, from whence it paſſed to the Venetians, who ſtill hold that empty honour.

The iſlands in the Ionian ſea are, SAPIENZA, STIVALI, ZANTE, CEPHALONIA, SANTAMAURA, CORFU, FANNU, and others of ſmaller note, particularly ISOLA DEL COMPARE, which would not deſerve mention, had it not been the ancient Ithaca the birth-place and kingdom of Ulyſſes. Theſe iſlands in general are fruitful and belong to the Venetians.

Zante has a populous capital of the ſame name, and is a place of conſiderable trade, eſpecially in currants *, grapes, and wine. The citadel is erected on the top of a large hill, ſtrong by nature, but now little better than a heap of ruins. Here is a garriſon of 500 men, but their chief dependence is on their fleet and the iſland of Corfu. The inhabitants of Zante are about 30,000, moſtly Greeks, and friendly to ſtrangers. Corfu, which is the capital of that iſland, and the reſidence of the governor-general over all the other iſlands, is a place of great ſtrength, and its circumference about four miles. The Venetians are ſaid to concern themſelves very little about the welfare or government of theſe iſlands, ſo that the inhabitants, who are generally Greeks, bear a very indifferent character. Their number at Corfu is eſtimated at 50,000, and their manners more ſevere than at Zante.

ASIA.

AS Aſia exceeds Europe and Africa in extent of territory, it is alſo ſuperior to them in ſerenity of air, fertility of ſoil, the deliciouſneſs of its fruits, the fragrancy and balſamic qualities of its plants, ſpices, and gums; the ſalubrity of its drugs; the quantity, variety, beauty, and value of its gems; the richneſs of its metals, and the fineneſs of its ſilks and cottons. It was in Aſia, according to the ſacred records, that the all-wiſe Creator planted the garden of Eden, in which he formed the firſt man and firſt woman, from whom the race of mankind was to ſpring. Aſia became again the nurſery of the world after the deluge, whence the deſcendants of Noah diſperſed their various colonies into all the other parts of the globe. It was in Aſia that God placed his once favourite people, the Hebrews, whom he enlightened by revelations delivered by the prophets, and to whom he gave the Oracles of Truth. It was here that the great and merciful work of our redemption was accompliſhed by his divine Son; and it was from hence that the light of his glorious goſpel was carried with amazing rapidity into all the known nations by his diſciples and followers. Here the firſt Chriſtian churches were founded, and the Chriſtian faith miraculouſly propagated and cheriſhed even with the blood of innumerable matyrs. It was in Aſia that the firſt edifices were reared, and the firſt empires founded, while the other parts of the globe were inhabited only by wild animals. On all theſe accounts, this quarter claims a ſuperiority over the reſt; but it muſt be owned, that a great change hath happened in that part of it called Turkey, which hath loſt much of its ancient ſplendour. The other parts of Aſia continue much in their former condition, the ſoil being as remarkable for its fertility, as moſt of the inhabitants for their indolence, effeminacy, and luxury. This effeminacy is chiefly owing to the warmth of the climate, though in ſome meaſure heightened by cuſtom and education; and the ſymptoms of it are more or leſs viſible, as the ſeveral nations are ſeated nearer or farther from the North. Hence

* So called from a corruption of Corinth, from whence the vines were originally imported.

the

the Tartars, who live near the ſame latitudes with us, are as brave, hardy, ſtrong, and vigorous, as any Euaopean nation. What is wanting in the robuſt frame of their bodies among the Chineſe, Mogul Indians, and all the inhabitants of the more ſouthern regions, is in a great meaſure made up to them by the vivacity of their minds, and ingenuity in various kinds of workmanſhip, which our moſt ſkilful mechanics have in vain endeavoured to imitate.

This vaſt extent of territory was ſucceſſively governed in paſt times by the Aſſyrians, the Medes, the Perſians, and the Greeks; but the immenſe regions of India and China were ſcarcely known to Alexander, or the conquerors of the ancient world. Upon the decline of thoſe empires, great part of Aſia ſubmitted to the Roman arms; and afterwards, in the middle ages, the ſucceſſors of Mahomet, or as they are uſually called, Saracens, founded in Aſia, in Africa, and in Europe, a more extenſive empire than that of Cyrus, Alexander, or even the Roman when in its height of power. The Saracen greatneſs ended with the death of Tamerlane; and the Turks, conquerors on every ſide, took poſſeſſion of the middle regions of Aſia, which they ſtill enjoy. Beſides the countries poſſeſſed by the Turks and Ruſſians, Aſia contains at preſent three large empires, the Chineſe, the Mogul, and the Perſian, upon which the leſſer kingdoms and ſovereignties depend. The prevailing form of government in this diviſion of the globe is abſolute monarchy. If any of them can be ſaid to enjoy ſome ſhare of liberty, it is the wandering tribes, as the Tartars and Arabs. Many of the Aſiatic nations, when the Dutch firſt came among them, could not conceive how it was poſſible for any people to live under any other form of government than that of a deſpotic monarchy. Turkey, Arabia, Perſia, part of Tartary, and part of India, profeſs Mahometaniſm. The Perſian and Indian Mahometans are of the ſect of Hali, and the Turks of that of Omar; but both own Mahomet for their law-giver, and the Koran for their rule of faith and life. In the other parts of Tartary, India, China, Japan, and the Aſiatic Iſlands, they are generally heathens and idolaters. Jews are to be found every where in Aſia. Chriſtianity, though planted here with wonderful rapidity by the apoſtles and primitive fathers, ſuffered an almoſt total eclipſe by the conqueſt of the Saracens, and afterwards of the Turks. Incredible indeed have been the hazards, perils, and ſufferings of popiſh miſſionaries, to propagate their doctrines in the moſt diſtant regions, and among the groſſeſt idolaters; but their labours have hitherto failed of ſucceſs, owing in a great meaſure to their own avarice, and the cruelty and injuſtice of the Europeans, who reſort thither in ſearch of wealth and dominion.

The principal languages ſpoken in Aſia are, the modern Greek, the Turkiſh, the Ruſſian, the Tartarian, the Perſian, the Arabic, the Malayan, the Chineſe, and the Japaneſe. The European languages are alſo ſpoken upon the coaſts of India and China.

The continent of Aſia is ſituated between 25 and 180 degrees of eaſt longitude, and between the equator and 80 degrees of north latitude. It is about 4740 miles in length, from the Dardanelles on the weſt, to the eaſtern ſhore of Tartary: and about 4380 miles in breadth, from the moſt ſouthern part of Malacca, to the moſt northern cape of Nova Zembla. It is bounded by the Frozen Ocean on the north; on the weſt it is ſeparated from Africa by the Red Sea, and from Europe by the Levant or Mediterranean, the Archipelago, the Helleſpont, the ſea of Marmora, the Boſphorus, the Black Sea, the river Don, and a line drawn from it to the river Tobol, and from thence to the rivy Oby, which falls into the Frozen Ocean. On the eaſt, it is bounded by the Pacific Ocean, or South-Sea, which ſeparates it from America: and on the ſouth, by the Indian Ocean; ſo that it is almoſt

furrounded by the ſea. The principal regions which divide this country follow:

	Nations.	Length.	Bread.	Sq. Miles.	Chief Cities.	Diſt. and bear. from London.	Diff. of time from London.	Religions.

TURKEY

TURKEY IN ASIA.

SITUATION AND EXTENT.

Miles.		Degrees.	Sq. Miles.
Length 1000 Breadth 800	between	27 and 46 east longitude. 28 and 45 north latitude.	520,820.

BOUNDARIES.] BOUNDED by the Black Sea and Circaſſia, on the North; by Perſia, on the Eaſt; by Arabia and the Levant Sea, on the South; and by the Archipelago, the Helleſpont, and Propontis, which ſeparate it from Europe, on the Weſt.

Diviſions.	Subdiviſions.	Chief Towns.
The eaſtern provinces are	1. Eyraca Arabic or Chaldea	Baſſora and Bagdad.
	2. Diarbec or Meſopotamia	Diarbec, Orfa, and Mouſul.
	3. Curdiſtan or Aſſyria	Nineveh and Betlis.
	4. Turcomania or Armenia	Erzerum and Van.
	5. Georgia, including Mengrelia and Imaretta, and part of Circaſſia	Teflis, Amarchia, and Gonie.
Natolia, or the Leſſer Aſia, on the weſt.	1. Natolia Proper	Burſa, Nici, Smyrna, and Epheſus.
	2. Amaſia	Amaſia, Trapeſond, and Sinope.
	3. Aladulia	Ajazzo and Marat.
	4. Caramania	Satalia and Teraſſo.
Eaſt of the Levant Sea.	Syria, with Paleſtine, or the Holy Land	Aleppo, Antioch, Damaſcus, Tyre, Sidon, Tripoli, Scanderoon, and Jeruſalem.

MOUNTAINS.] Theſe are famous in ſacred as well as profane writings. The moſt remarkable are, Olympus; Taurus and Anti-taurus; Caucaſus and Ararat; Lebanon; and Hermon.

RIVERS.] The ſame may be obſerved of the rivers, which are the Euphrates; Tigris; Orontes; Meander; Sarabat; Kara; and Jordan.

AIR AND CLIMATE.] Though both are delightful, and naturally ſalubrious to the human conſtitution, yet ſuch is the equality with which the Author of nature has diſpenſed his benefits, that Turkey, both in Europe and Aſia, is often viſited by the plague; a frightful ſcourge of mankind wherever it takes place, but here doubly deſtructive, from the native indolence of the Turks, and their ſuperſtitious belief in that kind of predeſtination which prevents them from uſing the proper precautions to defend themſelves againſt this calamity.

SOIL AND PRODUCE.] As this country contains the moſt fertile provinces of Aſia, I need ſcarcely inform the reader that it produces all the luxuries of life in the utmoſt abundance, notwithſtanding the indolence of its owners. Raw ſilk, corn, wine, oil, honey, fruit of every ſpecies, coffee, myrrh, frankincenſe, and odoriferous plants and drugs, are natives here almoſt without culture, which is practiſed chiefly by Greek and Armenian Chriſtians. The olives, citrons, lemons, oranges, figs, and dates, produced in theſe provinces, are highly delicious, and in

in ſuch plenty, that they coſt the inhabitants a mere trifle, and it is ſaid, in ſome places nothing. Their aſparagus is often as large as a man's leg, and their grapes far exceed thoſe of other countries in largeneſs. In ſhort, nature has brought all her productions here to the higheſt perfection.

ANIMAL PRODUCTIONS BY SEA AND LAND. The ſame may be ſaid of their animals. The breed of the Turkiſh and Arabian horſes, the latter eſpecially, are valuable beyond any in the world, and have conſiderably improved that of the Engliſh. We know of no quadrupeds that are peculiar to theſe countries, but they contain all that are neceſſary for the uſe of mankind. Camels are here in much requeſt, from their ſtrength, their agility, and above all, their moderation in eating and drinking, which is greater than that of any other known animal. Their manufacture, known by the name of camlets, was originally made by a mixture of camels hair and ſilk, though it is now often made with wool and ſilk. Their kids and ſheep are exquiſite eating, and are ſaid to ſurpaſs, in flavour and taſte, thoſe of Europe; but their butchers meat in general, beef particularly, is not ſo fine.

As to birds, they have wild fowl in vaſt perfection: their oſtriches are well known by their tallneſs, ſwiftneſs in running, and ſtupidity. The Roman epicures prized no fiſh, except lampreys, mullets, and oyſters, but thoſe that were found in Aſia.

METALS AND MINERALS.] This country contains all the metals that are to be found in the richeſt kingdoms and provinces in Europe; and its medicinal ſprings and baths exceed thoſe of any in the known world.

OF THE TURKS IN EUROPE AND ASIA.

POPULATION, INHABITANTS, MANNERS, CUSTOMS, AND DIVERSIONS. THE population of this great country is by no means equal either to its extent or fertility, nor have the beſt geographers been able to aſcertain it, becauſe of the uncertainty of its limits. It certainly is not ſo great as it was before the Chriſtian æra, or even under the Roman emperors; owing to various cauſes, and above all to the tyranny under which the natives live, and their polygamy, which is undoubtedly an enemy to population, as may be evinced from many reaſons, and particularly becauſe the Greeks and Armenians, among whom it is not practiſed, are incomparably more prolific than the Turks, notwithſtanding the rigid ſubjection in which they are kept by the latter. The plague is another cauſe of depopulation. Yet, after all, the ſubjects of the Turkiſh empire are computed at 49,000,000.

As to the inhabitants, they are generally well made and robuſt: when young, their complexions are fair, and their faces handſome; their hair and eyes are black or dark brown. The women, when young, are ſometimes handſome, but they generally look old at thirty. In their demeanour, the Turks are rather hypochondriac, grave, ſedate, and paſſive; but when agitated by paſſion, furious, raging, ungovernable; big with diſſimulation, jealous, ſuſpicious, and vindictive: in matters of religion, tenacious, ſuperſtitious, and moroſe. Though the generality ſeem hardly capable of much benevolence, or even humanity with regard to Jews, Chriſtians, or any who differ from them in religious matters, yet they are far from being devoid of ſocial affections for thoſe of their own religion. But intereſt is their ſupreme good, and when that comes in competition, all ties of religion, conſanguinity, or friendſhip, are with the generality ſpeedily diſſolved. The morals of the Aſiatic Turks are far preferable to thoſe of the European. They are hoſpitable to ſtrangers; and the vices of avarice and inhumanity reign chiefly among their

great men. They are likewiſe ſaid to be charitable to one another, and punctual in their dealings. Their charity and public ſpirit is moſt conſpicuous in their building caravanſeras, or places of entertainment, on roads that are deſtitute of accommodations, for the refreſhment of poor pilgrims or travellers. With the ſame laudable view they ſearch out the beſt ſprings, and dig wells, which in thoſe countries are a luxury to weary travellers. The Turks ſit croſs-legged upon mats, not only at their meals but in company. Their ideas, except what they acquire from opium, are ſimple and confined, ſeldom reaching without the walls of their own houſes; where they ſit converſing with their women, drinking coffee, ſmoking tobacco, or chewing opium. They have little curioſity to be informed of the ſtate of their own or any other country. If a viſier, baſhaw, or other officer, is turned out or ſtrangled, they ſay no more on the occaſion than that there will be a new viſier or governor, ſeldom enquiring into the reaſon of the diſgrace of the former. They are perfect ſtrangers to wit and agreeable converſation. They have few printed books, and ſeldom read any other than the Koran, and the comments upon it. Nothing is negotiated in Turkey without preſents; and here juſtice may commonly be bought and ſold.

The Turks dine about eleven o'clock in the forenoon, and they ſup at five in the winter, and ſix in the ſummer, and ſupper is their principal meal. Among the great people, their diſhes are ſerved up one by one; but they have neither knife nor fork, and they are not permitted by their religion to uſe gold or ſilver ſpoons. Their victuals are always high-ſeaſoned. Rice is the common food of the lower ſort, and ſometimes it is boiled up with gravy; but their chief diſh is pilau, which is mutton and fowl boiled to rags, and the rice being boiled quite dry, the ſoup is highly-ſeaſoned, and poured upon it. They drink water, ſherbet, and coffee; and the only debauch they know is in opium, which gives them ſenſations reſembling thoſe of intoxication. Gueſts of higher rank ſometimes have their beards perfumed by a female ſlave of the family. They are temperate and ſober from a principle of their religion, which forbids them the uſe of wine; though in private many of them indulge themſelves in the uſe of ſtrong liquors. Their common ſalutation is by an inclination of the head, and laying their right hand on their breaſt. They ſleep in linen waiſtcoats and drawers, upon mattreſſes, and cover themſelves with a quilt. Few or none of the conſiderable inhabitants of this vaſt empire have any notion of walking or riding either for health or diverſion. The moſt religious among them find, however, ſufficient exerciſe when they conform themſelves to the frequent ablutions, prayers, and rites preſcribed them by Mahomet.

Their active diverſions conſiſt in ſhooting at a mark, or tilting it with darts, at which they are very expert. Some of their great men are fond of hunting, and take the field with numerous equipages, which are joined by their inferiors; but this is often done for political purpoſes, that they may know the ſtrength of their dependents. Within doors, the cheſs or draught-board are the uſual amuſements and if they play at chance games they never bet money, that being prohibited by the Koran.

DRESS.] The men ſhave their heads, leaving a lock on the crown, and wear their beards long. They cover their heads with a turban, and never put it off but when they ſleep. Their ſhirts are without collar or wriſtband, and over them they throw a long veſt, which they tie with a ſaſh, and over the veſt they wear a looſe gown ſomewhat ſhorter. Their breeches, or drawers, are of a piece with their ſtockings; and inſtead of ſhoes they wear ſlippers, which they put off when they enter a temple or houſe. They ſuffer no Chriſtians, or other people, to wear white turbans. The dreſs of the women differs little from that of the men, only they wear ſtiffened caps upon their heads with horns ſomething like a mitre, and wear the

their hair down. When they appear abroad, they are ſo muffled up as not to be known by their neareſt relations. Such of the women as are virtuous make no uſe of paint to heighten their beauty, or to diſguiſe their complexion; but they often tinge their hands and feet with *henna*, which gives them a deep yellow. The men make uſe of the ſame expedient to colour their beards.

MARRIAGES.] Marriages in this country are chiefly negociated by the ladies. When the terms are agreed upon, the bridegroom pays down a ſum of money, a licence is taken out from the cadi, or proper magiſtrate, and the parties are married. The bargain is celebrated, as in other nations, with mirth and jollity; and the money is generally employed in furniſhing the houſe of the young couple. They are not allowed by their law more than four wives, but they may have as many concubines as they can maintain. Accordingly, beſides their wives, the wealthy Turks keep a kind of ſeraglio of women; but all theſe indulgences are ſometimes inſufficient to gratify their unnatural deſires.

FUNERALS.] The burials of the Turks are decent. The corpſe is attended by the relations, chanting paſſages from the Koran; and after being depoſited in a moſque (for ſo they call their temples), they are buried in a field by the iman or prieſt, who pronounces a funeral ſermon at the time of the interment. The male relations expreſs their ſorrow by alms and prayers; the women by decking the tomb on certain days with flowers and green leaves; and in mourning for a huſband they wear a particular head-dreſs, and leave off all finery for twelve months.

RELIGION.] The eſtabliſhed religion is the Mahometan, ſo called from Mahomet, the author of it; ſome account of which the reader will find in the following hiſtory of Arabia, the native country of that impoſtor. The Turks profeſs to be of the ſect of Omar; but theſe are ſplit into as many ſectaries as their neighbours the Chriſtians. There is no ordination among their clergy; any perſon may be a prieſt that pleaſes to take the habit, and perform the functions of his order, and may lay down his office when he pleaſes. Their chief prieſt, or mufti, enjoys great power in the ſtate.

ECCLESIASTICAL INSTITUTIONS OF CHRISTIANS.] The Turkiſh government having formed theſe into part of its finances, they are tolerated where they are moſt profitable; but the hardſhips impoſed upon the Greek church are ſuch as muſt always diſpoſe that people to favour any revolution of goverment. Conſtantinople, Jeruſalem, Alexandria, and Antioch, are patriarchates; and their heads are indulged, according as they pay for their privilege, with a civil as well as an eccleſiaſtical authority over their votaries. The ſame may be ſaid of the Neſtorian and Armenian patriarchs; and every great city that can pay for the privilege has its archbiſhop or biſhop. All male Chriſtians pay alſo a capitation tax from ſeventeen years old to ſixty, according to their ſtations.

LANGUAGE.] The radical languages of this empire are the Sclavonian, which ſeems to have been the mother-tongue of the ancient Turks; the Greek modernized, but ſtill bearing a relation to the old language; the Arabic and the Syriac, a dialect of which is ſtill ſpoken. A ſpecimen of the modern Greek follows in their Paternoſter.

Pater hemas, opios iſo ees tos ouranous: hagiaſthito to onoma ſou: na erti he baſilia ſou: to thelema ſou na genetez itzon en te ge, os is ton ouranon: to ptſomi hemas doze hemas ſemoren: kæ ſi choraſe hemos ta crimata hemon itzone, kæ hemas ſichoraſomen ekinous opou: mas adikounkæ men ternes hemais is to piraſmo, alla ſoſon hemas apo to kaxo. Amen.

LEARNING AND LEARNED MEN.] The Turks till of late profeſſed a ſovereign contempt for our learning. Greece, which was the native country of genius, arts, and ſciences, produces at preſent, beſides Turks, numerous bands of Chriſtian biſhops,

biſhops, prieſts, and monks, who in general are as ignorant as the Turks themſelves, and are divided into various abſurd ſects of what they call Chriſtianity. The education of the Turks ſeldom extends farther than reading the Turkiſh language and the Koran, and writing a common letter. Some of them underſtand aſtronomy ſo far as to calculate the time of an eclipſe; but the number of theſe being very ſmall, they are looked upon as extraordinary perſons.

ANTIQUITIES AND CURIOSITIES, NATURAL AND ARTIFICIAL. } Theſe are ſo various, that they have furniſhed matter for many voluminous publications, and others are appearing every day. Theſe countries contained all that was rich and magnificent in architecture and ſculpture; and neither the barbarity of the Turks, nor the depredations they have ſuffered from the Europeans, ſeem to have diminiſhed their number. They are more or leſs perfect, according to the air, ſoil, or climate, in which they ſtand, and all of them bear deplorable marks of neglect. Many of the fineſt temples are converted into Turkiſh moſques, or Greek churches, and are more diſfigured than thoſe which remain in ruins. Amidſt ſuch a plenitude of curioſities, all that can be done here is to ſelect ſome of the moſt ſtriking.

Balbec is ſituated on a riſing plain, between Tripoli in Syria and Damaſcus, at the foot of Mount Libanus, and is the Heliopolis of Cælo Syria. Its remains of antiquity diſplay, according to the beſt judges, the boldeſt plan that ever was attempted in architecture. The portico of the temple of Heliopolis is inexpreſſibly ſuperb, though diſfigured by two Turkiſh towers. The hexagonal court behind it is now known only by the magnificence of its ruins. Their walls were adorned with Corinthian pilaſters and ſtatues, and it opens into a quadrangular court of the ſame taſte and grandeur. The great temple to which this leads is now ſo ruined, that it is known only by an entablature, ſupported only by nine lofty columns, each conſiſting of three pieces joined together, by iron pins, without cement. Some of thoſe pins are a foot long, and a foot in diameter; and the ſordid Turks are daily at work to deſtroy the columns, for the ſake of the iron. A ſmall temple is ſtill ſtanding, with a pedeſtal of eight columns in front, and fifteen in flank, and every where richly ornamented with figures in alto relief, expreſſing the heads of gods, heroes, and emperors. To the weſt of this temple is another, of a circular form, of the Corinthian and Ionic order, but diſfigured with Turkiſh moſques and houſes. The other parts of this ancient city are proportionably beautiful and ſtupendous.

Various have been the conjectures concerning the founders of theſe immenſe buildings. The inhabitants of Aſia aſcribe them to Solomon, but ſome make them ſo modern as the time of Antoninus Pius. Perhaps they are of different æras; and though that prince and his ſucceſſors may have rebuilt ſome part of them, yet the boldneſs of their architecture, the beauty of their ornaments, and the ſtupendous execution of the whole, ſeem to fix their foundation to a period before the Chriſtian æra, but without mounting to the ancient times of the Jews or the Phœnicians, who probably knew little of the Greek ſtyle in building and ornamenting. Balbec is at preſent a little city, encompaſſed with a wall. The inhabitants, who are about 5000 in number, chiefly Greeks, live in or near the circular temple, in houſes built out of the ancient ruins. A free-ſtone quarry, in the neighbourhood, furniſhed the ſtones for the body of the temple; and one of the ſtones, not quite detached from the bottom of the quarry, is 70 feet long, 14 broad, and 14 feet five inches deep, and reduced to our meaſure, is 1135 tons. A coarſe white marble quarry, at a greater diſtance, furniſhed the ornamental parts.

Palmyra, or, as it was called by the ancients, Tadmor in the Deſert, is ſituated in the wilds of Arabia Petræa, about 33 deg. N. lat. and 200 miles to the ſouth-eaſt of Aleppo. It is approached through a narrow plain, lined as it were with the remains of antiquity; and, opening all at once, the eye is preſented with the moſt ſtriking objects that are to be found in the world. The temple of the Sun lies in ruins; but the acceſs to it is through a vaſt number of beautiful Corinthian columns of white marble, the grandeur and beauty of which can only be known by the plates of it, publiſhed by Mr. Wood, who, with his friends, viſited it ſome years ago, purpoſely to preſerve ſome remembrance of ſuch a curioſity. As thoſe drawings, or copies from them, are now common, we muſt refer the reader to them, eſpecially as he can form no very adequate ideas of the ruins from a printed relation. Superb arches, amazing columns, a colonade extending 4000 feet in length, terminated by a noble mauſoleum, temples, fine porticos, periſtyles, intercolumniations, and entablatures, all of them in the higheſt ſtyle, and finiſhed with the moſt beautiful materials, appear on all hands, but ſo diſperſed and disjointed, that it is impoſſible from them to form an idea of the whole when perfect. Theſe ſtriking ruins are contraſted by the miſerable huts of the wild Arabs, who reſide in or near them.

Nothing but ocular proof could convince any man, that ſo ſuperb a city, formerly 10 miles in circumference, could exiſt in the midſt of a ſandy deſert. Nothing, however, is more certain than that Palmyra was formerly the capital of a great kingdom; that it was the pride as well as the emporium of the eaſtern world, and that its merchants dealt with the Romans, and the weſtern nations, for the merchandiſes and luxuries of India and Arabia. Its preſent altered ſituation, therefore, can be accounted for only by natural cauſes, which have turned the more fertile tracts into barren deſerts. The Aſiatics think that Palmyra, as well as Balbec, owes its original to Solomon; and in this they receive ſome countenance from ſacred hiſtory. In profane hiſtory it is not mentioned before the time of Marc Anthony; and its moſt ſuperb buildings are thought to be of the lower empire, about the time of Gallienus. Odenathus, the laſt king of Palmyra, was highly careſſed by that emperor, and even declared Auguſtus. His widow Zenobia reigned in great glory for ſome time, and Longinus, the celebrated critic, was her ſecretary. Not being able to brook the Roman tyranny, ſhe declared war againſt the emperor Aurelian, who took her priſoner, led her in triumph to Rome, and butchered her principal nobility, and among others the excellent Longinus. He afterwards deſtroyed her city, and maſſacred its inhabitants, but expended large ſums out of Zenobia's treaſures in repairing the temple of the Sun, the majeſtic ruins of which have been mentioned. This, it muſt be acknowledged, is but a very lame account of that celebrated city; nor do any of the Palmyrene inſcriptions reach above the Chriſtian æra, though there can be no doubt that the city itſelf is of much higher antiquity. The emperor Juſtinian made ſome efforts to reſtore it to its ancient ſplendour, but without effect, for it dwindled by degrees to its preſent wretched ſtate. It has been obſerved very juſtly, that its architecture, and the proportions of its columns, are by no means equal in purity to thoſe of Balbec.

Nothing can be more futile than the boaſted antiquities ſhewn by the Greek and Armenian prieſts in and near Jeruſalem, which is well known to have been ſo often razed to the ground, and rebuilt anew, that no ſcene of our Saviour's life and ſufferings can be aſcertained; and yet thoſe eccleſiaſtics ſubſiſt by their forgeries, and pretending to guide travellers to every ſpot mentioned in the Old and New Teſtament. They are, it is true, under ſevere contributions to the Turks, but the trade

ſtill goes on, though much diminiſhed in its profits. The church of the Holy Sepulchre, as it is called, ſaid to be built by Helena, mother to Conſtantine the Great, is ſtill ſtanding, and of tolerable good architecture; but its different diviſions, and the diſpoſitions made round it, are chiefly calculated to ſupport the forgeries of its keepers. Other churches, built by the ſame lady, are found in Paleſtine; but the country is ſo altered in its appearance and qualities, that it is one of the moſt deſpicable of any in Aſia, and it is in vain for a modern traveller to attempt to trace in it any veſtiges of the kingdom of David and Solomon. But let a fertile country be under the frowns of heaven, and abandoned to tyranny and wild Arabs, it will in time become a deſert. Thus oppreſſion ſoon thinned the delicious plains of Italy; and the noted countries of Greece, and Aſia the Leſs, once the glory of the world, are now nearly deſtitute of learning, arts, and people.

Mecca and Medina are curioſities only through the ſuperſtition of the Mahometans. Their buildings are mean, when compared to European houſes or churches; and even the temple of Mecca, in point of architecture, makes but a ſorry appearance, though erected on the ſpot where the great prophet is ſaid to have been born. The ſame may be ſaid of the moſque at Medina, where that impoſtor was buried; ſo that the vaſt ſums ſpent yearly by Mahometan pilgrims, in viſiting thoſe places, are undoubtedly converted to temporal uſes. I ſhall not amuſe the reader with any accounts of the ſpot which is ſaid to have formed Paradiſe, and to have been ſituated between the rivers Euphrates and Tigris, where there are ſome tracts which undoubtedly deſerve that name. The different ruins, ſome of them inexpreſſibly magnificent, that are to be fouud in thoſe immenſe regions, cannot be appropriated with any certainty to their original founders. It is indeed eaſy to pronounce whether the ſtyle of their buildings be Greek, Roman, or Saracen; but all other information muſt come from their inſcriptions.

The neighbourhood of Smyrna (now called Iſmir) contains many valuable antiquities. The ſame may be ſaid of Aleppo, and a number of other places celebrated in antiquity, and now known only by geographical obſervations. The ſite of Old Troy cannot be diſtinguiſhed by the ſmalleſt veſtige, and is known only by its being oppoſite to the iſle of Tenedos, and the name of a brook, which the poets magnified into a wonderful river. A temple of marble built in honour of Auguſtus Cæſar, at Milaſſo in Caria, and a few ſtructures of the ſame kind, in the neighbourhood, are among the antiquities that are ſtill entire. Three theatres of white marble, and a noble circus near Laodicea, now Latichea, have ſuffered very little from time or barbariſm; and ſome travellers think that they diſcern the ruins of the celebrated temple of Diana, near Epheſus.

CHIEF CITIES, MOSQUES, AND OTHER BUILDINGS. } Theſe are very numerous, and at the ſame time very inſignificant, becauſe they have little or no trade, and are greatly decayed from their ancient grandeur. Scanderoon ſtands upon the ſite of Old Alexandria, but it is now almoſt depopulated. Superb remains of antiquity are found in its neighbourhood. Aleppo, however, holds a reſpectable rank among the cities of the Aſiatic Turkey. It is ſtill the capital of Syria, and is ſuperior in its buildings and conveniences to moſt of the Turkiſh cities. Its houſes, as uſual in the Eaſt, conſiſt of a large court, with a dead wall to the ſtreet, an arcade or piazza running round it, paved with marble, and an elegant fountain, of the ſame, in the middle. Aleppo and its ſuburbs are ſeven miles in compaſs, ſtanding on eight ſmall hills, on the higheſt top of which the citadel or caſtle is erected, but of no great ſtrength. An old wall and a broad ditch, now in many places turned into gardens, ſurround the city, which contains 235,000 inhabitants, of whom 30,000 are Chriſtians, and 5000 are Jews. It

is furniſhed with moſt of the conveniencies of life, except good water, within the walls, and even that is ſupplied by an aqueduct, diſtant about four miles, ſaid to have been erected by the empreſs Helena. The ſtreets are narrow, but well paved with large ſquare ſtones, and are kept very clean. Their gardens are pleaſant, being laid out in vineyards, olive, fig, and piſtachio trees; but the country round it rough and barren. Foreign merchants are numerous here, and tranſact their buſineſs in caravanſeras, or large ſquare buildings, containing their warehouſes, lodging-rooms, and compting-houſes. The city abounds in neat, and ſome of them magnificient moſques, public bagnios, and bazars, or market-places, which are formed into long, narrow, arched or covered ſtreets, with little ſhops, as in other parts of the Eaſt. Their coffee is excellent, and conſidered by the Turks as a high luxury; and their ſweatmeats and fruits are delicious. European merchants live here in greater ſplendour and ſafety than in any other city of the Turkiſh empire, which is owing to particular capitulations with the Porte. Coaches or carriages are not uſed here, but perſons of quality ride on horſe-back with a number of ſervants before them, according to their rank. The Engliſh, French, and Dutch, have conſuls, who are much reſpected, and appear abroad, the Engliſh eſpecially, with marks of diſtinction.

The heat of the country makes it convenient for the inhabitants to ſleep in the open air, here, over all Arabia, and many other parts of the Eaſt, for which reaſon their houſes are flat on the top. This practice accounts for the early acquaintance thoſe nations had with aſtronomy, and the motions of the heavenly bodies, and explains ſome parts of the holy ſcripture. As the Turks are very uniform in their way of living, this account of Aleppo may give the reader an idea of the other Turkiſh cities.

Bagdad, built upon the Tigris, not far, it is ſuppoſed, from the ſite of ancient Babylon, is the capital of the ancient Chaldea, and was the metropolis of the caliphate, under the Saracens in the twelfth century. This city retains but few marks of its ancient grandeur. It is in the form of an irregular ſquare, and rudely fortified, but the conveniency of its ſituation renders it one of the ſeats of the Turkiſh government, and it has ſtill a conſiderable trade, being annually viſited by the Smyrna, Aleppo, and weſtern caravans. The houſes of Bagdad are generally large, built of brick and cement, and arched over to admit the freer circulation of the air: many of their windows are made of elegant Venetian glaſs, and the ceiling ornamented with chequered work. Moſt of the houſes have alſo a court-yard before them, in the middle of which is a ſmall plantation of orange trees. The number of houſes is computed at 80,000, each of which pay an annual tribute to the Baſhaw, which is calculated to produce 300,000l. ſterling. Their bazars, in which the tradeſmen have their ſhops, are tolerably handſome, large, and extenſive, filled with ſhops of all kinds of merchandize, to the number of 12,000. Theſe were erected by the Perſians, when they were in poſſeſſion of the place, as were alſo their bagnios, and almoſt every thing here worthy the notice of a traveller. In this city are five moſques, two of which are well built, and have handſome domes, covered with varniſhed tiles of different colours. Two chapels are permitted for thoſe of the Romiſh and Greek perſuaſions. On the north-weſt corner of the city ſtands the caſtle, which is of white ſtone, and commands the river, conſiſting of curtins and baſtions; on which ſome large cannon are mounted, with two mortars on each baſtion; but in the year 1779, they had become, through neglect, altogether unſerviceable. Below the caſtle, by the water-ſide, is the palace of the Turkiſh governor; and there are ſeveral ſummer-

houſes

houſes on the river, which make a fine appearance. The Arabians, who inhabited this city under the caliphs, were remarkable for the purity and elegance of their dialect.

Ancient Aſſyria is now called the Turkiſh Curdiſtan, though part of it is ſubject to the Perſians. The capital is Curdiſtan; the ancient Nineveh being now a heap of ruins. Curdiſtan is ſaid to be for the moſt part cut out of a mountain, and is the reſidence of a viceroy, or beglerbeg. Orfa, formerly Edeſſa, is the capital of the fine province of Meſopotamia. It is now a mean place, and chiefly ſupported by a manufacture of Turkey leather. Mouſul is alſo in the ſame province, a large place, ſituated on the weſtern ſhore of the Tigris, oppoſite to where Nineveh formerly ſtood.

Georgia, or Gurgiſtan, now no longer ſubject to the Turks, is chiefly peopled by Chriſtians, a brave, warlike race of men. Their capital, Teflis, is a handſome city, and makes a fine appearance, its inhabitants being about 30,000. It is ſituated at the foot of a mountain, by the ſide of the river Kur, and is ſurrounded by ſtrong walls, except on the ſide of the river. It has a large fortreſs on the declivity of the mountain, which is a place of refuge for criminals and debtors, and the garriſon conſiſts of native Perſians. There are fourteen churches in Teflis, ſix of which belong to the Georgians, and the reſt to the Armenians: the Mahometants who are here, have no moſques. In the neighbourhood of the city are many pleaſant houſes, and fine gardens. The Georgians are ſaid, by ſome travellers, to be the handſomeſt people in the world; and ſome think that they owe their beauty to the long uſe of inoculation for the ſmall-pox. They make no ſcruple of ſelling and drinking wines in their capital, and other towns; and their valour has procured them many diſtinguiſhing liberties and privileges. Lately they have formed an alliance with Ruſſia, and claimed its protection.

The ancient cities of Damaſcus, Tyre, and Sidon, ſtill retain part of their former trade. Damaſcus is called Sham, and the approach to it by the river is inexpreſſibly beautiful. It contains a fine moſque, which was formerly a Chriſtian church. It is ſtill famous for its ſteel works, ſuch as ſword-blades, knives, and the like; the excellent temper of which is ſaid to be owing to a quality in the water. The inhabitants manufacture alſo thoſe beautiful ſilks called Damaſks, from their city, and carry on a conſiderable traffick in raw and worked ſilk, roſe-water extracted from the famous damaſk roſes, fruits, and wine. The neighbourhood of this city ſeems highly beautiful, eſpecially to the Turks, who delight in verdure and gardens.

Sidon, now Said, which likewiſe lies within the ancient Phœnicia, has ſtill ſome trade, and a tolerable harbour. The town is ſurrounded with a ſtone wall, a citadel on the land ſide, and another towards the ſea. The houſes are built chiefly of ſtone, and are two ſtories high. The inhabitants are about 16,000, chiefly Chriſtians, of the Greek church, and the place is the ſeat of a biſhop of that perſuaſion. There are in the town two public baths, and two moſques. It ſtands on a neck of land over againſt Tyre, and both form a bay of about 16 miles in breadth.

Tyre, now called Sur, about 20 miles diſtant from Sidon, ſo famous formerly for its rich dye, is now inhabited by ſcarcely any but a few fiſhermen, who live in the ruins of its ancient grandeur. There are ſtrong walls on the land ſide, of ſtone, 18 feet high, and ſeven broad. The circumference of the place is not more than a mile and a half; and Chriſtians and Mahometans make the number of 500. Some of the ruins of ancient Tyre are ſtill viſible. The pavements of the old city, Mr. Bruce tells us that he ſaw, and obſerves that they were $7\frac{1}{2}$ feet lower than the ground upon which the preſent city ſtands.

Paſſing by Tyre (ſays our author, who deſerves much praiſe for ſome happy elucidations

cidations of ſcripture) I came to be a mournful witneſs of the truth of that prophecy, That Tyre, the queen of Nations, ſhould be a rock for fiſhers to dry their nets on *. Two wretched fiſhermen, with miſerable nets, having juſt given over their occupation with very little ſucceſs, I engaged them, at the expence of their nets, to drag in thoſe places where they ſaid ſhell-fiſh might be caught, in hopes to have brought out one of the famous purple-fiſh. I did not ſucceed, but in this I was, I believe, as lucky as the old fiſhers had ever been. The purple fiſh at Tyre ſeems to have been only a concealment of their knowledge of cochineal, as, had they depended upon the fiſh for their dye, if the whole city of Tyre applied to nothing elſe but fiſhing, they would not have coloured twenty yards of cloth in a year †.

Natolia, or Aſia Minor, comprehending the ancient provinces of Lydia, Pamphylia, Piſidia, Lycaonia, Cilicia, Cappadocia, and Pontus, or Amaſia, all of them territories celebrated in the Greek and Roman hiſtory, are now, through the Turkiſh indolence and tyranny, either forſaken, or a theatre of ruins. The ſites of ancient cities are ſtill diſcernible; and ſo luxuriant is nature in thoſe countries, that in many places ſhe triumphs over her forlorn condition. The ſelfiſh Turks cultivate no more land than maintains themſelves; and their gardens and ſummer-houſes fill up the circuit of their moſt flouriſhing cities. The moſt judicious travellers, upon an attentive ſurvey of thoſe countries, fully vindicate all that has been ſaid by ſacred and profane writers of their beauty, ſtrength, fertility, and population. Even Paleſtine or Judea, the moſt deſpicable at preſent of them all, lies buried under the luxuries of its own ſoil. The Turks ſeem particularly fond of repreſenting Judea in the moſt dreadful colours, and have formed a thouſand falſehoods concerning it, which being artfully propagated by ſome among ourſelves, have impoſed upon weak Chriſtians ‡.

Under the government of Sheik Daher, the ally of the famous Ali Bey, ſome part of Paleſtine revived. He enlarged the buildings and walls of St. John de Acre, formerly Ptolemais, and ſhewed great indulgence to the Chriſtians. Its inhabitants were lately computed at 40,000. Caifa, which ſtands on the declivity of mount Carmel, diſtant about 20 miles from Acre, was alſo new built and enlarged by Daher. The ancient Joppa, now Jaffa, 50 miles weſt from Jeruſalem, ſtands on a rocky hill, hath an harbour for ſmall veſſels, and its circumference is about two miles. The number of inhabitants is 7000; the weſtern part of the town is inhabited by Chriſtians. The preſent ſtate of Ramah is deplorable, its walls in decay, and moſt of the houſes empty, though the number of inhabitants is ſtill between 3 and 4000. Not a houſe is ſtanding of the once magnificent city of Ceſarea, but the remains of the walls teſtify its former grandeur. Azotus is about two miles in circumference, the inhabitants are near 3000, and moſtly Mahometans; an old ſtructure is ſhewn here, with fine marble pillars,

* Ezek. chap. xxvi. 5.

† Bruce's Travels vol. I. Introduction, p. lix.

‡ The late reverend Dr. Shaw, profeſſor of Greek at Oxford, who ſeems to have examined that country with an uncommon degree of accuracy, and was qualified by the ſoundeſt philoſophy to make juſt obſervations, ſays, that were the Holy Land as well cultivated as in former times, it would be more fertile than the very beſt parts of Syria and Phœnicia, becauſe the ſoil is generally much richer, and, every thing conſidered, yields larger crops. Therefore the barrenneſs, ſays he, of which ſome authors complain, does not proceed from the natural unfruitfulneſs of the country, but from the want of inhabitants, the indolence which prevails among the few who poſſeſs it, and the perpetual diſcords and depredations of the petty princes who ſhare this fine country. Indeed the inhabitants can have but little inclination to cultivate the earth. "In Paleſtine, ſays Mr. Wood, "we have often ſeen the huſbandman ſowing, ac- "companied by an armed friend, to prevent his "being robbed of the ſeed." And, after all, he who ſows is uncertain whether he ſhall ever reap the harveſt.

which is ſaid to be the houſe that Sampſon pulled down, when inſulted by the Philiſtines. Gaza is ſtill reſpectable; it extends from eaſt to weſt three miles, and is a mile in breadth, divided into the old and new town. The laſt is inhabited by the inferior Turks and Arabs: the number of inhabitants is reckoned to be 26,000. It is about five miles from the ſea, and without the walls is a market for the country people to diſpoſe of their commodities to the inhabitants, for they are not permitted to enter the town. The country around is very fertile, in corn, oil, wine, honey, bees-wax, flax, and cotton.

Whether thoſe countries of Aſia could ever be reſtored to their ancient grandeur, trade, and population, may be a queſtion with ſome; but I apprehend that it would now be impoſſible (let the Turkiſh government be ever ſo beneficent) to divert commerce (without which all attempts of that kind muſt be feeble) from its European channels. There can, however, be no queſtion, that a government leſs brutal and bigoted than that of the Turks, might make the natives a powerful as well as a happy people within themſelves. The misfortune is, that the Greeks, Armenians, and other ſects of Chriſtians there, partake but too much of the Turkiſh ſtupidity. Though they are not ſuffered to wear white turbans, or to ride on horſeback, and are ſubjected to a thouſand indignities and miſeries, and are even, in many places, far more numerous than their oppreſſors, yet ſo abject is their ſpirit, that they make no efforts for their own deliverance. If they are leſs indolent than their oppreſſors, it is becauſe they muſt otherwiſe ſtarve; and they dare not enjoy even the property they acquire, leſt it ſhould be diſcovered to their tyrants, who would conſider it as their own.

COMMERCE AND MANUFACTURES.] Theſe objects are little attended to in the Turkiſh dominions. The nature of their government deſtroys that happy ſecurity which is the mother of arts, induſtry, and commerce; and ſuch is the debaſement of the human mind, when borne down by tyranny and oppreſſion, that all the great advantages of commere, which nature has as it were thrown under the feet of the inhabitants by their ſituation, are here totally neglected. The advantages of Tyre, Sidon, Alexandria, and all thoſe countries which carried on the commerce of the ancient world, are overlooked. They command the navigation of the Red Sea, which opens a communication to the ſouthern ocean, and preſents them with all the riches of the Indies. Whoever looks on a map of Turkey muſt admire the ſituation of their capital, upon a narrow ſtrait that ſeparates Europe from Aſia, and communicates on the ſouth with the Mediterranean ſea, thereby opening a paſſage to all the European nations as well as the coaſts of Africa. The ſame ſtrait, communicating northwards with the Black Sea, opens a paſſage, by means of the Danube and other great rivers, into the interior parts of Germany, Poland, and Ruſſia.

In this extenſive empire, where all the commodities neceſſary for the largeſt plan of induſtry and commerce are produced, the Turks content themſelves with manufacturing cottons, carpets, leather, and ſoap. The moſt valuable of their commodities, ſuch as ſilk, a variety of drugs, and dying ſtuffs, they generally export, without giving them much additional value from their own labour. The internal commerce of the empire is extremely ſmall, and managed entirely by Jews and Armenians. In their traffick with Europe the Turks are altogether paſſive. The Engliſh, French, Dutch, and other Europeans, reſort thither with their commodities, and bring back thoſe of Turkey in the ſame bottoms. They ſeldom attempt any diſtant voyage, and are poſſeſſed of only a few coaſting veſſels in the Aſiatic Turkey; their chief royal navy lying on the ſide of Europe. The inattention of the Turks to objects of commerce is perhaps the beſt ſecurity to their government. The balance of power eſtabliſhed among the princes of Europe, and their jealouſies of

of one another, ſecure to the Infidels the poſſeſſion of countries, which in the hands of the Ruſſians, or any active ſtate, might endanger the commerce of their neighbours, eſpecially their trade with India.

CONSTITUTION AND GOVERNMENT.] The Turkiſh government is commonly exhibited as a picture of all that is ſhocking and unnatural in arbitrary power. But from the late accounts of ſir James Porter, who reſided at the Porte in quality of ambaſſador from his Britannic majeſty, it appears that the rigours of that deſpotic government are conſiderably moderated by the power of religion. For though in this empire there is no hereditary ſucceſſion to property, the rights of individuals may be rendered fixed and ſecure, by being annexed to the church, which is done at an inconſiderable expence. Even Jews and Chriſtians may in this manner ſecure the enjoyment of their lands to the lateſt poſterity; and ſo ſacred and inviolable has this law been held, that there is no inſtance of an attempt on the ſide of the prince to treſpaſs or reverſe it. Neither does the obſervance of this inſtitution altogether depend on the ſuperſtition of the ſultan; he knows that an attempt to violate it would ſhake the foundation of his throne, which is ſolely ſupported by the laws of religion. Were he to treſpaſs theſe laws, he becomes an infidel, and ceaſes to be the lawful ſovereign. The ſame obſervation extends to all the rules laid down in the Koran, which was deſigned by Mahomet both as a political code and as a religious ſyſtem. The laws there enacted, having all the force of religious prejudices to ſupport them, are inviolable; and by them the civil rights of the Mahometans are regulated. Even the comments upon this book, which explain the law where it is obſcure, or extend and complete what Mahomet had left imperfect, are conceived to be of equal validity with the firſt inſtitutions of the prophet; and no member of the ſociety, however powerful, can trangreſs them without cenſure, or violate them without puniſhment.

The Aſiatic Turks, or rather ſubjects of the Turkiſh empire, who hold their poſſeſſions by a kind of military tenure, on condition of their ſerving in the field with a particular number of men, think themſelves, while they perform that agreement, almoſt independent of his majeſty, who ſeldom calls for the head, or the eſtate of a ſubject, who is not an immediate ſervant of the court. The moſt unhappy ſubjects of the Turkiſh government, are thoſe who attain the higheſt dignities of ſtate, and whoſe fortunes are conſtantly expoſed to ſudden alterations, and depend on the breath of their maſter. There is a gradation of great officers in Turkey, of whom the grand viſir, or prime miniſter; the chiaya, ſecond in power to the vizir; the reis effendi, or ſecretary of ſtate; and the aga of the janizaries, are the moſt conſiderable. Theſe, as well as the mufti, or high prieſt, the baſhaws, or governors of provinces, the civil judges, and many others, are commonly raiſed, by their application and aſſiduity, from the meaneſt ſtations in life, and are often the children of Tartars, or Chriſtian ſlaves taken in war. Tutored in the ſchool of adverſity, and arriving at pre-eminence through a thouſand difficulties and dangers, theſe men are generally as diſtinguiſhed for abilities, as deficient in virtue. They poſſeſs all the diſſimulation, intrigue, and corruption which often accompanies ambition in an humble rank; and they have a farther reaſon for plundering the people, becauſe they are uncertain how long they may enjoy the dignities to which they have attained. The adminiſtration of juſtice, therefore, is extremely corrupt over the whole empire; but this proceeds from the manners of the judges, and not from the laws of the kingdom, which are founded upon very equitable principles.

REVENUES.] The riches drawn from the various provinces of this empire muſt be immenſe. According to Baron de Tot, the revenues eſtimated on the records amount to 25,400,000l. but produce effectively only 3,200,000l. to the public

treaſury. The revenues ariſe from the cuſtoms, and a variety of taxes which fall chiefly on the Chriſtians and other ſubjects, not of the Mahometan religion; the rich pay a capitation tax of 30 ſhillings a year; tradeſmen 15 ſhillings, and common labourers 6 ſhillings and 10 pence half-penny. Another branch of the revenue ariſes from the annual tribute paid by the Tartars, and other nations bordering upon Turkey, but governed by their own princes and laws. All theſe, however, are trifling, when compared with the vaſt ſums extorted by the governors of provinces, and officers of ſtate, under the name of *preſents*. Theſe harpies, to indemnify themſelves, as we have already obſerved, exerciſe every ſpecies of oppreſſion that their avarice can ſuggeſt, till, becoming wealthy from the vitals of the countries and people they are ſent to govern, their riches frequently give riſe to a pretended ſuſpicion of diſloyalty or miſconduct, and the whole fortune of the offender devolves to the crown. The devoted victim is ſeldom acquainted with the nature of the offence, or the names of his accuſers; but, without giving him the leaſt opportunity of making a defence, an officer is diſpatched, with an imperial decree, to take off his head. The unhappy baſhaw receives it with the higheſt reſpect, and after he has read it, ſays, *The will of God and the emperor be done*, or ſome ſuch expreſſion, teſtifying his entire reſignation. Then he takes the ſilken cord, which the officer has in his boſom, and having tied it about his neck, and ſaid a ſhort prayer, the officer's ſervants throw him on the floor, and drawing the cord ſtrait, ſoon diſpatch him; after which his head is cut off, and carried to court.

FORCES.] The militia of the Turkiſh empire is of two ſorts: the firſt has certain lands appointed for its maintenance, and the other is paid out of the treaſury. Thoſe that have certain lands amount to about 268,000 troopers, effective men. Beſides theſe, there are alſo certain auxiliary forces raiſed by the tributary countries of this empire; as the Tartars, Walachians, Moldavians, and, till of late, the Georgians, who are commanded by their reſpective princes. The Kan of the Crim Tartars, before his country was ſubjected to Ruſſia, was obliged to furniſh 100,000 men and ſerve in perſon, when the grand-ſignior took the field. In every war, beſides the above forces, there are great numbers of volunteers, who live at their own charge, in expectation of ſucceeding the officers. Theſe adventurers not only promiſe themſelves an eſtate if they ſurvive, but are taught, that if they die in the war againſt the Chriſtians, they ſhall go immediately to paradiſe. The forces which receive their pay from the treaſury, are called the Spahis, or horſe-guards, and are in number about 12,000; and the janizaries, or foot-guards, who are eſteemed the beſt ſoldiers in the Turkiſh armies, amounting to about 25,000 men, who are quartered in and near Conſtantinople. They frequently grow mutinous, and have proceeded ſo far ſometimes as to depoſe the ſultan. They are educated in the ſeraglio, and trained up to the exerciſe of arms from their infancy; and there are no leſs than 100,000 foot-ſoldiers, ſcattered over every province of the empire, who procure themſelves to be regiſtered in this body, to enjoy the privileges of janizaries, which are very great, being ſubject to no juriſdiction but that of their aga, or chief commander.

ARMS AND TITLES.] The emperor's titles are ſwelled with all the pomp of eaſtern magnificence. He is ſtyled by his ſubjects, *the Shadow of God, a God on Earth, Brother to the Sun and Moon, Diſpoſer of all earthly Crowns, &c.* The grand-ſignior's arms are, vert, a creſcent argent, creſted with a turban, charged with three black plumes of heron's quills, with this motto, *Donec totum impleat orbem.*

COURT AND SERAGLIO.] Great care is taken in the education of the youths who are deſigned for the ſtate, the army, or the navy; but they are ſeldom pre-

ferred till about 40 years of age, and they riſe by their merit. They are generally the children of Chriſtian parents, either taken in war, purchaſed, or preſents from the viceroys and governors of diſtant provinces, the moſt beautiful, well made, and ſprightly children that can be met with, and are always reviewed and approved of by the grand-ſignior, before they are ſent to the colleges or ſeminaries, where they are educated for employments according to their genius and abilities.

The ladies of the ſeraglio are a collection of beautiful young women, chiefly ſent as preſents from the provinces and the Greek iſlands, moſt of them the children of Chriſtian parents. The brave prince Heraclius hath for ſome years paſt aboliſhed the infamous tribute of children of both ſexes, which Georgia formerly paid every year to the Porte. The number of women in the harem depends on the taſte of the reigning monarch or ſultan. Selim had 2000. Achmet had but 300, and the preſent ſultan hath nearly 1600. On their admiſſion they are committed to the care of old ladies, taught to ſew and embroider, muſic, dancing, and other accompliſhments, and furniſhed with the richeſt cloaths and ornaments. They all ſleep in ſeparate beds, and between every fifth there is a preceptreſs. Their chief governeſs is called *Katon Kiaga*, or governeſs of the noble young ladies. There is not one ſervant among them, for they are obliged to wait on one another by rotation; the laſt that is entered ſerves her who preceded her. Theſe ladies are ſcarcely ever ſuffered to go abroad, except when the grand-ſignior removes from one place to another, when a troop of black eunuchs conveys them to the boats, which are incloſed with latices and linen curtains; and when they go by land they are put in cloſe chariots, and ſignals are made at certain diſtances, to give notice that none approach the roads through which they march. The boats of the harem, which carry the grand-ſignior's wives, are manned with 24 rowers, and have white covered tilts, ſhut alternately by Venetian blinds. Among the emperor's attendants, are a number of mutes, who act and converſe by ſigns with great quickneſs, and ſome dwarfs who are exhibited for the diverſion of his majeſtey.

When he permits the women to walk in the garden of the ſeraglio, all people are ordered to retire, and on every ſide there is a guard of black eunuchs, with ſabres in their hands, while others go their rounds in order to hinder any perſon from ſeeing them. If unfortunately any one is found in the garden, even through ignorance or inadvertence, he is undoubtedly killed, and his head brought to the feet of the grand-ſignior, who gives a great reward to the guard for their vigilance. Sometimes the grand-ſignior paſſes into the gardens to amuſe himſelf, when the women are there: and it is then that they make uſe of their utmoſt efforts, by dancing, ſinging, ſeducing geſtures, and amorous blandiſhments, to enſnare the affections of the monarch. It is not permitted that the monarch ſhould take a virgin to his bed except during the ſolemn feſtivals, and on occaſion of ſome extraordinary rejoicings, or the arrival of ſome good news. Upon ſuch occaſions, if the ſultan chooſes a new companion to his bed, he enters into the apartment of the women, who are ranged in files by the governeſſes, to whom he ſpeaks, and intimates the perſon he likes beſt: the ceremony of the handkerchief, which the grand-ſignior is ſaid to throw to the girl that he elects, is an idle tale. As ſoon as the grand-ſignior has choſen the girl that he has deſtined to be the partner of his bed, all the others follow her to the bath, waſhing and perfuming her, and dreſſing her ſuperbly, conducting her, ſinging, dancing, and rejoicing, to the bed-chamber of the grand-ſignior, who is generally, on ſuch an occaſion, already in bed. No ſooner has the new-elected favourite entered the chamber, introduced by the grand eunuch who is upon guard, than ſhe kneels down, and when the ſultan calls her, ſhe creeps into bed to him at the foot of the bed, if the ſultan does not order her, by eſpecial grace, to approach by the ſide: after a certain time, upon a ſignal given

given by the ſultan, the governeſs of the girls, with all her ſuite, enter the apartment, and take her back again, conducting her with the ſame ceremony to the women's apartments; and if by good fortune ſhe becomes pregnant, and is delivered of a boy, ſhe is called *aſaki ſultaneſs*, that is to ſay, ſultaneſs-mother; for the firſt ſon, ſhe has the honour to be crowned, and ſhe has the liberty of forming her court, as before mentioned. Eunuchs are alſo aſſigned for her guard, and for her particular ſervice. No other ladies, though delivered of boys, are either crowned or maintained with ſuch coſtly diſtinction as the firſt: however, they have their ſervice apart, and handſome appointments. After the death of the ſultan, the mothers of the male children are ſhut up in the old ſeraglio, from whence they can never come out any more, unleſs any of their ſons aſcend the throne. Baron de Tott informs us, that the female ſlave who becomes the mother of a ſultan, and lives long enough to ſee her ſon mount the throne, is the only woman who, at that period alone, acquires the diſtinction of *Sultana Mother*: ſhe is till then in the interior of her priſon, with her ſon. The title of *Bache Kadun*, principal woman, is the firſt dignity of the grand-ſignior's harem, and ſhe hath a larger allowance than thoſe who have the title of ſecond, third, and fourth woman, which are the four free women the Koran allows.

ORIGIN AND PROGRESS OF THE TURKS.] It has been the fate of the more ſouthern and fertile parts of Aſia, at different periods, to be conquered by that warlike and hardy race of men, who inhabit the vaſt country, known to the ancients by the name of Scythia, and among the moderns by that of Tartary. One tribe of theſe people, called Turks or Turcomans, which name ſignifies *Wanderers*, extended its conqueſts under various leaders, and during ſeveral centuries, from the ſhore of the Caſpian to the ſtraits of the Dardanelles. Being long reſident in the capacity of body guards, about the courts of the Saracens, they embraced the doctrine of Mahomet, and acted for a long time as mercenaries in the armies of contending princes. Their chief reſidence was in the neighbourhood of Mount Caucaſus, from whence they removed to Armenia Major, and after being employed as mercenaries by the ſultans of Perſia, they ſeized that kingdom about the year 1037, and ſpread their ravages over all the neighbouring countries. Bound by their religion to make converts to Mahometaniſm, they never were without a pretence for invading and ravaging the dominions of the Greek emperors, and were ſometimes commanded by very able generals. Upon the declenſion of the caliphate or empire of the Saracens, they made themſelves maſters of Paleſtine; and the viſiting the Holy City of Jeruſalem, being then part of the Chriſtian exerciſes, in which they had been tolerated by the Saracens, the Turks laid the European pilgrims under ſuch heavy contributions, and exerciſed ſuch horrible cruelties upon the Chriſtian inhabitants of the country, as gave riſe to the famous Cruſades, which we have mentioned more fully in the Introduction.

It unfortunately happened, that the Greek emperors were generally more jealous of the progreſs of the Chriſtians than of the Turks; and though, after oceans of blood were ſpilt, a Chriſtian kingdom was erected at Jeruſalem under Godfrey of Boulogne, neither he nor his ſucceſſors were poſſeſſed of any real power for maintaining it. The Turks, about the year 1299, had extended their dominions on every ſide, and poſſeſſed themſelves, under Othman, of ſome of the fineſt provinces in Aſia, of Nice, and Pruſa in Bithynia, which Othman made his capital: from Othman they took the name of Othmans, the appellation of Turks, as it ſignifies in the original, wanderers, or baniſhed men, being conſidered by them as a term of reproach. Othman was ſucceeded by a race of the moſt warlike princes mentioned in hiſtory. About the year 1357, they paſſed the Helleſpont, and got a

footing in Europe, and Amurath ſettled the ſeat of his empire at Adrianople, which he took in the year 1360: under him the order of Janizaries was eſtabliſhed. Bajazet I. after conquering Bulgaria, and defeating the Greek emperor Sigiſmund, laid ſiege to Conſtantinople, in hopes of ſubjecting all the Greek empire. His greatneſs and inſolence provoked Tamerlane, a Tartarian prince, who was juſt then returned from his eaſtern conqueſts, to declare war againſt him. A deciſive battle was fought between thoſe rival conquerors, in Natolia, in the plain where Pompey defeated Mithridates, when Bajazet's army was cut in pieces, and he himſelf taken priſoner, and ſhut up in an iron cage, where he ended his life.

The ſucceſſors of Tamerlane, by declaring war againſt one another, left the Turks more powerful than ever; and though their career was checked by the valour of the Venetians, Hungarians, and the famous Scanderbeg, a prince of Epirus, they gradually reduced the dominions of the Greek emperors; and, after a long ſiege, Mahomet II. took Conſtantinople in 1453. Thus, after an exiſtence of ten centuries, from its firſt commencement under Conſtantine the Great, ended the Greek empire; an event which had been long foreſeen, and was owing to many cauſes; the chief was the total degeneracy of the Greek emperors themſelves, their courts, and families; the diſlike their ſubjects had to the popes, and the weſtern church, one of their patriarchs declaring publicly to a Romiſh legate, "that he would rather ſee a turban than the pope's tiara upon the great altar of Conſtantinople." But as the Turks, when they extended their conqueſt, did not exterminate, but reduce the nations to ſubjection, the remains of the ancient Greeks ſtill exiſt, as we have already obſerved, particularly in Conſtantinople, and the neighbouring iſlands; where, though under grievous oppreſſions, they profeſs Chriſtianity under their own patriarchs of Conſtantinople, Alexandria, Antioch, and Jeruſalem. The Armenians have only three patriarchs, who are richer than thoſe of the Greek church, on account of their people being richer and more converſant in trade. It is ſaid that the modern Greeks, though pining under the tyrannical yoke of the Turkiſh government, ſtill preſerve ſomewhat of the exterior appearance, though nothing of the internal principles which diſtinguiſhed their anceſtors.

The conqueſt of Conſtantinople was followed by the ſubmiſſion of all Greece; and from this time the Turks have been looked upon as an European power.

Mahomet died in 1481, and was ſucceeded by Bajazet II. who carried on war againſt the Hungarians and Venetians, as well as the Perſians and Egyptians. Bajazet falling ill of the gout, became indolent, was harraſſed by family diſſenſions, and at laſt, by order of his ſecond ſon, Selim, he was poiſoned by a Jew phyſician. Selim afterwards ordered his eldeſt brother Achmet to be ſtrangled, with many other princes of the Othman race. He defeated the Perſians and the prince of Mount Taurus; but being unable to penetrate into Perſia, he turned his arms againſt Egypt, which, after many bloody battles, he annexed to his own dominions, in the year 1517, as he did Aleppo, Antioch, Tripoli, Damaſcus, Gaza, and many other towns.

He was ſucceeded, in 1520, by his ſon, Soliman the Magnificent; who, taking advantage of the differences which prevailed among the Chriſtian powers, took Rhodes, and drove the knights from that iſland to Malta, which was given them by the emperor Charles V. The reign of Soliman, after this, was a continual war with the Chriſtian powers, and generally ſucceſsful, both by ſea and land. He took Buda, the metropolis of Hungary at that time, and Belgrade, and carried off near 200,000 captives, A. D. 1526, and, two years afterwards, advanced into Auſtria and beſieged Vienna, but retired on the approach of Charles V.: he miſcarried alſo

in an attempt to take the iſle of Malta. This Soliman is looked upon as the greateſt prince that ever filled the throne of Othman.

He was ſucceeded, in 1566, by his ſon, Selim II. In his reign, the Turkiſh marine received an irrecoverable blow from the Chriſtians, in the battle of Lepanto. This defeat might have proved fatal to the Turkiſh power, had the blow been purſued by the Chriſtians, eſpecially the Spaniards. Selim, however, took Cyprus, from the Venetians, and Tunis in Africa, from the Moors. He was ſucceeded, in 1575, by his ſon Amurath III. who forced the Perſians to cede Taurus, Teflis, and many other cities, to the Turks. He likewiſe took the important fortreſs of Raab, in Hungary; and in 1593, was ſucceeded by Mahomet III. The memory of this prince is diſtinguiſhed by his ordering nineteen of his brothers to be ſtrangled, and ten of his father's concubines, who were ſuppoſed to be pregnant, to be thrown into the ſea. He was often unſucceſsful in his wars with the Chriſtians, and died of the plague in 1604. Though his ſucceſſor Achmet was beaten by the Perſians, yet he forced the Auſtrians to a treaty in 1606, and to conſent that he ſhould keep what he was poſſeſſed of in Hungary. Oſman, a prince of great ſpirit, but no more than ſixteen years of age, being unſucceſsful againſt the Poles, was put to death by the janizaries, whoſe power he intended to have reduced. Morad IV. ſucceeded in 1623, and took Bagdad from the Perſians. His brother Ibrahim ſucceeded him in 1640; a worthleſs, inactive prince, and ſtrangled by the janizaries, in 1648. His ſucceſſor, Mahomet IV. was excellently well ſerved by his grand vizir Cuperli. He took Candia from the Venetians, after it had been beſieged for 30 years. This conqueſt coſt the Venetians, and their allies, 80,000 men, and the Turks, it is ſaid, 180,000. A bloody war ſucceeded between the Imperialiſts and the Turks, in which the latter were ſo ſucceſsful, that they laid ſiege to Vienna, but were forced (as has been already mentioned) to raiſe it with great loſs, by John Sobieſki, king of Poland, and other Chriſtian generals. Mahomet was, in 1687, ſhut up in priſon by his ſubjects, and ſucceeded by his brother Soliman II.

The Turks continued unſucceſsful in their wars during this reign, and that of his brother and ſucceſſor, Achmet II. but Muſtapha II. who mounted the throne in 1694, headed his armies in perſon; after ſome briſk campaigns, he was defeated by prince Eugene; and the peace of Carlowitz, between the Imperialiſts and Turks, was concluded in 1699. Soon after, Muſtapha was depoſed, his mufti was beheaded, and his brother Achmet III. mounted the throne. He was the prince who gave ſhelter, at Bender, to Charles XII. of Sweden; and ended a war with the Ruſſians, by a peace concluded at Pruth. When the Ruſſian army was ſurrounded without hopes of eſcape, the Czarina inclined the grand-vizir to peace by a preſent of all the money, plate, and jewels that were in the army; but the Ruſſians delivered up to the Turks, Aſoph, Kaminieck, and Taiganrog, and agreed to evacuate Poland. Achmet afterwards made war on the Venetians, which alarmed all the Chriſtian powers. The ſcene of action was tranſlated to Hungary, where the Imperial general, prince Eugene, gave ſo many repeated defeats to the infidels, that they were forced to conclude a diſgraceful peace, at Paſſarowitz, in 1718. An unfortunate war with the Perſians, under Kouli Khan, ſucceeding, the populace demanded the heads of the vizir, the chief admiral, and ſecretary, which were accordingly ſtruck off; but the ſultan alſo was depoſed, and Mahomet V. advanced to the throne. He was unſucceſsful in his wars with Kouli Khan, and at laſt obliged to recogniſe that uſurper as king of Perſia. He was, after that, engaged in a war with the Imperialiſts and Ruſſians; againſt the former he was victorious; but the ſucceſſes of the latter, which threatened Conſtantinople itſelf, forced him

to

to agree to a haſty treaty with the emperor, and after that another with the Ruſſians, which was greatly to his advantage. Mahomet died in 1754.

He was ſucceeded by his brother Oſman II. who died in 1757, and was ſucceeded by his brother, Muſtapha III. who died on the 21ſt of January, 1774, whilſt engaged in an unſucceſsful war with the Ruſſians, of which ſome account has been already given in the hiſtory of that country. In the courſe of this war, a conſiderable Ruſſian fleet was fitted out, which ſet ſail from the Baltic, with a view of ſhaking the remote parts of the Archipelago. This fleet having arrived at Minorca, departed from thence in the beginning of February 1770, and ſhaped its courſe for the Morea. Count Orlow having debarked ſuch land forces as he had with him at Maina, which lies a little to the weſtward of cape Metapan, and about 50 miles to the ſouth-weſt of Miſitra, the ancient Sparta; the Mainotes, the deſcendants of the Lacedæmonians, and who ſtill poſſeſſed the country of their anceſtors, under ſubjection to the grand-ſignior, immediately flew to their arms in every quarter, and joined the Ruſſians by thouſands, from their averſion to the tyranny of the Turks. The other Greeks immediately followed their example, or rather only waited to hear the arrival of the Ruſſians, to do what they had long intended; and the whole Morea ſeemed every where in motion. The open country was quickly over-run, and Miſitra, Arcadia, and ſeveral other places, as ſpeedily taken; while the Ruſſian ſhips, that had been ſeparated, or that put into Italy, arrived ſucceſſively, and landed their men in different quarters, where every ſmall detachment ſoon ſwelled to a little army, and the Turks were every where attacked or intercepted. In the mean time the Greeks gave the utmoſt looſe to their revenge, and every where ſlaughtered the Turks without mercy; and the rage and fury with which the inhabitants on the continent were ſeized, extended itſelf to the iſlands, where alſo the Turks were maſſacred in great numbers. They were, indeed, unable to make head againſt the Ruſſians and Greeks in the field; their only protection was found within their fortreſſes. The malcontents had ſo much increaſed ſince the firſt debarkation of the Ruſſians, that they inveſted Napoli di Romania, Corinth, and the caſtle of Patras, with ſeveral other places of leſs note But whilſt they were employed in theſe enterprizes, an army of thirty thouſand men, compoſed chiefly of Albanians and Epirotes, entered the Morea, commanded by Seraſkier, baſha of Boſnia. This Turkiſh general recovered all the northern part of the peninſula, as ſoon as he appeared in it; and all the Greeks that were found in arms, or out of their villages, were inſtantly put to death. The Ruſſians were now driven back to their ſhips; but about the ſame time another Ruſſian ſquadron, commanded by admiral Elphinſton, arrived from England, to reinforce count Orlow's armament. The Turkiſh fleet alſo appeared, and an obſtinate engagement was fought in the channel of Scio, which divides that iſland from Natolia, or the Leſſer Aſia. The Turkiſh fleet was conſiderably ſuperior in force, conſiſting of fifteen ſhips of the line, from ſixty to ninety guns, beſides a number of chebeques and gallies, amounting in the whole to near thirty ſail; the Ruſſians had only ten ſhips of the line, and five frigates. Some of the ſhips engaged with great reſolution, whilſt others on both ſides found various cauſes for not approaching ſufficiently near. But Spiritof, a Ruſſian admiral, encountered the captain pacha, in the Sultane of ninety guns, yard-arm and yard-arm; they both fought with the greateſt fury, and at length run ſo cloſe, that they locked themſelves together with grappling irons and other tackling. In this ſituation, the Ruſſians, by throwing hand-granades from the tops, ſet the Turkiſh ſhip on fire, and as they could not now be diſentangled, both ſhips were in a little time equally in flames. Thus dreadfully circumſtanced, without a poſſibility of ſuccour, they both at length blew up with a

moſt terrible exploſion. The commanders and principal officers on both ſides were moſtly ſaved; but the crews were almoſt totally loſt. The dreadful fate of theſe ſhips, as well as the danger to thoſe that were near them, produced a kind of pauſe on both ſides; after which the action was renewed, and continued till night, without any material advantage on either ſide. When it became dark, the Turkiſh fleet cut their cables, and run into a bay on the coaſt of Natolia: the Ruſſians ſurrounded them thus cloſely pent up, and in the night ſome fire-ſhips were ſucceſsfully conveyed among the Turkiſh fleet, by the intrepid behaviour of lieutenant Dugdale, an Engliſhman in the Ruſſian ſervice, who, though abandoned by his crew, himſelf directed the operations of the fire-ſhips. The fire took place ſo effectually, that in five hours the whole fleet, except one man of war and a few gallies that were towed off by the Ruſſians, was totally deſtroyed; after which they entered the harbour, and bombarded and cannonaded the town, and a caſtle that protected it, with ſuch ſucceſs, that a ſhot having blown up the powder magazine in the latter, both were reduced to a heap of rubbiſh. Thus was there ſcarcely a veſtige left, at nine o'clock, of a town, a caſtle, and a fine fleet, which had been all in exiſtence at one the ſame morning.

Some of the principal military tranſactions by land, in the war between Ruſſia and Turkey, having been already noticed in our account of the former empire, we ſhall here only add, that, after a moſt unfortunate war on the ſide of the Turks, peace was at length concluded between them and the Ruſſians, on the 21ſt of July, 1774, a few months after the acceſſion of the preſent grand-ſignior Achmet IV. The late emperor, Muſtapha III. left a ſon, then only in his 13th year; but as he was too young to manage the reins of government, in the then critical ſituation of the Turkiſh affairs, Muſtapha appointed his brother, the preſent emperor, to ſucceed him in the throne: and to this prince, under the ſtrongeſt terms of recommendation, he confided the care of his infant ſon.

The perſeverance of the Turks, ſupplied by their numerous Aſiatic armies, and the implicit ſubmiſſion to their officers, rather than any excellency in military diſcipline or courage in war, have been the great ſprings of thoſe ſucceſſes which have rendered their empire ſo formidable. The extenſion, as well as duration of their empire, may indeed be in ſome meaſure owing to the military inſtitution of the janizaries, a corps originally compoſed of the children of ſuch Chriſtian parents as could not pay their taxes. Theſe being collected together, were formed to the exerciſe of arms under the eyes of their officers in the Seraglio. They were generally in number about 40,000, long deemed invincible: and they ſtill continue the flower of the Turkiſh armies; but the Ottoman power has been long on the decline. The political ſtate of Europe, and the jealouſies that ſubſiſt among its princes, is now the ſureſt baſis of this empire, and the principal reaſon why the fineſt provinces in the world are ſuffered to remain in the poſſeſſion of theſe ignorant and haughty infidels.

Abdul Hamed, or Achmet IV. grand-ſignior, born 1710, ſucceeded to the throne of Turkey, 21ſt January, 1774, on the death of his brother; he hath three ſons and three daughters.

TAR-

TARTARY IN ASIA.

SITUATION AND EXTENT.

Miles.		Degrees.
Length 4000	between	50 and 150 east longitude.
Breadth 2400		30 and 72 north latitude.

BOUNDARIES.] IT would be deceiving the reader to desire him to depend upon the accounts given us by geographers, of the extent, limits, and situation of these vast regions. Even the empress of Russia and her ministry are ignorant of her precise limits with the Chinese, the Persians, and other nations. Tartary, taken in its fullest extent, is bounded by the Frozen Ocean, on the North; by the Pacific Ocean, on the East; by China, India, Persia, and the Caspian Sea, on the South; and by Muscovy, on the West.

Grand Divisions.	Subdivisions.	Chief Towns.	Sq. M.

	Kalmuck Tartary	Bokharia	850,000
	Usbeck Tartary	Samarcand	339,840

Kamtschatza is a great peninsula, which extends from North to South about seven degrees thirty minutes. It is divided into four districts, Bolcheresk, Tigilskaia Krepost, Verchnei or Upper Kamtschatkoi Ostrog, and Nishnei or Lower Kamtscatkoi Ostrog.

MOUNTAINS.] The principal mountains are Caucasus in Circassia, and the mountains of Taurus and Ararat so contiguous to it, that they appear like a continuation of the same mountain, which crosses all Asia, from Mongrelia to the Indies, and the mountains of Stolp, in the North.

SEAS.] These are the Frozen Ocean, the Pacific Ocean, and the Caspian Sea.

RIVERS.] The principal rivers are, the Wolga, which runs a course of two thousand miles; the Oby, which divides Asia from Europe; the Tabol, Irtis, Genesa or Jenska; the Burrumpooter, the Lena, and the Argun, which divides the Russian and Chinese empires.

AIR, CLIMATE, SOIL, AND PRODUCE.] The air of this country is very different, by reason of its vast extent from north to south; the northern parts reaching beyond the arctic polar circle, and the southern being in the same latitudes with Spain, France, Italy, and part of Turkey.

Nova

Nova Zembla, and Ruſſian Lapland, are moſt uncomfortable regions; the earth, which is covered with ſnow nine months in the year, being extremely barren, and every where incumbered with unwholeſome marſhes, uninhabited mountains, and impenetrable thickneſſes. The climate of Siberia is cold, but the air pure and wholeſome; and Mr. Tooke obſerves, that its inhabitants in all probability would live to an extreme old age, if they were not ſo much addicted to the abuſe of ſpirituous liquors. Siberia produces rye, oats, and barley, almoſt to the 60th degree of northern latitude. Cabbages, radiſhes, turnips, and cucumbers, thrive here tolerably well: but ſcarcely any other greens. All experiments to bring fruit trees to bear, have hitherto proved vain: but there is reaſon to believe that induſtry and patience may at length overcome the rudeneſs of the climate. Currants and ſtrawberries of ſeveral ſorts are ſaid to grow here in as great perfection as in the Engliſh gardens. Herbs, as well medicinal as common, together with various edible roots, are found very generally here: but there are no bees in all Siberia. Aſtrachan, and the ſouthern parts of Tartary, are extremely fertile, owing more to nature than induſtry. The parts that are cultivated produce excellent fruits of almoſt all the kinds known in Europe, eſpecially grapes, which are reckoned the largeſt and fineſt in the world. Their ſummers are very dry; and from the end of July to the beginning of October, the air is peſtered, and the ſoil ſometimes ruined, by incredible quantities of locuſts. Mr. Bell, who travelled with the Ruſſian ambaſſador to China, repreſents ſome parts of Tartary as deſirable and fertile countries, the graſs growing ſpontaneouſly to an amazing height. The country of Thibet is the higheſt in Aſia, and forms a portion of that elevated region, which gives riſe to the rivers of India and China, and thoſe of Siberia and other parts of Tartary.

METALS AND MINERALS.] It is ſaid that Siberia contains mines of gold, ſilver, copper, iron, jaſper, lapis lazuli, and loadſtones; a ſort of large teeth found here creates ſome diſpute among the naturaliſts, whether they belong to elephants, or are a marine production; their appearance is certainly whimſical and curious, when poliſhed with art and ſkill.

ANIMALS.] Theſe are camels, dromedaries, bears, wolves, and all the other land and amphibious animals that are common in the northern parts of Europe. Their horſes are of a good ſize for the ſaddle, and very hardy: as they run wild till they are five or ſix years old, they are generally headſtrong. Near Aſtrachan there is a bird called by the Ruſſians *baba*, of a grey colour, and ſomething larger than a ſwan; he has a broad bill, under which hangs a bag that may contain a quart or more; he wades near the edge of a river, and on ſeeing a ſhoal or fry of ſmall fiſhes, ſpreads his wings and drives them to a ſhallow where he gobbles as many of them as he can put into his bag, and then going aſhore, eats them or carries them to the young. Some travellers take this bird to be the pelican.

The foreſts of Siberia are well ſtocked with a variety of animals, ſome of which are not to be found in other countries. Theſe ſupply the inhabitants with food and cloaths; and, at the ſame time, furniſh them with commodities for an advantageous trade. Siberia may be conſidered as the native country of black foxes, ſables, and ermines, the ſkins of which are ſuperior to thoſe of any part of the world. Horſes and cattle are in great plenty, and ſold at low prices.

POPULATION, INHABITANTS, MANNERS, CUSTOMS, DIVERSIONS, AND DRESS.] The populouſneſs of Tartary is far from being proportional to its extent. The inhabitants are, in general, ſtrong made, ſtout men; their faces broad, their noſes flattiſh, their eyes ſmall and black, but very quick; their beards are ſcarcely viſible, as they continually thin them by pulling up the hairs by the roots.

The beauty of the Circaſſian women is a ſtaple commodity; for parents make no ſcruple of ſelling their daughters to recruit the ſeraglios, or rather *harems*, of

the great men of Turkey and Perſia. They are purchaſed, when young, by merchants, and taught ſuch accompliſhments as ſuit their capacities, to render them more valuable againſt the day of ſale.

According to Mr. Bruce, the Circaſſian women are extremely well ſhaped, with exceeding fine features, ſmooth clear complexions, and beautiful black eyes, which with their black hair hanging in two treſſes, one on each ſide the face, give them a moſt lovely appearance: they wear a black coif on their heads, covered with a fine white cloth tied under the chin. During the ſummer they all wear only a ſmock of divers colours, open ſo low before, that one may ſee below their navels: this, with their beautiful faces always uncovered, (contrary to the cuſtom of moſt of the other provinces in thoſe parts), their good humour and lively freedom in converſation, contributes to render them very deſirable: they have the reputation of being very chaſte, although it is an eſtabliſhed point of good manners among them, that as ſoon as any perſon comes to ſpeak to the wife, the huſband goes out of the houſe: but whether their continency proceeds from their own generoſity, to recompence the confidence of their huſbands, or has its foundation only in fame, I pretend not to determine. Their language they have in common with the other neighbouring Tartars, although the chief people among them are alſo not ignorant of the Ruſſian; the apparel of the men of Circaſſia is much the ſame with that of the Nagayans, only their caps are ſomething larger, and their cloaks being likewiſe of coarſe cloth or ſheep-ſkins, are faſtened only at the neck with a ſtring, and as they are not large enough to cover the whole body, they turn them round according to the wind and weather.

The Tartars are in general great wanderers; in their peregrinations they ſet out in the ſpring, their number in one body being frequently 10,000, preceded by their flocks and herds. When they come to an inviting ſpot, they live upon it till all its graſs and verdure is eaten up. They have little money, except what they get from their neighbours the Ruſſians, Perſians, or Turks, in exchange for cattle; with this they purchaſe cloth, ſilks, ſtuffs, and other apparel for their women. They have few mechanics, except thoſe who make arms. They avoid all labour as the greateſt ſlavery; their only employment is tending their flocks, hunting, and managing their horſes. If they are angry with a perſon, they wiſh he may live in one fixed place, and work like a Ruſſian. Among themſelves they are ſocial, and extremely hoſpitable to ſtrangers and travellers, who confidentially put themſelves under their protection. They are naturally of an eaſy chearful temper, always diſpoſed to laughter, and ſeldom depreſſed by care or melancholy. There is a ſtrong reſemblance between the northern and independent Tartars and ſome nations of Canada in North America; particularly, when any of their people are infirm through great age, or ſeized with diſtempers reckoned incurable, they make a ſmall hut for the patient near ſome river, in which they leave him with ſome proviſions, and ſeldom or never return to viſit him. On ſuch occaſions they ſay they do their parents a good office, in ſending them to a better world. Notwithſtanding this behaviour, many nations of the Tartars, eſpecially towards the ſouth, are tractable, humane, and ſuſceptible of pious and virtuous ſentiments. Their affection for their fathers, and their ſubmiſſion to their authority, cannot be exceeded; and this noble quality of filial love has diſtinguiſhed them in all ages. Hiſtory tells us, that Darius, king of Perſia, having invaded them with all the forces of his empire, and the Scythians retiring by little and little, Darius ſent an ambaſſador to demand where it was they propoſed to conclude their retreat, and when they intended to begin fighting. They returned for anſwer, "That they had no cities or cultivated fields, for the defence of which they ſhould give him battle; but when once he was come to the place of their fathers' monuments, he ſhould then underſtand in what manner the Scythians uſed to fight."

The

The Tartars are inured to horſemanſhip from their infancy; they ſeldom appear on foot. They are dextrous in ſhooting at a mark, inſomuch that a Tartar, while at full gallop, will ſplit a pole with an arrow, though at a conſiderable diſtance. The dreſs of the men is very ſimple, and fit for action; it generally conſiſts of a ſhort jacket, with narrow ſleeves made of deer ſkin, having the fur outward; trowſers and hoſe of the ſame kind of ſkin, both of one piece, and light to the limbs. The Tartars live in huts half ſunk under ground; they have a fire in the middle, with a hole in the top to let out the ſmoke, and benches round the fire to ſit or lie upon. This ſeems to be the common method of living among all the northern nations, from Lapland eaſtward, to the Japaneſe ocean. In the extreme northern provinces, during the winter, every family burrows itſelf under ground; and we are told, that ſo ſociable are they in their diſpoſitions, that they make ſubterraneous communications with each other, ſo that they may be ſaid to live in an inviſible city. The Tartars are immoderately fond of horſe-fleſh, eſpecially if it be young, and a little tainted, which makes their cabins extremely nauſeous. Though horſe-fleſh be preferred raw by ſome northern tribes, the general way of eating it is after it has been ſmoked and dried. The Tartars purchaſe their wives with cattle. In their marriages they are not very delicate. Little or no difference is made between the child of a concubine or ſlave, and that of the wife; but among the heads of tribes the wife's ſon is always preferred to the ſucceſſion. After a wife is turned of forty ſhe is employed in menial duties as another ſervant, and as ſuch muſt attend the young wife who ſucceeds to her place; nor is it uncommon, in ſome of the more barbarous tribes, for a father to marry his own daughter.

The deſcendants of the old inhabitants of Siberia are ſtill moſt of them idolaters. They conſiſt of many nations, entirely differing from each other in their manner of living, religion, language, and countenances. But in this they agree, that none of them follow agriculture, which is carried on by ſome Tartar tribes, chiefly by thoſe converted to Chriſtianity. A few of them breed cattle, and others follow hunting. The population of Siberia has been much increaſed ſince it became a Ruſſian province; for the Ruſſians have founded therein a number of towns, fortreſſes, and villages. Notwithſtanding which it preſents but a void and deſert view; ſince, by its extent, it is capable of ſupporting ſeveral millions more than it at preſent contains. For the manners and cuſtoms of the other Tartars belonging to the Ruſſian empire, we refer to our account of that country.

RELIGION.] The religion of the Tartars is variouſly modified by that of their neighbours; for it partakes of the Mahometan, the Gentoo, the Greek, and even the Popiſh religions. Some of them are the groſſeſt idolaters, and worſhip little rude images dreſſed up in rags. Each has his own deity, with whom he makes very free when matters do not go according to his mind.

The Circaſſians are Pagans, for, notwithſtanding they uſe circumciſion, they have neither prieſt, alcoran, or moſque, like other Mahometans. Every body here offers his own ſacrifice at pleaſure, for which, however, he has certain days, eſtabliſhed, rather by cuſtom than any poſitive command: their moſt ſolemn ſacrifice is offered at the death of their neareſt friends, upon which occaſion both men and women meet in the field to be preſent at the offering, which is a he-goat; and having killed it, they flay it, and ſtretch the ſkin with the head and horns on, upon a croſs at the top of a long pole, placed commonly in a quickſet hedge, (to keep the cattle from it), and near the place the ſacrifice is offered by boiling and roaſting the fleſh, which they afterwards eat. When the feaſt is over, the men riſe, and having paid their adoration to the ſkin, and muttering certain prayers, the women withdraw, and the men conclude the ceremony with drinking a great quantity of vitæ, and often with a quarrel.

But the religion and government of the kingdon of Thibet, and Laſſa, a large tract of Tartary, bordering upon China, are moſt worthy of attention. The Thibetians are governed by the Grand Lama, or Delai Lama, who is not only ſubmitted to, and adored by them, but is alſo the great object of adoration for the various tribes of Heathen Tartars, who roam through the vaſt tract of continent which ſtretches from the banks of the Wolga, to Korea on the ſea of Japan. He is not only the ſovereign pontiff, the vicegerent of the Deity on earth: but, as ſuperſtition is ever the ſtrongeſt where it is moſt removed from its object, the more remote Tartars abſolutely regard him as the Deity himſelf. They believe him to be immortal, and endowed with all knowledge and virtue. Every year they come up from different parts, to worſhip and make rich offerings at his ſhrine: even the emperor of China, who is a Manchou Tartar, does not fail in acknowledgements to him in his religious capacity, though the Lama is tributary to the emperor, and actually entertains, at a great expence, in the palace of Peking, an inferior Lama, deputed as his nuncio from Thibet. The opinion of thoſe who are reputed the moſt orthodox among the Thibetians is, that when the Grand Lama ſeems to die, either of old age or infirmity, his ſoul in fact only quits a crazy habitation, to look for another younger or better, and it is diſcovered again in the body of ſome child, by certain tokens known only to the lamas or prieſts, in which order he always appears. In 1774, the Grand Lama was an infant, which had been diſcovered ſome time before by the Tayoſhoo Lama, who in authority and ſanctity of character is next to the Grand Lama, and during his minority acts as chief. The lamas, who form the moſt numerous, as well as the moſt powerful body in the ſtate, have the prieſthood entirely in their hands; and, beſides, fill up many monaſtic orders, which are held in great veneration among them. The reſidence of the Grand Lama is at Patoli, a vaſt palace on a mountain near the banks of the Burampooter, about ſeven miles from Laſſa. The Engliſh Eaſt India Company made a treaty with the Lama in 1774 *. The religion of Thibet, though in many reſpects it differs from that of the Indian Bramins, yet in others has a great affinity to it. The Thibetians have a great veneration for the cow, and alſo highly reſpect the waters of the Ganges, the ſource of which they believe to be in heaven. The Sunniaſſes, or Indian pilgrims, often viſit Thibet as an holy place, and the Lama always entertains a body of two or three hundred in his pay. Beſides his religious influence and authority, the Grand Lama is poſſeſſed of unlimited power throughout his dominions, which are very extenſive, and ſtretch to Bengal.

Another religion, which is very prevalent among the Tartars, is that of Schamaniſm. The profeſſors of this religious ſect believe in one Supreme God, the Creator of all things. They believe that he loves his creation, and all his creatures; that he knows every thing, and is all-powerful; but that he pays no attention to the particular actions of men, being too great for them to be able to offend him, or to do any thing that can be meritorius in his ſight. But they alſo maintain, that the Supreme Being has divided the government of the world, and the deſtiny of men, among a great number of ſubaltern divinities, under his command and controul, but who nevertheleſs generally act according to their own fancies; and therefore mankind cannot diſpenſe with uſing all the means in their power for obtaining their favour. They likewiſe ſuppoſe, that, for the moſt part, theſe inferior deities abominate and puniſh premeditated villainy, fraud, and cruelty. They are all firmly perſuaded of a future exiſtence; but they have many ſuperſtitious notions and prac-

* The fort of Dellamcotta, which commanded the principal paſs through the ridge of the Bootan mountains, was taken by ſtorm by captain Jones in 1773, and the fame of this exploit made the Thibetians ſue for peace.

tices,

tices. Among all the Schamanes, women are conſidered as beings vaſtly inferior to men, and are thought to have been created only for their ſenſual pleaſure, to people the world, and to look after houſehold affairs: and in conſequence of theſe principles, they are treated with much ſeverity and contempt.

LEARNING.] The reader may be ſurpriſed to find this article in ſpeaking of Tartars; yet nothing is more certain than that, under Zingis Khan and Tamerlane, and their early deſcendants, Aſtrachan and the neighbouring countries were the ſeats of learning and politeneſs, as well as empire and magnificence. Modern luxury, be it ever ſo ſplendid, falls ſhort of that of thoſe princes; and ſome remains of their taſte in architecture are ſtill extant, but in ſpots ſo deſolate that they are almoſt inacceſſible. The encouragement of learning was the firſt care of the prince, and it was generally cultivated by his own relations or principal grandees. They wrote in the Perſian and Arabic tongues; and their hiſtories, many of which are ſtill extant in manuſcript, carry with them the ſtrongeſt marks of authenticity.

CURIOSITIES.] Theſe are comprehended in the remains of the buildings left by the above mentioned great conquerors and their ſucceſſors. Remains of ditches and ramparts are frequently met with, which heretofore either ſurrounded ſmall towns, now quite demoliſhed, or defended camps, forts, or caſtles, the veſtiges of which are often to be diſcovered. The ſlabode, or Tartarian ſuburb of Kaſimof, on the Oha, ſeems to have been the reſidence of ſome khan. In the midſt of the ruins of that city is a round and elevated tower, called in their language *Miſquir*, a ſort of temple. Here are alſo the remains of the walls of a palace; and in one of the maſarets, or burial places, is a very conſiderable mauſoleum, all which edifices are built of hewn ſtone and bricks. From an Arabic inſcription we learn, that the khan Schagali was buried there in the 962d year of the hegira, or the 1520th of the Chriſtian æra. Near Mount Caucaſus are ſtill very conſiderable remains of Madſchar, a celebrated city of former times. Near Derbent are numerous tombs covered with cylindrical ſtones, exceeding the uſual ſtature of men, with Arabic inſcriptions. In the environs of Aſtrachan the ruins of ancient Aſtrachan are very viſible; and the rubbiſh and ramparts of another reſpectable town ſtill exiſts near Tzaritzin, on the left ſhore of the Wolga. A little below the mouth of the Kama, which empties itſelf into the above mentioned river, are many ſuperb monuments of the ancient city Bulgaria, conſiſting of towers, moſques, houſes, and ſepulchres, all built of ſtone or brick. The oldeſt epitaphs have been there more than eleven centuries, and the moſt modern at leaſt four hundred years. Not far from hence, on the Tſcheremtſcham, a little river that runs into the Wolga, are found ruins ſomewhat more injured by the depredations of time: they are thoſe of Boulymer, an ancient and very conſiderable city of the Bulgarians. The Tartars have erected upon its ruins the ſmall town of Bilyairſk.

In the fortreſs of Kaſan is a monument of the ancient Tartarian kingdom of that name. Its lofty walls are ſo broad, that they ſerve at preſent for ramparts: the turrets of which, as well as the old palace of the khan, are built of hewn ſtone. Aſcending the river Kaſanha, we meet with epitaphs, and the ſtrong ramparts of the old Kaſan. Near the Oufa are cemeteries full of innumerable inſcriptions, and ſeveral ſepulchral vaults. The ramparts of Sibir, the ancient capital of Tartary, are ſtill ſeen about Tobolſk upon the Irtiſch. The lofty walls of Tontoura appear yet in the Baraba, a little gulf in the river Om; and near the mouth of the Oural are the ditches of the city Saratſchik. Not to mention the great number of other cities and ruins of Siberia; and eſpecially all thoſe that are to be met with in the deſert of Kirguis, which abounds in the relics of opulent cities. Some gold and ſilver coins have likewiſe been found, with ſeveral manuſcripts neatly written, which have been carried to Peterſburg. In 1720, ſays M. Voltaire, in his Hiſtory of Peter the Great, there were found in Kalmuc Tartary a ſubterraneous houſe of ſtone, ſome

urns, lamps, and ear-rings, an equeſtrian ſtatue, an Oriental prince with a diadem on his head, two women ſeated on thrones, and a roll of manuſcripts, which was ſent by Peter the Great to the Academy of Inſcriptions at Paris, and proved to be in the language of Thibet. About 80 miles from Laſſa is the lake Palte, or Jangſo; of ſuch extent, according to the natives, that it requires 18 days to walk round it. In the middle of it are iſlands, one of which is the ſeat of the *Lamiſſa Turcopama*, or the *great regenerate*, in whom the Thibetians think a divine ſpirit inhabits as in the Great Lama.

CITIES AND TOWNS.] Of theſe we know little but the names, and that they are in general no better than fixed hordes. They may be ſaid to be places of abode rather than towns or cities, for we do not find that they are under any regular government, or that they can make a defence againſt an enemy. The few places, however, that are mentioned in the preceding diviſions of this country, merit notice. Tobolſk and Aſtrachan are conſiderable cities; the firſt containing 15,000, and the latter 70,000 inhabitants. Forts, villages, and towns have alſo been lately erected in different parts of Siberia, for civilizing the inhabitants, and rendering them obedient to the Ruſſian government.

Teki, the capital of Circaſſian Tartary, is ſeated in a ſpacious plain on an iſland formed by the rivers Terki and Buſtrow, and is garriſoned by 2000 regulars, and 1000 Coſſacks. It is well fortified with ramparts and baſtions in the modern ſtyle, well ſtored with cannon, and has always a conſiderable garriſon in it, under the command of a governor. The Circaſſian prince who reſides here, is allowed five hundred Ruſſians for his guard, but none of his own ſubjects are permitted to dwell within any part of the fortifications. Ever ſince the reduction of thoſe parts to the obedience of Ruſſia, they have put in all places of ſtrength, not only Ruſſian garriſons and governors, but magiſtrates, and prieſts for the exerciſe of the Chriſtian religion; yet the Circaſſian Tartars are governed by their own princes, lords, and judges, but theſe adminiſter juſtice in the name of the empreſs, and in matters of importance, not without the preſence of the Ruſſian governors, being all obliged to take the oath of allegiance to her Imperial majeſty.

Tarku is the capital of Dageſtan, and contains 3000 houſes, two ſtories high, platformed at top for walking. The Tartars of this province are numerous, and Mahometans, governed by a ſhefkal, whoſe office is elective. The city of Derbent is ſituated on the Caſpian ſhore, and called the frontier of Perſia. It is ſaid to have been firſt built by Alexander the Great, and that he here received the viſit from the Amazonian queen Thaleſtris. It is now incloſed with a broad ſtrong wall, built with large ſquare ſtones, hard as marble, from the quarries in Caucaſus. Laſſa is a ſmall city, but the houſes are of ſtone, and are ſpacious and lofty.

COMMERCE AND MANUFACTURES.] This head makes no figure in the hiſtory of Tartary, their chief traffick conſiſting in cattle, ſkins, beavers, rhubarb, muſk, and fiſh. The Aſtrachans, notwithſtanding their interruptions by the wild Tartars, carry on a conſiderable traffic into Perſia, to which they export leather, woollen and linen cloth, and ſome European manufactures.

HISTORY.] Though it is certain that Tartary, formerly known by the name of Scythia, peopled the northern parts of Europe, and furniſhed thoſe amazing numbers who, under various names, deſtroyed the Roman empire, yet it is now but very thinly inhabited; and thoſe fine provinces, where learning and the arts reſided, are now ſcenes of horror and barbarity. This muſt have been owing to the dreadful maſſacres made among the nations by the two above-mentioned conquerors and their deſcendants; for nothing is more common in their hiſtories than their putting to the ſword three or four hundred thouſand people in a few days.

The country of Uſbec Tartary was once the ſeat of a more powerful empire than

than that of Rome or Greece. It was not only the native country, but the favourite reſidence of Zingis Khan and Tamerlane, who enriched it with the ſpoils of India and the eaſtern world. The former, about the year 1200 made himſelf maſter of thoſe regions, which form at this day the Aſiatic part of the Ruſſian empire; and his ſon Batou Sagin conquered Southern Ruſſia, and peopled it with Tartar colonies, which are now confounded or blendid with the Ruſſians. Long and heavily did the Tartar yoke gall the neck of Ruſſia, till alleviated by diviſions among the conquerors. But not till the time of Ivan III. who aſcended the Ruſſian throne in 1462, were the Ruſſians delivered from theſe warlike invaders. He repeatedly defeated them, ſubdued the kingdom of Kaſan and other provinces, and made his name reſpected in all that quarter.

Tamerlane's memory hath been more permanent than that of Zingis Khan, whoſe defeat of the Turkiſh emperor Bajazet hath been before noticed in the hiſtory of that nation. His deſcent is claimed not only by all the Khans and petty princes of Tartary, but by the emperor of Indoſtan himſelf. The capital of this country is Bokaria, which was known to the anients by the name of Bucharia; ſituated in the latitude of 39 degrees 15 minutes, and 13 miles diſtant from the once famous city of Samarcand, the birth-place of Tamerlane the Great, who died in the year 1405.

The preſent inhabitants of this immenſe common compoſe innumerable tribes, who range at pleaſure with their flocks and herds in the old patriarchal manner. Their tribes are commanded by ſeparate Khans or leaders, who, upon particular emergencies, elect a great Khan, inveſted with a paramount power over ſtrangers as well as natives, and whoſe forces often amount to 100,000 horſemen. His chief reſidence is a kind of military ſtation, which is moved and ſhifted according to the chance of war and other occaſions.

Beſides what may be learned from their hiſtory and traditions, the ſtandard or colours of the reſpective tribes form a diſtinctive mark, whereby each Tartar knows the tribe to which he belongs. Theſe marks of diſtinction conſiſt of a piece of Chineſe linen, or other coloured ſtuff, ſuſpended on a lance, twelve feet in length, among the Pagan Tartars. The Mahometan Tartars write upon their ſtandards the name of *God*, in the Arabic language. The Kalmucs and the Mogul Tartars diſtinguiſh theirs by the name of ſome animal; and as all the branches, or diviſions of a tribe preſerve the figure drawn upon the ſtandard of that tribe, adding only the particular denomination of each branch, thoſe ſtandards anſwer the purpoſe of a genealogical table or tree, by which each individual knows his origin and deſcent.

They are bounded on every ſide by the Ruſſian, the Chineſe, the Mogul, the Perſian, and the Turkiſh empires; each of whom are puſhing on their conqueſts in this extenſive, and in ſome places, fertile country. The Khans pay a tribute, or acknowledgment of their dependency to one or other of their powerful neighbours, who treat them with caution and lenity; as the friendſhip of theſe barbarians is of the utmoſt conſequence to the powers with whom they are allied. Some tribes, however, affect independency; and when united they form a powerful body, and of late have been very formidable to their neighbours, particularly to the Chineſe, as we ſhall mention in our account of that empire. The method of carrying on war, by waſting the country, is very ancient among the Tartars, and practiſed by all of them from the Danube eaſtward. This circumſtance renders them a dreadful enemy to regular troops, who muſt thereby be deprived of ſubſiſtence; while the Tartars, having always many ſpare horſes to kill and eat, are at no loſs for proviſions.

THE EMPIRE OF CHINA.

SITUATION AND EXTENT.

Miles.		Degrees.	Sq. Miles.
Length 1450, Breadth 1260	between	20 and 42 north latitude. 98 and 123 east longitude.	1,105,100
To which ſhould be added Chineſe Tartary.			644,000

BOUNDARIES.] IT is bounded by the Chineſe Tartary, and an amazing ſtone wall, of five hundred leagues in length, on the North; by the Pacific Ocean, which divides it from North America, on the Eaſt; by the Chineſian Sea, South; and by Tonquin, and the Tartarian countries and mountains of Thibet and Ruſſia, on the Weſt.

DIVISIONS.] The great diviſion of this empire, according to the authors of the Univerſal Hiſtory, and the abbé Groſier, in his general Deſcription of China, is into fifteen provinces (excluſive of that of Lyau-tong, which is ſituated without the Great Wall, though under the ſame dominion); each of which might, for their largeneſs, fertility, populouſneſs, and opulence, paſs for ſo many diſtinct kingdoms. We have the following account of the diviſion of this kingdom from the beſt authority. It will be of uſe in conſulting the map.

Provinces.	Chief Towns.
Pe-tcheli	Pekin
Kiang-nan	Kiang-ning-fou

CHINESE TARTARY.

This is bounded on the north by Siberia; on the eaſt by the Gulf of Kamtſchatka and the eaſtern ſea; on the ſouth by China; and on the weſt by the country of the Kalmouks, who are eſtabliſhed between the Caſpian ſea, and Caſghar.

EASTERN CHINESE TARTARY.

Extends north and ſouth from the 41ſt to the 55th degree of north latitude, and eaſt and weſt from about the 137th degree of longitude to the eaſtern ſea. It is bounded on the north by Siberia; on the ſouth by the Gulf of Lea-tong and Corea; on the eaſt by the eaſtern ſea; and on the weſt by the country of the Moguls. The country is divided into three grand departments.

Provinces.	Chief Towns.

But

But it is neceſſary to acquaint the reader, that the informations contained in Du Halde's voluminous account of China, are drawn from the papers of Jeſuits, and other monks ſent hither by the pope, but whoſe miſſions have been at an end for above half a century. Some of thoſe fathers were men of penetration and judgment, and had great opportunities of information; but their accounts of this empire are juſtly to be ſuſpected. They had powerful enemies at the court of Rome, where they maintained their footing only by magnifying their own labours and ſucceſſes, as well as the importance of the Chineſe empire. If their accounts are to be received with much caution, much more are thoſe of ſucceeding travellers, who have it ſcarce in their power to enter the empire farther, than what is abſolutely neceſſary for the purpoſes of trade. On account of this want of information, therefore, which is acknowledged even by Mr. Groſier, the lateſt writer on the ſubject, we muſt be much more brief in our deſcription of this celebrated empire, than otherwiſe we would wiſh to be.

NAME.] It is probably owing to a Chineſe word, ſignifying *Middle*, from a notion entertained by the natives that their country lay in the middle of the world.

MOUNTAINS.] China, except to the north, is a plain country, and contains no remarkable mountains.

RIVERS AND WATER.] The chief are the Yamour and the Argun, which are the boundary between the Ruſſian and Chineſe Tartary; the Croceus, or Whambo, or the Yellow River; the Kiam, or the Blue River; and the Tay. Common water in China is very indifferent, and in ſome places boiled to make it fit for uſe.

BAYS.] The chief are thoſe of Nanking and Canton.

CANALS.] Theſe are ſufficient to entitle the ancient Chineſe to the character of the moſt induſtrious people in the world. The commodiouſneſs and length of their canals are incredible. The chief of them are lined with hewn ſtone on the ſides, and they are ſo deep that they carry large veſſels, and ſometimes extend above 1000 miles in length. That is a moſt celebrated canal which extends from Canton as far as Peking, and which forms a communication between all the ſouthern and northern provinces. This work, which is called *The Royal Canal*, is ſix hundred leagues in length; and its navigation is no where interrupted but by the mountain *Meiling*, where paſſengers are obliged to travel ten or twelve leagues over land. In this principal canal many others end, which ſtretch out into the country, and form a communication between the neighbouring cities, towns, and villages. The greater part of thoſe private canals have been executed by the induſtry of the inhabitants of theſe cities and towns, who have ſpared neither labor nor expence to preſerve an eaſy conveyance of their goods into all the provinces of the empire. The veſſels which navigate theſe canals are fitted up for all the conveniencies of life; and it has been thought by ſome, that in China the water contains as many inhabitants as the land. They are furniſhed with ſtone quays, and ſometimes with bridges of an amazing conſtruction. The navigation is ſlow, and the veſſels ſometimes drawn by men. No precautions are wanting, that could be formed by art or perſeverance, for the ſafety of the paſſengers, in caſe a canal is croſſed by a rapid river, or expoſed to torrents from the mountains. Theſe canals, and the variety that is ſeen upon their borders, renders China delightful to the eye, as well as fertile, in places naturally barren and diſagreeable.

FORESTS.] Such is the induſtry of the Chineſe, that they are not encumbered with foreſts, though no country is better fitted for producing timber of all kinds. They ſuffer, however, none to grow but for ornament or uſe, or on the ſides of mountains, from whence the trees, when cut down, can be conveyed by water.

AIR, SOIL, AND PRODUCE.] The air of this empire is according to the ſituation

of the places. Towards the north it is ſharp, in the middle mild, and in the ſouth hot. All travellers agree in their accounts of the fertility of China, and of the extent and beauty of its plains. Neither incloſures, hedges, nor ditches are ſeen in them; ſcarcely even is there found a ſingle tree: ſo careful is the Chineſe huſbandman not to loſe the ſmalleſt portion of his land. The plains of the northern provinces produce wheat, thoſe of the ſouth, rice, becauſe the country is low, and covered with water. In ſeveral provinces there are two crops in a year; and even in the interval between the harveſts, the people ſow ſeveral kinds of pulſe, and other ſmall grain. The culture of the cotton, and the rice fields, from which the bulk of the inhabitants are clothed and fed, is extremely ingenious. The rare trees, and aromatic productions, either ornamental or medicinal, that abound in other parts of the world, are to be found in China, and ſome are peculiar to itſelf; but even a catalogue of them would form a little volume. Some, however, muſt be mentioned.

The *cotton-tree*, the produce of which forms one of the moſt conſiderable branches of the commerce of China, is cultivated with ſucceſs in the ſouthern provinces. Even on the very day that the labourers have reaped their grain, they ſow cotton in the ſame field, after having turned up the earth ſlightly with a rake. When the rain or dew has moiſtened the ground, a ſhrub is ſeen inſenſibly ſpringing up, which riſes to the height of two feet. The flowers appear about the beginning, or towards the middle of Auguſt. They are generally yellow; but ſometimes red. To the flower ſucceeds a button, which increaſes in the form of a pod, till it acquires the ſize of a walnut. The fortieth day after the flower has appeared, this pod burſts, divides itſelf into three parts, and diſcovers three or four ſmall cotton balls of a bright white colour, the figure of which is almoſt like that of thoſe produced by ſilk-worms. Theſe ſmall downy balls, when freed from the ſeeds by an ingenious proceſs of the Chineſe, is then carded and ſpun; and afterwards made into cloth.

The *tallow-tree* has a ſhort trunk, a ſmooth bark, crooked branches, red leaves, ſhaped like a heart, and is about the height of a common cherry-tree. The fruit it produces has all the qualities of our tallow, and when manufactured with oil ſerves the natives as candles; but for want of purifying, as we purify tallow in Europe, it ſmells ſtrong, nor is the light clear. Of the other trees peculiar to China, are ſome which yield a kind of flour; ſome partake of the nature of pepper. The gum of ſome is poiſonous, but affords the fineſt black Japan in the world. The Chineſe, notwithſtanding their induſtry, are ſo wedded to their ancient cuſtoms that theſe trees are very little, if at all, meliorated by cultivation. The ſame may be ſaid of their richeſt fruits, which, in general, are far from being ſo delicious as thoſe of Europe, or indeed of America. This is owing to the Chineſe never practiſing grafting, or inoculation of trees, and knowing nothing of experimental gardening.

It would be unpardonable here not to mention the raw-ſilk, which ſo much abounds in China, and above all, the *tea-plant*, or ſhrub. It is planted in rows, and pruned to prevent its luxuriancy. Notwithſtanding our long intercourſe with China, writers are ſtill divided about the different ſpecies and culture of this plant. It is generally thought that the green and bohea grows on the ſame ſhrub, but that the latter receives ſome kind of preparation, which takes away its raking qualities, and gives it a deeper colour. The other kinds, which go by the names of imperial, congo, ſinglo, and the like, are occaſioned probably by the nature of the ſoils, and from the provinces in which they grow. The culture of this plant ſeems to be very ſimple; and it is certain that ſome kinds are of a much higher and more delicious

flavour than others. It is thought that the fineſt, which is called the flower of the tea, is imported over-land to Ruſſia; but we know of little difference in their effects on the human body. The greateſt is between the bohea and the green.

It is ſuppoſed, that the Portugueſe had the uſe of tea long before the Engliſh, but it was introduced among the latter before the Reſtoration, as mention of it is made in the firſt act of parliament, that ſettled the exciſe on the king for life in 1660. Catharine of Liſbon, wife to Charles II. rendered the uſe of it common at court. The *ginſeng*, ſo famous among the Chineſe as the univerſal remedy, and monopoliſed even by their emperors, is now found to be but a common root, and is plentiful in Britiſh America. When brought to Europe, it is little diſtinguiſhed for its healing qualities; and this inſtance alone ought to teach us with what caution the former accounts of China are to be read. The ginſeng, however, is a native of the Chineſe Tartary.

METALS AND MINERALS.] China (if we are to believe naturaliſts) produces all metals and minerals that are known in the world. White copper is peculiar to itſelf, and is ſo pure and fine that it approaches near to ſilver. Thoſe who are deſirous of preſerving its ſplendor and beautiful colour, add to it a fifth part of ſilver. Their gold mines are but ſlightly worked, for ſuch is the policy of this people, that they have always feared, that if their men ſhould be expoſed to the temptation of theſe artifical riches, they would be induced to forſake the more uſeful labours of agriculture. The currency of gold is principally ſupplied by the grains the people pick up in the ſand of rivers and mountains. The ſilver ſpecie is furniſhed from the mines of Honan.

Iron, lead, and tin mines muſt be very common, ſince theſe metals are ſold at a low rate throughout the empire; and it appears from very authentic documents, that the uſe of iron in particular was very ancient there. Quarries, and coal-mines, are ſo abundant in every province, that, perhaps there is no country in the world where they are ſo common. Coals are found in great plenty in the mountains of the provinces of Chen-ſi, Chan-ſi, and Pe-tcheli; they are uſed by workmen in their furnaces, in all kitchens, and in the ſtoves with which the Chineſe warm their apartments during winter. Without this ſupply, fire-wood, which is ſcarce and very dear, would not be found ſufficient for the conſumption of the northern provinces.

POPULATION AND INHABITANTS.] According to ſome accounts, there are fifty-eight millions of inhabitants in China; and all between twenty and ſixty years of age pay an annual tax. But according to father Amiot, who has been at great pains to inveſtigate this point of population, it would ſeem that China contains, at preſent, two hundred millions of inhabitants. This enormous population the abbe Groſier endeavours to prove, by a detail of the numbers in each of the fifteen provinces, to be by no means exaggerated. Many intelligent people greatly queſtion the credibility of this large account. On all hands, however, it is admitted that their numbers are very great. Notwithſtanding the induſtry of the people, their amazing population frequently occaſions a dearth. Parents, who cannot ſupport their female children, are allowed to caſt them into the river; but they faſten a gourd to the child that it may float on the water; and compaſſionate people are often moved by the cries of the children to ſave them from death. The Chineſe, in their perſons, are middle-ſized, their faces broad, their eyes black and ſmall, their noſes rather ſhort. The Chineſe have particular ideas of beauty. They pluck up the hairs of the lower part of their faces by the roots with tweezers, leaving a few ſtraggling ones by way of beard. Their Tartar princes compel them to cut off the hair of their heads, and, like Mahometans, to wear only a lock on the crown.

Their complexion towards the north is fair, towards the ſouth ſwarthy, and the fatter a man is, they think him the handſomer. Men of quality and learning, who are not much expoſed to the ſun, are delicately complexioned, and they who are bred to letters let the nails of their fingers grow to an enormous length, to ſhew that they are not employed in manual labour.

The women have little eyes, plump roſy lips, black hair, regular features, and a delicate, though florid complexion. The ſmallneſs of their feet is reckoned a principal part of their beauty, and no ſwathing is omitted, when they are young, to give them that accompliſhment, ſo that when they grow up, they may be ſaid to totter rather than to walk. This fanciful piece of beauty was probably invented by the ancient Chineſe, to palliate their jealouſy.

To enter into all the ſtarch ridiculous formalities of the Chineſe, eſpecially of their men of quality when paying or receiving viſits, would give little information, and leſs amuſement, and very probably come too late, as the manners of the Chineſe, ſince they fell under the power of the Tartars, are greatly altered, and daily vary. It is ſufficient to obſerve, that the legiſlators of China looking upon ſubmiſſion and ſubordination as the corner-ſtones of all ſociety, deviſed thoſe outward marks of reſpect, ridiculous as they appear to us, as the teſt of duty and reſpect from inferiors to ſuperiors; and their capital maxim was, that the man who was deficient in civility was void of good ſenſe.

The Chineſe in general have been repreſented as the moſt diſhoneſt, low, thieving ſet in the world, employing their natural quickneſs only to improve the arts of cheating the nations they deal with, eſpecially the Europeans, but they obſerve that none but a Chineſe can cheat a Chineſe. They are fond of law-diſputes beyond any people in the world. Their hypocriſy is without bounds; and the men of property among them practiſe the moſt avowed bribery, and the loweſt meanneſſes to obtain preferment. It ſhould, however, be remembered, that ſome of the late accounts of China have been drawn up by thoſe who were little acquainted with any parts of that empire but the ſea-port towns; in which they probably met with many knaviſh and deſigning people. But it ſeems not juſt to attempt to characteriſe a great nation by a few inſtances of this kind, though well atteſted; and we appear not to be ſufficiently acquainted with the interior parts of China to form an accurate judgment of the manners and characters of the inhabitants. By ſome of the Jeſuit miſſionaries the Chineſe ſeem to have been too much extolled, and by the later writers too much degraded.

Dress.] This varies according to the diſtinction of ranks, and is intirely under the regulation of the law, which has even fixed the colours that diſtinguiſh the different conditions. The emperor, and princes of the blood, have alone a right to wear yellow; certain mandarines are intitled to wear ſatin of a red ground, but only upon days of ceremony; in general, they are clothed in black, blue, or violet. The colour to which the common people are confined, is blue or black; and their dreſs is always compoſed of plain cotton cloth. The men wear caps on their heads of the faſhion of a bell; thoſe of quality are ornamented with jewels. The reſt of their dreſs is eaſy and looſe, conſiſting of a veſt and a ſaſh, a coat or a gown thrown over them, ſilk boots quilted with cotton, and a pair of drawers. The ladies towards the ſouth wear nothing on their head. Sometimes their hair is drawn up in a net, and ſometimes it is diſhevelled. Their dreſs differs but little from that of the men, only their gown or upper garment has very large open ſleeves. The Chineſe muffle themſelves up cloſely in the morning; as the heat increaſes they gradually throw off their covering, and again wrap themſelves up at the approach of evening.

MARRIAGES.] The parties never ſee each other in China till the bargain is concluded by the parents, and that is generally when the parties are perfect children. Next to being barren, the greateſt ſcandal is to bring females into the world; and if a woman of a poor family happens to have three or four girls ſucceſſively, it not unfrequently happens that ſhe will expoſe them on the high roads, or caſt them into a river.

FUNERALS.] People of note cauſe their coffins to be made, and their tombs to be built in their life-time. No perſons are buried within the walls of a city, nor is a dead corpſe ſuffered to be brought into a town, if a perſon died in the country. Every Chineſe keeps in his houſe a table, upon which is written the names of his father, grandfather, and great-grandfather, before which they frequently burn incenſe, and proſtrate themſelves; and when the father of a family dies, the name of the great-grandfather is taken away, and that of the deceaſed is added.

LANGUAGE.] The Chineſe language contains only three hundred and thirty words, all of one ſyllable: but then each word is pronounced with ſuch various modulations, and each with a different meaning, that it becomes more copious than could be eaſily imagined, and enables them to expreſs themſelves very well on the common occaſions of life. The miſſionaries, who adapt the European characters, as well as they can, to the expreſſion of Chineſe words, have deviſed eleven different, and ſome of them very compounded, marks and aſpirations, to ſignify the various modulations, elevations, and depreſſions of the voice, which diſtinguiſh the ſeveral meanings of the ſame monoſyllable. The Chineſe oral language being thus barren and contracted, their literature is compriſed in arbitrary characters, which are amazingly complicated and numerous: according to ſome writers they amount to twenty-five thouſand; to thirty or forty thouſand, according to others; but the lateſt accounts ſay they amount to eighty thouſand, though he is reckoned a very learned man, who is maſter of fifteen or twenty thouſand. This language being wholly addreſſed to the eye, and having no affinity with the oral, the latter hath ſtill contiuued in its original uncultivated ſtate, while the former has received all poſſible improvements.

The Chineſe characters, Mr. Aſtle obſerves, which are by length of time become ſymbolic, were originally imitative; they ſtill partake ſo much of their original hieroglyphic nature, that they do not combine into words like letters or marks for ſounds; but we find one mark for a man, another for a horſe, a third for a dog, and in ſhort a ſeparate and diſtinct mark for each thing which has a corporeal form. The Chineſe alſo uſe a great number of marks entirely of a ſymbolic nature, to impreſs on the eye the conceptions of the mind, which have no corporeal forms, though they do not combine theſe laſt marks into words, like marks for ſounds or letters; but a ſeparate mark is made to repreſent or ſtand for each idea, and they uſe them in the ſame manner as they do their abridged picture-characters, which were originally imitative or hieroglyphic.

The Chineſe books begin from the right hand; their letters are placed in perpendicular columns, of which there are generally ten in a page. They are read downwards, beginning from the right-hand ſide of the paper. Sometimes a title is placed horizontally, and this likewiſe read from the right hand.

GENIUS AND LEARNING.] The genius of the Chineſe is peculiar to themſelves. They have no conception of what is beautiful in writing, regular in architecture, or natural in painting; and yet in their gardening, and planning their grounds, they hit upon the true ſublime and beautiful. They perform all the operations of arithmetic with prodigious quickneſs, but differently from the Europeans. Till the

latter

latter came among them, they were ignorant of mathematical learning, and all its depending arts. They had no proper apparatus for aſtronomical obſervations; and the metaphyſical learning, which exiſted among them, was only known to their philoſophers; but even the arts introduced by the Jeſuits were of very ſhort duration, and laſted very little longer than the reign of Cang-hi, who was contemporary with our Charles II. nor is it very probable they will ever be revived. It has been generally ſaid, that they underſtood printing before the Europeans; but that can be only applied to block-printing, for the fuſile and moveable types were undoubtedly Dutch or German inventions. The Chineſe, however, had almanacks, which were ſtamped from plates or blocks, many hundred years before printing was diſcovered in Europe.

The difficulty of maſtering and retaining ſuch a number of arbitrary marks and characters, as there are in what may be called the Chineſe written language, greatly retards the progreſs of their erudition. But there is no part of the globe where learning is attended with ſuch honours and rewards, and where there are more powerful inducements to cultivate and purſue it. The literati are reverenced as men of another ſpecies, and are the only nobility known in China. If their birth be ever ſo mean and low, they become mandarins of the higheſt rank, in proportion to the extent of their learning. On the other hand, however exalted their birth may be, they quickly ſink into poverty and obſcurity, if they neglect thoſe ſtudies which raiſed their fathers. It has been obſerved, that there is no nation in the world where the firſt honours of the ſtate lie ſo open to the loweſt of the people, and where there is leſs of hereditary greatneſs. The Chineſe range all their works of literature into four claſſes. The firſt is the claſs of *King*, or the ſacred books, which contains the principles of the Chineſe religion, morality, and government, and ſeveral curious and obſcure records, relative to theſe important ſubjects. Hiſtory forms a claſs apart; yet, in this firſt claſs, there are placed ſome hiſtorical monuments on account of their relation to religion and government, and among others the *Tekun-tſicou*, a work of Confucius, which contains the annals of twelve kings of Low, the native country of that illuſtrious ſage. The ſecond claſs is that of the *Su*, or *Che*, that is, of hiſtory and the hiſtorians. The third claſs, called *Tſu*, *Tſe*, comprehends philoſophy and the philoſophers, and contains all the works of the Chineſe literati, the productions alſo of foreign ſects and religions, which the Chineſe conſider only in the light of philoſophical opinions, and all books relative to mathematics, aſtronomy, phyſic, military ſcience, the art of divination, agriculture, and the arts and ſciences in general. The fourth claſs is called *Tcie*, or *Miſcellanies*, and contains all the poetical books of the Chineſe, their pieces of eloquence, their ſongs, romances, tragedies, and comedies. The Chineſe literati, in all the periods of their monarchy, have applied themſelves leſs to the ſtudy of nature, and to the reſearches of natural philoſophy, than to moral inquiries, the practical ſcience of life, and internal polity and manners. It is ſaid, that it was not before the dynaſty of the Song, in the 10th and 11th centuries after Chriſt, that the Chineſe philoſophers formed hypotheſes concerning the natural ſyſtem of the univerſe, and entered into diſcuſſions of a ſcholaſtic kind, in conſequence, perhaps, of the intercourſe they had long kept up with the Arabians, who ſtudied with ardour the works of Ariſtotle. And ſince the Chineſe have begun to pay ſome attention to natural philoſophy, their progreſs in it has been much inferior to that of the Europeans.

The invention of gunpowder is juſtly claimed by the Chineſe, who made uſe of it againſt Zingis Khan and Tamerlane. They ſeem to have known nothing of ſmall fire-arms, and to have been acquainted only with the cannon, which they call the fire-

fire-pan. Their induſtry in their manufactures of ſtuffs, porcelane, japanning, and the like ſedentary trades, is amazing, and can be equalled only by their labours in the field, in making canals, levelling mountains, raiſing gardens, and navigating their junks and boats.

ANTIQUITIES AND CURIOSITIES.] Few natural curioſities preſent themſelves in China, that have not been comprehended under foreign articles. Some volcanoes, and rivers and lakes of particular qualities, are to be found in different parts of the empire, the volcano of Lineſung is ſaid ſometimes to make ſo furious a diſcharge of fire and aſhes, as to occaſion a tempeſt in the air; and ſome of their lakes are ſaid to petrify fiſhes when put into them. The artificial curioſities of China are ſtupendous. The great wall, ſeparating China from Tartary, to prevent the incurſions of the Tartars, is ſuppoſed to extend from 1200 to 1500 miles. It is carried over mountains and valleys, and reaches, according to Mr. Groſier, from the province of Shenſi to the Whang-Hay, or Yellow Sea. It is in moſt places built of brick and mortar, which is ſo well tempered, and built ſo cloſely, as not to admit the leaſt entrance for any inſtrument of iron, that though it has ſtood for 1800 years, it is but little decayed, and in ſuch a dry climate may remain in the ſame condition for many ages. The beginning of this wall is a large bulwark of ſtone raiſed in the ſea, in the province of Petcheli, to the eaſt of Peking and almoſt in the ſame latitude: it is built like the walls of the capital city of the empire, but much wider, being tarraſſed and caſed with bricks, and is from twenty to twenty-five feet high. It is flanked with towers, two bow-ſhots diſtant one from the other, which add to its ſtrength, and render it much eaſier to be defended. One third of the able bodied men in China were employed in conſtructing this wall, which, it is ſaid, was begun, and completely finiſhed in the ſhort ſpace of five years; and it is farther reported, that the workmen ſtood ſo cloſe for many miles, that they could hand the materials from one to another. P. Regis, and the other gentlemen, who took a map of theſe provinces, often ſtretched a line on the top, to meaſure the baſis of triangles, and to take diſtant points with an inſtrument. They always found it paved wide enough for five or ſix horſemen to travel a-breaſt with eaſe. Mention has been already made of the prodigious canals and roads that are cut through this empire.

The artificial mountains preſent on their tops, temples, monaſteries, and other edifices. The Chineſe bridges cannot be ſufficiently admired. They are built ſometimes upon barges ſtrongly chained together, yet ſo as to be parted, and to let the veſſels paſs that ſail up and down the river. Some of them run from mountain to mountain, and conſiſt only of one arch; that over the river Saffrany is 400 cubits long, and 500 high, though a ſingle arch, and joins two mountains; and ſome in the interior parts of the empire are ſaid to be ſtill more ſtupendous. The triumphal arches raiſed in honour of their great men, form the next ſpecies of artificial curioſities. Though they are not built in the Greek or Roman ſtyle of architecture, yet they are ſuperb and beautiful. They are ſaid in the whole to be eleven hundred, two hundred of which are particularly magnificent. Their ſepulchral monuments make likewiſe a great figure. Their towers, the models of which are now ſo common in Europe under the name of pagodas, are vaſt embelliſhments to the face of their country. They ſeem to be conſtructed by a regular order, and moſt of them are finiſhed with exquiſite carvings and gildings, and other ornaments. That at Nanking, which is 200 feet high, and 40 in diameter, is the moſt admired. It is called the Porcelane Tower, becauſe it is lined with Chineſe tiles. Their temples are chiefly remarkable for the fanciful taſte in which they are built, for their capaciouſneſs, their whimſical ornaments, and the uglineſs of the idols they contain.

The

The Chineſe are remarkably fond of bells, which give name to one of their principal feſtivals. A bell of Peking weighs 120,000 pounds, but its ſound is ſaid to be diſagreeable. The laſt curioſity I ſhall mention, is their fire-works, which in China, exceed thoſe of all other nations. In ſhort, every province of China is a ſcene of curioſities. Their buildings, except their pagodas, being confined to no order, and ſuſceptible of all kinds of ornaments, have a wild variety, and a pleaſing elegance not void of magnificence, agreeable to the eye and the imagination, and preſent a diverſity of objects not to be found in European architecture.

CHIEF CITIES.] Little can be ſaid of theſe more than that ſome of them are immenſe, and there is great reaſon to believe their population is much exaggerated. The empire is ſaid to contain 4400 walled cities; the chief of which are Peking; Nanking, and Canton. Peking, the capital of the whole empire of China, and the ordinary reſidence of the emperors, is ſituated in a very fertile plain, twenty leagues diſtant from the great wall. It is an oblong ſquare, and is divided into two cities: that which contains the emperor's palace is called the Tartar city, becauſe the houſes were given to the Tartars when the preſent family came to the throne; and they refuſing to ſuffer the Chineſe to inhabit it, forced them to live without the walls, where they in a ſhort time built a new city; which by being joined to the other, renders the whole of an irregular form, ſix leagues in compaſs. The walls and gates of Peking are of the ſurpriſing height of fifty cubits, ſo that they hide the whole city; and are ſo broad, that centinels are placed upon them on horſeback; for there are ſlopes within the city of conſiderable length, by which horſemen may aſcend the walls; and in ſeveral places there are houſes built for the guard. The gates, which are nine in number, are neither embelliſhed with ſtatues, nor carvings, all their beauty conſiſting in their prodigious height, which at a diſtance gives them a noble appearance. The arches of the gates are built of marble, and the reſt with large bricks, cemented with excellent mortar. Moſt of the ſtreets are built in a direct line, the largeſt are about 120 feet broad, and a league in length. The ſhops where they ſell ſilks and China-ware generally take up the whole ſtreet, and afford a very agreeable proſpect. Each ſhop-keeper places before his ſhop, on a ſmall kind of pedeſtal, a board about twenty feet high, painted, varniſhed, and often gilt, on which are written in large characters the names of the ſeveral commodities he ſells. Theſe, being placed on each ſide of the ſtreet at nearly an equal diſtance from each other, have a very pretty appearance; but the houſes are poorly built in front, and very low, moſt of them having only a ground floor, and none exceeding one ſtory above it. Of all the buildings in this great city, the moſt remarkable is the imperial palace, the grandeur of which does not conſiſt ſo much in the nobleneſs and elegance of the architecture as in the multitude of its buildings, courts, and gardens, all regularly diſpoſed: for within the walls are not only the emperor's houſe, but a little town, inhabited by the officers of the court, and a multitude of artificers employed and kept by the emperor; but the houſes of the courtiers and artificers are low and ill contrived. F. Attiret, a French Jeſuit, who was indulged with a ſight of the palace and gardens, ſays, that the palace is more than three miles in circumference, and that the front of the building ſhines with gilding, paint, and varniſh, while the inſide is ſet off and furniſhed with every thing that is moſt beautiful and precious in China, the Indies, and Europe. The gardens of this palace are large tracts of grounds, in which are raiſed, at proper diſtances, artificial mountains, from 20 to 60 feet high, which form a number of ſmall vallies, plentifully watered by canals, which uniting, form lakes and meres. Beautiful and magnificent barks ſail on theſe pieces of water, and the banks are ornamented with ranges of buildings, not any two of which are ſaid to have any

reſemblance to each other, which diverſity produces a very pleaſing effect. Every valley has its houſe of pleaſure, large enough to lodge one of our greateſt lords in Europe with all his retinue: many of theſe houſes are built with cedar, brought with a vaſt expence the diſtance of 500 leagues. Of theſe palaces, or houſes of pleaſure, there are more than 200 in this vaſt encloſure. In the middle of a lake, which is near half a league in diameter every way, is a rocky iſland, on which is built a palace, containing more than a hundred apartments. It has four fronts, and is a very elegant and magnificent ſtructure. The mountains and hills are covered with trees, particularly ſuch as produce beautiful and aromatic flowers; and the canals are edged with ruſtic pieces of rock, diſpoſed with ſuch art, as exactly to reſemble the wildneſs of nature.

The city of Peking is computed to contain two millions of inhabitants, though Nanking is ſaid to exceed it both in extent and populouſneſs. But Canton is the greateſt port in China, and the only one much frequented by Europeans. The city wall is about five miles in circumference, with very pleaſant walks around it. From the top of ſome adjacent hills, on which forts are built, you have a fine proſpect of the country. It is beautifully interſperſed with mountains, little hills and vallies, all green; and theſe again pleaſantly diverſified with ſmall towns, villages, high towers, temples, the ſeats of mandarins and other great men, which are watered with delightful lakes, canals, and ſmall branches from the river Ta; on which are numberleſs boats and junks, ſailing different ways through the moſt fertile parts of the country. The city is entered by ſeven iron gates, and within-ſide of each there is a guard-houſe. The ſtreets of Canton are very ſtraight, but generally narrow, and paved with flag-ſtones. There are many pretty buildings in this city, great numbers of triumphal arches, and temples well ſtocked with images. The ſtreets of Canton are ſo crowded, that it is difficult to walk in them; yet women of any faſhion are ſeldom to be ſeen, unleſs by chance, when coming out of their chairs. There are great numbers of market-places for fiſh, fleſh, poultry, vegetables, and all kinds of proviſions, which are ſold very cheap. There are many private walks about the ſkirts of the town, where thoſe of the better ſort have their houſes, which are very little frequented by Europeans, whoſe buſineſs lies chiefly in the trading parts of the city, where there are only ſhops and warehouſes. Few of the Chineſe traders of any ſubſtance keep their families in the houſe where they do buſineſs, but either in the city, in the more remote ſuburbs, or farther up in the country. They have all ſuch a regard to privacy, that no windows are made towards the ſtreets, but in ſhops and places of public buſineſs; nor do any of their windows look towards thoſe of their neighbours. The ſhops of thoſe that deal in ſilk are very neat, make a fine ſhow, and are all in one place; for tradeſmen, or dealers in one kind of goods, herd together in the ſame ſtreet. It is computed that there are in this city, and its ſuburbs, 1,200,000 people; and there are often 5000 trading veſſels lying in its harbour.

TRADE AND MANUFACTURES.] China is ſo happily ſituated, and produces ſuch a variety of materials for manufactures, that it may be ſaid to be the native land of induſtry; but it is an induſtry without taſte or elegance, though carried on with vaſt art and neatneſs. They make paper of the bark of bamboo, and other trees, as well as of cotton, but not comparable, for records or printing, to the European. Their ink, for the uſe of drawing, is well known in England, and is ſaid to be made of oil and lamp-black. I have already mentioned the antiquity of their printing, which they ſtill do, by cutting their characters on blocks of wood. The manufacture of that earthen ware, generally known by the name of China, was long a ſecret in Europe, and carried immenſe ſums from thence. Though the Chineſe affect to

keep that manufacture ſtill a ſecret, yet it is well known that the principal material is a prepared pulverized earth, and that ſeveral European countries far exceed the Chineſe in manufacturing this commodity *. The Chineſe ſilks are generally plain and flowered gauſes, and they are ſaid to have been originally fabricated in that country, where the art of rearing ſilk-worms was firſt diſcovered. They manufacture ſilks likewiſe of a more durable kind, and their cotton, and other cloths, are famous for furniſhing a light warm wear.

Their trade, it is well known, is open to all the European nations, with whom they deal for ready money; for ſuch is the pride and avarice of the Chineſe, that they think no manufactures equal to their own. But it is certain, that ſince the diſcovery of the porcelane manufactures, and the vaſt improvements the Europeans have made in the weaving branches, the Chineſe commerce has been on the decline.

CONSTITUTION AND GOVERNMENT.] This was a moſt inſtructive and entertaining article, before the conqueſt of China by the Tartars; for though their princes retain many fundamental maxims of the old Chineſe, they have obliged the inhabitants to deviate from the ancient diſcipline in many reſpects. Perhaps their acquaintance with the Europeans may have contributed to their degeneracy. The original plan of the Chineſe government was patriarchal, almoſt in the ſtricteſt ſenſe of the word. Duty and obedience to the father of each family was recommended and enforced in the moſt rigorous manner; but at the ſame time, the emperor was conſidered as the father of the whole. His mandarins, or great officers of ſtate, were looked upon as his ſubſtitutes; and the degrees of ſubmiſſion which were due from the inferior ranks to the ſuperior, were ſettled and obſerved with the moſt ſcrupulous preciſion, and in a manner that to us ſeems highly ridiculous. This ſimple claim of obedience required great addreſs and knowledge of human nature to render it effectual; and the Chineſe legiſlators, Confucius particularly, appear to have been men of wonderful abilities. They enveloped their dictates in a number of myſtical appearances, ſo as to ſtrike the people with awe and veneration. The mandarins had modes of ſpeaking and writing different from thoſe of other ſubjects, and the people were taught to believe that their princes partook of divinity, ſo that they were ſeldom ſeen, and more ſeldom approached.

Though this ſyſtem preſerved the public tranquillity for a great number of years, yet it had a fundamental defect that often convulſed, and at laſt proved fatal to the ſtate, becauſe the ſame attention was not paid to the military as to the civil duties. The Chineſe had paſſions like other men, and ſometimes a weak or wicked adminiſtration drove them into arms, and a revolution eaſily ſucceeded, which they juſtified by ſaying, that their ſovereign had ceaſed to be their father. During thoſe commotions, one of the parties naturally invited their neighbours the Tartars to their aſſiſtance, who, poſſeſſing great ſagacity, became acquainted with the weak ſide of their conſtitution, and availed themſelves accordingly; for, having invaded and conquered the empire, they gradually conformed to the Chineſe inſtitutions.

Beſides the great doctrine of patriarchal obedience, the Chineſe had ſumptuary laws and regulations for the expences of all degrees of ſubjects, which were very uſeful in preſerving the public tranquillity, and preventing the effects of ambition. By their inſtitutions likewiſe the mandarins might remonſtrate to the em-

* The Engliſh in particular have carried this branch to a high degree of perfection, as appears from the commiſſions which have been received of late from ſeveral princes of Europe; and we hope that a manufacture, ſo generally uſeful, will meet with encouragement from every true patriot among ourſelves.

peror,

peror, but in the moſt ſubmiſſive manner, upon the errors of his government; and when he was a virtuous prince, this freedom was often attended with the moſt ſalutary effects. No country in the world is ſo well provided with magiſtrates for the diſcharge of juſtice, both in civil and criminal matters, as China; but they are often ineffectual, through want of public virtue in the execution. The emperor is ſtyled, "*Holy Son of Heaven, Sole Governor of the Earth, Great Father of his People.*"

RELIGION.] This article is nearly connected with the preceding. Though the ancient Chineſe worſhipped idols, yet their philoſophers and legiſlators had juſter notions of the Deity, and indulged the people in the worſhip of ſenſible objects, only to make them more ſubmiſſive to government. The Jeſuits made little oppoſition to this, when they attempted to convert the Chineſe; and ſuffered their proſelytes to worſhip Tien, pretending that it was no other than the name of God. The truth is, Confucius, and the Chineſe legiſlators, introduced a moſt excellent ſyſtem of morals among the people, and endeavoured to ſupply the want of juſt ideas of a future ſtate, by preſcribing to them the worſhip of inferior deities. Their morality approximates to that of Chriſtianity; but as we know little of their religion, only through the Jeſuits, we cannot adopt for truth the numerous inſtances which they tell us of the conformity of the Chineſe with the Chriſtian religion. Thoſe fathers, it muſt be owned, were men of great abilities, and made a wonderful progreſs above a century ago in their converſions; but they miſtook the true character of the emperor, who was their patron; for he no ſooner found that they were in fact aſpiring to the civil direction of the government, than he expelled them, levelled their churches with the ground, and prohibited the exerciſe of their religion; ſince which time Chriſtianity has made no figure in China.

PUBLIC ROADS.] The ſecurity of travellers, and an eaſy mode of conveyance for paſſengers and merchandize of every kind, are objects to which particular attention ſeems to have been paid by adminiſtration in China. The manner in which the public roads are managed greatly contributes to the former.

Theſe roads are in general very broad; they are paved in all the ſouthern provinces, and ſome of the northern. Valleys have been filled up, and paſſages have been cut through rocks and mountains, in order to make commodious highways, and to preſerve them as nearly as poſſible on a level. They are generally bordered with very lofty trees, and ſometimes with walls eight or ten feet in height, to prevent travellers from entering into the fields. Openings are left in them at certain intervals, which give a paſſage into croſs roads, that conduct to different villages. On all the great roads, covered ſeats are erected at proper diſtances, where the traveller may ſhelter himſelf from the inclemency of winter, or the exceſſive heats of ſummer.

There is no want of inns on the principal highways, and over the croſs roads. The former are very ſpacious, but they are badly ſupplied with proviſions. People are even obliged to carry beds with them, or to ſleep on a plain mat. Government requires of thoſe who inhabit them, to give lodging only to thoſe who aſk and pay for it.

We meet with many turrets (ſays Mr. Bell), called poſt-houſes, erected at certain diſtances one from another, with a flag-ſtaff, on which is hoiſted the imperial pendant. Theſe places are guarded by ſoldiers, who run from one poſt to another with great ſpeed, carrying letters which concern the emperor. The turrets are in ſight of one another, and by ſignals they can convey intelligence of any remarkable event. By theſe means the court is informed in the ſpeedieſt manner of whatever diſturbance may happen in the moſt remote part of the empire.

Revenues.] These are said by some to amount to twenty millions, or, according to the abbé Grosier, to forty-one millions sterling, a year; but this cannot be meant in money, which does not at all abound in China. The taxes collected for the use of government in rice, and other commodities, are certainly very great, and may be easily imposed with equality, as an account of every man's family and substance is annually enrolled; and must amount to a great sum.

Military and marine strength.] China is, at this time, a far more powerful empire than it was before its conquest by the eastern Tartars in 1644. This is owing to the consummate policy of Chun-tchi, the first Tartarian emperor of China, who obliged his hereditary subjects to conform themselves to the Chinese manners and policy, and the Chinese to wear the Tartar dress and arms. The two nations were thereby incorporated. The Chinese were appointed to all the civil offices of the empire. The emperor made Peking the seat of his government, and the Tartars quietly submitted to a change of their country and condition which was so much in their favour.

This security, however, of the Chinese from the Tartars, takes from them all military objects; the Tartar power alone being formidable to that empire. The only danger that threatens it at present, is the disuse of arms. The troops of this empire amount to more than seven hundred thousand. This numerous army brings to our remembrance what historians tell us concerning Ninus, and Semiramis, and, to descend to later times, of the forces of Xerxes and Darius. But this multitude will appear less astonishing in China, when we consider the extent of the empire, and its enormous population. Besides these, many thousands are employed in the collection of the revenue, and the preservation of the canals, the great roads, and the public peace. The imperial guards amount to about 30,000. As to the marine force, it is composed chiefly of the junks, already mentioned, and other small ships, that trade coast-ways, or to the neighbouring countries, or to prevent sudden descents.

A treatise on the military art, translated from the Chinese into the French language, was published at Paris in 1772, from which it appears that the Chinese are well versed in the theory of the art of war: but caution, and care, and circumspection, are much recommended to their generals; and one of their maxims is, never to fight with enemies either more numerous or better armed than themselves.

History.] The Chinese pretend to an antiquity beyond all measure of credibility; and their annals have been carried beyond the period to which the scripture chronology assigns the creation of the world. Poan-Kou is said by them to have been the first man; and the interval of time betwixt him and the death of the celebrated Confucius, which was in the year before Christ 479, hath been reckoned from 276,000 to 96,961,740 years. But upon an accurate investigation of this subject it appears, that all the Chinese historical relations of events, prior to the reign of the emperor Yao, who lived 2057 years before Christ, are entirely fabulous, composed in modern times, unsupported by authentic records, and full of contradictions. It appears also, that the origin of the Chinese empire cannot be placed higher than two or three generations before Yao. But even this is carrying the empire of China to a very high antiquity, and it is certain that the materials for Chinese history are extremely ample. The grand annals of the empire of China are comprehended in 668 volumes, and consist of the pieces that have been composed by the tribunal, or department of history, established in China for transmitting to posterity the public events of the empire, and the lives, characters, and transactions of its sovereigns. It is said, that all the facts, which concern the monarchy since its foundation, have been deposited in this department, and from age to age have been

arranged according to the order of time, under the inſpection of government, and with all the precautions againſt illuſion or partiality that could be ſuggeſted. Theſe precautions have been carried ſo far, that the hiſtory of the reign of each imperial family has only been publiſhed after the extinction of that family, and was kept a profound ſecret during the dynaſty, that neither fear nor flattery might adulterate the truth. It is aſſerted, that many of the Chineſe hiſtorians expoſed themſelves to exile, and even to death, rather than diſguiſe the defects and vices of the ſovereign. But the emperor Chi-hoangti, at whoſe command the great wall was built, in the year 213 before the Chriſtian æra, ordered all the hiſtorical books and records, which contained the fundamental laws and principles of the ancient government, with the medals, inſcriptions, and monuments of antiquity, to be burnt, that they might not be employed by the learned to oppoſe his authority, and reſiſt the changes he propoſed to introduce into the monarchy; and that there might remain no earlier record, date, or authority, relative to religion, ſcience, or politics, than thoſe of his own reign, and he be conſidered as the founder of the empire. Four hundred literati were burnt with their books; yet this barbarous edict had not its full effect; ſeveral books were concealed, and eſcaped the general ruin. After this period, ſtrict ſearch was made for the ancient books and records that yet remained; but though much induſtry was employed for this purpoſe, it appears that the authentic hiſtorical ſources of the Chineſe, for the times anterior to the year 200 before Chriſt, are very few, and that they are ſtill in ſmaller number for more remote periods. But notwithſtanding the depredations that have been made upon the Chineſe hiſtory, it is ſtill immenſely voluminous, and has been judged by ſome writers ſuperior to that of all other nations. Of the grand annals before mentioned, which amount to 668 volumes, a copy is preſerved in the library of the French king. A chronological abridgment of this great work, in one hundred volumes, was publiſhed in the 42d year of the reign of Kang-hi; that is, in the year 1703. This work is generally called Kammo, or the Abridgment. From theſe materials the abbé Groſier propoſed to publiſh at Paris, in the French language, a General Hiſtory of China, in 12 volumes, 4to. Some of which have been printed; and a ſmaller work in 12 volumes 8vo, by the late Father de Mailla, miſſionary at Peking, hath been juſt publiſhed.

But the limits to which our work is confined will not permit us to enlarge upon ſo copious a ſubject as that of the Chineſe hiſtory. It ſeems as if the original form of government was monarchical; and a ſucceſſion of excellent princes, and a duration of domeſtic tranquillity, united legiſlation with philoſophy, and produced their Fo-hi, whoſe hiſtory is wrapped up in myſteries, their Li-Laokum, and above all their Confucius, at once the Solon and the Socrates of China. Their long ſtruggle with the Tartars, which laſted ſeveral centuries, and the violence of domeſtic factions, produced bloody wars, and many revolutions; ſo that though the Chineſe empire is hereditary, the imperial ſucceſſion has been often interrupted. Upwards of twenty dynaſties, or different lines and families of ſucceſſion, are enumerated in their annals.

Neither the great Zinghis Khan, nor Tamerlane, though they often defeated the Chineſe, could ſubdue their empire; and neither of them could keep the conqueſts they made there. After their invaſions were over, the Chineſe went to war with the Manchew Tartars, while an indolent worthleſs emperor, Tſontching, was upon the throne. In the mean time, a bold rebel, named Li-cong-tſe, in the province of Se-tchuen, dethroned the emperor, who hanged himſelf, as did moſt of his courtiers and women. Ou-ſan-quey, the Chineſe general, on the frontiers of Tartary, refuſed to recogniſe the uſurper, and made a peace with Tſongate, or Chun-tchi, the Manchew

chew prince, who drove the uſurper from the throne, and took poſſeſſion of it himſelf, about the year 1644. The Tartar maintained himſelf in his authority, and, as has been already mentioned, wiſely incorporated his hereditary ſubjects with the Chineſe, ſo that in effect Tartary became an acquiſition to China. He was ſucceeded by a prince of great natural and acquired abilities, who was the patron of the Jeſuits, but knew how to check them when he found them intermeddling with the affairs of his government. About the year 1661, the Chineſe, under this Tartar family, drove the Dutch out of the iſland of Formoſa, which the latter had taken from the Portugueſe.

In the year 1771, all the Tartars which compoſed the nation of the Tourgouths, left the ſettlements which they had under the Ruſſian government on the banks of the Wolga and the Iaick, at a ſmall diſtance from the Caſpian ſea, and in a vaſt body of fifty thouſand families, they paſſed through the country of the Haſacks. After a march of eight months, in which they ſurmounted innumerable difficulties and dangers, they arrived in the plains that lie on the frontier of Carapen, not far from the banks of the river Ily, and offered themſelves as ſubjects to Kien-long, emperor of China, who was then in the thirty-ſixth year of his reign. He received them graciouſly, furniſhed them with proviſions, cloaths, and money, and allotted to each family a portion of land for agriculture and paſturage. The year following there was a ſecond emigration of about thirty thouſand other Tartar families, who alſo quitted the ſettlements which they enjoyed under the Ruſſian government, and ſubmitted to the Chineſe ſcepter. The emperor cauſed the hiſtory of theſe emigrations to be engraven upon ſtone, in four different languages.

INDIA IN GENERAL.

SITUATION AND BOUNDARIES.] THIS vaſt country is ſituated between the 66th and 109th degrees of Eaſt longitude, and between 1 and 40 of North latitude. It is bounded on the North, by the countries of Uſbec Tartary and Thibet; on the South, by the Indian Ocean; on the Eaſt, by China and the Chineſe Sea; and on the Weſt, by Perſia and the Indian Sea.

DIVISIONS.] I ſhall divide, as others have done, India at large into three great parts; firſt, the Peninſula of India beyond the Ganges, called the Farther Peninſula; ſecondly, the main land, or the Mogul's empire; thirdly, the Peninſula within or on this ſide the Ganges; all of them vaſt, populous, and extended empires. But it is neceſſary, in order to ſave many repetitions, to premiſe an account of ſome particulars common to thoſe numerous nations, which ſhall be extracted from the moſt enlightened of our modern writers who have viſited the country in the ſervice of the Eaſt India Company.

POPULATION AND INHABITANTS.] Mr. Orme, an excellent and an authentic hiſtorian, comprehends the two latter diviſions under the title of Indoſtan. The Mahometans (ſays he), who are called Moors, of Indoſtan, are computed at ten millions, and the Indians at an hundred millions. Above half the empire is ſubject to rajahs, or kings, who derive their deſcent from the old princes of India, and exerciſe all right of ſovereignty, only paying a tribute to the Great Mogul, and obſerving the treaties by which their anceſtors recogniſed his ſuperiority. In other reſpects, the government of Indoſtan is full of wiſe checks upon the overgrowing

greatneſs

greatneſs of any ſubject; but (as all precautions of that kind depend upon the adminiſtration) the indolence and barbarity of the moguls or emperors, and their great viceroys, have rendered them fruitleſs.

The original inhabitants of India are called Gentoos; or, as others call them, Hindoos, and the country Hindooſtan. They pretend that Brumma, who was their legiſlator both in politics and religion, was inferior only to God, and that he exiſted many thouſand years before our account of the creation. This Brumma, probably, was ſome great and good genius, whoſe beneficence, like that of the pagan legiſlators, led his people and their poſterity to pay him divine honours. The Bramins (for ſo the Gentoo prieſts are called) pretend that he bequeathed to them a book called the Vedam, containing his doctrines and inſtitutions; and that though the original is loſt, they are ſtill poſſeſſed of a ſacred commentary upon it, called the Shahſtah, which is written in the Shanſcrite, now a dead language, and known only to the Bramins, who ſtudy it, even as our ſacred ſcriptures are written in Greek and Hebrew. But whether that language was originally different from that of the country, or whether it has only now become unintelligible to the people, through that change which is incident to all living languages, is not well known.

The foundation of Brumma's doctrine conſiſted in the belief of a Supreme Being, who created a regular gradation of beings, ſome ſuperior, and ſome inferior to man; in the immortality of the ſoul, and a future ſtate of rewards and puniſhments, which is to conſiſt of a tranſmigration into different bodies, according to the lives they have led in their pre-exiſtent ſtate. From this it appears more than probable, that the Pythagorean metempſychoſis took its riſe in India. The neceſſity of inculcating this ſublime, but otherwiſe complicated doctrine, into the lower ranks, induced the Bramins, who are by no means unanimous in their doctrines, to have recourſe to ſenſible repreſentations of the Deity and his attributes; ſo that the original doctrines of Brumma have degenerated into idolatry, in the worſhip of different animals, and various images, and of the moſt hideous figures, delineated or carved. Wooden images are placed in all their temples, and on certain feſtivals are exhibited in the high-roads and in the ſtreets of towns. The human figures with elephants heads, which are the objects of their devotion, have many hands, and are enormouſly corpulent.

The Hindoos have, from time immemorial, been divided into four great *tribes*. The firſt and moſt noble tribe are the Bramins, who alone can officiate in the prieſthood, like the Jewiſh tribe of Levi. They are not, however, excluded from government, trade, or agriculture, though they are ſtrictly prohibited from all menial offices by their laws. The ſecond in order is the Sittri tribe, who, according to their original inſtitution, ought to be all military men; but they frequently follow other profeſſions. The third is the tribe of Beiſe, who are chiefly merchants, bankers, and banias or ſhop-keepers. The fourth tribe is that of Sudder, who ought to be menial ſervants; and they are incapable of raiſing themſelves to any ſuperior rank. If any one of them ſhould be excommunicated from any of the four tribes, he and his poſterity are for ever ſhut out from the ſociety of every body in the nation, except that of the Harri caſt, who are held in utter deteſtation by all the other tribes, and are employed only in the meaneſt and vileſt offices. This circumſtance renders excommunication ſo dreadful, that any Hindoo will ſuffer torture, and even death itſelf, rather than deviate from one article of his faith.

Beſides this diviſion into tribes, the Gentoos are alſo ſubdivided into *caſts*, or ſmaller claſſes and tribes; and it has been computed that there are eighty-four of

theſe caſts, though ſome have ſuppoſed there was a greater number. The order of pre-eminence of all the caſts, in a particular city or province, is generally indiſputably decided. The Indian of an inferior would think himſelf honoured by adopting the cuſtoms of a ſuperior caſt; but this laſt would give battle ſooner than not vindicate its prerogatives: the inferior receives the victuals prepared by a ſuperior caſt with reſpect, but the ſuperior will not partake of a meal which has been prepared by the hands of an inferior caſt. Their marriages are circumſcribed by the ſame barriers as the reſt of their intercourſes: and hence, beſides the national phyſiognomy, the members of each caſt preſerve an air of ſtill greater reſemblance to each other. There are ſome caſts remarkable for their beauty, and others as remarkable for their uglineſs. The moſt ſtriking features in the character of the Hindoos, are their ſuperſtition, and veneration for the inſtitutions and tenets of their forefathers.

The members of each caſt, ſays Dr. Robertſon, adhere invariably to the profeſſion of their forefathers. From generation to generation, the ſame families have followed, and will always continue to follow one uniform line of life. To this may be aſcribed that high degree of perfection conſpicuous in many of the Indian manufactures; and though veneration for the practices of their anceſtors may check the ſpirit of invention, yet, by adhering to theſe, they acquire ſuch an expertneſs and delicacy of hand, that Europeans, with all the advantages of ſuperior ſcience, and the aid of more complete inſtruments, have never been able to equal the exquiſite execution of their workmanſhip. While this high improvement of their more curious manufactures excited the admiration, and attracted the commerce, of other nations, the ſeparation of profeſſions in India, and the early diſtribution of the people into claſſes, attached to peculiar kinds of labour, ſecured ſuch abundance of the more common and uſeful commodities, as not only ſupplied their own wants, but miniſtered to thoſe of the countries around them.

To this early diviſion of the people into caſts, we muſt likewiſe aſcribe a ſtriking peculiarity in the ſtate of India, the permanence of its inſtitutions, and the immutability in the manners of its inhabitants. What now is in India, always was there, and is ſtill likely to continue: neither the ferocious violence and illiberal fanaticiſm of its Mahomedan conquerors, nor the power of its European maſters, have effected any conſiderable alteration. The ſame diſtinctions of condition take place, the ſame arrangements in civil and domeſtic ſociety remain, the ſame maxims of religion are held in veneration, and the ſame ſciences and arts are cultivated. Hence, in all ages, the trade with India has been the ſame; gold and ſilver have uniformly been carried thither, in order to purchaſe the ſame commodities with which it now ſupplies all nations; and from the age of Pliny to the preſent times, it has always been conſidered and execrated as a gulf which ſwallows up the wealth of every other country, that flows inceſſantly towards it, and from which it never returns *.

RELIGION.] The inſtitutions of religion, publicly eſtabliſhed in all the extenſive countries ſtretching from the banks of the Indus to Cape Comorin, preſent to view an aſpect nearly ſimilar. They form a regular and complete ſyſtem of ſuperſtition, ſtrengthened and upheld by every thing which can excite the reverence and ſecure the attachment of the people. The temples, conſecrated to their deities, are magnificent, and adorned not only with rich offerings, but with the moſt exquiſite works in painting and ſculpture, which the artiſts, higheſt in eſtimation among them, were capable of executing. The rites and ceremonies of their worſhip are pompous and ſplendid, and the performance of them not only mingles in

* Dr. Robertſon's Hiſtorical Diſquiſition concerning India. Appendix, p. 261, 262.

all

all the tranſactions of common life, but conſtitutes an eſſential part of them. The Brahmins, who, as miniſters of religion, preſide in all its functions, are elevated above every other order of men, by an origin deemed not only more noble, but acknowledged to be ſacred. They have eſtabliſhed among themſelves a regular hierarchy and gradation of ranks, which, by ſecuring ſubordination in their own order, adds weight to their authority, and gives them a more abſolute douinion in the minds of the people. This dominion they ſupport by the command of the immenſe revenues, with which the liberality of princes, and the zeal of pilgrims and devotees, have enriched their Pagodas.

It is far from my attention to enter into any minute detail with reſpect to this vaſt and complicated ſyſtem of ſuperſtition. An attempt to enumerate the multitude of deities which are the objects of adoration in India; to deſcribe the ſplendour of worſhip in their Pagodas, and the immenſe variety of their rites and ceremonies; to recount the various attributes and functions which the craft of prieſts, or the credulity of the people, have aſcribed to their divinities; eſpecially if I were to accompany all this with a review of the numerous and often fanciful ſpeculations and theories of learned men on this ſubject, would too much ſwell this part of our work.

In the various ſuperſtitions which have prevailed in different parts of the world, the inviſible beings, who are the firſt objects of our veneration, have every where a near reſemblance. The powers of man in the more early ſtages of his progreſs are very limited. He ſuppoſes that there is a diſtinct cauſe of every remarkable effect, and aſcribes to a ſeparate power every event which attracts his attention, or excites his terror. He fancies that it is the province of one deity to point the lightning, and with an awful ſound to hurl the irreſiſtible thunderbolt at the head of the guilty; that another rides in the whirlwind, and, at his pleaſure, raiſes or ſtills the tempeſt; that a third rules over the ocean; and that a fourth is the god of battles. We may here recogniſe a ſtriking uniformity of features in the ſyſtem of ſuperſtition eſtabliſhed throughout every part of the earth; more particularly, among the Greeks in Europe, and the Indians in Aſia, the two people, in thoſe great diviſions of the earth, who were moſt early civiliſed. What is ſuppoſed to be performed by the power of Jupiter, of Neptune, of Æolus, of Mars, of Venus, according to the mythology of the Weſt, is aſcribed in the Eaſt to the agency of Agnée, the god of fire; Varoon, the god of oceans; Vayoo, the god of wind; Cama, the god of love; and a variety of other divinities.

But it is well known that in Greece, however the generality of the people entertained theſe groſs ideas, in proportion as ſcience advanced, men of reflecting minds thought more juſtly concerning the great firſt cauſe. Accordingly, ſome philoſophers among them, of great name, diſcerning the wiſdom, the foreſight, and the goodneſs diſplayed in creating, preſerving, and governing the world, perceived that the characters of the divinities which were propoſed as the objects of their adoration in their temples, could not entitle them to be conſidered as the preſiding powers in nature. They, therefore, formed ideas concerning the perfections of one Supreme Being, the Creator and Ruler of the univerſe; as juſt and rational as have ever been attained by the unaſſiſted powers of the human mind.

If from Europe we now turn to Aſia, we ſhall find, that from the progreſs which the moſt eminent perſons of the Brahmin-caſt made in the various branches of ſcience, they formed ſuch a juſt idea of the ſyſtem of nature, and of the power, wiſdom, and goodneſs, diſplayed in the formation and government of it, as elevated their minds above the popular ſuperſtition, and led them to acknowledge one Supreme Being,

"the Creator of all things (to uſe their own expreſſions), and from whom all things proceed *."

In India, the dominion of religion extends to a thouſand particulars, which in other countries are governed either by the civil laws, or by taſte, cuſtom, or faſhion. Dreſs, food, the common intercourſes of life, marriages, profeſſions, are all under the juriſdiction of religion. There is ſcarcely any thing which is not regulated by ſuperſtition. It preſcribes rules of conduct in all circumſtances and ſituations; nor is there any thing almoſt ſo trifling or minute as to be conſidered as a matter of indifference. The original government of the Hindoos, was in reality an hierarchy; for among that religious people, the higheſt authority was poſſeſſed by the prieſthood, or the Bramin caſt. Nor is it in this inſtance only, that we find a reſemblance between the natives of India and the Jews. Not only were the governments of both nations hierarchical, but in both there was a vaſt variety of religious obſervances and ceremonies extending to many particulars, which in other countries are matters of choice or of indifference; and both entertained the moſt profound reſpect and veneration for their anceſtors. All the caſts acknowledge the Bramins for their prieſts, and from them derive their belief of the tranſmigration; which leads many of them to afflict themſelves even at the death of a fly, although occaſioned by inadvertence. But the greater number of caſts are leſs ſcrupulous, and eat, although very ſparingly, both of fiſh and fleſh; but, like the Jews, not of all kinds indifferently. The food of the Hindoos is ſimple, conſiſting chiefly of rice, ghee, which is a kind of imperfect butter, milk, vegetables, and oriental ſpices of different kinds, but chiefly what is called in the Eaſt, *chilly*, and in the Weſt, green or Cayenne pepper. The warrior caſt may eat of the fleſh of goats, mutton, and poultry. Other ſuperior caſts may eat poultry and fiſh; but the inferior caſts are prohibited from eating fleſh or fiſh of any kind. Their greateſt luxury conſiſts in the uſe of the richeſt ſpiceries and perfumes, of which the great people are very laviſh, and which grow almoſt ſpontaneouſly in their gardens. They eſteem milk the pureſt of foods, becauſe they think it partakes of ſome of the properties of the nectar of their gods, and becauſe they eſteem the cow itſelf almoſt like a divinity.

Their manners are gentle; their happineſs conſiſts in the ſolaces of domeſtic life; and they are taught by their religion, that matrimony is an indiſpenſable duty in every man, who does not entirely ſeparate himſelf from the world from a principle of devotion. Their religion alſo permits them to have ſeveral wives; but they ſeldom have more than one: and it has been obſerved, that their wives are diſtinguiſhed by a decency of demeanour, a ſolicitude in their families, and a fidelity to their vows, which might do honour to human nature in the moſt civiliſed countries. The amuſements of the Hindoos conſiſt in going to their pagodas, in aſſiſting at religious ſhews, and in fulfilling a variety of ceremonies preſcribed to them by the Bramins. Their religion ſeems to forbid them to quit their own ſhores †, nor do they want any thing from abroad. They might, therefore, have lived in

* Baghvat—Geeta, p. 84.

† The Gentoos are perſuaded, that the waters of the three great rivers, Ganges, Kiſtna, and Indus, have the ſacred virtue of purifying thoſe who bathe in them, from all pollutions and ſins. This religious idea ſeems to be founded on a principle of policy, and intended to reſtrain the natives from migrating into diſtant countries: for it is remarkable, that the ſacred rivers are ſo ſituated, that there is not any part of India where the inhabitants may not have an opportunity of waſhing away their ſins. The Ganges, which riſes in the mountains of Thibet, with its different branches, runs through the kingdoms of Bengal, Bahar, and Orixa, and the upper provinces of Oude, Rohilcund, Agra, Delhi, and Lahore. The Kiſtna divides the Carnatic from Golconda, and runs through the Viſiapore into the interior parts of the Decan. And the Indus, bounding the Guzarat provinces, ſeparates Indoſtan from the dominions of Perſia.

much tranquility and happineſs, if others had looked on them with the ſame indifference with which they regard the reſt of the world.

The ſoldiers, are commonly called Rajah-poots, or perſons deſcended from rajahs, and reſide chiefly in the northern provinces, and are generally more fair-complexioned than the people of the ſouth. Theſe rajah-poots are a robuſt, brave, faithful people, and enter into the ſervice of thoſe who will pay them; but when the leader falls in battle, they think that their engagements to him are finiſhed, and they run off the field without any ſtain upon their reputation.

CUSTOMS AND DRESS.] The cuſtom of women burning themſelves, upon the death of their huſbands, ſtill continues to be practiſed among ſome of high caſt and condition, though much leſs frequently than formerly, and it is ſaid, that the Bramins now do not encourage it. One particular claſs of women are allowed to be openly proſtituted: theſe are the famous dancing girls. Their attitudes and movements are very eaſy, and not ungraceful. Their perſons are delicately formed, gaudily decorated, and highly perfumed. By the continuation of wanton attitudes, they acquire, as they grow warm in the dance, a frantic laſciviouſneſs, and communicate, by a natural contagion, the moſt voluptuous deſires to the beholders.

The Gentoos are as careful of the cultivation of their lands, and their public works and conveniences, as the Chineſe; and remarkably honeſt and humane: there ſcarcely is an inſtance of a robbery in all Indoſtan, though the diamond merchants travel without defenſive weapons. According to a late writer, the Hindoos, as well as the Perſians, Tartars, and adjoining nations, who have inhabited Indoſtan ſince it was invaded by Tamerlane, though of different nations, religions, laws, and cuſtoms, poſſeſs nevertheleſs, in equal degrees, hoſpitality, politeneſs, and addreſs. In refinement and eaſe they are ſuperior to any people to the weſtward of them. In politeneſs and addreſs, in gracefulneſs of deportment, and ſpeech, an Indian is as much ſuperior to a Frenchman of faſhion, as a French courtier is to a Dutch burgomaſter of Dort. A Frenchman's eaſe is mixed with forward familiarity, with confidence, and ſelf-conceit; but the Hindoos, eſpecially thoſe of the higher caſts, are in their demeanour eaſy and unconſtrained, ſtill more than even a French courtier, and their eaſe and freedom is reſerved, modeſt, and reſpectful.

The complexion of the Gentoos is black, their hair is long, their perſons are ſtraight and elegant, their limbs finely proportioned, their fingers long and tapering, their countenances open and pleaſant, and their features exhibit the moſt delicate lines of beauty in the females, and in the males a kind of manly ſofneſs.

Their walk and gait, as well as their whole deportment, is in the higheſt degree graceful. The dreſs of the men is a kind of cloſe-bodied gown, like our women's gowns, and wide trowſers, reſembling petticoats, reaching down to their ſlippers. Such of the women as appear in public, have ſhawls over their heads and ſhoulders, ſhort cloſe jackets, and tight drawers which come down to their ankles. Hence the dreſs of the men gives them, in the eyes of Europeans, an appearance of effeminacy; whereas that of the women will appear rather maſculine.

Their houſes cover much ground, and have ſpacious galleries and accommodations of various kinds. The apartments are ſmall, and the furniture not very elegant, if we except the rich Perſian carpets. The grandeur of their palaces conſiſt in baths, perfumes, temples, gods, and harems. The harems or zezanas, that is, the reſidences of the women, are removed from the front of the houſe, and lighted only from a ſquare ſpace in the centre of the whole building. The apparel of the women is inconceivably rich; they have jewels on their fingers and about

their necks, and alſo in their ears and noſtrils; with bracelets on their wriſts and arms, and around their ankles.

PAGODAS.] The temples or pagodas of the Gentoos are ſtupendous but diſguſtful ſtone buildings, erected in every capital, and under the direction of the Brahmins.

To this, however, there are ſome exceptions; for in proportion ſays Dr. Robertſon, the philoſophical hiſtorian of India, to the progreſs of the different countries of India in opulence and refinement, the ſtructure of their temples gradually improved. From plain buildings they became highly ornamented fabrics, and, both by their extent and magnificence, are monuments of the power and taſte of the people by whom they were erected. In this highly finiſhed ſtyle there are Pagodas of great antiquity in different parts of Indoſtan, particularly in the ſouthern provinces, which were not expoſed to the deſtructive violence of Mahomedan zeal. In order to aſſiſt my readers in forming a proper idea of theſe buildings, I ſhall briefly deſcribe two, of which we have the moſt accurate accounts. The entry to the Pagoda of Chillambrum, near Porto Novo, on the Coromandel coaſt, held in high veneration on account of its antiquity, is by a ſtately gate under a pyramid an hundred and twenty-two feet in height, built with large ſtones above forty feet long, and more than five feet ſquare, and all covered with plates of copper, adorned with an immenſe variety of figures neatly executed. The whole ſtructure extends one thouſand three hundred and thirty-two feet in one direction, and nine hundred and thirty-ſix in another. Some of the ornamental parts are finiſhed with an elegance entitled to the admiration of the moſt ingenious artiſts.

The Pagoda of Seringham, ſuperior in ſanctity to that of Chillambrum, ſurpaſſes it as much in grandeur; and fortunately I can convey a more perfect idea of it by adopting the words of an elegant and accurate hiſtorian. This Pagoda is ſituated about a mile from the weſtern extremity of the iſland of Seringham, formed by the diviſion of the great river Caveri into two channels. "It is compoſed of ſeven ſquare enclоſures, one within the other, the walls of which are twenty-five feet high, and four thick. Theſe enclоſures are three hundred and fifty feet diſtant from one another, and each has four large gates with a ſquare tower; which are placed, one in the middle of each ſide of the enclоſure, and oppoſite to the four cardinal points. The outward wall is near four miles in circumference, and its gateway to the ſouth is ornamented with pillars, ſeveral of which are ſingle ſtones thirty-three feet long, and nearly five in diameter; and thoſe which form the roof are ſtill larger: in the inmoſt enclоſures are the chapels. Here, as in all the other great Pagodas of India, the Brahmins live in a ſubordination which knows no reſiſtance, and ſlumber in a voluptuouſneſs which knows no wants *." If the Brahmins are maſters of any uncommon art or ſcience, they frequently turn it to the purpoſes of profit from their ignorant votaries. Mr. Scrafton ſays, that they know how to calculate eclipſes; and that judicial aſtrology is ſo prevalent among them, that half the year is taken up with unlucky days; the head aſtrologer being always conſulted in their councils. The Mahometans likewiſe encourage thoſe ſuperſtitions, and look upon all the fruits of the Gentoo induſtry as belonging to themſelves. Though the Gentoos are entirely paſſive under all their oppreſſions, and by their ſtate of exiſtence, the practice of their religion, and the ſcantineſs of their food, have nothing of that reſentment in their nature that animates the reſt of mankind; yet they are ſuſceptible of avarice, and ſometimes bury their money, and rather than diſcover it, put themſelves to death by poiſon or otherwiſe. This practice, which it ſeems is not uncom-

* Orme's Hiſt. of Milit. Tranſact. of Indoſtan, vol. i. p. 178.

mon,

mon, accounts for the vaſt ſcarcity of ſilver that till of late prevailed in Indoſtan.

INFLUENCE OF FOOD AND EARLY MARRIAGES.] The reaſons above mentioned account likewiſe for their being leſs under the influence of their paſſions than the inhabitants of other countries. The perpetual uſe of rice, their chief food, gives them but little nouriſhment; and their marrying early, the male before fourteen, and their women at ten or eleven years of age, keeps them low and feeble in their perſons. A man is in the decline of life at thirty, and the beauty of the women begins to decay at eighteen: at twenty-five they have all the marks of old age. We are not therefore to wonder at their being ſoon ſtrangers to all perſonal exertion and vigour of mind; and whatever may be the cauſe, a recent traveller among them obſerves, it is certain, that death is regarded with leſs horror in India than in any other country in the world. The origin and the end of all things, ſay the philoſophers of India of the preſent times, is a *vacuum*. A ſtate of repoſe is the ſtate of greateſt perfection; and this is the ſtate after which a wiſe man aſpires. It is better, ſay the Hindoos, to ſit than to walk, and to ſleep than to wake; but death is the beſt of all. According to the Gentoo laws, criminals ſentenced to death are not to be ſtrangled, ſuffocated, or poiſoned, but to be cut off by the ſword; becauſe, without an effuſion of blood, malefactors are ſuppoſed to die with all their ſins about them; but the ſhedding of their blood, it is thought, expiates their crimes.

The Mahometans, who, in Indoſtan, are called Moors, are of Perſian, Turkiſh, Arabic, and other extractions. They early began, in the reigns of the caliphs of Bagdad, to invade Indoſtan. They penetrated as far as Delhi, which they made their capital. They ſettled colonies in ſeveral places, whoſe deſcendants are called Pytans; but their empire was overthrown by Tamerlane, who founded the Mogul government, which ſtill ſubſiſts. Thoſe princes being ſtrict Mahometans, received under their protection all that profeſſed the ſame religion, and who being a brave, active people, counterbalanced the numbers of the natives. They are ſaid to have introduced the diviſion of provinces, over which they appointed ſoubahs; and thoſe provinces, each of which might be ſtyled an empire, were ſubdivided into nabobſhips; each nabob being immediately accountable to his ſoubah, who in proceſs of time became almoſt independent on the emperor, or, as he is called, the Great Mogul, upon their paying him an annual tribute. The vaſt reſort of Perſian and Tartar tribes has likewiſe ſtrengthened the Mahometan government: but it is obſervable, that in two or three generations, the progeny of all thoſe adventurers, who brought nothing with them but their horſes and their ſwords, degenerated into eaſtern indolence and ſenſuality.

Of all thoſe tribes, the Mahrattas at preſent make the greateſt figure. They are a kind of mercenaries, who live on the mountains between Indoſtan and Perſia. They commonly ſerve on horſeback, and, when well commanded, they have been known to give law even to the court of Delhi. Though they are originally Gentoos, yet they are of bold active ſpirits, and pay no great reſpect to the principles of their religion. Mr. Scrafton ſays, that the Mahometans or Moors are of ſo deteſtable a character, that he never knew above two or three exceptions, and thoſe were among the Tartar and Perſian officers of the army. They are void, we are told, of every principle even of their own religion; and if they have a virtue, it is an appearance of hoſpitality, but it is an appearance only; for while they are drinking with, and embracing a friend, they will ſtab him to the heart. But it is probable, that theſe repreſentations of their moral depravity are carried beyond the bounds of truth.

The manner of drinking among the Gentoos is remarkable. They religiouſly

avoid touching the veſſel that contains the liquor with their lips, and pour it into their mouths, holding the bottle, or other veſſel, at leaſt at a foot's diſtance. Their idea is, that they would be polluted by ſtagnating water. They will drink from a pump, or of any running ſtream, but not out of a pool.

POLITICAL CONSTITUTION AND FORM OF GOVERNMENT. } Theſe will afford a very ſtriking proof of the early and high civilization of the people of India. "The Indians trace back the hiſtory of their own country through an immenſe ſucceſſion of ages, and aſſert that all Aſia, from the mouth of the Indus on the weſt, to the confines of China on the eaſt, and from the mountains of Thibet on the north, to Cape Comorin on the ſouth, formed a vaſt empire, ſubject to one mighty ſovereign, under whom rules ſeveral hereditary princes and rajahs. But their chronology which meaſures the life of man in ancient times by thouſands of years, and computes the length of the ſeveral periods, during which it ſuppoſes the world to have exiſted, by millions, is ſo wildly extravagant, as not to merit any ſerious diſcuſſion. We muſt reſt ſatisfied then, until ſome more certain information is obtained with reſpect to the ancient hiſtory of India, with taking the firſt accounts of that country, which can be deemed authentic, from the Greeks, who ſerved under Alexander the Great. They found kingdoms of conſiderable magnitude eſtabliſhed in that country. The territories of Porus, and of Taxiles comprehended a great part of the Panjab *, one of the moſt fertile, and beſt cultivated countries in India. The kingdom of the Praſij, or Gandaridæ, ſtretched to a great extent on both ſides of the Ganges. All the three, as appears from the ancient Greek writers, were powerful and populous.

"This deſcription of the partition of India into ſtates of ſuch magnitude, is alone a convincing proof of its having advanced far in civilization. In whatever region of the earth there has been an opportunity of obſerving the progreſs of men in ſocial life, they appear at firſt in ſmall independent tribes or communities. Their common wants prompt them to unite; and their mutual jealouſies, as well as the neceſſity of ſecuring ſubſiſtence, compel them to drive to a diſtance every rival who might encroach on thoſe domains which they conſider as their own. Many ages elapſe before they coaleſce, or acquire ſufficient foreſight to provide for the wants, or ſufficient wiſdom to conduct the affairs of a numerous ſociety. Even under the general climate, and in the rich ſoil of India, more favourable perhaps to the union and increaſe of the human ſpecies than any other part of the globe, the formation of ſuch extenſive ſtates, as were eſtabliſhed in that country when firſt viſited by Europeans, muſt have been a work of long time; and the members of them muſt have been long accuſtomed to exertions of uſeful induſtry.

"Though monarchical government was eſtabliſhed in all the countries of India, to which the knowledge of the ancients extended, the ſovereigns were far from poſſeſſing uncontrouled or deſpotic power. The monarchs of India, who are all taken from the ſecond of the four claſſes formerly deſcribed, which is intruſted with the functions of government and exerciſe of war, behold among their ſubjects an order of men far ſuperior to themſelves in dignity, and ſo conſcious of their own pre-eminence, both in rank and in ſanctity, that they would deem it degradation and pollution, if they were to eat of the ſame food with their ſovereign.

"While the ſacred rites of the Bramins oppoſed a barrier againſt the encroachments of regal power on one hand, it was circumſcribed on the other by the ideas which thoſe who occupied the higheſt ſtations in ſociety entertained of their own dignity and privileges.—Nor were the benefits of theſe reſtraints upon the pow-

* This term means the country watered by the five eaſtern branches of the Indus.

er

er of the ſovereign confined wholly to the two ſuperior orders in the ſtate; they extended, in ſome degree, to the third claſs employed in agriculture." This is very ſatisfactorily ſtated by our accurate and ingenious hiſtorian *.

LAWS AND JUDICIAL PROCEEDINGS.] In the early and rude ages of ſociety, the few diſputes with reſpect to property which ariſe, are terminated by the interpoſition of the old men, or by the authority of the chiefs in every ſmall tribe or community; their deciſions are dictated by their own diſcretion, or founded on plain and obvious maxims of equity. But as controverſies multiply, caſes ſimilar to ſuch as have been formerly determined muſt recur, and the awards upon theſe grow gradually into precedents, which ſerve to regulate future judgments. Thus, long before the nature of property is defined by poſitive ſtatutes, there is gradually formed, in every ſtate, a body of cuſtomary or common law by which judicial proceedings are directed, and every deciſion conformable to it is ſubmitted to with reverence, as the reſult of the accumulated wiſdom and experience of ages.

In this ſtate the adminiſtration of juſtice ſeems to have been in India, when firſt viſited by Europeans. Though the Indians, according to their account, had no written laws, but determined every controverted point, by recollecting what had been formerly decided; they aſſert that juſtice was diſpenſed among them with great accuracy, and that crimes were moſt ſeverely puniſhed. But in this general obſervation is contained all the intelligence which the ancients furniſh concerning the nature and forms of judicial proceedings in India. Fortunately, the defects of their information have been amply ſupplied by the more accurate and extenſive reſearches of the moderns.—Towards the middle of the ſixteenth century, Akber the Sixth, in deſcent from Tamerlane, mounted the throne of Indoſtan. As in every province of his extenſive empire, the Hindoos formed the great body of his ſubjects, he laboured to acquire a perfect knowledge of their religion, their ſciences, their laws and inſtitutions; in order that he might conduct every part of his government, particularly the adminiſtration of juſtice, in a manner as much accommodated as poſſible to their own ideas. In this generous undertaking he was ſeconded with zeal by his vizier Abul Fazel, a miniſter whoſe underſtanding was not leſs enlightened than that of his maſter. By their aſſiduous reſearches, and conſultation of learned men, ſuch information was obtained as enabled Abul Fazel to publiſh a brief compendium of Hindoo juriſprudence in the Ayeen Akberry, which may be conſidered as the firſt genuine communication of its principles to perſons of a different religion. About two centuries afterwards, the illuſtrious example of Akber was imitated and ſurpaſſed by Mr. Haſtings, the governor general of the Britiſh ſettlements in India. By his authority, and under his inſpection, the moſt eminent Pundits, or Bramins learned in the laws, of the provinces over which he preſided, were aſſembled at Calcutta; and, in the courſe of two years, compiled from their moſt ancient and approved authors, ſentence by ſentence, with addition or diminution, a full code of Hindoo laws; which is, undoubtedly, the moſt valuable and authentic elucidation of Indian policy and manners that has been hitherto communicated to Europe.

According to the Pundits, ſome of the writers upon whoſe authority they found the decrees which they have inſerted in the code, lived ſeveral millions of years before their time. Without entering into any examination of what is ſo extravagant, we may conclude, that the Hindoos have in their poſſeſſion treatiſes concerning the laws and juriſprudence of their country, of more remote antiquity than are to be found in any other nation. The truth of this depends not upon their own teſtimony alone, but it is put beyond doubt by one circumſtance, that all theſe treatiſes are

* Dr. Robertſon's Diſquiſition concerning India, Appendix, p. 262—266.

written

written in the Shanſkreet language, which has not been ſpoken for many ages in any part of Indoſtan, and is now underſtood by none but the moſt learned Bramins. That the Hindoos were a people highly civilized, at the time when their laws were compoſed, is moſt clearly eſtabliſhed by internal evidence contained in the Code itſelf. Among nations beginning to emerge from barbariſm, the regulations of law are extremely ſimple, and applicable only to a few obvious caſes of daily occurrence. Men muſt have been long united in a ſocial ſtate, their tranſactions muſt have been numerous and complex, and judges muſt have determined an immenſe variety of controverſies to which theſe gave riſe, before the ſyſtem of law becomes voluminous and comprehenſive. In that early age of the Roman republic, when the laws of the twelve tables were promulgated, nothing more was required than the laconic injunctions which they contain for regulating the deciſions of courts of juſtice; but, in a later period, the body of civil law, ample as its contents are, was found hardly ſufficient for that purpoſe. To the jejune brevity of the twelve tables, the Hindoo code has no reſemblance, but with reſpect to the number and variety of points it conſiders, it will bear a compariſon with the celebated digeſt of Juſtinian; or with the ſyſtems of juriſprudence in nations moſt highly civiliſed. The articles of which the Hindoo code is compoſed, are arranged in natural and luminous order. They are numerous and comprehenſive, and inveſtigated with all that minute attention and diſcernment which are natural to a people diſtinguiſhed for acuteneſs and ſubtility of underſtanding, who have been long accuſtomed to the accuracy of judicial proceedings, and acquainted with all the refinements of legal practice. The deciſions concerning every point, with a few exceptions occaſioned by local prejudices and peculiar cuſtoms, are founded upon the great and immutable principles of juſtice which the human mind acknowledges and reſpects, in every age, and in all parts of the earth *.

The Mahometan inſtitutes prevail only in their great towns and their neighbourhood. The empire is hereditary, and the emperor is heir only to his own officers. All lands go in the hereditary line, and continue in that ſtate even down to the ſubtenants, while the lord can pay his taxes, and the latter their rent, both which are immutably fixed in the public books of each diſtrict. The imperial demeſne lands are thoſe of the great rajah families, which fell to Tamerlane and his ſucceſſors. Certain portions of them are called jaghire lands, and are beſtowed by the crown on the great lords or *omrahs*, and upon their death revert to the emperor; but the rights even of the ſubtenants of thoſe lands are indefeaſible.

Mr. Dalrymple obſerves, according to the Gentoo conſtitution, land (houſes and gardens excepted) is not private property, but belongs to the community, in the ſeveral villages; each of which are ſupplied with their reſpective public officers, as the headman, to execute juſtice; the conicopoly, to keep the accounts of the village, the corn-meter, ſmith, barber, doctor, aſtrologer, &c. The grounds are cultivated by the community, and the produce ſhared out in certain proportions to all. One is allotted to the Pagodas and Brahmins, one to the government, another to the public officers, one to the repair of tanks, or reſervoirs of water, and the reſt diſtributed among the community: but we underſtand that the Mahometan government, and the intruſion of Europeans, have introduced ſome innovations in this ancient conſtitution, particularly, by farming the circar, or government ſhares.

LITERATURE.] The evidence which we have of the literature of the Indians is rendered more intereſting by being derived from a ſource of knowledge which the laudable curioſity of our countrymen has opened to the people of Europe within

* Dr. Robertſon's Diſquiſition, Appendix, p. 270——275.

theſe

theſe few years. That all the ſcience and literature poſſeſſed by the Brahmins, were contained in books written in a language underſtood by a few only of the moſt learned among them, is a fact which has long been known; and all the Europeans ſettled in India during three centuries, have complained that the Brahmins obſtinately refuſed to inſtruct any perſon in this language. But at length, by addreſs, mild treatment, and a perſuaſion that the earneſtneſs with which inſtruction was ſolicited, proceeded not from any intention of turning their religion into deriſion, but from a deſire of acquiring a perfect knowledge of their ſciences and literature, their ſcruples have been overcome. Several Britiſh gentlemen are now completely maſters of the Shanſkreet language. The myſterious veil, formerly deemed impenetrable, is removed; and in the courſe of five years, the curioſity of the public has been gratified by two publications as ſingular as they were unexpected. The one is a tranſlation, by Mr. Wilkins, of an Epiſode from the *Mahabarad*, an epic poem, in high eſtimation among the Hindoos, compoſed, according to their account, by Kreeſhna Dwypayen Veias, the moſt eminent of their Brahmins, above three thouſand years before the Chriſtian æra. The other is *Sacontala*, a dramatic poem, written about a century before the birth of Chriſt, tranſlated by ſir William Jones.

The Mahabarad is a voluminous poem, conſiſting of upwards of four hundred thouſand lines. Mr. Wilkins has tranſlated more than a third of it; but only a ſhort epiſode, entitled Baghvat-Geeta, is hitherto publiſhed, and from this ſpecimen we muſt form an opinion with reſpect to the whole. The ſubject of the poem is a famous civil war between two branches of the royal houſe of Bhaurat. When the forces on each ſide were formed in the field, and ready to decide the conteſt by the ſword, Arjoon, the favourite and pupil of the god Kreeſhna, who accompanied him in this hour of danger, requeſted of him to cauſe his chariot to advance between the two hoſtile armies. He looked at both armies, and beheld, on either ſide, none but grandſires, uncles, couſins, tutors, ſons and brothers, near relations or boſom friends; and when he had gazed for a while, and ſaw theſe prepared for the fight, he was ſeized with extreme pity and compunction, and uttered his ſorrows in the following words:— "Having beheld, O *Kreeſhna!* my kindred thus waiting anxious for the fight, my members fail me, my countenance withereth, the hair ſtandeth an end upon my body, and all my frame trembleth with horror! Even *Gandeev*, my bow, eſcapeth from my hand, and my ſkin is parched and dried up.—When I have deſtroyed my kindred, ſhall I longer look for happineſs? I wiſh not for victory, *Kreeſhna*; I want not dominion; I want not pleaſure; for what is dominion, and the enjoyments of life, or even life itſelf, when thoſe for whom dominion, pleaſure and enjoyment were to be coveted, have abandoned life and fortune, and ſtand here in the field ready for the battle. Tutors, ſons and fathers, grandſires and grandſons, uncles, nephews, couſins, kindred, and friends! although they would kill me, I wiſh not to fight them; no not even for the dominion of the three regions of the univerſe, much leſs for this little earth *."

The drama of Sacontala muſt be thought to be a great literary curioſity; but from this the nature of our preſent work will not permit us to give any extract. We ſhall therefore refer our curious readers either to the tranſlation above mentioned, or to ſeveral quotations he will find in Dr. Robertſon's elegant Appendix on the manners and inſtitutions of the people of India; from whence we have taken the preceding account, and much enriched this part of our work; which we ſhall cloſe by one remark, namely, that it is only to nations conſiderably advanced in refinement, that the drama is a favourite entertainment. The Greeks had been for a good time a po-

* Baghvat Geeta, p. 30, 31.

liſhed people; Alcæus and Sappho had compoſed their odes, and Thales and Anaximander had opened their ſchools, before tragedy made its firſt rude effort in the cart of Thēſpis; and a good time elapſed before it attained to any conſiderable degree of excellence. From the drama of Sacontala, then, we muſt form an advantageous idea of the ſtate of improvement in that ſociety to whoſe taſte it was ſuited.

Beſides the two works which have been already mentioned, we ſhall enumerate ſome other pieces which have been tranſlated from the Shanſkreet language.—1. To Mr. Wilkins we are indebted for *Heeto-pades*, or *Amicable Inſtruction*, in a ſeries of connected fables, interſperſed with moral, prudential, and political maxims.—2. In the firſt number of the New Aſiatic Miſcellany, we have a tranſlation of a celebrated compoſition in the eaſt, known by the title of the *Five Gems*. It conſiſts of ſtanzas by five poets, who attended the court of Abiſſura, king of Bengal. Some of theſe ſtanzas are ſimple and elegant.—3. An ode tranſlated from Wulli; in which that extravagance of fancy, and thoſe far-fetched and unnatural conceits, which ſo often diſguſt Europeans with the poetical compoſitions of the Eaſt, abound too much.—4. Some original grants of land, of very ancient dates, tranſlated by Mr. Wilkins. It may ſeem odd, that a charter of legal conveyance of property ſhould be ranked among the literary compoſitions of any people. But ſo widely do the manners of the Hindoos differ from thoſe of Europe, that as our lawyers multiply words and clauſes, in order to render a grant complete, and to guard againſt every thing that may invalidate it, the *Pundits* ſeem to diſpatch the legal part of the deed with brevity, but, in a long preamble and concluſion, make an extraordinary diſplay of their own learning, eloquence, and powers of compoſition, both in proſe and in verſe. The preamble to one of theſe deeds is an encomium of the monarch who grants the land, in a bold ſtrain of eaſtern exaggeration: "When his innumerable army marched, the heavens were ſo filled with the duſt of their feet, that the birds of the air could reſt upon it. His elephants moved like walking mountains, and the earth, oppreſſed by their weight, mouldered into duſt."—5. The tranſlation of part of the Shaſter, publiſhed by colonel Dow, in the year 1768. This tranſlation was not made by him from the Shanſkreet, but taken from the mouth of a Brahmin, who explained the Shaſter in Perſian, or in the vulgar language of Bengal.

COMMERCE.] In every age, it has been a commerce of luxury rather than of neceſſity, which has been carried on between Europe and India. Its elegant manufactures, ſpices, and precious ſtones, are neither objects of deſire to nations of ſimple manners, nor are ſuch nations poſſeſſed of wealth ſufficient to purchaſe them. The three great articles of general importation from India were ſpices and aromatics, precious ſtones and pearls, and ſilk.—1. Spices and aromatics. From the mode of religious worſhip in the heathen world; from the incredible number of their deities, and of the temples conſecrated to them; the conſumption of frankincenſe and other aromatics, which were uſed in every ſacred function, muſt have been very great: but the vanity of men occaſioned a greater conſumption of theſe fragment ſubſtances than their piety. It was the cuſtom of the Romans to burn the bodies of their dead; and they deemed it a diſplay of magnificence, to cover, not only the body, but the funeral pile on which it was laid, with the moſt coſtly ſpices.—2. Precious ſtones, together with which pearls may be claſſed, ſeem to be the article next in value imported from the Eaſt.—3. Another production of India in great demand at Rome, was ſilk.

In two particulars, however, our importations from India differ greatly from thoſe of the ancients. The dreſs, both of the Greeks and Romans, was almoſt entirely woollen

woollen, which, by their frequent uſe of the warm bath, was rendered abundantly comfortable. Their conſumption of linen and cotton cloths was much inferior to that of modern times, when theſe are worn by perſons in every rank of life. Accordingly a great branch of modern importation from that part of India with which the ancients were acquainted, is in *piece-goods*; comprehending, under that mercantile term, the immenſe variety of fabrics, which Indian ingenuity has formed of cotton. Beſides theſe, we import, to a conſiderable extent, various commodities, which are to be conſidered merely as the materials of our domeſtic manufactures. Such are the cotton-wool of Indoſtan, the ſilk of China, and the ſalt-petre of Bengal.

We have already given the outlines of the government by which this great empire long ſubſiſted, without almoſt the reſemblance of virtue among its great officers, either civil or military. It was ſhaken, however, after the overthrow of Mahomet Shah, by Kouli Khan, which was attended by ſo great a diminution of the imperial authority, that the ſoubahs and nabobs became abſolute in their own governments. Though they could not alter the fundamental laws of property, yet they invented new taxes, which beggared the people, to pay their armies and ſupport their power; ſo that many of the people, a few years ago, after being unmercifully plundered by collectors and tax-maſters, were left to periſh through want. To ſum up the miſery of the inhabitants, thoſe ſoubahs and nabobs, and other Mahometan governors, employ the Gentoos themſelves, and ſome even of the Brahmins, as the miniſters of their rapaciouſneſs and cruelties. Upon the whole, ever ſince the invaſion of Kouli Khan, Indoſtan, from being a well-regulated government, is become a ſcene of mere anarchy or ſtratocracy; every great man protects himſelf in his tyranny by his ſoldiers, whoſe pay far exceeds the natural riches of his government. As private aſſaſſinations and other murders are here committed with impunity, the people, who know they can be in no worſe ſtate, concern themſelves very little in the revolutions of government. To the above cauſes are owing the late ſucceſſes of the Engliſh in Indoſtan. The reader, from this repreſentation, may perceive, that all the Engliſh have acquired in point of territory, has been gained from uſurpers and robbers; and their poſſeſſion of it being guarantied by the preſent lawful emperor, is ſaid to be founded upon the laws and conſtitutions of that country. We are, however, ſorry to be obliged to remark, that the conduct of many of the ſervants of the Eaſt India company towards the natives has in too many inſtances been highly diſhonourable to the Engliſh name, and totally inconſiſtent with that humanity which was formerly our national characteriſtic.

The PENINSULA of INDIA beyond the GANGES, called the FARTHER PENINSULA.

SITUATION AND EXTENT.

Miles.		Degrees.	Sq. Miles.
Length 2000 Breadth 1000	between	1 and 30 north latitude. 92 and 109 eaſt longitude.	741,500

BOUNDARIES.] THIS peninſula is bounded by Thibet and China, on the North; by China and the Chineſe ſea, on the Eaſt; by the ſame ſea and the ſtraits of Malacca, on the South; and by the Bay of Bengal

and the Hither India, on the Weſt. The ſpace between Bengal and China is now called the province of Mecklus, and other diſtricts, ſubject to the king of Ava or Burmah.

NAME.] The name of India is taken from the river Indus, which of all others was beſt known to the Perſians. The whole of this peninſula was unknown to the ancients, and is partly ſo to the moderns.

AIR AND CLIMATE.] Authors differ concerning the air of this country, ſome preferring that of the ſouthern, and ſome that of the northern parts. It is generally agreed, that the air of the former is hot and dry, but in ſome places moiſt, and conſequently unhealthy. The climate is ſubject to hurricanes, lightnings, and inundations, ſo that the people build their houſes upon high pillars to defend them from floods; and they have no other idea of ſeaſons, but wet and dry. Eaſterly and Weſterly *monſoons* (which is an Indian word) prevail in this country.

MOUNTAINS.] Theſe run from North to South almoſt the whole length of the country; but the lands near the ſea are low, and annually overflowed in the rainy ſeaſon.

RIVERS.] The chief are Sanpoo * or Burrampooter † Domea, Mecon, Menan, and Ava, or the great river Nou Kian.

Of theſe the Burrampooter, called Sanpoo, in the upper part of its courſe, is by far the moſt conſiderable. This rival ſiſter of the Ganges iſſues from the ſame mountains that give birth to that river; but taking a contrary, i. e. an eaſterly direction through Thibet, winds to the ſouth-weſt through Aſſam, and entering Indoſtan, flows to the ſouth, aſſumes the name of Megna, and joins the weſtern branch of the Ganges with an immenſe body of water, equal if not ſuperior to the Ganges itſelf.

Theſe two noble rivers, when they approach the ſea, divide into ſuch a multitude of channels, and receive ſuch a number of navigable ſtreams, that a tract of country, nearly equal to Great Britain in extent, enjoys by their means the fineſt inland navigation that can be conceived, and which gives conſtant employment to 30,000 boatmen. Theſe channels are ſo numerous that very few places in this tract are even in

* Sanpoo, in the language of Thibet, means *The River*.

† The orthography of this word, as given here, is according to the common pronunciation in Bengal; but it is ſaid to be written in the Shanſcrit language, *Brahma-pooter*, which ſignifies the ſon of *Brahma*. Major Rennel's Memoir, 255.

the dry ſeaſon 25 miles from a navigable ſtream; and in the ſeaſon of the periodical rains, they overflow their banks to the depth of 30 feet, and form an inundation that fertilizes the ſoil to the extent of more than 100 miles.

BAYS AND STRAITS.] The bays of Bengal, Siam, and Cochin China. The ſtraits of Malacca and Sincapora. The promontories of Siam, Romana, and Banſac.

SOIL AND PRODUCT OF THE DIFFERENT NATIONS.] The ſoil of this peninſula is fertile in general, and produces all the delicious fruits that are found in other countries contiguous to the Ganges, as well as roots and vegetables, and in Ava, a quantity of ſalt-petre, and the beſt teek-timber, or Indian oak, which for ſhip-building in warm climates is of much longer duration than any European oak. Teek ſhips of 40 years old are not uncommon in the Indian ſeas. This peninſula abounds likewiſe in ſilks, elephants, and quadrupeds, both domeſtic and wild, that are common in the ſouthern kingdoms of Aſia. The natives drive a great trade in gold, diamonds, rubies, topazes, amethyſts, and other precious ſtones. Tonquin produces little or no corn or wine, but is the moſt healthful country of all the peninſula. In ſome places, eſpecially towards the north, the inhabitants have ſwellings in their throats, ſaid to be owing to the badneſs of their water.

INHABITANTS, CUSTOMS, AND DIVERSIONS.] The Tonquineſe are excellent mechanics and fair traders; but greatly oppreſſed by their king and great lords. His majeſty engroſſes the trade, and his factors ſell by retail to the Dutch and other nations. The Tonquineſe are fond of lacker houſes, which are unwholeſome and poiſonous. The people in the ſouth are a ſavage race, and go almoſt naked, with large ſilver and gold ear-rings, and coral, amber, or ſhell bracelets. In Tonquin and Cochin China, the two ſexes are ſcarcely diſtinguiſhable by their dreſs, which reſembles that of the Perſians. The people of quality are fond of Engliſh broad-cloth, red or green; and others wear a dark-coloured cotton cloth. In Azem, which is thought one of the beſt countries in Aſia, the inhabitants prefer dogs-fleſh to all other animal food. The people of that kingdom pay no taxes, becauſe the king is ſole proprietor of all the gold and ſilver, and other metals, found in his kingdom. They live, however, eaſy and comfortably. Almoſt every houſe-keeper has an elephant for the conveniency of his wives and women, polygamy being practiſed all over India.

It is unqueſtionable that thoſe Indians, as well as the Chineſe, had the uſe of gunpowder before it was known in Europe; and the invention is generally aſcribed to the Azemeſe. The inhabitants of the ſouthern diviſion of this peninſula go under the name of Malayans, from the neighbouring country of Malacca.

Though the ſuperſtitions that prevail in this peninſula are extremely groſs, yet the people believe in a future ſtate; and when their kings are interred, a number of animals are buried with them, and ſuch veſſels of gold and ſilver as they think can be of uſe to them in their future life. The people in this peninſula are commonly very fond of ſhew, and often make an appearance beyond their circumſtances. They are delicate in no part of their dreſs but in their hair, which they buckle up in a very agreeable manner. In their food they are loathſome; for beſides dogs, they eat rats, mice, ſerpents, and ſtinking fiſh. The people of Arracan are equally indelicate in their amours, for they hire Dutch and other foreigners to conſummate the nuptials with their virgins, and value their women moſt when in a ſtate of pregnancy. Their treatment of the ſick is ridiculous beyond belief; and in many places; when a patient is judged to be incurable, he is expoſed on the bank of ſome river, where he is either drowned, or devoured by birds or beaſts of prey. Notwithſtanding the great antiquity of moſt Indian nations, it is confidently aſſerted that on the confines of Arracan and Pegu, there is a people (if ſolitary ſavages, roaming through

woods

woods in queſt of prey, deſerve the name of people) that appear to be in the very firſt ſtage of ſociety. They are the only people in the known world that go abſolutely naked, without the ſmalleſt covering on any part of their bodies. They live on fruit, which grows ſpontaneouſly, in the uncultivated deſert they inhabit, in great abundance; and on the fleſh of animals, which they tear alive and devour raw. They ſit on their hams, with their legs and arms diſpoſed in the manner of monkeys. At the approach of men, they fly into their woods. They take care of their offspring, and live in families, but ſeem to have no ideas of ſubordination of rank or civil government.

The diverſions common in this country are fiſhing and hunting, the celebrating of feſtivals, and acting comedies, by torch-light, from evening to morning.

LANGUAGE.] The language of the court of Delhi is Perſian, but in this peninſula it is chiefly Malayan, interſperſed with other dialects.

LEARNING AND LEARNED MEN.] The Brahmins, who are the tribe of the prieſthood, deſcend from thoſe Brachmans who are mentioned to us with ſo much reverence by antiquity; and although much inferior, either as philoſophers or men of learning, to the reputation of their anceſtors, as prieſts, their religious doctrines are ſtill implicitly followed by the whole nation; and as preceptors, they are the ſource of all the knowledge which exiſts in Indoſtan. But the utmoſt ſtretch of their mathematical knowledge ſeems to be the calculation of eclipſes. They have a good idea of logic; but it does not appear that they have any treatiſes on rhetoric: their ideas of muſic, if we may judge from their practice, are barbarous; and in medicine they derive no aſſiſtance from the knowledge of anatomy, ſince diſſections are repugnant to their religion.

The poetry of the Aſiatics is too turgid, and full of conceits, and the diction of their hiſtorians verboſe: but though the manner of eaſtern compoſitions differs from the correct taſte of Europe, there are many things in the writings of Aſiatic authors worthy the attention of literary men. Mr. Dow obſerves, that in the Shanſcrit, or learned language of the Brahmins, which is the grand repoſitory of the religion, philoſophy, and hiſtory of the Hindoos, there are many hundred volumes in proſe which treat of the ancient Indians and their hiſtory. The ſame writer alſo remarks, that the Shanſcrit records contain accounts of the affairs of Weſtern Aſia, very different from thoſe given by the Arabians; and that it is more than probable, that, upon examination, the former will appear to bear the marks of more authenticity, and of greater antiquity, than the latter. The Arabian writers have been generally ſo much prejudiced againſt the Hindoos, that their accounts of them are by no means to be relied on.

Mr. Dow obſerves, that the ſmall progreſs which correctneſs and elegance of ſentiment and diction have made in the Eaſt, did not proceed from a want of encouragement to literature. On the contrary, it appears, that no princes in the world patronized men of letters with more generoſity and reſpect than the Mahometan emperors of Indoſtan. A literary genius was not only the certain means to acquire a degree of wealth which muſt aſtoniſh Europeans, but an infallible road for riſing to the firſt offices of the ſtate. The character of the learned was at the ſame time ſo ſacred, that tyrants, who made a paſtime of embruing their hands in the blood of their other ſubjects, not only abſtained from offering violence to men of genius, but ſtood in fear of their pens.

MANUFACTURES AND COMMERCE.] Theſe vary in the different countries of this peninſula; but the chief branches have been already mentioned. The inhabitants, in ſome parts, are obliged to manufacture their ſalt out of aſhes. In all handicraft trades that they underſtand, the people are more induſtrious, and better workmen, than

than moſt of the Europeans; and in weaving, ſewing, embroidering, and ſome other manufactures, it is ſaid that the Indians do as much work with their feet as their hands. Their painting, though they are unſkilful in drawing, is amazingly vivid in its colours. The fineneſs of their linen, and the fillagree work in gold and ſilver, are beyond any thing of thoſe kinds to be found in other parts of the world. The commerce of India, in ſhort, is courted by all trading nations, and probably has been ſo from the earlieſt ages: it was not unknown even in Solomon's time; and the Greeks and Romans drew from thence their higheſt materials of luxury. The greateſt ſhare of it, through events foreign to this part of our work, is now centered in England, though that of the Dutch is ſtill very conſiderable; that of the French has for ſome time declined, nor is that of the Swedes and Danes of much importance.

CONSTITUTION, GOVERNMENT, RARITIES, AND CITIES. This article is ſo extenſive, that it requires a ſlight review of the kingdoms that form this peninſula. In Axem, it hath been already obſerved, the king is proprietor of all the gold and ſilver; he pays little or nothing to the Great Mogul; his capital is Ghergong or Kirganu. We know little or nothing of the kingdom of Tipra, but that it was anciently ſubject to the kings of Arracan; and that they ſend to the Chineſe gold and ſilk, for which they receive ſilver in return. Arracan lies to the ſouth of Tipra, and is governed by twelve princes, ſubject to the chief king, who reſides in his capital. His palace is very large, and contains, as we are told, ſeven idols caſt in gold of two inches thick, each of a man's height, and covered over with diamonds and other precious ſtones. Pegu is about 350 Engliſh miles in length, and almoſt the ſame in breadth. The riches of the kingdom, when an independent ſtate, were almoſt incredible; ſome idols, as big as life, being of maſſy gold and ſilver. The king's revenues aroſe from the rents of lands, of which he was ſole proprietor, and from duties on merchandiſe; ſo that ſome thought him the richeſt monarch in the world, except the Chineſe emperor. He was ſaid to be able to bring a million, and on occaſion a million and a half, of ſoldiers to the field, well cloathed and armed; and to be maſter of 800 trained elephants, each with a caſtle on his back holding four ſoldiers. The conſtitution of this empire is of the feudal kind, for the prince aſſigns lands and towns to his nobles upon military tenures. In the year 1754, Pegu was reduced to the ſtate of a dependent province by the king of Ava. Macao is the great mart of trade in that province.

We know little of the kingdom of Ava. Monchaboo was the reſidence of the king, and not Ava, in 1755. It is ſaid, the honours the king aſſumes are next to divine. His ſubjects trade chiefly in muſk and jewels, rubies, and ſapphires. In other particulars, the inhabitants reſemble thoſe of Pegu. In thoſe kingdoms, and indeed in the greateſt part of this peninſula, the doctrines of the Grand Lama of Thibet prevail, as well as thoſe of the Brahmins.

The kingdom of Laos or Lahos, formerly included that of Jangoma or Jangomay, but that is now ſubject to Ava; we know few particulars of it that can be depended upon. It is ſaid to be immenſely populous, to abound in all the rich commodities as well as the groſs ſuperſtitions of the eaſt, and to be divided into a number of petty kingdoms, all of them holding of one ſovereign, who, like his oriental brethern, is abſolutely deſpotic, and lives in inexpreſſible pomp and magnificence; but is of the Lama religion, and often the ſlave of his prieſts and miniſters.

The kingdom of Siam has been often deſcribed by miſſionaries and pretended travellers in the moſt romantic terms; and therefore we can pay little credit to their accounts, farther than that it is a rich and flouriſhing kingdom, and that it approaches, in its government, policy, and the quickneſs and acuteneſs of its inhabitants

habitants, very near to the Chineſe. The kingdom of Siam is ſurrounded by high mountains, which on the eaſt ſide ſeparate it from the kingdoms of Camboja and Laos; on the weſt, from Pegu; and on the north, from Ava, or, more properly, from Jangoma; on the ſouth it is waſhed by the river Siam, and joins the peninſula of Malacca, the north-weſt part whereof is under its dominion. The extent of the country, however, is very uncertain, and it is but indifferently peopled. The inhabitants of both ſexes are more modeſt than any found in the reſt of this peninſula. Great care is taken of the education of the children. Their marriages are ſimple, and performed by their talapoins, or prieſts, ſprinkling holy water upon the couple, and repeating ſome prayers. We are told that gold is ſo abundant in this country, that their moſt ponderous images are made of it; and that it is ſeen in vaſt quantities on the outſide of the king's palace. Theſe relations are found, by modern travellers, to be the fictions of French and other miſſionaries: for though the country has mines of gold, their ornaments are either exceſſively thin plates of that metal, or a very bright lacker that covers wooden or other materials. The government is extremely deſpotic; even ſervants muſt appear before their maſters in a kneeling poſture; and the mandarins are proſtrate before the king. Siam, the capital, is repreſented as a large city, but ſcarcely a ſixth part of it is inhabited; and the palace is about a mile and a half in circuit. Bankok, which ſtands about 18 leagues to the ſouth of Siam, and 12 miles from the ſea, is the only place towards the coaſt that is fortified with walls, batteries, and braſs cannon; and the Dutch have a factory at Ligor, which ſtands on the eaſt ſide of the peninſula of Malacca, but belonging to Siam.

The peninſula of Malacca is a large country, and contains ſeveral kingdoms or provinces. The Dutch, however, are ſaid to be real maſters and ſovereigns of the whole peninſula, being in poſſeſſion of the capital (Malacca). The inhabitants are ſimple, or rather groſs, in their manner of living; and yet the Malayan language is reckoned the pureſt of any ſpoken in all the Indies. We are told by the lateſt travellers, that its chief produce is tin, pepper, elephants' teeth, canes, and gums. Some miſſionaries pretend that it is the Golden Cherſoneſus or Peninſula of the ancients, and that the inhabitants uſed to meaſure their riches by bars of gold. The truth is, that the excellent ſituation of this country admits of a trade with India; ſo that when it was firſt diſcovered by the Portugueſe, who were afterwards expelled by the Dutch, Malacca was the richeſt city in the eaſt, next to Goa and Ormus, being the key of the China, the Japan, the Moluccas, and the Sunda trade. The country, however, at preſent, is chiefly valuable for its trade with the Chineſe. This degeneracy of the Malayans, who were formerly an induſtrious and ingenious people, is eaſily accounted for by the tyranny of the Dutch, whoſe intereſt it is that they ſhould never recover from their preſent ſtate of ignorance and ſlavery.

The Engliſh carry on a ſmuggling trade in their country ſhips, from the coaſt of Coromandel and the Bay of Bengal, to Malacca. This commerce is connived at by the Dutch governor and council, who little regard the orders of their ſuperiors, provided they can enrich themſelves.

Cambodia, or Camboja, is a country little known to the Europeans; but, according to the beſt information, its greateſt length, from north to ſouth, is about 520 Engliſh miles; and its greateſt breadth, from weſt to eaſt, about 398. This kingdom has a ſpacious river running through it, the banks of which are the only habitable parts of the country, on account of its ſultry air, and the peſtiferous gnats, ſerpents, and other animals bred in the woods. Its ſoil, commodities, trade, animals, and products by ſea and land, are much the ſame with thoſe of the other kingdoms of this vaſt peninſula. The betel, a creeping plant of a particular flavour,

flavour, and, as they ſay, an excellent remedy for all thoſe diſeaſes that are common to the inhabitants of the Eaſt Indies, is the higheſt luxury of the Cambodians, from the king to the peaſant; but is very unpalatable and diſagreeable to the Europeans. The ſame barbarous magnificence, the deſpotiſm of their king, and the ignorance of the people, prevail here as throughout the reſt of the peninſula. Between Cambodia and Cochin China lies the little kingdom of Chiampa, the inhabitants of which trade with the Chineſe, and ſeem therefore to be ſomewhat more civilized than their neighbours.

Cochin-China, or the weſtern China, is ſituated under the torrid zone, and extends, according to ſome authors, about 500 miles in length; but it is much leſs extenſive in its breadth from eaſt to weſt. Laos, Cambodia, and Chiampa, as well as ſome other ſmaller kingdoms, are ſaid to be tributary to Cochin-China; ſome particulars of which I have mentioned in the general view of this peninſula. The manners and religion of the people ſeem to be originally Chineſe; and they are much given to trade. Their king is ſaid to be immenſely rich, and his kingdom enjoys all the advantages of commerce that are found in the other parts of the Eaſt Indies; but this mighty prince, as well as the king of Tonquin, are ſubject to the Chineſe emperor. It is reaſonable to ſuppoſe, that all theſe rich countries were peopled from China, or at leaſt, that they had, ſome time or other, been governed by one head, till the mother-country became ſo large, that it might be convenient to parcel it out, reſerving to itſelf a kind of feudal ſuperiority over them all.

The government of Tonquin is particular. The Tonquineſe had revolted from the Chineſe, which occaſioned a civil war. A compromiſe at laſt took place between the chief of the revolt, and the repreſentative of the ancient kings, by which it was agreed that the former ſhould have all the executive powers of the government, under the name of the Chouah; but that the Bua, or real king, ſhould retain the royal titles, and be permitted ſome inconſiderable civil prerogatives within his palace, from which neither he nor any of his family can ſtir without the permiſſion of the chouah.

The chouah reſides generally in the capital Cachao, which is ſituated near the centre of the kingdom. The bua's palace is a vaſt ſtructure, and has a fine arſenal. The Engliſh have a very flouriſhing factory on the north-ſide of the city, conveniently provided with ſtore-houſes, and office-houſes, a noble dining room, and handſome apartments for the merchants, factors, and officers of the company.

The above is the beſt account I have been able to give of this vaſt peninſula. Its rarities, conſiſting of houſes overlaid with gold, and ſolid idols of the ſame metal, adorned with an infinite number of precious ſtones and jewels, are mentioned by many travellers; but it is difficult to give them credit, when we conſider the undiſciplined weakneſs of the inhabitants, their ſuperſtition, indolence, ignorance, and native timidity; which muſt render them a prey not only to Europeana dventurers, but to the Tartar conquerors of China. To this we may add, the univerſally admitted paſſion of thoſe people for oſtentation, and the many diſcoveries that have been made by candid travellers, of their diſplaying plated or gilded furniture and ornaments, at which they are wonderfully expert, for thoſe of maſſy gold.

The poſſeſſion of rubies, and other precious ſtones of an extraordinary ſize, and even of white and party-coloured elephants, convey among thoſe credulous people a pre eminence of rank and royalty, and has ſometimes occaſioned bloody wars. After all, it muſt be acknowledged, that, however dark the accounts we have of thoſe kingdoms may be, yet there is ſufficient evidence to prove, that they are immenſely rich in all the treaſures of nature; but that thoſe advantages are attended

with many natural calamities, ſuch as floods, volcanos, earthquakes, tempeſts, and above all, rapacious and poiſonous animals, which render the poſſeſſion of life, even for an hour precarious and uncertain.

INDIA within the GANGES, or the Empire of the GREAT MOGUL.

The Britiſh nation poſſeſſes in full ſovereignty the whole ſoubah of Bengal, and the greateſt part of Bahar. In Oriſſa, or Orixa, only the diſtricts of Midnapour. The whole poſſeſſions contain about 150,000 ſquare miles, and 10 millions of inhabitants. With their allies and tributaries, they now occupy the whole navigable courſe of the Ganges from its entry on the plains to the ſea, which, by its winding courſe, is more than 1350 miles.

AIR AND SEASONS.] The winds in this climate generally blow for ſix months from the ſouth, and ſix from the north. April, May, and the beginning of June, are exceſſively hot, but refreſhed by ſea breezes; and in ſome dry ſeaſons, the hurricanes, which tear up the ſands, and let them fall in dry ſhowers, are exceſſively diſagreeable. The Engliſh, and conſequently the Europeans in general, who arrive at Indoſtan, are commonly ſeized with ſome illneſs, ſuch as flux or fever, in their different appearances; but when properly treated, eſpecially if the patients are abſtemious, they recover, and afterwards prove healthy.

MOUNTAINS.] The moſt remarkable mountains are thoſe of Caucaſus and Naugracut, which divide India from Perſia, Uſbec Tartary, and Thibet, and are inhabited by Mahrattas, Afghans, or Patans, and other people more warlike than the Gentoos.

The mountains named the Gauts, Gattes, or INDIAN APPENINE, and which extend from Cape Comorin to the Tapty, or Surat river, are alſo called *Balla-Gaut*, throughout their whole extent: meaning, literally, the *higher* or *upper Gauts* *. In the peninſula within the Ganges, this term is applied in contradiſtinction to Payen-Gaut, or the *lower-Gauts*: but in the Deccan, it appears to be uſed only as a proper name, and not as a correlative; we having never heard of the Deccan, Payen-Gaut.

This famous Appenine, which marks, with more preciſion perhaps than any other boundary whatever, the line of ſummer and winter, or rather of dry and wet, extends 13 degrees of latitude; that is, from Cape Comorin to Surat (with the exception of a valley or break in the continuity of the ridge of theſe mountains, oppoſite to Paniany) at unequal diſtances from the coaſt: ſeldom more than ſeventy miles, and commonly about forty: and within one ſhort ſpace only, it approaches within ſix miles. Although the altitude of theſe mountains is unknown, yet it is ſufficiently great to prevent the great body of clouds from paſſing over them; and accordingly the alternate N. E. and S. W. winds (called the monſoons) occaſion a rainy ſeaſon on one ſide of the mountains only; that is, on the windward ſide. It would appear, though, that clouds enough do paſs over, to occaſion a rainy ſeaſon, at a conſiderable diſtance to leeward, where thoſe clouds deſcend; as we may ſuppoſe them to do, although at the time they paſſed over the Gauts, they muſt neceſſarily have been too high, and of courſe too light, to condenſe and fall in rain there. This, I am led to conſider by Lieut. Ewart's account of the weather at Nagpour, in the very

* Gaut, or Ghaut, ſignifies either a paſs through mountains, or landing-place on the bank of a river. In the former ſenſe, the term has been applied to the Carnatic, which is divided by ridges of mountains abounding with paſſes and defiles.

centre of India; where the ſeaſons differ but little from their uſual courſe in Bengal, and on the weſtern ſide of India: that is, the S. W. monſoon occaſions a rainy ſeaſon: but the rains are not ſo violent, nor of ſuch long continuance, as in thoſe places. At the mouth of the God[illegible] river and its neighbourhood, the S. W. monſoon occaſions a rainy [illegible] alſo; and the Godaverry is then ſwoln and overflows: and this part is about as far to leeward of the Gauts, as Nagpour is. We may conclude then, that the ridge of the Gauts ſhelters a particular tract only; beyond which the light and elevated clouds that paſs over it deſcend in rain. Madras is within the limits of the ſheltered tract, though at leaſt three hundred miles to leeward of the Gauts: Rajamundry (near the mouth of the Godaverry) may be about five-hundred. It would be curious to know the exact limit of wet and dry.

If I miſtake not, until lately it was a general opinion, that the Gauts extended from the northern (or Bootan) mountains to Cape Comorin, and occaſioned a diverſity of ſeaſons, at one and the ſame time, throughout all India. But the truth is, that different ſeaſons exiſt at the ſame moment, only in a part of the peninſula: for the cauſe ceaſes in the parallel of Surat; where the S. W. wind, no longer oppoſed by a wall of mountains, carries its ſupplies of moiſture uninterruptedly, both far and near, over the * whole face of the country.

Rivers.] Theſe are the Indus and the Ganges, both of them known to the ancients, and held in the higheſt eſteem, and even veneration, by the modern inhabitants. The Indus is by the natives called Sinde † or Sindeh, and is formed of about ten principal ſtreams which deſcend from the Perſian and Tartarian mountains on the north-eaſt and north-weſt. From the city of Attock down to Moultan, it is commonly ſtyled the River Attock; below Moultan it is often named the Soor, until it divides itſelf into many channels near Tatta, where the principal branch takes the name of Mehran. Theſe channels form and interſect a large triangular iſland, which they fertilize by their periodical inundations. The principal rivers it receives are the Behat, or Hydaſpes, and the Hyphaſis, which formed the eaſtern boundary of the conqueſts of Alexander.

The Ganges ‡, one of the fineſt rivers of the world, iſſues from Kentaiſſe, one of the vaſt mountains of Thibet, and after a courſe of about 750 miles, through mountainous regions little known, enters Indoſtan at the defile of Kupele, ſuppoſed by the natives to be its ſource. From hence this fine river, (which is revered by the Hindoos as a deity that is to waſh away all their ſtains) flows through delightful plains, with a ſmooth navigable ſtream, from one to three miles wide, during the remainder of its courſe, which is about 1350 miles, to the bay of Bengal, into which it falls by two larger and a multitude of leſſer channels, that form and interſect a large triangular iſland, whoſe baſe at the ſea is near 200 miles in extent. The entire courſe of the Ganges is 2100 miles, and is to that of the Thames as 9½ to 1 §. The navigation

* Major Rennell's Memoir, p. 213, 214.

† The name of Sinde was not unknown to the Romans: *Indus incolis Sindus appellatus.* Pliny, Book vi.

‡ The proper name of this river, in the language of Hindooſtan (or Indoſtan), is *Pudda*, or *Padda*. It is alſo named *Burra Gonga*, or the Great River; and *Gonga* the River, by way of eminence; and from this, doubtleſs, the European names of the River are derived. Rennel's Memoir, 255.

§ The proportionable lengths of courſe, of ſome of the moſt noted rivers in the world, are ſhewn nearly by the following numbers:

European rivers —	Thames —	—	1
	Rhine —	—	5¾
	Danube —	—	7
	Wolga —	—	9½

Aſiatic

navigation of the eaſtern branch being dangerous, is little frequented. The weſtern branch, called the Little Ganges, or River of Hoogly, is navigable by large ſhips, and moſt generally reſorted to. The Ganges receives 11 rivers, ſome of which are equal to the Rhine, and none inferior to the Thames.

Beſides theſe rivers, many others water this country, at the Bahet of Chelum, (the Hydaſpes of Alexander) the Jenau or the ancient Aceſines, or Beah, Setlege, Jumna, and the Rauvee, formerly the Hydraotes, on the ſouth bank of which ſtands the city of Lahor.

SEAS, BAYS, AND CAPES.] Theſe are the Indian Ocean; the bay of Bengal; the gulf of Cambaya; the ſtraits of Ramanakoel; Capes Comorin and Diu.

INHABITANTS.] To what was ſaid of their religion and ſects, in the general review of this great empire, we may add, that the fakirs are a kind of Mahometan mendicants or beggars, who travel about, practiſing the greateſt auſterities; but many of them are impoſtors. Their number is ſaid to be 800,000. Another ſet of mendicants are the joghis, who are idolaters, and are ſuppoſed to be twelve millions in number, but all of them vagabonds, who live by amuſing the credulous Gentoos with fooliſh fictions. The Banians, who are ſo called from their innocence of life, ſerve as brokers, and profeſs the Gentoo religion.

The Perſees, or Parſes, of Indoſtan, are originally the Gaurs, deſcribed in Perſia, an induſtrious people, particularly in weaving and architecture of every kind. They pretend to be poſſeſſed of the works of Zoroaſter, whom they call by various names, and which ſome Europeans think contain many particulars that would throw light upon ancient hiſtory both ſacred and profane. This opinion is countenanced by the few parcels of thoſe books that have been publiſhed; but ſome are of opinion that the whole is a modern impoſture. The Gaurs pay divine adoration to fire, but it is ſaid, only as an emblem of the Divinity, and as his chief agent in the ſyſtem of the univerſe. They never extinguiſh fire. They will ſtand four hours by their lamp, putting up their prayers to God, with folded hands, and their eyes turned towards Heaven with great marks of devotion. They utter ejaculatory prayers all day long, and conſtantly mix buſineſs, and even common converſation, with devotion. They have a ſuperſtitious veneration for cocks and for dogs. They breed great numbers of dogs at their own houſes, and feed them regularly twice every day with rice and ghee. To all dogs, whether their own or not, they are very hoſpitable. Wherever they ſee a dog, they preſently call him, and offer him food. If you walk abroad with a dog in any of the Perſee villages, you preſently hear *jo! jo!* at every turn; every body ſtriving to be the firſt to entertain your dog. Dogs are alſo ſacred in all the Turkiſh dominions. The dogs on the iſland of Bombay, a few years ago, were many of them mad: whereupon an order was given by the

governor,

governor, for killing all dogs without exception. This order being known, the Perſees were greatly alarmed, met together, and entered into a ſolemn alliance in defence of their dogs, determined to protect their lives at the riſque of their own. It was therefore thought prudent, not to inſiſt on the execution of the decree that had been iſſued againſt thoſe faithful and affectionate domeſtics.

The nobility and people of rank delight in hunting with the bow as well as the gun, and often train the leopards to the ſports of the field. They affect ſhady walks and cool fountains, like other people in hot countries. They are fond of tumblers, mountebanks, and jugglers; of barbarous muſic, both in wind and ſtring inſtruments, and play at cards in their private parties. Their houſes make no appearance, and thoſe of the commonalty are poor and mean, and generally thatched, which renders them ſubject to fire; but the manufacturers chuſe to work in the open air; and the inſide of houſes belonging to the principal perſons are commonly neat, commodious, nay many of them magnificent.

COMMERCE OF INDOSTAN.] I have already mentioned this article as well as the manufactures of India; but the Mahometan merchants carry on, in a particular ſpecies of veſſels called junks, a trade which has not been deſcribed; I mean that with Mecca, in Arabia, from the weſtern parts of this empire, up the Red Sea. The largeſt of theſe junks, we are told, beſides the cargoes, will carry 1700 Mahometan pilgrims to viſit the tomb of their prophet. At Mecca they meet with Abyſſinian, Egyptian, and other traders, to whom they diſpoſe of their cargoes for gold and ſilver; ſo that a Mahometan junk returning from this voyage is often worth 200,000l.

PROVINCES, CITIES, AND OTHER BUILDINGS, PUBLIC AND PRIVATE.] The province of Agra is the largeſt in all Indoſtan, containing 40 large towns and 340 villages. Agra is the greateſt city, and its caſtle the largeſt fortification in all the Indies. The Dutch have a factory there, but the Engliſh have none.

The city of Delhi, which is the capital of that province, is likewiſe the capital of Indoſtan. It is deſcribed as a fine city, and contains the imperial palace, which is adorned with the uſual magnificence of the Eaſt. Its ſtables formerly contained 12,000 horſes, brought from Arabia, Perſia, and Tartary; and 500 elephants. When the forage is burnt up by the heats of the ſeaſon, theſe horſes are ſaid to be fed in the morning with bread, butter, and ſugar, and in the evening with rice-milk properly prepared.

Tatta, the capital of Sindy, is a large city; and it is ſaid that a plague which happened there in 1699 carried off above 80,000 of its manufacturers in ſilk and cotton. It is ſtill famous for the manufacture of palanquins, a kind of canopied couches, on which the great men all over India, Europeans as well as natives, repoſe when they appear broad. They are carried by four men, who will trot along, morning and evening, 40 miles a day; 10 being uſually hired, who carry the palanquin by turns, four at a time. Though a palanquin is dear at firſt coſt, yet the porters may be hired for nine or ten ſhillings a month each, out of which they maintain themſelves. The Indus, at Tatta, is about a mile broad, and famous for its fine carp.

Though the province of Moultan is not very fruitful, yet it yields excellent iron and canes; and the inhabitants, by their ſituation, are enabled to deal with the Perſians and Tartars yearly for above 60,000 horſes. The capital is Moultan, about 800 miles, by the courſe of the river, from the ſea.

The province of Caſſimere, being ſurrounded with mountains, is difficult of acceſs, but when entered, it appears to be the paradiſe of the Indies. It is ſaid to contain 100,000 villages, to be ſtored with cattle and game, without any beaſts of prey. The capital (Caſſimere) ſtands by a large lake; and both ſexes, the women

eſpecially

eſpecially, are almoſt as fair as the Europeans, and are ſaid to be witty, dextrous, and ingenious.

The province and city of Lahor, formerly made a great figure in the Indian hiſtory, and is ſtill one of the largeſt and fineſt in the Indies, producing the beſt ſugars of any in Indoſtan. Its capital was once about nine miles long, but is now much decayed. We know little of the provinces of Ayud, Varad, Bekar, and Hallabas, that is not in common with the other provinces of Indoſtan, excepting that they are inhabited by a hardy race of men, who ſeem never to have been conquered; and though they ſubmit to the Moguls, live in an eaſy, independent ſtate. In ſome of thoſe provinces many of the European fruits, plants, and flowers, thrive, as in their native ſoil.

Bengal, of all the Indian provinces, is perhaps the moſt intereſting to an Engliſh reader. Its natural ſituation, (as deſcribed by Major Rennel, late ſurveyor general in Bengal) is ſingularly happy with reſpect to ſecurity from the attack of foreign enemies. On the north and eaſt it hath no warlike neighbours, and hath moreover a formidable barrier of mountains, rivers, or extenſive waſtes towards thoſe quarters, ſhould an enemy ſtart up. On the ſouth is a ſea-coaſt guarded by ſhallows and impenetrable woods, and with only one port, which is of difficult acceſs, in an extent of 300 miles. Only on the weſt can an enemy be apprehended, but there the natural barrier is ſtrong, and with its population and reſources, and the uſual proportion of Britiſh troops, Bengal might bid defiance to any part of Indoſtan which was inclined to become its enemy. It is eſtimated to be the ſtore-houſe of the Eaſt Indies. Its fertility exceeds that of Egypt after being overflowed by the Nile; and the produce of its ſoil conſiſts of rice, ſugar-canes, corn, ſeſamum, ſmall mulberry and other trees. Its callicoes, ſilk, ſalt-petre, lakka, opium, wax, and civet, go all over the world, and proviſions here are in vaſt plenty, and incredibly cheap, eſpecially pullets, ducks, and geeſe. The country is interſected by canals cut out of the Ganges for the benefit of commerce; and extends near 100 leagues on both ſides the Ganges, full of cities, towns, villages, and caſtles.

In Bengal, the worſhip of the Gentoos is practiſed in its greateſt purity; and their ſacred river (Ganges) is in a manner lined with their magnificent pagodas or temples. The women, notwithſtanding their religion, are ſaid by ſome to be laſcivious and enticing.

Generally ſpeaking, the deſcription of one Indian city, is a deſcription of all; they being all built on one plan, with exceeding narrow, confined and crooked ſtreets; with an incredible number of reſervoirs and ponds, and a great many gardens interſperſed. A few of the ſtreets are paved with brick. The houſes are variouſly built: ſome of brick, others with mud, and a ſtill greater proportion with bamboos, and mats: and theſe different kinds of fabricks ſtanding intermixed with each other, form a motley appearance; thoſe of the latter kinds are invariably of one ſtory, and covered with thatch. Thoſe of brick ſeldom exceed two floors, and have flat, terraced roofs. The two former claſſes far out-number the laſt, which are often ſo thinly ſcattered, that fires, which often happen, do not ſometimes meet with the obſtruction of a brick houſe through a whole ſtreet.

Calcutta is in part an exception to this rule of building; for there the quarter inhabited by the Engliſh is compoſed entirely of brick buildings, many of which have more the appearance of palaces than of private houſes; but the remainder of the city, and by much the greateſt part, is built as I have deſcribed the cities in general to be. Within theſe 20 or 25 years, Calcutta has been wonderfully improved, both in appearance and in the ſalubrity of its air; for the ſtreets have been properly drained, and the ponds filled up; thereby removing a vaſt ſurface of ſtagnant water,

water, the exhalations from which were particularly hurtful. Calcutta is well known to be the emporium of Bengal, and the ſeat of the governor-general of India. It is a very extenſive and populous city, being ſuppoſed at preſent to contain, at leaſt, 500,000 inhabitants. Its local ſituation is not fortunate; for it has ſome extenſive muddy lakes, and a vaſt foreſt, cloſe to it. It is remarkable that the Engliſh have been more inattentive than other European nations, to the natural advantages of ſituation in their foreign ſettlements. It is a modern city, having riſen on the ſite of the village of Govindpour, about 90 years ago*.

The principal Engliſh factory in Bengal is at Calcutta, called Fort William, ſituate on the river Hoogley, the moſt weſterly branch of the Ganges. It is about 100 miles from the ſea; and the river is navigable up to the town, for the largeſt ſhips that viſit India. The fort itſelf is ſaid to be irregular, and untenable againſt diſciplined troops; but the ſervants of the Company have provided themſelves with convenient apartments for their own accommodation. As the town itſelf has been long in poſſeſſion of the Company, an Engliſh civil government, by a mayor and aldermen, was introduced into it. This was immediately under the authority of the company. But in 1773, an act of parliament was paſſed to regulate the affairs of the Eaſt India Company, as well in India as in Europe. By this act the governor-general and four counſellors were appointed and choſen by the parliament, with whom was veſted the whole civil and military government of the preſidency of Fort William; and the ordering, management, and government, of all the territorial acquiſitions and revenues in the kingdom of Bengal, Bahar, and Oriſſa, ſo long as the Company ſhould remain poſſeſſed of them. The governor-general and council were alſo entruſted with the ſuperintendance of the preſidencies of Madras, Bombay, and Bencoolen. The governor-general and council to pay obedience to the orders of the court of directors, and to correſpond with them. The governor-general and counſellors were likewiſe empowered to eſtabliſh a court of judicature at Fort William; to conſiſt of a chief juſtice, and three other judges to be named from time to time by his majeſty; theſe are to exerciſe all criminal, admiralty, and eccleſiaſtical juriſdiction; to be a court of record, and a court of oyer and terminer for the town of Calcutta, and factory of Fort William and its limits, and the factories ſubordinate thereto. But the eſtabliſhment of this ſupreme court does not appear to have promoted either the intereſts of the Eaſt India Company, or the felicity of the people of the country. No proper attention was paid to the manners and cuſtoms of the people; acts of great oppreſſion and injuſtice have been committed; and the ſupreme court has been a ſource of great diſſatisfaction, diſorder, and confuſion. For the ſubſequent regulations reſpecting the Eaſt India territories and company, we refer to our account of them in the hiſtory of England.

In 1756, an unhappy event took place at Calcutta, which is too remarkable to be omitted. The nabob, or ſoubah, quarrelled with the company, and inveſted Calcutta with a large body of black troops. The governor, and ſome of the principal perſons of the place, threw themſelves, with their chief effects, on board the ſhips in the river; they who remained, for ſome hours, bravely defended the place; but their ammunition being expended, they ſurrendered upon terms. The ſoubah, a capricious, unfeeling tyrant, inſtead of obſerving the capitulation, forced Mr. Holwell, the governor's chief ſervant, and 145 Britiſh ſubjects, into a little but ſecure priſon, called the Black-hole, a place about eighteen feet ſquare, and ſhut up from almoſt all communication of free air. Their miſeries during the night were in-

* Rennell's Memoir of his Map of Indoſtan, p. 58, 59.

expreſ-

expreſſible, and before morning no more than twenty-three were found alive, the reſt dying of ſuffocation, which was generally attended with a horrible phrenſy. Among thoſe ſaved was Mr. Holwell himſelf, who has written a moſt affecting account of the cataſtrophe. The inſenſible nabob returned to his capital, after plundering the place, imagining he had rooted the Engliſh out of his dominions; but the ſeaſonable arrival of admiral Watſon, and colonel (afterwards lord) Clive, put them once more, with ſome difficulty, in poſſeſſion of the place; and the war was ſoon concluded by the battle of Plaſſy, gained by the colonel, and the death of the nabob Suraja Dowla, in whoſe place Mhir Jaffeir, one of his generals, and who had previouſly ſigned a ſecret treaty with Clive, to deſert his maſter, and amply reward the Engliſh, was advanced to the ſoubahſhip.

The capital of Bengal, where the nabob keeps his court, is Muxadabad, or Moorſhedabad: Benares, lying in the ſame province, is the Gentoo univerſity, and celebrated for its ſanctity. This zemindary, which includes alſo the circars of Gazypeur and Chunar, conſtituted a part of the dominions of Oude till 1774, when its tribute or quit-rent of 24 lacks was transferred to the Engliſh.

Dacca is ſituated in the eaſtern quarter of Bengal, and beyond the principal ſtream of the Ganges, although a very capital branch of it runs under it. Few ſituations are better calculated for an inland emporium of trade, than this, as the Dacca river communicates with all the other inland navigations; and that not by a circuitous, but by a direct communication. It is the third city of Bengal in point of extent and population. It has a vaſt trade in muſlins; and manufactures the moſt delicate ones, among thoſe that are ſo much ſought after in Europe; and the cotton is produced within the province. Dacca has in its turn been the capital of Bengal, and that within the preſent century. There are the remains of a very ſtrong fortreſs in it; and, within theſe few years, there was near it a cannon of extraoadinary weight and dimenſions*; but it has ſince fallen into the river, together with the bank on which it reſted.

Chandenagore is the principal place poſſeſſed by the French in Bengal: it lies higher up the river than Calcutta. But though ſtrongly fortified, furniſhed with a garriſon of 500 Europeans, and 1200 Indians, and defended by 123 pieces of cannon and three mortars, it was taken by the Engliſh admirals Watſon and Pococke, and colonel Clive, and alſo was obliged to ſurrender in the laſt war, but reſtored by the peace. Hoogly, which lies fifty miles to the north of Calcutta, upon the Ganges, is a place of prodigious trade for the richeſt Indian commodities. The Dutch have here a well-fortified factory. The ſearch for diamonds is carried on by about 10,000 people from Saumelpour, which lies thirty leagues to the north of Hoogly, for about fifty miles farther. The other chief towns are Caſſumbazar, Chinchura, Barnagua, andMaldo; beſides a number of other places of leſs note, but all of them rich in the Indian manufactures.

* As it may gratify the curioſity of ſome of our readers, we here inſert, from major Rennell, the dimenſions of this gun. The meaſures were taken by himſelf very carefully throughout. It was made of hammered iron; it being an immenſe tube formed of 14 bars, with rings of 2 or 3 inches wide driven over them, and hammered down into a ſmooth ſurface; ſo that its appearance was equal to the beſt executed piece of braſs ordnance, although its proportions were faulty.

Whole length - - -	22 feet	10½ inches.
Diameter at the breech -	3	3
—— 4 feet from the muzzle	2	10
—— the muzzle - -	2	2½
—— of the bore - -	1	3⅓

The gun contained 234,413 cubic inches of wrought iron: and conſequently weighed 64,814 pounds avoird poize, or about the weight of eleven 32 pounders. Weight of an iron ſhort for the gun pounds.

We know little concerning the province or ſoubah of Malva, which lies to the weſt of Bengal; Sindia and Holkar divide the largeſt part of it. The capital of the former is Ougein, and of Holkar, the city of Indoor. It is as fertile as the other provinces, and its chief city is Ratipor. The province of Kandiſh included that of Berar and part of Orixa, and its capital is Brampur, or Burhanpoor, a flouriſhing city, and it carries on a vaſt trade in chintzes, callicoes, and embroidered ſtuffs. Cattack is the capital of Orixa, and lies in the only road between Bengal and the Northern circars, and belongs to the Berar Rajah Moodajee Booſla, whoſe dominions are very extenſive. Of the five Northern circars, Cicacole, Rajamundry, Ellore, and Condapilly are in poſſeſſion of the Engliſh, and Gunton is in the hands of the Nizam.

The above are the provinces belonging to the Mogul's empire to the north of what is properly called the Peninſula Within the Ganges. Thoſe that lie to the ſouthward fall into the deſcription of the peninſula itſelf.

HISTORY.] The firſt invader whoſe expedition is authentically recorded of this extenſive and fruitful country was the famous Alexander of Macedon, and where the fortreſs of Rotas now ſtands on the banks of the Behat, he is ſuppoſed to have put in execution his ſtratagem for croſſing the river, whilſt the oppoſite ſhore was poſſeſſed by Porus. Zinghis Khan alſo directed his force there in the year 1221, and made the emperor to forſake his capital. The ſeat of government was, indeed, often changed, ſometimes by neceſſity and at others by choice, as from Gazna to Delhi, to Lahore, to Agra, and to Canage. This laſt place was in the reign of Porus, and long afterwards. the capital of Indoſtan, but is now reduced to a middling town, though the ruins are of great extent *.

The next conqueror is Tamerlane, who croſſed the Indus nearly at the ſame place with Alexander, but long before Tamerlane, Mahometan princes had entered, made conqueſts, and eſtabliſhed themſeves in India. Valid, the ſixth of the caliphs, named Ommiades, who aſcended the throne in the 708th year of the Chriſtian æra, and in the 90th of the Hegira, made conqueſts in India: ſo that the Koran was introduced very early into this country. Mahmoud, ſon of Sebegtechin, prince of Gazna, the capital of a province ſeparated by mountains from the north-weſt parts of India, and ſituated near Kandahar, carried the Koran with the ſword into Indoſtan in the year 1000 or 1002 of the Chriſtian æra. He treated the Indians with all the rigour of a conqueror, and all the fury of a zealot, plundering treaſures, demoliſhing temples, and murdering idolaters. The wealth found by him in Indoſtan is repreſented as immenſe. The ſucceſſors of this Mahmoud are called the dynaſty of the Gaznavides, and maintained themſelves in a great part of the countries which he had conquered in India until the year 1155, or 1157, when Koſrou Schah, the 13th and laſt prince of the Gaznavide race, was depoſed by Kuſſain Gauri, who founded the dynaſty of the Gaurides, which furniſhed five princes, who poſſeſſed nearly the ſame dominions as their predeceſſors the Gaznavides. Scheabbedin, the fourth of the Gauride emperors, during the life of his brother and predeceſſor Gaiatheddin, conquered the kingdoms of Moultan and Delhi, and drew from thence prodigious treaſures. But an Indian, who had been rendered deſperate by the pollutions and inſults to which he ſaw his gods and temples expoſed, made a vow to aſſaſſinate Scheabbedin, and executed it. The race of Gaurides ended in the year 1212, in the perſon of Mahmoud, ſucceſſor and

* Suppoſed to be the Paliobothra of the ancients. In the ſixth century it contained 30,000 ſhops, in which beetel-nut was ſold, and there were alſo 60,000 muſicians and ſingers, who paid a tax to government.

nephew to Scheabbedin, who was alſo cut off by aſſaſſins. Several revolutions followed till the time of Tamerlane, whoſe troops entered India at the end of the year 1398, deſcending more terrible than all its former inundations from the centre of the Indian Caucaſus. This invincible barbarian met with no reſiſtance ſufficient to juſtify, even by the military maxims of Tartars, the cruelties with which he marked his way. But, after an immenſe ſlaughter of human creatures, he at length rendered himſelf lord of an empire which extended from Smyrna to the banks of the Ganges.

The hiſtory of the ſucceſſors of Tamerlane, who reigned over Indoſtan with little interruption more than 350 years, has been variouſly repreſented; but all agree that they were magnificent and deſpotic princes, that they committed their provinces, as has been already obſerved, to rapacious governors, or to their own ſons, by which their empire was often miſerably torn in pieces. It is worthy of obſervation, that the provinces of Indoſtan have ſeldom continued under one head during a period of twenty years, from the earlieſt hiſtory down to the reign of Acbar in the 16th century. Bengal, Guzerat, and other provinces, were in turn independent, and ſometimes the empire of Indoſtan was confined within the proper limits of the province itſelf. So that the hiſtory of it furniſhes an excellent leſſon to princes not to graſp at too extenſive dominion*. At length, the famous Aurengzebe, in the year 1667, though the youngeſt among many ſons of the reigning emperor, after defeating or murdering all his brethren, mounted the throne of Indoſtan, and may be conſidered as the real founder and legiſlator of the empire. He was a great and politic prince, and the firſt who extended his dominion over the Peninſula Within the Ganges, which is at preſent ſo well known to the Engliſh. He lived ſo late as the year 1707, and it is ſaid that ſome of his great officers of ſtate were alive in the year 1750. Aurengzebe ſeems to have left too much power to the governors of his diſtant provinces, and to have been to inattentive to prevent the effects of that dreadful deſpotiſm, which, while in his hands, preſerved the tranquility of his empire; but when it deſcended to his weak indolent ſucceſſors, occaſioned its overthrow.

In 1713, four of his grandſons diſputed the empire, which, after a bloody ſtruggle, fell to the eldeſt, Mauzoldin, who took the name of Jehander Shah. This prince was a ſlave to his pleaſures, and was governed by his miſtreſs ſo abſolutely, that his great Omrahs conſpired againſt him, and raiſed to the throne one of his nephews, who ſtruck off his uncle's head. The new emperor, whoſe name was Furrukhſir, was governed, and at laſt enſlaved by two brothers of the name of Seyd, who uſurped his power ſo abſolutely, that, being afraid to puniſh them publicly, he ordered them both to be privately aſſaſſinated. They diſcovered his intention, and dethroned the emperor, in whoſe place they raiſed a grandſon of Aurengzebe, by his daughter, a youth of ſeventeen years of age, after impriſoning and ſtrangling Furrukhſir. The young emperor proved diſagreeable to the brothers, and being ſoon poiſoned, they raiſed to the throne his elder brother, who took the title of Shah Jehan. The rajahs of Indoſtan, whoſe anceſtors had entered into ſtipulations, or what may be called *pacta conventa*, when they admitted the Mogul family, took the field againſt the two brothers; but the latter were victorious, and Shah Jehan was put in tranquil poſſeſſion of the empire, and died in 1719. He was ſucceed-

* Some parts of the empire were 1000 miles diſtant from the ſeat of government. The Engliſh conqueſts in India met thoſe of Tamerlane in a point equidiſtant from the mouths of the Ganges and Indus, in the year 1774, for they cloſed their campaign that year at Loldong, 1100 miles from Calcutta.

ed by another prince of the Mogul race, who took the name of Mahommed Shah, and entered into private meaſures with his great rajahs for deſtroying the Seyds, who were declared enemies by Nizam al Muluck, one of Aurengzebe's favourite generals. Nizam, it is ſaid, was privately encouraged by the emperor to declare himſelf againſt the brothers, and to proclaim himſelf ſoubah of Decan, which belonged to one of the Seyds, who was aſſaſſinated by the emperor's order. The younger Seyd no ſooner underſtood what had happened, than he proclaimed the ſultan Ibrahim, another of the Mogul princes, emperor. A battle enſued in 1720, in which the emperor was victorious, and is ſaid to have uſed his conqueſt with great moderation, for he remitted Ibrahim to the priſon from whence he had been taken; and Seyd, being likewiſe a priſoner, was condemned to perpetual confinement; but the emperor took poſſeſſion of his vaſt riches. Seyd did not long ſurvive his confinement; and upon his death, the emperor abandoned himſelf to the ſame courſe of pleaſures that had been ſo fatal to his predeceſſors. As to Nizam, he became now the great imperial general, and was often employed againſt the Mahrattas, whom he defeated, when they had almoſt made themſelves maſters of Agra and Delhi. He was confirmed in his ſoubahſhip, and was conſidered as the firſt ſubject in the empire. Authors are divided as to his motives for inviting Nadir Shah, otherwiſe Kouli Khan, the Perſian monarch, to invade Indoſtan. It is thought that he had intelligence of a ſtrong party formed againſt him at court; but the truth perhaps is, that Nizam did not think that Nadir Shah could have ſucceſs, and at firſt wanted to make himſelf uſeful by oppoſing him. The ſucceſs of Nadir Shah is well known, and the immenſe treaſure which he carried from Indoſtan in 1739. Beſides thoſe treaſures, he obliged the Mogul to ſurrender to him all the lands to the weſt of the rivers Attock and Synd, comprehending the provinces of Peyſhor, Cabul, and Gagna, with many other rich and populous principalities, the whole of them almoſt equal in value to the crown of Perſia itſelf.

This invaſion coſt the Gentoos 200,000 lives. As to the plunder made by Nadir Shah, ſome accounts, and thoſe ſtrongly authenticated, make it amount to the incredible ſum of two hundred and thirty-one millions ſterling, as mentioned by the London Gazette of thoſe times. The moſt moderate ſay that Nadir's own ſhare amounted to conſiderably above ſeventy millions. Be that as it will, the invaſion of Nadir Shah may be conſidered as putting a period to the greatneſs of the Mogul empire. Nadir, however, having raiſed all the money he could in Delhi, re-inſtated the Mogul, Mahommed Shah, in the ſovereignty, and returned into his own country. A general defection of the provinces ſoon after enſued; none being willing to yield obedience to a prince deprived of the power to enforce it. The provinces to the north-weſt of the Indus had been ceded to Nadir Shah, who being aſſaſſinated in 1747, Achmet Abdalla, his treaſurer, an unprincipled man, but poſſeſſed of great intrepidity, found means, in the general confuſion occaſioned by the tyrant's death, to carry off three hundred camels loaded with wealth, whereby he was enabled to put himſelf at the head of an army, and march againſt Delhi with fifty thouſand horſe. Thus was the wealth drawn from Delhi, made the means of continuing thoſe miſeries of war which it had at firſt occaſioned. In this extremity, prince Ahmed Shah, the Mogul's eldeſt ſon, and the vizier, with other leading men, took the field, with eighty thouſand horſe, to oppoſe the invader. The war was carried on with various ſucceſs, and Mahommed Shah died before its termination. His ſon, Ahmed Shah, then mounted the imperial throne at Delhi; but the empire fell every day more into decay. Abdallah erected an independent kingdom, of which the Indus is the general boundary, and Candahar is the capital.

The

The Mahrattas, a warlike nation, poſſeſſing the ſouth-weſtern peninſula of India *, had, before the invaſion of Nadir Shah, exacted a chout, or tribute from the empire, ariſing out of the revenues of the province of Bengal, which being with-held, in conſequence of the enfeebled ſtate of the empire, the Mahrattas became clamorous. The empire began to totter to its foundation; every petty chief, by counterfeiting grants from Delhi, laying claim to jaghires † and to diſtricts. The country was torn to pieces by civil wars, and groaned under every ſpecies of domeſtic confuſion. Ahmed Shah reigned only ſeven years, after which much more diſorder and confuſion prevailed in this country, and the people ſuffered great calamities. At preſent, the imperial dignity of Indoſtan is veſted in Shah Allum or Zadah, who is univerſally acknowledged to be the true heir of the Tamerlane race; but his power is feeble: the city of Delhi, and a ſmall territory round it, is all that is left remaining to the houſe and heir of Tamerlane, who depends upon the protection of the Engliſh, whoſe intereſt it is to ſupport him, as his grant to the company is the beſt legal guarantee of their poſſeſſions.

We ſhall now conclude the hiſtory of Indoſtan with ſome account of the Britiſh tranſactions, in that part of the world, ſince 1765, when they were quietly ſettled in the poſſeſſion of the provinces of Bengal, Bahar, and Orixa; not indeed as abſolute ſovereigns, but as tributaries to the emperor. This ſtate of tranquility, however, did not long continue; for in 176- they found themſelves engaged in a very dangerous war with Hyder Ally, the ſovereign of Myſore. This man had originally been a military adventurer, who learned the rudiments of the art of war in the French camp; and, in the year 1753, had diſtinguiſhed himſelf in their ſervice. In 176 , having been advanced to the command of the army of Myſore, he depoſed his ſovereigns, and uſurped the ſupreme authority under the title of regent. In a ſhort time he extended his dominions on all ſides, except the Carnatic, until at laſt his dominions equalled the iſland of Great Britain in extent, with a revenue of not leſs than four millions ſterling annually. The diſcords which took place in various parts of Indoſtan, particularly among the Mahrattas, enabled him to aggrandiſe himſelf in ſuch a manner, that his power ſoon became formidable to his neighbours; and in 1767, he found himſelf in danger of being attacked on one ſide by the Mahrattas, and on the other by the Britiſh. The former were bought off with a ſum, of money, and the latter were in conſequence obliged to retire. Having ſoon, however, aſſembled all their forces, ſeveral obſtinate engagements took place; and the Britiſh now, for the firſt time, found a ſteady oppoſition from an Indian prince. The war continued with various ſucceſs during the years 1767, 1768, and part of 1769, when Hyder, with a ſtrong detachment of his army, paſſing by that of the Britiſh, advanced within a little diſtance of Madras, where he intimidated the government into a peace upon his own terms. The advantages gained by this peace, however, were quickly loſt by an unfortunate war with the Mahrattas, from whom, in the year 1771, he received a moſt dreadful defeat, almoſt his whole army being killed or taken. Hyder was now reduced to the neceſſity of allowing his enemies to deſolate

* Malwa, Berar Oriſſa, Candeiſh, and Viſipour, the principal part of Amednagur or Dowlatabad, half of Guzerat, and a ſmall part of Agimere, Agra, and Allahabad are comprized within their extenſive empire, which extends from ſea to ſea acroſs the wideſt part of the peninſula, and from the confines of Agra northward to the Kiſtna ſouthward, forming a tract of about 1000 miles long, and 700 wide. This extenſive country is divided among a number of chiefs, whoſe obedience to the Paiſhwah, or Head, is merely nominal, and they are often at war among themſelves, and alſo with their head. Their power hath been on the decline for the laſt twenty years.

† Jaſhire means a grant of land from a ſovereign to a ſubject, revokable at pleaſure; but generally, or almoſt always, for a life-rent.

the country, till they retired of their own accord; after which he retrieved his affairs with incredible perſeverance and diligence, ſo that in a few years he became more formidable than ever. In 1772, the Mahrattas made ſome attempts to get poſſeſſion of the provinces of Corah and ſome others, but were oppoſed by the Britiſh; who, next year, defeated and drove them acroſs the river Ganges, when they had invaded the country of the Rohillas. On this occaſion the latter had acted only as the allies of Sujah Dowlaw, to whom the Rohilla chiefs had promiſed to pay 40 lacks of rupees for the protection afforded them; but when the money came to be paid, it was under various pretences refuſed; the conſequence of which was, that the Rohilla country was next year (1774) invaded and conquered by the Britiſh, as well as ſeveral other large tracts of territory; by which means the boundary of Oude was advanced to the weſtward, within 25 miles of Agra; north-weſtward to the upper part of the navigable courſe of the Ganges; and ſouth-weſtward to the Jumna river.

In 1778, a new war commenced with the Mahrattas; on which occaſion a brigade, conſiſting of 7000 Indian troops, commanded by Britiſh officers, traverſed the whole empire of the Mahrattas, from the river Jumna to the weſtern ocean. About this time the war with France broke out, and Hyder Ally, probably expecting aſſiſtance from the French, made a dreadful irruption into the Carnatic, at the head of 100,000 men. For ſome time he carried every thing before him, and, having the good fortune to defeat, or rather deſtroy a detachment of the Britiſh army under colonel Baillie, it was generally imagined that the power of Britain in that part of the world would have ſoon been annihilated. By the happy exertions of ſir Eyre Coote, however, to whom the management of affairs was now committed, the progreſs of this formidable adverſary was ſtopped, and he ſoon became weary of a war, which was attended with incredible expence to himſelf, without any reaſonable proſpect of ſucceſs. By the year 1782, therefore, Hyder Ally was ſincerely deſirous of peace, but died before it could be brought to a concluſion; and his rival, ſir Eyre Coote, did not ſurvive him above five months; a very remarkable circumſtance that the commanders in chief of two armies, oppoſed to each other, ſhould both die natural deaths, within ſo ſhort a ſpace of time.

It is, however, the intereſt of the Eaſt India company, that their governments in India ſhould interfere as little as poſſible in the domeſtic or national quarrels of the country powers, and that they ſhould always endeavour to be in a ſtate of peace and tranquillity with their neighbours. But theſe maxims of ſound policy they have not adhered to; their governors and ſervants having unneceſſarily, and ſometimes very iniquitouſly, embroiled themſelves with the country powers, and engaged in wars of a very pernicious and indefenſible nature. The wars into which they have entered with the Mahrattas, and with that enterprizing prince, Hyder Ally, now dead, but ſucceeded by a warlike ſon, Tippoo Saib, have been attended with an enormous expence, and been extremely prejudicial to the intereſts of the company and the nation at home. By temporary plans of violence and injuſtice, and ſometimes diſregarding their own treaties, they have forfeited the good opinion of the natives, and by exciting the indignation of the country princes againſt them, greatly leſſened the ſecurity of the poſſeſſions of the company.

The emperor of Indoſtan, or Great Mogul (ſo called from being deſcended from Tamerlane the Mongul, or Mogul Tartar), on his advancement, to the throne, aſſumes ſome grand title; as, "*The Conqueror of the World; the Ornament of the Throne, &c.*" but he is never crowned.

RIVERS.] The Cattack, or Mahanada, the mouths of which have never been traced; the Soane and Nerbudda; the Puddai and Godavery, which laſt is eſteemed a ſacred river; and the famous Kiſtna, a principal branch of which paſſes within 30 miles eaſt of Poonah, where it is named Beurah, and alſo eſteemed a ſacred river.

CLIMATE, SEASONS, AND PRODUCE.] The chain of mountains already mentioned, running from north to ſouth, renders it winter on one ſide of this peninſula, while it is ſummer on the other. About the end of June, a ſouth-weſt wind begins to blow from the ſea, on the coaſt of Malabar, which with continual rains, laſts four months, during which time all is ſerene upon the coaſt of Coromandel (the weſtern and eaſtern coaſts being ſo denominated.) Towards the end of October, the rainy ſeaſon, and the change of the monſoon, begins on the Coromandel coaſt, which being deſtitute of good harbours, renders it extremely dangerous for ſhips to remain there, during that time; and to this is owing the periodical returns of the Engliſh ſhipping to Bombay, upon the Malabar coaſt. The air is naturally hot in this peninſula, but is refreſhed by breezes, the wind altering every twelve hours; that is, from midnight to noon it blows off the land, when it is intolerably hot, and during the other twelve hours from the ſea, which laſt proves a great refreſhment to the inhabitants of the coaſt. The produce of the ſoil is the ſame with that of the other parts of the Eaſt Indies. The like may be ſaid of their quadrupeds, fiſh, fowl, and noxious creatures and inſects.

The Teek foreſts, (obſerves major Rennell, in his Memoir, p. 180, 181.) from whence the marine yard at Bombay is furniſhed with that excellent ſpecies of ſhip-timber, lie along the weſtern ſide of the Gaut mountains, and other contiguous ridges of hills, on the north and north-eaſt of Baſſeen: the numerous rivulets that deſcend from them, affording water-carriage for the timber. We cannot help remarking the unpardonable negligence we are guilty of, in delaying to build teek ſhips of war for the uſe of the Indian ſeas. They might be freighted home, without the ceremony of regular equipment, as to maſts, ſails, and furniture; which might be calculated juſt to anſwer the purpoſe of the home-paſſage, at the beſt ſeaſons; and crews could be provided in India. The letter ſubjoined in a note, and which was written with the beſt intentions nine or ten years ago, will explain the circumſtances of the caſe *. Teek

* "Frequent have been the opportunities I have had, of obſerving how very rapid the decay of ſhips built of European timber is, in the Eaſt Indies: and, on the contrary, how durable the ſhips are that are built of the wood of that country, namely, the TEEK: which may not improperly be ſtyled INDIAN-OAK. The number of ſhips of war that were ruined in thoſe ſeas, during the late war (1757 to 1762) may be admitted as a proof of the former remark; and the great age of the ſhips built in India, may ſerve to prove the latter. What I mean to infer from this, for your lordſhip's uſe, is, that ſhips of war, under third rates, may be conſtructed in India; and with moderate repairs, laſt for ages: whereas, a ſhip of European conſtruction can remain there but a very few years; to which diſadvantage, may be added, that of loſing, in the mean time, the ſervices of the ſhips that are ſent to relieve the worn out ones.

"Bengal produces iron and hemp; and the neighbouring foreſts, pine maſts: nothing is wanted to bring all theſe into uſe, but a fit opportunity, and proper encouragement.

"Auguſt 20, 1788."

ſhips

ſhips of forty years old and upwards, are no uncommon objects in the Indian ſeas, while an European built ſhip is ruined there in five years. The ſhips built at Bombay are the beſt, both in point of workmanſhip and materials, of any that are conſtructed in India: and although 4th rates only are mentioned in the letter, there is no doubt but that 3d rates may be conſtructed as there is a choice of timber. The Spaniards build capital ſhips in their foreign ſettlements. The Eaſt India company have a Teek ſhip on her fourth voyage at preſent; which ſhip has wintered in England: therefore any objection founded on the effects of froſt, on the Teek timber, is done away."

Bilſah, which is almoſt the heart of India, affords tobacco of the moſt delicate kind, throughout that whole region *.

INHABITANTS.] The inhabitants of this part are more black in complexion than thoſe of the other peninſula of India, though lying nearer to the equator, which make ſome ſuſpect them to be the deſcendants of an ancient colony from Ethiopia. The greateſt part of them have but a faint notion of any allegiance they owe to the emperor of Indoſtan, whoſe tribute from hence has been, ever ſince the invaſion of Shah Nadir, intercepted by their ſoubahs and nabobs, who now exerciſe an independent power in the government: but beſides thoſe ſoubahs, and other imperial viceroys, many eſtates in this peninſula belong to the rajahs, or lords, who are the deſcendants of their old princes, and regard themſelves as independent on the Mogul, and his authority.

PROVINCES, CITIES AND OTHER BUILDINGS, PUBLIC AND PRIVATE. From what has been ſaid above, this peninſula is rather to be divided into great governments, or ſoubahſhips, than into provinces. One ſoubah often engroſſes ſeveral provinces, and fixes the ſeat of his government according to his own conveniency. I ſhall ſpeak of thoſe provinces as belonging to the Malabar, or Coromandel coaſt, the two great objects of Engliſh commerce in that country; and firſt, of the eaſtern, or Coromandel coaſt.

Madura begins at Cape Comorin, the ſouthernmoſt point of the peninſula. It is about the bigneſs of the kingdom of Portugal, and is ſaid to have been governed by a ſovereign king, who had under him ſeventy tributary princes, each of them independent in his own dominions, but paying him a tax; now, the caſe is much altered, the prince of the country being ſcarcely able to protect himſelf and his people from the depredations of his neighbours, but by a tribute to buy them off: the capital is Tritchinopoly. The chief value of this kingdom ſeems to conſiſt in a pearl fiſhery upon its coaſt. Tanjore is a little kingdom, lying to the eaſt of Madura. The ſoil is fertile, and its prince rich, till plundered by the nabob of Arcot, and ſome Britiſh ſubjects connected with him. Within it lies the Daniſh Eaſt India ſettlement of Tranquebar, and the fortreſs of Negapatam, which was taken from the Dutch the laſt war, and confirmed to the Engliſh, by the late treaty of peace. The capital city is Tanjore, governed by a rajah under the Engliſh protection.

The Carnatic is bounded on the eaſt by the bay of Bengal, on the north by the river Kiſtna, which divides it from Golconda; on the weſt by Viſapur, or Viſipour, and, on the ſouth by the kingdoms of Meſſaur and Tanjore; being in length from ſouth to north, about 345 miles. If Tanjore, Marrawar, Tritchinopoly, Madura, and Tinevelly be included, and they are all appendages of the Carnatic, the length thereof from north to ſouth is 570 miles, but no where more than 110 wide,

* A difference of opinion ſeems to have ariſen among the learned, whether tobacco came originally from Aſia or America. It was poſſibly indigenous to both continents. It is univerſally diſſeminated over Indoſtan, and China: and appears to have been in uſe ſo long, in the former, that it is not regarded as a new plant. It is there named *Tambra patra*; that is, the copper, or copper coloured leaf.

and chiefly no more than 80. The capital of the Carnatic is Biſnagar, and of our ally the Nabob of Arcot, whoſe dominions commence on the ſouth of the Guntoo circar, and extend along the whole coaſt of Coromandel to Cape Comorin. The country in general is eſteemed healthful, fertile, and populous. Within this country, upon the Coromandel coaſt, lies fort St. David's, or Cuddalore, belonging to the Engliſh, with a diſtrict round it. The fort is ſtrong, and of great importance to our trade. Five leagues to the north lies Pondicherry, the emporium of the French in the Eaſt Indies, which hath been repeatedly taken by the Engliſh, and as often reſtored by the treaties of peace.

Fort St. George, better known by the name of Madras, is the capital of the Engliſh Eaſt India Company's dominions in that part of the Eaſt Indies, and is diſtant eaſtward from London about 4800 miles. Great complaints had been made of the ſituation of this fort; but no pains have been ſpared by the company, in rendering it impregnable to any force that can be brought againſt it by the natives. It protects two towns, called, from the complexions of their ſeveral inhabitants, the White and the Black. The White Town is fortified, and contains an Engliſh corporation of a mayor and aldermen. Nothing has been omitted to mend the natural badneſs of its ſituation, which ſeems originally to be owing to the neighbourhood of the diamond mines, that are but a week's journey diſtant. Theſe mines are under the direction of a Mogul officer, who lets them out by admeaſurement, encloſing the contents by palliſadoes; all diamonds above a certain weight originally belonged to the emperor. The diſtrict belonging to Madras doth not extend much more than forty miles round, and is of little value for its product. Eighty thouſand inhabitants of various nations are ſaid to be dependent upon Madras; but its ſafety conſiſts in the ſuperiority of the Engliſh by ſea. It carries on a conſiderable trade with China, Perſia, and Mocha.

The reader needs not to be informed of the immenſe fortunes acquired by the Engliſh upon this coaſt within thirty years; but ſome of theſe fortunes appear to have been obtained by the moſt iniquitous practices. There ſeems to have been ſome fundamental errors in the conſtitution of the Eaſt India Company. The directors conſidered the riches acquired by their governors and other ſervants as being plundered from the company, and accordingly ſent out ſuperintendants to control their governors and overgrown ſervants, and have from time to time changed their governors and members of the council there. As this is a ſubject of the greateſt importance that ever perhaps occured in the annals of a commercial country, the reader will indulge us in one or two reflections.

The Engliſh Eaſt India Company, through the diſtractions of the Mogul empire, the enterpriſing ſpirit of their military officers, and the aſſiſtance of the Engliſh navy, acquired an income in this peninſula, and in Indoſtan, that is ſuperior to the revenues of many crowned heads; and ſome of their own ſervants pretend, that when all their expences are paid, their clear revenue amounts to near two millions ſterling; out of which they were to pay 400,000l. annually to the government, while ſuffered to enjoy their dominions. How their revenue is collected, or from whence it ariſes, is beſt known to the company: part of it, however, has been granted in property, and part of it ſecured on mortgages, for diſcharging their expences in ſupporting the intereſts of their friends, the emperor, and the reſpective ſoubahs and nabobs they have aſſiſted.

The company has exerciſed many rights appropriated to ſovereignty; ſuch as thoſe of holding forts, coining money, and the like. Theſe powers were thought incompatible with the principles of a commercial limited company, and therefore the Engliſh miniſtry and parliament have repeatedly interfered, and at length have eſtabliſhed a board of control at home. It is hoped that, in conſequencesof this

inſtitution, ſuch meaſures may be taken with the Eaſtern princes and potentates, as may render the acquiſitions of the company permanent and national.

I have already mentioned the kingdom of Golconda, which, beſides its diamonds, is famous for the cheapneſs of its proviſions, and for making white wine of grapes that are ripe in January. Golconda is ſubject to a prince, called the Nizam or ſoubah of the Deccan, who is rich, and can raiſe 100,000 men. The famous diamond mine, Raolconda, is in this province. The capital of his dominions is called Bagnagar, or Hyderabad; but the kingdom takes its name from the city of Golconda, and comprizes the eaſtern part of Dowletabad. Eaſt-ſouth-eaſt of Golconda lies Maſulipatam, where the Engliſh and Dutch have factories. The Engliſh have alſo factories at Ganjam and Viſagapatam, on this coaſt; and the Dutch at Narſipore. The province of Oriſſa, from whence the Engliſh company draw ſome part of their revenues, lies to the north of Golconda, extending in length from eaſt to weſt about 550 miles, and in breadth about 240. It is governed chiefly by Moodajee Booſlah, and his brother Bembajee, allies to the Mahrattas. In this province ſtands the idolatrous temple of Jagernaut, which they ſay is attended by 500 prieſts. The idol is an irregular pyramidal black ſtone, of about 4 or 500 lb. weight, with two rich diamonds near the top, to repreſent eyes, and the noſe and mouth painted with vermilion.

Major Rennell obſerves, that there is a void ſpace between the known parts of Berar, Golconda, Oriſſa, and the northern circars, of near 300 miles in length, and 250 in breadth, and that it is not likely to be filled up unleſs a great change takes place in European politics in India. Our poſſeſſions in the northern circars extend only 70 miles by land, and in ſome places not more than 30, which forms a ſlip of 350 miles in length, bounded towards the continent by a ridge of mountains. Within theſe, and towards Berar, is an extenſive tract of woody and mountainous country, with which the adjacent provinces appear to have ſcarcely any communication. Though ſurrounded by people highly civilized, and who abound in uſeful manufactures, it is ſaid, that the few ſpecimens of the miſerable inhabitants of this tract who have appeared in the circars, uſe no covering but a wiſp of ſtraw. This wild country extends about 160 miles, and the firſt civilized people beyond them are the Berar Mahrattas.

The country of the Deccan * comprehends ſeveral large provinces, and ſome kingdoms; particularly thoſe of Baglana, Balagate, Telenga, and the kingdom of Viſiapour. The truth is, the names, dependencies, and governments of thoſe provinces, are extremely unſettled; and ſince their reduction by Aurengzebe, or his father, have been ſubject to almoſt annual revolutions and alterations. Modern geographers are not agreed upon their exact ſituation and extent, but by the aſſiſtance of major Rennell's late Memoirs, of a Map of Indoſtan, and his new drawings, we have gratified our readers with a new map of the country, which we hope will be found clear and accurate. The principal towns are Aurungabad, and Doltabad, or Dowlatabad; the latter is the ſtrongeſt place in all Indoſtan. Near it lies the famous pagod of Elora, in a plain of about two leagues ſquare. The tombs, chapels, temples, pillars, and many thouſand figures that ſurround it, are ſaid to be cut out of the natural rock, and to ſurpaſs all the other efforts of human art. Telenga lies on the eaſt of Golconda, and its capital, Beder, contains a

* The name DECCAN ſignifies the SOUTH, and, in its moſt extenſive ſignification, includes the whole peninſula ſouth of Indoſtan Proper. However, in its ordinary acceptation, it means only the countries ſituated between Indoſtan Proper, the Carnatic, and Oriſſa; that is the provinces of Candeiſh, Amednagur, Viſiapour, and Oriſſa. Rennell's Introduction to his Memoir of his Map of Indoſtan, p. cxii.

garriſon of 3000 men. The inhabitants of this province ſpeak a language peculiar to themſelves.

Guzerat is a maritime province on the gulf of Cambaya, and one of the fineſt in India, but inhabited by a fierce rapacious people. It is ſaid to contain 35 cities. Amedabab is the capital of the province, where there is an Engliſh factory, and is ſaid, in wealth, to vie with the richeſt towns in Europe. About 43 French leagues diſtant lies Surat, where the Engliſh have a flouriſhing factory.

Viſiapour is a large province, the weſtern part is called Konkan, which is intermingled with the Portugueſe poſſeſſions. The rajah of Viſiapour is ſaid to have had a yearly revenue of ſix millions ſterling, and to have brought into the field 150,000 ſoldiers. The capital is of the ſame name, and the country very fruitful. The principal places on this coaſt are, Daman, Baſſaim Trapor, or Tarapor, Chawl, Dandi-Rajahpur, Dabul-Rajahpur, Gheriah, and Vingorla. The Portugueſe have loſt ſeveral valuable poſſeſſions on this coaſt, and thoſe which remain are on the decline.

Among the iſlands lying upon the ſame coaſt is that of Bombay, belonging to the Engliſh Eaſt India Company. Its harbour can conveniently contain 1000 ſhips at anchor. The iſland itſelf is about ſeven miles in length, and twenty in circumference; but its ſituation and harbour are its chief recommendations, being deſtitute of almoſt all the conveniencies of life. The town is about a mile long, and poorly built; and the climate was fatal to Engliſh conſtitutions, till experience, caution, and temperance, taught them preſervatives againſt its unwholeſomeneſs; the beſt water there is preſerved in tanks, which receive it in the rainy ſeaſons. The fort is a regular quadrangle, and well built of ſtone. Many black merchants reſide here. This iſland was part of the portion paid with the infanta of Portugal to Charles II. who gave it to the Eaſt India Company; and the iſland is ſtill divided into three Roman-catholic pariſhes, inhabited by Portugueſe, and what are called popiſh Meſtizos and Canarins; the former being a mixed breed of the natives and Portugueſe, and the other aborigines of the country. The Engliſh have fallen upon methods to render this iſland and town, under all their diſadvantages, a ſafe, if not an agreeable reſidence. The reader ſcarcely needs to be informed, that the governor and council of Bombay have lucrative poſts, as well as the officers under them. The troops on the iſland are commanded by Engliſh officers; and the natives, when formed into regular companies, and diſciplined, are here, and all over the Eaſt Indies, called Seapoys. The inhabitants of the iſland amount to near 60,000 of different nations; each of whom enjoys the practice of his religion unmoleſted. Here, beſides Europeans of all countries, you meet with Turks, Perſians, Arabians, Armenians, a mixed race, the vileſt of their ſpecies, deſcended from the Portugueſe, and the outcaſts from the Gentoo religion, &c. and alſo captives that are ſlaves to every other tribe. The Turks that reſort to this place on account of trade, are, like the reſt of their countrymen, ſtately, grave, and reſerved. The Perſians are more gay, lively and converſible, but leſs honeſt in matters of trade than the ſaturnine Turks. The Arabians are all life and fire, and when they treat with you on any ſubject, will make you a fine oration in flowing numbers, and a muſical cadence; but they are the moſt diſhoneſt of all. The Armenians are generally handſome in their features, mild in their tempers, and in their nature kind and beneficent. They are a kind of Chriſtians, and an honour to that ſect, beyond many that go from England.

Near Bombay are ſeveral other iſlands, one of which called Elephanta, contains the moſt inexplicable antiquity perhaps in the world. A figure of an elephant, of the natural ſize, cut coarſely in ſtone, preſents itſelf on the landing-

place,

place, near the bottom of a mountain. An eaſy ſlope then leads to a ſtupendous temple, hewn out of the ſolid rock, eighty or ninety feet long, and forty broad. The roof, which is cut flat, is ſupported by regular rows of pillars, about ten feet high, with capitals, reſembling round cuſhions, as if preſſed by the weight of the incumbent mountain. At the farther end are three gigantic figures, which have been multiplied by the blind zeal of the Portugueſe. Beſides the temple, are various images, and groupes on each hand cut in the ſtone; one of the latter bearing a rude reſemblance of the judgment of Solomon; alſo a colonnade, with a door of regular architecture; but the whole bears no manner of reſemblance to any of the Gentoo works.

The iſland and city of Goa, the capital of the Portugueſe ſettlements in the Eaſt Indies, lies about thirty miles ſouth of Vingorla. The iſland is about twenty-ſeven miles in compaſs. It has one of the fineſt and beſt fortified ports in the Indies. This was formerly a moſt ſuperb ſettlement, ſurpaſſed in bulk or beauty by few of the European cities. It is the reſidence of a captain general ſent from Portugal, who lives in great ſplendour. The city ſtands upon the banks of a river of the ſame name, about twelve miles diſtant from the entrance of the harbour: the view up this river is truly delightful, the banks on either ſide are adorned with churches and country ſeats of the Portugueſe, interſperſed with groves and vallies. The river has ſeveral pleaſing openings as it winds along, its banks are low, but the hills behind riſe to an amazing height, and add grandeur to the ſpectacle, greatly tending alſo to beautify the proſpect. The city of Goa itſelf is adorned with many fine churches, magnificently decorated; and has ſeveral handſome convents; the church of St. Auguſtine is a noble ſtructure, and is adorned in the inſide by many fine pictures. It ſtands on the top of a hill, from whence you have an extenſive view of the city and adjacent country: it is a circumſtance that has always been obſerved, and very juſtly, that the Portugueſe have ever choſen the ſpots for their convents and churches in the moſt delightful ſituations. The body of this church is ſpacious, and the grand altar-piece finiſhed in the moſt elegant ſtyle. The building of the choir is of Gothic architecture, and therefore of antiquity. The church has a convent adjoining to it, in which live a ſet of religious monks, of the order of St. Auguſtine: ſome of the brothers of this convent have given popes and cardinals to the Roman ſee, as appears by their portraits which are hung up in a neat chapel.

It is ſaid that the revenues of the Jeſuits, upon this iſland, equalled thoſe of the crown of Portugal. Goa, as well as the reſt of the Portugueſe poſſeſſions on this coaſt, are under a viceroy, who ſtill keeps up the remains of the ancient ſplendor of the government. It is, however, much on the decline, and in little or no eſtimation with the country powers; indeed their bigotry and ſuperſtitious attachment to their faith is ſo general, that the inhabitants, formerly populous, are now reduced to a few thinly inhabited villages; they will not ſuffer any Muſſulman or Gentoo to live within the precincts of the city. If other meaſures are not purſued, Goa muſt in a very few years ſink to nothing. Though it is evident that the internal decay of the government has been ſo occaſioned by the oppreſſion and bigotry of the prieſts, and the expulſion of many uſeful hands; yet the court of Portugal cannot be prevailed upon to alter its meaſures, although the flouriſhing ſituation of the Engliſh and other European ſettlements (and of which one cauſe is certainly the mild and tolerant principles adhered to in points of religion, provided it interferes not with the affairs of government), is continually before their eyes. The nabob Tippoo has lately ſhewn an inclination to attack them, but was ſuddenly called off by the Mahrattas. The Portugueſe much fear he will return; and ſhould he, there is little doubt but that the place will ſurrender to him. There was formerly an inquiſition at this place,

but it is now aboliſhed; the building ſtill remains, and by its black outſide, appears a fit emblem of the cruel and bloody tranſactions that paſſed within its walls! The rich peninſula of Salvett is dependent on Goa. Sunda lies ſouth of the Portugueſe territories, and is governed by a rajah, tributary to the Mogul.

Canoree lies about forty miles to the ſouth of Goa, and reaches to Calicut. Its ſoil is famous for producing rice, that ſupplies many parts of Europe, and ſome of the Indies. The Canorines are ſaid generally to be governed by a lady, whoſe ſon has the title of rajah; and her ſubjects are accounted the braveſt and moſt civilized of any in that peninſula, and remarkably given to commerce.

The celebrated Hyder Ally, with whom the company formerly made a peace, but with whom their ſervants ſoon after embroiled them, and who lately made a violent irruption into the Carnatic, took manyof its chief places, obtained great advantages over the company's troops, and brought his forces to the gates of Madras, but died before the concluſion of the war, is ſaid to have been a native of Myſore, which lies to the ſouth-weſt of the Carnatic; and the Chriſtians of the apoſtle St. Thomas live at the foot of the Gauti mountains.

The dominions of Tippoo Saib, ſon of Hyder Ally, comprehend generally the provinces of Myſore, Bednore, Zaimbetore, Zanaree, and Dindigal, beſides his acquiſition to the northward from the Mahrattas: they are at leaſt 400 miles in length, and in the breadth from 290 to 130, ſo that he hath the largeſt ſhare in the peninſula.

Though Malabar gives name to the whole ſouth-weſt coaſt of the peninſula, yet it is confined at preſent to the country ſo called, lying on the weſt of Cape Comorin, and called the dominions of the Samorin. The Malabar language, however, is common in the Carnatic; and the couutry itſelf is rich and fertile, but peſtered with green adders, whoſe poiſon is incurable. The moſt remarkable places in Malabar are Cranganore, containing a Dutch factory and fort; and Tellicherry, where the Engliſh have a ſmall ſettlement, keeping a conſtant garriſon of one battalion of ſeapoys, a company of artillery, and ſometimes a company of European infantry; they are alſo able to raiſe about three thouſand native militia. The view of the country round Tellicherry is very pleaſant, conſiſting of irregular hills and vallies. The boundaries of the Engliſh are terminated by the oppoſite ſide of the river, and at a very little diſtance is a ſtrong fortreſs of Tippoo. Tellicherry is eſtemed by all who reſide there to be one of the healthieſt places in India, Europeans ſeldom dying there. It is alſo much reſorted to by convaleſcents. I obſerved, (ſays Mr. Franklin) in the company's garden, the pepper vine, which grows in a curious manner, and ſomething ſimilar to the grape. The pepper on it, when fit to gather, appears in ſmall bunches; it is in ſize ſomething larger than the head of a ſmall pea; the pepper, however, for the company's ſhips cargoes, is brought from ſome diſtance in the country. Tellicherry produces the coffee-tree. Calicut alſo deſerves to be mentioned, where the French and Portugueſe have ſmall factories, beſides various other diſtinct territories and cities. Cape Comorin, which is the ſouthernmoſt part of this peninſula, though not above three leagues in extent, is famous for uniting in the ſame garden the two ſeaſons of the year; the trees being loaded with bloſſoms and fruit on the one ſide, while on other ſide they are ſtripped of all their leaves. This ſurpriſing phenomenon is owing to the ridge of mountains ſo often mentioned, which traverſe the whole peninſula from ſouth to north. On the oppoſite ſides of the Cape, the winds are conſtantly at variance, blowing from the weſt on the weſt ſide, and from the eaſt on the eaſtern ſide.

It may be proper to obſerve, that in the diſtrict of Cochin, within Malabar, are to be found ſome thouſands of Jews, who pretend to be of the tribe of Manaſſeh, and

to have records engraven on copper plates in Hebrew characters. They are ſaid to be ſo poor, that many of them embrace the Gentoo religion. Diſcoveries of Jews and their records have likewiſe been made in China, and other places of Aſia, which have occaſioned various ſpeculations among the learned.

Having in the preceding diviſion of India conſidered it as compriſing three great parts; firſt, the Peninſula of India beyond the Ganges, called the farther Peninſula; ſecondly, the main land, or the Mogul's empire; thirdly, the Peninſula within or on this ſide the Ganges; all of them vaſt, populous, and extenſive empires: having alſo in the above arrangement obſerved that method we have laid down for ourſelves in delineating the other kingdoms of the earth, beginning with the more northerly, and ſo proceeding regularly towards the ſouthern, we now think it neceſſaryto introduce to the knowledge of our readers the preſent manner in which the two latter diviſions of India, under the title of Indoſtan, have been marked out, according to the powers or princes, who are reſpectively in poſſeſſion of them.

The celebrated Perſian uſurper Thamas Kouli Khan, having in the year 1738 defeated the emperor Mahomed Shaw, plundered Delhi, and pillaged the empire of treaſure to the amount of more than 70 millions ſterling, reſtored the unhappy prince his dominions, but annexed to Perſia all the countries weſtward of the Indus.

This dreadful incurſion ſo weakened the authority of the emperor, that the viceroys of the different provinces either threw off their allegiance, or acknowledged a very precarious dependence; and engaging in wars with each other, called in as allies the Eaſt India companies of France and England, who had been originally permitted as traders, to form eſtabliſhments on the coaſts: theſe, from the great ſuperiority of European diſcipline, from allies became in a ſhort time principals in an obſtinate conteſt, that at length terminated in the expulſion of the French from Indoſtan; and thus a company of Britiſh merchants have acquired, partly by ceſſions from the country powers, and partly by injuſtice and uſurpation, teritories equal in extent, and ſuperior in wealth and population to moſt of the kingdoms of Europe.

The Mahrattas originally poſſeſſed ſeveral provinces of Indoſtan, from whence they were driven by the arms of the Mogul conquerors; they were never wholly ſubjected, but retiring to the northern part of the Gauts, made frequent incurſions from theſe inacceſſible mountains; taking advantage of the anarchy of the empire, they have extended their frontiers, and are at preſent poſſeſſed of a tract of country 1000 Britiſh miles long, by 700 wide.

Hyder Ally *, a ſoldier of fortune, who had learned the art of war from the Europeans, having poſſeſſed himſelf of that part of the ancient Carnatic, called the kingdom of Myſore, has within a few years acquired, by continual conqueſts, a conſiderable portion of the ſouthern part of the peninſula. This able and active prince, the moſt formidable enemy that the Engliſh ever experienced in Indoſtan, dying in 1783,

* The character of the late Hyder Ally appearing to me (ſays major Rennell) to be but little underſtood in this part of the world, I have ventured to attempt an outline of it. His military ſucceſs, founded on the improvement of diſcipline; attention to merit of every kind; conciliation of the different tribes that ſerved under his banners; contempt of ſtate and ceremony, except what naturally aroſe from the dignity of his character; and his conſequent oeconomy in perſonal expences (the different habits of which, form the chief diſtinction of what is called character among ordinary princes), together with his minute attention to matters of finance, and the regular payment of his army; all theſe together raiſed Hyder as far above the princes of Indoſtan, as the great qualities of the late Pruſſian monarch raiſed him above the generality of European princes: hence I have ever conſidered Hyder as the FREDERIC of the Eaſt. Cruelty was the vice of Hyder; but we are to conſider that Hyder's ideas of mercy were regulated by an Aſiatic ſtandard; and it is not improbable that he might rate his own character for moderation and clemency, as far above thoſe of Tamerlane, Nadir Shah, and Abdallah, as he rated his diſcipline above theirs.

left

leſt to his ſon Tippoo Saib the peaceful poſſeſſion of his dominions ſuperior in extent to the kingdom of England.

Theſe extraordinary revolutions, with others of leſs importance, render the following account of the preſent diviſion of property in this unhappy empire abſolutely neceſſary, in order to underſtand its modern hiſtory.

PRESENT DIVISION OF INDOSTAN.

Such is the inſtability of human greatneſs, that the preſent Mogul, Shaw Allum, the deſcendant of the Great Tamerlane, is merely a nominal prince, of no importance in the politics of Indoſtan: he is permitted to reſide at Delhi, which with a ſmall adjacent territory, is all that remains to him of that vaſt empire which his anceſtors governed for more than 350 years.

The principal diviſions of this country, as they ſtood in 1782, are as follow, viz. The Britiſh poſſeſſions; ſtates in alliance with Britain; Tippoo Saib's territories; Mahratta ſtates and their tributaries; and the territories of the ſubah of the Deccan.

BRITISH POSSESSIONS.

The Britiſh poſſeſſions contain about 150,000 ſquare Britiſh miles, (which is about 18,000 more than is contained in Great Britain and Ireland) and about 10 millions of inhabitants. They conſiſt of three diſtinct governments, viz.

Government of Calcutta or Bengal, -	Bengal Subah Bahar Subah Benares Subah	On the Ganges.
	Northern Circars	On the coaſt of Oriſſa
Government of Madras -	The Jaghire Territory of Cuddalore ———of Devicotta ———of Negapatam	On the coaſt of Coromandel.
Government of Bombay		On the Gulf of Cambay.

GOVERNMENT OF BENGAL.] This government was rich, flouriſhing, and populous, before the late uſurpations in Indoſtan. It is finely watered by the Ganges and Burrampooter with their numerous navigable channels, and the ſeveral navigable rivers they receive; it is fertilized by their periodical inundations; and by its natural ſituation is well ſecured againſt foreign enemies. But for a more particular deſcription of this province, we refer our readers to the account we have already given of it.

GOVERNMENT OF MADRAS.] The great defects of this government are not only the wants of connection between its parts, which are ſcattered along an extenſive coaſt, and ſeparated from each other by ſtates frequently hoſtile, but being totally devoid of good harbours: hopes however have been entertained of removing this laſt defect, by removing the bar at the mouth of that branch of the Caveri called Coleroon, which falls into the ſea at Devicotta. The capital and ſeat of government is MADRAS in the Jaghire, called alſo Fort St. George. It is ill-ſituated, without a harbour, and badly fortified, yet contains upwards of 200,000 inhabitants. —Fort. St. DAVID in the territory of Cuddalore is rich, flouriſhing, and contains 60,000 inhabitants. —MASULIPATAM, in the northern Circars, at one of the mouths of the Kiſtna, was formerly the moſt flouriſhing and commercial city on this coaſt, and though much declined, is ſtill conſiderable.

The

The northern Circars, which are denominated from the towns of Cicacole, Rajamundry, Elore, and Condapili, are defended inland by a ſtrong barrier of mountains and extenſive foreſts, beyond which the country is totally unknown for a conſiderable ſpace.

GOVERNMENT of BOMBAY.] This government is watered by the Tapee and Nerbudda. Its capital and ſeat of government is BOMBAY, in a ſmall iſland and an unhealthy ſituation; but it is well-fortified, and has a fine harbour.—SURAT on the Tapee, which forms an indifferent port, is one of the moſt rich and commercial cities in Indoſtan. TELLICHERRY, on the Malabar coaſt, is dependent on Bombay.

ALLIES OF THE BRITISH.

Dominions of the Nabob of Oude	Fyzabad Lucknow
Dominions of the Nabob of Arcot, comprehending the eaſtern part only of the Ancient Carnatic.	Arcot on the Paliar is the capital, though the nabob uſually reſides at Madras Gingee, the ſtrongeſt Indian fortreſs in the Carnatic. Tritchinapoly near the Caveri, well fortified in the Indian manner, was rich and populous, containing near 400,000 inhabitants, now almoſt ruined by the numerous ſieges it has ſuſtained. Seringham Pagoda, in an iſland of the Caveri, is famous throughout Indoſtan for its ſanctity, and has no leſs than 40,000 prieſts, who conſtantly reſide here in voluptuous indolence. Chandegeri, the ancient capital of the empire of Narzzingua, formerly rich, powerful, and populous; near it is the famous pagoda of Tripetti, the Loretto of Indoſtan, the offerings of the numerous pilgrims who reſort hither, bring in an immenſe revenue. Tanjore, Madura, and Tinivelly, are the capitals of ſmall ſtates of the ſame name, which with Marawar, are dependent on the nabob of Arcot.
Territory of Futty Sing Guicker, in the Soubah of Guzerat	Amedabat Cambay
Territory of the Rajah of Ghod	Gwalior, a celebrated fortreſs.

TIPPOO SAIB's TERRITORIES.

Provinces.	Chief Towns.
Kingdom of Myſore —	Seringapatam on the Caveri
Bednore — — —	Bednore, or Hyder Nuggar
Canara — — —	Mangalore
Part of Malabar Proper —	Calicut.

Chitteldroog, Sanore, Harponelly, Roydroog, Gooty, Condanore, Caroul, Cuddapa, &c. are the capitals of territories of the ſame name, which have been ſucceſſively conquered by Hyder Ally.

MAHRATTA STATES AND THEIR TRIBUTARIES.

This extenſive country is divided among a number of chiefs or princes, who have one common head called the Pariſhwa, or Nana, to whom however their obedience is merely nominal, as they often go to war againſt each other, and are ſeldom confederated except for mutual defence.

Southern Poonah Mahrattas, or the territories of Paiſhwa, are naturally ſtrong, being interſected by the various branches of the Gauts.

- Satara the nominal capital of the Mahratta ſtates; the Pariſhwa at preſent reſides at Poonah.
- Aurungabad, Amednagur, and Viſiapour, are in his territories.

The Concan, or tract between the Gauts and the ſea is ſometimes called the Pirate Coaſt, as it was ſubject to the celebrated pirate Angria, and his ſucceſſors, whoſe capital was the ſtrong fortreſs of Gheria, taken by the Engliſh and Mahrattas in 1755: by the acquiſition of this coaſt the Mahrattas have become a maritime power, and dangerous enemies to the government of Bombay.

Berar Mahrattas, their country is very little known to Europeans.

- Nagpour is the capital.
- Balaſſore has conſiderable trade.
- Cuttack on the Mahanada, an important poſt, which renders this nation a formidable enemy to the Britiſh, as it cuts off the communication between the governments of Bengal and Madras.

Northern Poonah Mahrattas, governed at preſent by Sindia, Holkar, and ſome other leſs conſiderable princes.

- Ougein, the reſidence of Sindia.
- Indoor, the reſidence of Holkar.
- Calpy, the reſidence of Gungdar Punt.
- Sagur, the reſidence of Ballagee.

Territory of the Soubah of the Deccan *.

- Hydrabad is the capital.

Country of the Abdalli. This government, which includes the ſoubah of Cabul, and the neighbouring parts of Perſia, was formed by Abdalla, one of the generals of Thamas Kouli Khan, when on the death of that uſurper his empire was diſmembered: its capital is Candahar in Perſia.

Country of the Seiks: they are ſaid to conſiſt of a number of ſmall ſtates independent of each other, but united by a federal union.

Country of the Jats or Getes, very little known to Europeans.

Country of Zabeda Cawn, an Afghan Rohilla.

Territory of Agra on the Jumna.

Ferrukabad, or country of the Patan Rohillas, on the Ganges, ſurrounded by the dominions of Oude.

Bundelcund.

Travançore, near Cape Comorin.

* Adoni is dependent on the ſoubah.

PERSIA.

Situation and Extent.

Miles.		Degrees.	Sq. Miles.
Length 1300 Breadth 1100	between	44 and 70 east longitude. 25 and 44 north latitude.	800,000.

Boundaries. MODERN Perſia is bounded by the mountains of Ararat, or Daghiſtan, which divide it from Circaſſian Tartary, on the North-Weſt; by the Caſpian Sea, which divides it from Ruſſia, on the North; by the river Oxus, which divides it from Uſbec Tartary, on the North-eaſt; by India, on the Eaſt; and by the Indian ocean, and the gulfs of Perſia and Ormus, on the South; and by Arabia and Turkey, on the Weſt.

This kingdom is divided into the following provinces: on the frontiers of India are Choraſan, part of the ancient Hyrcania, including Herat and Eſterabad; Sableuſtan, including the ancient Bactriana and Candahor; and Sigiſtan, the ancient Drangiana. The ſouthern diviſion contains Makeran, Kerman, the ancient Gedroſſia, and Farſiſtan, the ancient Perſia. The ſouth-weſt diviſion, on the frontiers of Turkey, contains the provinces of Chuſiſtan, the ancient Suſiana, and Irac-Agem, the ancient Parthia. The north-weſt diviſion, lying between the Caſpian Sea and the frontiers of Turkey in Aſia, contains the provinces of Aderbeitzen, the ancient Media; Gangea, Daghiſtan, part of the ancient Iberia and Colchis; Ghilan, part of the ancient Hyrcania; Shirvan, and Mazanderan.

Name.] Perſia according to the poets, derived its name from Perſius, the ſon of Jupiter and Danae. Leſs fabulous authors ſuppoſe it derived from Paras, which ſignifies a horſeman, the Perſians, or Parthians, being always celebrated for their ſkill in horſemanſhip.

Air.] In ſo extenſive an empire this is very different. Thoſe parts which border upon Caucaſus and Daghiſtan, and the mountains near the Caſpian Sea, are cold, as lying in the neighbourhood of thoſe mountains which are commonly covered with ſnow. The air in the midland provinces of Perſia is ſerene, pure, and exhilirating; but in the ſouthern provinces it is hot, and ſometimes communicates noxious blaſts to the midland parts, which are ſo often mortal, that the inhabitants fortify their heads with very thick turbans.

Soil, vegetable and animal productions. } Theſe vary like the air. The ſoil is far from being luxuriant towards Tartary and the Caſpian Sea, but with cultivation it might produce abundance of corn and fruits. South of mount Taurus, the fertility of the country in corn, fruits, wine, and other luxuries of life, is equalled by few countries. It produces wine and oil in plenty, ſena, rhubarb, and the fineſt of drugs. The fruits are delicious, eſpecially their dates, oranges, piſtachio nuts, melons, cucumbers, and garden-ſtuff, not to mention vaſt quantities of excellent ſilk; and the gulf of Baſſora formerly furniſhed great part of Europe and Aſia with very fine pearls. Some parts near Iſpahan produce almoſt all the flowers that are valued in Europe; and from ſome of them, the roſes eſpecially, they extract waters of a ſalubrious and odorific kind, which form a gainful article in trade. In ſhort, the fruits, vegetables, and flowers of Perſia, are of a moſt exalted flavour; and had the natives the art of horticulture to as great perfection as ſome nations in Europe, by tranſplanting, engrafting, and other meliorations, they

would add greatly to the natural riches of the country. The Perſian aſſafœtida flows from a plant called hiltot, and turns into a gum. Some of it is white, and ſome black; but the former is ſo much valued, that the natives make very rich ſauce of it, and ſometimes eat it as a rarity.

No place in the world produces the neceſſaries of life in greater abundance and perfection than Shirauz; nor is there a more delightful ſpot in nature to be conceived, than the vale in which it it ſituated, either for the ſalubrity of the air, or for the profuſion of every thing neceſſary to render life comfortable and agreeable. The fields yield plenty of rice, wheat, and barley, which they generally begin to reap in the month of May, and by the middle of July the harveſt is compleated. Moſt of the European fruits are produced here, and many of them are ſuperior in ſize and flavour to what can be raiſed in Europe, particularly the apricot and grape. Of the grape of Shirauz there are ſeveral ſorts, all of them very good, but two or three more particularly ſo than the reſt; one is the large white grape, which is extremely luſcious and agreeable to the taſte; the ſmall white grape, as ſweet as ſugar; and the black grape, of which the celebrated wine of Shirauz is made, which is really delicious, and well-deſerving of praiſe; ſo much ſo that people who have drank it for a ſpace of time ſeldom care for any other, though at the firſt taſte it is rather unpleaſant to an European. It is preſſed by the Armenians and Jews in the months of October and November, and a vaſt deal is exported annually to Abu Shehr, and other parts in the Perſian gulph, for the ſupply of the Indian market. The pomegranate is good to a proverb; the Perſians call it the fruit of Paradiſe.

The breed of horſes in the province of Fars is at preſent very indifferent, owing to the ruinous ſtate of the country; but in the province of Duſhtiſtaàn, lying to the ſouth-weſt, it is remarkably good. The ſheep are of a ſuperior flavour, owing to the excellence of the paſturage in the neighbourhood of Shirauz, and are alſo celebrated for the fineneſs of their fleeces: they have tails of an extraordinary ſize, ſome of which I have ſeen weigh (ſays Mr. Francklin) upwards of thirty pounds; but thoſe which are ſold in the markets do not weigh above ſix or ſeven. Their oxen are large and ſtrong, but their fleſh is ſeldom eaten by the natives, who confine themſelves chiefly to that of the ſheep and fowls.

Proviſions of all kinds are very cheap; and the neighbouring mountains affording an ample ſupply of ſnow throughout the year, the meaneſt artificer of Shirauz may have his water and fruits cooled without any expence worthy his conſideration. This ſnow being gathered on the tops of the mountains, and brought in carts to the city, is ſold in the markets. The price of proviſions is regulated in Shirauz with the greateſt exactneſs by the daroga, or judge of the police, who ſets a fixed price upon every article, and no ſhop-keeper dares to demand more, under the ſevere penalty of loſing his noſe and ears; ſuch being the puniſhment attached to a crime of this nature; by which means the pooreſt inhabitants are effectually ſecured from impoſition, in ſo capital a point as the neceſſaries of life.

Mountains.] Theſe are Caucaſus and Ararat, which are called the mountains of Daghiſtan; and the vaſt collection of mountains called Taurus, and their diviſions, run through the middle of the country from Natolia to India.

Rivers.] It has been obſerved, that no country, of ſo great an extent, has ſo few navigable rivers as Perſia. The moſt conſiderable are thoſe of the Kur, anciently Cyrus; and Aras, anciently Araxes, which riſes in or near the mountains of Ararat, and joining the Cyrus, falls into the Caſpian Sea. Some ſmall rivulets falling from the mountains water the country; but their ſtreams are ſo inconſiderable, that few or none of them can be navigated even with boats. The Oxus

can

can ſcarcely be called a Perſian river, though it divides Perſia from Uſbec Tartary. Perſia has the river Indus on the eaſt, and the Euphrates and Tigris on the weſt.

WATER.] The ſcarcity of rivers in Perſia occaſions a ſcarcity of water; but the defect, where it prevails, is admirably well ſupplied by means of reſervoirs, aqueducts, canals, and other ingenious methods.

METALS AND MINERALS.] Perſia contains mines of iron, copper, lead, and above all, turquoiſe ſtones, which are found in Choraſan. Sulphur, ſalt-petre, and antimony, are found in the mountains. Quarries of red, white, and black marble, have alſo been diſcovered near Tauris.

POPULATION, INHABITANTS, MANNERS, CUSTOMS, AND DIVERSIONS.] It is impoſſible to ſpeak with any certainty concerning the population of a country ſo little known as that of Perſia. If we are to judge by the vaſt armies, in modern as well as ancient times, raiſed there, the numbers it contains muſt be very great. The Perſians of both ſexes are generally handſome; the men being fond of Georgian and Circaſſian women. Their complexions towards the ſouth are ſomewhat ſwarthy. The men ſhave their heads, but the young men ſuffer a lock of hair to grow on each ſide, and the beard of their chin to reach up to their temples; but religious people wear long beards. Men of rank and quality wear very magnificent turbans; many of them coſt twenty-five pounds, and few under nine or ten. They have a maxim to keep their heads very warm, ſo that they never pull off their caps or turbans out of reſpect even to the king. Their dreſs is very ſimple. Next to their ſkin they wear callico ſhirts, over them a veſt, which reaches below the knee, girt with a ſaſh, and over that a looſe garment ſomewhat ſhorter. The materials of their cloaths, however, are commonly very expenſive; conſiſting of the richeſt furs, ſilks, muſlin, cottons, and the like valuable ſtuffs, richly embroidered with gold and ſilver. They wear a kind of looſe boots on their legs, and ſlippers on their feet. They are fond of riding, and very expenſive in their equipages. They wear at all times a dagger in their ſaſh, and linen trowſers. The collars of their ſhirts and cloaths are open; ſo that their dreſs upon the whole is far better adapted for the purpoſes both of health and activity than the long flowing robes of the Turks. The dreſs of the women is not much different; their wear, as well as that of the men, is very coſtly; and they are at great pains to heighten their beauty by art, colours, and waſhes.

The Perſians accuſtom themſelves to frequent ablutions, which are the more neceſſary, as they ſeldom change their linen. In the morning early they drink coffee, about eleven go to dinner upon fruits, ſweatmeats, and milk. Their chief meal is at night. They eat at their repaſts cakes of rice, and others of wheat flour; and as they eſteem it an abomination to cut either bread, or any kind of meat after it is dreſſed, theſe cakes are made thin, that they may be eaſily broken with the hand; and their meat, which is generally mutton, or fowls, is ſo prepared, that they divide it with their fingers. When every thing is ſet in order before them, they eat faſt, and without any ceremony. But it is obſerved by a late traveller, that when the oldeſt man in the company ſpeaks, though he be poor and ſet at the lower end of the room, they all give a ſtrict attention to his words. They are temperate, but uſe opium, though not in ſuch abundance as the Turks; nor are they very delicate in their entertainments of eating and drinking. They are great maſters of ceremony towards their ſuperiors, and ſo polite, that they accommodate Europeans who viſit them with ſtools, that they may not be forced to ſit croſs-legged. They are ſo immoderately fond of tobacco, which they ſmoke through a tube fixed in water, ſo as to be cool in the mouth, that when it has been prohibited by their princes,

princes, they have been known to leave their country rather than be debarred from that enjoyment. The Perſians are naturally fond of poetry, moral ſentences, and hyperbole. Their long wars, and their national revolutions, have mingled the native Perſians with barbarous nations, and are ſaid to have taught them diſſimulation; but they are ſtill pleaſing and plauſible in their behaviour, and in all ages have been remarkable for hoſpitality.

The Perſians write like the Hebrews, from the right to the left; are neat in their ſeals and materials for writing, and wonderfully expeditious in the art. The number of people employed in their manuſcripts (for no printing is allowed there) is incredible. Their great foible ſeems to be oſtentation in their equipages and dreſſes; nor are they leſs jealous of their women than the Turks, and other eaſtern nations. They are fond of muſic, and take a pleaſure in converſing in large companies; but their chief diverſions are thoſe of the field, hunting, hawking, horſemanſhip, and the exerciſe of arms, in all which they are very dexterous. They excel, as their anceſtors the Parthians did, in archery. They are fond of rope-dancers, jugglers, and fighting of wild beaſts; and privately play at games of chance.

There are places in Shirauz (Mr. Francklin obſerves) diſtinguiſhed by the name of Zoor Khàna, the houſe of ſtrength or exerciſe, to which the Perſians reſort for the ſake of exerciſing themſelves. Theſe houſes conſiſt of one room, with the floor ſunk about two feet below the ſurface of the earth, and the light and air are admitted to the apartment by means of ſeveral ſmall perforated apertures made in the dome. In the centre is a large ſquare terrace of earth, well beaten down, ſmooth and even; and on each ſide are ſmall alcoves raiſed about two feet above the terrace, where the muſicians and ſpectators are ſeated. When all the competitors are aſſembled, which is on every Friday morning by day-break, they immediately ſtrip themſelves to the waiſt; on which each man puts on a pair of thick woollen drawers, and takes in his hands two wooden clubs of about a foot and a half in length, and cut in the ſhape of a pear; theſe they reſt upon each ſhoulder, and the muſic ſtriking up, they move them backwards and forwards with great agility, ſtamping with their feet at the ſame time, and ſtraining every nerve till they produce a very profuſe perſpiration. After continuing this exerciſe about half an hour, upon a ſignal given they all leave off, quit their clubs, and joining hands in a circle, begin to move their feet very briſkly in union with the muſic, which is all the while playing a lively tune. Having continued this for ſome time, they commence wreſtling, in which the maſter of the houſe is always the challenger; and, being accuſtomed to the exerciſe, generally proves conqueror. The ſpectators pay each a ſhahee in money, equal to three-pence Engliſh, for which they are refreſhed with a calean to ſmoke, and coffee. This mode of exerciſe muſt contribute to health, as well as add ſtrength, vigour, and a manly appearance to the frame. It ſeems to bear ſome reſemblance to the gymnaſtic exerciſes of the ancients.

In attempting to ſay any thing of the character of the modern Perſians (ſays Mr. Francklin) I am ſenſible of the difficulty of the undertaking, yet, as during my ſtay in Perſia, from the ſituation I was placed in, by living in a native family, I had an opportunity of ſeeing more of the nature and diſpoſition of the middling ſort of people, and their manners and cuſtoms, than has fallen to the lot of moſt travellers, I am induced to give the few obſervations I made during that period. The Perſians, with reſpect to outward behaviour, are certainly the Pariſians of the Eaſt. Whilſt a rude and inſolent demeanour peculiarly marks the character of the Turkiſh nation towards foreigners and Chriſtians, the behaviour of the Perſians would, on the contrary, do honour to the moſt civiliſed nations: they are kind, courteous, civil and obliging to all ſtrangers, without being guided by thoſe religious prejudices

dices ſo very prevalent in every other Mahometan nation; they are fond of enquiring after the manners and cuſtoms of Europe; and in return very readily afford any information in reſpect to their own country. The practice of hoſpitality is with them ſo grand a point, that a man thinks himſelf highly honoured if you will enter his houſe and partake of what the family affords; whereas going out of a houſe, without ſmoking a calèan, or taking any other refreſhment, is deemed, in Perſia, a high affront; they ſay that every meal a ſtranger partakes with them brings a bleſſing upon the houſe.

The Perſians, in their converſation, uſe ſuch extravagant and hyperbolical compliments on the moſt trifling occaſions, that it would at firſt inſpire a ſtranger with an idea, that every inhabitant of the place was willing to lay down his life, ſhed his blood, or ſpend his money in your ſervice; and this mode of addreſs (which in fact means nothing) is obſerved not only by thoſe of a higher rank, but even amongſt the meaneſt artificers, the loweſt of which will make no ſcruple, on your arrival, of offering you the city of Shirauz, and all its appurtenances, as a peiſhkuſh or preſent. This behaviour appears at firſt very remarkable to Europeans, but after a ſhort time becomes equally familiar. Freedom of converſation is a thing totally unknown in Perſia, as that *walls have ears* is proverbially in the mouth of every one. The fear of chains, which bind their bodies, has alſo enſlaved their minds; and their converſation to men of ſuperior rank to themſelves is marked with ſigns of the moſt abject and ſlaviſh ſubmiſſion; while, on the contrary, they are as haughty and overbearing to their inferiors.

In their converſation, the Perſians aim much at elegance, and are perpetually repeating verſes and paſſages from the works of their moſt favourite poets Hafez, Sadi, and Jami; a practice univerſally prevalent from the higheſt to the loweſt; becauſe thoſe who have not the advantages of reading and writing, or the other benefits ariſing from education, by the help of their memories, which are very retentive, and what they learn by heart, are always ready to bear their part in converſation. They alſo delight much in jokes and quaint expreſſions, and are fond of playing upon each other; which they ſometimes do with great elegance and irony. There is one thing much to be admired in their converſations, which is the ſtrict attention they always pay to the perſon ſpeaking, whom they never interrupt on any account. They are in general a perſonable, and in many reſpects, a handſome people: their complexions, ſaving thoſe who are expoſed to the inclemencies of the weather, are as fair as Europeans.

The bright and ſparkling eyes of the women, which is a very ſtriking beauty, is in a great meaſure owing to art, as they rub their eye-brows and eye-lids with the black powder of antimony (called ſurma), which adds an incomparable brilliancy to their natural luſtre.

MARRIAGES.] When the parents of a young man have determined upon marrying him, they look out amongſt their kindred and acquaintance for a ſuitable match; they then go to the houſe where the female they intend to demand, lives. If the father of the woman approves, he immediately orders ſweetmeats to be brought in, which is taken as a direct ſign of compliance. After this, the uſual preſents on the part of the bridegroom are made, which, if the perſon be in middling circumſtances, generally conſiſt of two complete ſuits of apparel of the beſt ſort, a ring, a looking-glaſs, and a ſmall ſum in ready money, of about ten or twelve tomans, which is to provide for the wife in caſe of divorce. There is alſo provided a quantity of houſehold ſtuff of all ſorts, ſuch as carpets, mats, bedding, utenſils for dreſſing victuals, &c. The contract is witneſſed by the cadi, or magiſtrate. The wedding-night being come, the bride is brought forth covered from head to

foot

in a veil of red ſilk, or painted muſlin; a horſe is then preſented for her to mount, which is ſent thither expreſsly by the bridegroom; and when ſhe is mounted, a large looking-glaſs is held before her by one of the bride-maids, all the way to the houſe of her huſband, as an admonition to her, that it is the laſt time ſhe will look into the glaſs as a virgin, being now about to enter into the cares of the married ſtate. The proceſſion then ſets forward in the following order:—firſt, the muſic and dancing-girls, after which the preſents in trays borne upon men's ſhoulders; next come the relations and friends of the bridegroom, all ſhouting, and making a great noiſe; who are followed by the bride herſelf, ſurrounded by all her female friends and relations, one of whom leads the horſe by the bridle, and ſeveral others on horſeback cloſe the proceſſion. Rejoicings upon this occaſion generally continue eight or ten days. Men may marry for life, or for any determined time, in Perſia, as well as through all Tartary; and travellers or merchants, who intend to ſtay ſome time in any city, commonly apply to the cadi, or judge, for a wife during the time he propoſes to ſtay. The cadi, for a ſtated gratuity, produces a number of girls, whom he declares to be honeſt, and free from diſeaſes; and he becomes ſurety for them. A gentleman who lately attended the Ruſſian embaſſy to Perſia declares, that, among thouſands, there has not been one inſtance of their diſhoneſty during the time agreed upon.

Funerals.] The funerals of the Perſians are conducted in a manner ſimilar to thoſe in other Mahomedan countries. On the death of a Muſſulman, the relations and friends of the deceaſed being aſſembled, make loud lamentations over the corpſe; after which it is waſhed and laid out on a bier, and carried to the place of interment without the city-walls, attended by a mullah, or prieſt, who chaunts paſſages from the Koràn all the way to the grave. If any Muſſulman ſhould chance to meet the corpſe during the proceſſion, he is obliged by the precepts of his religion, to run up to the bier, and offer his aſſiſtance in carrying it to the grave, crying out at the ſame time, *Làh Illáh Ill Lillàh!* There is no God, but God. After interment, the relations of the deceaſed return home, and the women of the family make a mixture of wheat, honey, and ſpices, which they eat in memory of the deceaſed, ſending a part of it to their friends and acquaintance, that they alſo may pay him a like honour. This cuſtom ſeems to be derived from very great antiquity, as we read in Homer of ſacrifices and libations being frequently made to the memory of departed ſouls.

Religion.] The Perſians are Mahometans of the ſect of Ali; for which reaſon the Turks, who follow the ſucceſſion of Omar and Abu-Bekr, call them heretics. Their religion is, if poſſible, in ſome things more fantaſtical and ſenſual than that of the Turks; but in many points it is mingled with ſome bramin ſuperſtitions. When they are taxed by the Chriſtians with drinking ſtrong liquors, as many of them do, they anſwer very ſenſibly, "You Chriſtians whore and get drunk, though you know you are committing ſins, which is the very caſe with us." Having mentioned the bramins, the compariſon between them and the Perſian *guebres* or *gaurs*, who pretend to be the diſciples and ſucceſſors of the ancient magi, the followers of Zoroaſter, might be highly worth a learned diſquiſition: that both of them held originally pure and ſimple ideas of a Supreme Being, may be eaſily proved; but the Indian bramins and parſees accuſe the *gaurs*, who ſtill worſhip the fire, of having ſenſualiſed thoſe ideas, and introduced an evil principle into the government of the world. A combuſtible ground, about ten miles diſtant from Baku, a city in the north of Perſia, is the ſcene of the *guebres* devotions. This ground is impregnated with inflammatory ſubſtances, and contains ſeveral old little temples; in one of which the *guebres* pretend to preſerve the ſacred flame of the univerſal

fire which, riſes from the end of a large hollow cane ſtuck in the ground, reſembling a lamp burning with very pure ſpirits. The Mahometans are the declared enemies of the *gaurs*, who were baniſhed out of Perſia by Shah Abbas. Their ſect is ſaid to be numerous, though tolerated in very few places.

The long wars between the Perſians and the Romans ſeem early to have driven the ancient Chriſtians into Perſia, and the neighbouring countries. Even to this day, many ſects are found that evidently have Chriſtianity for the ground-work of their religion. Some of them, called Souffees, who are a kind of quietiſts, ſacrifice their paſſions to God, and profeſs the moral duties. The Sabean Chriſtians have, in their religion, a mixture of Judaiſm and Mahometaniſm; and are numerous towards the Perſian gulf. I have already mentioned the Armenian and Georgian Chriſtians, who are very numerous in Perſia. The preſent race of Perſians are ſaid to be very cool in the doctrines of Mahomet, owing chiefly to their late wars with the Turks.

The Perſians obſerve the faſt during the month of Ramazàn (the 9th month of the Mahomedan year) with great ſtrictneſs and ſeverity. About an hour before daylight, they eat a meal which is called Séhre, and from that time until the next evening at ſun-ſet, they neither eat nor drink of any thing whatever. It is even ſo rigid, that if in the courſe of the day the ſmoke of a calean, or the ſmalleſt drop of water, reaches their lips, the faſt is in conſequence deemed broken, and of no avail. From ſun-ſet until the next morning they are allowed to refreſh themſelves. This faſt, when the month Ramazàn falls in the middle of ſummer, as it ſometimes muſt do (theMahomedan year being lunar), is extremely ſevere, eſpecially to thoſe who are obliged by their occupations to go about during the day-time, and is rendered ſtill more ſo, as there are alſo ſeveral nights during its exiſtence which they are enjoined to ſpend in prayer. The Perſians particularly obſerve two; the one being that in which their prophet Ali died from a wound which he received from the hands of an aſſaſſin three days before; which night is the 21ſt of Ramazàn, the day of which is called by the natives the day of murder.—The other is the night of the 23d, in which they affirm that the Koran was brought down from Heaven by the hands of the angel Gabriel and delivered to their prophet Mahomed; wherefore it is denominated the night of power.

LANGUAGE.] It has been diſputed among the learned, whether the Arabs had their language, from the Perſians; but this chiefly reſts on the great intermixture of Arabic words in the Perſian language, and the deciſion ſeems to be in favour of the Arabs. The common people eſpecially towards the ſouthern coaſts of the Caſpian ſea, ſpeak Turkiſh; and the Arabic probably was introduced into Perſia under the caliphate, when learning flouriſhed in thoſe countries. Many of the learned Perſians have written in the Arabic, and people of quality have adopted it as the modiſh language, as we do the French. The pure Perſic is ſaid to be ſpoken in the ſouthern parts, on the coaſt of the Perſian gulf, and in Iſpahan; but many of the provinces ſpeak a barbarous mixture of the Turkiſh, Ruſſian, and other languages. Their Pater-noſter is of the following tenour: *Ei Padere ma kih der oſmoni; pac baſched mâm tu; bayayed padeſchahi tu; ſchwad chwáaſte tu henzjunáaukih der oſmon níz derzemín; béh mára jmrouz nân kefâf rouz mara; wadarguaſar mara konáhan ma zjunankihma niz mig ſarim ormân mara; wador ozmajiſch minedâzzmara; likin chalás kun mara ez eſeherir.* Amen.

LEARNING AND LEARNED MEN.] The Perſians, in ancient times, were famous for both; and their poets renowned all over the Eaſt. There is a manuſcript at Oxford, containing the lives of a hundred and thirty-five of the fineſt Perſian poets. Ferduſi and Sadi were among the moſt celebrated. The former com-

priſed the hiſtory of Perſia in a ſeries of epic poems, which employed him for near thirty years, and which are ſaid by Mr. Jones, to be "a glorious monument of Eaſtern genius and learning." Sadi was a native of Shirauz, and flouriſhed in the thirteenth century, and wrote many fine pieces, both in proſe and verſe. Shemſeddin was one of the moſt eminent lyric poets that Aſia has produced; and Nakhſbeb wrote in Perſian a book called the "Tales of a Parrot," not unlike the Decameron of Boccace. Jami was a moſt animated and elegant poet, who flouriſhed in the middle of the fifteenth century, and whoſe beautiful compoſitions, on a great variety of ſubjects, are preſerved at Oxford, in twenty-two volumes. Hariri compoſed in a rich, elegant, and flowery ſtyle, a moral work, in fifty diſſertations, on the changes of fortune, and the various conditions of human life, interſperſed with a number of agreeable adventures, and ſeveral fine pieces of poetry.

Of Hafez, the ſprightly and voluptuous bard of Shirauz, the name and character are ſufficiently known to Orientaliſts. It may, however, excite the curioſity of the Engliſh reader, that the poet here introduced to his notice, conciliated the favour of an offended emperor, by the delicacy of his wit, and the elegance of his verſes: that the moſt powerful monarchs of the Eaſt ſought in vain to draw him from the enjoyment of literary retirement, and to purchaſe the praiſes of his Muſe by all the honours and ſplendour of a court; and that his works were not only the admiration of the jovial and the gay, but the manual of myſtic piety to the ſuperſtitious Mahometan, the oracle, which like the *Sortes Virgilianæ*, determined the councils of the wiſe, and prognoſticated the fate of armies and of ſtates. Seventeen odes have already been tranſlated into Engliſh by Mr. Nott, with which he has publiſhed the originals, for the purpoſe of promoting the ſtudy of the Perſian language. The 12th ode has alſo appeared in an Engliſh dreſs by the elegant hand of ſir William Jones.

The tomb of this celebrated and deſervedly admired poet ſtands about two miles diſtant from the walls of the city of Shirauz, on the north-eaſt ſide. It is placed in a large garden, and under the ſhade of ſome cypreſs trees of extraordinary ſize and beauty; it is compoſed of fine white marble from Tauris, eight feet in length and four in breadth: this was built by Kerim Khan, and covers the original one: on the top and ſides of the tomb are ſelect pieces from the poet's own works, moſt beautifully cut in the Perſian Nuſtàleek character. During the ſpring and ſummer ſeaſons, the inhabitants viſit here, and amuſe themſelves with ſmoking, playing at cheſs and other games, reading alſo the works of Hafez, who is in greater eſteem with them than any other of their poets, and they venerate him almoſt to adoration, never ſpeaking of him but in the higheſt terms of rapture and enthuſiaſm; a moſt elegant copy of his works is kept upon the tomb, for the purpoſe and the inſpection of all who go there. The principal youth of the city aſſemble here, and ſhew every poſſible mark of reſpect for their favourite poet, making plentiful libations of the delicious wine of Shirauz to his memory. Cloſe by the garden runs the ſtream of Roknabad, ſo celebrated in the works of Hafez, and, within a ſmall diſtance, the ſweet bower of Moſellày.

At preſent, learning is at a very low ebb among the Perſians. Their boaſted ſkill in aſtronomy is now reduced to a mere ſmattering in that ſcience, and terminates in judicial aſtrology; ſo that no people in the world are more ſuperſtitious than the Perſians. The learned profeſſion in greateſt eſteem among them is that of medicine; which is at perpetual variance with aſtrology, becauſe every doſe muſt be in the lucky hour fixed by the aſtrologer, which often defeats the ends of the preſcription. It is ſaid, however, that the Perſian phyſicians are acute and ſagacious. Their drugs are excellent, and they are no ſtrangers to the practices of Galen and Avicenna. Add to this, that the plague is but little known in this country;

country; as equally rare are many other diſeaſes that are fatal in other places; ſuch as the gout, the ſtone, the ſmall-pox, conſumptions, and apoplexies. The Perſian practice of phyſic is therefore pretty much circumſcribed, and they are very ignorant in ſurgery, which is exerciſed by barbers, whoſe chief occupation is in letting blood; for they truſt the healing of green wounds to the excellency of the air, and the good habit of the patient's body.

ANTIQUITIES AND CURIOSITIES, NATURAL AND ARTIFICIAL.] The monuments of antiquity in Perſia, are more celebrated for their magnificence, and expence, than their beauty or taſte. No more than nineteen columns, which formerly belonged to the famous palace of Perſepolis *, are now remaining. Each is about fifteen feet high, and compoſed of excellent Parian marble. The ruins of other ancient buildings are found in many parts of Perſia, but void of that elegance and beauty which is diſplayed in the Greek architecture. The tombs of the kings of Perſia are ſtupendous works; being cut out of a rock, and highly ornamented with ſculptures. The chief of the modern edifices is a pillar to be ſeen at Iſpahan, ſixty feet high, conſiſting of the ſkulls of beaſts, erected by Shah Abbas, after the ſuppreſſion of a rebellion. Abbas had vowed to erect ſuch a column of human ſkulls; but upon the ſubmiſſion of the rebels, he performed his vow by ſubſtituting thoſe of brutes, each of the rebels furniſhing one.

The baths near Gombroon work ſuch cures, that they are eſteemed among the natural curioſities of Perſia. The ſprings of the famous Naphtha near Baku, are mentioned often in natural hiſtory for their ſurpriſing qualities; but the chief of the natural curioſities in this country, is the burning phænomenon, and its inflammatory neighbourhood, already mentioned under the article of Religion.

HOUSES, CITIES, AND PUBLIC EDIFICES.] The houſes of men of quality in Perſia, are in the ſame taſte with thoſe of the Aſiatic Turks already deſcribed. They are ſeldom above one ſtory high, built of bricks, with flat roofs for walking on, and thick walls. The hall is arched, the doors are clumſey and narrow, and the rooms have no communication but with the hall; the kitchens and office-houſes being built apart. Few of them have chimnies, but a round hole in the middle of the room. Their furniture chiefly conſiſts of carpets, and their beds are two thick cotton quilts, which ſerve them likewiſe as coverlids, with carpets under them.

Iſpahan or Spahawn, the capital of Perſia, is ſeated on a fine plain, within a mile of the river Zenderhend, which ſupplies it with water. It is ſaid to be twelve miles in circumference. The ſtreets are narrow and crooked, and the chief amuſement of the inhabitants is on the flat roofs of their houſes, where they ſpend their ſummer evenings; and different families aſſociate together. The royal ſquare is a third of a mile in length, and about half as much in breadth; and we are told, that the royal palace, with the buildings and gardens belonging to it, is three miles in circumference. There are in Iſpahan 160 moſques, 1800 caravanſeras, 260 public baths, a prodigious number of fine ſquares, ſtreets, and palaces, in which are canals, and trees planted to ſhade and better accommodate the people. This capital is ſaid formerly to have contained 650,000 inhabitants; but was often depopulated by Kouli Khan during his wars, ſo that we may eaſily ſuppoſe, that it has loſt great part of its magnificence. In 1744, when Mr. Hanway was there, it was thought that not above 5000 of its houſes were inhabited.

Shirauz lies about 225 miles to the ſouth eaſt of Iſpahan. It is an open town, but its neighbourhood is inexpreſſibly rich and beautiful, being laid out for many miles

* Mr. Francklin has lately favoured the world with a very full account of the ruins of this celebrated palace. We have availed ourſelves of many of his obſervation upon this empire; but his decription of theſe ruins is too long to be inſerted in this work.

in gardens, the flowers, fruits, and wines of which are incomparable. The vines of Shirauz are reckoned the beſt of any in Perſia. This town is the capital of Farſiſtan, or Perſia Proper, and hath a college for the ſtudy of eaſtern learning, where the arts and ſciences were taught; and is the ſame as that mentioned by ſir John Chardin, who viſited this city in the laſt century. It is now, however, decaying very faſt, but there are ſtill mullahs and religious men reſiding in it; at preſent it goes by the name of Mudruſſa Khan, or the Khan's college; but literature and the ſciences have long ſince been neglected at Shirauz, and the preſent ſituation of the country does not ſeem to promiſe a ſpeedy revival. This city contains an uncommon number of moſques, and is adorned by many noble buildings, but its ſtreets are narrow and inconvenient, and not above 4000 of its houſes are inhabited. Shirauz has many good bazars and caravanſerais: that, diſtinguiſhed by the appellation of the Vakeel's bazar (ſo called from its being built by Kerim Khan), is, upon the authority of Mr. Francklin, who lately viſited it, by far the handſomeſt. It is a long ſtreet, extending about a quarter of a mile, built entirely of brick, and roofed ſomething in the ſtyle of the Piazzas in Covent Garden; it is lofty and well made; on each ſide are the ſhops of the tradeſmen, merchants, and others, in which are expoſed for ſale, a variety of goods of all kinds: theſe ſhops are the property of the Khan, and are rented to the merchants at a very eaſy monthly rate. Leading out of this bazar is a ſpacious caravanſerai, of an octagon form, built of brick; the entrance through a handſome arched gate-way: in the centre is a place for the baggage and merchandiſe, and on the ſides above and below commodious apartments for the merchants and travellers; theſe are alſo rented at a moderate monthly ſum. About the centre of the above mentioned bazar, is another ſpacious caravanſerai of a ſquare form, the front of which is ornamented with a blue and white enamelled work, in order to repreſent China ware, and has a pleaſing effect to the eye.

The cities of Ormus and Gombroon, on the narrow part of the Perſian Gulf, were formerly places of great commerce and importance. The Engliſh and other Europeans have factories at Gombroon, where they trade with the Perſians, Arabians, Banyans, Armenians, Turks and Tartars, who come hither with the caravans which ſet out from various inland cities of Aſia, under the convoy of guards.

MOSQUES AND BAGNIOS.] I thought proper to place them here under a general head, as their form of building is pretty much the ſame all over the Mahometan countries.

Moſques are religious buildings, ſquare, and generally of ſtone; before the chief gate there is a ſquare court, paved with white marble, and low galleries round it, whoſe roof is ſupported by marble pillars. Thoſe galleries ſerve for places of ablution before the Mahometans go into the moſque. About every moſque there are ſix high towers, called minarets, each of which has three little open galleries, one above another. Theſe towers, as well as the moſques, are covered with lead, and adorned with gilding and other ornaments; and from thence inſtead of a bell, the people are called to prayer by certain officers appointed for that purpoſe. No woman is allowed to enter the moſques: nor can a man with his ſhoes or ſtockings on. Near moſt moſques is a place of entertainment for ſtrangers during three days; and the tomb of the founder, with conveniencies for reading the Koran, and praying.

The city of Shirauz is adorned (according to Mr. Francklin) with many fine moſques, particularly that built by the late Kerim Khan, which is a noble one: being very well diſguiſed, ſays our traveller, in my Perſian dreſs, I had an opportunity of entering the building unobſerved; it is of a ſquare form; in the centre is a ſtone reſervoir of water, made for performing the neceſſary ablutions, previous to prayer; on the four ſides of the building are arched apartments allotted for devotion, ſome of the fronts of which are covered with China tiles; but Kherim Khan dying before

before the work was completed, the remainder has been made up with a blue and white enamelled work. Within the apartments, on the walls, on each ſide, are engraved various ſentences from the Koran, in the Nuſhki character; and at the upper end of the ſquare is a large dome with a cupola at top, which is the particular place appropriated for the devotion of the Vakeel or ſovereign: this is lined throughout with white marble, ornamented with the curious blue and gold artificial lapis lazuli, and has three large ſilver lamps ſuſpended from the roof of the dome. In the centre of the city is another moſque, which the Perſians call the Musjidi Noo, or the New Moſque, but its date is nearly coeval with the city itſelf, at leaſt ſince it has been inhabited by Mahomedans: it is a ſquare building of a noble ſize, and has apartments for prayer on each ſide; in them are many inſcriptions in the old Cuſick character, which of themſelves denote the antiquity of the place.

The bagnios in the Mahometan countries are wonderfully well conſtructed for the purpoſe of bathing. Sometimes they are ſquare, but oftener circular, built of white well-poliſhed ſtone or marble. Each bagnio contains three rooms; the firſt for dreſſing and undreſſing; the ſecond contains the water, and the third the bath; all of them paved with black and white marble. The operation of the bath is very curious, but wholeſome; though to thoſe not accuſtomed to it, it is painful. The waiter rubs the patient with great vigour, then handles and ſtretches his limbs as if he was diſlocating every bone in the body; all which exerciſes are, in thoſe inert warm countries, very conducive to health. In public bagnios, the men bathe from morning to four in the afternoon; when all male attendants being removed, the ladies ſucceed, and when coming out of the bath diſplay their fineſt cloaths.

I might here attempt to deſcribe the eaſtern ſeraglios or harams, the women's apartments; but from the moſt credible accounts, they are contrived according to the taſte and conveniency of the owner, and divided into a certain number of apartments, which are ſeldom or never entered by ſtrangers; and there is no country where women are ſo ſtrictly guarded as among the great men in Perſia.

Police.] The police in Shirauz, as well as all over Perſia, is very good. At ſun-ſet the gates of the city are ſhut; no perſon whatever is permitted either to come in or go out during the night, the keys of the different gates being always ſent to the Hakim or Governor, and remaining with him until morning. During the night, three tiblas or drums, are beaten at three different times; the firſt at eight o'clock, the ſecond at nine, and the third at half paſt ten. After the third tibla has ſounded, all perſons whatſoever found in the ſtreets by the Daroga, or judge of the police, or by any of his people, are inſtantly taken up, and conveyed to a place of confinement, where they are detained until next morning, when they are carried before the Hakim; and if they cannot give a very good account of themſelves, are puniſhed, either by the baſtinado, or a fine.

Civil matters are all determined by the Cazi, and eccleſiaſtical ones, (particularly divorces) by the Sheick al Sellaum, or head of the faith, an office anſwering to that of Mufti in Turkey. Juſtice is carried on in Perſia in a very ſummary manner; the ſentence, whatever it may be, being always put into execution on the ſpot. Theft is generally puniſhed with the loſs of noſe and ears; robbing on the road, by ripping up the belly of the criminal, in which ſituation he is expoſed upon a gibbet in one of the moſt public parts of the city and there left until he expires in torment; a dreadful puniſhment, but it renders robberies in Perſia very uncommon. The puniſhments in this country are ſo varied and cruel, that humanity ſhudders at the thought; and the happy Engliſhman, viewing them, bleſſes himſelf that he is born in the arms of freedom, where property is not only ſacred, but juſtice adminiſtered with mercy!

Manu-

MANUFACTURES AND COMMERCE.] The Perſians equal, if not exceed, all the manufacturers in the world in ſilk, woollen, mohair, carpets, and leather. Their works in theſe join fancy, taſte, and elegance, to richneſs, neatneſs, and ſhew; and yet they are ignorant of painting, and their drawings are very rude. Their dying excels that of Europe. Their ſilver and gold laces, and threads, are admirable for preſerving their luſtre. Their embroideries and horſe furniture are not to be equalled; nor are they ignorant of the pottery and window-glaſs manufactures. On the other hand, their carpenters are very indifferent artiſts, which is ſaid to be owing to the ſcarcity of timber all over Perſia. Their jewellers and goldſmiths are clumſey workmen; and they are ignorant of lock-making, and the manufacture of looking glaſſes. Upon the whole, they lie under inexpreſſible diſadvantages from the form of their government, which renders them ſlaves to their kings, who often engroſs either their labour or their profits.

The trade of the Perſians, who have little or no ſhipping of their own, is carried on in foreign bottoms. That with the Engliſh and other nations, by the gulf of Ormus at Gombroon, was the moſt gainful they had; but the perpetual wars in which they are engaged have ruined their commerce. The great ſcheme of the Engliſh, in trading with the Perſians through Ruſſia, promiſed vaſt advantages to both nations, but it has hitherto anſwered the expectations of neither. Perhaps the court of Peterſburgh is not fond of ſuffering the Engliſh to eſtabliſh themſelves upon the Caſpian ſea, the navigation of which is now poſſeſſed by the Ruſſians; but nothing can be ſaid with certainty on that head, till the goverment of Perſia is in a more ſettled condition than it is at preſent.

CONSTITUTION AND GOVERNMENT.] Both theſe are extremely precarious, as reſting in the breaſt of a deſpotic, and often capricious monarch. The Perſians, however, had ſome fundamental rules of government. They excluded from their throne females, but not their male progeny. Blindneſs likewiſe was a diſqualification for the royal ſucceſſion. In other reſpects the king's will was a law for the people. The inſtances that have been given of the cruelties and inhumanities practiſed by the Mahometan kings of Perſia, are almoſt incredible, eſpecially during the two laſt centuries. The reaſon given to the Chriſtian ambaſſadors, by Shah Abbas, one of their moſt celebrated princes, was, that the Perſians were ſuch brutes, and ſo inſenſible by nature, that they could not be governed without the exerciſe of exemplary cruelties. But this was only a wretched and ill-grounded apology for his own barbarity. The favourites of the prince, female as well as male, are his only counſellors, and the ſmalleſt diſobedience to their will is attended with immediate death. The Perſians have no degrees of nobility, ſo that the reſpect due to every man, on account of his high ſtation, expires with himſelf. The king has been known to prefer a younger ſon to his throne, by putting out the eyes of the elder brother.

REVENUES.] The king claims one-third of the cattle, corn, and fruits of his ſubjects, and likewiſe a third of ſilk and cotton. No rank or condition of Perſians is exempted from ſevere taxations and ſervices. The governors of provinces have particular lands aſſigned to them for maintaining their retinues and troops; and the crown-lands defray the expences of the court, king's houſhold, and great officers of ſtate. After ſaying thus much, the reader cannot doubt that the revenues of the Perſian kings were prodigious; but nothing can be ſaid with any certainty in the preſent diſtracted ſtate of that country. Even the water that is let into fields and gardens is ſubject to a tax, and foreigners, who are not Mahometans, pay each a ducat a head.

MILI-

MILITARY STRENGTH.] This conſiſted formerly of cavalry, and it is now thought to exceed that of the Turks. Since the beginning of this century, however, their kings have raiſed bodies of infantry. The regular troops of both brought to the field, even under Kouli Khan, did not exceed 60,000; but, according to the modern hiſtories of Perſia, they are eaſily recruited in caſe of a defeat. The Perſians have few fortified towns; nor had they any ſhips of war until Kouli Khan built a royal navy; but ſince his death we hear no more of their fleet.

ARMS AND TITLES.] The arms of the Perſian monarch are a lion couchant looking at the riſing ſun. His title is Shah, or the *Diſpoſer of Kingdoms*. Shah or Khan, and Sultan, which he aſſumes likewiſe, are Tartar titles. To acts of ſtate the Perſian monarch does not ſubſcribe his name, but the grant runs in this manner, *This act is given by him whom the univerſe obeys.*

HISTORY.] All ancient hiſtorians mention the Perſian monarchs and their grandeur; and no empire has undergone a greater variety of governments. It is here ſufficient to ſay, that the Perſian empire ſucceeded the Aſſyrian or Babylonian, and that Cyrus laid its foundation about 556 years before Chriſt, and reſtored the Iſraelites, who had been captive at Babylon, to liberty. It ended in the perſon of Darius, who was conquered by Alexander 329 years before Chriſt. Alexander's empire was divided among his generals, whoſe deſcendants in leſs than three centuries were conquered by the Romans. Theſe laſt, however, never fully ſubdued Perſia, and the natives had princes of their own, by the name of Arſacides, who more than once defeated the Roman legions. The ſucceſſors of thoſe princes ſurvived the Roman empire itſelf, but were ſubdued by the famous Tamerlane, whoſe poſterity were ſupplanted by a doctor of law, Cheki Adir, the anceſtor of the Sefi or Sophi family, and who pretended to be deſcended from Mahomet himſelf. His ſucceſſors, though ſome of them were valiant and politic, and enlarged the empire, and from him ſometimes called Sophis, proved in general to be a diſgrace to humanity, by their cruelty *, ignorance and indolence, which brought them into ſuch diſrepute with their ſubjects, barbarous as they were, that Haſſein, a prince of the Sefi race, who ſuceeded in 1694, was murdered by Mahmud, ſon and ſucceſſor to the famous Miriweis; as Mahmud himſelf was by Eſref, one of his general officers, who uſurped the throne. Prince Tahmas, the repreſentative of the Sefi family, had eſcaped from the rebels, and aſſembling an army, took into his ſervice Nadir Shah, who defeated and killed Eſref, and re-annexed to the Perſian monarchy all the places diſmembered from it by the Turks and Tartars during their late rebellions. At laſt the ſecret ambition of Nadir broke out, and, after aſſuming the name of Tahmas Kouli Khan, and pretending that his ſervices were not ſufficiently rewarded, he rebelled againſt his ſovereign, made him a priſoner, and, it is ſuppoſed, put him to death.

This uſurper afterwards mounted the throne, under the title of Shah Nadir. His expedition into Indoſtan, and the amazing booty he made there, has been men-

* The inſtances of wanton cruelty, and the moſt ſavage barbarity, recorded of ſome of the kings of Perſia, are ſhocking to humanity, and a ſtriking evidence of the miſeries and calamities occaſioned by deſpotic power. Shah Abbas, ſurnamed the Great, having three ſons, cauſed the eyes of the two youngeſt to be put out, and afterwards put the eldeſt to death. He was ſucceeded by his grandſon, who began his reign by ordering the eyes of his only brother to be cut out. He alſo caſt from a rock his two uncles, who had before been blinded by order of Shah Abbas. The inſtances of his cruelty were innumerable: he buried alive forty-four women of his Haram, though when he was not hunting, or over his cups, he uſed to paſs his time with them. Seffie, or Suliman, who aſcended the throne of Perſia in 1660, and was a brutal tyrant, when he was intoxicated either with wine or anger, often ordered the hands, feet, ears, and noſes, of thoſe near him to be cut off, their eyes to be plucked out, or their lives to be ſacrificed, as if it were his paſtime.

tioned

tioned in the deſcription of that country. It has been remarked, that he brought back an inconſiderable part of his booty from India, loſing great part of it upon his return by the Mahrattas and various accidents. He next conquered Uſbec Tartary; but was not ſo ſucceſsful againſt the Dagheſtan Tartars, whoſe country he found to be inacceſſible. He beat the Turks in ſeveral engagements, but was unable to take Bagdad. The great principle of his government was to ſtrike terror into all his ſubjects by the moſt cruel executions. His conduct became ſo intolerable, that it was thought his brain was touched; and he was aſſaſſinated in his own tent, partly in ſelf-defence, by his chief officers and his relations, in the year 1747. Many pretenders, upon his death, ſtarted up; and it may naturally be ſuppoſed, that a chronological and accurate account of theſe various and rapid revolutions is very difficult to be obtained. The confuſion which prevailed through the whole country, from the death of Nadir, until the ſettlement of Kerim Khan, prevented all attempts of literature, arts, and ſciences. During this interval, the whole empire of Perſia was in arms, and rent by commotions; different parties in different provinces of the kingdom ſtruggling for power, and each endeavouring to render himſelf independent of the other, torrents of blood were ſhed, and the moſt ſhocking crimes were committed with impunity. The whole face of the country, from Gombroon to Ruſſia, preſents to the view thouſands of inſtances of the miſery and devaſtation which has been occaſioned by theſe commotions. The picture is melancholy but juſt.

From the accounts we have been able to collect, the ſeries of pretenders to the throne of Perſia, from the death of Nadir Shaw until the final eſtabliſhment of Kerim Khan's government was no leſs than nine, including himſelf. Kerim Khan Zund was a moſt favourite officer of Nadir Shaw, and at the time of his death was in the ſouthern provinces. Shirauz and other places had declared for him. He found means, at laſt, after various encounters, with doubtful ſucceſs, completely to ſubdue all his rivals; and finally to eſtabliſh himſelf as ruler of all Perſia. He was in power about thirty years, the latter part of which he governed Perſia under the appellation of Vakeel, or regent; for he never would receive the title of Shah. He made Shirauz the chief city of his reſidence, in gratitude for the aſſiſtance he had received from its inhabitants, and thoſe of the ſouthern inhabitants. He died in the year 1779, in the eightieth year of his age, regretted by all his ſubjects, who eſteemed and honoured him as the glory of Perſia. His character is moſt deſervedly celebrated for the public buildings which he erected, and the excellent police which he maintained, ſo that during his whole reign there was not in Shirauz a ſingle riot productive of bloodſhed; beſides theſe, his averſion to ſevere puniſhments, his liberality and kindneſs to the poor, his toleration of people of different perſuaſions, his partiality for Europeans, and his encouragement of trade, together with his great military abilities, and perſonal courage, rendered him not only beloved by his own ſubjects, but greatly reſpected by foreign powers.

From the death of Kerim Khan to the preſent time, a variety of competitors have been deſirous of filling the throne of Perſia. Of theſe we ſhall only mention the two principal. Akau Mahomet Khan keeps poſſeſſion of the provinces of Mazanderan and Ghilan, as well as the cities of Iſpahan, Hamadan, and Tauris, where he is acknowledged as ſovereign. Jaafar Khan has poſſeſſion of the city of Shirauz, and the provinces of Beaboon and Shuſter: he alſo receives an annual preſent from the province of Carmania, and another from the city of Yezd; Abu Shehr and Lar alſo ſend him tribute. The ſouthern provinces are in general more fruitful than thoſe to the northward, they not having been ſo frequently the ſcenes of action during the late revolutions.

Jaafar

Jaafar Khan is a middle-aged man, very corpulent, and has a caſt in his right eye: in the places where he is acknowledged, he is well beloved and reſpected; he is very mild in his diſpoſition, and juſt. In Shirauz he keeps up a moſt excellent police, and good government. He is very kind and obliging to ſtrangers in general, and to the Engliſh in particular. Of the two competitors who at preſent contend for the government of Perſia, he is the moſt likely, in caſe of ſucceſs againſt his opponent, to reſtore the country to a happy and reputable ſtate; but it will require a long ſpace of time to recover it from the calamities into which the different revolutions have brought it:—a country, if an Oriental metaphor may be allowed, once bloming as the garden of Eden, fair and flouriſhing to the eye;—now, ſad reverſe! deſpoiled and leafleſs by the cruel ravages of war, and deſolating contention.

The forces of the two competitors are nearly equal, conſiſting of about 20,000 men, chiefly horſe. This was the ſituation of the country in 1788, according to the report of the laſt advices, when the fate of Perſia was ſtill undecided.

ARABIA.

NAME.] It is remarkable that this country has always preſerved its ancient name. The word *Arab*, it is generally ſaid, ſignifies a robber, or freebooter. The word *Saracen*, by which one tribe is called, is ſaid to ſignify both a thief and an inhabitant of the deſert. Theſe names juſtly belong to the Arabians, for they ſeldom let any merchandiſe paſs through the country without extorting ſomething from the owners.

MOUNTAINS.] The mountains of Sinai and Horeb, lying in Arabia Petræa, eaſt of the Red-Sea, and thoſe called Gabel el Ared, in Arabia Felix, are the moſt noted.

RIVERS, SEAS, GULFS, AND CAPES.] There are few fountains, ſprings, or rivers in this country, except the Euphrates, which waſhes the north-eaſt limits of it. It is almoſt ſurrounded with ſeas; as the Indian Ocean, the Red-Sea, the gulfs of Perſia and Ormus. The chief capes or promontories are thoſe of Roſalgate and Muſſedon.

CLIMATE, AIR, SOIL, AND PRODUCE.] As a conſiderable part of this country lies under the Torrid Zone, and the Tropic of Cancer paſſes over Arabia Felix, the air is exceſſively dry and hot, and the country is ſubject to hot poiſonous winds, like thoſe on the oppoſite ſhores of Perſia, which often prove fatal, eſpecially to ſtrangers. The ſoil, in ſome parts, is nothing more than immenſe ſands, which, when agitated by the winds, roll like the troubled ocean, and ſometimes form mountains by which whole caravans have been buried or loſt. In theſe deſerts, the caravans, having no tracks, are guided, as at ſea, by a compaſs, or by the ſtars, for they travel chiefly in the night. Here, ſays Dr. Shaw, are no paſtures clothed with flocks, nor vallies ſtanding thick with corn; here are no vineyards or oliveyards: but the whole is a loneſome deſolate wilderneſs, no otherways diverſified than by plains covered with ſand, and mountains that are made up of naked rocks and precipices. Neither is this country ever, unleſs ſometimes at the equinoxes, refreſhed with rain; and the intenſeneſs of the cold in the night is almoſt equal to that of the heat in the day-time. But the ſouthern part of Arabia, deſervedly called the Happy, is bleſſed with an excellent ſoil, and, in general, is very fertile. There the cultivated lands, which are chiefly about the towns near the ſea-coaſt, produce balm of Gilead, manna, myrrh, caſſia, aloes, frankinceſe, ſpikenard, and other valuable gums; cinnamon, pepper, cardamum, oranges, lemons, pomegranates, figs, and other fruits; honey and wax in plenty, with a ſmall quantity of corn and wine. This country is famous for its coffee and its dates, which laſt are found ſcarcely any where in ſuch perfection as here and in Perſia. There are few trees fit for timber in Arabia, and little wood of any kind.

ANIMALS.] The moſt uſeful animals in Arabia are camels and dromedaries; they are amazingly fitted by Providence for traverſing the dry and parched deſerts of this country, for they are ſo formed, that they can throw up the liquor form their ſtomach into their throat, by which means they can travel ſix or eight days without water. The camels uſually carry 800lb. weight upon their backs, which is not taken off during the whole journey, for they naturally kneel down to reſt, and in due time riſe with their load. The dromedary is a ſmall camel with two bunches on its back, and remarkably ſwift. It is an obſervation among the Arabs, that wherever there are trees, the water is not far off; and when they draw near a pool, their camels will ſmell it a diſtance, and ſet up their great trot till they come to it. The Arabian horſes are well known in Europe, and have contributed to improve the breed of the Engliſh. They are only fit for the ſaddle, and are admired for their make as much as for their ſwiftneſs and high mettle. The fineſt breed is in the kingdom of Sunnaa, in which Mocha is ſituated.

INHA-

INHABITANTS, MANNERS, CUSTOMS, AND DRESS.] The Arabians like moſt of the nations of Aſia, are of a middle ſtature, thin, and of a ſwarthy complexion, with black hair and black eyes. They are ſwift of foot, excellent horſemen, and are ſaid to be in general a brave people, expert at the bow and lance, and, ſince they became acquainted with fire-arms, good markſmen. The inhabitants of the inland country live in tents, and remove from place to place with their flocks and herds, as they have ever done ſince they became a nation.

The Arabians in general are ſuch thieves, that travellers and pilgrims, who are led thither from all nations through motives of devotion or curioſity, are ſtruck with terror on their approaches towards the deſerts. Thoſe robbers, headed by a captain, traverſe the country in conſiderable troops on horſeback, and aſſault and plunder the caravans; and we are told, that ſo late as the year 1750, a body of 50,000 Arabians attacked a caravan of merchants and pilgrims returning from Mecca, killed about 60,000 perſons, and plundered it of every thing valuable, though eſcorted by a Turkiſh army. On the ſea-coaſt they are mere pirates, and make prize of every veſſel they can maſter, of whatever nation.

The habit of the roving Arabs is a kind of blue ſhirt, tied about them with a white ſaſh or girdle; and ſome of them have a veſt of furs or ſheep-ſkins over it; they alſo wear drawers, and ſometimes ſlippers, but no ſtockings; and have a cap or turban on their head. Many of them go almoſt naked; but, as in the eaſtern countries, the women are ſo wrapped up, that nothing can be diſcerned but their eyes. Like other Mahometans, the Arabs eat all manner of fleſh, except that of hogs; and prefer the fleſh of camels, as we prefer veniſon, to other meat. They take care to drain the blood from the fleſh, as the Jews do, and like them refuſe ſuch fiſh as have no ſcales. Coffee and tea, water, and ſherbet made of oranges, water, and ſugar, is their uſual drink: they have no ſtrong liquors.

RELIGION.] Of this the reader will find an account in the following hiſtory of Mahomet their countryman. Many of the wild Arabs a reſtill Pagans, but the people in general profeſs Mahometaniſm.

LEARNING AND LANGUAGE.] Though the Arabians in former ages were famous for their learning and ſkill in all the liberal arts, there is ſcarcely a country at preſent where the people are ſo univerſally ignorant. The vulgar language uſed in the three Arabias is the Arabeſk, or corrupt Arabian, which is likewiſe ſpoken, with ſome variation of dialect, over great part of the Eaſt, from Egypt to the court of the Great Mogul. The pure old grammatical Arabic, which is ſaid to be a dialect of the Hebrew, and by the people of the Eaſt accounted the richeſt, moſt energetic, and copious language in the world, is taught in their ſchools, as Greek and Latin is among Europeans, and uſed by Mahometans in their worſhip; for as the Koran was written in this language, they will not ſuffer it to be read in any other: they look upon it to have been the language of Paradiſe, and think no man can be maſter of it without a miracle, as conſiſting of ſeveral millions of words. The books which treat of it ſay, they have no fewer than a thouſand terms to expreſs the word *camel*, and five hundred for that of *lion*.

In the Temple of Mecca, or ſuſpended on its walls and gates, are ſeven Arabian poems, called the *Moalakat*, a fine ſpecimen of Oriental poetry. As to the dramatic paſtorals, which have been lately tranſlated into Engliſh by ſir William Jones, the following ſtanzas of one of the poems are tranſcribed, as they ſerve to gratify literary curioſity, and alſo diſplay a lively and entertaining view of the Arabian cuſtoms and modes of living.

1. "Deſolate are the manſions of the fair, the ſtations in Minia, where they

reſted, and thoſe where they fixed their abodes! Wild are the hills of Geul and deſerted is the ſummit of Rijaam.

2. The canabs of Rayaan are deſtroyed: the remains of them are laid bare, and ſmoothed by the floods, like characters engaved on the ſolid rocks.
3. Dear ruins! Many a year has been cloſed, many a month, holy and unhallowed, has elapſed ſince I exchanged tender vows with the fair inhabitants.
4. The rainy conſtellations of ſpring have made their hills green and luxuriant: The drops from the thunder-clouds have drenched them with profuſe as well as with gentle ſhowers:
5. Showers from every nightly cloud, from every cloud veiling the horizon at day-break, and from every evening cloud, reſponſive with hoarſe murmurs.
6. Here the wild eringo-plants raiſe their head; here the antelopes bring forth their young by the ſides of the valley; and here the oſtriches drop their eggs.
7. The large-eyed wild cows lie ſuckling their young a few days old: their young, who will ſoon become a herd on the plain.
8. The torrents have cleared the rubbiſh, and diſcloſed the traces of habitations, as the reeds of a writer reſtore effaced letters in a book.
9. Or as the black duſt, ſprinkled over the varied marks on a fair hand, brings to view, with a brighter tint, the blue ſtains of woad.
10. I ſtood aſking news of the ruins concerning their lovely habitants; but what avail my queſtions to dreary rocks, who anſwer them only by their echo?
11. In the plains, which now are naked, a populous city once dwelled: but they decamped at early dawn, and nothing of them remains but the camels which encircled their tents, and the Thumaam-plants, with which they were repaired.
12. How were thy tender affections raiſed, when the damſels of the tribe departed; when they hid themſelves in carriages of cotton, like antelopes in their lair; and the tents, as they were ſtruck, gave a piercing ſound!
13. They were concealed in vehicles, whoſe ſides were well covered with awnings and carpets, with fine-ſpun curtains, and pictured veils.
14. A company of maidens were ſeated in them, with black-eyes, and graceful motions, like the wild heifers of Tuda, or the roes of Wegera, tenderly gazing on their young.
15. They haſtened their camels, till the ſultry vapour gradually ſtole them from thy ſight; and they ſeemed to paſs through a vale, wild with tamariſks, and rough with large ſtone, like the valley of *Beiſha*."

The Pater-noſter in the Arabic is as follows: *Abuna elladhi fi-ſſamwat; jetkaddas eſmâc; tati malacutac: taouri maſchiatic, cama fi-ſſama; kedhalec ala lardh aating chobzena kefatna iaum beiaum; wagfor lena donubena, wachataina, cama nogfor nachna lemen aca doina; walâ tadalbchalna fihajarib; laken mejjina me nneſcherir.* Amen.

CHIEF CITIES, CURIOSITIES, AND ARTS. What is called the Deſert of Sinai, is a beautiful plain near nine miles long, and above three in breadth; it lies open to the north-eaſt, but to the ſouthward is cloſed by ſome of the lower eminences of Mount Sinai; and other parts of that mountain make ſuch encroachments upon the plain as to divide it in two, each ſo capacious as to be ſufficient to receive the whole camp of the Iſraelites.

From Mount Sinai may be ſeen Mount Horeb, where Moſes kept the flocks of Jethro, his father-in-law, when he ſaw the burning buſh. On thoſe mountains, are many chapels and cells, poſſeſſed by the Greek and Latin monks, who, like the

the religious at Jeruſalem, pretend to ſhew the very ſpot where every miracle or tranſaction recorded in ſcripture happened. The chief cities in Arabia are Mocha, Aden, Muſchat, Suez, and Juddah or Gedda.

Mocha is well built, the houſes very lofty, and forts covered with a chinam or ſtucco that give a dazzling whiteneſs to them. The harbour is ſemicircular, the circuit of the wall is two miles, and there are ſeveral handſome moſques in the city. Suez, the Arſinoe of the ancients, is ſurrounded by the deſert, and but a ſhabby ill-built place. The ſhips are forced to anchor a league from the town, to which the leading channel has only about nine feet water. Juddah is the place of the greateſt trade in the Red Sea, for there the commerce between Arabia and Europe meets and is interchanged, the former ſending her gums, drugs, coffee, &c. and from Europe come cloths, iron, furs and other articles by the way of Cairo. The revenues of theſe, with the profits of the port, are ſhared by the grand-ſignior and the xeriff of Mecca, to whom this place jointly belongs.

Mecca, the capital of all Arabia, and Medina, deſerve particular notice. At Mecca, the birth-place of Mahomet, is a moſque ſo glorious, that it is generally counted the moſt magnificent of any temple in the Turkiſh dominions: its lofty roof being raiſed in faſhion of a dome, and covered with gold, with two beautiful towers at the end, of extraordinary height and architecture, make a delightful appearance, and are conſpicuous at a great diſtance. The moſque hath a hundred gates, with a window over each; and the whole building within is decorated with the fineſt gildings and tapeſtry. The number of pilgrims who yearly viſit this place is almoſt incredible, every muſſulman being obliged by his religion to come hither once in his life-time, or ſend a deputy. At Medina, about fifty miles from the Red Sea, the city to which Mahomet fled when he was driven out of Mecca, and the place where he was buried, is a ſtately moſque, ſupported by 400 pillars, and furniſhed with 300 ſilver lamps, which are continually burning. It is called the *Moſt Holy* by the Turks, becauſe in it is placed the coffin of their prophet Mahomet, covered with cloth of gold, under a canopy of ſilver tiſſue, which the baſhaw of Egypt, by order of the grand-ſignior, renews every year. The camel which carries it, derives a ſort of ſanctity from this office, and is never to be uſed in any drudgery afterwards. Over the foot of the coffin is a rich golden creſcent, ſo curiouſly wrought, and adorned with precious ſtones, that it is eſteemed a maſter-piece of great value. Thither the pilgrims reſort, as to Mecca, but not in ſuch numbers.

GOVERNMENT.] The inland country of Arabia is under the government of many petty princes, who are ſtyled xerifs and imans, both of them including the offices of king and prieſt, in the ſame manner as the califs of the Saracens, the ſucceſſors of Mahomet. Theſe monarchs appear to be abſolute, both in ſpirituals and temporals; the ſucceſſion is hereditary, and they have no other laws than thoſe found in the Koran, and the comments upon it. The northern Arabs owe ſubjection to the Turks, and are governed by baſhaws reſiding among them; but it is certain they receive large gratuities from the grand-ſignior for protecting the pilgrims that paſs through their country from the robberies of their countrymen. The Arabians have no ſtanding regular militia, but their kings command both the perſons and the purſes of their ſubjects, as the neceſſity of affairs require.

HISTORY.] The hiſtory of this country in ſome meaſure differs from that of all others; for as the ſlavery and ſubjection of other nations make a great pat of their hiſtory, that of the Arabs is entirely compoſed of their conqueſts or independence. The Arabs are deſcended from Iſhmael, of whoſe poſterity it was foretold, that they ſhould be invincible, "have their hand againſt every man, and every man's hand againſt theirs." They are at preſent, and have remained from the remoteſt ages,

ages, during the various conqueſts of the Greek, Romans, and Tartars, a convincing proof of the divinity of this prediction. Toward the north, and the ſea-coaſts of Arabia, the inhabitants are, indeed, kept in awe by the Turks; but the wandering tribes in the ſouthern and inland parts acknowledge themſelves ſubjects of no foreign power, and do not fail to harraſs and annoy all ſtrangers who come into their country. The conqueſts of the Arabs make as wonderful a part of their hiſtory, as the independence and freedom which they have ever continued to enjoy. Theſe, as well as their religion, began with one man, whoſe character forms a very ſingular phenomenon in the hiſtory of mankind. This was the famous Mahomet, a native of Mecca, a city of that diviſion of Arabia which, for the luxuriancy of its ſoil, and mild temperature of its climate, has ever been eſteemed the lovelieſt and ſweeteſt region of the world, and is diſtinguiſhed by the epithet of Happy.

Mahomet was born in the ſixth century, anno 569, in the reign of Juſtinian II. emperor of Conſtantinople. Though deſcended of mean parentage, illiterate and poor, he was endowed with a ſubtile genius, like thoſe of the ſame country, and poſſeſſed a degree of enterprize and ambition peculiar to himſelf, and much beyond his condition. He had been employed, in the early part of his life, by an uncle, Abuteleb, as a factor, and had occaſion, in this capacity, to travel into Syria, Paleſtine, and Egypt. He was afterwards taken into the ſervice of a rich merchant, upon whoſe death he married his widow, Cadiga, and by her means came to be poſſeſſed of great wealth and of a numerous family. During his peregrinations into Egypt and the Eaſt, he had obſerved the vaſt variety of ſects in religion, whoſe hatred againſt each other was ſtrong and inveterate, while at the ſame time there were many particulars in which the greater part of them were agreed. He carefully laid hold of theſe particulars, by means of which, and by addreſſing himſelf to the love of power, riches, and pleaſure, paſſions univerſal among men, he expected to raiſe a new ſyſtem of religion, more general than any which hitherto had been eſtabliſhed. In this deſign he was aſſiſted by a Sergian monk, whoſe libertine diſpoſition had made him forſake his cloiſter and profeſſion, and engage in the ſervice of Cadiga, with whom he remained as a domeſtic when Mahomet was taken to her bed. This monk was perfectly qualified, by his great learning, for ſupplying the defects which his maſter, for want of a liberal education, laboured under, and which, in all probability, muſt have obſtructed the execution of his deſign. It was neceſſary, however, that the religion they propoſed to eſtabliſh ſhould have a divine ſanction; and for this purpoſe Mahomet turned a calamity, with which he was afflicted, to this advantage. He was often ſubject to fits of the epilepſy, a diſeaſe which thoſe whom it afflicts are deſirous to conceal; Mahomet gave out therefore that theſe fits were trances, into which he was miraculouſly thrown by God Almighty, during which he was inſtructed in his will, which he was commanded to publiſh to the world. By this ſtrange ſtory, and by leading a retired, abſtemious, and auſtere life, he eaſily acquired a character for ſuperior ſanctity among his acquaintance and neighbours. When he thought himſelf ſufficiently fortified by the numbers, and the enthuſiaſm of his followers, he boldly declared himſelf a prophet, ſent by God into the world, not only to teach his will, but to compel mankind to obey it.

As we have already mentioned, he did not lay the foundation of his ſyſtem ſo narrow as only to comprehend the natives of his own country. His mind, though rude and enthuſiaſtic, was enlarged by travelling into diſtant lands, whoſe manners and religion he had made a peculiar ſtudy. He propoſed that the ſyſtem he eſtabliſhed

bliſhed ſhould extend over all the neighbouring nations, to whoſe doctrines and prejudices he had taken care to adapt it. Many of the inhabitants of the Eaſtern countries were at this time much addicted to the opinions of Arius, who denied that Jeſus Chriſt was co-equal with God the Father, as is declared in the Athanaſian creed. Egypt and Arabia were filled with Jews, who had fled into theſe corners of the world from the perſecution of the emperor Adrian, who threatened the total extinction of that people. The other inhabitants of thoſe countries were pagans. Theſe, however, had little attachments to their decayed and derided idolatry; and, like men whoſe religious principle is weak, and given themſelves over to pleaſure and ſenſuality, or to the acquiſition of riches, to be the better able to indulge in the gratifications of ſenſe, which, together with the doctrine of predeſtination, compoſed the ſole principles of their religion and philoſophy. Mahomet's ſyſtem was exactly ſuited to theſe three kinds of men. To gratify the two former, he declared that there was one God, who created the world and governed all things in it; that he had ſent various prophets into the world to teach his will to mankind, among whom Moſes and Jeſus Chriſt were the moſt eminent; but the endeavours of theſe had proved ineffectual, and God had therefore now ſent his laſt and greateſt prophet with a commiſſion more ample than what Moſes or Chriſt had been entruſted with. He had commanded him not only to publiſh his laws, but to ſubdue thoſe who were unwilling to believe or obey them; and for this end to eſtabliſh a kingdom upon earth which ſhould propagate the divine law throughout the world; that God had deſigned utter ruin and deſtruction to thoſe who ſhould refuſe to ſubmit to him; but to his faithful followers, he had given the ſpoils and poſſeſſions of all the earth, as a reward in this life, and had provided for them hereafter a paradiſe of all ſenſual enjoyments, eſpecially thoſe of love; that the pleaſures of ſuch as died in propagating the faith, would be peculiarly intenſe, and vaſtly tranſcend thoſe of the reſt. Theſe, together with the prohibition of drinking ſtrong liquors (a reſtraint not very ſevere in warm climates), and the doctrine of predeſtination, were the capital articles of Mahomet's creed. They were no ſooner publiſhed than a vaſt many of his countrymen embraced them with implicit faith. They were written by the prieſt we formerly mentioned, and compoſe a book called the *Koran*, or Alcoran, by way of eminence, as we ſay the Bible, which means the Book. The perſon of Mahomet, however, was familiar to the inhabitants of Mecca, ſo that the greater part of them were ſufficiently convinced of the deceit. The more enlightened and leading men entered into a deſign to cut him off: but Mahomet getting notice of their intention, fled from his native city to Medina Tahmachi, or the city of the Prophet. The fame of his miracles and doctrine was, according to cuſtom, greateſt at a diſtance, and the inhabitants of Medina received him with open arms. From this flight, which happened in the 622d year of Chriſt, the fifty-fourth year of Mahomet's age, and the tenth of his miniſtry, his followers, the Mahometans, compute their time, and the æra is called in Arabic, Hegira, "the Flight."

Mahomet, by the aſſiſtance of the inhabitants of Medina, and of others whom his inſinuation and addreſs daily attached to him, brought over all his countrymen to a belief, or at leaſt to an acquieſcence in his doctrines. The ſpeedy propagation of his ſyſtem among the Arabians, was a new argument in its behalf among the inhabitants of Egypt, and the Eaſt, who were previouſly diſpoſed to it. Arians, Jews, and Gentiles, all forſook their ancient faith, and became Mahometans. In a word, the contagion ſpread over Arabia, Syria, Egypt, and Perſia; and Mahomet, from a deceitful hypocrite, became the moſt powerful monarch in his time. He was proclaimed king at Medina in the year 627, and after ſubduing

part of Arabia and Syria, he died in 632, leaving two branches of his race, both eſteemed divine among their ſubjects. Theſe were the caliphs of Perſia and of Egypt, under the laſt of which Arabia was included. The former of theſe turned their arms to the Eaſt, and made conqueſts of many countries. The caliphs of Egypt and Arabia directed their ravages towards Europe, and, under the name of Saracens or Moors (which they obtained becauſe they entered Europe from Mauritania in Africa, the country of the Moors) reduced moſt of Spain, France, Italy, and the iſlands in the Mediterranean.

In this manner did the ſucceſſors of that impoſtor ſpread their religion and conqueſts over the greateſt part of Aſia, Africa, and Europe; and they ſtill give law to a very conſiderable part of mankind.

The INDIAN and ORIENTAL ISLANDS.

THE JAPAN ISLANDS, Japan or Nipham, Bongo, Tonſo, and Dezima, form together what has been called the empire of JAPAN, and are governed by a moſt deſpotic prince, who is ſometimes called emperor and ſometimes king. They are ſituated about 150 miles eaſt of China, and extend from the 30th to the 41ſt degree of north latitude, and from the 130th to the 147th of eaſt longitude. The chief town is Jeddo, in the 141ſt degree of eaſt longitude, and the 36th of north latitude.

The ſoil and productions of the country are pretty much the ſame with thoſe of China: and the inhabitants are famous for their lacker ware, known by the name of Japan. The iſlands themſelves are very inacceſſible, through their high rocks and tempeſtuous ſeas; they are ſubjected to earthquakes and have ſome volcanos. I have already mentioned the circumſtance of the Dutch expelling the Portugueſe from this gainful trade. The Japaneſe themſelves are the groſſeſt of all idolaters, and ſo irreconcileable to Chriſtianity, that it is commonly ſaid the Dutch who are the only European people with whom they now trade, pretend themſelves to be no Chriſtians, and humour the Japaneſe in the moſt abſurd ſuperſtitions. Notwithſtanding all this compliance, the natives are very ſhy and rigorous in all their dealings with the Dutch; and Nagaſacci, in the Iſland of Dezima, is the only place where they are ſuffered to trade. The complexions of the Japaneſe are in general yellowiſh, although ſome few, chiefly women, are almoſt white. Their narrow eyes, and high eye-brows, are like thoſe of the Chineſe and Tartars; and their noſes are ſhort and thick. Their hair is univerſally black; and ſuch a ſameneſs of faſhion reigns throughout this whole empire, that the head-dreſs is the ſame from the emperor to the peaſant. The faſhion of their cloaths has alſo remained the ſame from very high antiquity. They conſiſt of one or more looſe gowns, tied about the middle with a ſaſh. People of rank have them made of ſilk, but the lower claſs of cotton ſtuffs. Women generally wear a greater number of them than men, and much longer, and have them more ornamented, often with gold or ſilver flowers woven into the ſtuff.

Their houſes are built with upright poſts, croſſed and wattled with bamboo, plaiſtered both without and within, and white-waſhed. They generally have two ſtories; but the uppermoſt is low and ſeldom inhabited. The roofs are covered with pantiles, large and heavy, but neatly made. The floors are elevated two feet from

from the ground, and covered with planks, on which mats are laid. They have no furniture in their rooms; neither tables, chairs, ſtools, benches, cupboards, or even beds. Their cuſtom is to ſit down on their heels upon the mats, which are always ſoft and clean. Their victuals are ſerved up to them on a low board raiſed but a few inches from the floor, and one diſh only at a time. Mirrors they have, but never fix them up in their houſes as ornamental furniture: they are made of a compound metal, and uſed only at their toilets. Notwithſtanding the ſeverity of their winters, which obliges them to warm their houſes from November to March, they have neither fire-places nor ſtoves: inſtead of theſe they uſe large copper pots ſtanding upon legs. Theſe are lined on the inſide with loam, on which aſhes are laid to ſome depth, and charcoal lighted upon them, which ſeems to be prepared in ſome manner which renders the fumes of it not at all dangerous. The firſt compliment offered to a ſtranger, in their houſes, is a diſh of tea, and a pipe of tobacco. Fans are uſed by both ſexes equally; and are, within or without doors, their inſeparable companions. The whole nation are naturally cleanly: every houſe, whether public or private, has a bath, of which conſtant and daily uſe is made by the whole family. Obedience to parents, and reſpect to ſuperiors, are the characteriſtics of this nation. Their ſalutations and converſations between equals abound alſo with civility and politeneſs; to which children are early accuſtomed by the example of their parents. Their penal laws are very ſevere; but puniſhments are ſeldom inflicted. Perhaps there is no country where fewer crimes againſt ſociety are committed. Commerce and manufactures flouriſh here, though, as theſe people have few wants, they are not carried to the extent which we ſee in Europe. Agriculture is ſo well underſtood, that the whole country, even to the tops of the hills, is cultivated. They trade with no foreigners but the Dutch and Chineſe, and in both caſes with companies of privileged merchants. Beſides the ſugars, ſpices, and manufactured goods, which the Dutch ſend to Japan, they carry thither annually upwards of 200,000 deer ſkins, and more than 100,000 hides, the greateſt part of which they get from Siam, where they pay for them in money. The merchandiſe they export from theſe iſlands both for Bengal and Europe, conſiſts in 9000 cheſts of copper, each weighing 120 pounds, and from 25 to 30,000 weight of camphor. Their profits on imports and exports are valued at 40 or 45 per cent. As the Dutch company do not pay duty in Japan, either on their exports or imports, they ſend an annual preſent to the emperor, conſiſting of cloth, Chintz, ſuccotas, cottons, ſtuffs, and trinkets.

The LADRONE ISLANDS, of which the chief town is ſaid to be Guam, eaſt longitude 140, north latitude 14: they are about twelve in number. The people took their name from their pilfering qualities. We know nothing of them worth a particular mention, except that lord Anſon landed upon one of them (Tinian), where he found great refreſhment for himſelf and his crew.

FORMOSA is likewiſe an Oriental iſland. It is ſituated to the eaſt of China, near the province of Fo-kien, and is divided into two parts by a chain of mountains, which runs through the middle, beginning at the ſouth-coaſt, and ending at the north. This is a very fine iſland, and abounds with all the neceſſaries of life. That part of the iſland which lies to the weſt of the mountains, belongs to the Chineſe, who conſider the inhabitants of the eaſtern parts as ſavages, though they are ſaid to be a very inoffenſive people. The inhabitants of the cultivated parts are the ſame with the Chineſe, already deſcribed. The Chineſe have likewiſe made themſelves maſters of ſeveral other iſlands in thoſe ſeas, of which we ſcarcely know

the names; that of Ainan is between ſixty and ſeventy leagues long, and between fifty and ſixty in breadth, and but twelve miles from the province of Canton. The original inhabitants are a ſhy, cowardly people, and live in the moſt unwholeſome part of the iſland, the coaſt and cultivated parts, which are very valuable, being poſſeſſed by the Chineſe.

The PHILIPPINES are ſaid to be 1100 in number, lying in the Chineſe ſea (part of the Pacific Ocean), 200 miles ſouth-eaſt of China, of which Manilla, or Luconia, the chief, is 400 miles long and 200 broad. The inhabitants conſiſt of Chineſe, Ethiopians, Malays, Spaniards, Portugueſe, Pintados or painted people, and Meſtes, a mixture of all theſe. The property of the iſlands belongs to the king of Spain, they having been diſcovered by Magellan, and afterwards conquered by the Spaniards in the reign of Philip II. from whom they take their name. Their ſituation is ſuch, between the eaſtern and weſtern continents, that the inhabitants trade with Mexico and Peru as well as with all the iſlands and places of the Eaſt Indies. Two ſhips from Acapulco, in Mexico, carry on the commerce for the Spaniards, who make 400 per cent. profit. The country is fruitful in all the neceſſaries of life, and beautiful to the eye. Veniſon of all kinds, buffaloes, hogs, ſheep, goats, and a particular large ſpecies of monkeys, are found here in great plenty. The neſt of the bird ſaligan affords that diſſolving jelly, which is ſo voluptuous a rarity at European tables. Many European fruits and flowers thrive ſurpriſingly in thoſe iſlands. If a ſprig of an orange or lemon tree is planted there, it becomes within the year a fruit-bearing tree; ſo that the verdure and luxuriancy of the ſoil are almoſt incredible. The tree amet ſupplies the natives with water; and there is alſo a kind of cane, which if cut yields fair water enough for a draught: this abounds in the mountains, where the water is moſt wanted.

The city of Manilla contains about 3000 inhabitants; its port is Cavite, lying at the diſtance of three leagues, and defended by the caſtle of St. Philip. In the year 1762, Manilla was reduced by the Engliſh under general Draper and admiral Corniſh, who took it by ſtorm, and humanely ſuffered the archbiſhop, who was the Spaniſh viceroy at the ſame time, to ranſom the place for about a million ſterling. The bargain, however, was ungenerouſly diſowned by him and the court of Spain, ſo that great part of the ranſom is ſtill unpaid. The Spaniſh government is ſettled there, and the Indian inhabitants pay a capitation tax. The other iſlands, particularly Mindanoa, the largeſt next to Manilla, are governed by petty princes of their own, whom they call ſultan. The ſultan of Mindanao is a Mahometan.

Upon the whole, though theſe iſlands are enriched with all the profuſion of nature, yet they are ſubject to moſt dreadful earthquakes, thunder, rains, and lightning; and the ſoil is peſtered with many noxious and venomous creatures, and even herbs and flowers, whoſe poiſons kill almoſt inſtantaneouſly. Some of their mountains are volcanos.

The MOLUCCAS, commonly called the SPICE or CLOVE ISLANDS. Theſe are not out of ſight of each other, and lie all within the compaſs of twenty-five leagues, to the ſouth of the Philippines, in 125 degrees of eaſt longitude, and between one degree ſouth, and two north latitude. They are in number five, viz. Bachian, Machian, Motyr, Ternate, and Tydore. Theſe iſlands produce neither corn nor rice, ſo that the inhabitants live upon a bread made of ſagoe. Their chief produce conſiſts of cloves, mace, and nutmegs, in vaſt quantities; which are monopolized by the Dutch with ſo much jealouſy, that they deſtroy the plants leſt the natives ſhould ſell the ſupernumerary ſpices to other nations. Theſe iſlands, after being ſubject to various powers, are now governed by three kings, ſubordinate to the Dutch. Ternate is the largeſt of theſe iſlands, though no more than thirty miles

miles in circumference. The Dutch have here a fort called Victoria; and another called Fort Orange, in Machian.

AMBOYNA. This iſland, taken in a large ſenſe, is one of the moſt conſiderable of the Moluccas, which, in fact, it commands. It is ſituated in the Archipelago of St. Lazarus, between the third and fourth degrees of ſouth latitude, and 120 leagues to the eaſtward of Batavia. Amboyna is about ſeventy miles in circumference, and defended by a Dutch garriſon of 7 or 800 men, beſides ſmall forts, which protect their clove plantations. It is well known, that when the Portugueſe were driven off this iſland, the trade of it was carried on by the Engliſh and Dutch; and the barbarities of the latter in firſt torturing and then murdering the Engliſh, and thereby engroſſing the whole trade, and that of Banda, can never be forgotten; but muſt be tranſmitted as a memorial of Dutch cruelty at that period, to all poſterity. This tragical event happened in 1622.

The BANDA, or NUTMEG ISLANDS, are ſituated between 127 and 128 degrees eaſt longitude, and between four and five ſouth latitude, comprehending the iſlands of Lantor (the chief town of which is Lantor), Poleron, Roſinging, Pooloway, and Gonapi. The chief forts belonging to the Dutch on theſe iſlands, are thoſe of Revenge and Naſſau. The nutmeg, covered with mace, grows on theſe iſlands only, and they are intirely ſubject to the Dutch. In ſeveral iſlands that lie near Banda and Amboyna, the nutmeg and clove would grow, becauſe, as naturaliſts tell us, birds, eſpecially doves and pigeons, ſwallow the nutmeg and clove whole, and void them in the ſame ſtate; which is one of the reaſons why the Dutch declare war againſt both birds. The great nutmeg harveſt is in June and Auguſt.

The iſland of CELEBES or MACASSAR, is ſituate under the equator, between the iſland of Borneo and the Spice iſlands, at the diſtance of 160 leagues from Batavia, and is 500 miles long, and 200 broad. This iſland, notwithſtanding its heat, is rendered habitable by breezes from the north, and periodical rains. Its chief product is pepper and opium; and the natives are expert in the ſtudy of poiſons, with a variety of which nature has furniſhed them. The Dutch have a fortification on this iſland; but the internal part of it is governed by three kings, the chief of whom reſides in the town of Macaſſar. In this, and indeed in almoſt all the Oriental iſlands, the inhabitants live in houſes built on large poſts, which are acceſſible only by ladders, which they pull up in the night-time, for their ſecurity againſt venomous animals. They are ſaid to be hoſpitable and faithful, if not provoked. They carry on a large trade with the Chineſe; and if their chiefs were not perpetually at war with each other, they might eaſily drive the Dutch from their iſland. Their port of Jampoden is the moſt capacious of any in that part of the world.

The Dutch have likewiſe fortified GILOLO and CERAM, two other ſpice iſlands, lying under the equator, and will ſink any ſhips that attempt to traffic in thoſe ſeas.

The SUNDA ISLANDS. Theſe are ſituated in the Indian Ocean, between 93 and 120 degrees of eaſt longitude, and between eight degrees north and eight degrees ſouth latitude, comprehending the iſlands of Borneo, Sumatra, Java, Bally, Lambee, Banca, &c. The three firſt, from their great extent and importance, require to be ſeparately deſcribed.

BORNEO is ſaid to be 800 miles long, and 700 broad, and till late diſcoveries was therefore thought to be the largeſt iſland in the world. The inland part of the country is marſhy and unhealthy; and the inhabitants live in towns built upon floats in the middle of the rivers. The ſoil produces rice, cotton, canes, pepper, camphor, the tropical fruits, gold, and excellent diamonds. The famous ouran-outang is a native of this country; it is now found by Dr. Camper to have the intermaxillary bone, in common with other quadrupeds, beſides a bone in its penis: and in many other particulars to differ from the human form, with which it was long ſuppoſed to have ſo near a reſemblance. The ſea-coaſt of Borneo is governed by Mahometan princes; the chief port of this iſland is Benjar-Maſſeen, and carries on a commerce with all trading nations.

SUMATRA has Malacca on the north, Borneo on the eaſt, and Java on the ſouth-eaſt, from which it is divided by the ſtraits of Sunda; it is divided into two equal parts by the equator, extending five degrees, and upwards, north-weſt of it, and five on the ſouth-eaſt; and is 1000 miles long, and 100 broad. This iſland produces ſo much gold, that it is thought by ſome to be the Ophir mentioned in the ſcriptures; but Mr. Marſden, in his late hiſtory of the iſland, thinks it was unknown to the ancients. The higheſt mountain in Sumatra is called *Ophir* by the Europeans, whoſe ſummit above the level of the ſea is 13,842 feet, exceeding in height the Peak of Teneriffe by 577 feet. The Portugueſe were the firſt diſcoverers and ſettlers, but met with diſgrace in their attempts againſt Acheen. The firſt Engliſh fleet that made its appearance in this part of the world, and laid the foundation of a commerce that was to eclipſe that of every other European ſtate, viſited Acheen in the year 1602, under captain Lancaſter, who carried a letter from queen Elizabeth to the king of that place. The Engliſh Eaſt India company have two ſettlements here, Bencoolen, and Fort-Marlborough; from whence they bring their chief cargoes of pepper. The king of Acheen is the chief of the Mahometan princes who poſſeſs the ſea-coaſts. The interior parts are governed by Pagan princes, whoſe governments are all independent, and their language and manners are very different. The natural products of Sumatra are pretty much the ſame with thoſe of the adjacent iſlands, but this iſland is ſurpraſſed by few in rice, pepper, and camphor, and the bountiful indulgence of nature. It is from this country that moſt of the caſſia ſent to Europe is produced. The caſſia tree grows to fifty or ſixty feet, with a ſtem of about two feet diameter, and a beautiful and regular ſpreading head. The quantity of pepper produced in the Eaſt India company's diſtricts on Sumatra is annually 1200 tons; of which the greateſt part comes to Europe, and the reſt is ſent to China.

Rain is very frequent here: ſometimes very heavy, and almoſt always attended with thunder and lightning. Earthquakes are not uncommon, and there are ſeveral volcanoes on the iſland. The people who inhabit the coaſt are Malays, who came hither from the peninſula of Malacca, but the interior parts are inhabited by very different people, and who have hitherto had no connection with the Europeans. Their language and character differ much from thoſe of the Malays; the latter uſing the Arabic character, as do the Acheeneſe. The principal internal languages of the iſland are the Rejang and Batha, each containing characters eſſentially different from each other. The people between the diſtricts of the Engliſh company, and thoſe of the Dutch at Palembang, on the other ſide the iſland, write on long narrow ſlips of the bark of a tree, with a piece of bamboo. They begin at the bottom, and from the left hand to the right, contrary to the cuſtom of the other eaſtern nations. Theſe inhabitants of the interior parts of Sumatra are a free people, and live in ſmall villages, called dooſons, independent of each other, and governed each by its own chief. All of them have laws, ſome written ones, by which they puniſh offen-

offenders, and terminate diſputes. They have almoſt all of them, particularly the women, large ſwellings in their necks, ſome near as big as a man's head, but in general as big as an oſtrich's egg, like the Goitres of the Alps. That part of this iſland, which is called the Caffia country, is well inhabited by a people called Battas, who differ from all the other inhabitants of Sumatra in language, manners, and cuſtoms. They have no king, but live in villages, independent of each other, and generally at variance. They fortify their villages very ſtrongly with double fences of camphor plank pointed, and placed with their points projecting outwards; and between theſe fences they place pieces of bamboo, hardened by fire, and likewiſe pointed, which are concealed by the graſs, but which will run quite through a man's foot. Such of their enemies whom they take priſoners, they put to death and eat, and their ſkulls they hang up as trophies, in the houſes where the unmarried men and boys eat and ſleep. They allow of polygamy; a man may purchaſe as many wives as he pleaſes; but Mr. Marſden obſerves, it is extremely rare, that an inſtance occurs of their having more than one, and that only among a few of their chiefs: but this continence is attributed to their poverty. The original clothing of the Sumatrans is the ſame with that of the inhabitants of the South-Sea iſlands, general ſtyled Otaheitean cloth. The buffalo (*carbow*) conſtitutes a principal part of their food, and is the only animal employed in their domeſtic labours. The Sumatran pheaſant is a bird of uncommon beauty.

Within about ninety miles of Sumatra is the iſland of ENGANHO, which is very little known, on account of the terrible rocks and breakers that entirely ſurround it. It is inhabited by naked ſavages, who are tall and well made, and who generally appear armed with lances and clubs, and ſpeak a different language from the inhabitants of any of the neighbouring iſlands.

The grateſt part of JAVA belongs to the Dutch, who have here erected a kind of commercial monarchy, the capital of which is Batavia, a noble and populous city, lying in the latitude of ſix degrees ſouth, at the mouth of the river Jucata, and furniſhed with one of the fineſt harbours in the world. The town itſelf is built in the manner of thoſe in Holland, and is about a league and a half in circumference, with five gates, and ſurrounded by regular fortifications; but its ſurburbs are ſaid to be ten times more populous than itſelf. The government here is a mixture of Eaſtern magnificence and European police, and held by the Dutch governor-general of the Indies. When he appears abroad, he is attended by his guards and officers. The city is as beautiful as it is ſtrong, and its fine canals, bridges, and avenues, render it a moſt agreeable reſidence. The deſcription of it, its government and public edifices, have employed whole volumes. The citadel, where the governor has his palace, commands the town and the ſuburbs, which are inhabited by natives of almoſt every nation in the world. The Chineſe reſiding in this iſland are computed at 100,000; but about 30,000 of that nation were barbarouſly maſſacred, without the ſmalleſt offence even proved upon them, in 1740. This maſſacre was too unprovoked and deteſtable to be defended even by the Dutch, who, when the governor arrived in Europe, ſent him back to be tried at Batavia; but he never has been heard of ſince. A Dutch garriſon of 3000 men conſtantly reſides at Batavia; and about 15,000 troops are quartered in the iſland and the neighbourhood of the city. Their government is admirably well calculated to prevent the independency either of the civil or military power.

The ANDAMAN and NICOBAR iſlands. Theſe iſlands lie at the entrance of the bay

bay of Bengal, and furniſh proviſion, conſiſting of tropical fruits and other neceſſaries, for the ſhips that touch there. They are otherwiſe too inconſiderable to be mentioned. They are inhabited by an harmleſs, inoffenſive, but idolatrous people.

CEYLON. This iſland, though not the largeſt, is thought to be by nature the richeſt and fineſt in the world. It is ſituated in the Indian Ocean, near Cape Comorin, the ſouthern extremity of the Hither Peninſula of India, being ſeparated from the coaſt of Coromandel by a narrow ſtrait, and is 250 miles long and 200 broad. The natives call it, with ſome ſhew of reaſon, the terreſtrial paradiſe; and it produces, beſides excellent fruits of all kinds, long pepper, fine cotton, ivory, ſilk, tobacco, ebony, muſk, cryſtal, ſalt-petre, ſulphur, lead, iron, ſteel, copper: beſides cinnamon, gold, and ſilver, and all kinds of precious ſtones except diamonds. All kinds of fowls and fiſh abound here. Every part of the iſland is well wooded and watered; and beſides ſome curious animals peculiar to itſelf, it has plenty of cows, buffaloes, goats, hogs, deer, hares, dogs, and other quadrupeds. The Ceylon elephant is perferred to all others, eſpecially if ſpotted; but ſeveral noxious animals, ſuch as ſerpents and ants, are likewiſe found here. The chief commodity of the iſland is its cinnamon, which is by far the beſt in all Aſia. Though its trees grow in great profuſion, yet the beſt is found in the neighbourhood of Columbo, the chief ſettlement of the Dutch, and Negambo. The middle of the country is mountainous and woody, ſo that the rich and beautiful vallies are left in the poſſeſſion of the Dutch, who have in a manner ſhut up the king in his capital city, Candy, which ſtands on a mountain in the middle of the iſland, ſo that he has ſcarcely any communication with other nations, or any property in his own dominons. The deſcendants of the ancient inhabitants are called Cinglaſſes, who, though idolaters, value themſelves upon maintaining their ancient laws and cuſtoms. They are, in general, a ſober inoffenſive people, and are mingled with Moors, Malabars, Portugueſe, and Dutch.

It may be here proper to obſerve, that the cinnamon tree, which is a native of this iſland, has two, if not three barks, which form the true cinnamon; the trees of a middling growth and age afford the beſt; and the body of the tree, which when ſtripped is white, ſerves for building and other uſes. In 1656, the Dutch were invited by the natives of this delicious iſland, to defend them againſt the Portugueſe, whom they expelled, and have monopoliſed it ever ſince to themſelves. Indeed, in January 1782, Trinconomale, the chief ſea-port of the iſland, was taken by the Engliſh, but ſoon afterwards retaken by the French, and reſtored to the Dutch by the laſt treaty of peace

The MALDIVES. Theſe are a vaſt cluſter of ſmall iſlands, or little rocks, juſt above the water, lying between the equator and eight degrees north latitude, near Cape Comorin. They are chiefly reſorted to by the Dutch, who drive a profitable trade with the natives for couries, a kind of ſmall ſhells, which go, or rather formerly went, for money upon the coaſts of Guinea and other parts of Africa. The cocoa of the Maldives is an excellent commodity and medicine. "Of this tree, (ſays a well-informed author) they build veſſels of twenty or thirty tons; their hulls, maſts, ſails, rigging, anchors, cables, proviſions, and firing, are all from this uſeful tree."

We have already mentioned BOMBAY on the Malabar coaſt, in ſpeaking of India. With regard to the language of all the Oriental iſlands, nothing certain can be ſaid. Each iſland has a particular tongue; but the Malayan, Chineſe, Portugueſe, Dutch,

Dutch, and Indian words, are ſo frequent among them, that it is difficult for an European, who is not very expert in thoſe matters, to know the radical languages. The ſame may be almoſt ſaid of their religion; for though its original is certainly Pagan, yet it is intermixed with many Mahometan, Jewiſh, Chriſtian, and other foreign ſuperſtitions.

The ſea which ſeparates the ſouthern point of the peninſula of Kamtſchatka from Japan contains a number of iſlands in a poſition from north-north-eaſt to ſouth-ſouth-weſt, which are called the KURILE ISLANDS. They are upwards of twenty in number, are all mountainous, and in ſeveral of them are volcanoes and hot ſprings. The principal of theſe iſlands are inhabited; but ſome of the little ones are intirely deſert and unpeopled. They differ much from each other in reſpect both to their ſituation and natural conſtitution. The foreſts in the more northern ones are compoſed of laryx and pines; thoſe to the ſouthward produce canes, bamboos, vines, &c. In ſome of them are bears and foxes. The ſea-otter appears on the coaſts of all theſe iſlands, as well as whales, ſea-horſes, ſeals, and other amphibious animals. Some of the inhabitants have a great likeneſs to the Japaneſe in their manners, language, and perſonal appearance; others very much reſemble the Kamtſchadales. The northern iſlands acknowledge the ſovereignty of the empire of Ruſſia; but thoſe to the ſouth pay homage to Japan. The Kurilians diſcover much humanity and probity in their conduct, and are cautious and hoſpitable; but adverſity renders them timid, and prompts them to ſuicide. They have a particular veneration for old age. They reverence an old man whoever he be, but have an eſpecial affection for thoſe of their reſpective families. Their language is agreeable to the ear, and they ſpeak and pronounce it ſlowly. The men are employed in hunting, fiſhing for ſea animals and whales, and catching fowls. Their canoes are made of wood that their foreſts produce, or that the ſea caſts upon their ſhores. The women have charge of the kitchen, and make cloaths. In the northern iſlands they ſew, and make different cloths of the thread of nettles. The ſouthern iſlanders are more refined and poliſhed than the northern, and carry on a ſort of commerce with Japan, whither they export whale-oil, furs, and eagle's feathers to fledge arrows with. In return, they bring Japaneſe utenſils of metal and varniſhed wood, ſkillets, ſabres, different ſtuffs, ornaments of luxury and parade, tobacco, all ſorts of trinkets, and ſmall wares.

AFRICA.

A F R I C A.

AFRICA, the third grand diviſion of the globe, is generally repreſented as bearing ſome reſemblance to the form of a pyramid, the baſe being the northern part of it, which runs along the ſhores of the Mediterranean, and the point or the top of the pyramid, the Cape of Good Hope. Africa is a peninſula of a prodigious extent, joined to Aſia only by a neck of land, about ſixty miles over, between the Red Sea and the Mediterranean, uſually called the Iſthmus of Suez, and its utmoſt length from north to ſouth, from Cape Bona in the Mediterranean, in 37 degrees north, to the Cape of Good Hope in 34-7 ſouth latitude, is 4300 miles; and the broadeſt part from Cape Verd, in 17-20 degrees, to Cape Guarda-fui, near the ſtraits of Babel-Mandel, in 51-20 eaſt longitude, is 3500 miles from eaſt to weſt. It is bounded on the north by the Mediterranean Sea, which ſeparates it from Europe; on the eaſt by the Iſthmus of Suez, the Red Sea, and the Indian Ocean, which divide it from Aſia; on the ſouth by the Southern Ocean; and on the weſt by the great Atlantic Ocean, which ſeparates it from America. As the equator divides this extenſive country almoſt in the middle, and the far greateſt part of it is within the tropics, the heat is in many places almoſt inſupportable to an European; it being there increaſed by the reflection of the ſun's rays from vaſt deſerts of burning ſands. The coaſts, however, and banks of rivers, ſuch as the Nile, are generally fertile, and moſt parts of this region are inhabited, though it it is far from being ſo populous as Europe or Aſia. From what has been ſaid, the reader cannot expect to find here a variety of climates. In many parts of Africa, ſnow never falls in the plains: and it ſeldom lies but on the tops of the high mountains. The natives, in theſe ſcorching regions, would as ſoon expect that marble ſhould melt and flow in liquid ſtreams, as that water, by freezing, ſhould loſe its fluidity, be arreſted by the cold, and, ceaſing to flow, become like the ſolid rock.

That the geography of Africa, obſerves major Rennell, has made a ſlower progreſs towards improvement than that of every other part of the world, during the laſt and the preſent century, is to be attributed more to natural cauſes, than to an abſolute want of attention on the part of geography. Formed by the Creator with a contour and ſurface totally unlike the other continents, its interior parts elude all nautic reſearch; whilſt the wars and commerce in which Europeans have taken part, have been confined to very circumſcribed parts of its borders. To the lovers of adventure and novelty, Africa diſplays a moſt ample field; but the qualification of local manners, and in ſome degree of habits, muſt in this caſe be ſuperadded to that of language; and this unqueſtionably renders the undertaking more arduous than that of an ordinary tour.

As both EUROPE, and its adjacent continent, ASIA, are ſpread over with inland ſeas, lakes, or rivers, of the moſt extended navigations, ſo as collectively to aid the tranſport of bulky articles of merchandiſe from one extreme of them to the other; and to form (like ſtepping-ſtones over a brook) a more commodious communication: ſo likewiſe the northern part of the new continent appears to have an almoſt continuous inland navigation; which muſt prove of infinite advantage to its inhabitants, when fully peopled, and contribute to their ſpeedier civilization, in the mean time. But AFRICA ſtands alone in a geographical view. Penetrated by no inland ſeas, like the Mediterranean, Baltic, or Hudſon's Bay; nor overſpread with extenſive lakes,

like thoſe of North America; nor having, in common with the other continents, rivers running from the centre to the extremities; but on the contrary, its regions ſeparated from each other by the leaſt practicable of all boundaries, and deſerts of ſuch formidable extent, as to threaten thoſe who traverſe them, with the moſt horrible of all deaths, that ariſing from thirſt! Placed in ſuch circumſtances, can we be ſurpriſed either at our ignorance of its interior part, or of the tardy progreſs of civilization in it? Poſſibly the difficulty of conveying merchandiſe to the coaſts, under the above circumſtances, may have given riſe to the traffic in men, a commodity that can tranſport itſelf! But laying this out of the queſtion, as an abſtract ſpeculation; there can be little doubt but that the progreſs of civilization amongſt the Africans, has been as ſlow as can be conceived in any ſituation: and it has alſo happened that the deſtined inſtruments of their civilizaton, have remained in a proportionable degree of ignorance concerning the nature of the country.

Nothing can evince the low ſtate of the African geography, more than M. D'Anville's having had recourſe to the works of Ptolemy and Edriſi, to compoſe the interior part of his map of Africa (1749). It is well known that thoſe authors wrote in the ſecond and in the twelfth centuries of our æra. Moſt of the poſitions in the inland part of the great body of Africa are derived from Edriſi; and it is wonderful how nearly ſome of the poſitions agree with thoſe furniſhed by the lateſt obſervations. Such was the tranſcendant judgment of D'Anville, in combining the ſcanty notices that are furniſhed by the Nubian geographer!

But the public are not to expect, even under an improved ſyſtem of African geography, that the interior part of that continent will exhibit an aſpect ſimilar to the others; rich in variety; each region aſſuming a diſtinct character. On the contrary, it will be meagre and vacant in the extreme. The dreary expanſes of deſert which often ſurround the habitable ſpots, forbid the appearance of the uſual proportion of towns; and the paucity of rivers, added to their being either abſorbed or evaporated, inſtead of being conducted in flowing lines to the ocean, will give a ſingular caſt to its hydrography; the direction of their courſes, being moreover, equivocal, through the want of that information, which a communication with the ſea uſually affords at a glance.

The ſociety for promoting the diſcovery of the interior parts of Africa has been fortunate in collecting much geographical information in ſo early a ſtage of the African reſearches; and there is little doubt but that, in a few years, all the great features of this continent (within the reach of their enquiries) may be known and deſcribed. But to accompliſh this, it will be neceſſary that intelligent Europeans ſhould trace ſome of the principal routes; as well to apportion the diſtances, as to eſtabliſh ſome kind of criterion for the parole information derived from the natives. As yet, in the wide extent of near thirty degrees on a meridian, between Benin and Tripoli, not one celeſtial obſervation has been taken to determine the latitude *.

The moſt conſiderable rivers in Africa, are the Niger, which falls into the Atlantic or weſtern ocean at Senegal, after a courſe of 2800 miles †. It increaſes and de-

* Major Rennell's Memoir of his Map of the Northern Parts of Africa, printed by the African Aſſociation, at the end of their Proceedings.

† This is extremely difficult, if not impoſſible to aſcertain. For (according to Mr. Lucas's communications to the african Aſſociation) both the riſe and termination of the Niger are unknown, but the courſe is from eaſt to weſt. So great is its rapidity, that no veſſel can aſcend its ſtream: and ſuch is the want of ſkill, or ſuch the abſence of commercial inducements among the nations who inhabit its borders, that even with the current neither veſſels nor boats are ſeen to navigate. In one place, indeed, the traveller finds accommodations for the paſſage of himſelf and of his goods; but even there though the ferrymen, by the indulgence of the ſultan of Caſhna, are exempted from all taxes, the boat which conveys the merchandize is nothing more than an ill-conſtructed raft, for

decreaſes as the Nile, fertiliſes the country, and contains grains of gold intermixed with its ſand. The Gambia and Senegal are only branches of this river. The Nile divides Egypt into two parts, and diſcharges itſelf into the Mediterranean, after a prodigious courſe from its ſource in Abyſſinia.

The moſt conſiderable mountains in Africa are the Atlas, a ridge extending from the weſtern ocean, to which it gives the name of Atlantic Ocean, as far as Egypt. It had its name from the king of Mauritania, a great lover of aſtronomy, who uſed to obſerve the ſtars from its ſummit; on which account the poets repreſent him as bearing the heavens on his ſhoulders. The mountains of the Moon, extending themſelves between Abyſſinia and Monomotapa, are ſtill higher than thoſe of Atlas. Thoſe of Sierra Leona, or the mountains of the Lions, which divide Nigritia from Guinea, and extend as far as Ethiopia. Theſe were ſtyled by the ancients the mountains of God, on account of their being ſubject to thunder and lightning. The Peak of Teneriffe, which the Dutch make their firſt meridian, riſes about two miles high in the form of a ſugar-loaf, and is ſituated on an iſland of the ſame name near the coaſt. The moſt noted capes or promontories in this country are, Cape Verd; ſo called, becauſe the land is always covered with green trees and moſſy ground; it is the moſt weſterly point of the continent of Africa. The Cap of Good Hope, ſo denominated by the Portugueſe, when they firſt went round it in 1498, and diſcovered the paſſage to Aſia. It is the ſouthern extremity of Africa, in the country of the Hottentots; at preſent in the poſſeſſion of the Dutch, and the general rendezvous of ſhips of every nation who trade to India, being about half way from Europe. There is but one ſtrait in Africa, which is called Babel-Mandel, and joins the Red Sea with the Indian ocean.

The ſituation of Africa for commerce is extremely favourable, ſtanding as it were in the centre of the globe, and having thereby a much nearer communication with Europe, Aſia, and America, than any of the other quarters has with the reſt. That it abounds with gold, we have not only the teſtimony of the Portugueſe, the Dutch, the Engliſh, and the French, who have ſettlements on its coaſts, but that of the moſt authentic hiſtorians. It is, however, the misfortune of Africa, that, though it has 10,000 miles of ſea-coaſt, with noble, large, deep rivers, it ſhould be inhabited by barbarous or ſavage nations. At the mouths of many of its rivers are the moſt excellent harbours, deep, ſafe, calm, and ſheltered from the wind, and capable of being made perfectly ſecure by fortifications; but quite deſtitute of ſhipping, trade, and merchants, even where there is plenty of merchandiſe. In ſhort, Africa, though a full quarter of the globe, ſtored with an inexhauſtible treaſure, and capable, under proper improvements, of producing ſo many things delightful, as well as con-

the planks are faſtened to the timbers with ropes, and the ſeams are cloſed both within and without, by a plaiſter of tough clay, of which a large proviſion is always carried on the raft, for the purpoſe of excluding the ſtream wherever its entrance is obſerved.

The depth of the river at the place of paſſage, which is more than a hundred miles to the ſouth of the city of Caſhna, the capital of the empire of that name, is eſtimated at twenty-three or twenty-four feet Engliſh.

Its width is ſuch, that even at the iſland of Gongoo, where the ferrymen reſide, the ſound of the loudeſt voice from the northern ſhore is ſcarcely heard; and at Tombuctou, where the name of Gnewa, or black, is given to the ſtream, the width is deſcribed as being that of the Thames at Weſtminſter. In the rainy ſeaſon it ſwells above its banks, and not only floods the adjacent lands, but often ſweeps before it the cattle and cottages of the ſhort-ſighted, or too confident inhabitants. That the people who live in the neighbourhood of the Niger ſhould refuſe to profit by its navigation, may juſtly ſurprize the traveller; but much greater is his aſtoniſhment, when he finds that even the food which the bounty of the ſtream would give, is uſeleſsly offered to their acceptance; for ſuch is the want of ſkill, or ſuch the ſettled diſlike of the people to this ſort of proviſion, that the fiſh with which the river abounds, are left in undiſturbed poſſeſſion of its waters.——Proceedings of the African Aſſociation, p. 183—186.

venient, within itſelf, ſeems to be almoſt entirely neglected, not only by the natives, who are quite unſolicitous of reaping the benefits which Nature has provided for them, but alſo by the more civilized Europeans who are ſettled in it, particularly the Portugueſe.

Africa once contained ſeveral kingdoms and ſtates, eminent for the liberal arts, for wealth and power, and the moſt extenſive commerce. The kingdoms of Egypt and Ethiopia, in particular, were much celebrated; and the rich and powerful ſtate of Carthage, that once formidable rival to Rome itſelf, extended her commerce to every part of the ancient world; even the Britiſh ſhores were viſited by her fleets, till Juba, who was king of Mauritania, but tributary to the republic of Carthage, unhappily called in the Romans, who, with the aſſiſtance of the Mauritanians, ſubdued Carthage, and by degrees all the neighbouring kingdoms and ſtates. After this, the natives, conſtantly plundered, and conſequently impoveriſhed, by the governors ſent from Rome, neglected their trade, and cultivated no more of their lands than might ſerve for their ſubſiſtence. Upon the decline of the Roman empire, in the fifth century, the north of Africa was over-run by the Vandals, who contributed ſtill more to the deſtruction of arts and ſciences; and, to add to this country's calamity, the Saracens made a ſudden conqueſt of all the coaſts of Egypt and Barbary, in the ſeventh century. Theſe were ſucceeded by the Turks; and both being of the Mahometan religion, whoſe profeſſors carried deſolation with them wherever they came, the ruin of that once flouriſhing part of the world was thereby completed.

The inhabitants of this continent, with reſpect to religion, may be divided into three ſorts; namely, Pagans, Mahometans, and Chriſtians. The firſt are the moſt numerous, poſſeſſing the greateſt part of the country, from the tropic of Cancer to the Cape of Good Hope, and they are generally black. The Mahometans, who are of a tawny complexion, poſſeſs Egypt, and almoſt all the northern ſhores of Africa, or what is called the Barbary coaſt. The people of Abyſſinia, or the Upper Ethiopia, are denominated Chriſtians, but retain many Pagan and Jewiſh rites. There are alſo ſome Jews, on the north of Africa, who manage all the little trade that part of the country enjoys.

There are ſcarcely any two nations, or indeed any two of the learned, that agree in the modern diviſions of Africa; and for this very reaſon, that ſcarcely any traveller has penetrated into the heart of the country; and conſequently we muſt acknowledge our ignorance of the bounds, and even the names of ſeveral of the inland nations, which may be ſtill reckoned among the unknown and undiſcovered parts of the world; but, according to the beſt accounts and conjectures, Africa may be divided according to the following Table.

	Nations.	Length	Bread.	Sq. Miles.	Chief Cities.	Dist. and bear. from London.	Diff. of time from London	Religions.
Barbary.	Morocco, Tafilet, &c.	500	480	219,400	Fez	1080 S.	0 24 aft.	Mahom.
	Algiers	480	100	143,600	Algiers	920 S.	0 13 bef.	Mahom.
	Tunis	220	170	54,400	Tunis	990 S. E.	0 39 bef.	Mahom.
	Tripoli	700	240	75,000	Tripoli	1260 S. E.	0 56 bef.	Mahom.
	Barca	400	300	66,400	Polemeta	1440 S. E.	1 26 bef.	Mahom.
	Egypt	600	250	140,700	Grand Cairo	1920 S. E.	2 21 bef.	Mahom.
Up. Ethiop.	Biledulgerid	2500	350	485,000	Dara	1565 S.	0 32 aft.	Pagans.
	Zaara	3400	660	739,200	Tegeſſa	800 S.	0 24 aft.	Pagans.

	Sofola	480	300	97,000	Sofola	4600 S. E.	1 18 bef.	Pagans.
	Terra de Nat.	600	350	184,900	No Towns	* * *	* * *	Pagans.
	Caffraria or Hottentot	708	660	200,340	Cape of Good Hope	5200 S.	1 4 bef.	Moſt ſtupid Pag.

The principal iſlands of Africa lie in the India ſeas and Atlantic Ocean; of which the following belong to, or trade with the Europeans, and ſerve to refreſh their ſhipping to and from India:

Iſlands.	Sq. M.	Towns.	Trade with or belong to
Babel Mandel, at the entrance of the Red Sea		Babel Mandel	All nations
Zocotra, in the Indian Ocean	3,600	Calauſia	Ditto
The Comora Iſles, ditto	1,000	Joanna	Ditto
Madagaſcar, ditto	168,000	St. Auſtin	Ditto
Mauritius, ditto	1,840	Mauritius	French
Bourbon, ditto	2,100	Bourbon	Ditto
S. Helena, in the Atlantic Ocean		St. Helena	Engliſh
Aſcenſion, ditto			Uninhabited
St. Matthew, ditto			Ditto
St. Thomas, Anaboa, Princes iſland, Fernandopo	ditto	St. Thomas, Anaboa	Portugueſe
Cape Verd Iſlands, ditto	2,000	St. Domingo	Ditto
Goree, ditto		Fort St. Michael	French
Canaries, ditto		Palma, St. Chriſtophers	Spaniſh
Madeiras, ditto	1,500	Santa Cruz, Funchal	Portugueſe
The Azores, or Weſtern Iſles lie nearly at an equal diſtance from Europe, Africa, and America	2,000	Angra, St. Michael	Ditto

Having

Having given the reader ſome idea of Africa, in general, with the principal kingdoms, and their ſuppoſed dimenſions, we ſhall now conſider it under four grand diviſions: firſt, Egypt; ſecondly the ſtates of Barbary, ſtretching along the coaſt of the Mediterranean, from Egypt in the eaſt, to the Atlantic Ocean, weſt; thirdly, the kingdoms of Abyſſinia, Fezzan, Bornou, and Caſhna; and, laſtly, that part of Africa, between the tropic of Cancer and the Cape of Good Hope: the laſt of theſe diviſions, indeed, is vaſtly greater than the other three; but the nations which it contains are ſo little known, and ſo barbarous, and, like all barbarous nations, ſo ſimilar in moſt reſpects to each other, that they may, without impropriety, be thrown under one general head.

EGYPT.

Situation and Extent.

Miles.		Degrees.	Sq. Miles.
Length 600 Breadth 250	between	20 and 32 north latitude. 28 and 36 eaſt longitude.	140,700.

Southern diviſion contains	Upper Egypt	Sayd or Thebes
		Coſſiar.

Air.] It is obſerved by M. Volney, that during eight months of the year (from March to November) the heat is almoſt inſupportable by an European. "During the whole of this ſeaſon, the air is inflamed, the ſky ſparkling, and the heat oppreſſive to all unaccuſtomed to it."—The other months are more temperate. The ſoutherly winds which ſometimes blow in Egypt, are by the natives called *poiſonous* winds, or the *hot winds of the deſert*. They are of ſuch extreme heat and aridity, that no animated body expoſed to it can withſtand its fatal influence. During the three days which it generally laſts, the ſtreets are deſerted; and woe to the traveller whom this wind ſurpriſes remote from ſhelter; when it exceeds three days it is inſupportable. Very frequently the inhabitants are almoſt blinded with drifts of ſand. Theſe evils are remedied by the riſing and overflowing of the Nile.

Soil and produce.] Whoever is in the leaſt acquainted with literature, knows that the vaſt fertility of Egypt is owing to the annual inundation of the Nile, occaſioned

caſioned by the rains which fall during May, June, and July, in Abyſſinia and the neighbouring countries of Africa. According to Mr. Volney, the commencement of the inundation is not entirely aſcertained, though the Copies fix it at the 19th of June. At the height of its flood in the Lower Egypt, nothing is to be ſeen in the plains, but the tops of foreſts and fruit-trees, their towns and villages being built upon eminences either natural or artificial. When the river is at its proper height, the inhabitants celebrate a kind of jubilee, with various feſtivities. The banks or mounds which confine it, are cut by the Turkiſh baſha, attended by his grandees; but, according to captain Norden, who was preſent on the occaſion, the ſpectacle is not very magnificent. When the banks are cut, the water is let into what they call the Chalis, or grand canal, which runs through Cairo, from whence it is diſtributed into cuts, for ſupplying their fields and gardens. This being done, and the waters beginning to retire, ſuch is the fertility of the ſoil, that the labour of the huſbandman is next to nothing. He throws his wheat and barley into the ground in October and May. He turns his cattle out to graze in November, and in about ſix weeks, nothing can be more charming than the proſpect, which the face of the country preſents, in riſing corn, vegetables, and verdure of every ſort. Oranges, lemons, and fruits, perfume the air. The culture of pulſe, melons, ſugar-canes, and other plants, which require moiſture, is ſupplied by ſmall, but regular cuts from ciſterns and reſervoirs. Dates, plantanes, grapes, figs, and palm-trees, from which wine is made, are here plentiful. March and April are the harveſt months, and produce three crops; one of lettuces and cucumbers (the latter being the chief food of the inhabitants), one of corn and one of melons. The Egyptian paſturage is equally prolific, moſt of the quadrupeds producing two at a time, and the ſheep four lambs a year.

Animals.] Egypt abounds in black cattle; and it is ſaid, that the inhabitants employ every day 20,000 oxen in raiſing water for their grounds. They have a fine large breed of aſſes, upon which the Chriſtians ride, being inſolently debarred by the Turks from riding on any other beaſt. The Egyptian horſes are very fine; they never trot, but walk well, and gallop with great ſpeed, turn ſhort, ſtop in a moment, and are extremely tractable. The hippopotamus, or river-horſe, an amphibious animal, reſembling an ox in its hinder parts, with the head of a horſe, is common in Upper Egypt. Tygers, hyenas, camels, antelopes, apes with the head like a dog, and the rat, called ichneumon, are natives of Egypt. The camelion, a little animal ſomething reſembling a lizard, that changes colour as you ſtand to look upon him, is found here as well as in neighbouring countries. The crocodile was formerly thought peculiar to Egypt, but there does not ſeem to be any material difference between it and the aligators of India, and America. They are both amphibious animals, in the form of a lizard, and grow till they are about twenty feet in length, and have four ſhort legs, with large feet armed with claws, and their backs are covered with a kind of impenetrable ſcales, like armour. The crocodile waits for his prey in the ſedge, and other cover, on the ſides of the rivers; and, pretty much reſembling the trunk of an old tree, ſometimes ſurpriſes the unwary traveller with his fore paws, or beats him down with his tail.

This country produces likewiſe great numbers of eagles, hawks, pelicans, and water-fowls of all kinds. The ibis, a creature (according to Mr. Norden) ſomewhat reſembling a duck, was deified by the ancient Egyptians for its deſtroying ſerpents and peſtiferous inſects. They were thought to be peculiar to Egypt, but a ſpecies of them is ſaid to have been lately diſcovered in other parts of Africa.

Oſtriches

Oſtriches are common here, and are ſo ſtrong that the Arabs ſometimes ride upon their backs.

The Ceraſtes, or horned viper, inhabits the greateſt part of the eaſtern continent, eſpecially the deſert ſandy parts of it. It abounds in Syria, in the three Arabias, and in Africa. I apprehend this to be the aſpic which Cleopatra employed to procure her death. Alexandria, plentifully ſupplied by water, muſt then have had fruit of all kinds in its gardens. The baſkets of figs muſt have come from thence, and the aſpic, or ceraſtes, that was hid in them, from the adjoining deſert, where there are plenty to this day.

The poiſon is very copious for ſo ſmall a creature; it is fully as large as a drop of laudanum dropt from a vial by a careful hand. Viewed through a glaſs, it appears not perfectly tranſparent or pellucid. People have doubted whether or not this yellow liquor is the poiſon, and the reaſon has been, that animals who had taſted it did not die as when bitten, but this reaſon does not hold in modern phyſics. We know why the ſaliva of a mad dog has been given to animals and has not affected them; and a German phyſician was bold enough to diſtil the pus, or putrid matter flowing from the ulcer of a perſon infected by the plague, and taſte it afterwards without any bad conſequences; ſo that it is clear the poiſon has no activity, till through ſome ſore or wound it is admitted into circulation.

There are few ſubjects of more curious inveſtigation, than the incantation of ſerpents. There is no doubt of its reality. The ſcriptures are full of it †. All that have been in Egypt have ſeen as many different inſtances as they choſe. Some have doubted that it was a trick, and that the animals ſo handled had been firſt trained, and then diſarmed of their powers of hurting; and fond of the diſcovery they have reſted themſelves upon it, without experiment, in the face of all antiquity. But I will not hefitate to aver (ſays Mr. Bruce) that I have ſeen at Cairo (and this may be ſeen daily without trouble or expence) a man who has taken a ceraſtes with his naked hands from a number of others lying at the bottom of the tub, has put it upon his bare head, covered it with the common red cap he wears, then taken it out, put it in his breaſt, and tied it about his neck like a necklace; after which it has been applied to a hen, and bit it, which has died in a few minutes.

We know from hiſtory, that where any country has been remarkably infeſted with ſerpents, there the people have been ſcreened by this ſecret. The Pſylli and Marmarides of old were undoubtedly defended in this manner,

Ad quorum cantus mites jacuere ceraſtæ. Sil. Ital. lib. iii.

To leave ancient hiſtory, I can myſelf vouch, (ſays our author) that all the black people in the kingdom of Sennaar, whether Funge or Nuba, are perfectly armed againſt the bite of either ſcorpion or viper. They take the ceraſtes in their hands at all times, put them in their boſoms, and throw them to one another as children do apples or balls, without having irritated them by this uſage ſo much as to bite. The Arabs have not this ſecret naturally, but from their infancy they acquire an exemption from the mortal conſequences attending the bite of theſe animals, by chewing a certain root, and waſhing themſelves (it is not anointing) with an infuſion of certain plants in water.

One day when I was with the brother of Shekh Adelan, prime miniſter of Sennaar, a ſlave of his brought a ceraſtes, which he had juſt then taken out of a hole, and was uſing it with every ſort of familiarity. I told him my ſuſpicion that the

† Jerem. viii. 17. Pſal. lviii. 5.

teeth

teeth had been drawn, but he aſſured me they were not, as did his maſter Kittou, who took it from him, wound it round his arm, and at my deſire ordered the ſervant to carry it home with me. I took a chicken by the neck, and made it flutter before him, his ſeeming indifference left him, and he bit it with great ſigns of anger, the chicken died almoſt immediately; I ſay his ſeeming indifference, for I conſtantly obſerved, that however lively the viper was before, upon being ſeized by any of theſe barbarians, he ſeemed as if taken with ſickneſs and feebleneſs, frequently ſhut his eyes, and never turned his mouth towards the arm of the perſon that held him. I aſked Kittou how they come to be exempted from this miſchief? he ſaid they were born ſo, and ſo ſaid the grave and reſpectable men among them. Many of the lighter and lower ſort talked of enchantments by words and by writing, but they all knew how to prepare any perſon by medicines, which were decoctions of herbs and roots.

POPULATION, MANNERS, CUSTOMS, AND DIVERSIONS.] As the population of Egypt is almoſt confined to the banks of the Nile, and the reſt of the country inhabited by Arabs, and other nations, we can ſay little upon this head with preciſion. It ſeems to be certain that Egypt is at preſent not near ſo populous as formerly, and its depopulation is owing to anarchy and peſpotiſm. According to Mr. Volney, the number of inhabitants may amount to 2,300,000, of which Cairo contains about 250,000. This country is inhabited by four different races of people; the Turks who *pretend* to be maſters of the country; the Arabs who were conquered by the Turks; the Coptes, who are deſcended from the ancient Egyptians mixed with the Perſians, Greeks, and Romans, who ſucceſſively conquered Egypt; and the Mamalouks, who were originally Circaſſian and Mingrelian ſlaves, and being the only military force, are the *real* maſters of the country.

The Turks, who reſide in Egypt, retain all their Ottoman pride and inſolence, and wear the Turkiſh habit, to diſtinguiſh themſelves from the Arabs and Coptes, who dreſs very plain, their chief finery being an upper garment of white linen, and linen drawers; but their ordinary dreſs is of blue linen, with a long cloth coat, either over or under it. The Chriſtians and Arabs of the meaner kind content themſelves with a linen or woollen wrapper, which they fold, blanket-like, round their body. The Jews wear blue leather ſlippers, the other natives of their country wear red, and the foreign Chriſtians yellow. The dreſs of the women is tawdry and unbecoming; but their cloaths are ſilk, when they can afford it; and ſuch of them as are not expoſed to the ſun, have delicate complexions and features. The Coptes are generally excellent accomptants, and many of them live by teaching the other natives to read and write. Their exerciſes and diverſions are much the ſame as thoſe made uſe of in Perſia, and other Aſiatic countries. All Egypt is over-run with jugglers, fortune-tellers, mountebanks, and travelling ſlight-of-hand-men.

RELIGION.] To what I have already ſaid concerning the religion of Egypt, it is proper to add that the bulk of the Mahometans are enthuſiaſts, and have among them their *ſantos*, or fellows who pretend to a ſuperior degree of holineſs, and without any ceremony intrude into the beſt houſes, where it would be dangerous to turn them out. The Egyptian Turks mind religious affairs very little, and it would be hard to ſay what ſpecies of Chriſtianity is profeſſed by the Chriſtian Coptis, who are here numerous, but they profeſs themſelves to be of the Greek church, and enemies to that of Rome. In religious, and indeed many civil matters, they are under the juriſdiction of the patriarch of Alexandria, who by the dint of money generally purchaſes a protection at the Ottoman court.

LANGUAGE.] The Coptic is the moſt ancient language of Egypt. This was ſucceeded

ſucceeded by the Greek, about the time of Alexander the Great; and that by the Arabic, upon the commencement of the califate, when the Arabs diſpoſſeſſed the Greeks of Egypt. The Arabic, or Arabeſque, as it is called, is ſtill the current language, but the Coptic and modern Greek continue to be ſpoken.

LEARNING AND LEARNED MEN.] Though it is ſuppoſed that the Greeks derived all their knowledge from the ancient Egyptians, yet ſcarcely a veſtige of it remains among their deſcendants. This is owing to the bigotry and ignorance of their Mahometan maſters; but here it is proper to make one obſervation which is of general uſe. The califs or Saracens who ſubdued Egypt were of three kinds. The firſt, who were the immediate ſucceſſors of Mahomet, made war, from conſcience and principle, upon all kinds of literature, except the Koran; and hence it was, that when they took poſſeſſion of Alexandria, which contained the moſt magnificent library the world ever beheld, its valuable manuſcripts were applied for ſome months to cooking their victuals, and warming their baths. The ſame fate attended upon the other magnificent Egyptian libraries. The califs of the ſecond race were men of taſte and learning, but of a peculiar ſtrain. They bought up all the manuſcripts, that ſurvived the general conflagration, relating to aſtronomy, medicine, and ſome uſeleſs parts of philoſophy; but they had no taſte for the Greek arts, ſciences, hiſtory, or poetry, and learning was confined to their own courts and colleges, without ever finding its way back to Egypt. The lower race of califs, eſpecially thoſe who called themſelves califs of Egypt, diſgraced human nature; and the Turks have riveted the chains of barbarous ignorance which they impoſed.

All the learning therefore poſſeſſed by the modern Egyptians conſiſts in arithmetical calculations for the diſpatch of buſineſs, the jargon of aſtrology, a few noſtrums in medicine, and ſome knowledge of Arabeſque or the Mahometan religion.

CURIOSITIES AND ANTIQUITIES.] Egypt abounds more with theſe than perhaps any other part of the world. Its pyramids have been often deſcribed. Their antiquity is beyond the reſearches of hiſtory itſelf, and their original uſes are ſtill unknown. They are eleven in number, and diſtant four leagues from Cairo. The baſis of the largeſt covers eleven acres of ground, and its perpendicular height is 500 feet, but, if meaſured obliquely to the terminating point, 700 feet *. It contains a room thirty-four feet long, and ſeventeen broad, in which is a marble cheſt, but without either cover or contents, ſuppoſed to have been deſigned for the tomb of the founder, who, according to Herodotus, was Cheops, the Egyptian king, who immediately ſucceeded Proteus, in the ninth century before Chriſt.

The mummy pits, ſo called for their containing the mummies, or embalmed bodies of the ancient Egyptians, are ſubterraneous vaults of a prodigious extent; but the art of preparing the mummies is now loſt. It is ſaid that ſome of the bodies, thus embalmed, are perfect and diſtinct at this day, though burried 3000 years ago. The labyrinth in Upper Egypt is a curioſity thought to be more wonderful than the pyramids themſelves. It is partly under ground, and cut out of a marble rock conſiſting of twelve palaces, and 1000 houſes, the intricacies of which occaſion its name. The lake Mæris was dug by order of an Egyptian king, to correct the irregularities of the Nile, and to communicate with that river, by canals and ditches which ſtill ſubſiſt, and are evidences of the utility as well as grandeur of the work. Wonderful grottos and excavations, moſtly artificial, abound in Egypt. The whole

* Mr. Volney ſays that a late menſuration aſſigns to each face of the great pyramid, ſix hundred feet; and its perpendicular height four hundred and eighty feet.

country towards Grand Cairo is a continued ſcene of antiquities, of which the oldeſt are the moſt ſtupendous, but the more modern the moſt beautiful. Cleopatra's needle, and its ſculptures, are admirable.

Pompey's pillar which is ſituated on a rock, about a mile without the gates of the city of Alexandria, is a fine regular column of the Corinthian order, the ſhaft of which is one ſtone, being eighty-eight feet nine inches in height, or ten diameters of the column; the whole height is 114 feet, including the capital and pedeſtal. The whole of the pillar is granite, but the capital is of another ſtone. This magnificent monument appears, in taſte, (ſays Mr. Bruce) to be the work of that period between Hadrian and Severus; but, though the former erected ſeveral large buildings in the eaſt, it is obſerved of him that he never put inſcriptions upon them. This pillar has had a Greek inſcription, and I think, may very probably be attributed to the time of the latter, as a monument of the gratitude of the city of Alexandria for the benefits he conferred on them, eſpecially ſince no ancient hiſtory mentions its exiſtence at an earlier period. I apprehend it to have been brought in a block from the Thebais in Upper Egypt, by the Nile; though ſome have imagined it was an old obeliſk, hewn to the round form of a pillar. The Sphynx, as it is called, is no more than the head and part of the ſhoulders of a woman hewn out of the rock, and about thirty feet high, near one of the pyramids.——The manner of hatching chickens in ovens is common in Egypt, and now practiſed in ſome parts of Europe.

"The payrus (which is one of the natural curioſities of Egypt, and ſerved the ancients to write upon) is a cyperus, called by the Greeks Biblus. There is no doubt but it was early known in Egypt. Pliny ſays that Varro writes that the papyrus came not into general uſe till after the conqueſt of Egypt by Alexander; yet it is plain from Anacreon *, Alcæus, Æſchylus, and the comic poets, that it was known in their time. Plato and Ariſtole ſpeak of it alſo, ſo do Herodotus, and Theophraſtus †. We alſo know it was of old in uſe among the Ionians, who probably brought it in very early days directly from Egypt. Numa, too, who lived 300 years before Alexander, is ſaid to have left a number of books written on the papyrus, which a long time after his death were found at Rome.

" With Ariſtotle began the firſt arrangement of a library. Alexander's conqueſt, and the building of Alexandria, laid open Egypt, its trade, and learning, to the world. Papyrus then, or the paper made from it, was the only material made uſe of for writing upon. A violent deſire of amaſſing books, and a library, immediately followed, which we may ſafely attribute to the example ſet by Ariſtotle.

" The Ptolemies, and the kings of Pergamus, contended who ſhould make the largeſt collection. The Ptolemies, maſters of Egypt, and of the papyrus, availed themſelves of this monopoly to hinder the multiplication of books in Greece. The other princes probably ſmuggled this plant, and propagated it wherever it would grow out of Egypt. And Eumenes king of Pergamus ſet about bringing to perfection the manufacture of parchment, which, long before, the Ionians had uſed from the ſcarcity of paper; for whatever reſemblance there might be in names, or whatever may be inferred from them, writing upon ſkins or parchment was much more ancient than any city or ſtate in Greece, and in uſe probably before Greece was inhabited. The Jews we know made uſe of it in the earlieſt ages. At this very time which we are now ſpeaking of, we learn from Joſephus ‡, that the elders, by order of the high prieſts, carried a copy of the law to Ptolemy Philadelphus in letters of gold upon ſkins, the pieces of who were ſo artfully put together that the joinings did not appear.

* Anac. Odeiv. † Theoph. Hiſt. Plant. lib. iv. 9. ‡ Joſeph. lib. xii. p. 405.

" In

"In a large and very perfect manuſcript in my poſſeſſion (ſays, Mr. Bruce), which was dug up at Thebes, the boards are of papyrus root, covered firſt with the coarſer pieces of the paper, and then with leather in the ſame manner as it would be done now. It is a book one would call a ſmall folio, rather than by any other name, and I apprehend that the ſhape of the book where papyrus is employed was always of the ſame form with thoſe of the moderns. The letters are ſtrong, deep, black, and apparently written with a reed, as is practiſed by the Egyptains and Abyſſinians ſtill. It is written on both ſides, ſo never could be rolled up as parchment was, nor would the brittleneſs of the materials when dry, ſupport any ſuch frequent unrolling.

"If the date of the invention of the uſeful art of making paper is doubtful, the time when it was loſt, or ſuperſeded by one more convenient, is as uncertain. Euſtathius ſays it was diſuſed in his time, in the year 1170. Mabillon endeavours to prove it exiſted in the ninth, and even that there exiſted ſome Popiſh bulls written upon it as late as the eleventh century. He gives, as inſtances, a part of St. Mark's Goſpel preſerved at Venice, as being upon papyrus, and the fragments of Joſephus at Milan to be cotton paper, while Maffei proves this to be juſt the reverſe, that of St. Mark being cotton, and the other indiſputably he thinks to be Egyptian papyrus, ſo that Mabillon's authority as to the bulls of the pope may be fairly queſtioned.

"The ſeveral times I have been at theſe places mentioned, I have never ſucceeded in ſeeing any of theſe pieces; that of St. Mark at Venice I was aſſured had been recogniſed to be cotton paper; it was rendered not legible by the warm ſaliva of zealots kiſſing it from devotion, which I can eaſily comprehend muſt contain a very coroſive quality, and the Venetians now reſuſe to ſhew it more *."

CITIES, TOWNS, AND PUBLIC EDIFICES. Even a ſlight review of theſe would amount to a large volume. In many places, not only temples, but the walls of cities, built before the time of Alexander the Great, are ſtill entire, and many of their ornaments, particularly the colours of their paintings, are as freſh and vivid as when firſt laid on.

Alexandria, which lies on the Levant coaſt, was once the emporium of the world, and by the means of the Red Sea furniſhed Europe, and great part of Aſia, with the riches of India. It owes its name to its founder Alexander the Great. It ſtands forty miles weſt from the Nile, and is a hundred and twenty north-weſt of Cairo. It roſe upon the ruins of Tyre and Carthage, and is famous for the light-houſe erected on the oppoſite iſland of Pharos, for the direction of mariners, deſervedly eſteemed one of the wonders of the world. The mole which was built to form a communication with the iſland of Pharos is 1000 yards in length, and though near 2000 years old, the excellence of its materials has reſiſted, in a great meaſure, the violence of winds and waves ever ſince. All the parts of the city were magnificent in proportion, as appears from their ruins, particularly the ciſterns and aqueducts. Many of the materials of the old city, however, have been employed in building New Alexandria, which at preſent is a very ordinary ſea-port, known by the name of Scanderoon. Notwithſtanding the poverty, ignorance, and indolence of the inhabitants, their moſques, bagnios, and the like buildings, erected within theſe ruins, preſerve an inexpreſſible air of majeſty. "It is thinly inhabited, and there is a tradition among the natives that, more than once, it has been in agitation to abandon it all together, and retire to Roſetta, or Cairo, but that they have been witheld by the opinion of divers ſaints from Arabia, who have aſſured them, that Mecca being deſtroyed, (as it muſt be they think by the Ruſſians) Alexandria is then to become *the holy place*, and that Mahomet's body is to be tranſported thither: when that city

* Bruce's Travels, 4to. vol. v. p. 1, 2, 3, 5, &c.

is deſtroyed, the ſanctified relics are to be tranſported to Carouan, in the kingdom of Tunis: laſtly, from Carouan they are to come to Roſetta, and there to remain till the conſummation of all things *."

Roſetta, or Raſchid, ſtands twenty-five miles to the north-weſt of Alexandria, and is recommended for its beautiful ſituation, and the delightful proſpects which command the fine country, or iſland of Delta, formed by the Nile, near its mouth. It is likewiſe a place of great trade. The length of the city is two miles, but it is only half a mile broad. In the environs are many country houſes belonging to Chriſtian merchants, with fine gardens, producing the choiceſt fruits of the Eaſt. The Mahometan inhabitants are here alſo particularly civil and polite.

Cairo, now Maſr, the preſent capital of Egypt, is a large and populous, but a diſagreeable reſidence, on account of its peſtilential air, and narrow ſtreets. It is divided into two towns, the Old and the New, and defended by an old caſtle, the works of which are ſaid to be three miles in circumference. This caſtle is ſaid to have been built by Saladine: at the weſt end are the remains of very noble apartments, ſome of which are covered with domes, and adorned with pictures in Moſaic work; but theſe apartments are now only uſed for weaving embroidery, and preparing the hangings and coverings annually ſent to Mecca. The well, called Joſeph's well, is a curious piece of mechaniſm, about 300 feet deep. The memory of that patriarch is ſtill revered in Egypt, where they ſhew granaries, and many other works of public utility, that go under his name. They are certainly of vaſt antiquity; but it is very queſtionable whether they were erected by him. One of his granaries is ſhewn in old Cairo, but captain Norden ſuſpects it is a Saracen work, nor does he give us any high idea of the buildings of the city itſelf. On the bank of the Nile, facing Cairo, lies the village of Gize, which is thought to be the ancient Memphis. Two miles weſt, is Bulac, called the port of Cairo. The Chriſtians of Cairo practiſe a holy cheat, during the Eaſter holidays, by pretending that the limbs and bodies of the dead ariſe from their graves, to which they return peaceably. The ſtreets of Cairo are peſtered with the jugglers and fortune-tellers already mentioned. One of their favourite exhibitions is their dancing camels, which when young, they place upon a large heated floor: the intenſe heat makes the poor creatures caper, and being plied all the time with the ſound of a drum, the noiſe of that inſtrument ſets them a dancing all their lives after.

The other towns of note in Egypt are Damietta, ſuppoſed to be the ancient Peluſium; Seyd, on the weſt banks of the Nile, 200 miles ſouth of Cairo, ſaid to be the ancient Egyptian Thebes; and Coſſiar, on the weſt coaſt of the Red Sea. The general practice of ſtrangers, who viſit thoſe places, is to hire a Janizary, whoſe authority commonly protects them from the inſults of the other natives. Suez, formerly a place of great trade, is now a ſmall city, and gives name to the iſthmus, that joins Africa with Aſia. The children of Iſrael are ſuppoſed to have marched near this city, when they left Egypt, in their way towards the Red Sea. This ſea appears to have certainly derived its name from Edom, long and early its powerful maſter, that word ſignifying Red in Hebrew. It formerly went by the name of the ſea of Edom, or Idumea, ſince, by that of the Red Sea. Almoſt every object and village in this country preſents ſome amazing piece of antiquity. The difficulties in viſiting it are great; ſo that the accounts we can depend upon are but few, nor do they always agree together.

MARBLE QUARRIES.] "It has been a wonder (ſays Mr. Bruce in his journey acroſs the deſert of the Thebaid from Kennê to Coſſeir) with all travellers, and with

* Bruce's Travels, 4to. vol. i. p. 15.

myſelf

myſelf among the reſt, where the ancients procured that prodigious quantity of fine marble, with which all their buildings abound. That wonder, however, among many others, now ceaſes, after having paſſed, in four days, more granite, porphyry, marble, and jaſper, than would build Rome, Athens, Cornith, Syracuſe, Memphis, Alexandria, and half a dozen ſuch cities. It ſeemed to be very viſible, that thoſe openings in the hills, which I call defiles, were not natural, but artificial, and that whole mountains had been cut out at theſe places.

"The prophyry ſhews itſelf by a fine purple ſand, without any gloſs, or glitter on it, and is exceedingly agreeable to the eye. It is mixed with the native white ſand, and fixed gravel of the plains. Green unvariegated marble is generally ſeen in the ſame mountain with the porphyry. Where the two veins meet, the marble is for ſome inches brittle, but the porphyry of the ſame hardneſs as in other places.

"The granite is covered with ſands, and looks like ſtone of a dirty, brown colour. But this is only the change and impreſſion the ſun and weather have made upon it; for upon breaking it, you ſee it is grey granite, with black ſpots, with a reddiſh caſt, or bluſh over it. This red ſeems to fade, or ſuffer from the outward air, but, upon working or poliſhing the ſurface, this colour again appears. It is in greater quantity than the porphyry, and nearer the Red Sea. Pompey's pillar ſeems to have been from this quarry.

"Next to the granite, but never, as I obſerved, joined with it in the ſame mountain, is the red marble. It is covered with ſand of the ſame colour, and looks as if the whole mountain were ſpread over with brick duſt. There is alſo a red marble with white veins, which I have often ſeen at Rome, but not in principal ſubjects. I have alſo ſeen it in Britain. The common green (called ſerpentine) looks as if covered over with Brazil ſnuff. Joined with this green, I ſaw two ſamples of that beautiful marble, they call Iſabella; one of them with a yellowiſh caſt, which we call Quaker-colour, the other with a blueiſh, which is commonly termed dove-colour. In this green, likewiſe, it was we ſaw the vein of jaſper; but whether it was abſolutely the ſame with this, which is the bloody jaſper, or blood-ſtone, is what we had not time to ſettle.

"I ſhould firſt have made mention of the verde antico, the dark green with white irregular ſpots, becauſe it is of the greateſt value, and neareſt the Nile. This is produced in the mountains of the plain green, or ſerpentine, as is the jaſper, and is not diſcoverable by the duſt, or any particular colour upon it. Firſt, there is a blue ſleaky ſtone. After lifting this, we come to the beds of the verde antico; and here the quarrying is very obvious, for it has been uncovered in patches, not above twenty-feet ſquare. Then, in another part, the green ſtone has been removed, and another pit of it wrought.

"I ſaw, in ſeveral places in the plain, ſmall pieces of African marble ſcattered about, but no rocks or mountains of it. This prodigious ſtore of marble is placed upon a ridge, whence there is a deſcent to the eaſt, or weſt, either to the Nile or Red Sea. The level ground, and hard-fixed gravel are proper for the heavieſt carriages, and will eaſily and ſmoothly convey any weight whatever to its place of embarkation on the Nile; ſo that another wonder ceaſed, how the ancients tranſported thoſe vaſt blocks of marble to Thebes, Memphis, and Alexandria *."

MANUFACTURES AND COMMERCE.] The Egyptians export prodigious quantities of unmanufactured as well as prepared flax, thread, cotton, and leather of all ſorts, callicoes, yellow wax, ſal ammoniac, ſaffron, ſugar, ſena, and caſſia. They trade with the Arabs for coffee, drugs, ſpices, callicoes, and other merchandiſes, which

* Bruce's Travels, 4to. Vol. i. p. 186, 187, 188.

are

are landed at Suez, from whence they ſend them to Europe. Several European ſtates have conſuls reſident in Egypt, but the cuſtoms of the Turkiſh government are managed by Jews. A number of Engliſh veſſels arrive yearly at Alexandria; ſome of which are laden on account of the owners, but moſt of them are hired and employed as carriers to the Jews, Armenians, and Mahometan traders.

CONSTITUTION AND GOVERNMENT.] A viceroy is ſent to Egypt from the Porte under the title of the paſha or baſhaw of Cairo, and is one of the greateſt officers of the Ottoman empire. But ſince the revolution of Ali Bey, the power of the Turks in Egypt is more precarious than in any other province. The government of Egypt is both monarchical and republican. The monarchical is executed by the paſha. The republican, or rather the ariſtocratical part of the government, conſiſts of a divan, compoſed of twenty-four ſangiacks, beys, or lords. The head of them is called the ſheik bellet, who is choſen by the divan, and confirmed by the paſha. Every one of the ſangiacks is arbitrary in his own territory, and exerts ſovereign power; the major part of them reſide at Cairo. If the grand ſignior's paſha acts in oppoſition to the ſenſe of the divan, or attempts to violate their privileges, they will not ſuffer him to continue in his poſt, and the Porte is obliged to ſend another. They have an authentic grant of privileges, dated in the year 1517, in which year Sultan Selim conquered Egypt from the Mamalukes.

REVENUES.] Theſe are very inconſiderable, when compared with the natural riches of the country, and the deſpotiſm of its government. Some ſay they amount to a million ſterling, but that two thirds of the whole is ſpent in the country.

MILITARY STRENGTH.] This conſiſts in the Mamalukes, ſome bodies of whom are cantoned in the villages to exact tribute, and ſupport authority. The greater part are aſſembled at Cairo. They amount to about eight thouſand men, attached to the different beys, whom they enable to contend with each other, and to ſet the Turks at defiance.

HISTORY.] It is generally agreed that the princes of the line of the Pharoahs ſat on the throne of Egypt, in an uninterrupted ſucceſſion, till Cambyſes, the ſecond king of Perſia, conquered the Egyptians 520 years before the birth of Chriſt; and that in the reign of thoſe princes, the pyramids were raiſed; ſtructures, which cannot now be viewed without aſtoniſhment. Egypt continued a part of the Perſian empire, till Alexander the Great vanquiſhed Darius, when it fell under the dominion of that prince, who ſoon after built the celebrated city of Alexandria. The conqueſts of Alexander, who died in the prime of life, being ſeized upon by his generals, the province of Egypt fell to the ſhare of Ptolemy, by ſome ſuppoſed to have been a half-brother of Alexander, when it again became an independent kingdom, about 300 years before Chriſt. His ſucceſſors, who ſometimes extended their dominions over great part of Syria, ever after retained the name of Ptolemies, and in that line Egypt continued between two and three hundred years, till the famous Cleopatra, the wife and ſiſter of Ptolemy Dionyſius, the laſt king, aſcended the throne. After the death of Cleopatra, who had been miſtreſs ſucceſſively to Julius Cæſar and Mark Anthony, Egypt became a Roman province, and thus remained till the reign of Omar, the ſecond calif of the ſucceſſors of Mahomet, who expelled the Romans, after it had been in their hands 700 years. The famous library of Alexandria, ſaid to conſiſt of 700,000 volumes, was collected by Ptolemy Philadelphus, ſon of the firſt Ptolemy; and the ſame prince cauſed the Old Teſtament to be tranſlated into Greek, but whether by ſeventy-two interpreters, and in the manner commonly related, is juſtly queſtioned: this tranſlation is known by the name of the Septuagint. Omar ſubjected Egypt to the Mahometan power, about the year 640, and the califs of Babylon were ſovereigns of the

the country till 870, when the Egyptians ſet up a governor of their own called the calif of Cairo.

About the time of the cruſades, between the year 1150 and 1190, Egypt was governed by Noreddin, the Saracen ſultan of Damaſcus, whoſe ſon, the famous Saladine, proved ſo formidable to thoſe Chriſtian adventurers, and retook from them Jeruſalem. He inſtituted the military corps of Mamalukes, like the Janizaries of Conſtantinople, who, about the year 1242, advanced one of their own officers to the throne, and ever after choſe their prince out of their own body. Egypt, for ſome time, made a figure under thoſe illuſtrious uſurpers, and made a noble ſtand againſt the prevailing power of the Turks, till under Selim, who, about the year 1517, after giving the Mamalukes ſeveral bloody defeats, reduced Egypt to its preſent ſtate of ſubjection.

While Selim was ſettling the government of Egypt, great numbers of the ancient inhabitants withdrew into the deſerts and plains, under one Zinganeus, from whence they attacked the cities and villages of the Nile, and plundered whatever fell in their way. Selim and his officers perceiving that it would be a matter of great difficulty to extirpate thoſe marauders, left them at liberty to quit the country, which they did in great numbers, and their poſterity is known all over Europe and Aſia, by the name of Gipſies. Of late, however, many of them have incorporated with, and adopted the manners of, the people among whom they reſide.

An attempt was made a few years ſince to deprive the Ottoman Porte of its authority over Egypt by Ali Bey, whoſe father was a prieſt of the Greek church. Ali turned Mahometan, and being a man of great abilities and addreſs, rendered himſelf extremely popular in Egypt. A falſe accuſation having been made againſt him to the grand ſignior, his head was ordered to be ſent to Conſtantinople, but being apprized of the deſign, he ſeized and put to death the meſſenger who brought the order, and was ſoon enabled to put himſelf at the head of an army. Taking advantage of the diſtreſsful and dangerous ſituation to which the Turkiſh empire was reduced, in conſequence of the war with Ruſſia, he boldly mounted the throne of the ancient ſultans of Egypt. But not content with the kingdom of Egypt, he alſo laid claim to Syria, Paleſtine, and that part of Arabia which had belonged to the ancient ſultans. He marched at the head of his troops to ſupport theſe pretenſions, and actually ſubdued ſome of the neighbouring provinces both of Arabia and Syria. At the ſame time that we was engaged in theſe great enterprizes, he was not leſs attentive to the eſtabliſhing of a regular form of government, and introducing order into a country that had been long the ſeat of anarchy and confuſion. His views were equally extended to commerce; for which purpoſe he gave great encouragement to the Chriſtian traders, and took off ſome ſhameful reſtraints and indignities, to which they were ſubjected in that barbarous country. He alſo wrote a latter to the republic of Venice, with the greateſt aſſurances of his friendſhip, and that their merchants ſhould meet with every degree of protection and ſafety. His great deſign was ſaid to be, to make himſelf maſter of the Red Sea; to open the port of Suez to all nations, but particularly to the Europeans, and to render Egypt once more the great centre of commerce. The conduct and views of Ali Bey ſhewed an extent of thought and ability that indicated nothing of the barbarian, and beſpoke a mind equal to the founding of an empire: but he was not finally ſucceſsful. He was however, for ſome time extremely fortunate; he aſſumed the titles and ſtate of the ancient Sultans of Egypt, and was ably ſupported by Sheick Daher, and ſome other Arabian princes, who warmly eſpouſed his intereſts. He alſo ſucceeded in almoſt all his enterprizes againſt the neighbouring Aſiatic governors and baſhas, whom he

he repeatedly defeated; but he was afterwards deprived of the kingdom of Egypt by the baſe and ungrateful conduct of his brother-in law, Mahomed Bey Aboudaab, his troops being totally defeated on the 7th of March 1773, and himſelf wounded and taken priſoner: he died of his wounds, and was buried at Grand Cairo. Aboudaab afterwards governed Egypt as Sheik Bellet, and marched into Paleſtine to ſubdue Sheik Daher. After behaving with great cruelty to the inhabitants of the places he took, he was found dead in his bed one morning at Acre, ſuppoſed to be ſtrangled. Sheik Daher accepted the Porte's full amneſty, and truſting to their aſſurances, embraced the captain paſha's invitation to dine on board his ſhip, when the captain produced his orders, and the brave Daher, Ali Bey's ally, had his head cut off in the 85th year of his age. From that time Egypt has been torn by a civil war, between the adherents of Ali, and other beys or princes, who roſe on his ruins. Of theſe the principal are Morad and Ybrahim, who having driven their enemies into baniſhment, began to quarrel among themſelves. Alternately expelled from Cairo, they finally agreed to a compromiſe, March, 1785; but it is not expected that their agreement will be laſting.

The Porte ſtill retains a paſha in Egypt but this paſha, confined and watched in the caſtle of Cairo, is rather the priſoner of the Mamalouks, than the repreſentative of the ſultan.

THE STATES OF BARBARY*.

UNDER this head I ſhall rank the countries of, 1. Morocco and Fez; 2. Algiers; 3. Tunis; 4. Tripoli and Barca.

The empire of Morocco, including Fez, is bounded on the North by the Mediterranean ſea; on the South, by Tafilet; and on the Eaſt, by Segelmeſſa and the kingdom of Algiers, being 500 miles in length, and 480 in breadth.

Fez, which is now united to Morocco, is about 125 miles in length, and much the ſame in breadth. It lies between the kingdom of Algiers to the Eaſt, and Morocco on the South, and is ſurrounded in other parts by the ſea.

Algiers, formerly a kingdom, is bounded on the Eaſt by the kingdom of Tunis, on the North by the Mediterranean, on the South by Mount Atlas, and on the Weſt by the kingdoms of Morocco and Tafilet. According to Dr. Shaw, who reſided 12 years at Algiers in quality of chaplain to the Britiſh factory, and has corrected many errors of ancient and modern geographers reſpecting the ſtates of Barbary, this country extends in length 480 miles along the coaſt of the Mediterranean, and is between 40 and 100 miles in breadth.

Tunis is bounded by the Mediterranean on the North and Eaſt; by the kingdom of Algiers on the Weſt; and by Tripoli, with part of Biledulgerid, on the South; being 220 miles in length from North to South, and 170 in breadth from Eaſt to Weſt.

Tripoli, including Barca, is bounded on the North by the Mediterranean ſea; on the South by the country of the Beriberies; on the Weſt by the kingdom of Tunis, Biledulgerid, and a territory of the Gadamis; and on the Eaſt by Egypt: extending about 1100 miles along the ſea-coaſt; and the breadth is from 100 to 300 miles.

* This territory was called Barbaria by the Greeks and Romans, from Berber, in the original ſignifying *ſhepherd*, which was the original occupation of the inhabitants. Bruce's Travels, Vol. I. p. 384.

Each

Each capital bears the name of the ſtate or kingdom to which it belongs, but the capital of Biledulgerid (the ancient Numidia) is Dara.

This being premiſed, I ſhall conſider the Barbary ſtates as forming (which they really do) a great political confederacy, however independent each may be as to the exerciſe of its internal policy; nor is there a greater difference than happens in different provinces of the ſame kingdom, in the cuſtoms and manners of the inhabitants.

AIR AND SEASONS.] The air of Morocco is mild, as is that of Algiers, and indeed of all the other ſtates, except in the months of July and Auguſt.

SOIL, VEGETABLE AND ANIMAL PRODUCTIONS, BY SEA AND LAND.] Theſe ſtates, under the Roman empire were juſtly denominated the garden of the world; and to have a reſidence there, was conſidered as the higheſt ſtate of luxury. The produce of their ſoil formed thoſe magazines, which furniſhed all Italy, and great part of the Roman empire, with corn, wine, and oil. Though the lands are now uncultivated, through the oppreſſion and barbarity of their conſtitution, yet they are ſtill fertile, not only in the above mentioned commodities, but in dates, figs, raiſins, almonds, apples, pears, cherries, plums, citrons, lemons, oranges, pomegranates, with plenty of roots and herbs in their kitchen gardens. Excellent hemp and flax grow on their plains; and, by the report of Europeans, who have lived there for ſome time, the country abounds with all that can add to the pleaſures of life; for their great people find means to evade the ſobriety preſcribed by the Mahometan law, and make free with excellent wines and ſpirits, of their own growth and manufacture. Algiers produces ſalt-petre, and great quantities of excellent ſalt; and lead and iron have been found in ſeveral places of Barbary.

Neither the elephant nor the rhinoceros are to be found in the ſtates of Barbary; but their deſerts abound with lions, tigers, leopards, hyænas, and monſtrous ſerpents. The Barbary horſes were formerly very valuable, and thought equal to the Arabian. Though their breed is now ſaid to be decayed, yet ſome very fine ones are occaſionally imported into England. Dromedaries, aſſes, mules, and kumrahs, a moſt ſerviceable creature, begot by an aſs upon a cow, are their beaſts of burden; but from the ſervices of the camel they derive the greateſt advantages. This uſeful quadruped enables the African to perform his long and toilſome journies acroſs that continent. The camel is, therefore, (ſays Mr. Bruce) emphatically called the *ſhip of the deſert*. He ſeems to have been created for this very trade, endued with parts and qualities adapted to the office he is employed to diſcharge. The drieſt thiſtle, and the bareſt thorn, is all the food this uſeful animal requires, and even theſe, ſo ſave time, he eats while advancing on his journey, without ſtopping, or occaſioning a moment of delay. As it is his lot to croſs immenſe deſerts, where no water is found, and countries not even moiſtened by the dew of heaven, he is endued with the power at one watering-place to to lay in a ſtore with which he ſupplies himſelf for thirty days to come. To contain this enormous quantity of fluid, nature has formed large ciſterns within him, from which, once filled, he draws at pleaſure the quantity he wants, and pours it into his ſtomach with the ſame effect as if he then drew from a ſpring, and with this he travels, patiently and vigorouſly, all day long, carrying a prodigious load upon him, through countries infected with poiſonous winds, and glowing with parching and never-cooling ſands. Their cows are but ſmall, and barren of milk their ſheep yield but indifferent fleeces, but are very large, as are their goats. Bears, porcupines, foxes, apes, hares, rabbits, ferrets, weaſels, moles, cameleons, and all kinds of reptiles are found here. Beſides vermin, ſays Dr. Shaw (ſpeaking of his travels through Barbary), the apprehenſions we were under, in ſome parts at leaſt of this country, of being bitten or ſtung by the ſcorpion, the viper, or

the venomous ſpider, rarely failed to interrupt our repoſe; a refreſhment ſo very grateful and ſo highly neceſſary to a weary traveller. Partridges and quails, eagles, hawks, and all kinds of wild-fowl, are found on this coaſt; and of the ſmaller birds, the capſa-ſparrow is remarkable for its beauty, and the ſweetneſs of its note, which is thought to exceed that of any other bird, but it cannot live out of its own climate. The ſeas and bays of Barbary abound with the fineſt and moſt delicious fiſh of every kind, and were preferred by the ancients to thoſe of Europe.

POPULATION, INHABITANTS, MANNERS, CUSTOMS, AND DIVERSIONS. Morocco was formerly far more populous than it is now, if, as travellers ſay, its capital contained 100,000 houſes, whereas at preſent it is thought not to contain above 25,000 inhabitants: nor can we think that the other parts of the country are more populous, if it is true that their king or emperor has 80,000 horſe and foot, of foreign negroes, in his armies.

The city of Algiers is ſaid to contain 100,000 Mahometans, 15,000 Jews, and 2000 Chriſtian ſlaves; but no eſtimate can be formed as to the populouſneſs of its territory. Some travellers report, that it is inhabited by a friendly hoſpitable people, who are very different in their manners and character from thoſe of the metropolis.

Tunis is the moſt poliſhed republic of all the Barbary ſtates. The capiral which alſo bears the name of Tunis, is a large and flouriſhing city. The people are more civilized than in Algiers, and the government milder, but the climate is very far from being ſo good. Tunis is low, hot, and damp; and deſtitute of good water, with which (according to Mr. Bruce) Algiers is ſupplied from a thouſand ſprings. It contains 10,000 families, and above 3000 tradeſmen's ſhops, and its ſuburbs conſiſt of 1000 houſes. The Tuniſines are indeed exceptions to the other ſtates of Barbary; for even the moſt civiliſed of the European governments might improve from their manners. Their diſtinctions are well kept up, and proper reſpect is paid to the military, mercantile, and learned profeſſions. They cultivate friendſhip with the European ſtates; arts and manufactures have been lately introduced among them; and the inhabitants are ſaid at preſent to be well acquainted with the various labours of the loom. The Tuniſine women are exceedingly handſome in their perſons; and though the men are ſun-burnt, the complexion of the ladies is very delicate, nor are they leſs neat and elegant in their dreſs; but they improve the beauty of their eyes by art, particularly the powder of lead-ore, the ſame pigment, according to the opinion of the learned Dr. Shaw, that Jezebel made uſe of when ſhe is ſaid (2 Kings, chap. ix. verſe 30.) to have painted her face; the words of the original being, that ſhe ſet off her eyes with the powder of lead-ore. The gentlemen, in general, are ſober, orderly, and clean in their perſons, their behaviour genteel and complaiſant, and a wonderful regularity reigns through all the ſtreets and city.

Tripoli was once the richeſt, moſt populous, and opulent of all the ſtates on the coaſt; but is now much reduced, and the inhabitants, who are ſaid to amount to between 4 and 500,000, have all the vices of the Algerines.

Their manners are much of a piece with thoſe of the Egyptians already deſcribed. The ſubjects of the Barbary ſtates, in general ſubſiſting by piracy, are allowed to be bold intrepid mariners, and will fight deſperately when they meet with a prize at ſea. They are notwithſtanding far inferior to the Engliſh, and other European ſtates, in both the conſtruction and management of their veſſels. They are, if we except the Tuniſines, void of all arts and literature. The miſery and poverty of the inhabitants of Morocco, who are not immediately in the emperor's ſervice, are beyond all deſcription; but thoſe who inhabit the inland parts of the country

are

are an hoſpitable inoffenſive people; and indeed it is a general obſervation, that the more diſtant the inhabitants of thoſe ſtates are from the ſeats of their government, their manners are the more pure. Notwithſtanding their poverty, they have a livelineſs about them, eſpecially thoſe who are of the Arabic deſcent, that gives them an air of contentment; and having nothing to loſe, they are peaceable among themſelves. The Moors are ſuppoſed to be the original inhabitants, but are now blended with the Arabs, and both are cruelly oppreſſed by a handful of inſolent domineering Turks, the refuſe of the ſtreets of Conſtantinople.

DRESS.] The dreſs of theſe people is a linen ſhirt, over which they tie a ſilk or cloth veſtment with a ſaſh, and over that a looſe coat. Their drawers are made of linen. The arms and legs of the wearer are bare, but they have ſlippers on their feet; and perſons of condition ſometimes wear buſkins. They never move their turban, but pull off their ſlippers when they attend religious duties, or the perſon of their ſovereign. They are fond of ſtriped and fancied ſilks. The dreſs of the women is not very different from that of the men, but their drawers are longer, and they wear a ſort of cawls on their heads inſtead of a turban. The chief furniture of their houſes conſiſts of carpets and mattreſſes, on which they ſit and lie. In eating, their ſlovenlineſs is ſhocking. They are prohibited gold and ſilver veſſels; and their meat, which they ſwallow by handfuls, is boiled or roaſted to rags.

RELIGION.] All foreigners are here allowed the open profeſſion of their religion, but the inhabitants of theſe ſtates are Mahometans; and many ſubjects of Morocco follow the tenets of the Hamed, a modern ſectary, and an enemy to theſe ancient doctrine of the caliſs. All of them have much reſpect for idiots; whoſe protection in ſome caſes ſcreens offenders from puniſhment, for the moſt notorious crimes. In the main, however, the Moors of Barbary, as the inhabitants of theſe ſtates are now promiſcuouſly called, (becauſe the Saracens firſt entered Europe from Mauritania, the country of the Moors), have adopted the very worſt parts of the Mahometan religion, and ſeem to have retained only as much of it as countenances their vices. Adultery in the women is puniſhed with death; but though the men are indulged with a plurality of wives and concubines, they commit the moſt unnatural crimes with impunity.

LANGUAGE.] As the ſtates of Barbary poſſeſs thoſe countries that formerly went by the name of Mauritania and Numidia, the ancient African language is ſtill ſpoken in ſome of the inland countries, and even by ſome inhabitants of the city of Morocco. In the ſea-port towns, and maritime countries, a baſtard kind of Arabic is ſpoken; and ſea-faring people are no ſtrangers to that medley of living and dead languages, Italian, French, Latin, &c. that is ſo well known in all the ports of the Mediterranean, by the name of *Lingua Franca*.

ANTIQUITIES AND CURIOSITIES, NATURAL AND ARTIFICIAL. This article is well worth the ſtudy of an antiquary, but the ſubjects of it are difficult of acceſs, being ſcattered over a wide extent of country, inhabited by ignorant and inhoſpitable barbarians. The reader can ſcarcely doubt that the countries which contained Carthage, and the pride of the Phœnician, Greek, and Roman works, are replete with the moſt curious remains of antiquity. Some memorials of the Mauritanian and Numidian greatneſs are ſtill to be met with, and many ruins of cities which bear evidences of their ancient grandeur and populouſneſs. Theſe point out the old Julia Cæſarea of the Romans, which was little inferior in magnificence to Carthage itſelf. A few of the aqueducts of Carthage are ſaid to be ſtill remaining,

but no veſtige of its walls *. The ſame is the fate of Utica, famous for the retreat and death of Cato, and many other renowned cities of antiquity; and ſo over-run is the country with barbariſm, that their very ſcites are not known, even by their ruins, amphitheates, and other public buildings, which remain ſtill in tolerable preſervation. Beſides thoſe of claſſical antiquity, many Saracen monuments, of the moſt ſtupendous magnificence, are likewiſe found in this vaſt tract; theſe were erected under the califs of Badgad, and the ancient kings of the country, before it was ſubdued by the Turks, or reduced to its preſent form of government. Their walls form the principal fortifications in the country, both inland and maritime. We know of few or no natural curioſities belonging to this country, except its ſalt-pits, which in ſome places take up an area of ſix miles. Dr. Shaw mentions ſprings found here that are ſo hot as to boil a large piece of mutton very tender in a quarter of an hour.

CITIES AND PUBLIC BUILDINGS.] Mention has already been made of Morocco, the capital of that kingdom, but now almoſt in ruins, the court having removed to Mequinez, a city of Fēz, 30 miles diſtant, and very populous. Incredible things are recorded of the magnificent palaces in both cities; but the common people live in a dirty ſlovenly manner.

The city of Algiers is not above a mile and a half in circuit, though it is computed to contain near 120,000 inhabitants, 15,000 houſes, and 107 moſques. Their public baths are large, and handſomely paved with marble. The proſpect of the country and ſea from Algiers is very beautiful, being built on the declivity of a mountain; but the city, though for ſeveral ages it has braved ſome of the greateſt powers in Chriſtendom, could make but a faint defence againſt a regular ſiege, and it is ſaid, that three Engliſh fifty-gun ſhips might batter it about the ears of the inhabitants from the harbour. If ſo, the Spaniards muſt have been very deficient either in courage or conduct. They attacked it in the year 1775, by land and by ſea, but were repulſed with great loſs, though they had near 20,000 foot and 2000 horſe, and 47 king's ſhips of different rates, and 346 tranſports. In the year 1783 and 84, they alſo renewed their attacks by ſea to deſtroy the city and gallies, but after ſpending a quantity of ammunition, bombs, &c. were forced to retire without either its capture or extinction. The mole of the harbour is 500 paces in length, extending from the continent to a ſmall iſland where there is a caſtle and large battery.

The kingdom of Tunis, which is naturally the fineſt of all theſe ſtates, contains the remains of many noble cities, ſome of them ſtill in good condition. The capital, about 30 miles ſouth of old Carthage, has fortifications, and is about three miles in circumference. The ſtreets (ſays Mr. Stanley) are narrow, as in moſt hot countries; and, not being paved, they are dirty in winter, and duſty in ſummer. The houſes are not magnificent, but neat and commodious; moſt of them have a porch, or gateway, with benches on each ſide, covered with mats, where the maſter of the houſe tranſacts his buſineſs, and receives his friends; no perſons, except on ſome extraordinary occaſions, having any farther admiſſion. Beyond this is an open court paved with marble ſtone, or glazed tiles, according to the ability of the owner, covered over, and ſheltered from the ſun and weather, by a cloth which by means of pullies

* Mr. Stanley, having had frequent opportunities of going over the remains, is of opinion that this celebrated city was about fifteen miles in circumference. There are three eminences, which are ſo many heaps of fine marble pounded together, and were, in all probability, the ſites of temples, and other diſtinguiſhed buildings. He obſerves, that the preſent buildings are not the remains of the ancient city deſtroyed by the Romans, who intirely raſed it, and ploughed up the very foundations. They are the ruins of the city which was built on the ſite of the former, and which was deſtroyed by the Saracens in the beginning of the ſeventh century.

may

may be folded or unfolded at pleaſure. When entertainments are given, the company meets in the court, which is always kept very clean. The public exchange for merchants and their goods is commodious; but the inhabitants of Tunis are diſtreſſed for want of freſh water.

Moſt of the water uſed in this city is rain-water, preſerved in ciſterns, into which it is conveyed by pipes from the roofs of the houſes, which are all flat. Theſe ciſterns are ſo large, that they hold enough to ſerve the families five or ſix months. Almoſt every ciſtern has the baſe of a marble column hollowed out to cover the mouth; thouſands of them being put to this uſe all over the country.

Merſa, two ſhort miles from Carthage, and eleven from Tunis, is a very pleaſant ſituation. Here the bey has two country-houſes, one of which has been a coſtly work, built by Haſſan Bey, ſurnamed the Good. From theſe houſes are orange gardens, reaching almoſt to the ſea-ſhore; on the edge of which is a famous well of ſweet water, eſteemed the beſt and lighteſt in the kingdom; and cloſe to this a coffee-houſe. Numbers of people from the neighbouring places, reſort here to drink coffee, and a glaſs of this natural luxury, ſo peculiarly enjoyed in the eaſtern countries; few perſons, except thoſe who have lived in hot climates, knowing the bleſſing of a good ſpring.

In the middle of the court is a large mulberry-tree, under the ſhade of which they ſit and ſmoke, and play at cheſs, inhaling the comfortable ſea-breeze, that refreſhes this charming ſpot. Nothing can be more pictureſque, than to ſee the Moors gallantly mounted, with their attendants, complimenting one another.

The water is drawn up by a camel, with the Perſian wheel, and diſtributed to the neighbouring countries.

The city of Tripoli conſiſts of an old and new town, the latter being the moſt flouriſhing; but never can make any conſiderable figure, on account of the inconveniencies attending its ſituation, particularly the want of ſweet water. The city of Oran, lying upon this coaſt, is about a mile in circumference, and is fortified both by art and nature. It was a place of conſiderable trade, and the object of many bloody diſputes between the Spaniards and the Moors. Conſtantina was the ancient Cirta, and one of the ſtrongeſt cities in Numidia, being inacceſſible on all ſides, except the ſouth-weſt.

Beſides the above towns and cities, many others, formerly of great renown, lie ſcattered up and down this immenſe tract of country. The city of Fez, at preſent the capital of the kingdom ſo called, is ſaid to contain near 300,000 inhabitants, beſides merchants and foreigners. Its moſques amount to 500; one of them magnificent beyond deſcription, and about a mile and a half in circumference. Mequinez is eſteemed the great emporium of all Barbary. Sallee was formerly famous for the piracy of its inhabitants. Tangier, ſituated about two miles within the ſtraits of Gibraltar, was given by the crown of Portugal as part of the dowry of queen Catharine, conſort of Charles II. of England. It was intended to be to the Engliſh what Gibraltar is now; and it muſt have been a moſt noble acquiſition, had not the miſunderſtandings between the king and his parliament occaſioned him to blow up its fortifications and demoliſh its harbour; ſo that from being one of the fineſt cities in Africa, it is now little better than a fiſhing town. Ceuta, upon the ſame ſtrait, almoſt oppoſite to Gibraltar, is ſtill in the hands of the Spaniards, but often, if not always, beſieged or blocked up by the Moors. Tetuan, which lies within twenty miles of Ceuta, is now but an ordinary town, containing about 800 houſes; but the inhabitants are ſaid to be rich, and tolerably civilized in their manners.

The provinces of Suz, Tafilet, and Geſula, form no part of the ſtates of Barbary, though the king of Morocco pretends to be their ſovereign: nor do they contain any thing that is particularly curious.

Zaara, is a deſert country, thinly peopled and nearly deſtitute of both water and proviſions.

MANUFACTURES AND COMMERCE.] The lower ſubjects of theſe ſtates know very few imaginary wants, and depend partly upon their piracies to be ſupplied with neceſſary utenſils and manufactures; ſo that their exports conſiſt chiefly of leather, fine mats, embroidered handkerchiefs, ſword-knots, and carpets, which are cheaper, and ſofter than thoſe in Turkey, though not ſo good in other reſpects. As they leave almoſt all their commercial affairs to the Jews and Chriſtians ſettled among them; the latter have eſtabliſhed ſilk and linen works, which ſupply the higher ranks of their own ſubjects. They have no ſhips that, properly ſpeaking, are employed in commerce; ſo that the French and Engliſh carry on the greateſt part of their trade. Their exports, beſides thoſe already mentioned, conſiſt of elephants' teeth, oſtrich feathers, copper, tin, wool, hides, honey, wax, dates, raiſins, olives, almonds, gum-arabic, and ſandrac. The inhabitants of Morocco are likewiſe ſaid to carry on a conſiderable trade by caravans to Mecca, Medina, and ſome inland parts of Africa, from whence they bring back vaſt numbers of negroes, who ſerve in their armies, and are ſlaves in their houſes and fields.

In return for their exports, the Europeans furniſh them with timber, artillery of all kinds, gunpowder, and whatever they want, either in their public or private capacities; the particulars of which are too many to ſpecify. The duties paid by the Engliſh in the ports of Morocco, are but half thoſe paid by other Europeans. It is a general obſervation, that no nation is fond of trading with theſe ſtates, not only on account of their capricious deſpotiſm, but the villany of their individuals, both natives and Jews, many of whom take all opportunities of cheating, and when detected are ſeldom puniſhed.

It has often been thought ſurpriſing, that the Chriſtian powers ſhould ſuffer their marine to be inſulted by thoſe barbarians, who take the ſhips of all nations with whom they are not at peace, or rather, who do not pay them a ſubſidy either in money or commodities. We cannot account for this forbearance otherwiſe than by ſuppoſing, firſt, that a breach with them might provoke the Porte, who pretends to be their lord paramount; ſecondly, that no Chriſtian power would be fond of ſeeing Algiers, and the reſt of that coaſt, in poſſeſſion of another; and, thirdly, that nothing could be got by a bombardment of any of their towns, as the inhabitants would inſtantly carry their effects to their deſerts and mountains, ſo that the benefit, reſulting from the conqueſt, muſt be tedious and precarious.

CONSTITUTION AND GOVERNMENT.] In Morocco, government cannot be ſaid to exiſt. The emperors have for ſome ages been parties, judges, and even executioners with their own hands, in all criminal matters; nor is their brutality more incredible than the ſubmiſſion with which their ſubjects bear it. In the abſence of the emperor, every military officer has the power of life and death in his hand, and it is ſeldom that they mind the form of a judicial proceeding. Some veſtiges, however, of the califate government ſtill continue; for in places where no military officer reſides, the mufti or high-prieſt is the fountain of all juſtice, and under him the cadis, or civil officers, act as our juſtices of the peace. Though the emperor of Morocco is not immediately ſubject to the Porte, yet he acknowledges the Grand Signior to be his ſuperior, and he pays him a diſtant allegiance as the chief repreſentative of Mahomet. What I have ſaid of Morocco is applicable to Fez, both kingdoms being now under one emperor.

Though Algiers, Tunis, and Tripoli, have each of them a Turkiſh paſha or dey, who governs in the name of the Grand Signior, yet very little regard is paid by his ferocious ſubjects to his authority. He cannot even be ſaid to be nominated by

the

the Porte. When a vacancy of the government happens, which it commonly does by murder, every ſoldier in the army has a vote in chooſing the ſucceeding dey; and though the election is often attended with bloodſhed, yet it is no ſooner fixed than he is cheerfully recogniſed and obeyed. It is true, he muſt be confirmed by the Porte; but that is ſeldom refuſed, as the divan is no ſtranger to the diſpoſitions of the people. The power of the dey is deſpotic; and the income of the dey of Algiers amounts to about 150,000l. a year, without greatly oppreſſing his ſubjects, who are very tenacious of their property. A detachment of the army of their ſtates is annually ſent into each province to collect the tribute from the Moors and Arabs; and the prizes taken at ſea, ſometimes equal the taxes laid upon the natives. Theſe deys pay ſlight annual tributes to the Porte. When the grand Signior is at war with a Chriſtian power, he requires their aſſiſtance, as he does that of the king of Morocco; but he is obeyed only as they think proper. Subordinate to the deys are officers, both military and civil; and in all matters of importance, the dey is expected to take the advice of a common council, which conſiſts of thirty paſhas. Theſe paſhas ſeldom fail of forming parties, among the ſoldiers, againſt the reigning dey, whom they make no ſcruple of aſſaſſinating, even in council; and the ſtrongeſt candidate then fills his place. Sometimes he is depoſed; ſometimes, though but very ſeldom, he reſigns his authority to ſave his life; and it is ſeldom he dies a natural death upon the throne. The authority of the dey is unlimited; but an unſucceſsful expedition, or too pacific a conduct, ſeldom fails to put an end to his life and government.

REVENUES.] I have already mentioned thoſe of Algiers, but they are now ſaid to be exceeded by Tunis. They conſiſt of a certain proportion of the prizes taken from Chriſtians, a ſmall capitation tax, and the cuſtoms paid by the Engliſh, French, and other nations, who are ſuffered to trade with thoſe ſtates. As to the king of Morocco, we can form no ideas of his revenues, becauſe none of his ſubjects can be ſaid to poſſeſs any property. From the manner of his living, his attendance and appearance, we may conclude he does not abound in riches. The ranſoms of Chriſtian ſlaves are his perquiſites. He ſometimes ſhares in the veſſels of the other ſtates, which entitles him to a part of their prizes. He claims a tenth of the goods of his Mahometan ſubjects, and ſix crowns a year from every Jew merchant. He has likewiſe conſiderable profits in the Negroland and other caravans, eſpecially the ſlave-trade towards the ſouth. It is thought that the whole of his ordinary revenue, in money, does not exceed 165,000l. a year.

MILITARY STRENGTH AT SEA AND LAND.] By the beſt accounts we have received, the king of Morocco can bring to the field 100,000 men; but the ſtrength of this army conſiſts of cavalry mounted by his negro ſlaves. Thoſe wretches are brought young to Morocco, know no other ſtate but ſervitude, and no other maſter but their king, and prove the firmeſt ſupport of his tyranny. About the year 1727, all the naval force of Morocco conſiſted only of three ſmall ſhips, which lay at Sallee, and, being full of men, ſometimes brought in prizes. The Algerines maintain about 6500 foot, conſiſting of Turks, and cologlies, or the ſons of ſoldiers. Part of them ſerve as marines on board their veſſels. About 1000 of them do garriſon duty, and part are employed in fomenting differences among the neighbouring Arab princes. Beſides theſe, the dey can bring 2000 Mooriſh horſe into the field; but as they are enemies to the Turks, they are little truſted. Thoſe troops are under excellent diſcipline, and the deys of all the other Barbary ſtates keep up a force in proportion to their abilities; ſo that a few years ago they refuſed to ſend any tribute to the Turkiſh emperor, who ſeems to be ſatisfied with the ſhadow of obedience which they pay him.

It is very remarkable, that though the Carthaginians, who inhabited this very country of Barbary, had greater fleets and a more extenſive commerce than any other nation, or than all the people upon the face of the earth, when that ſtate flouriſhed, the preſent inhabitants have ſcarcely any merchant-ſhips belonging to them, or indeed any other than what Sallee, Algiers, Tunis, and Tripoli fit out for piracy; which, though increaſed ſince the laſt attack of the Spaniards, are now but few and ſmall, and ſome years ago did not exceed ſix ſhips from thirty-ſix to fifty guns. The admiral's ſhip belongs to the government; the other captains are appointed by private owners, but ſubject to military law. With ſuch a contemptible fleet, theſe infidels not only haraſs the nations of Europe, but oblige them to pay a kind of tribute by way of preſents.

History.] There perhaps is no problem in hiſtory ſo unaccountable as the decline and fall of the ſplendor, power, and glory of the ſtates of Barbary; which, when Rome was miſtreſs of the world, formed the faireſt jewel in the imperial diadem. It was not till the ſeventh century that, after theſe ſtates had been by turns in poſſeſſion of the Vandals and the Greek emperors, the califs or Saracens of Bagdad conquered them, and from thence became maſters of almoſt all Spain, from whence their poſterity was totally driven about the year 1492, when the exiles ſettled among their friends and countrymen on the Barbary coaſt. This naturally begot a perpetual war between them and the Spaniards, who preſſed them ſo hard, that they called to their aſſiſtance the two famous brothers Barbaroſſa, who were admirals of the Turkiſh fleet, and who, after breaking the Spaniſh yoke, impoſed upon the inhabitants of all thoſe ſtates (excepting Morocco) their own. Some attempts were made by the emperor Charles V. to reduce Algiers and Tunis, but they were unſucceſsful; and, as already obſerved, the inhabitants have in fact ſhaken off the Turkiſh yoke likewiſe.

The emperors or kings of Morocco are the ſucceſſors of thoſe ſovereigns of that country who were all called xeriffs, and whoſe powers reſembled that of the califate of the Saracens. They have been in general a ſet of bloody tyrants; though they have had among them ſome able princes, particularly Muley Moluc, who defeated and killed Don Sebaſtian, king of Portugal. They have lived in almoſt a continual ſtate of warfare with the kings of Spain and other Chriſtian princes ever ſince: nor does the crown of Great-Britain ſometimes diſdain, as in the year 1769, to purchaſe their friendſhip with preſents.

ABYSSINIA.

Situation and Extent.

Miles.		Degrees.	Sq. Miles.
Length 900 Breadth 800	between	6 and 20 north latitude 26 and 44 eaſt longitude.	378,000.

Boundaries.] IT is bounded on the north by the kingdom of Sennaar, or Nubia; on the eaſt, partly by the Red Sea, and partly by Dancala; on the weſt by Gorham; and on the ſouth by the kingdom of Gingiro, and Alaba.

It contains (according to Mr. Bruce, from whom the ſubſequent account is chiefly taken) the following provinces, viz. 1. Maſuah; 2. Tigre; 3. Samen; 4. Begemder,

der; 5. Amhara; 6. Walaka; 7. Gojam; 8. Damot; 9. Maitſha; 10. Dembea; 11. Kuara; 12. Nara.

AIR AND SEASONS.] The rainy ſeaſon continues for ſix months of the year, from April to September, which is ſucceeded, without interval, by a cloudleſs ſky, and vertical ſun; and cold nights, which, as immediately follow theſe ſcorching days. The earth, notwithſtanding the heat of theſe days, is yet perpetually cold, ſo as to feel diſagreeably to the ſoles of the feet; partly owing to the ſix months rains, when no ſun appears, and partly to the perpetual equality of nights and days.

DISEASES OF THE CLIMATE.] The whole coaſt of the Red Sea from Suez to Babelmandel, but more eſpecially between the tropics, is very unwholeſome. Violent fevers, called there *nedad*, make the principal figure in this fatal liſt, and generally terminate the third day in death. If the patient ſurvives till the fifth day, he very often recovers by drinking water only, and throwing a quantity of cold water upon him, even in his bed, where he is permitted to lie without attempting to make him dry, or change his bed, till another deluge adds to the firſt.

There is no remedy ſo ſovereign here as the bark; but it muſt be given in very different times and manners from thoſe purſued in Europe. Were a phyſician to take time to prepare his patient for the bark, by firſt giving him purgatives, he would be dead of the fever before his preparation was completed.

The next common diſeaſe in the low country of Arabia, the intermediate iſland of Maſuah, and all Abyſſinia, (for the diſeaſes are exactly ſimilar in all this tract) is the tertian fever, which is in nothing different from our tertian, and is ſucceſſfully treated here in the ſame manner as in Europe. As no ſpecies of this diſeaſe, at leaſt that I have ſeen, (ſays our author Mr. Bruce) menaces the patient with death, eſpecially in the beginning of the diſorder, ſome time may be allowed for preparation to thoſe who doubt the effect of bark.

There is a ſpecies of dyſentery here, which begins with a conſtant diarrhœa, when the inteſtines are at laſt excoriated, and the mucus voided by the ſtools. This diſeaſe is rarely cured, if it begins with the rainy ſeaſon. But if, on the contrary, it happen either in the ſunny ſix months, or the end of the rainy ones immediately next to them, ſmall doſes of ipecacuanha either carry it off, or it changes into an intermitting fever, which yields afterwards to the bark.

The next diſeaſe, which we may ſay is endemial, is called *hanzeer*, the *hogs* or the *ſwine*, and is a ſwelling of the glands of the throat, and under the arms. This the ignorant inhabitants endeavour to bring to a ſuppuration, but in vain; they then open them in ſeveral places; a ſore and running follows, and a diſeaſe very much reſembling what in Europe is called the evil.

The next (though not a dangerous complaint) has a very terrible appearance. Small tubercules or ſwellings appear all over the body, but thickeſt in the thighs, arms, and legs. Theſe ſwellings go and come for weeks together without pain; though the legs often ſwell to a monſtrous ſize, as in the dropſy. Sometimes the patients have ulcers in their noſes and mouths, not unlike thoſe which are one of the malignant conſequences of the venereal diſeaſe. The ſmall ſwellings or eruptions, when ſqueezed, very often yield blood; in other reſpects the patient is generally in good health, ſaving the pain the ulcers give him, and the ſtill greater uneaſineſs of mind which he ſuffers from the ſpoiling the ſmoothneſs of his ſkin; for all the nations in Africa within the tropics are wonderfully affected at the ſmalleſt eruption or roughneſs of the ſkin. A black of Sennaar will hide himſelf in the houſe where it is dark, and is not to be ſeen by his friends, if he ſhould have two or three pimples on any part of his body; nor is there any remedy, however violent, which they will not fly to for immediate relief. Scars and wounds are no blemiſhes; and for

three or four pimples on their bracelet arm, they will ſuffer the application of a red hot iron with great reſolution and conſtancy.

The next complaint I ſhall mention, as common in theſe countries, is called *farenteit*, a corruption of an Arabic word, which ſignifies the worm of Pharaoh; all bad things being by the Arabs attributed to theſe poor kings, who ſeem to be looked upon by poſterity as the evil genii of the country which they once governed.

This extraordinary animal only afflicts thoſe who are in conſtant habit of drinking ſtagnant water; and, far from affecting the fleſhy parts of the body, it generally comes out where the bone has leaſt fleſh upon it. Upon looking at this worm, on its firſt appearance, a ſmall black head is extremely viſible, with a hooked beak, of a whitiſh colour. Its body is ſeemingly of a white ſilky texture, very like a ſmall tendon, bared, and perfectly cleaned. After its appearance, the natives of theſe countries, who are uſed to it, ſeize it gently by the head, and wrap it round a ſmall piece of ſilk, or bird's feather. Every day, or ſeveral times a-day, they try to wind it up upon the quill as far as it comes readily; and, upon the ſmalleſt reſiſtance, they give over, for fear of breaking it. I have ſeen, (ſays Mr. Bruce) five feet or more of this extraordinary animal, winded out with invincible patience, in the courſe of three weeks. No inflammation then remained, and ſcarcely any redneſs round the edges of the aperture, only a ſmall quantity of lymph appeared in the hole or puncture, which ſcarcely iſſued out upon preſſing. In three days it was commonly well, and left no ſcar or dimple implying loſs of ſubſtance.

I myſelf (ſays our author) experienced this complaint. I was reading upon a ſofa at Cairo, a few days after my return from Upper Egypt, when I felt in the fore part of my leg, upon the bone, about ſeven inches below the center of my knee-pan, an itching reſembling what follows upon the bite of a muſcheto. Upon ſcratching, a ſmall tumour appeared, very much like a muſcheto bite. The itching returned in about an hour afterwards; and being more intent upon my reading than my leg, I ſcratched it till the blood came. I ſoon after obſerved ſomething like a black ſpot, which had already riſen conſiderably above the ſurface of the ſkin. All medicine proved uſeleſs; and the diſeaſe not being known at Cairo, there was nothing for it but to have recourſe to the only received method of treating it in this country. About three inches of the worm was winded out upon a piece of raw ſilk in the firſt week, without pain or fever; but it was broken afterwards through the careleſſneſs and raſhneſs of the ſurgeon, when changing a poultice on board the ſhip in which I returned to France: a violent inflammation followed; the leg ſwelled ſo as ſcarce to leave appearance of knee or ancle; the ſkin, red and diſtended, ſeemed glazed like a mirror. The wound was now healed, and diſcharged nothing; and there was every appearance of mortification coming on. The great care and attention procured me in the lazaretto at Marſeilles, by a nation always foremoſt in the acts of humanity to ſtrangers, and the attention and ſkill of the ſurgeon, recovered me from this troubleſome complaint.

The laſt I ſhall mention of theſe endemial diſeaſes, and the moſt terrible of all others that can fall to the lot of man, is the elephantiaſis, which ſome have choſen to call the leproſy, or Lepra Arabum; though in its appearance, and in all its appearances and ſtages, it no more reſembles the leproſy of Paleſtine, (which is, I apprehend, the only leproſy that we know) than it does the gout or the dropſy. I never ſaw the beginning of this diſeaſe. During the courſe of it, the face is often healthy to appearance; the eyes vivid and ſparkling: thoſe affected have ſometimes a kind of dryneſs upon the ſkin of their backs, which, upon ſcratching, I have ſeen leave a mealineſs, or whiteneſs; the only circumſtance, to the beſt of my recollection,

tion, in which it reſembled the leproſy, but it has no ſcalineſs. The hair, too, is of its natural colour; not white, yelloviſh, or thin, as in the leproſy.

The chief ſeat of this diſeaſe is from the bending of the knee downwards to the ancle; the leg is ſwelled to a great degree, becoming one ſize from bottom to top, and gathered into circular wrinkles, like ſmall hoops or plaits; between every one of which there is an opening that ſeparates it all round from the one above, and which is all raw fleſh, or perfectly excoriated. From between theſe circular diviſions a great quantity of lymph conſtantly oozes. The ſwelling of the leg reaches over the foot, ſo as to leave about an inch or little more of it ſeen. It ſhould ſeem that the black colour of the ſkin, the thickneſs of the leg, and its ſhapeleſs form, and the rough tubercles, or excreſcences, very like thoſe ſeen upon the elephant, give the name to this diſeaſe, and form a ſtriking reſemblance between the diſtempered legs of the unfortunate individual of the human ſpecies, and thoſe of the noble quadruped the elephant, when in full vigour.

RULES OF HEALTH.] It will be very reaſonably expected, (ſays our ingenious traveller) that after this unfavourable account of the climate, and the uncertainty of remedies for theſe frequent and terrible diſeaſes, I ſhould ſay ſomething of the regimen proper to be obſerved there, in order to prevent what it ſeems doubtful whether we can ever cure: and as theſe rules apply to other warm climates, beſides Abyſſinia, we the more readily inſert them.

My firſt general advice to a traveller is this, to remember well what was the ſtate of his conſtitution before he viſited theſe countries, and what his complaints were, if he had any; for fear very frequently ſeizes us upon the firſt ſight of the many and ſudden deaths we ſee upon our firſt arrival, and our ſpirits are ſo lowered by perpetual perſpiration, and our nerves ſo relaxed, that we are apt to miſtake the ordinary ſymptoms of a diſeaſe, familiar to us in our own country, for the approach of one of theſe terrible diſtempers, that are to hurry us in a few hours into eternity. This has a bad effect in the very ſlighteſt diſorders; ſo that it hath become almoſt proverbial---"If you think you ſhall die, you will die".

If a traveller finds that he is as well after having been ſome time in this country as he was before entering it, his beſt way is to make no innovation in his regimen, further than in abating ſomething in the quantity. But if he is of a tender conſtitution, he cannot act more wiſely than to follow implicitly the regimen of ſober, healthy people of the country, without arguing upon European notions, or ſubſtituting what we conſider as ſuccedaneums to what we ſee uſed on the ſpot. *All ſpirits* are to be avoided; even bark is better in water than in wine. The ſtomach, being relaxed by profuſe perſpiration, needs ſomething to ſtrengthen, but not inflame, and enable it to perform digeſtion. For this reaſon (inſtinct we ſhould call it, if ſpeaking of beaſts) the natives of all eaſtern countries ſeaſon every ſpecies of food, even the ſimpleſt, and mildeſt, rice, ſo much with ſpices, eſpecially pepper, as abſolutely to bliſter a European palate.

Theſe powerful antiſeptics Providence has planted in theſe countries for this uſe; and the natives have, from the earlieſt times, had recourſe to them in proportion to the quantity they can procure. And hence, in theſe dangerous climates, the natives are as healthy as we are in our northern ones. Travellers in Arabia are diſguſted at this ſeemingly inflammatory food; and nothing is more common than to hear them ſay that they are afraid theſe quantities of ſpices will give them a fever. But did they ever feel themſelves heated by ever ſo great a quantity of black pepper? Spirits, they think, ſubſtituted to this, anſwer the ſame purpoſe. But does not the heat of your ſkin, the violent pain in your head, while the ſpirits are filtering through the

veſſels of your brains, ſhew the difference? And when did any ever feel a like ſenſation from black pepper, or any pepper eaten to exceſs in every meal?

I lay down then, as a poſitive rule of health that the warmeſt diſhes the natives delight in, are the moſt wholeſome ſtrangers can uſe in the putrid climates of the Lower Arabia, Abyſſinia, Sennaar, and Egypt itſelf; and that ſpirits, and all fermented liquors, ſhould be regarded as poiſons, and for fear of temptation, not ſo much as be carried along with you, unleſs as a menſtruum for outward applications.

Spring, or running water, if you can find it, is to be your only drink. You cannot be too nice, in procuring this article. But, as on both coaſts of the Red Sea you ſcarcely find any but ſtagnant water, the beſt way of obtaining wholeſome water is this: Take a quantity of fine ſand; waſh it from the ſalt quality with which it is impregnated; and ſpread it upon a ſheet to dry. Then nearly fill an oil-jar with water, and pour into it as much from a boiling kettle as would ſerve to kill all the animalcula and eggs that are in it. Then ſift the dried ſand, as ſlowly as poſſible, upon the ſurface of the water in the jar, till the ſand ſtand half a foot in the bottom of it. After letting it ſettle a night, draw it off by a hole in the jar with a ſpigot in it, about an inch above the ſand; then throw the remaining ſand out upon the cloth, and dry and waſh it again.

This proceſs is ſooner performed than deſcribed. The water is as limpid as the pureſt ſpring, and little inferior to the fineſt Spa. Drink largely of this without fear; according as your appetite requires. By violent perſpiration the aqueous part of your blood is thrown off; and it is not ſpirituous liquor can reſtore this, whatever ſtrength it may give you from another cauſe. When hot, and almoſt fainting with weakneſs from continual perſpiration, I have gone into a warm bath, and been immediately reſtored to ſtrength, as upon firſt riſing in the morning. Some perhaps will object, that this heat would have weakened and overpowered you; but the fact is otherwiſe; and the reaſon is, the quantity of water, taken up by your abſorbing veſſels, reſtores to your blood that finer fluid which was thrown off, and then the uneaſineſs occaſioned by that want ceaſes, for it is the want of that, we call uneaſineſs.

In Nubia never ſcruple to throw yourſelf into the coldeſt river or ſpring you can find, in whatever degree of heat you are. The reaſon of the difference in Europe is, that when by violence you have raiſed yourſelf to an extraordinary degree of heat, the cold water in which you plunge yourſelf checks your perſpiration, and ſhuts your pores ſuddenly. The medium is itſelf too cold, and you do not uſe force ſufficient to bring back the perſpiration, which nought but action occaſioned; whereas, in theſe warm countries, your perſpiration is natural and conſtant, though no action be uſed, only from the temperature of the medium; therefore, though your pores are ſhut the moment you plunge yourſelf in the cold water, the ſimple condition of the outward air again covers you with pearls of ſweat the moment you emerge; and you begin the expence of the aqueous part of your blood afreſh from the new ſtock that you have laid in by your immerſion.

For this reaſon, if you are well, deluge yourſelf from head to foot, even in the houſe, where water is plenty, by directing a ſervant to throw buckets upon you at leaſt once a-day when you are hotteſt; not from any imagination that the water braces you, as it is called, for your bracing will laſt you only a very few minutes; but theſe copious inundations will carry watery particles into your blood, though not equal to bathing in running ſtreams, where the total immerſion, the motion of the water, and the action of the limbs, all conſpire to the benefit you are in queſt of. As to cold water bracing in thoſe climates, I am perſuaded it is an idea not founded in truth. By obſervation it has appeared often to me, that when heated by

by violent exerciſe, I have been much more relieved, and my ſtrength more completely reſtored by the uſe of a tepid bath, than by an equal time paſſed in a cold one.

Do not fatigue yourſelf if poſſible. Exerciſe is not either ſo neceſſary, or ſalutary here as in Europe. Uſe fruits ſparingly, eſpecially if too ripe. The muſa, or banana, in Arabia Felix, are always rotten ripe when they are brought to you. Avoid all ſort of fruit expoſed for ſale in the markets, as it has probably been gathered in the ſun, and carried miles in it, and all its juices are in a ſtate of fermentation.

Rice and pillaw are the beſt food; fowls are very bad, eggs are worſe; greens are not wholeſome. In Arabia the mutton is good, and, when roaſted, may be eaten warm with ſafety; perhaps better if cold. All ſoups or broths are to be avoided; all game is bad.

QUADRUPEDS.] There is no country in the world which produces a greater number, or variety of quadrupeds, whether tame or wild, than Abyſſinia. As the high country is now perfectly cleared of wood, by the waſte made in that article from the continual march of armies, the mountains are covered to the very top, with perpetual verdure, and moſt luxuriant herbage.

The long rains in ſummer are not ſuddenly abſorbed by the rays of the ſun: a thick veil defends the ground when it is in the zenith, or near it, affording heat to promote vegetation, without withering it by deſtroying the moiſture, and by this means a never-failing ſtore of provender is conſtantly provided for all ſorts of cattle. Of the tame or cow-kind, great abundance preſent themſelves every where, differing in ſize, ſome having horns of various dimenſions, ſome without horns at all; differing alſo in the colour and length of their hair.

The reader may with confidence aſſure himſelf, that there are no ſuch animals as carnivorous bulls in Africa, as has been aſſerted in the Philoſophical Tranſactions; and, though we may ſay of the buffalo that it is of this kind, yet we cannot call it a tame animal here; ſo far from that, that it is the moſt ferocious in the country where he reſides.

But what is very particular, the female buffalo is the only animal kept for giving milk in Egypt. And though apparently theſe are of the ſame ſpecies, and came originally from Ethiopia, their manners are ſo intirely changed by their migration, difference of climate or of food, that without the exertion of any art to tame them, they are milked, conducted to and fro, and governed by children of ten years old, without apprehenſion, or any unlucky accident having ever happened.—Of horſes alſo there is a ſufficient quantity in this part of the continent of Africa.

Among the wild animals are prodigious numbers of the gazel or antelope kind; the bohur, ſaſſa, feeho, and madequa, and many others. Hyænas are ſtill more numerous. There are few varieties of the dog or fox kind. Of theſe the moſt numerous is the deep, or, as he is called, the jackal; this is preciſely the ſame in all reſpects as the deep of Barbary and Syria, who are heard hunting in great numbers, and howling in the evening and morning. The wild boar, ſmaller and ſmoother in the hair than that of Barbary or Europe, but differing in nothing elſe, is met frequently in ſwamps or banks of rivers covered with wood. As he is accounted unclean in Abyſſinia, both by Chriſtians and Mahometans, conſequently not perſecuted by the hunter, both he and the fox ſhould have multiplied; but it is probable they, and many other beaſts, when young, are deſtroyed by the voracious hyæna.

The elephant, rhinoceros, giraffa, or camelopardalis, are inhabitants of the low hot country; nor is the lion, leopard, or faadh, which is the panther, ſeen in the high and cultivated country. There are no tigers in Abyſſinia, nor, as far as I know, in Africa; it is an Aſiatic animal. Innumerable flocks of apes, and baboons

boons of different kinds, deſtroy the fields of millet every where; theſe, and an immenſe number of common rats, make great deſtruction in the country and harveſt. I never ſaw a rabbit in Abyſſinia, but there is plenty of hares; this is an animal which they reckon unclean; and not being hunted for food, it ſhould ſeem they ought to have increaſed to greater numbers. It is probable, however, that the great quantity of eagles, vultures, and beaſts of prey, has kept them within reaſonable bounds. The hippopotamus and crocodile abound in all the rivers, not only of Abyſſinia, but as low down as Nubia and Egypt. There are many of the aſs kind in the low country towards the frontiers of Atbara, but no zebras; theſe are the inhabitants of Fazuclo, and Narea.

But of all the other quadrupeds, there is none exceeds the hyæna for its mercileſs ferocity. They were a plague, ſays our author, ſpeaking of theſe animals, in Abyſſinia in every ſituation, both in the city and in the field, and I think ſurpaſſed the ſheep in number. Gondar was full of them from the time it turned dark till the dawn of day, ſeeking the different pieces of ſlaughtered carcaſes which this cruel and unclean people expoſe in the ſtreets without burial. Many a time in the night, when the king had kept me late in the palace, and it was not my duty to lie there, in going acroſs the ſquare from the king's houſe, not many hundred yards diſtant, I have been apprehenſive they would bite me in the leg. They grunted in great numbers about me, though I was ſurrounded with ſeveral armed men, who ſeldom paſſed a night without wounding or ſlaughtering ſome of them.

One night in Maitſha, being very intent on obſervation, I heard ſomething paſs behind me towards the bed, but upon looking round could perceive nothing. Having finiſhed what I was about, I went out of my tent, reſolving directly to return, which I immediately did, when I perceived large blue eyes glaring at me in the dark. I called upon my ſervant with a light, and there was the hyæna ſtanding nigh the head of the bed, with two or three large bunches of candles in his mouth. To have fired at him I was in danger of breaking my quadrant, or other furniture, and he ſeemed, by keeping the candles ſteadily in his mouth, to wiſh for no other prey at that time. As his mouth was full, and he had no claws to tear with, I was not afraid of him, but with a pike ſtruck him as near the heart as I could judge. It was not till then he ſhewed any ſign of fierceneſs; but upon feeling his wound, he let drop the candles, and endeavoured to run up the ſhaft of the ſpear to arrive at me, ſo that, in ſelf-defence, I was obliged to draw out a piſtol from my girdle and ſhoot him, and nearly at the ſame time my ſervant cleft his ſkull with a battle-ax. In a word, the hyæna was the plague of our lives, the terror of our night-walks, the deſtruction of our mules and aſſes, which above all others are his favourite food. Thoſe of the largeſt ſize are five feet nine inches in length, meaſuring from the noſe to the anus.

It is a conſtant obſervation in Numidia, that the lion avoids and flies from the face of man, till by ſome accident they have been brought to engage, and the beaſt has prevailed againſt him; then that feeling of ſuperiority imprinted by the Creator in the heart of all animals for man's preſervation ſeems to forſake him. The lion, having once taſted human blood, relinquiſhes the purſuit after the flock. He repairs to ſome highway or frequented path, and has been known in the kingdom of Tunis, to interrupt the road to a market for ſeveral weeks; and in this he perſiſts till hunters or ſoldiers are ſent out to deſtroy him.

The ſame, but in a much greater extent, happens in Atbara. The Arabs, who reſide in this diſtrict, live in encampments in different parts of the country, their ancient patrimony or conqueſt. Here they plow and ſow, dig wells, and have plenty of water; the ground produces large crops, and all is proſperity ſo long as there is peace. Inſolence and preſumption follow eaſe and riches. A quarrel happens with

with a neighbouring clan, and the firſt act of hoſtility, or deciſive advantage, is the one burning the others' crop at the time it is near being reaped. Inevitable famine follows. They are provided with no ſtores, no ſtock in hand, their houſes are burnt, their wells filled up, the men ſlain by their enemies, and many thouſands of the helpleſs remainder left perfectly deſtitute of neceſſaries; and that very ſpot, once a ſcene of plenty, in a few day is reduced to an abſolute deſert. Moſt of the miſerable ſurvivors die before they can reach the next water; they have no ſubſiſtence by the way; they wander among the acacia trees, and gather gum. There, every day loſing their ſtrength, and deſtitute of all hope, they fall ſpontaneouſly, as it were, into the jaws of the mercileſs hyæna; who, finding ſo very little difference or difficulty between ſlaying the living, and devouring the dead, follows the miſerable remains of this unfortunate multitude, till he has extirpated the laſt individual of them. Thence it comes that we find it obſervable in the deſert, that the whole country is ſtrewed with bones of the dead; horrid monuments of the victories of this ſavage animal, and of man more ſavage and cruel than he. From the eaſe with which he overcomes theſe half-ſtarved and unarmed people, ariſes the calm, ſteady confidence in which he ſurpaſſes all the reſt of his kind.

He is extremely fond of the fleſh of mules or aſſes; but there is another paſſion for which he is ſtill more remarkable, that is, his liking of dog's fleſh, or, as it is commonly expreſſed, his averſion to dogs. No dog, however fierce, will touch him in the field. Greyhounds, that were accuſtomed to faſten upon the wild boar, would not engage with him. This animoſity between him and dogs, though it has eſcaped modern naturaliſts, appears to have been known to the ancients in the eaſt. In Eccleſiaſticus (chap. xiii. ver. 18.) it is ſaid, "What agreement is there between the hyæna, and the dog?" a ſufficient proof that the antipathy was ſo well known as to be proverbial.

HUNTING THE ELEPHANT, RHINOCEROS, &c.] The hunting of theſe animals being one of the amuſements of the natives, we ſhall give the reader an account of this dangerous ſport, in the words of Mr. Bruce.

On the 6th of January, 1772, an hour before day, after a hearty breakfaſt, we mounted on horſeback, to the number of about thirty. But there was another body, both of horſe and foot, which made hunting the elephant their particular buſineſs. Theſe men dwell conſtantly in the woods, and know very little the uſe of bread, living entirely upon the fleſh of the beaſts they kill, chiefly that of the elephant or rhinoceros. They are exceedingly thin, light, and agile, both on horſeback and foot; are very ſwarthy, though few of them black; none of them woolly-headed, and all of them have European features. They are called Agageer, a name of their profeſſion, not of their nation, which comes from the word Agar, and ſignifies to hough or ham-ſtring with a ſharp weapon. More properly it means, indeed, the cutting the tendon of the heel, and is a characteriſtic of the manner in which they kill the elephant, which is ſhortly as follows: two men, abſolutely naked, without any rag or covering at all about them, get on horſeback; this precaution is from fear of being laid hold of by the trees or buſhes, in making their eſcape from a very watchful enemy. One of theſe riders ſits upon the back of the horſe, ſometimes with a ſaddle, and ſometimes without one, with only a ſwitch or ſhort ſtick in one hand, carefully managing the bridle with the other; behind him ſits his companion, who has no other arms but a broad-ſword, ſuch as is uſed by the Sclavonians, and which is brought from Trieſte.

As ſoon as the elephant is found feeding, the horſeman rides before him as near his face as poſſible; or, if he flies, croſſes him in all directions, crying out, "I am ſuch a man and ſuch a man; this is my horſe, that has ſuch a name; I killed your father in ſuch a place, and your grandfather in ſuch another place, and I am now come to kill you; you are but an aſs in compariſon of them." This nonſenſe he verily

verily believes the elephant underſtands, who, chafed and angry at hearing the noiſe immediately before him, ſeeks to ſeize him with his trunk or proboſcis, and intent upon this, follows the horſe every where, turning, and turning round with him, neglectful of making his eſcape by running ſtraight forward, in which conſiſts his only ſafety. After having made him turn once or twice in purſuit of the horſe, the horſeman rides cloſe up along-ſide of him, and drops his companion juſt behind on the off ſide; and while he engages the elephant's attention upon the horſe, the footman behind gives him a drawn ſtroke juſt above the heel, or what in man is called the tendon of Achilles. This is the critical moment; the horſeman immediately wheels round, and takes his companion up behind him, and rides off full ſpeed after the reſt of the herd, if they have ſtarted more than one; and ſometimes an expert agageer will kill three out of one herd. If the ſword is good, and the man not afraid, the tendon is commonly intirely ſeparated; and if it is not cut through, it is generally ſo far divided, that the animal, with the ſtreſs he puts upon it, breaks the remaining part aſunder. In either caſe he remains incapable of advancing a ſtep, till the horſeman returning, or his companions coming up, pierce him through with javelins and lances; he then falls to the ground, and expires with the loſs of blood.

My agageer, however, having wounded the firſt elephant, failed in the purſuit of the ſecond, and, being cloſe upon him at entering the wood, he received a violent blow from a branch of a tree, which the elephant had bent by his weight, and, after paſſing, allowed it to replace itſelf, when it knocked down both the riders, and very much hurt the horſe. This, indeed, is the great danger in elephant-hunting; for ſome of the trees, that are dry and ſhort, break by the violent preſſure of ſo immenſe a body moving ſo rapidly, and fall upon the purſuers, or acroſs the roads. But the greateſt number of theſe trees, being of a ſucculent quality, they bend without breaking, and return quickly to their former poſition, when they ſtrike both horſe and man ſo violently, that they often beat them to pieces, and ſcatter them upon the plain. Dextrous, too, as the riders are, the elephant ſometimes reaches them with his trunk, with which he daſhes the horſe againſt the ground, and then ſets his feet upon him, till he tears him limb from limb with his proboſcis; a great many hunters die this way.

The elephant once ſlain, they cut the whole fleſh off his bones into thongs, like the reins of a bridle, and hang theſe, like feſtoons, upon the branches of trees, till they become perfectly dry, without ſalt, and they then lay them by for their proviſion in the ſeaſon of the rains.

The next morning we were on horſeback by the dawn of day in ſearch of the rhinoceros, many of which we had heard make a very deep groan and cry as the morning approached; ſeveral of the agageers then joined us, and after we had ſearched about an hour in the thickeſt part of the wood, one of them ruſhed out with great violence, croſſing the plain towards a wood of canes that was about two miles diſtance. But though he ran, or rather trotted, with ſurprizing ſpeed, conſidering his bulk, he was, in a very little time, transfixed with thirty or forty javelins, which ſo confounded him, that he left his purpoſe of going to the wood, and ran into a deep hole, ditch, or ravine, a *cul de ſac*, without outlet, breaking about a dozen of the javelins as he entered. Here we thought he was caught as in a trap, for he had ſcarce room to turn; when a ſervant, who had a gun, ſtanding directly over him, fired at his head, and the animal fell immediately, to all appearance, dead. All thoſe on foot now jumped in with their knives to cut him up, and they had ſcarce begun, when the animal recovered ſo far as to riſe upon his knees; happy then was the man that eſcaped firſt; and had not one of the agageers, who was himſelf

in

in the ravine, cut the ſinew of the hind-leg as he was retreating, there would have been a very ſorrowful account of the foot-hunters that day.

After having diſpatched him, I was curious to ſee what wound the ſhot had given, which had operated ſo violently upon ſo huge an animal; and I doubted not it was in the brain. But it had ſtruck him no where but upon the point of the foremoſt horn, of which it had carried off above an inch; and this occaſioned a concuſſion which had ſtunned him for a minute, till the bleeding had recovered him.

We had not gone far before a wild boar aroſe, which I immediately killed with my javelin; and another of its companions ſhared the ſame fate about a quarter of an hour after. Nobody would touch the carcaſe of the boar after it was dead, being an animal which is conſidered as unclean.

Birds.] The number of birds in Abyſſinia exceeds that of other animals beyond proportion. The high and low countries are equally ſtored with them, the firſt kind are the carnivorous birds. Many ſpecies of the eagle and hawk, many more ſtill of the vulture kind, as it were overſtock all parts of the country. That ſpecies of glede, called Haddaya, ſo frequent in Egypt, comes very punctually into Ethiopia, at the return of the ſun, after the tropical rains. The quantity of ſhell-fiſh which then covers the edges of the deſert, and leaves the ſalt ſprings where they have been nouriſhed, ſurprized by the heat, and deſerted by the moiſture, are the firſt food theſe birds find in their way. They then are ſupplied by the carcaſes of thoſe large beaſts, the elephant, rhinoceros, and giraffa, the whole tribe of the deer kind, and the wild aſſes that are ſlain by the hunters, part of which only are uſed for food.

The vaſt quantity of field-rats and mice that appear after harveſt, and ſwarm in the cracks, or fiſſures in the ground, are their next ſupply. But above all, the great ſlaughter made of cattle upon the march of the army, the beaſts of burden which die under carriage and ill treatment, the number of men that periſh by diſeaſe and by the ſword, whoſe carcaſes are never buried by this barbarous and unclean people, compoſe ſuch a quantity and variety of carrion, that it brings together at one time a multitude of birds of prey, it would ſeem there was not ſuch a number on the whole earth. Theſe follow the camp, and abide by it; indeed, they ſeem another camp round it, for, beſides thoſe that ventured among the tents, the fields on every ſide, as far as the eyes could reach, are covered with them, and the branches of the trees ready to break under the preſſure of their weight.

The Niſſer, or golden eagle, is not only the largeſt of the eagle-kind, but ſurely one of the largeſt birds that flies. From wing to wing he is eight feet four inches. The black eagle, Rachamah, Erkoom, Moroc, Sheregrig, and Waalia, are particularly deſcribed by the hiſtorian of Abyſſinia, to whoſe celebrated work we refer the reader who is deſirous of information concerning them.

There is no great plenty of water-fowl in Abyſſinia, eſpecially of the web-footed kind. Vaſt variety of ſtorks cover the plains in May, when the rains become conſtant. All the deep and graſſy bogs have ſnipes in them; and ſwallows there are of many kinds unknown in Europe; thoſe that are common in Europe appear in paſſage at the very ſeaſon when they take their flight from thence. There are few owls in Abyſſinia; but theſe are of an immenſe ſize and beauty. There are no geeſe, wild or tame, excepting what is called the golden gooſe, gooſe of the Nile, or gooſe of the cape, common in all the ſouth of Africa: theſe build their neſt upon trees, and when not in water, generally ſit upon them.

Insects.] From the claſs of inſects, we ſhall ſelect the moſt remarkable, viz. the Tſaltſalya or fly, which is an inſect that furniſhes a ſtriking proof how falla-

cious it is to judge by appearances. If we conſider its ſmall ſize, its weakneſs, want of variety or beauty, nothing in the creation is more contemptible or inſignificant. Yet paſſing from theſe to his hiſtory, and to the account of his powers, we muſt confeſs the very great injuſtice we do him from want of conſideration. We are obliged with the greateſt ſurprize to acknowledge, that thoſe huge animals, the elephant, the rhinoceros, the lion, and the tiger, inhabiting the ſame wood, are ſtill vaſtly his inferious, and that the appearance of this ſmall inſect, nay, his very ſound, though he is not ſeen, occaſions more trepidation, movement, and diſorder, both in the human and brute creation, than would whole herds of theſe monſtrous animals collected together, though their number was in a tenfold proportion greater than it really is.

This inſect has not been deſcribed by any naturaliſt. It is in ſize very little larger than a bee, of a thicker proportion, and his wings, which are broader than thoſe of a bee, placed ſeparate like thoſe of a fly; they are of pure gauze, without colour or ſpot upon them; the head is large, the upper jaw or lip is ſharp, and has at the end of it a ſtrong-pointed hair of about a quarter of an inch long; the lower jaw has two of theſe pointed hairs, and this pencil of hairs, when joined together, makes a reſiſtance to the finger nearly equal to that of a ſtrong hog's briſtle. Its legs are ſerrated in the inſide, and the whole covered with brown hair or down. As ſoon as this plague appears, and their buzzing is heard, all the cattle forſake their food, and run wildly about the plain, till they die, worn out with fatigue, fright, and hunger. No remedy remains but to leave the black earth, and haſten down to the ſands of Atbara, and there they remain while the rains laſt; this cruel enemy never daring to purſue them farther.

Though the ſize of the camel is immenſe, his ſtrength vaſt, and his body, covered with a thick ſkin, defended with ſtrong hair, yet ſtill he is not capable to ſuſtain the violent punctures the fly makes with his pointed proboſcis. He muſt loſe no time in removing to the ſands of Atbara; for when once attacked by this fly, his body, head, and legs break out into large boſſes, which ſwell, break, and putrify to the certain deſtruction of the creature.

Even the elepant and rhinoceros, who by reaſon of their enormous bulk, and the vaſt quantity of food and water they daily need, cannot ſhift to deſert and dry places as the ſeaſon may require, are obliged to roll themſelves in mud and mire, which, when dry, coats them over like armour, and enables them to ſtand their ground againſt this winged aſſaſſin: and yet upon almoſt every elephant and rhinoceros may be ſeen theſe tubercles, which may moſt probably be attributed to this enemy.

All the inhabitants of the ſea-coaſt of Melinda, down to Cape Gardefan, to Saba, and the ſouth coaſt of the Red Sea, are obliged to put themſelves in motion, and remove to the next ſand in the beginning of the rainy ſeaſon, to prevent all their ſtock of cattle from being deſtroyed. This is not a partial emigration; the inhabitants of all the countries from the mountains of Abyſſinia northward, to the confluence of the Nile and Aſtaboras, are once a-year obliged to change their abode, and ſeek protection in the ſands of Beja; nor is there any alternative, or means, of avoiding this, though a hoſtile band was in their way capable of ſpoiling them of half their ſubſtance.

Of all thoſe that have written upon theſe countries, the prophet Iſaiah alone has given an account of this animal, and the manner of its operation. *Iſa.* vii. 18, 19. "And it ſhall come to paſs, in that day, that the Lord ſhall *hiſs* for the fly that "is in the uttermoſt parts of the rivers of Egypt;"—"And they ſhall come, and "ſhall

"ſhall reſt all of them in the deſolate vallies *, and in the holes of the rocks, and upon all thorns, and upon all buſhes."

Providence, from the beginning it would ſeem, had fixed its habitation to one ſpecies of ſoil, being a black fat earth, extraordinarily fruitful; and ſmall and inconſiderable as it was, it ſeems from the firſt to have given a law to the ſettlement of the country. It prohibited abſolutely thoſe inhabitants of the fat earth, called Mazaga, domiciled in caves and mountains, from enjoying the help or labour of any beaſts of carriage. It deprived them of their fleſh and milk for food, and gave riſe to another nation whoſe manners were juſt the reverſe of the firſt. Theſe were the ſhepherds, leading a wandering life, and preſerving theſe immenſe herds of cattle by conducting them into the ſands beyond the limits of the black earth, and bringing them back again when the danger from this inſect was over.

We cannot read, ſays Mr. Bruce, to whom all lovers of ſacred literature are indebted for his very happy elucidations of ſcripture, and for his manly and judicious defences of revelation in ſeveral places throughout his narrative; we cannot read the hiſtory of the plagues which God brought upon Pharaoh by the hands of Moſes, without ſtopping a moment to conſider a ſingularity, a very principal one, which attended this plague of the fly. It was not till this time and by means of this inſect, that God ſaid, he would ſeparate his people from the Egyptians. And it would ſeem that then a law was given to them, which fixed the limits of their habitation. It is well known that the land of Goſhen, or Geſhen, the poſſeſſion of the Iſraelites, was a land of paſture, which was not tilled or ſown, becauſe it was not overflowed by the Nile. But the land overflowed by the Nile was the black earth of the valley of Egypt, and it was here that God confined the flies; for he ſays, it ſhall be a ſign of this ſeparation of the people, which he had then made, that not one fly ſhould be ſeen in the ſand or paſture ground, the land of Goſhen, and this kind of ſoil has ever ſince been the refuge of all cattle emigrating from the black earth to the lower part of Atbara. Iſaiah, indeed, ſays, that the fly ſhall be in all the deſert places, and conſequently the ſands; yet this was a particular diſpenſation of providence to anſwer a ſpecial end, the deſolation of Egypt, and was not a repeal of the general law, but a confirmation of it; it was an exception, for a particular purpoſe and a limited time.

The Chaldee verſion is content with calling this animal ſimply Zebub, which ſignifies the fly in general, as we expreſs it in Engliſh. The Arabs call it Zimb in their tranſlation, which has the ſame general ſignification. The Ethiopic verſion calls it Tſaltſalya, which is the true name of this particular fly in Geez, and was the ſame in Hebrew.

VEGETABLE PRODUCTIONS.] The *Papyrus*, which is a plant well known in Egypt, appears to have been early brought thither from Ethiopia. It is alſo found in Abyſſinia. It never grows in the bed of a river, but generally in ſome ſmall ſtream that iſſued out of, or into ſome large ſtagnant lake or water-courſe. It does not even truſt itſelf to the weight of the wave of the deepeſt part of the lake when agitated by the wind; but it grows generally about the borders of it, as far as the depth of the water is within a yard. The reader will find a more circumſtantial deſcription of this plant in the preceding account of the curioſities of Egypt. *Baleſſan*, *Balm*, or *Balſam* is alſo a native of Abyſſinia. The great value ſet upon this drug in the eaſt remounts to very early ages. We know from ſcripture, the oldeſt hiſtory ex-

* That is, they ſhall cut off from the cattle their uſual retreat to the deſert, by taking poſſeſſion of thoſe places, and meeting them there, where ordinarily they never come, and which therefore are the refuge of the cattle.

tant, as well as the moſt infallible, that the Iſhmaelites, or Arabian carriers and merchants, trafficking with the India commodities into Egypt, brought with them balm as part of the cargo. Joſephus *, in the hiſtory of the antiquities of his country, ſays that a tree of this balſam was brought to Jeruſalem by the queen of Sheba (the queen of Abyſſinia), and given, among other preſents to Solomon, who, as we know from ſcripture, was very ſtudious of all ſorts of plants, and ſkilful in the deſcription and diſtinction of them. Notwithſtanding this poſitive authority of Joſephus, we are not to put it in competition with that of ſcripture, from which we know the place where it grew, and was ſold to merchants, was Gilead in Judæa, more than 1780 years before Chriſt, or 1000 before the queen of Sheba; ſo that reading the verſe, nothing can be more plain than that it had been tranſplanted into Judæa, flouriſhed, and had become an article of commerce in Gilead, long before the period Joſephus mentions: "And they ſat down to eat bread, and they liſted up their "eyes and looked, and behold a company of Iſhmaelites came from Gilead, with "their camels, bearing ſpicery, and balm, and myrrh, going to carry it down into "Egypt †." At this time it probably acquired its name of Balm of Gilead.—The *Enſete* is an herbaceous plant, which grows and comes to great perfection at Gondar, but it moſt abounds in that part of Maitſha and Goutto weſt of the Nile where there are large plantations of it, and is there, almoſt excluſive of every thing elſe, the food of the Galla inhabiting that province. When ſoft, like a turnip well boiled, if eat with milk or butter, it is the beſt of all food, wholeſome, nouriſhing, and eaſily digeſted. The *Teff* is a grain commonly ſown all over Abyſſinia, where it ſeems to thrive equally on all ſorts of ground; from it is made the bread which is commonly uſed throghout Abyſſinia. The Abyſſinians indeed have plenty of wheat, and ſome of it of an excellent quality. They likewiſe make as fine wheat-bread as any in the world, both for colour and taſte; but the uſe of wheat-bread is chiefly confined to people of the firſt rank. On the other hand Teff is uſed by all ſorts of people from the king downwards, and there are kinds of it which are eſteemed fully as much as wheat. The beſt of theſe is as white as flour, exceedingly light and eaſily digeſted. There are others of a browner colour, and ſome nearly black; this laſt is the food of ſoldiers and ſervants. The cauſe of this variation ariſes from the ſoil on which it grows, and from the degree of fineneſs with which it is ſifted. The acacia tree is very common in Abyſſinia, as are ſeveral other curious productions of the vegetable world, many of which are deſcribed in the Appendix of our author, and illuſtrated by many elegant engravings, which will afford a very great entertaintment to the curious botaniſt.

Lakes.] The lake of Tzana (not to mention thoſe of Gooderoo, and Court Ohha) is by much the largeſt expanſe of water known in this country. Its extent, however, has been greatly exaggerated. Its greateſt breadth is thirty-five miles, and its extent in length is forty-nine. The Nile, by a current always viſible, croſſes the end of it. In dry the months from October to March, the lake ſhrinks greatly in ſize: but after that all thoſe rivers are full which are on every ſide of it, and fall into the lake, like radii drawn to a center, then it ſwells, and extends itſelf into the plain country, and has of courſe a much larger ſurface.

There are forty-five inhabited iſlands in the lake, if you believe the Abyſſinians, who, in every thing, are very great liars. The number may perhaps be about eleven. All theſe iſlands were formerly uſed as priſons for the great people, or for a voluntary retreat, on account of ſome diguſt or great misfortune, or as places of ſecurity to depoſit their valuable effects during troubleſome times.

* Joſeph. Antiq. lib. v. † Gen. xxxvii. 25.

Cataracts

CATARACTS OF THE NILE.] Omitting thoſe of inferior note, we ſhall here give the reader ſome account of the great cataract of Alata. The firſt thing our traveller was ſhewn was the bridge, which conſiſts of an arch of about twenty-five feet broad, the extremities of which were ſtrongly let into, and reſted on the ſolid rock on both ſides; but fragments of the parapets remained, and the bridge itſelf ſeemed to bear the appearance of frequent repairs, and many attempts to ruin it; otherwiſe, in its conſtruction, it was exceedingly commodious. The Nile here is confined between two rocks, and runs in a deep trough, with great roaring and impetuous velocity. They were told no crocodiles were ever ſeen ſo high, and were obliged to remount the ſtream above half a mile before they came to the cataract, through trees and buſhes of a beautiful and delightful appearance.

The cataract itſelf was the moſt magnificent ſight that Mr. Bruce ever beheld. The height has been rather exaggerated. The miſſionaries ſay the fall is about ſixteen ells, or fifty feet. The meaſuring is, indeed, very difficult; but, by the poſition of long ſticks, and poles of different lengths, at different heights of the rock, from the water's edge, Mr. Bruce thinks he may venture to ſay that it is nearer forty feet than any other meaſure. The river had been conſiderably encreaſed by rains, and fell in one ſheet of water, without any interval, above half an Engliſh mile in breadth, with a force and noiſe that was truly terrible, and which ſtunned, and made him, for a time, perfectly dizzy. A thick fume, or haze, covered the fall all round, and hung over the courſe of the ſtream both above and below, marking its tract, though the water was not ſeen. The river, though ſwelled with rain, preſerved its natural clearneſs, and fell, as far as he could diſcern, into a deep pool, or baſon, in the ſolid rock, which was full, and in twenty different eddies to the very foot of the precipice, the ſtream, when it fell, ſeeming part of it to run back with great fury upon the rock, as well as forward in the line of its courſe, raiſing a wave, or violent ebullition, by chaffing againſt each other.

Jerome Lobo pretends, that he has ſat under the curve, or arch, made by the projectile force of the water ruſhing over the precipice. He ſays he ſat calmly at the foot of it, and looking through the curve of the ſtream, as it was falling, ſaw a number of rainbows of inconceivable beauty in this extraordinary priſm. This, however, Mr. Bruce, without heſitation, avers to be a downright falſehood. A deep pool of water reaches to the very foot of the rock, and is in perpetual agitation. Now, allowing that there was a ſeat or bench, which there is not, in the middle of the pool, it is abſolutely impoſſible, by any exertion of human ſtrength, to have arrived at it. Although a very robuſt man, in the prime and vigour of life, and a hardy, practiſed, indefatigable ſwimmer, Mr. Bruce is perfectly confident he could not have got to that ſeat from the ſhore through the quieteſt part of that baſon. And, ſuppoſing the friar placed in his imaginary ſeat under the curve of that immenſe arch of water, he muſt have had a portion of firmneſs, more than falls to the ſhare of ordinary men, and which is not likely to be acquired in a monaſtic life, to philoſophiſe upon optics in ſuch a ſituation, where every thing would ſeem to his dazzled eyes to be in motion, and the ſtream, in a noiſe like the loudeſt thunder, to make the ſolid rock (at leaſt as to ſenſe) ſhake to its very foundation, and threaten to tear every nerve to pieces, and to deprive one of other ſenſes beſides that of hearing. It was a moſt magnificent ſight, that ages, added to the greateſt length of human life, would not deface or eradicate from Mr. Bruce's memory; it ſtruck him with a kind of ſtupor, and a total oblivion of where he was, and of every other ſublunary concern. It was one of the moſt magnificent, ſtupendous ſights in the creation.

Sources of the Nile.] To diſcover theſe having been the great object of all Mr. Bruce's travels, the hopes of which having animated him through toils and dangers innumerable, it will not be eaſy to conceive the mingled emotions which muſt have ariſen in his mind, when he ſtood in rapture over the principal fountain. Let him, however, ſpeak for himſelf. "It is eaſier to gueſs than to deſcribe the ſituation of my mind at that moment—ſtanding in that ſpot which had baffled the genius, induſtry, and inquiry of both ancients and moderns, for the courſe of near three thouſand years. Kings had attempted this diſcovery at the head of armies, and each expedition was diſtinguiſhed from the laſt, only by the difference of the numbers which had periſhed, and agreed alone in the diſappointment which had uniformly, and without exception followed them all. Fame, riches, and honour, had been held out for a ſeries of ages to every individual of thoſe myriads theſe princes commanded, without having produced one man capable of gratifying the curioſity of his ſovereign, or wiping off this ſtain upon the enterpriſe and abilities of mankind, or adding this deſideratum for the encouragement of geography. Though a mere private Briton, I triumphed here, in my own mind, over kings and their armies; and every compariſon was leading nearer and nearer to preſumption, when the place itſelf where I ſtood, the object of my vain-glory, ſuggeſted what depreſſed my ſhort-lived triumphs. I was but a few minutes arrived at the ſources of the Nile, through numberleſs dangers and ſufferings, the leaſt of which would have overwhelmed me but for the continued goodneſs and protection of providence; I was, however, but then half through my journey, and all thoſe dangers which I had already paſſed, awaited me again on my return.

I ſaw Strates expecting me on the ſide of the hill: "Strates, ſaid I, faithful ſquire, come and triumph with your Don Quixote at that iſland of Barataria, where we have wiſely and fortunately brought ourſelves; come and triumph with me over all the kings of the earth, all their armies, all their philoſophers, and all their heroes."--"Sir", ſays Strates, "I do not underſtand a word of what you ſay, and as little of what you mean: you very well know I am no ſcholar; but you had much better leave that bog, and come into the houſe."-- "Come, ſaid I, take a draught of this excellent water, and drink with me a health to his majeſty, George III. and a long line of princes." I had in my hand a large cup of a cocoa-nut ſhell, which I procured in Arabia, and which was brim-full. He drank to the king ſpeedily and chearfully, with the addition of "Confuſion to his enemies," and toſſed up his cap with a loud huzza. "Now friend, ſaid, I, here is to a more humble, but ſtill a ſacred name, here is to---Maria!" He aſked if that was the Virgin Mary? I anſwered, "In faith, I believe ſo, Strates." He did not ſpeak, but only gave a humph of diſapprobation.

The day had been very hot, ſo that my thirſt led me to theſe frequent libations at this long-ſought-for ſpring, the moſt ancient of all altars. "Strates, ſaid I, here is to our happy return. Come, friend, you are yet two toaſts behind me; can you ever be ſatiated with this excellent water?" "Look you, ſir, ſays he very gravely, as for king George I drank to him with all my heart, to his wife, to his children, to his brothers and ſiſters, God bleſs them all! amen;—but as for the Virgin Mary, as I am no papiſt, I beg to be excuſed from drinking healths, which *my church* does not drink. But you muſt forgive me if I refuſe to drink any more water. They ſay theſe ſavages pray over that hole every morning to the devil, and I am afraid I feel his horns in my belly already, from the great draught of that helliſh water I drank firſt."

Mr. Bruce now proceeds to deſcribe the ſources of the Nile, which have, as he ſays, remained to our days as unknown as they were to antiquity; no good or genuine voucher having yet been produced capable of proving that they were before diſcovered,

diſcovered, or ſeen by the curious eye of any traveller, from the earlieſt ages to this day; and it is with confidence Mr. Bruce propoſes to his reader, that he will conſider him as ſtill ſtanding at theſe fountains, and patiently hear from him the recital of the origin, courſe, names, and circumſtances of this the moſt famous river in the world, which he will in vain ſeek from books, or from any other human authority whatever, and which by the care and attention he has paid to the ſubject, will, he hopes, be found ſatisfactory.

The Agows of Damot pay divine honour to the Nile; they worſhip the river, and thouſands of cattle have been offered, and ſtill are offered, to the ſpirit ſuppoſed to reſide at its ſource. The village of Geeſh, though not farther diſtant than 600 yards, is not in ſight of the ſources of the Nile. In the middle of a marſh, near the bottom of the mountain of Geeſh, ariſes a hillock of a circular form, about three feet from the ſurface of the marſh itſelf, though apparently founded much deeper in it. The diameter of this is ſomething ſhort of twelve feet, it is ſurrounded by a ſhallow trench, which collects the water, and voids it eaſtward; it is firmly built with ſod or earthern turf, brought from the ſides, and conſtantly kept in repair, and this is the altar upon which all their religious ceremonies are performed. In the middle of this altar is a hole, obviouſly made, or at leaſt enlarged, by the hand of man. It is kept clear of graſs, or other aquatic plants, and the water in it is perfectly pure and limpid, but has no ebullition or motion of any kind diſcernable upon its ſurface. This mouth, or opening of the ſource, is ſome parts of an inch leſs than three feet diameter, and the water ſtood about two inches from the lip or brim. This ſpring is about ſix feet ſix inches deep.

Ten feet diſtant from the firſt of theſe ſprings, a little to the weſt of ſouth, is the ſecond fountain, about eleven inches in diameter; but this is eight feet three inches deep. And about twenty feet diſtant from the firſt is the third ſource, its mouth being ſomething more than two feet large, and it is five feet eight inches deep.

Mr. Bruce being extremely anxious to aſcertain the preciſe ſpot on the globe that this fountain had ſo long occupied unknown, verified the inſtrument with all poſſible care, both at the zenith and horizon. With a braſs quadrant of three feet radius, by one meridian altitude of the ſun's upper limb, all neceſſary equations and deductions conſidered, he determined the latitude of the place of obſervation to to be 10° 59′ 11″ in north latitude; and by another obſervation of the ſame kind 10° 59′ 8″, after which, by a medium of thirty-three obſervations of ſtars, the largeſt and neareſt, the firſt vertical, he found the latitude to be 10° 59′ 25′ in round numbers, for the exact latitude of the principal fountain of the Nile, though the Jeſuits have ſuppoſed it 12° N. by a random gueſs. The longitude he aſcertained to be 36° 55′ 30″ eaſt of the meridian of Greenwich.

CAUSE OF THE INUNDATIONS OF THE NILE. It is an obſervation that holds good through all the works of Providence, that although God, in the beginning, gave an inſtance of his Almighty power by creating the world with one ſingle *fiat*, yet, in the laws he has laid down for the maintaining order and regularity in the details of his creation, he has invariably produced all theſe effects by the leaſt degree of power poſſible, and by thoſe means that ſeem moſt obvions to human conception. But it ſeemed, however, not according to the tenor of his ways and wiſdom, to create a country like Egypt, without ſprings, or even dews, and ſubject it to a nearly vertical ſun, that he might ſave it by ſo extraordinary an intervention as was the annual inundation, and make it the moſt fertile ſpot of the univerſe.

Whatever were the conjectures of the dreamers of antiquity, modern travellers and philoſophers, deſcribing without prejudice or ſyſtem what their eyes ſaw, have found that the inundation of Egypt has been effected by natural means, perfectly

conſonant

conſonant with the ordinary rules of Providence, and the laws given for the government of the reſt of the univerſe. They have found that the plentiful fall of the tropical rains produced every year at the ſame time by the action of a violent ſun, has been uniformly, without miracle, the cauſe of Egypt being regularly overflowed.

The ſun being nearly ſtationary for ſome days in the tropic of Capricorn, the air there becomes ſo much rarified, that the heavier winds, charged with watery particles, ruſh in upon it from the Atlantic on the weſt, and from the Indian Ocean on the eaſt. The ſouth wind, moreover, loaded with heavy vapour, condenſed in that high ridge of mountains not far ſouth of the line, which forms a ſpine to the peninſula of Africa, and, running northward with the other two, furniſh wherewithal to reſtore the equilibrium.

The ſun, having thus gathered ſuch a quantity of vapours as it were to a focus, now puts them in motion, and drawing them after it in its rapid progreſs northward, on the 7th of January, for two years together, ſeemed to have extended its power to the atmoſphere of Gondar, when, for the firſt time, there appeared in the ſky white, dappled, thin clouds, the ſun being then diſtant 34° from the zenith, without any one cloudy or dark ſpeck having been ſeen for ſeveral months before. Advancing to the line with increaſed velocity, and deſcribing larger ſpirals, the ſun brings on a few drops of rain at Gondar the firſt of March, being then diſtant 5° from the zenith; theſe are greedily abſorbed by the thirſty ſoil, and this ſeems to be the fartheſt extent of the ſun's influence, capable of cauſing rain, which then only falls in large drops, but laſts but a few minutes: the rainy ſeaſon, however, begins moſt ſeriouſly upon its arrival at the zenith of every place, and theſe rains continue conſtant and increaſing after he has paſſed it, in his progreſs northward. Before this, green boughs and leaves appear floating in the Bahar el Abiad, and ſhew that, in the latitude where it riſes, the rains are already abundant. The Galla, who inhabit, or have paſſed that river, give account of its ſituation, which lies about 5° from the Line.

In April, all the rivers in Amhara, Begemder, and Laſta, firſt diſcoloured, and and then beginning to ſwell, join the Nile in the ſeveral parts of its courſe neareſt them; the river then, from the height of its angle of inclination, forces itſelf through the ſtagnant lake without mixing with it. In the beginning of May, hundreds of ſtreams pour themſelves from Gojam, Damot, Maitſha, and Dembea, into the lake Tzana, which had become low by intenſe evaporation, but now begins to fill inſenſibly, and contributes a large quantity of water to the Nile, before it falls down the cataract of Alata. In the beginning of June, the ſun, having now paſſed all Abyſſinia, the rivers there are all full, and then is the time of the greateſt rains in Abyſſinia, while it is for ſome days, as it were ſtationary in the tropic of Cancer.

Immediately after the ſun has paſſed the line, he begins the rainy ſeaſon to the ſouthward, ſtill as he approaches the zenith of each place; but the ſituation and neceſſities of this country being varied, the manner of promoting the inundation is changed. A high chain of mountains run from about 6° ſouth all along the middle of the continent towards the Cape of Good Hope, and interſects the ſouthern part of the peninſula, nearly in the ſame manner that the river Nile does the northern. A ſtrong wind from the ſouth, ſtopping the progreſs of the condenſed vapours, daſhes them againſt the cold ſummits of this ridge of mountains, and forms many rivers which eſcape in the direction either eaſt or weſt, as the level preſents itſelf. If this is towards the weſt, they fall down the ſides of the mountains into the Atlantic, and if on the eaſt, into the Indian Ocean.

CITIES AND TOWNS.] GONDAR, the metropolis of Abyſſinia, is ſituated upon a hill of conſiderable height, the top of it nearly plain, on which the town is placed. It conſiſts of about ten thouſand families in time of peace; the houſes are chiefly of clay, the roofs thatched in the form of cones, which is always the conſtruction within the tropical rains. On the weſt end of the town is the king's houſe, formerly a ſtructure of conſiderable conſequence. It was a ſquare building, flanked with ſquare towers. It was formerly four ſtories high, and, from the top of it, had a magnificent view of all the country ſouthward to the lake Tzana. Great part of this houſe is now in ruins, having been burnt at different times; but there is ſtill ample lodging in the two loweſt floors of it, the audience chamber being above one hundred and twenty feet long.

The palace and all its contiguous buildings are ſurrounded by a ſubſtantial ſtone wall thirty feet high, with battlements upon the outer wall, and a parapet roof between the outer and inner, by which you can go along the whole, and look into the ſtreet. There appears to have been never any embraſures for cannon, and the four ſides of the wall are above an Engliſh mile and a half in length. Gondar, by a number of obſervations of the ſun and ſtars, made by day and night, in the courſe of three years, with an aſtronomical quadrant of three feet radius, and two excellent teleſcopes, and by a mean of all their ſmall differences, is in N. lat. 12° 34′ 30″; and by many obſervations of the ſatellites of Jupiter, eſpecially the firſt, both in their immerſions and emerſions during that period, I concluded its longitude to be 37° 33′ 0″ eaſt from the meridian of Greenwich.

DIXAN is the firſt town in Abyſſinia, on the ſide of Taranta. Dixan is built on the top of a hill, perfectly in form of a ſugar loaf; a deep valley ſurrounds it every where like a trench, and the road winds ſpirally up the hill till it ends among the houſes. It is true of Dixan, as of moſt frontier towns, that the bad people of both contiguous countries reſort thither. The town conſiſts of Moors and Chriſtians, and is very well peopled; yet the only trade of either of theſe ſects is a very extraordinary one, that of ſelling children. The Chriſtians bring ſuch as they have ſtolen in Abyſſinia to Dixan as to a ſure depoſit; and the Moors receive them there, and carry them to a certain market at Maſuah, whence they are ſent over to Arabia, or India. The prieſts of the province of Tigre, eſpecially thoſe near the rock Damo, are openly concerned in this infamous practice. Dixan is in lat. 14° 57′ 55″ north, and long. 40° 7′ 30″ eaſt of the meridian of Greenwich.

AXUM is ſuppoſed to have been once the capital of Abyſſinia, and its ruins are now every extenſive; but, like the cities of ancient times, conſiſt altogether of public buildings. In one ſquare, which ſeems to have been the center of the town, there are forty obeliſks, none of which have any hieroglyphics upon them. They are all of one piece of granite, and, on the top of that which is ſtanding, there is a *patera* exceedingly well carved in the Greek taſte. Axum is watered by a ſmall ſtream, which flows all the year from a fountain in the narrow valley, where ſtand the rows of obeliſks. The ſpring is received into a magnificent baſon of 150 feet ſquare, and thence it is carried at pleaſure, to water the neighbouring gardens, where there is little fruit excepting pomegranates, neither are theſe very excellent. The latitude of this town is 14° 6′ 36″ north.

MASUAH. The houſes of this town, which is ſituated upon an iſland bearing the ſame name, on the Abyſſinian ſhore of the Red Sea, are, in general, built of poles and bent graſs, as in the towns of Arabia; but beſides theſe, there are about twenty of ſtone, ſix or eight of which are two ſtories each. N. lat. 15° 35′ 5″ E. long. 39° 36′ 30″.

TRADE AND COMMERCE.] There is a conſiderable deal of trade carried on at Maſuah, narrow and confined as the iſland is, and violent and unjuſt as is the government. But it is all done in a ſlovenly manner, and for articles where a ſmall capital is inveſted. Property here is too precarious to riſk a venture in valuable commodities, where the hand of power enters into every tranſaction.

Gondar and all the neighbouring country depend for the neceſſaries of life, cattle, honey, butter, wheat, hides, wax, and a number of ſuch articles, upon the Agows, who inhabit a province in which the ſources of the Nile are found, and which province is no where ſixty miles in length, nor half that in breadth. Theſe Agows come conſtantly in ſucceſſion, a thouſand or fifteen hundred at a time, loaded with theſe commodities, to the capital.

It may naturally occur, that, in a long carriage, ſuch as that of a hundred miles, in ſuch a climate, butter muſt melt, and be in a ſtate of fuſion, conſequently very near putrefaction: this is prevented by the root of an herb, called Moc-moco, yellow in colour, and in ſhape nearly reſembling a carrot; this they bruiſe and mix with their butter, and a very ſmall quantity preſerves it freſh for a conſiderable time.

VARIOUS CUSTOMS.] We meet in Abyſſinia with various uſages, and ſhall firſt take notice of thoſe that regard the king and court, in which we find a remarkable reſemblance between the cuſtoms in the court of ancient Perſia, and thoſe in that of Abyſſinia.

The kings of Perſia, like thoſe of Abyſſinia, were eligible in one family only, that of the Arſacidæ, and it was not till that race failed, they choſe Darius. The title of the king of Abyſſinia is, *King* of *Kings*; and ſuch Daniel tells us was that of Nebuchadnezzar. The right of primogeniture does not ſo prevail in Abyſſinia as to exclude election in the perſon of the younger brothers, and this was likewiſe the caſe in Perſia.

In Perſia a preference was ſuppoſed to be due to the king's lawful children; but there were inſtances of the natural child being preferred to the lawful one. Darius, though a baſtard, was preferred to Iſogius, Xerxes' lawful ſon, and that merely by the election of the people. The ſame has always obtained in Abyſſinia. A very great part of their kings are adulterous baſtards; others are the iſſue of concubines, but they have been preferred to the crown, by the influence of a party always under name of the voice of the people.

Though the Perſian kings had various palaces to which they removed at different times of the year, Paſagarda, the metropolis of their ancient kings, was obſerved as the only place for their coronation*; and this, too, was the caſe of Abyſſinia, with their metropolis of Axum.

The next remarkable ceremony in which theſe two nations agreed, is that of adoration, inviolably obſerved in Abyſſinia to this day, as often as you enter the ſovereign's preſence. This is not only kneeling *, but an abſolute proſtration. You firſt fall upon your knees, then upon the palms of your hands, then incline your head and body till your forehead touch the earth; and in caſe you have an anſwer to expect, you lie in that poſture till the king, or ſomebody from him, deſires you to riſe. This, too, was the cuſtom of Perſia. Arrian † ſays this was firſt inſtituted by Cyrus, and this was preciſely the poſture in which they adored God, mentioned in the book of Exodus.

* Lucretius, lib. v. Ovid. Metam. lib. i. Lucian, in Navig. † Arrian, lib. iv. cap. 11. Exod. chap. iv. Matth. chap. ii.

We

We will now compare ſome particulars in the dreſs and ornaments of the two kings. The king of Abyſſinia wears his hair long, ſo did the ancient kings of Perſia. A comet had appeared in the war with Perſia, and was looked upon by the Romans as a bad omen. Veſpaſian laughed at it, and ſaid, if it portended any ill it was to the king of Perſia, becauſe, *like him*, it wore long hair.—The diadem was, with the Perſians, a mark of royalty, as with the Abyſſinians, being compoſed of the ſame materials, and worn in the ſame manner. The king of Abyſſinia wears it, while marching, as a mark of ſovereignty, that does not impede, or incommode him, as any other heavier ornament would do, eſpecially in hot weather. This fillet ſurrounds his head, above the hair, leaving the crown perfectly uncovered. This was the diadem of the Perſians, as appears from Lucian, who calls it a white fillet about the forehead.

It is in Abyſſinia, high-treaſon to ſit on any ſeat of the king's; and he that preſumed to do this would be inſtantly hewn to pieces, if there was not ſome other collateral proof of his being a madman.

It is probable that Alexander had heard of this law in Perſia, and diſapproved of it; for one day, it being extremely cold, the king, ſitting in his chair before the fire, warming his legs, ſaw a ſoldier, probably a Perſian, who had loſt his feeling by extreme numbneſs. The king immediately leaped from his chair, and ordered the ſoldier to be ſet down upon it. The fire ſoon brought him to his ſenſes, but he had almoſt loſt them again with fear, by finding himſelf in the king's ſeat. To whom Alexander ſaid, "Remember, and diſtinguiſh, how much more advantageous to man my government is than that of the kings of Perſia. By ſitting down on my ſeat, you have ſaved your life; by ſitting on theirs, you would infallibly have loſt it."

The kings of Abyſſinia are above all laws. They are ſupreme in all cauſes eccleſiaſtical and civil: the land and perſons of their ſubjects are equally their property, and every inhabitant of their kingdom is born their ſlave; if he bears a higher rank, it is by the king's gift; for his neareſt relations are accounted nothing better.

There are ſeveral kinds of bread in Abyſſinia, ſome of different ſorts of teff, and ſome of tocuſſo, which alſo vary in quality. The king of Abyſſinia eats of wheat bread, though not of every wheat, but of that only that grows in the province of Dembea, therefore called the king's food. It always has been and ſtill is the cuſtom of the kings of Abyſſinia to marry what number of wives they chooſe, that theſe were not, therefore, all queens; but that among them there was one who was conſidered particularly as queen, and upon her head was placed the crown, and ſhe was called Iteghè. Thus, in Perſia, we read that Ahaſuerus loved Eſther, who had found grace in his ſight more than the other virgins, and he had placed a golden crown upon her head.

The king of Abyſſinia never is ſeen to walk, nor to ſet his foot on the ground out of his palace; and when he would diſmount from the horſe or mule on which he rides, he has a ſervant with a ſtool, who places it properly for him for that purpoſe. He rides into the anti-chamber to the foot of the throne, or to the ſtool placed in the alcove of his tent. He very often judges capital crimes himſelf. No man is condemned by the king in perſon to die for the firſt fault, unleſs the crime be of a horrid nature, ſuch as parricide, or ſacrilege. And, in general, the life and merits of the priſoner are weighed againſt his immediate guilt; ſo that if his firſt behaviour has had more merit towards the ſtate than his preſent delinquency is thought to have injured it, the one is placed fairly againſt the other, and the accuſed is generally abſolved when the ſovereign judges alone.

The capital puniſhments in Abyſſinia are the croſs, flaying alive, and lapidation, or ſtoning to death. To theſe we may add the plucking out of the eyes, a cruelty too often committed. This is generally inflicted upon rebels. The dead bodies of criminals ſlain for treaſon, murder, and violence, are ſeldom buried in Abyſſinia. The ſtreets of Gondar are ſtrewed with pieces of their carcaſes, which bring the wild beaſts in multitudes into the city as ſoon as it becomes dark, ſo that it is ſcarcely ſafe for any one to walk in the night. The dogs uſed to bring pieces of human bodies into the houſe, and court-yard, to eat them in greater ſecurity. From this ſhort ſketch of their manners, the reader will be fully convinced of the rude and barbarous ſtate of this people, in which he would be more confirmed from the deſcription of an Abyſſinian banquet, which decency will hardly permit us to inſert, but which the curious reader may find in the work itſelf *.

METHOD OF COMPUTING TIME.] The Abyſſinians, like the ancient Egyptians, their firſt colony, in computing their time, have continued the uſe of the ſolar year. Diodorus Siculus ſays, "they do not reckon their time by the moon, but according to the ſun; that thirty days conſtitute their month, to which they add five days, and the fourth part of a day; and this completes their year."

It is uncertain whence they derive the names of their months; they have no ſignification in any of the languages of Abyſſinia. The name of the firſt month among the old Egyptians has continued to this day. It is Tot, probably ſo called from the firſt diviſion of time among the Egyptians, from obſervation of the heliacal riſing of the dog-ſtar. The names of the months retained in Abyſſinia, are poſſibly, in antiquity, prior to this. They are probably thoſe given them by the Cuſhite before the Kalendars at Thebes and Meroë, their colony, were formed.

The Abyſſinians have another way of deſcribing time peculiar to themſelves; they read the whole of the four evangeliſts every year in their churches. They begin with Matthew, then proceed to Mark, Luke and John in order; and when they ſpeak of an event, they write and ſay it happened in the days of Matthew, that is in the firſt quarter of the year, while the goſpel of St. Matthew was yet reading in the churches.

They compute the time of the day in a very arbitrary, irregular manner. The twilight is very ſhort, almoſt imperceptible. As ſoon as the ſun falls below the horizon, night comes on, and all the ſtars appear. This term, then, the twilight, they chooſe for the beginning of their day, and call it Naggé, which is the very time the twilight of the morning laſts. The ſame is obſerved at night, and Meſet is meant to ſignify the inſtant of beginning of the twilight, between the ſun's falling below the horizon, and the ſtar's appearing. Mid-day is by them called *Kater*, a very old word, which ſignifies *culmination*, or a thing's being arrived or placed at the middle or higheſt part of an arch. All the reſt of times, in converſation, they deſcribe by pointing at the place in the heavens where the ſun then was, when what they are deſcribing happened.

Nothing can be more inaccurate than all Abyſſinian calculations. Their abſolute ignorance in arithmetic, their exceſſive idleneſs, and averſion to ſtudy, and a number of fanciful, whimſical combinations, by which every particular ſcribe or monk diſtinguiſhes himſelf, are inſuperable obſtacles againſt any ſcientific acquiſitions.

RELIGION.] Mr. Bruce informs us from the annals of Abyſſinia, that in the time of Solomon, all this country was converted to Judaiſm, and the government of the church and ſtate modelled according to what was then in uſe at Jeruſalem.

* Bruce's Travels, to diſcover the Source of the Nile, 4to. vol. iii. p. 301.

Some

Some eccleſiaſtical writers, rather from attachment to particular ſyſtems, than from any conviction that the opinion they eſpouſe is truth, would perſuade us that the converſion of Abyſſinia to Chriſtianity happened in the days of the Apoſtles; but it appears that this was effected by the labours of Frumentius (the apoſtle of the Abyſſinians) in the year of Chriſt 333, according to our account, of which converſion, the following narartive may not be unacceptable.

Meropius, a philoſopher of Tyre, a Greek by nation and by religion, had taken a paſſage in a ſhip on the Red Sea to India, and had with him two young men Frumentius, and Œdeſius, whom he intended to bring up to trade, after having given them a very liberal education. It happened their veſſel was caſt away on a rock upon the coaſt of Abyſſinia; Meropius, defending himſelf, was ſlain by the natives, and the two boys carried to Axum, the capital of Abyſſinia, where the court then reſided. Though young, they ſoon began to ſhew the advantages attending a liberal education. They acquired the language very ſpeedily; and, as that country is naturally inclined to admire ſtrangers, theſe were ſoon looked upon as two prodigies. Œdeſius, probably the dulleſt of the two, was ſet over the king's houſehold and wardrobe, a place that has been filled conſtantly by a ſtranger of that nation to this very day. Frumentius was judged worthy by the queen to have the care of the young prince's education, to which he dedicated himſelf intirely.

After having inſtructed his pupil in all ſorts of learning, he ſtrongly impreſſed him with a love and veneration for the Chriſtian religion; after which he himſelf ſet out for Alexandria, where he found St. Athanaſius, newly elected to that ſee.

He related to him briefly what had paſſed in Ethiopia, and the great hopes of the converſion of that nation, if proper paſtors were ſent to inſtruct them. Athanaſius embraced that opportunity with all the earneſtneſs that became his ſtation and profeſſion. He ordained Frumentius biſhop of that country, who inſtantly returned and found the young king his pupil in the ſame good diſpoſition as formerly. He embraced Chriſtianity; the greateſt part of Abyſſinia followed his example, and the church of Ethiopia continued with this biſhop in perfect unity and friendſhip till his death. It ſhould ſeem that this converſion of Abyſſinia was quietly conducted, and without blood.

There is no country in the world where there are ſo many churches as in Abyſſinia. Though the country is very mountainous, and conſequently the view much obſtructed, it is very ſeldom you ſee leſs than five or ſix churches, and, if you are on a commanding ground, five times that number. Every great man that dies thinks he has atoned for all his wickedneſs if he leaves a fund to build a church, or has built one in his life-time. The king builds many. Wherever a victory is gained, there a church is erected in the very field, ſtinking with the putrid bodies of the ſlain. Formerly this was only the caſe when the enemy was Pagan or Infidel; now the ſame is obſerved when the victories are over Chriſtians.

The ſituation of a church is always choſen near running water, for the convenience of their purifications, and ablutions, in which they obſerve ſtrictly the Levitical law. The churches are all round, with thatched roofs; their ſummits are perfect cones; the outſide is ſurrounded by a number of wooden pillars, which are nothing elſe than the trunks of the cedar-tree, and are placed to ſupport the edifice, about eight feet of the roof projecting beyond the wall of the church, which forms an agreeable walk, or colonade, around it in hot weather, or in rain. The inſide of the church is in ſeveral diviſions, according as is preſcribed by the law of Moſes. The firſt is a circle ſomewhat wider than the inner one; here the congregation ſit and pray. Within this is a ſquare, and that ſquare is divided by a veil or curtain, in which is another very ſmall diviſion anſwering to the holy of holies.

This

This is ſo narrow that none but the prieſts can go into it. You are bare-footed whenever you enter the church, and, if bare-footed, you may go through every part of it, if you have any ſuch curioſity, provided you are pure, *i. e.* have not been concerned with women for twenty-four hours before, or touched carrion or dead bodies; (a curious aſſemblage of ideas) for in that caſe you are not to go within the precincts, or outer circumference of the church, but ſtand and ſay your prayers at an awful diſtance among the cedars.

All perſons of both ſexes, under Jewiſh diſqualifications, are obliged to obſerve this diſtance; and this is always a place belonging to the church, where, unleſs in Lent, you ſee the greateſt part of the congregation; but this is left to your own conſcience, and, if there was either great inconvenience in the one ſituation, or great ſatisfaction in the other, the caſe would be otherwiſe.

When you go to the church you put off your ſhoes before your firſt entering the outer precinct; but you muſt leave a ſervant there with them, or elſe they will be ſtolen, if good for any thing, by the prieſts and monks before you come out of the church. At entry you kiſs the threſhold, and two door-poſts, go in and ſay what prayer you pleaſe; that finiſhed, you come out again, and your duty is over. The churches are full of pictures, painted on parchment, and nailed upon the walls, in a manner little leſs ſlovenly than you ſee paltry prints in beggarly country ale-houſes. There has been always a ſort of painting known among the ſcribes, a daubing much inferior to the worſt of our ſign-painters. Sometimes, for a particular church, they get a number of pictures of ſaints, on ſkins of parchment, ready finiſhed from Cairo, in a ſtile very little ſuperior to theſe performances of their own. They are placed like a frize, and hung in the upper part of the wall. St. George is generally there with his dragon, and St. Demetrius fighting a lion. There is no choice in their ſaints, they are both of the Old and New Teſtament, and thoſe that might be diſpenſed with from both. There is St. Pontius Pilate and his wife, there is St. Balaam and his aſs; Sampſon and his jaw-bone; and ſo of the reſt. But the thing that ſurpriſed Mr. Bruce moſt was a kind of ſquare-miniature upon the front of the head-piece, or mitre, of the prieſt, adminiſtering the ſacrament at Adowa, repreſenting Pharaoh on a white horſe, plunging in the Red Sea, with many guns and piſtols ſwimming upon the ſurface of it around him.

Nothing emboſſed, nor in relief, ever appears in any of their churches; all this would be reckoned idolatry, ſo much ſo, that they do not wear a croſs, as had been repreſented, on the top of the ball of the ſendick, or ſtandard, becauſe it caſts a ſhade; but there is no doubt that pictures have been uſed in their churches from the very earlieſt ages of Chriſtianity.

Their firſt biſhop, Frumentius, being ordained about the year 333, and inſtructed in the religion of the Greeks of the church of Alexandria, by St. Athanaſius, then ſitting in the chair of St. Mark, it follows that the true religion of the Abyſſinians, which they received on their converſion to Chriſtianity, is that of the Greek church. They receive the holy ſacrament in both kinds, in unleavened bread, and in the grape bruiſed with the huſk together as it grows, ſo that it is a kind of marmalade, and is given in a flat ſpoon. They obſerve alſo circumciſion.

History.] As the accounts of kings and princes of remote ages are not always entertaining, and as the hiſtory of ſo barbarous and unciviliſed a people will, we preſume, afford but ſmall amuſement to our readers, whatever ſatisfaction they may have received from ſurveying the manners and cuſtoms of the people, and the natural hiſtory of the country, we ſhall therefore make no farther apology for omitting the account of the annals of Abyſſinia, but refer thoſe, who have any deſire

of information upon this ſubject to the ſecond volume of the travels of our adventurous author, where he will find a very ample detail through more than 700 pages of a ponderous quarto.

FEZZAN, BORNOU, AND CASHNA.

IT having been long a ſubject of lamentation that Europeans know very little, if any thing, of the *interior diſtricts* of Africa, we are happy to find that a number of learned and opulent individuals have formed themſelves into a ſociety for the purpoſe of exploring them. The aſſociation was formed on the ninth of June, in the year 1788; and on the ſame day a committee of its members, viz. *lord Rawdon, the biſhop of Landaff, ſir Joſeph Banks, Mr. Beaufoy*, and *Mr. Stuart*, were inveſted with the direction of its funds, the management of its correſpondence, and the choice of the perſons to whom the geographical miſſion was to be aſſigned. Perſuaded of the importance of the object which the Aſſociation had in view, their committee loſt no time in executing the plan which it had formed. Two gentlemen were recommended to them; and appearing to be eminently qualified for making the projected reſearches, they were choſen. One was a *Mr. Ledyard*; the other a *Mr. Lucas*. Mr. Ledyard's hiſtory which pointed him out to the ſociety as a proper perſon for undertaking the African adventure, is too curious and amuſing to be omitted; and as it is ſo cloſely connected with this part of our work, it is preſumed that it will not be thought foreign to the deſign of it.

Mr. Ledyard was an American by birth, and ſeemed from his youth to have felt an invincible deſire to make himſelf acquainted with the unknown or imperfectly diſcovered regions of the globe. For ſeveral years he had lived with the Indians of America, had ſtudied their manners, and had practiſed in their ſchool the means of obtaining the protection, and of recommending himſelf to the favour of ſavages. In the humble ſituation of a corporal of marines, to which he ſubmitted, rather than relinquiſh his purſuit, he had made, with captain Cook, the voyage of the world; and feeling on his return an anxious deſire of penetrating from the north-weſtern coaſt of America, which Cook had partly explored, to the eaſtern coaſt, with which he himſelf was perfectly familiar, he determined to traverſe the vaſt continent from the Pacific to the Atlantic Ocean.

His firſt plan for the purpoſe was that of embarking in a veſſel, which was then preparing to ſail, on a voyage of commercial adventure to Nootka Sound, on the weſtern coaſt of America; and with this view he expended in ſea-ſtores the greateſt part of the money which his chief benefactor, ſir Joſeph Banks (whoſe generous conduct the writer of this narrative has often heard him acknowledge) had liberally ſupplied. But the ſcheme being fruſtrated by the rapacity of a cuſtom-houſe officer, who had ſeized and detained the veſſel, for reaſons, which, on legal enquiry, proved to be frivolous, he determined to travel over land to Kamtſchatka, from whence, to the weſtern coaſt of America, the paſſage is extremely ſhort. With no more than ten guineas in his purſe, which was all that he had left, he croſſed the Britiſh Channel to Oſtend, and, by the way of Denmark and the Sound, proceeded to the capital of Sweden, from which, as it was winter, he attempted to traverſe the gulf of Bothnia on the ice, in order to reach Kamtſchatka by the ſhorteſt way; but finding, when he came to the middle of the ſea, that the water was not frozen, he returned to Stockholm, and taking his courſe northward, walked into the arctic circle; and paſſing round the head of the gulph, deſcended on its eaſtern ſide to Peterſburgh.

There

There he was noticed as an extraordinary man. Without ſtockings, or ſhoes, and in too much poverty to provide himſelf with either, he received and accepted an invitation to dine with the Portuguese ambaſſador. To this invitation it was probably owing that he was able to obtain the ſum of twenty guineas for a bill on ſir Joſeph Banks, which he confeſſed he had no authority to draw, but which, in conſideration of the buſineſs that he had undertaken, and of the progreſs that he had made, ſir Joſeph, he believed, would not be unwilling to pay. To the ambaſſador's intereſt it might alſo be owing that he obtained permiſſion to accompany a detachment of ſtores which the empreſs had ordered to be ſent to Yakutz, for the uſe of Mr. Billings an Engliſhman, at that time in her ſervice.

Thus accommodated, he travelled eaſtward through Siberia ſix thouſand miles, to Yakutz, where he was kindly received by Mr. Billings, whom he remembered on board captain Cook's ſhip, in the ſituation of the aſtronomer's ſervant, but to whom the empreſs had now entruſted her ſchemes of northern diſcovery.

From Yakutz he proceded to Oczakow, on the coaſt of the Kamtſchatka ſea, from whence he meant to have paſſed over to that peninſula, and to have embarked on the eaſtern ſide in one of the Ruſſian veſſels that trade to the weſtern ſhores of America; but finding that the navigation was completely obſtructed by the ice, he returned again to Yakutz, in order to wait for the concluſion of the winter.

Such was his ſituation, when, in conſequence of ſuſpicions not hitherto explained, or reſentments for which no reaſon is aſſigned, he was ſeized, in the empreſs's name, by two Ruſſian ſoldiers, who placed him in a ſledge, and conveying him in the depth of winter, through the deſerts of the Northern Tartary, left him at laſt on the frontiers of the Poliſh dominions.

As they parted, they told him, that if he returned to Ruſſia, he would certainly be hanged; but that, if he choſe to go back to England, they wiſhed him a pleaſant journey.

In the midſt of poverty, covered with rags, infeſted with the uſual accompaniments of ſuch cloathing, worn with continued hardſhip, exhauſted by diſeaſe, without friends, without credit, unknown and full of miſery, he found his way to Koningſberg.—There, in the hour of his uttermoſt diſtreſs, he reſolved once more to have recourſe to his old benefactor, and luckily he found a perſon who was willing to take his draft for five guineas, on the preſident of the Royal Society.

With this aſſiſtance he arrived in England, and immeditely waited on ſir Joſeph Banks, who told him, knowing his temper, that he believed he could recommend him to an adventure almoſt as perilous as the one from which he had returned; and communicated to him the wiſhes of the aſſociation for diſcovering the inland countries of Africa.

Ledyard replied, that he had always determined to traverſe the continent of Africa, as ſoon as he had explored the interior of North America; and as ſir Joſeph had offered him a letter of introduction, he came directly to the writer of theſe memoirs *. Before I had learnt from the note, the name and buſineſs of my viſitor, I was ſtruck with the manlineſs of his perſon, the breadth of his cheſt, the openneſs of his countenance, and the inquietude of his eye. I ſpread the map of Africa before him, and tracing a line from Cairo to Sennar, and from thence weſtward, in the latitude and ſuppoſed direction of the Niger, I told him that was the route by which I was anxious that Africa might, if poſſible, be explored. He ſaid, he ſhould think himſelf ſingularly fortunate to be entruſted with the adventure. I aſked him, when he would ſet out? "To morrow morning" was his anſwer. I

* Mr. Beaufoy.

told him I was afraid that we ſhould not be able, in ſo ſhort a time, to prepare his inſtructions, and procure for him the letters what were requiſite; but that if the committee ſhould approve of his propoſal, all expedition ſhould be uſed.

Such a perſon as Mr. Ledyard was formed by nature for the object in contemplation; and, were we unacquainted with the ſequel, we ſhould congratulate the ſociety in being ſo fortunate as to find ſuch a man for one of their miſſionaries: but the reader will ſoon be acquainted with the melancholy circumſtance to which we allude.

Mr. Lucas's hiſtory, being leſs ſingular than that of Mr. Ledyard, is told with more brevity: but enough is ſaid to ſatisfy every reader reſpecting his qualifications. He had been ſent, when a boy, to Cadiz, in Spain, for education as a merchant, and having the misfortune on his return to be captured by a Sallee rover, was brought as a ſlave to the imperial court of Morocco. Three years of captivity preceded his reſtoration to freedom and his conſequent departure from Gibraltar, where, at the requeſt of general Cornwallis, he accepted the offices of vice-conſul and chargé d'affairs in the empire of Morocco, and had the ſatisfaction to return, as the delegate of his ſovereign, to the very kingdom in which, for a long period, he had lived as a ſlave. At the end of ſixteen years, he once more reviſited England, and was ſoon appointed Oriental interpreter to the Britiſh court, in which ſituation he was when he became known to the committee, and expreſſed his willingneſs, with his majeſty's permiſſion, to undertake, in the ſervice of the aſſociation, *whatever journey his knowledge of the manners, cuſtoms, and language, of the Arabs might enable him to perform.*

From two ſuch geographical miſſionaries (obſerves a very reſpectable literary journaliſt *) much information was no doubt expected; and, though the views of the ſociety are not yet fully anſwered, the communications which it has received, are of a nature which will excite, though not fully gratify, the curioſity of geographers.

Mr. Ledyard undertook, at his own deſire, the difficult and perilous taſk of traverſing from eaſt to weſt in the latitude attributed to the Niger, the wideſt part of the continent of Africa. On this bold adventure, he left London, June 30, 1788, and arrived at Cairo on the 19th of Auguſt.

Hence, he tranſmitted ſuch accounts to his employers, as manifeſt him to have been a traveller who obſerved, reflected, and compared; and ſuch was the information which he collected here from the travelling ſlave-merchants, and from others, reſpecting the interior diſtricts of Africa, that he was impatient to explore them. He wrote to the committee, that his next communication would be from Sennaar, (600 miles to the ſouth of Cairo): but death, attributed to various cauſes, arreſted him at the commencement of his reſearches, and diſappointed the hopes which were entertained of his projected journey.

Endowed with a ſoul for diſcovery, and formed, by nature, for atchievements of hardihood and peril, the death of Ledyard muſt be conſidered as a public misfortune. Ladies, as well as philoſophers, will lament him; eſpecially, when they read his character of the ſex, which, conceiving it to be juſt, we ſhall here inſert.

"I have always remarked that women, in all countries, are civil, obliging, tender and humane; that they are ever inclined to be gay and chearful, timorous and modeſt; and that they do not heſitate like men to perform a generous action. Not haughty, not arrogant, not ſupercilious, they are full of courteſy, and fond of ſociety; more liable, in general, to err than man, but, in general, alſo, more virtuous,

* Monthly Review, new Series, vol. ii. p. 63.

and performing more good actions than he. To a woman, whether civiliſed or ſavage, I never addreſſed myſelf in the language of decency and friendſhip, without receiving a decent and friendly anſwer. With men it has been otherwiſe.

" In wandering over the *barren* plains of *inhoſpitable Denmark*, through *honeſt Sweden*, and *frozen Lapland*, *rude and churliſh Finland*, *unprincipled Ruſſia*, and the *wide-ſpread regions* of the *wandering Tartar*; if hungry, dry, cold, wet, or ſick, the women have ever been friendly to me, and uniformly ſo; and to add to this virtue, (ſo worthy the appellation of benevolence) theſe actions have been performed in ſo free, and ſo kind a manner, that if I was dry, I drank the ſweeteſt draught, and if hungry, I eat the coarſe morſel with a double reliſh *."

" With a mixture of regret and diſappointment, we turn from poor Ledyard, to notice Mr. Lucas's communications, which occupy the greateſt part of the volume publiſhed by the aſſociation. He embarked for Tripoli, October 18, 1788, with inſtructions to proceed over the deſert of Zahara to Fezzan, to collect, and to tranſmit by way of Tripoli, whatever intelligence the people of Fezzan, or the traders thither, might be able to afford reſpecting the interior of the continent; and to return by the way of Gambia, or the coaſt of Guinea.

" Inſtructions to undertake great enterprizes, are more eaſily given than executed. So Mr. Lucas found; and ſo the reader, to his diſappointment, will find likewiſe. Only a part of the plan was this geographic miſſionary able to carry into execution. He ſets out, indeed, mounted on a handſome mule preſented to him by the Bey, the baſhaw's eldeſt ſon, in company with ſhereefs, for the kingdom of Fezzan; reſolved, we will ſuppoſe, to penetrate from Tripoli even unto Gambia: but his perginations, which began Feb. 1, 1789 terminated at Meſurata, on Feb. 7.

" Deprived of viſiting Fezzan, and the other inland diſtricts of Africa, Mr. Lucas ſolicits the information of his fellow-travellers, and tranſmits to the ſociety the reſult of his conferences. A memoir compiled in this way, from the reports of a Shereef Imhammed, will not be deemed very ſatisfactory, and yet it certainly merits conſideration, as it is, in part, coroborated by other teſtimonies †.

" The Shereef might not mean to deceive; and yet, in conſequence of his education, and particular prejudices, on account of the language which he uſed, and of not properly diſtinguiſhing between vague report and atteſted facts, we may be allowed to queſtion whether things exactly accord with this relation before us. The Aga Mohammed told Mr. Ledyard, " That he would ſee in his travels, a people who had the power of tranſmuting themſelves into the forms of different animals," p. 28; and hence it is fair to infer, that no abſolute dependence is to be placed on the accuracy of the Mohammedan narrative of the interior diſtricts of this quarter of the globe ‡."

Having no other ſources of information, however, we muſt, for the preſent, content ourſelves with theſe communications. From the various conferences of Mr. Lucas with the Shereef Imhammed, the following narrative is compoſed:

" It deſcribes the kingdom of Fezzan to be a ſmall circular domain, placed in a vaſt wilderneſs, as an iſland in the midſt of the ocean, containing near an hundred

* Proceedings of the African Aſſociation, p. 44.

† The governor of Meſurata, and Ben Alli, a native of Morocco. This, however, is the ſame ſort of evidence. No European has yet confirmed it; and as for the governor of Meſurata, he was not ſeparately interrogated, but only had the memorandums, which were taken from the Shereef, read to him; the truth of which, however, he confirms. As for Ben Alli's teſtimony, it is given from recollection, impaired by the lapſe of twenty years.

‡ When the perſon in whom Mr. Lucas confides, p. 138, confounds the ſkin of the hippopotamus with that of the camelopardalis, may we not ſuſpect that he confounds many other things?

towns

towns and villages, of which Mourzouk is the capital; diſtant, ſouth, from Meſurata, about 390 miles. In this kingdom are to be ſeen ſome venerable remains of ancient magnificence, ſome diſtricts of remarkable fertility, and numerous ſmoaking lakes, producing a ſpecies of foſſil alkali called *trona*. Agriculture and paſturage are the principal occupations of the Fezanners: they do not appear to have any coin; their medium of commerce is gold-duſt: their houſes, or rather huts, are built of clay, and are covered with branches of trees, on which earth is laid. As rain never falls at Fezzan, this covering is a ſufficient protection. Their dreſs reſembles that of the Moors of Barbary: but, during the heats of ſummer, which are intenſe, they only wear drawers, and a cap to protect their heads from the immediate action of the ſun. To theſe, many particulars are added of their perſons, diſeaſes, and mode of cure; of their religion, government, taxes, animal and vegetable productions. Their ſovereign, who is a tributary of the baſhaw of Tripoli, adminiſters impartial juſtice; and, as a proof of the aſcendancy which he poſſeſſes in this reſpect over his ſubjects, the Fezanners, who travelled with Mr. Lucas, deſcribed to him the following cuſtom:

"If a man has injured another, and refuſes to go with him to the judge, the complainant draws a circle round the oppreſſor; ſolemnly charges him, in the king's name, not to leave the place till the officers of juſtice, in ſearch of whom he is going, ſhall arrive; and ſuch (*if they are to be credited*) is, on the one hand, his fear of the puniſhment which is inflicted on thoſe who diſobey the injunction, and ſo great, on the other, is his dread of the perpetual baniſhment which, if he ſeeks his ſafety by withdrawing from the kingdom, muſt be his inevitable lot, that this imaginary priſon operates as a real confinement, and the offender ſubmiſſively waits the arrival of the officers of juſtice."

"The compiler's parentheſis (*if they are to be credited*) precludes the neceſſity of any remark. The narrative proceeds to ſtate, that ſouth-eaſt of Morzouk, at the diſtance of 150 miles, is a ſandy deſert, 200 miles wide; beyond which, are the mountains of Tibeſti, inhabited by ferocious ſavages, tributary to Fezzan. The vallies between the mountains are ſaid to be fertilized by innumerable ſprings, to abound with corn, and to be celebrated for their breed of camels. The tribute of the Tibeſtins to the king of Fezzan, is twenty camel loads of ſenna.

"This kingdom is inconſiderable, when compared with the two great empires of Bornou, and Caſhna, which lie ſouth of Fezzan, occupying that vaſt region which ſpreads itſelf from the river of the Antelopes, for 1200 miles weſtward, and includes a great part of the Niger's courſe. Caſhna, we are informed, contains a thouſand towns and villages; and in Bornou, which is ſtill more conſiderable, thirty languages are ſaid to be ſpoken. The latter is repreſented as a fertile and beautiful country; its capital being ſituated within a day's journey of the river *Wod-el-Gazel*, which is loſt in the ſandy waſtes of the vaſt deſert of Bilma, and is inhabited by herdſmen, dwelling, like the old patriarchs, in tents, and whoſe wealth conſiſts in their cattle *. (Bornou, or Bernoa, is a word ſignifying the land of Noah: for the Arabs conceive, that, on the retiring of the deluge, its mountains received the ark.) Though they cultivate various ſorts of grain, the uſe of the plough is unknown; and the hoe is the only inſtrument of huſbandry. Here, grapes, apricots, and pomegranates, together with limes and lemons, and two ſpecies of melons, the water and the muſk, are produced in large abundance: but one of the moſt valuable of its vegetables is a tree called kedéyna, which, in form and height, reſembles the olive, is like the lemon in its leaf, and bears a nut, of which the kernel and the

* Horſes and horned cattle, goats, ſheep, and camels, are the common animals of the country.

ſhell are both in great eſtimation, the firſt as a fruit, the laſt on account of the oil which it furniſhes, when bruiſed, and which ſupplies the lamps of the people of Bornou with a ſubſtitute for the oil of olives, p. 139, Bees, it is added, are ſo numerous, that the wax is often thrown away as an article of no value in the market. Many other particulars are added, for which we muſt refer to the work. The population is deſcribed by the expreſſion, a *countleſs multitude*. We ſhall paſs over the nature of their religion, which is Mohammedan; of their government, which is an elective monarchy; and the ſingular mode of their electing a new king from among the children of the deceaſed ſovereign: but the account of the preſent ſultan, his wives, and his children (p. 227.) is too curious not to be exhibited.

"The preſent ſultan, whoſe name is Alli, is a man of an unoſtentatious, plain appearance; for he ſeldom wears any other dreſs than the common blue ſhirt of cotton or ſilk, and the ſilk or muſlin turban, which form the uſual dreſs of the country. Such, however, is the magnificence of his ſeraglio, that the ladies who inhabit it are ſaid to be 500 in number, and he himſelf is deſcribed as the reputed father of 350 children, of whom 300 are males; a diſproportion which naturally ſuggeſts the idea that the mother, preferring to the gratification of natural affection, the joy of ſeeing herſelf the ſuppoſed parent of a future candidate for the empire, ſometimes exchanges her female child for the male offſpring of a ſtranger."

"We are told that fire-arms, though not unknown to the people of Bornou, are not poſſeſſed by them.

"South-eaſt from Bornou, lies the extenſive kingdom of Begarmee; and, beyond this kingdom, are ſaid to be ſeveral tribes of Negroes, idolaters, and feeders on human fleſh. Theſe, we are told, are annually invaded by the Begarmeeſe; and, when they have taken as many priſoners as their purpoſe may require, they drive the captives, like cattle, to Begarmee. It is further ſaid, that if any of them, exhauſted by fatigue, happen to linger in their pace, one of the horſemen ſeizes on the oldeſt, and, cutting off his arm, uſes it as a club to drive on the reſt.

"We are not much diſpoſed to give credit to this relation. That the Negroes, who are ſold for ſlaves, are different from the other Africans, is not probable; and that they ſhould be driven along with the mangled limbs of their aſſociates, utterly exceeds belief.

"The empire of Caſhna bears a great reſemblance to that of Bornou.

"After peruſing what is here related of the extent, population, fertility, manufactures, and commerce of theſe regions, we may be permitted to wonder at their having remained altogether unknown to Europeans. We cannot but ſuſpect conſiderable exaggerations. That the interior parts of Africa are peopled, the caravans which go from Cairo and Tripoli, and which are often abſent three years, ſufficiently evince: but that they are divided into regular and civilized ſtates, may be a queſtion. *A thouſand towns and villages* in one empire, and *thirty different languages* ſpoken in the other, manifeſt a diſpoſition in the Shereef Imhammed to enlargement, or, at leaſt to retail looſe reports. That they ſhould be acquainted with, yet not poſſeſs fire-arms, nor make any attempt to navigate the Niger, nor even to take the fiſh that abound in its waters, but little accords with the hiſtory of their commerce, and of their progreſs in manufactures.

"Let us, however, make all poſſible deductions, and be ever ſo incredulous as to ſome particulars, the proſpect which this narrative opens to us, of the interior of Africa (the greater part of which we have been accuſtomed to conſider as conſigned by nature to perpetual ſterility and deſolation) muſt afford great pleaſure; and though, as we have already remarked, it is far from being ſatisfactory, or from having anſwered the object of the miſſion, it may be regarded by the ſociety as that

ſort of evidence which ſhould encourage them to perſevere, and ought to induce Europeans, without delay, actually to explore the central provinces of the African continent."

Of AFRICA, from the Tropic of Cancer to the Cape of Good-Hope.

See the Table and Map.

THIS immenſe territory is, comparatively, ſpeaking very little known, no modern traveller having penetrated into the interior parts; ſo that we are ignorant not only of the bounds, but even of the names of ſeveral inland countries. In many material circumſtances, the inhabitants of this extenſive continent agree with each other. If we except the people of Abyſſinia, who are tawny, and profeſs a mixture of Chriſtianity, Judaiſm, and Paganiſm, they are all of a black complexion: in their religion, except on the ſea-coaſts, which have been viſited and ſettled by ſtrangers, they are pagans: and the form of government is every where monarchical. Few princes, however, poſſeſs a very extenſive juriſdiction; for as the natives of this part of Africa are groſsly ignorant in all the arts of utility or refinement, they are little acquainted with one another; and generally united in ſmall communities, each governed by its own prince. In Abyſſinia indeed, as well as in Congo, Loango, and Angola, we are told of powerful monarchs; but on examination, it is found that the authority of theſe princes ſtands on a precarious footing, each tribe or ſeparate body of their ſubjects being under the influence of a petty chieftain of their own, ſtyled Negus, to whoſe commands, however contrary to thoſe of the *Negaſcha Negaſcht*, or king of kings, they are always ready to ſubmit. This indeed muſt always be the caſe among rude nations, where the art of governing, like all others, is in a very ſimple and imperfect ſtate. In the ſucceſſion to the throne, force generally prevails over right; and an uncle, a brother, or other collateral relation, is on this account commonly preferred to the deſcendants, whether male or female.

The fertility of a country ſo prodigiouſly extenſive, might be ſuppoſed more various than we find it is; in fact, there is no medium in this part of Africa with regard to the advantages of ſoil; it is either perfectly barren, or extremely fertile: this ariſes from the intenſe heat of the ſun, which, where it meets with ſufficient moiſture, produces the utmoſt luxuriancy; and in thoſe countries where there are few rivers, reduces the ſurface of the earth to a barren ſand. Of this ſort are the countries of Anian and Zaara, which, for want of water, and conſequently of all other neceſſaries, are reduced to pefect deſerts, as the name of the latter denotes. In thoſe countries, on the other hand, where there is plenty of water, and particularly where the rivers overflow the land, part of the year, as in Abyſſinia, the productions of nature, both of the animal and vegetable kinds, are found in the higheſt perfection and greateſt abundance. The countries of Mandingo, Ethiopia, Congo, Angola, Batua, Truticui, Monomotapa, Caſati, and Mehenemugi, are extremely rich in gold and ſilver. The baſer metals likewiſe are found in theſe and many other parts of Africa. But the perſons of the natives make the moſt conſiderable article in the produce and traffic of this miſerable quarter of the globe.

On the Guinea or weſtern coaſt, the Engliſh trade to James Fort, and other ſettlements

ments near and up the river Gambia, where they exchange their woollen and linen manufactures, their hardware and ſpirituous liquors, for the perſons of the natives. By the treaty of peace in 1783, the river of Senegal with its dependencies were given up to France. Among the negroes, a man's wealth conſiſts in the number of his family, whom he ſells like ſo many cattle, and often at an inferior price. Gold and ivory, next to the ſlave trade, form the principal branches of African commerce. Theſe are carried on from the ſame coaſt, where the Dutch and French, as well as Engliſh, have their ſettlements for this purpoſe.

According to Mr. Ramſay, the annual Britiſh exports to Africa are eſtimated at 500,000l. part of which is annually exchanged with American and other foreign traders on the coaſt. About 50,000l. is returned in ivory, gold duſt, gum, &c. The greateſt part of the profits of the ſlave trade is raiſed on the ſugar plantations. If by eſtabliſhing factories, and encouraging civilization on the coaſt of Africa, and returning ſome of our Weſt Indian ſlaves to their original country, we tried to make up for our paſt treachery to the natives, and inſtructed them in the culture of thoſe articles, our demand for which has been ſo advantageous to America, viz. tobacco, indigo, cotton, rice, &c. to barter with us for our manufactures, great would be our profits. Were Africa civilized, and could we pre-occupy the affections of the natives, and introduce gradually our religion, manners, and language among them, we ſhould open a market that would fully employ our manufacturers and ſeamen, morally ſpeaking, till the end of time; and while we inriched ourſelves, we ſhould contribute to their happineſs *. For Africa, in its higheſt probable ſtate of culture, could not poſſibly interfere with the ſtaple of Britain, ſo as to hinder an extenſive and mutally advantageous trade from being carried on between the countries. The great difference of climate and ſoil muſt always diſtinguiſh the ſupplies and wants of each.

The Portugueſe are in poſſeſſion of the eaſt and weſt coaſt of Africa, from the Tropic of Capricorn to the Equator; which immenſe tract they became maſters of, by their ſucceſſive attempts, and happy diſcovery and navigation of the Cape of Good Hope. From the coaſt of Zanguebar, on the eaſtern ſide, they trade not only for the articles above mentioned, but likewiſe for ſeveral others, as ſena, aloes, civet, ambergriſe, and frankincenſe. The Dutch have ſettlements towards the ſouthern part of the continent in the country called Caffraria, or the land of the Hottentots, particularly Cape Town, which is well ſettled, and fortified; where their ſhips bound for India uſually put in, and trade with the natives for their cattle, in exchange for which they give them ſpirituous liquors.

COUNTRY OF THE HOTTENTOTS.

DURING the thirty-ſix hours which I ſpent (ſays monſieur Vaillant) with the Gonaqua Hottentots, I had time to make ſeveral obſervations concerning them. I remarked that they make a clapping noiſe with their tongue, like the reſt of the Hottentots. When they accoſt any one, they ſtretch forth the hand, ſaying *Tabé*, I ſalute you. This word and ceremony, which are employed by the Caffrees, are not uſed by the Hottentots, properly ſo called.

* It is moſt devoutly to be wiſhed by every friend to humanity, that the new ſettlement forming at Sierra Leone (which is 8° 12′ N. L. and about 12° W. L.) under the patronage of a very reſpectable ſociety of gentlemen in London, may anſwer thoſe benevolent purpoſes, for which it was intended; viz. to introduce the light of knowledge, and the comforts of civilization into Africa, to cement and perpetuate the moſt confidential union between the European colony and the natives of that country.

This affinity of cuſtoms, manners, and even conformation, their being ſo near Great Caffraria, and the accounts I afterwards received, convinced me theſe *hordes* of Gonaquas, who equally reſemble the Caffrees and the Hottentots, muſt be a mixed breed produced by theſe two nations. The dreſs of the men, arranged with more ſymmetry, has the ſame ſhape as that of the Hottentots; but as the Gonaquas are a little taller, they make their mantles of calves inſtead of ſheeps ſkins; they are both called *kroſs*. Several of them wear hanging from their necks a bit of ivory, or very white ſheeps bone, and this contraſt of the two colours produces a good effect, and is very becoming.

When the weather is exceſſively hot, the men lay aſide every part of their dreſs that is ſuperfluous, and retain only what they name their *jackals*. This is a piece of the ſkin of the animal ſo called, with which they cover what nature bids them conceal, and which is faſtened to their girdle. This veil, however, negligently arranged, may be conſidered as an uſeleſs appendage, and is of very little ſervice to their modeſty. The women, much fonder of dreſs than the men, employ more care in adorning their perſons. They wear a *kroſs* like the latter, but the apron which conceals their ſex is larger than thoſe of the Hottentots. During the great heats, they retain only this apron, with a ſkin which deſcends, behind, from their girdle to the calf of the leg. Young girls, below the age of nine years, go perfectly naked; when they attain to that age, they wear nothing but a ſmall apron.

Whatever may be the extent of the deſerts of Africa, we muſt not form any calculations reſpecting its population from thoſe innumerable ſwarms of blacks which are found on the weſt, and which border all the coaſts of the ocean, from the Canary Iſles to the environs of the Cape of Good Hope. There is certainly no proportion to enable us to hazard even a conjecture; ſince by a trade approved by a few, and held in deteſtation by the greater number, the barbarous navigators of Europe have induced theſe negroes, by the moſt villainous attractions, to give up their priſoners, or thoſe who are inferior to them in ſtrength. As their wants increaſed, they have become inhuman and perfidious beings; the prince has ſold his ſubjects; the mother has ſold her ſon; and nature, as an accomplice, has rendered her prolific.

This diſguſting and execrable traffic is, however, ſtill unknown in the interior parts of the continent. The deſert is really a deſert; and it is only at certain diſtances that one meets with a few *hordes*, that are not numerous, and who live on the fruits of the earth, and the produce of their cattle. After finding one horde, one muſt travel a great way to find another. The heat of the climate, the dryneſs of the ſands, the barrenneſs of the earth, a ſcarcity of water, rugged and rocky mountains, ferocious animals, and, beſides theſe, the humour of the Hottentots, a little phlegmatic, and their cold temperament, are all obſtacles to propagation. When a father has ſix children, it is accounted a phenomenon.

The country of the Gonaquas, into which I penetrated, did not therefore contain three thouſand people, in an extent of thirty or forty leagues. Theſe people did not reſemble thoſe degenerated and miſerable Hottentots, who pine in the heart of the Dutch colonies, contemptible and deſpiſed inhabitants, who bear no marks of their ancient origin but an empty name; and who enjoy, at the expence of their liberty, only a little peace, purchaſed at a dear rate, by the exceſſive labour to which they are ſubjected on the plantations; and by the deſpotiſm of their chiefs, who are always ſold to government. I had here (continues M. Vaillant) an opportunity of admiring a free and brave people, valuing nothing but independence; never obeying any impulſe foreign to nature, and calculated only to deſtroy their magnanimous, free, and truly philanthropic character.

The huts, conſtructed like thoſe of the Hottentots in the colonies, were eight or nine

nine feet in diameter, and were covered with ox or ſheep ſkins, but more commonly with mats. They had only one opening, very narrow and low; and it was in the middle of their hut that the family kindled their fire. The thick ſmoke with which theſe kennels were filled, and which had no other vent but the door, added to the ſtench which they always retain, would have ſtifled any European who might have had the courage to remain in them two minutes: cuſtom, however, renders all this ſupportable to theſe ſavages.

The two colours for which they ſhew the greateſt fondneſs are red and black. The firſt is compoſed of a kind of ochry earth, which is found in ſeveral places of the country, and which they mix and dilute with greaſe: this earth has a great reſemblance to brick-duſt, or tiles reduced to powder. Their black is nothing elſe than ſoot, or the charcoal of tender wood. Some women, indeed, are contented with painting only the prominence of the cheeks; but in general they daub over their whole body, in compartments varied with a certain degree of ſymmetry: and this part of their dreſs requires no ſmall length of time. Theſe two colours, ſo much admired by the Hottentots, are always perfumed with the powder of the *boughou*, which is not very agreeable to the ſmell of an European. A Hottentot would perhaps find our odours and eſſences no leſs inſupportable; but the *boughou* has over our rouge and paſtes the advantage of not being pernicious to the ſkin, of not attacking and injuring the lungs; and the female Hottentot, who is acquainted with neither amber, muſk, nor benjamin, never knows what it is to be oppreſſed by vapours, ſpaſm, and the head-ache. The men never paint their faces, but they uſe a preparation made of both colours mixed, to paint the upper-lip as far as the noſtrils; by which they enjoy the advantage of continually inhaling the odour of the ſubſtance employed for this purpoſe. Young girls ſometimes favour their lovers ſo far as to apply this paint for them under the noſe; and on this point they ſhew a kind of coquetry which has a very powerful influence over the heart of a Hottentot novice. The reader, however, muſt not infer, that the Hottentot women pay ſo much attention to dreſs as to neglect thoſe daily and uſeful occupations to which nature and their uſages call them. Separated from Europe by an immenſity of ſea, and from the Dutch colonies by deſert mountains and impaſſable rocks, too much communication with theſe people has not yet led them to the exceſſes of our depravation. On the contrary, when they have the happineſs of being mothers, nature addreſſes them in a different language; they aſſume, more than in any other country, a ſpirit ſuitable to their ſtate, and readily give themſelves up to thoſe cares which ſhe imperiouſly requires of them.

They are remarkably fond of hunting, and in this exerciſe they diſplay great dexterity. Beſides gins and ſnares, which they place at convenient ſpots to catch large animals, they lie in wait for them alſo, attack them as ſoon as they appear, and kill them with their poiſoned arrows, or their aſſagays, which are a kind of lances. On the firſt view of their arrows, one would not ſuſpect how deſtructive weapons they are; their ſmallneſs renders them ſo much the more dangerous, as it is impoſſible to perceive and follow them with the eye, and conſequently to avoid them. The ſlighteſt wound which they make always proves mortal, if the poiſon reaches the blood, and if the fleſh be torn. The ſureſt remedy is to amputate the wounded part, if it be a limb, but if the wound be in the body, death is unavoidable. The aſſagay is generally a very feeble weapon in the hands of a Hottentot; but, beſides this, as its length renders it not dangerous, for it may be ſeen cleaving the air, it is not difficult to avoid it.—Such are the means for attacking or defending, uſed by ſome of the ſavage nations of Africa. They may perhaps incite the indignation of an European, and induce him to tax theſe people with barbarity; but it muſt be remembered that the Europeans, before they employed that terrible thunder which in a moment cauſes

cauſes ſo much devaſtation and ruin, had no other arms but thoſe made of ſteel, and knew alſo the method of ſending a double death to the enemy.

The Hottentots have not the leaſt notion of the elements of agriculture; they neither ſow nor plant, nor do they ever reap any crop.—When they chooſe to give themſelves the trouble, they make an intoxicating liquor, compoſed of honey and a certain root, which they ſuffer to foment in a certain quantity of water. This liquor, which is a kind of hydromel, is not their uſual beverage, nor do they ever keep a ſtock of it by them. Whatever they have, they drink all at once, and frequently regale themſelves in this manner at certain periods. They ſmoke the leaves of a plant which they name *dagha*, and not *daka*, as ſome authors have written. This plant is not indigenous; it is the hemp of Europe. There are ſome of the ſavages who prefer theſe leaves to tobacco; but the greater part of them are fond of mixing both together. They ſet leſs value on the pipes brought from Europe than on thoſe which they fabricate themſelves; the former appear to them to be too ſmall.

Though they rear abundance of ſheep and oxen (continues our author) they ſeldom kill the latter, unleſs ſome accident happens to them, or old age has rendered them unfit for ſervice: their principal nouriſhment, therefore, is the milk of their ewes and cows, beſides which, they have the produce of their hunting excurſions, and from time to time they kill a ſheep. To fatten their animals they employ a proceſs, which, though not practiſed in Europe, is no leſs efficacious; and has this peculiar advantage, that it requires no care. They bruiſe, between two flat ſtones, thoſe parts which we deprive them of by the knife; and when thus compreſſed they acquire in time a prodigious bulk, and become a moſt delicate morſel, when they have reſolved to ſacrifice the animal.

Thoſe oxen which they intend for carrying burdens muſt be broke and trained very early to the ſervice; otherwiſe they would become abſolutely untractable. On this account, when the animal is ſtill young, they pierce the cartilage which ſeparates the noſtrils, and thruſt through the hole a piece of ſtick about eight or ten inches in length, and almoſt an inch in diameter.—The taſk of milking the cows and the ewes belongs to the women: and, as they never beat or torment them, they are ſurpriſingly tractable, and are abſolutely the ſame ſpecies as thoſe in Europe.

Of their ſheep and kine each village hath one common herd; every inhabitant taking it in his turn to be herdſman. This charge requires many precautions, very different from thoſe which are taken by our herdſmen, beaſts of prey being much more numerous and fierce in the ſouthern parts of Africa than in Europe. Lions, indeed are not very common; but there are elephants, rhinoceroſes, leopards, tygers, hyænas, and ſeveral kinds of wolves, more deſtructive than ours, together with many other furious animals that abound in the foreſts, and occaſionally make excurſions towards the Cape, and deſtroy the tame cattle. To prevent theſe misfortunes, it is the buſineſs of the herdſman to go, or ſend, every day round his diſtrict, in order to diſcover if any beaſt of prey be lurking in that quarter. In which caſe, he aſſembles the whole village together, and makes his report; when a party of the ſtouteſt among them arm themſelves with javelins and pointed arrows, and follow the perſon who may have diſcovered the beaſt, to the cave or covert where he is lodged. Here they arrange themſelves in two lines; the herdſmen entering the cave, and endeavouring to provoke the beaſt to follow him out, where he is inevitably deſtroyed.

Theſe ſavages meaſure the year by the epochs of drought and rainy weather. This diviſion is common to all the inhabitants of the tropical regions, and it is ſubdivided into moons; but they never count the days, if they exceed ten, that is to ſay, the number of their fingers. Beyond that, they mark the day or the time by ſome re-

markable epoch; for example, an extraordinary ſtorm, an elephant killed, an infectious diſorder among the cattle, an emigration, &c. The different parts of the day they diſtinguiſh by the courſe of the ſun; and they will tell you, pointing with their finger, he was *there* when I departed, and *here* when I arrived. This method is far from being exact; but notwithſtanding its want of preciſion, it is almoſt ſufficient for theſe people, who having no appointments of gallantry, no law-ſuits to attend, no perfidies to commit, no ſcandal to propagate, no occaſion meanly to cringe before ignorant patrons, and no new play to damn, calmly behold the ſun finiſh his courſe, and are under very little uneaſineſs whether twenty thouſand clocks bring miſery to one and happineſs to another.

A ſenſe of delicacy makes the Hottentots keep themſelves ſeparate from others when they are ſick. They are then ſeldom ſeen, and it would appear that they are aſhamed of having loſt their health. It never enters their thoughts to expoſe themſelves in public for the purpoſe of exciting pity. This is a forced method, but uſeleſs in a country where every body is compaſſionate.

When a Hottentot dies, he is buried in his worſt kroſs, and the limbs are diſpoſed in ſuch a manner that the whole body is covered. The relations then tranſport it to a certain diſtance from the horde, and diſpoſing it in a pit dug for this purpoſe, and which is never deep, cover it with earth, and then with ſtones, if any are to be found in the neighbourhood. Such a mauſoleum proves but a very weak defence againſt the attacks of the jackal and the hyæna: the body indeed is ſoon dug up and devoured. However badly this laſt duty may be diſcharged, the Hottentots are not much to be blamed, when we call to mind the funeral ceremonies of the ancient and celebrated Parſis, ſtill attached to the cuſtom of expoſing their dead on the tops of high towers, or in open cemeteries, in order that the crows and the vultures may feed upon them, and carry them away in morſels. The children, and, failing them, the neareſt relations of the deceaſed, take poſſeſſion of whatever is left; but the quality of a chief is not hereditary. He is always appointed by the horde, and his power is limited. In their councils his advice prevails, if it be judged good; if not, no regard is paid to it. When they are about to go to war, they know neither rank nor diviſions; each attacks or defends after his own manner; the moſt intrepid march in the van; and, when victory declares itſelf, they do not beſtow upon one man the honour of an action which has proved ſucceſsful by the courage of all: it is the whole nation that triumph.

Of all the people whom I ever ſaw (obſerves our author) the Gonaquas are the only nation that can be conſidered as free; but they will perhaps be ſoon obliged to remove to a greater diſtance, or receive laws from the Dutch government. All the land to the eaſt being in general good, the planters endeavour to extend their poſſeſſions in that quarter as much as they can, and their avarice doubtleſs will ſome day ſucceed. Miſery muſt then be the portion of theſe happy and peaceable people; and every trace of their liberty will be deſtroyed by maſſacres and invaſions. Thus have all thoſe hordes mentioned by old authors been treated; and, by being often diſmembered and weakened, they are now reduced to a ſtate of abſolute dependence on the Dutch. The exiſtence of the Hottentots, their names, and their hiſtory, will therefore in time be accounted fabulous; unleſs ſome traveller, who may poſſeſs curioſity enough to induce him to diſcover their remains, ſhould have the courage to penetrate into the remote deſerts inhabited by the great Nimiquas, where rocks more and more hardened by time, and old and barren mountains, do not produce a ſingle plant worthy to engage the attention of the ſpeculative botaniſt.

Some old authors have ſaid that the families of the ſavages ſleep all promiſcuouſly together in the ſame hut; and are neither acquainted with difference of age, nor that

invincible

invincible horror which ſeparates beings connected by blood: this has led ſome to the moſt infamous ſuſpicions.—Yes, the whole family inhabit the ſame hut; the father lies by the ſide of his daughter, and the mother by the ſon; but on the return of Aurora each riſes with a pure heart, and without having occaſion to bluſh before the Author of all Beings, or any of the creatures whom he has marked with the ſeal of his reſemblance. A ſavage is neither a brute, nor a barbarian.

It is neceſſary in this narration to take notice of that diſguſting apron of the Hottentot women, which has long made a figure in hiſtory. It is ſtill faſhionable among a certain horde. I ſay, it is faſhionable (obſerves M. Vaillant); for, inſtead of being the gift of nature, it ought to be conſidered as one of the moſt monſtrous refinements ever invented by I know not what coquetry, altogether peculiar to a certain ſmall corner of the world. This ſingularity is nothing elſe but a prolongation of the nymphæ, occaſioned by weights ſuſpended from them. They may hang down about nine inches more or leſs, according to the age of the perſon, or the aſſiduous care which is beſtowed on this ſingular decoration.

A phyſiognomiſt, or, if the reader chooſes, a modern wit, would entertain his company by aſſigning to the Hottentot, in the ſcale of beings, a place between a man and the ourang-outang. I cannot however conſent to this ſyſtematic arrangement; the qualities which I eſteem in him will never ſuffer him to be degraded ſo far; and I have found his figure ſufficiently beautiful, becauſe I experienced the goodneſs of his heart. It muſt indeed be allowed, that there is ſomething peculiar in his features, which in a certain degree ſeparates him from the generality of mankind, his cheek-bones are exceedingly prominent; ſo that his face being very broad in that part, and the jaw bones on the contrary extremely narrow, his viſage continues ſtill decreaſing even to the point of the chin. This configuration gives him an air of lankneſs, which makes his head appear very much diſproportioned, and too ſmall for his full and plump body. His flat noſe riſes ſcarcely half an inch at its greateſt elevation; and his noſtrils, which are extremely wide, often exceed in height the ridge of his noſe. His mouth is large, and furniſhed with ſmall teeth, well enamelled and perfectly white: his eyes, very beautiful and open, incline a little towards the noſe, like thoſe of the Chineſe; and to the ſight and touch his hair has the reſemblance of wool; it is very ſhort, curls naturally, and in colour is as black as ebony. He has very little hair, yet he employs no ſmall care to pull out by the roots part of what he has; but the natural thinneſs of his eyebrows ſaves him from this trouble in that part. Though he has no beard but upon the upper lip, below the noſe, and at the extremity of the chin, he never fails to pluck it out as ſoon as it appears. This gives him an effeminate look; which joined to the natural mildneſs of his character, deſtroys that commanding fierceneſs common to all men in a ſtate of nature, and which has acquired them the proud title of kings.—The women, with more delicacy of features, exhibit the ſame characteriſtic marks in their figure: they are equally well made. Their breaſts, admirably placed, have a moſt beautiful form, while in the bloom of youth; and their hands are ſmall, and their feet exceedingly well ſhaped, though they never wear ſandals. The ſound of their voice is ſoft; and their idiom, paſſing through the throat, is not deſtitute of harmony. When they ſpeak, they employ a great many geſtures, which give power and gracefulneſs to their arms.

The Hottentots, being naturally timid, are conſequently not at all an enterprizing people. Their phlegmatic coolneſs, and their ſerious looks, give them an air of reſerve, which they never lay aſide, even at the moſt joyful moments; while, on the contrary, all other black or tawny nations give themſelves up to pleaſures with the livelieſt joy, and without any reſtraint.

A profound indifference to the affairs of life inclines them very much to inactivity and indolence: the keeping of their flocks, and the care of procuring a ſubſiſtence, are the only objects that occupy their thoughts. They never follow hunting as ſportſmen, but like people oppreſſed and tormented by hunger. In ſhort, forgetting the paſt, and being under no neceſſity for the future, they are ſtruck only with the preſent; and it is that which alone engages their attention.

They are however (according to our traveller) the beſt, the kindeſt, and the moſt hoſpitable of people. Whoever travels among them may be aſſured of finding food and lodging; and though they will receive preſents, yet they never aſk for anything. If the traveller has a long journey to accompliſh, and if they learn from the information he requires, that there are no hopes of his ſoon meeting with other hordes, that which he is going to quit, ſupply him with proviſions as far as their circumſtances will allow, and with every thing elſe neceſſary for his continuing his journey, and reaching the place of his deſtination. Such are theſe people, or at leaſt ſuch did they appear to me, in all the innocence of manners, and of a paſtoral life. They excite the idea of mankind in a ſtate of infancy.

CAFFRARIA.

THE country known by the general denomination of Caffraria, is a very extenſive region, bounded on the north by Negroland and Abyſſinia; on the weſt by part of Guinea, Congo, and the ſea; on the ſouth by the Cape of Good Hope; and on the eaſt by the ſea. It is divided into ſeveral territories and kingdoms, of which little is known, and is computed to be 700 miles long, and 660 broad.

We ſhall give a more particular deſcription of the people from two modern writers; the firſt celebrated for his botanical knowledge, the other for his taſte in natural hiſtory, but more eſpecially for his very entertaining and intereſting travels into the interior parts of Africa, which, it is hoped, will not prove unacceptable to the reader.

The men among the Caffrees, ſays lieutenant Paterſon, are from five feet ten inches to ſix feet high, and well proportioned, and in general evince great courage in attacking lions or any beaſts of prey.

The colour of the Caffrees is a jet black, their teeth white as ivory, and their eyes large. The cloathing of both ſexes is nearly the ſame, conſiſting entirely of the hides of oxen, which are as pliant as cloth. The men wear tails of different animals tied round their thighs; pieces of braſs in their hair, and large ivory rings on their arms: they are alſo adorned with the hair of lions, and feathers faſtened in their heads, with many other fantaſtical ornaments.

They are extremely fond of dogs, which they exchange for cattle, and to ſuch a height do they carry this paſſion, that if one particularly pleaſes them, they will give two bullocks in exchange for it.—Their whole exerciſe through the day is hunting, fighting, or dancing. They are expert in throwing their lances, and in time of war, uſe ſhields made of the hides of oxen.

The women are employed in the cultivation of their gardens and corn. They cultivate ſeveral vegetables, which are not indigenous to their country, ſuch as tobacco, water melons, a ſort of kidney-beans, and hemp. The women alſo make baſkets, and the mats which they ſleep on.—The men have great pride in their cattle;

tle; they cut their horns in ſuch a way as to be able to turn them into any ſhape they pleaſe, and they teach them to anſwer a whiſtle. When they wiſh their cattle to return home, they go a little way from the houſe, and blow this ſmall inſtrument, which is made of ivory or bone, and ſo conſtructed as to be heard at a great diſtance, and in this manner bring all their cattle home without any difficulty.

The ſoil of this country is a blackiſh loomy ground, and ſo extremely fertile, that every vegetable ſubſtance, whether ſown or planted, grows here with great luxuriance.—There are great variations in the climate; but I had no thermometer to obſerve the degrees of heat. It ſeldom rains, except in the ſummer ſeaſon, when it is accompanied with thunder and lightning. The country, however, is extremely well ſupplied with water, not only from the high land towards the north, which furniſhes abundance throughout the year, but from many fountains of excellent water, which are found in the woods. From what I obſerved of this country, I am induced to believe that it is greatly ſuperior to any other known part of Africa. The woods produce variety of arborious plants, and ſome of a great ſize; they are inhabited by elephants, buffaloes, &c. There were alſo variety of beautiful birds and butterflies; but they were ſo ſhy, that I was able only to preſerve two birds of that country.

To judge of the Caffrees by thoſe I had ſeen, ſays Monſieur Vaillant, they are taller than the Hottentots of the colonies, or even than the Gonaquais, though they greatly reſemble the latter, but are more robuſt, and poſſeſs a greater degree of pride and courage. The features of the Caffrees are likewiſe more agreeable, none of their faces contracting towards the bottom, nor do the cheek bones of theſe people project in the uncouth manner of the Hottentots; neither have they large flat faces and thick lips like their neighbours the negroes of Moſambique, but a well formed contour, and agreeable noſe, with eyes ſparkling and expreſſive; ſo that ſetting aſide our prejudice with regard to colour, there are many women among them who might be thought handſome by the ſide of an European lady. They do not diſfigure themſelves by daubing their eye-brows like the Hottentots; but are very much tatooed, particularly about the face.

The hair of the Caffrees, which is ſtrong and curling, is never greaſed; but they anoint the reſt of their bodies, with a view of making themſelves active and ſtrong. The men are more particular in decorations than the women, being very fond of beads and braſs rings. They are ſeldom ſeen without bracelets on their legs and arms, made of the tuſks of an elephant, which they ſaw to a convenient thickneſs, and then poliſh and round. As theſe rings cannot be opened, it is neceſſary to make them big enough to paſs the hand through, ſo that they fall or riſe according to the motion of the arm. Sometimes they place ſmall rings on the arms of their children, whoſe growth ſoon fills up the ſpace, and fixes the ornament, a circumſtance which is particularly pleaſing to them.

They likewiſe make necklaces of the bones of animals, which they poliſh and whiten in the moſt perfect manner. Some content themſelves with the leg bone of a ſheep hanging on the breaſt, which is thought as pleaſing a decoration, as a patch on the face of a pretty woman. In the warm ſeaſon the Caffrees only wear their ornaments; when the weather is cold, they make uſe of kroſes made of the ſkins of calves or oxen, which reach to the feet. One particularity which deſerves attention, and does not exiſt elſewhere, is, that the Caffree women care little for ornaments. Indeed they are well made, and pretty, when compared to other ſavages; and never uſe the uncouth profuſion of Hottentot coquetry, not even wearing copper bracelets. Their aprons, like thoſe of the Gonaquais, are bordered with ſmall rows of beads, which is the only vanity they exhibit.

The

The ſkin that the female Hottentot ties about the loins, the Caffree women wears as high as her ſhoulders, tying it over the boſom which it covers. They have, like the men, a kroſs or cloak of calf or ox ſkin diveſted of the hair; but it is only in the cold and rainy ſeaſon that either ſex wear it. Theſe ſkins are as ſoft and pliant as the fineſt ſtuffs. Let the weather or the ſeaſon prove ever ſo bad, neither men nor women cover their heads. Sometimes, indeed, I have ſeen the head of a Caffree adorned with a feather ſtuck in the hair; but this ſight is by no means common.

One part of the daily occupation of the women is making earthen ware, which they faſhion as dexterouſly as their huſbands: they likewiſe make a curious kind of baſkets, of a texture ſo compact as to contain milk; and they alſo prepare the fields for ſeed, ſcratching the earth, rather than digging it, with wooden pick-axes.

The huts of the Caffrees are higher and more commodious than thoſe of the Hottentots; it is abſolutely a perfect hemiſphere; they are compoſed of wooden work, very ſtrong and compact, covered both within and without, with a mixture of earth, clay, and cow-dung. The opening, or door-way is ſo low, that to enter the dwelling you muſt crawl on your hands and knees, which makes it eaſier to defend themſelves againſt animals, or the ſudden attacks of an enemy. The hearth or fire-place is in the centre, ſurrounded by a circular rim which riſes two or three inches.

The lands of Caffraria, either from their ſituation, or the number of ſmall rivers that refreſh them, are more fertile than thoſe of the Hottentots. The Caffrees practiſe agriculture, which proves they are not naturally wanderers.

I have remarked, continues Monſieur Vaillant, that notwithſtanding the beautiful foreſts that adorn Caffraria, and delightful paſtures which ſpring up and almoſt cover the animals which feed on them; notwithſtanding thoſe rivers and ſtreams which croſs each other in a thouſand different directions to render them rich and fertile; their oxen, their cows, and almoſt all their animals, are much ſmaller than thoſe of the Hottentots—a difference which undoubtedly ariſes from the nature of the ſap, and a certain flavour predominant in every kind of graſs. I have made the obſervation both on domeſtic and wild animals, which never acquire the ſize of thoſe bred in the dry barren countries I have paſſed through.

Induſtry is the leading trait in the character of the Caffrees. Some arts, taught indeed by neceſſity, a love of agriculture, with a few religious dogmas, diſtinguiſh them as a more civiliſed people than thoſe towards the ſouth.

Circumciſion, which is generally practiſed among them, proves that they either owe their origin to an ancient people, or have ſimply imitated the inhabitants of ſome neighbouring country, of whom they have no longer any remembrance, neither do they uſe it (as they ſay) in any religious or myſtical ſenſe.

They entertain a very high opinion of the ſupreme being, and of his power; believe in a future ſtate, where the good will be rewarded, and the wicked puniſhed; but have no idea of the creation, thinking the world had no beginning, and will ever continue in the preſent ſtate. They have no ſacred ceremonies, and never pray. They inſtruct their own children, having no prieſts; but inſtead of them a kind of ſorcerers or conjurors, whom they greatly diſtinguiſh and revere.

The Caffrees are governed by a chief or king, whoſe power is very limited, receiving no tax, having no troops at his command, but being the father of a free people; neither attended nor feared but reſpected and beloved, and frequently poorer than many of his ſubjects. Being permitted to take as many wives as he pleaſes, who think it an honour to belong to him, it is neceſſary that he ſhould have a larger portion of land to cultivate, and a greater number of cattle to tend and feed; theſe

theſe being his only reſources for the maintenance of his numerous family, he is frequently in danger of being ruined. His cabin is neither higher, nor better decorated than the reſt; his whole family and ſeraglio live round him, compoſing a group of a dozen or fifteen huts; the adjoining land is generally of his own cultivation.

It is a cuſtom among the Caffrees for each to gather his own grain, which is their favourite nouriſhment, and which they grind, or rather cruſh between two ſtones; for which reaſon, the families living ſeparately, each ſurrounded by his own plantation of corn, occaſions a ſmall *horde* ſometimes to occupy a league ſquare of ground, a circumſtance never ſeen among the Hottentots.

The diſtance of the different *hordes* makes it neceſſary that they ſhould have chiefs, who are appointed by the king. When there is any thing to communicate, he ſends for and gives them orders, or rather information, which the chiefs bear to their ſeveral *hordes*.

The principal weapon of the Caffree is the lance or aſſaygay, which ſhews his diſpoſition to be at once intrepid and noble, deſpiſing, as below his courage, the invenomed dart, ſo much in uſe among hisneighbours; ſeeking his enemy face to face, and never throwing his lance but openly. In war he carries a ſhield of about three feet in height, made of the thickeſt part of the hide of a buffalo; this defends him from the arrow or aſſaygay, but is not proof againſt a muſket ball. The Caffree alſo manages with great ſkill, a club of about two feet and a half long, made of a ſolid piece of wood, three or four inches thick, in the largeſt part, and gradually diminiſhing towards one of the ends. When, in a cloſe engagement, they ſtrike with this weapon, or frequently throw it to the diſtance of fifteen or twenty paces, in which caſe it ſeldom fails of the intended effect.

The ſovereignty here is hereditary, the eldeſt ſon ever ſucceding. In default of male heirs, it is not the king's brother ſucceeds, but the eldeſt nephew; and in caſe the king ſhould have neither children nor nephews, the chiefs of the different hordes elect a king. Upon theſe occaſions a ſpirit of party ſometimes prevails, which gives riſe to factions and intrigues that generally end in bloodſhed.

Polygamy is cuſtomary among the Caffrees, their marriages are even more ſimple than thoſe of the Hottentots, the parents of the bridegroom being always content with his choice; the friends of the bride are rather more difficult, but ſeldom refuſe their conſent; after which they rejoice, drink and dance for weeks together, according to the wealth of the families; but theſe feaſts are never held but on the firſt eſpouſals. They have no muſical inſtruments but ſuch as are uſed by the Hottentots. As for their dances, the ſtep is not unlike the Engliſh.

At the death of the father, the ſons and the mother divide the property he has left between them. The daughters claiming nothing, remain at home with their mother or brother, unleſs it pleaſes ſome man to take them; and if this circumſtance takes place, during the life of the parents, they receive cattle in proportion to the wealth of their father. The dead are ſeldom buried, but carried away from the Kraal by their family, and depoſited in a deep trench common to the whole horde on ſuch occaſions, where the wild beaſts repair at leiſure, which preſerves the air from thoſe noxious vapours which otherwiſe the putrefaction would occaſion. The honours of burial are only due to the king or chief of a horde. They cover theſe bodies with piles of ſtones in the form of a dome.

I am unacquainted with the diſpoſition of the Caffrees, reſpecting love and jealouſy, but believe that they only feel the latter ſenſation in regard to their countrymen; voluntarily giving up their women for a ſmall conſideration to the firſt white man that expreſſes an inclination for them.

History.] The history of this continent of Africa is little known. We learn from the ancients, who ſailed a conſiderable way round the coaſts, that the inhabitants were in the ſame rude ſituation near 2000 years ago in which they are at preſent. This may either be accounted for by ſuppoſing, that nature has placed ſome inſuperable barrier between the natives of this diviſion of Africa and the inhabitants of Europe; or that the former being ſo long accuſtomed to a ſavage manner of life, and degenerating from one age to another, at length became hardly capable of making any progreſs in civility or ſcience. It is very certain that all the attempts of the Europeans, particularly of the Dutch at the Cape of Good Hope, have been hitherto ineffectual for making the leaſt impreſſion on theſe ſavage mortals, or giving them the leaſt inclination or even idea of the European manner of life.

The Portugueſe are ſovereigns of the greateſt part of the coaſt, and have a number of black princes their tributaries. There are ſome independent princes who have extenſive dominions, particularly the kings of Dahome and Widah, the moſt noted of any for the infamous ſlave-trade. Upwards of 200 years have the European nations traded with Africa in human fleſh, and encouraged in the Negro countries, wars, rapine, deſolation, and murder, that the Weſt India iſlands might be ſupplied with that commodity. The annual exportation of poor creatures from Africa hath exceeded 100,000, many of whom are driven a thouſand miles to the ſea coaſt, their villages having been ſurrounded in the night by an armed force, and the inhabitants dragged into perpetual captivity.

A ſea officer lately viſited all the chiefs of the Negroes in our ſettlements, from Santa Apollonia to Athera, an extent of more than 250 miles, and found the police and puniſhment of all crimes regulated by the ſlave-trade. Thoſe who commit crimes or treſpaſſes againſt their laws, are, at the deciſion of twelve elders, ſold for ſlaves for the uſe of their government, and the ſupport of their chiefs. Theft, adultery, and murder, are the higheſt crimes, and, whenever they are detected, ſubject the whole family to ſlavery. But any individual condemed to ſlavery for the crime of his relation, may redeem his own perſon, by furniſhing two ſlaves in his room. Or when a man commits one of the above cardinal crimes, all the male part of his family are forfeited to ſlavery; if a woman, the female part is ſold. "This traffic in crimes makes the chiefs vigilant. Nor do our planters, who purchaſe them, uſe any pains to inſtruct them in religion, to make them amends for the oppreſſion thus exerciſed on them. I am ſorry to ſay they are unnaturally averſe to every thing that tends to it; yet the Portugueſe, French, and Spaniards, in their ſettlements, ſucceeded in their attempts to inſtruct them, as much to the advantage of commerce, as of religion. It is for the ſake of Chriſtianity, and the advantages accompanying it, that Engliſh ſlaves embrace every occaſion of deſerting to the ſettlements of thoſe nations."

It is high time for the legiſlature to interfere and put an end to this moſt infamous of all trades, ſo diſgraceful to the Chriſtian name, and ſo repugnant to the principles of our conſtitution. Let the negroes already in our iſlands be properly treated, made free, and encouragement given to their population; meaſures that would be attended with no leſs profit than honour.

AFRICAN ISLANDS.

OF the African iſlands, ſome lie in the Eaſtern or Indian Ocean, and ſome in the Weſtern or Atlantic. We ſhall begin with thoſe in the Indian Ocean; the chief of which are Zocotra, Babelmandel, Madagaſcar, the Comora Iſlands, Bourbon, and Mauritius. *See the Map.*

ZOCOTRA. This iſland is ſituated in eaſt lon. 53, north lat. 12, thirty leagues eaſt of Cape Gardefoi, on the continent of Africa: it is eighty miles long, and fifty-four broad, and has two good harbours, where the European ſhips uſed formerly to put in when they loſt their paſſage to India. It is a populous, plentiful country, yielding moſt of the fruits and plants that are uſually found within the tropics, together with frankincenſe, gum-tragacanth, and aloes. The inhabitants are Mahometans, of Arab extraction, and are under the government of a prince or Sheik who is probably tributary to the Porte.

BABELMANDEL. The iſland of Babelmandel gives name to the ſtrait at the entrance of the Red Sea, where it is ſituated in eaſt long 44-30, north lat. 12, about four miles both from the Arabian and Abyſſinian ſhores. The Abyſſinians or Ethiopians, and the Arabians, formerly contended with great fury for the poſſeſſion of this iſland, as it commands the entrance into the South Sea, and preſerves a communication with the ocean. This ſtrait was formerly the only paſſage through which the commodities of India found their way to Europe; but ſince the diſcovery of the Cape of Good Hope, the trade by the Red Sea is of little importance. The iſland is of ſmall value, being a barren, ſandy ſpot of earth, not five miles round.

COMORA. Theſe iſlands are, Joanna, Mayotta, Mohilla, Angezeia, and Comora; ſituated between 41 and 46 eaſt lon. and between 10 and 14 ſouth lat. at an equal diſtance from Madagaſcar and the continent of Africa. Joanna, the chief, and which claims ſovereignty over, and exacts tribute from the others, is about 30 miles long and 15 broad, and affords plenty of proviſions, and ſuch fruits as are produced between the tropics. Eaſt-India ſhips, bound to Bombay, uſually touch here for refreſhments. The inhabitants are negroes of the Mahometan perſuaſion, and entertain our ſeamen with great humanity.

MADAGASCAR. This is the largeſt of the African iſlands, and is ſituated between 43 and 51 deg. eaſt lon. and between 10 and 26 ſouth lat. 300 miles ſouth-eaſt of the continent of Africa; it being near 1000 miles in length from north to ſouth; and generally between 200 and 300 miles broad. The ſea rolls with great rapidity, and is exceeding rough between this iſland and the continent of the Cape of Good Hope, forming a channel, or paſſage, through which all European ſhips, in their voyage to and from India, generally paſs, unleſs prevented by ſtorms.

Madagaſcar is a pleaſant and fertile country, abounding in ſugar, honey, vines, fruit-trees, vegetables, valuable gums, corn, cattle, fowls, precious ſtones,

iron, ſome ſilver, copper, ſteel, and tin. It affords an agreeable variety of hills, vallies, woods, and champaign; watered with numerous rivers, and well ſtored with fiſh. The air is generally temperate, and ſaid to be very healthy, though in a hot climate. The inhabitants are of different complexions and religions: ſome white, ſome negroes, ſome Mahometans, ſome pagans. The whites, and thoſe of a tawny complexion who inhabit the coaſts, are deſcended from the Arabs, as is evident from their language, and their religious rites; but here are no moſques, temples, nor any ſtated worſhip, except that they offer ſacrifices of beaſts on particular occaſions; as when ſick, when they plant yams, or rice, when they hold their aſſemblies, circumciſe their children, declare war, enter into new-built houſes, or bury their dead. Many of them obſerve the Jewiſh ſabbath, and give ſome account of the ſacred hiſtory, the creation and fall of man, as alſo of Noah, Abraham, Moſes, and David; from whence it is conjectured that they are deſcended of Jews who formerly ſettled here; though none knows how or when. This iſland was diſcovered by the Portugueſe, and the French took poſſeſſion of it in 1642; but the people diſliking their government, they were driven out in 1651; ſince which the natives have had the ſole poſſeſſion of the iſland, under a number of petty princes, who make war upon each other for ſlaves and plunder.

Mauritius, or Maurice, was ſo called by the Dutch, who firſt touched here in 1598, in honour of prince Maurice their ſtadtholder; but the French, its preſent maſters, have given it the name of THE ISLE OF FRANCE. It is ſituated in eaſt lon. 56, ſouth lat. 20, about 400 miles eaſt of Madagaſcar. It is of an oval form about 150 miles in circumference, with a fine harbour, capable of holding fifty large ſhips, ſecure againſt any wind that blows, and 100 fathoms deep at the entrance. The climate is extremely healthy and pleaſant. The mountains, of which there are many, and ſome ſo high that their tops are covered with ſnow, produce the beſt ebony in the world, beſides other various kinds of valuable wood, two of which greatly reſemble ebony in quality; one red, the other yellow as wax. The iſland is watered with ſeveral pleaſant rivers well ſtocked with fiſh; and though the ſoil is none of the moſt fruitful, yields plenty of tobacco, rice, fruit, and feeds a great number of cattle, deer, goats, and ſheep.

Bourbon. The Iſle of Bourbon is ſituated in eaſt long. 54, ſouth lat. 21, about 300 miles eaſt of Madagaſcar, and is about 90 miles round. There are many good roads for ſhipping round Bourbon, particularly on the north and ſouth ſides; but hardly a ſingle harbour where ſhips can ride ſecure againſt thoſe hurricanes which blow during the monſoons. Indeed the coaſt is ſo ſurrounded with blind rocks, ſunk a few feet below the water, that coaſting along ſhore is at all times dangerous. On the ſouthern extremity is a volcano, which continually throws out flames, ſmoke, and ſulphur, with a hideous roaring noiſe, terrible in the night to mariners. The climate here, though extremely hot, is healthy, being refreſhed with cooling gales, that blow morning and evening from the ſea and land: ſometimes, however, terrible hurricanes ſhake the whole iſland almoſt to its foundation; but generally without any other bad conſequence than frightening the inhabitants. The iſland abounds in brooks and ſprings, and in fruits, graſs, and cattle, with excellent tobacco (which the French have planted there), aloes, white pepper, ebony, palm, and other kinds of wood, and fruit-trees. Many of the trees yield odoriferous gums and raiſins, particularly benzoin of an excellent ſort in great plenty. The rivers are well ſtocked with fiſh, the coaſt with land and ſea tortoiſes,

and

and every part or the country with horned cattle, as well as hogs and goats. Ambergris, coral, and the moſt beautiful ſhells, are found upon the ſhore. The woods are full of turtle doves, paroquets, pigeons, and a great variety of other birds, beautiful to the eye and pleaſant to the palate. The French firſt ſettled here in the year 1672, after they were driven from the iſland of Madagaſcar. They have now ſome conſiderable towns in the iſland, with a governor; and here their Eaſt-India ſhips touch and take in refreſhments.

There are a great many more ſmall iſlands about Madagaſcar, and on the eaſtern coaſt of Africa, laid down in maps, but no where deſcribed.

Leaving therefore the eaſtern world and the Indies, we now turn round the Cape of Good Hope, which opens to our view the Atlantic, an immenſe ocean, lying between the two grand diviſions of the globe, having Europe, Aſia, and Africa, or the Old World, on the eaſt; and America, or the New World, on the weſt; towards which diviſion we now ſteer our courſe, touching in our way at the following iſlands upon the African coaſt, that have not yet been deſcribed, viz. St. Helena, Aſcenſion, St. Matthew, St. Thomas's, &c. Goree, Cape Verd, the Canary and Madeira iſlands. *See the Map.*

ST. HELENA. The firſt iſland on this ſide the Cape is St. Helena, ſituated in weſt lon. 6-4, ſouth lat. 16, being 1200 miles weſt of the continent of Africa, and 1800 eaſt of South America. The iſland is a rock about 21 miles in circumference, very high, and very ſteep, and only acceſſible at the landing-place, in a ſmall valley at the eaſt ſide of it, which is defended by batteries of guns planted level with the water; and as the waves are perpetually daſhing on the ſhore, it is generally difficult landing even here. There is no other anchorage about the iſland but at Chapel Valley Bay; and as the wind always blows from the ſouth-eaſt, if a ſhip overſhoots the iſland ever ſo little, ſhe cannot recover it again. The Engliſh plantations here afford potatoes and yams, with figs, plantains, bananas, grapes, kidney-beans, and Indian corn; of the laſt, however, moſt part is deſtroyed by the rats, which harbour in the rocks, and cannot be deſtroyed; ſo that the flour they uſe is almoſt wholly imported from England; and in times of ſcarcity they generally eat yams and potatoes inſtead of bread. Though the iſland appears on every ſide a hard barren rock, yet it is agreeably diverſified with hills and plains, adorned with plantations of fruit-trees and garden-ſtuff. They have great plenty of hogs, bullocks, poultry, ducks, geeſe, and turkeys, with which they ſupply the ſailors, taking in exchange ſhirts, drawers, or any light cloths, pieces of callico, filks, muſlins, arrack, ſugar, &c.

St. Helena is ſaid to have been firſt diſcovered by the Portugueſe on the feſtival of the empreſs Helena, mother of the emperor Conſtantine the Great, whoſe name it ſtill bears. It does not appear that the Portugueſe ever planted a colony here: and the Engliſh Eaſt India company took poſſeſſion of it in 1600, and held it without interruption till the year 1673, when the Dutch took it by ſurpriſe. However, the Engliſh, under the command of captain Munden, recovered it again within the ſpace of a year, and at the ſame time took three Dutch Eaſt India ſhips that lay in the road. There are about 200 families in the iſland, moſt of them deſcended from Engliſh parents. The Eaſt India ſhips take in water and freſh proviſions here, in their way home; but the iſland is ſo ſmall, and the wind ſo much againſt them outward bound, that they then very ſeldom ſee it.

The company's affairs are here managed by a governor, deputy-governor, and ſtore-keeper, who have ſtanding ſalaries allowed by the company, beſides a public

table well furniſhed, to which all commanders, maſters of ſhips, and principal paſſengers are welcome.

ASCENSION. This iſland is ſituated in 7 deg. 40 min. ſouth lat. 600 miles north-weſt of St. Helena: it received its name from its being diſcovered by the Portugueſe on Aſcenſion-day; and is a mountainous, barren iſland, about 20 miles round, and uninhabited; but has a ſafe, convenient harbour, where the Eaſt India ſhips generally touch to furniſh themſelves with turtles or tortoiſes, which are very plentiful here, and vaſtly large, ſome of them weighing above a hundred pounds. The ſailors going aſhore in the night-time, frequently turn two or three hundred of them on their backs before morning; and are ſometimes ſo cruel, as to turn many more than they uſe, leaving them to die on the ſhore.

ST. MATTHEW. This is a ſmall iſland lying in 6-1 weſt lon. and 1-30 ſouth lat. 300 miles to the north-eaſt of Aſcenſion, and was alſo diſcovered by the Portugueſe, who planted and kept poſſeſſion of it for ſome time; but afterwards deſerting it, this iſland now remains uninhabited, having little to invite other nations to ſettle there, except a ſmall lake of freſh water.

The four following iſlands, viz. ST. THOMAS, PRINCES ISLAND, ANNABOA, and FERNANDOPÓ, are ſituated in the gulf of Guinea, between Congo and Benin; all of them were firſt diſcovered by the Portugueſe, and belong ſtill to them; they furniſh ſhipping with freſh water and proviſions as they paſs by. And, to the honour of the Portugueſe government, and diſgrace of our Weſt India legiſlatures, there are 15,000 Negro Chriſtians in St. Thomas', inſtructed to read and write, who daily attend divine worſhip, clean and well clothed.

CAPE VERD ISLANDS. Theſe iſlands are ſo called from a cape of that name on the African coaſt, near the river Gambia, over againſt which they lie, at the diſtance of 300 miles, between 23 and 26 degrees weſt lon. and 14 and 18 deg. north lat. They were diſcovered in the year 1460, by the Portugueſe, and are about 20 in number; but ſome of them, being only barren, uninhabited rocks, are not worth notice. St. Jago, Bravo, Fogo, Mayo, Bonaviſta, Sal, St. Nicholas, St. Vincent, Santa Cruz, and St. Antonio, are the moſt conſiderable, and are ſubject to the Portugueſe. The air, generally ſpeaking, is very hot, and in ſome of them very unwholeſome. They are inhabited by Europeans, or the deſcendants of Europeans, and negroes.

ST. JAGO, where the Portugueſe viceroy reſides, is the moſt fruitful, beſt inhabited, and largeſt of them all, being 150 miles in circumference, yet it is mountainous, and has much barren land in it. Its produce is ſugar, cotton, ſome wine, India corn, cocoa-nuts, oranges, and other tropical fruits; but the plant of moſt conſequence is madder, which grows in abundance among the cliffs. Here is plenty of roots, garden-ſtuffs, hogs, and poultry, and ſome of the prettieſt green monkeys, with black faces, that are to be met with any where. Baya, or Praya (famous for an action between an Engliſh and French ſquadron), ſituated on the eaſt ſide, has a good port, and is ſeldom without ſhips, thoſe outward-bound to Guinea or the Eaſt Indies, from England, Holland, and France, often touching here for water and refreſhments.

In the iſland of MAYO or MAY, immenſe quantities of ſalt are made by the heat of

of the ſun from the ſea-water, which at ſpring-tides, is received into a ſort of pan, formed by a ſand-bank, which runs along the coaſt for two or three miles. Here the Engliſh drive a conſiderable trade for ſalt, and have commonly a man of war to guard the veſſels that come to load with it, which in ſome years amount to a hundred or more. The ſalt coſts nothing, except for raking it together, wheeling it out of the pond, and carrying it on aſſes to the boats, which is done at a very cheap rate. Several of our ſhips come hither for a freight of aſſes, which they carry to Barbadoes and other Britiſh plantations. The inhabitants of this iſland, even the governor and prieſts, are all negroes, and ſpeak the Portugueſe language. The negro governor expects a ſmall preſent from every commander that loads ſalt, and is pleaſed to be invited aboard their ſhips. The ſea water is ſo clear on this coaſt, that an Engliſh ſailor, who dropped his watch, perceived it at the bottom, though many fathoms deep, and had it brought up by one of the natives, who are, in general, expert at diving.

The iſland of Fogo is remarkable for being a volcano, continually ſending up ſulphureous exhalations; and ſometimes the flame breaks forth like Ætna, in a terrible manner, throwing out pumice ſtones that annoy all the parts adjacent.

Goree is ſituated within cannon-ſhot of Cape Verd, N. lat. 14-43, W. lon. 17-20 and was ſo called by the Dutch, from an iſland and town of the ſame name in Holland. It is a ſmall ſpot not exceeding two miles in circumference, but its importance riſes from its ſituation for trade ſo near Cape Verd, and it has been therefore a bone of contention between European nations. It was firſt poſſeſſed by the Dutch, from whom, in 1663, it was taken by the Engliſh; but in 1665 it was re-taken by the Dutch, and in 1677 ſubdued by the French, in whoſe poſſeſſion it remained till the year 1759, when the Britiſh arms were every where triumphant. It was reſtored to the French at the treaty of peace in 1763. It was re-taken by the Engliſh in the laſt war but again reſtored at the peace of 1783.

Canaries. The Canaries, anciently called the Fortunate Iſlands, are ſeven in number, and ſituated between 12 and 19 degrees weſt lon. and between 27 and 29 degrees north lat. about 150 miles ſouth-weſt of Morocco. Their particular names are, Palma, Hiero, Gomera, Teneriffe, Grand Canaria, Fuertuventura, and Langorote. Theſe iſlands enjoy a pure, temperate air, and abound in the moſt delicious fruits, eſpecially grapes, which produce thoſe rich wines that obtain the name of the Canary, whereof the greateſt part is exported to England, which in time of peace is computed at ten thouſand hogſheads annually. The Canaries abound with thoſe little beautiful birds that bear their name, and are now ſo common and ſo much admired in Europe; but their wild notes in their native land far excel thoſe in a cage or foreign clime.

Grand Canary, which communicates its name to the whole, is about 150 miles in circumference, and ſo extremely fertile, as to produce two harveſts in the year. Teneriffe, the largeſt of theſe iſlands next to that of the Grand Canary, is about 120 miles round; a fertile country, abounding in corn, wine, and oil; though it is pretty much encumbered with mountains, particularly the Peak. Captain Glaſs obſerves, that in coming in with this iſland, in clear weather, the Peak may be eaſily diſcerned at 120 miles diſtance, and in ſailing from it at 150. The Peak is an aſcent in the form of a ſugar-loaf, about fifteen miles in circumference, and according to the account of Sprat biſhop of Rocheſter, publiſhed in the Phioſophical

Tranſactions, near three miles perpendicular; but lately aſcertained to be only 13,265 feet. This mountain is a volcano, and ſometimes throws out ſuch quantities of ſulphur and melted ore, as to convert the richeſt lands into barren deſerts. Theſe iſlands were firſt diſcovered and planted by the Carthaginians; but the Romans deſtroying that ſtate, put a ſtop to the navigation on the weſt coaſt of Africa, and the Canaries lay concealed from the reſt of the world, until, they were again diſcovered in the year 1405, by the Spaniards, to whom they ſtill belong. It is remarkable, that though the natives reſembled the Africans in their ſtature and complexion when the Spaniards firſt came among them, their language was different from that ſpoken on the continent; they retained none of their cuſtoms, were maſters of no ſcience, and did not know there was any country in the world beſides their own.

MADEIRAS. The three iſlands called the Madeiras, are ſituated, according to the author of Anſon's voyage, in a fine climate in 32-27 north lat. and from 18-30 to 19-50 weſt lon. about 100 miles north of the Canaries, and as many weſt of Sallee in Morocco. The largeſt, from which the reſt derive the general name of Madeiras, or rather Mattera, on account of its being formerly almoſt covered with wood, is about 75 miles long, 60 broad, and 180 in circumference. It is compoſed of one continued hill, of a conſiderable height, extending from eaſt to weſt; the declivity of which, on the ſouth ſide, is cultivated and interſperſed with vineyards; and in the midſt of this ſlope the merchants have fixed their country ſeats, which form a very agreeable proſpect. There is but one conſiderable town in the whole iſland, which is named Fonchial, ſeated on the ſouth part of the iſland, at the bottom of a large bay; towards the ſea it is defended by a high wall, with a battery of cannon, and is the only place where it is poſſible for a boat to land; and even here the beach is covered with large ſtones, and a violent ſurf continually beats upon it.

Though this iſland ſeems to have been known to the ancients, yet it lay concealed for many generations, and was at length diſcovered by the Portugueſe in 1519: but others aſſert that it was firſt diſcovered by an Engliſhman, in the year 1344. Be that as it may, the Portugueſe took poſſeſſion of it, and are ſtill almoſt the only people who inhabit it. The Portugueſe, at their firſt landing, finding it little better than a thick foreſt, rendered the ground capable of cultivation by ſetting fire to this wood; and it is now very fertile, producing in great abundance the richeſt wine, ſugar, the moſt delicate fruits, eſpecially oranges, lemons, and pomegranates; together with corn, honey, and wax: it abounds alſo with boars and other wild beaſts, and with all ſorts of fowls, beſides numerous groves of cedar trees, and thoſe that yield a juice called dragon's blood, maſtic, and other gums. The inhabitants of this iſle make the beſt ſweet-meats in the world, and ſucceeded wonderfully in preſerving citrons and oranges, and in making marmalade and perfumed paſtes, which exceed thoſe of Genoa. The ſugar they make is extremely beautiful, and ſmells naturally of violets. This indeed is ſaid to be the firſt place in the Weſt where that manufacture was ſet on foot, and from thence it was carried to the Braſils in America. The Portugueſe not finding it ſo profitable as at firſt, have pulled up the greateſt part of their ſugar canes, and planted vineyards in their ſtead, which produce ſeveral ſorts of excellent wine, particularly that which bears the name of the iſland, malmſy, and tent; of all which the inhabitants make and ſell prodigious quantities. No leſs than 20,000 hogſheads of Madeira, it is ſaid, are yearly exported, the greateſt part to the Weſt Indies, eſpecially to Barbadoes,

the Madeira wine not only enduring a hot climate better than any other, but even being improved, when expoſed to the ſun in barrels, after the bung is taken out. It is ſaid no venomous animal can live here. Of the two other iſlands, one is called Port Santo, which lies at a ſmall diſtance from Madeira, is about eight miles in compaſs, and extremely fertile. It has very good harbours, where ſhips may ride with ſafety againſt all winds, except the ſouth-weſt; and is frequented by Indiamen outward and homeward bound. The other iſland is an inconſiderable barren rock.

AZORES. Leaving the Madeiras, with which we cloſe the account of Africa, we continue our courſe weſtward through this immenſe ocean, which brings us to the Azores, or, as they are called the Weſtern Iſlands, that are ſituated between 25 and 32 degrees weſt lon. and between 37 and 40 north latitude, 900 miles weſt of Portugal, and as many eaſt of Newfoundland, laying almoſt mid-way between Europe and America. They are nine in number, and are named Santa Maria, St. Miguel or St. Micheal, Tercera, St. George, Gracioſa, Fayal, Pico, Flores, and Corvo. They were diſcovered in the middle of the fifteenth century by Joſhua Vander Berg, a merchant of Bruges in Flanders, who, in a voyage to Liſbon, was by ſtreſs of weather, driven to theſe iſlands, which he found deſtitute of inhabitants, and called them the Flemiſh Iſlands. On his arrival at Liſbon, he boaſted of this diſcovery, on which the Portugueſe ſet ſail immediately, and took poſſeſſion of them, to whom they ſtill belong, and were called in general the Azores, from the great number of hawks and falcons found among them. All theſe iſlands enjoy a very clear and ſerene ſky, with a ſalubrious air; but are expoſed to violent earthquakes and inundations, from both which they have frequently ſuffered much damage. They are, however, extremely fertile in corn, wine, and a variety of fruits; alſo in cattle, fowl, and fiſh. It is ſaid that no poiſonous or noxious animals breed on the Azores, and that if carried thither they will expire in a few hours.

St. Michael, which is the largeſt, being near 100 miles in circumference, and containing 50,000 inhabitants, was twice invaded and plundered by the Engliſh in the reign of queen Elizabeth. Tercera is the moſt important of theſe iſlands, on account of its harbour, which is ſpacious, and has good anchorage, but is expoſed to the ſouth eaſt winds. It is generally viſited by homeward bound fleets from Braſil, Africa, and the Eaſt Indies. Its capital town, Angra, contains a cathedral and five churches, and is the reſidence of the governor of theſe iſlands, as well as of the biſhop.

AMERICA.

Its Discovery and Conquest.

WE are now to treat of a country of vaſt extent and fertility, and which, though little cultivated by the hand of Art, owes in many reſpects more to that of Nature that any other diviſion of the globe. The particular circumſtances of this country require that we ſhould in ſome meaſure vary our plan, and, before deſcribing its preſent ſtate, afford ſuch information with regard to its diſcovery, as is moſt neceſſary for ſatisfying our readers.

Towards the cloſe of the 15th century, Venice and Genoa were the only powers in Europe who owed their ſupport to commerce. An interference of intereſts inſpired a mutual rivalſhip; but in traffic Venice was much ſuperior. She engroſſed the whole commerce of India, then, and indeed always, the moſt valuable in the world; but hitherto entirely carried on through the inland parts of Aſia, or by the way of Egypt and the Red Sea. In this ſtate of affairs, Columbus, a native of Genoa, whoſe knowledge of the true figure of the earth, however attained, was much ſuperior to the general notions of the age in which he lived, formed a project of ſailing to the Indies by a bold and unknown route, and of opening to his country a new ſource of opulence and power. But this propoſal of ſailing weſtward to the Indies was rejected by the Genoeſe as chimerical, and the principles on which it was founded were condemned as abſurd. Stung with diſappointment and indignation, Columbus retired from his country, laid his ſcheme before the court of France, where his reception was ſtill more mortifying, and where, according to the practice of that people, he was laughed at and ridiculed. Henry VII. of England was his next reſort; but the cautious politics of that prince were the moſt oppoſite imaginable to a great but uncertain deſign. In Portugal, where the ſpirit of adventure and diſcovery about this time began to operate, he had reaſon to expect better ſucceſs. But the Portugueſe contented themſelves with creeping along the coaſt of Africa, and diſcovering one cape after another: they had no notion of venturing boldly into the open ſea, and of riſking the whole at once. Such repeated diſappointments would have broken the ſpirit of any man but Columbus. The expedition required expence, and he had nothing to defray it. His mind, however, ſtill remained firm; he became the more enamoured of his deſign, the more difficulty he found in accompliſhing it, and he was inſpired with that noble enthuſiaſm which always animates an adventurous and original genius. Spain was now his only reſource, and there, after eight years attendance, he at length ſucceeded and chiefly though the intereſt of queen Iſabella. Columbus ſet ſail in the year 1492, with a fleet of three ſhips, upon the moſt adventurous attempt ever undertaken by man, and in the fate of which the inhabitants of two worlds were intereſted *. In this voyage he had athouſand difficulties to contend

* Dr. Robertſon obſerves, that the armament of Columbus was not ſuitable either to the dignity of the nation by which it was equipped, or to the importance of the ſervice for which it was deſtined. It

tend with; the moſt ſtriking was the variation of the compaſs, then firſt obſerved, and which ſeemed to threaten that the laws of Nature were altered on an unknown ocean, and the only guide he had left was ready to forſake him. His ſailors, always diſcontented, now broke out into open mutiny, threatening to throw him overboard, and inſiſted on their return. But the firmneſs and addreſs of the commander, and much more the diſcovery of land, after a voyage of 33 days, put an end to the commotion. It was on the morning of the 12th of October, that Columbus deſcried an iſland, whoſe flat and verdant fields, well ſtored with wood, and watered with many rivulets, preſented the aſpect of a delightful country. The crew of the Pinta inſtantly began the Te Deum, as a hymn of thankſgiving to God, and were joined by thoſe of the other ſhips, with tears of joy, and tranſports of congratulation. This office of gratitude to Heaven was followed by an act of juſtice to their commander. They threw themſelves at the feet of Columbus with feelings of ſelf-condemnation mingled with reverence, and implored him to pardon their ignorance, incredulity, and inſolence. After this the boats were all manned and armed, and they rowed towards the iſland with their colours diſplayed, with warlike muſic and other martial pomp. As they approached the coaſt, they ſaw it covered with a multitude of people, whom the novelty of the ſpectacle had drawn together, and whoſe attitudes and geſtures expreſſed wonder and aſtoniſhment at the ſtrange objects which preſented themſelves to their view. Columbus was the firſt European who ſet foot in the new world, which he had diſcovered. He landed in a rich dreſs, and with a naked ſword in his hand. His men followed, and kneeling down, they all kiſſed the ground which they had ſo long deſired to ſee; and took ſolemn poſſeſſion of the country for the crown of Caſtile and Leon. The natives of the country were at firſt ſhy through fear, but ſoon became familiar with the Spaniards, and trafficked with them. It was one of the Bahama iſlands on which Columbus had landed, and which he called *San Salvador*; but he ſoon diſcovered, from the poverty of the inhabitants, that theſe could not be the Indias he was in queſt of. In ſteering ſouthward, however, he found the iſland called Hiſpaniola, abounding in all the neceſſaries of life, inhabited by a humane and hoſpitable people, and what was of ſtill greater conſequence, as it inſured his favourable reception at home, promiſing, from ſome ſamples he received, conſiderable quantities of gold. This iſland therefore he propoſed to make the centre of his diſcoveries: and having left upon it a few of his companions as the ground-work of a colony, returned to Spain to procure neceſſary reinforcements.

The court was then at Barcelona; Columbus travelled thither from Seville, amidſt the acclamations of the people, attended by ſome of the natives, and conveying the gold, the arms, utenſils, and ornaments of the country he had diſcovered. This entry into Barcelona was a ſpecies of triumph more glorious than that of conquerors, more uncommon, and more innocent. In this voyage, he had acquired a general knowledge of all the iſlands in that great ſea which divides North and South America;

It conſiſted of three veſſels. The largeſt, a ſhip of no conſiderable burden, was commanded by Columbus, as admiral, who gave it the name of Santa Maria, out of reſpect for the Bleſſed Virgin, whom he honoured with ſingular devotion. Of the ſecond, called the Pinta, Martin Pinzon was captain, and his brother Francis pilot. The third, named the Nigna, was under the command of Vincent Yanez Pinzon. Theſe two were light veſſels, hardly ſuperior in burden or force to large boats. This ſquadron, if it merits that name, was victualled for twelve months, and had on board ninety men, moſtly ſailors, together with a few adventurers who followed the fortune of Columbus, and ſome gentlemen of Iſabella's court, whom ſhe appointed to accompany him. Though the expence of the undertaking was one of the circumſtances which chiefly alarmed the court of Spain, and retarded ſo long the negociation with Columbus, the ſum employed in fitting out this ſquadron did not exceed four thouſand pounds.

but he had no idea that there was an ocean between him and China. The countries which he had diſcovered were conſidered as a part of India. Even after the error which gave riſe to this opinion was detected, and the true poſition of the new world was aſcertained, the name has remained, and the appellation of *Weſt Indies* is given by all the people of Europe to the country, and that of *Indians* to its inhabitants. Thus were the Weſt Indies diſcovered by ſeeking a paſſage to the Eaſt; and even after the diſcovery, ſtill conceived to be a part of the eaſtern hemiſphere. The preſent ſucceſs of Columbus, his former diſappointments, and the glory attending ſo unexpected a diſcovery, rendered the court of Spain as eager to forward his deſigns now, as it had been dilatory before. A fleet of ſeventeen ſail was immediately prepared; all the neceſſaries for conqueſt or diſcovery were embarked, and 1500 men, among whom were ſeveral of high rank and fortune, prepared to accompany Columbus, now appointed governor with the moſt ample authority. It is impoſſible to determine, whether the genius of this great man, in firſt conceiving the idea of theſe diſcoveries, or his ſagacity in the execution of the plan he had conceived, moſt deſerve our admiration. Inſtead of hurrying from ſea to ſea, and from one iſland to another, which, agreeably to the vulgar ambition of diſcoverers, was naturally to be expected, Columbus with ſuch a field before him, unable to turn on either hand without finding new objects of his curioſity and his pride, determined rather to turn to the advantage of the court of Spain the diſcoveries he had already made, than to acquire for himſelf the unvailing applauſe of viſiting a number of unknown countries, from which he reaped no other benefit but the pleaſure of ſeeing them. With this view he made for Hiſpaniola, where he eſtabliſhed a colony, and erected forts in the moſt advantageous grounds for ſecuring the dependence of the natives. Having ſpent a conſiderable time in this employment, and laboured for the eſtabliſhment of this colony with as much zeal and aſſiduty as if his views had extended no farther, he next proceeded to aſcertain the importance of his other diſcoveries, and to examine what advantages were moſt likely to be derived from them. He had already touched at Cuba, which, from ſome ſpecimens, ſeemed a rich country; but whether it was an iſland, or a part of ſome great continent, he was altogether uncertain. To aſcertain this point was the preſent object of his attention. In coaſting along the ſouthern ſhore of Cuba, Columbus was entangled among a multitude of iſlands, of which he reckoned 160 in one day. Theſe iſlands, which were well inhabited, and abounded in all the neceſſaries of life, gave him an opportunity of reflecting on this fertility of nature, where his countrymen expected nothing but the barren ocean; he called them *Jardin de la Reina*, or the Queen's Garden, in gratitude to his royal benefactreſs, who was always uppermoſt in his memory. In the ſame voyage Jamaica was diſcovered. But to ſo many difficulties was Columbus expoſed, on an unknown ſea, among rocks, ſhelves, and lands, that he returned to Hiſpaniola, without learning any thing more certain with regard to Cuba, the main object of this enterprize.

By the firſt ſucceſs of this great man, the public diffidence was turned into admiration; but by a continuance of the ſame ſucceſs, their admiration degenerated into envy. His enemies in Spain ſet every ſpring in motion againſt him; and there is ſeldom difficulty in finding ſpecious grounds of accuſation againſt ſuch as are employed in the execution of extenſive and complicated plans. An officer was diſpatched from Spain, fitted by his character to act the part of a ſpy and informer, and whoſe preſence plainly demonſtrated to Columbus the neceſſity of returning to Europe, for obviating the objections or calumny of his enemies.

It

It was not without great difficulty that he was enabled to ſet out on a third expedition, ſtill more famous than any he had hitherto undertaken. He deſigned to ſtand to the ſouthward from the Canaries until he came under the equinoctial line, and then to proceed directly weſtward, that he might diſcover what opening that might afford to India, or what new iſlands, or what continent might reward his labour. In this navigation, after being long buried in a thick fog, and ſuffering numberleſs inconveniences from the exceſſive heats and rains between the tropics, they were at length favoured by a ſmart gale, and went before it ſeventeen days to the weſtward. At the end of this time, a ſeamen ſaw land, which was an iſland on the coaſt of Guiana, now called Trinidad. Having paſſed this iſland, and two others which lie in the mouth of the great river Oronoque, the admiral was ſurpriſed with an appearance he had never ſeen before: this was the frightful tumult of the waves, occaſioned by a conflict betwixt the tide of the ſea, and the rapid current of that immenſe river. But ſailing forward, he plainly diſcovered that they were in freſh water; and judging rightly that it was improbable any iſland ſhould ſupply ſo vaſt a river, he began to ſuſpect he had diſcovered the continent; but when he left the river, and found that the land continued on to the weſtward for a great way, he was convinced of it. Satisfied with this diſcovery, he yielded to the uneaſineſs and diſtreſſes of his crew, and bore away for Hiſpaniola. In the courſe of this diſcovery, Columbus landed at ſeveral places, where, in a friendly manner, he traded with the inhabitants, and found gold and pearl in tolerable plenty.

About this time the ſpirit of diſcovery ſpread itſelf widely, and many adventurers all over Europe wiſhed to acquire the reputation of Columbus, without poſſeſſing his abilities. The Portugueſe diſcovered Braſil, which makes at preſent the moſt valuable part of their poſſeſſions: Cabot, a native of Briſtol, diſcovered the north-eaſt coaſts, which form the United States of America; and Americus Veſpuſius, a merchant of Florence, ſailed to the ſouthern continent; and being a man of addreſs, had the honour of giving his name to half the globe. But no one is now impoſed on by the name; it is univerſally known that Columbus was the firſt diſcoverer. The being deprived of the honour of giving name to the new world, was one of the ſmalleſt mortifications to which this great man was expoſed. For ſuch were the clamours of his enemies, and the ingratitude of the court of Spain, that after diſcovering the continent, and making ſettlements in the iſlands of America, he was treated like a criminal, and carried over to Europe in irons. When he arrived in Spain, the court began to be aſhamed of their ungenerous treatment of this great man, and orders were inſtantly iſſued to ſet him at liberty. He vindicated his conduct, in the preſence of the king and queen, in the moſt ſatisfactory manner, and gave ample evidence of the malevolence of his enemies. Ferdinand and Iſabella expreſſed their ſorrow for what had happened, diſavowed their knowledge of it, and joined in promiſing him protection and future favour. Columbus, however, retained a deep ſenſe of the indignity with which he had been treated. The fetters that he had been loaded with were conſtantly hung up in his chamber, and he gave orders that when he died they ſhould be buried in his grave. But, notwithſtanding the ill treatment which he had received, he undertook another voyage in order to make farther diſcoveries. He underwent in the courſe of it great fatigues; and returning to Spain, ended his life at Valladolid on the 20th of May, 1506, in the 59th year of his age. He had the glory of making the one half of the world known to the other; a glory ſo much the more precious, as it was untainted by cruelty or plunder, which diſfigured all the exploits of thoſe who came after him, and accompliſhed the execution of his plan. The ſucceeding governors of Cuba and Hiſpaniola endeavoured to purchaſe the ſame advantages by the blood

of the natives, which Columbus had obtained by his good ſenſe and humanity. Theſe iſlands contained mines of gold. The Indians only knew where they were ſituated; and the extreme avarice of the Spaniards, too furious to work by the gentle means of perſuaſion, hurried them to acts of the moſt ſhocking violence and cruelty againſt thoſe unhappy men, who, they believed, concealed from them part of their treaſure. The ſlaughter once begun, they ſet no bounds to their fury; in a few years they depopulated Hiſpaniola, which contained three millions of inhabitants; and Cuba, that had about 600,000. Bartholomew de la Caſas, a witneſs of thoſe barbarous depopulations, ſays, that the Spaniards went out with their dogs to hunt men. The unhappy ſavages, almoſt naked and unarmed, were purſued like deer in the foreſts, devoured by dogs, killed by gun-ſhot, or ſurpriſed and burnt in their habitations.

The Spaniards had hitherto only viſited the continent: from what they ſaw with their eyes, or learned by report, they conjectured that this part of the new world would afford a ſtill more valuable conqueſt. Fernando Cortez was diſpatched from Cuba with 600 men, 18 horſes, and a ſmall number of field-pieces. With this inconſiderable force, he propoſed to ſubdue the moſt powerful ſtate on the continent of America; this was the empire of Mexico; rich, extenſive, and inhabited by millions of Indians paſſionately fond of war, and then headed by Montezuma, whoſe fame in arms ſtruck terror into the neighbouring nations. Never hiſtory, to be true, was more improbable and romantic than that of this war. The empire of Mexico, it is ſaid, had ſubſiſted for ages: its inhabitants were not rude and barbarous; every thing announced a poliſhed and intelligent people. They knew, like the Egyptians of old, that the year conſiſted nearly of 365 days. The ſuperiority in military affairs was the object of admiration and terror over all the continent; and their government, founded on the ſure baſis of laws combined with religion, ſeemed to bid defiance to time itſelf. Mexico, the capital of the empire, ſituated in the middle of a ſpacious lake, was the nobleſt monument of American induſtry: it communicated with the continent by immenſe cauſeways, which were carried through the lake. The city was admired for its buildings, all of ſtone, its ſquares and market-places, the ſhops which glittered with gold and ſilver, and the ſumptuous palaces of Montezuma, ſome erected on columns of jaſper, and containing whatever was moſt rare, curious, or uſeful. But all the grandeur of his empire could not defend it againſt the Spaniards. Cortez, in his march, met with feeble oppoſition from the nations along the coaſt of Mexico, who were terrified at their firſt appearance: the warlike animals on which the Spaniſh officers were mounted, the artificial thunder which iſſued from their hands, the wooden caſtles which had wafted them over the ocean, ſtruck a panic into the natives, from which they did not recover till it was too late. Wherever the Spaniards marched, they ſpared no age or ſex, nothing ſacred or profane. At laſt, the inhabitants of Tlaſcala, and ſome other ſtates on the coaſt, deſpairing of being able to oppoſe them, entered into their alliance, and joined armies with thoſe terrible, and, as they believed, invincible conquerors. Cortez, thus reinforced, marched onward to Mexico; and in his progreſs diſcovered a volcano of ſulphur and ſaltpetre, whence he could ſupply himſelf with powder. Montezuma heard of his progreſs, without daring to oppoſe it. This ſovereign is reported by the boaſting Spaniards, to have commanded 30 vaſſals, of whom each could appear at the head of 100,000 combatants, armed with bows and arrows, and yet he durſt not reſiſt a handful of Spaniards aided by a few Americans, whoſe allegiance would be ſhaken by the firſt reverſe of fortune. Such was the difference between the inhabitants of the two worlds, and ſuch the effect of the Spaniſh victories, the fame of which always marched before them.

By

By ſending a rich preſent of gold, which only whetted the Spaniſh avarice, Montezuma haſtened the approach of the enemy. No oppoſition is made to their entry into his capital. A palace is ſet apart for Cortez and his companions, who are already treated as the maſters of the new world. He had good reaſon, however, to diſtruſt the affected politeneſs of this emperor, under which he ſuſpected ſome plot for his deſtruction was concealed; but he had no pretence for violence; Montezuma loaded him with kindneſs, and with gold in greater quantities than he demanded, and his palace was ſurrounded with artillery, the moſt frightful of all engines to the Americans. At laſt a circumſtance fell out which afforded Cortez a pretext for beginning hoſtilities. In order to ſecure a communication by ſea, to receive the neceſſary reinforcements, he had erected a fort, and left a ſmall garriſon behind him at Vera Cruz, which has ſince become an emporium of commerce between Europe and America. He underſtood that the Americans in the neighbourhood had attacked this garriſon in his abſence, and that a Spaniard was killed in the action; that Montezuma himſelf was privy to this violence, and had iſſued orders that the head of the ſlain Spaniard ſhould be carried through his provinces, to deſtroy a belief, which then prevailed among them, that the Europeans were immortal. Upon receiving this intelligence, Cortez went in perſon to the emperor, attended by a few of his moſt experienced officers. Montezuma pleaded innocence, and Cortez ſeemed extremely ready to believe him; though at the ſame time he alledged that the Spaniards in general would never be perſuaded of it, unleſs he returned along with them to their reſidence, which would remove all jealouſy between the two nations. The ſucceſs of this interview ſhewed the ſuperiority of the European addreſs. A powerful monarch, in the midſt of his own palace, and ſurrounded by his guards, gave himſelf up a priſoner, to be diſpoſed of according to the will of a few gentlemen who came to demand him. Cortez had now got into his hands an engine, by which every thing might be accomplished. The Americans had the higheſt reſpect, or rather a ſuperſtitious veneration for their emperor. Cortez, therefore, by keeping him in his power, allowing him to enjoy every mark of royalty but his freedom, and at the ſame time, from a thorough knowledge of his character, being able to flatter all his taſtes and paſſions, maintained the eaſy ſovereignty of Mexico, by governing its prince. Did the Mexicans, grown familiar with the Spaniards, begin to abate of their reſpect? Montezuma was the firſt to teach them more deference. Was there a tumult excited through the cruelty or avarice of the Spaniards? Montezuma aſcended the battlements of his priſon, and harangued his Mexicans into order and ſubmiſſion. This farce continued a long while: but on one occaſion, when Montezuma was ſhamefully diſgracing his character by juſtifying the enemies of his country, a ſtone, from an unknown hand ſtruck him on the temple, which in a few days occaſioned his death. The Mexicans, now delivered from this emperor, who co-operated ſo ſtrongly with the Spaniards, elected a new prince, the famous Guatimozin, who from the beginning diſcovered an implacable animoſity againſt the Spaniſh name. Under his conduct the unhappy Mexicans ruſhed againſt thoſe very men, whom a little before they had offered to worſhip. The Spaniards, however, by the dexterous management of Cortez, were too firmly eſtabliſhed to be expelled from Mexico. The immenſe tribute which the grandees of this country had agreed to pay to the crown of Spain, amounted to 600,000 marks of pure gold, beſides an amazing quantity of precious ſtones, a fifth part of which being diſtributed among the ſoldiers, ſtimulated their avarice and their courage, and made them willing to periſh, rather than part with ſo precious a booty. The Mexicans, however, made no ſmall

efforts

efforts for independence; but all their valour, and deſpair itſelf, gave way before what they called the Spaniſh thunder. Guatimozin and the empreſs were taken priſoners. This was the prince who, (when he lay ſtretched on burning coals, by order of one of the receivers of the king of Spain's exchequer, who inflicted the torture to make him diſcover in what part of the lake he had thrown his riches) ſaid to his high-prieſt, condemned to the ſame puniſhment, and who loudly expreſſed his ſenſe of the pains that he endured, "Do you take me to lie on a bed of roſes?" The high-prieſt remained ſilent, and died in an act of obedience to his ſovereign. Cortez, by getting a ſecond emperor into his hand, made a complete conqueſt of Mexico; together with which the Caſtille D'Or, Darien, and other provinces, fell into the hands of the Spaniards.

While Cortez and his ſoldiers were employed in reducing Mexico, they got intelligence of another great empire, ſituated towards the equinoctial line, and the tropic of Capricorn, which was ſaid to abound in gold and ſilver, and precious ſtones, and to be governed by a prince more magnificent than Montezuma. This was the empire of Peru, which extended in length near thirty degrees, and was the only other country in America which deſerved the name of a civilized kingdom. Whether it happened that the Spaniſh government had not received certain intelligence concerning Peru, or that, being engaged in a multiplicity of other concerns, they did not chuſe to adventure on new enterpriſes; certain it is, that this extenſive country, more important than Mexico itſelf, was reduced by the endeavours, and at the expence of three private perſons. The names of theſe were, Francis Pizarro, Almagro, and Lucques, a wealthy and artful prieſt. The two former were natives of Panama, men of doubtful birth, and of low education. Pizarro, the ſoul of the enterpriſe, could neither read nor write. They ſailed over into Spain, and without difficulty obtained a grant of what they ſhould conquer. Pizarro then ſet out for the conqueſt of Peru, with 250 foot, 60 horſe, and 12 ſmall pieces of cannon, drawn by ſlaves from the conquered countries. If we reflect that the Peruvians naturally entertained the ſame prejudices with the Mexicans, in favour of the Spaniſh nations, and were beſide of a character ſtill more ſoft and unwarlike, it need not ſurpriſe us, after what has been ſaid of the conqueſt of Mexico, that, with this inconſiderable force, Pizarro ſhould make a deep impreſſion on the Peruvian empire. There were particular circumſtances likewiſe which, conſpired to aſſiſt him, and which, as they diſcover ſomewhat of the hiſtory, religion and ſtate of the human mind in this immenſe continent, it may not be improper to relate.

Mango Capac was the founder of the Peruvian empire. He was one of thoſe uncommon men who, calm and diſpaſſionate themſelves, can obſerve the paſſions of their fellow-creatures, and turn them to their own profit or glory. He obſerved that the people of Peru were naturally ſuperſtitious, and had a particular veneration for the ſun. He pretended therefore to be deſcended from that luminary, whoſe worſhip he was ſent to eſtabliſh, and whoſe authority he was entitled to bear. By this ſtory, romantic as it appears, he eaſily deceived a credulous people, and brought a large extent of territory under his juriſdiction; a larger ſtill he ſubdued by his arms; but both the force and the deceit he employed for the moſt laudable purpoſes. He united and civiliſed the diſtreſſed and barbarous people; he bent them to laws and arts; he ſoftened them by the inſtitution of a benevolent religion; in ſhort, there was no part of America where agriculture and the arts were ſo aſſiduouſly cultivated, and where the people were of ſuch mild and ingenuous manners. A race of princes ſucceeded Mango, diſtinguiſhed by the title of Yncas, and revered by the people as deſcendants of their great God, the Sun. The twelfth

of theſe was now on the throne, and named Atabalipa. His father, Guaiana Capac, had conquered the province of Quito, which now makes a part of Spaniſh Peru. To ſecure himſelf in the poſſeſſion, he had married the daughter of the natural prince of that country; and of this marriage was ſprung Atabalipa. His elder brother, named Hueſcar, of a different mother, had claimed the ſucceſſion to the whole of his father's dominions, not excepting Quito, which devolved on the younger by a double connection. A civil war had been kindled on this account, which, after various turns of fortune, and greatly weakening the kingdom, ended in favour of Atabalipa, who detained Hueſcar, as a priſoner, in the tower of Cuſco, the capital of the Peruvian empire. In this feeble and disjointed ſtate was the kingdom of Peru when Pizarro advanced to it. The ominous predictions of religion, too, as in moſt other caſes, joined their force to human calamities. Prophecies were recorded, dreams were recollected, which foretold the ſubjection of the empire by unknown perſons, whoſe deſcription was ſuppoſed to correſpond to the appearance of the Spaniards. In theſe circumſtances, Atabalipa, inſtead of oppoſing the Spaniards, ſet himſelf to procure their favour. Pizarro, however, whoſe temper partook of the meanneſs of his education, had no conception of dealing gently with thoſe he called Barbarians; but who, however, though leſs acquainted with the cruel art of deſtroying their fellow-creatures, were more civilized than himſelf. While he was engaged in conference, therefore, with Atabalipa, his men, as they had been previouſly inſtructed, furiouſly attacked the guards of that prince, and having butchered 5000 of them, as they were preſſing forward, without regard to their particular ſafety, to defend the ſacred perſon of their monarch, ſeized Atabalipa himſelf, whom they carried off to the Spaniſh quarters. Pizarro, with the ſovereign in his hands, might already be deemed the maſter of Peru: for the inhabitants of this country were as ſtrongly attached to their emperor, as the Mexicans themſelves. Atabalipa was not long in their hands before he began to treat of his ranſom. On this occaſion the ancient ornaments, amaſſed by a long line of magnificent kings, the hallowed treaſures of the moſt magnificent temples, were brought out to ſave him, who was the ſupport of the kingdom and of the religion. While Pizarro was engaged in this negotiation, by which he propoſed, without releaſing the emperor, to get into his poſſeſſion an immenſe quantity of his beloved gold, the arrival of Almagro cauſed ſome embarraſſment in his affairs. The friendſhip, or rather the external ſhew of friendſhip, between theſe men, was ſolely founded on the principle of avarice, and a bold enterpriſing ſpirit, to which nothing appeared too dangerous that might gratify their ruling paſſion. When their intereſts, therefore, happened to interfere, it was not to be thought that any meaſures could be kept between them. Pizarro expected to enjoy the moſt conſiderable ſhare of the treaſure ariſing from the emperor's ranſom, becauſe he had the chief merit in acquiring it. Almagro inſiſted on being upon an equal footing: and at length, leſt the common cauſe might ſuffer by any rupture between them, this diſpoſition was agreed to. The ranſom was paid without delay, a ſum exceeding their conception, but not ſufficient to gratify their avarice. It amounted to 1,500,000l. ſterling, and conſidering the value of money at that time, was prodigious; on the dividend, after deducting a fifth for the king of Spain, and the ſhares of the chief commanders and officers, each private ſoldier had above 2000l. Engliſh money. With ſuch fortunes, it was not to be expected that a mercenary army would patiently ſubmit to the rigours of military diſcipline. They inſiſted on being diſbanded, that they might enjoy the fruits of their labour in quiet. Pizarro complied with this demand; ſenſible that avarice would ſtill detain many in his family, and that thoſe who returned with ſuch magnificent fortunes, would induce new adventurers to purſue the ſame road

to

to wealth. Theſe wiſe reflections were abundantly verified; it was impoſſible to ſend out better recruiting-officers than thoſe who had themſelves ſo much profited by the field; new ſoldiers conſtantly arrived, and the American armies never wanted reinforcement.

This immenſe ranſom was only a farther reaſon for detaining Atabalipa in confinement, until they diſcovered whether he had another treaſure to gratify their avarice. But whether they believed he had no more to give, and were unwilling to employ their troops in guarding a prince, from whom they expected no farther advantage, or that Pizarro had conceived an averſion againſt the Peruvian emperor, on account of ſome inſtances of craft and duplicity, which he obſerved in his character, and which he conceived might prove dangerous to his affairs, it is certain, that by his command Atabalipa was put to death. To juſtify this cruel proceeding, a ſham charge was exhibited againſt the unhappy prince, in which he was accuſed of idolatry, of having many concubines, and other circumſtances equally impertinent. The only juſt ground of accuſation againſt him was, that his brother Hueſcar had been put to death by his command; and even this was conſiderably palliated, becauſe Hueſcar had been plotting his deſtruction, that he might eſtabliſh himſelf on the throne. Upon the death of the Ynca, a number of candidates appeared for the throne. The principal nobility ſet up the full brother of Hueſcar; Pizarro ſet up a ſon of Atabalipa; and two generals of the Peruvians endeavoured to eſtabliſh themſelves by the aſſiſtance of the army. Theſe diſtractions, which in another empire would have been extremely hurtful, and even here at another time, were at preſent rather advantageous to the Peruvian affairs. The candidates fought againſt each other; their battles accuſtomed theſe harmleſs people to blood; and ſuch is the preference of a ſpirit of any kind raiſed in a nation to a total lethargy, that in the courſe of thoſe quarrels among themſelves, the inhabitants of Peru aſſumed ſome courage againſt the Spaniards, whom they regarded as the ultimate cauſe of all their calamities. The loſſes which the Spaniards met with in theſe quarrels, though inconſiderable in themſelves, were rendered dangerous, by leſſening the opinion of their invincibility, which they were careful to preſerve among the inhabitants of the new world. This conſideration engaged Pizarro to conclude a truce; and this interval he employed in laying the foundations of the famous city Lima, and in ſettling the Spaniards in the country. But as ſoon as a favourable opportunity offered, he renewed the war againſt the Indians, and after many difficulties made himſelf maſter of Cuſco, the capital of the empire. While he was engaged in theſe conqueſts, new grants and ſupplies arrived from Spain. Pizarro obtained 200 leagues along the ſea-coaſt, to the ſouthward of what had been before granted, and Almagro 200 leagues to the ſouthward of Pizarro's government. This diviſion occaſioned a warm diſpute between them, each reckoning Cuſco within his own diſtrict. But the dexterity of Pizarro brought about a reconciliation. He perſuaded his rival, that though the country which really belonged to him, lay to the ſouthward of Cuſco, it was equally rich and fertile, and might be as eaſily conquered as Peru. He offered him his aſſiſtance in the expedition, the ſucceſs of which he did not even call in queſtion.

Almagro, that he might have the honour of ſubduing a kingdom for himſelf, liſtened to his advice; and joining as many of Pizarro's troops to his own as he judged neceſſary, penetrated, with great danger and difficulty, into Chili; loſing many of his men as he paſſed over mountains of an immenſe height, and always covered with ſnow. He reduced, however, a very conſiderable part of this country.

country. But the Peruvians were now become too much acquainted with war, not to take advantage of the diviſion of the Spaniſh troops. They made an effort for regaining their capital, in which, Pizarro being indiſpoſed, and Almagro removed at a great diſtance, they were well nigh ſucceſsful. The latter, however, no ſooner got notice of the ſiege of Cuſco, than, relinquiſhing all views of diſtant conqueſts, he returned, to ſecure the grand object of his former labours. He raiſed the ſiege with infinite ſlaughter of the aſſailants; but having obtained poſſeſſion of this city, he was unwilling to give it up to Pizarro, who now approached with an army, and knew of no other enemy but the Peruvians. This diſpute occaſioned a long and bloody ſtruggle between them, in which the turns of fortune were various, and the reſentment fierce on both ſides, becauſe the fate of the vanquiſhed was certain death. This was the lot of Almagro, who, in an advanced age, fell a victim to the ſecurity of a rival, in whoſe dangers and triumphs he had long ſhared, and with whom, from the beginning of the enterprize, he had been intimately connected. During the courſe of this civil war, many Peruvians ſerved in the Spaniſh armies, and learned, from the practice of Chriſtians, to butcher one another. That blinded nation, however, at length opened their eyes, and took a very remarkable reſolution. They ſaw the ferocity of the Europeans, their unextinguiſhable reſentment and avarice, and they conjectured that theſe paſſions would never permit their conteſts to ſubſide. Let us retire, ſaid they, from among them, let us fly to our mountains; they will ſpeedily deſtroy each other, and then we may return in peace to our former habitations. The reſolution was inſtantly put in practice; the Peruvians diſperſed, and left the Spaniards in their capital. Had the force on each ſide been exactly equal, this ſingular policy of the natives of Peru might have been attended with ſucceſs. But the victory of Pizarro put an end to Almagro's life, and to the hopes of the Peruvians, who have never ſince ventured to make head againſt the Spaniards.

Pizarro, now ſole maſter of the field, and of the moſt extenſive empire in the world, was ſtill urged on, by his ambition, to undertake new enterprizes. The ſouthern countries of America, into which he had ſome time before diſpatched Almagro, offered the richeſt conqueſt. Towards this quarter, the mountains of Potoſi, compoſed almoſt of entire ſilver, had been diſcovered, the ſhell of which only remains at preſent. He therefore followed the track of Almagro into Chili, and reduced another part of that country. Orellana, one of his commanders, paſſed the Andes, and ſailed down to the mouth of the river of Amazons: an immenſe navigation, which diſcovered a rich and delightful country; but as it is moſtly flat, and therefore not abounding in minerals, the Spaniards then, and ever ſince, neglected it. Pizarro, meeting with repeated ſucceſs, and having no ſuperior to control, nor rival to keep him within bounds, now gave looſe reins to the natural ferocity of his temper, and behaved with the baſeſt tyranny and cruelty againſt all who had not concurred in his deſigns. This conduct raiſed a conſpiracy againſt him, to which he fell a ſacrifice in his own palace, and in the city of Lima, which he himſelf had founded. The partiſans of old Almagro declared his ſon, of the ſame name, their viceroy. But the greater part of the nation, though extremely well ſatisfied with the fate of Pizarro, did not concur with this declaration. They waited the orders of the emperor Charles V. then king of Spain, who ſent over Vaca di Caſtro to be their governor. This man, by his integrity and wiſdom, was admirably well fitted to heal the wounds of the colony, and to place every thing on the moſt advantageous footing, both for it and for the mother country. By his prudent management the mines of La Plata and Potoſi, which were formerly a matter of

private plunder, became an object of public utility to the court of Spain. The parties were ſilenced or cruſhed; young Almagro, who would hearken to no terms of accommodation, was put to death; and a tranquillity, ſince the arrival of the Spaniards unknown, was reſtored to Peru. It ſeems, however, that Di Caſtro had not been ſufficiently ſkilled in gaining the favour of the Spaniſh miniſtry, by proper bribes or promiſes, which in that age a miniſtry would expect from the governor of ſo rich a country. By their advice, a council was ſent over to control Di Caſtro, and the colony was again unſettled. The parties, but juſt extinguiſhed, began to blaze anew; and Gonzalo, the brother of the famous Pizarro, ſet himſelf at the head of his brother's partiſans, with whom many new malecontents had united. It was now no longer a diſpute between governors about the bounds of their juriſdiction. Gonzalo Pizarro only paid a nominal ſubmiſſion to the king. He ſtrengthened daily; and even went ſo far as to behead a governor who was ſent over to curb him. He gained the confidence of the admiral of the Spaniſh fleet in the South Seas, by whoſe means he propoſed to hinder the landing of any troops from Spain; and he had a view of uniting the inhabitants of Mexico in his revolt.

Such was the ſituation of affairs, when the court of Spain, ſenſible of their miſtake in not ſending into America men whoſe character and virtue only, and not importunity and cabal, pleaded in their behalf, diſpatched with unlimited powers Peter de la Gaſga, a man differing only from Caſtro by being of a more mild and inſinuating behaviour, but with the ſame love of juſtice, the ſame greatneſs of ſoul, and the ſame diſintereſted ſpirit. All thoſe who had not joined in Pizarro's revolt, flocked to his ſtandard; many of his friends, charmed with the behaviour of Gaſga, forſook their old connections; the admiral was gained over by inſinuation, to return to his duty; and Pizarro himſelf was offered a full indemnity, provided he ſhould return to the allegiance of the Spaniſh crown. But ſo intoxicating are the ideas of royalty, that Pizarro was inclined to run every hazard rather than ſubmit to an officer of Spain. With thoſe of his partiſans, therefore, who ſtill continued to adhere to his intereſt, he determined to venture a battle, in which he was conquered and taken priſoner. His execution followed ſoon after; and thus the brother of him, who conquered Peru for the crown of Spain, fell a ſacrifice to the ſecurity of the Spaniſh dominion over that country.

The conqueſt of the great empires of Mexico and Peru, is the only part of the American hiſtory which deſerves to be treated under the preſent head. What relates to the reduction of the other parts of the continent, or of the iſlands, if it contains either inſtruction or entertainment, ſhall be treated under thoſe particular countries. We now proceed to examine the manners, government, religion, and whatever compoſes the character of the natives of America: and as theſe are extremely ſimilar all over this part of the globe, we ſhall ſpeak of them in general, in order to ſave continual repetitions; noticing, at the ſame time, when we enter upon the deſcription of the particular countries, whatever is peculiar or remarkable in the inhabitants.

Of the Original Inhabitants of AMERICA.

THE diſcovery of America has not only opened a new ſource of wealth to the buſy and commercial part of Europe, but an extenſive fiéld of ſpeculation to the philoſopher, who would trace the character of man under various forms of ſociety, and obſerve the movements of the human heart, or the operation of the human underſtanding, when untutored by ſcience, and untainted with corruption. So ſtriking ſeemed the diſparity between the inhabitants of Europe and the natives of America, that ſome ſpeculative men have ventured to affirm, that it is impoſſible they ſhould be of the ſame ſpecies, or derived from one common ſource. This concluſion, however, is precipitate and erroneous. The characters of mankind may be infinitely varied, according to the different degrees of improvement at which they are arrived, the manner in which they acquire the neceſſaries of life, the force of cuſtom and habit, and a multiplicity of other circumſtances too particular to be mentioned, and too various to be reduced under any general head. But the great outlines of humanity are to be diſcovered among them all, notwithſtanding the various ſhades which characteriſe nations, and diſtinguiſh them from each other.

When the thirſt of gold carried the inhabitants of Europe beyond the Atlantic, they found the inhabitants of the New World immerſed in what they reckoned barbarity, but which, however, was a ſtate of honeſt independence and noble ſimplicity. Except the inhabitants of the great empires of Peru and Mexico, who, comparatively ſpeaking, were refined nations, the natives of America were unacquainted with almoſt every European art: even agriculture itſelf, the moſt uſeful of them all, was hardly known, or cultivated very ſparingly. The only kind of labour on which they depended for acquiring the neceſſaries of life, was that of hunting the wild animals, which their mountains and foreſts ſupplied in great abundance. This exerciſe, which among them is a moſt ſerious occupation, gives a ſtrength and agility to their limbs, unknown among other nations. The ſame cauſe perhaps renders their bodies in general, where the rays of the ſun are not too violent, uncommonly ſtraight and well proportioned. Their muſcles are firm and ſtrong; their bodies and heads flattiſh, which is the effect of art; their features are regular, but their countenances fierce; their hair long, black, lank, and as ſtrong as that of a horſe. The colour of their ſkin is a reddiſh brown, admired among them, and heightened by the conſtant uſe of bears fat and paint. The character of the Indians is altogether founded upon their circumſtances and way of life. A people who are conſtantly employed in procuring the means of a precarious ſubſiſtence, who live by hunting the wild animals, and who are generally engaged in war with their neighbours, cannot be ſuppoſed to enjoy much gaiety of temper, or a high flow of ſpirits. The Indians, therefore, are in general grave even to ſadneſs; they have nothing of that giddy vivacity peculiar to ſome nations of Europe, and they deſpiſe it. Their behaviour to thoſe about them is regular, modeſt, and reſpectful. Ignorant of the arts of amuſement, of which that of ſaying trifles agreeably is one of the moſt conſiderable, they never ſpeak but when they have ſomething important to obſerve; and all their actions, words, and even looks, are attended with ſome meaning. This is extremely natural to men who are almoſt continually engaged in purſuits, which to them are of the higheſt importance. Their ſubſiſtence depends entirely on what they procure with their hands; and their lives, their honour, and every thing dear to them, may be loſt by the ſmalleſt inattention to

the deſigns of their enemies. As they have no particular object to attach them to one place rather than to another, they fly wherever they expect to find the neceſſaries of life in greateſt abundance. Cities, which are the effects of agriculture and arts, they have none. The different tribes or nations are for the ſame reaſon extremely ſmall, when compared with civiliſed ſocieties, in which induſtry, arts, agriculture, and commerce, have united a vaſt number of individuals, whom a complicated luxury renders uſeful to each other. Theſe ſmall tribes live at an immenſe diſtance; they are ſeparated by a deſert frontier, and hid in the boſom of impenetrable and almoſt boundleſs foreſts.

There is eſtabliſhed in each ſociety a certain ſpecies of government, which over the whole continent of America prevails with exceeding little variation; becauſe over the whole of this continent the manners and way of life are nearly ſimilar and uniform. Without arts, riches, or luxury, the great inſtruments of ſubjection in poliſhed ſocieties, an American has no method by which he can render himſelf conſiderable among his companions, but by a ſuperiority in perſonal qualities of body or mind. But as Nature has not been very laviſh in her perſonal diſtinctions, where all enjoy the ſame education, all are pretty much equal, and will deſire to remain ſo. Liberty, therefore, is the prevailing paſſion of the Americans; and their government, under the influence of this ſentiment, is better ſecured than by the wiſeſt political regulations. Though free in the fulleſt ſenſe of the word, they do not deſpiſe all ſort of authority; they are attentive to the voice of wiſdom, which experience has conferred on the aged, and they inliſt under the banners of the chief, in whoſe valour and military addreſs they have learned to repoſe their confidence. In every ſociety, therefore, there is to be conſidered the power of the chief and of the elders; and according as the government inclines more to the one or to the other, it may be regarded as monarchical, or as a ſpecies of ariſtocracy. Among thoſe tribes which are moſt engaged in war, the power of the chief is naturally predominant; becauſe the idea of having a military leader was the firſt ſource of his ſuperiority, and the continual exigencies of the ſtate requiring ſuch a leader, will continue to ſupport, and even to enhance it. His power, however, is rather perſuaſive than coercive; he is reverenced as a father rather than feared as a monarch. He has no guards, no priſons, no officers of juſtice, and one act of ill-judged violence would drive him from the throne. The elders, in the other form of government, which may be conſidered as an ariſtocracy, have no more power. In ſome tribes, indeed, there is a kind of hereditary nobility, whoſe influence being conſtantly augmented by time, is more conſiderable. But this ſource of power, which depends chiefly on the imagination, by which we annex to the merit of our contemporaries that of their forefathers, is too refined to be very common among the natives of America. In moſt countries, therefore, age alone is ſufficient for acquiring reſpect, influence, and authority. It is age which teaches experience, and experience is the only ſource of knowledge among a barbarous people. Among the Indians, buſineſs is conducted with ſuch ſimplicity as recalls, to thoſe acquainted with antiquity, a picture of the moſt early ages. The heads of families meet together in a houſe or cabin appointed for the purpoſe. Here the buſineſs is diſcuſſed; and here thoſe of the nation, diſtinguiſhed for their eloquence or wiſdom, have an opportunity of diſplaying their talents. Their orators*, like thoſe of Homer, expreſs themſelves in a bold, figurative ſtyle, ſtronger and more expreſſive than refined, or rather ſoftened nations can well bear, and with geſtures equally violent, but often extremely natural and affecting. When the buſineſs is over, and they happen to be well provided with food, they appoint a feaſt upon the occaſion, of which almoſt the

* See the note p. 863.

whole nation partakes. The feaſt is accompanied with a ſong, in which the real or fabulous exploits of their forefathers are celebrated. They have dances too, though, like thoſe of the Greeks and Romans, chiefly of the military kind; and their muſic and dancing accompany every feaſt.

It often happens, that thoſe different tribes or nations, ſcattered as they are at great intervals, meet in their excurſions after prey. If there ſubſiſts no animoſity between them, which ſeldom is the caſe, they behave in the moſt friendly and courteous manner; but if they happen to be in a ſtate of war, or if there has been no previous intercourſe between them, all who are not friends are deemed enemies, and they fight with the moſt ſavage fury.

War, if we except hunting, is the only employment of the men; as to every other concern, and even the little agriculture they enjoy, it is left to the women. Their moſt common motive for entering into war, when it does not ariſe from an accidental rencounter or interference, is either to revenge themſelves for the death of ſome loſt friends, or to acquire priſoners, who may aſſiſt them in their hunting, and whom they adopt into their ſociety. Theſe wars are either undertaken by ſome private adventurers, or at the inſtance of the whole community. In the latter caſe, all the young men, who are diſpoſed to go out to battle (for no one is compelled contrary to his inclination), give a bit of wood to the chief, as a token of their deſign to accompany him; for every thing among theſe people is tranſacted with a great deal of ceremony and many forms. The chief, who is to conduct them, faſts ſeveral days, during which he converſes with no one, and is particularly careful to obſerve his dreams, which the preſumption natural to ſavages generally renders as favourable as he could deſire. A variety of other ſuperſtitions and ceremonies are obſerved. One of the moſt hideous is ſetting the war-kettle on the fire, as an emblem that they are going out to devour their enemies; which among ſome nations muſt formerly have been the caſe, ſince they ſtill continue to expreſs it in clear terms, and uſe an emblem ſignificant of the ancient uſage. Then they diſpatch a porcelane, or large ſhell, to their allies, inviting them to come along, and drink the blood of their enemies. For with the Americans, as with the Greeks of old,

> "A generous friendſhip no cold medium knows,
> "But with one love, with one reſentment glows."

They think that thoſe in their alliance muſt not only adopt their enmities, but have their reſentment wound up to the ſame pitch with themſelves. And, indeed, no people carry their friendſhips, or their reſentment, ſo far as they do; and this is what ſhould be expected from their peculiar circumſtances; for the Americans who live in ſmall ſocieties, who ſee few objects and few perſons, become wonderfully attached to theſe objects and perſons, and cannot be deprived of them without feeling themſelves miſerable. Their ideas are too confined to enable them to entertain juſt ſentiments of humanity, or univerſal benevolence. But this very circumſtance, while it makes them cruel and ſavage to an incredible degree, towards thoſe with whom they are at war, adds a new force to their particular friendſhips, and to the common tie which unites the members of the ſame tribe, or of thoſe different tribes which are in a ſtate of alliance. Without attending to this reflection, ſome facts we are going to relate, would excite our wonder without informing our reaſon, and we ſhould be bewildered in a number of particulars, ſeemingly oppoſite to one another, without being ſenſible of the general cauſe from which they proceed.

Having

Having finiſhed all the ceremonies previous to the war, they iſſue forth with their faces blackened with charcoal, intermixed with ſtreaks of vermilion, which give them a moſt horrid appearance. Then they exchange their cloaths with their friends, and diſpoſe of all their finery to the women, who accompany them to a conſiderable diſtance to receive thoſe laſt tokens of eternal friendſhip.

The great qualities in an Indian war are vigilance and attention, to give and to avoid a ſurpriſe; and indeed in theſe they are ſuperior to all nations in the world. Accuſtomed to continual wandering in the foreſts, having their perceptions ſharpened by keen neceſſity, and living in every reſpect according to nature, their external ſenſes have a degree of acuteneſs almoſt incredible. They can trace out their enemies, at an immenſe diſtance, by the ſmoke of their fires, which they ſmell, and by the tracks of their feet on the ground, imperceptible to an European eye, but which they count and diſtinguiſh with the utmoſt facility. They can even diſtinguiſh the different nations with whom they are acquainted, and can determine the preciſe time when they paſſed, where an European could not, with all his glaſſes, diſtinguiſh footſteps at all. Theſe circumſtances, however, give them no ſuperiority, becauſe their enemies are equally ſkilful. When they go out, therefore, they take care to avoid making uſe of any thing by which they might run the danger of a diſcovery. They light no fire to warm themſelves, or to prepare their victuals: they lie cloſe to the ground all day, and travel only in the night; and marching along in files, he that cloſes the rear diligently covers with leaves the tracks of his own feet, and of theirs who preceded him. When they halt to refreſh themſelves, ſcouts are ſent out to reconnoitre the country, and beat up every place where they ſuſpect an enemy to lie concealed. In this manner they enter unawares the villages of their foes; and while the flower of the nation are engaged in hunting, maſſacre all the children, women, and helpleſs old men, or make priſoners of as many as they can manage, or have ſtrength enough to be uſeful to their nation. But when the enemy is appriſed of their deſign, and coming on in arms againſt them, they throw themſelves flat on the ground among the withered herbs and leaves, which their faces are painted to reſemble. Then they allow a part to paſs unmoleſted, when all at once, with a tremendous ſhout, riſing up from their ambuſh, they pour a ſtorm of muſket-bullets on their foes. The party attacked returns the ſame cry. Every one ſhelters himſelf with a tree, and returns the fire of the adverſe party, as ſoon as they raiſe themſelves from the ground to give a ſecond fire. Thus does the battle continue until the one party is ſo much weakened as to be incapable of farther reſiſtance. But if the force on each ſide continues nearly equal, the fierce ſpirits of the ſavages, inflamed by the loſs of their friends, can no longer be reſtrained. They abandon their diſtant war, they ruſh upon one another with clubs and hatchets in their hands, magnifying their own courage, and inſulting their enemies with the bittereſt reproaches. A cruel combat enſues, death appears in a thouſand hideous forms, which would congeal the blood of civilized nations to behold, but which rouſe the fury of ſavages. They trample, they inſult over the dead bodies, tearing the ſcalp from the head, wallowing in their blood like wild beaſts, and ſometimes devouring their fleſh. The flame rages on till it meets with no reſiſtance; then the priſoners are ſecured, thoſe unhappy men, whoſe fate is a thouſand times more dreadful than theirs who have died in the field. The conquerors ſet up a hideous howling to lament the friends they have loſt. They approach in a melancholy and ſevere gloom to their own village; a meſſenger is ſent to announce their arrival, and the women, with frightful ſhrieks, come out to mourn their dead brothers or their huſbands. When they are arrived, the chief relates in a low voice to the

elders, a circumſtantial account of every particular of the expedition. The orator* proclaims aloud this account to the people, and as he mentions the names of thoſe who have fallen, the ſhrieks of the women are redoubled. The men too join in theſe cries, according as each is moſt connected with the deceaſed by blood or friendſhip. The laſt ceremony is the proclamation of the victory; each individual then forgets his private misfortunes, and joins in the triumph of his nation; all tears are wiped from their eyes, and by an unaccountable tranſition, they paſs in a moment from the bitterneſs of ſorrow to an extravagance of joy. But the treatment of the priſoners, whoſe fate all this time remains undecided, is what chiefly characteriſes the ſavages.

We have already mentioned the ſtrength of their affections or reſentments. United as they are in ſmall ſocieties, connected within themſelves by the firmeſt ties, their friendly affections, which glow with the moſt intenſe warmth within the walls of their own village, ſeldom extend beyond them. They feel nothing for the enemies of their nation; and their reſentment is eaſily extended from the individual who has injured them to all others of the ſame tribe. The priſoners, who have themſelves the ſame feelings, know the intentions of their conquerors, and are prepared for them. The perſon who has taken the captive attends him to the cottage, where, according to the diſtribution made by the elders, he is to be delivered to ſupply the loſs of a citizen. If thoſe who receive him have their family weakened by war or other accidents, they adopt the captive into the family, of which he becomes a member. But if they have no occaſion for him, or their reſentment for the loſs of their friends be too high to endure the ſight of any connected with thoſe who were concerned in it, they ſentence him to death. All thoſe who have met with the ſame ſevere ſentence being collected, the whole nation is aſſembled at the execution, as for ſome great ſolemnity. A ſcaffold is erected, and the priſoners are

* I may challenge (ſays Mr. Jefferſon, in his notes on Virginia) the whole orations of Demoſthenes and Cicero, and of any more eminent orator, if Europe has furniſhed more eminent, to produce a ſingle paſſage ſuperior to the ſpeech of Logan, a Mingo chief, to lord Dunmore, when governor of this ſtate; and, as a teſtimony of their talents in this line, I beg leave to introduce it, firſt ſtating the incidents neceſſary for underſtanding it

In the ſpring of the year 1774, a robbery and murder were committed on the inhabitants of the frontiers of Virginia, by two Indians of the Shawanee tribe. The neighbouring whites, according to their cuſtom, undertook to puniſh this outrage in a ſummary way. Col. Creſap, a man infamous for the many murders he had committed on thoſe much-injured people, collected a party, and proceeded down the Kanhaway in queſt of vengeance. Unfortunately a canoe of women and children, with one man only, was ſeen coming from the oppoſite ſhore, unarmed, and unſuſpecting an hoſtile attack from the whites. Creſap and his party concealed themſelves on the bank of the river, and the moment the canoe reached the ſhore, fingled out their objects, and, at one fire, killed every perſon in it. This happened to be the family of Logan, who had long been diſtinguiſhed as a friend of the whites. This unworthy return provoked his vengeance; he accordingly ſignalized himſelf in the war which enſued. In the autumn of the ſame year, a deciſive battle was fought at the mouth of the great Kanhaway, between the collected forces of the Shawanees, Mingoes, and Delawars, and a detachment of the Virginia militia. The Indians were defeated, and ſued for peace. Logan, however, diſdained to be ſeen among the ſuppliants. But leſt the ſincerity of a treaty ſhould be miſtruſted, from which ſo diſtinguiſhed a chief abſented himſelf, he ſent by a meſſenger the following ſpeech to be delivered to lord Dunmore:

"I appeal to any white man to ſay if ever he entered Logan's cabin hungry, and he gave him not meat; if ever he came cold and naked, and he clothed him not. During the courſe of the laſt long and bloody war, Logan remained idle in his cabin, an advocate for peace. Such was my love for the whites, that my countrymen pointed, as they paſſed, and ſaid, 'Logan is the friend of white men.' I had even thought to have lived with you, but for the injuries of one man. Col. Creſap, the laſt ſpring, in cold blood, murdered all the relations of Logan, not ſparing even my women and children. There runs not a drop of my blood in the veins of any living creature. This called on me for revenge. I have ſought it: I have killed many: I have glutted my vengeance. For my country, I rejoice at the beams of peace. But do not harbour a thought that mine is the joy of fear. Logan never felt fear. He will not turn on his heel to ſave his life. Who is there to mourn for Logan?—Not one."

tied

tied to the ſtake, where they commence their death-ſong, and prepare for the enſuing ſcene of cruelty with the moſt undaunted courage. Their enemies, on the other ſide, are determined to put it to the proof, by the moſt refined and exquiſite tortures. They begin at the extremity of his body, and gradually approach the vital parts. One plucks out his nails by the roots; another takes a finger into his mouth, and tears off the fleſh with his teeth; a third thruſts the finger, mangled as it is, into the bowl of a pipe made red hot, which he ſmokes like tobacco; then they pound his toes and fingers to pieces between two ſtones; they pull off the fleſh from the teeth, and cut circles about his joints, and gaſhes in the fleſhy parts of his limbs, which they ſear immediately with red-hot irons, cutting, burning, and pinching them ſucceſſively; they pull off this fleſh, thus mangled and roaſted, bit by bit, devouring it with greedineſs, and ſmearing their faces with the blood in an enthuſiaſm of fury. When they have thus torn off the fleſh, they twiſt the bare nerves and tendons about an iron, tearing and ſnapping them, whilſt others are employed in pulling and extending their limbs in every way that can increaſe the torment. This continues often five or ſix hours; and ſometimes, ſuch is the ſtrength of the ſavages, days together. Then they frequently unbind him, to give a breathing to their fury, to think what new torments they ſhall inflict, and to refreſh the ſtrength of the ſufferer, who, wearied out with variety of torture, often falls into ſo profound a lethargy, that they are obliged to apply the fire to awake him, and renew his ſufferings. He is again faſtened to the ſtake, and again they renew their cruelty: they ſtick him all over with ſmall matches of wood, that eaſily takes fire, but burns ſlowly; they continually run ſharp reeds into every part of his body; they drag out his teeth with pincers, and thruſt out his eyes; and laſtly, after having burned his fleſh from the bones with ſlow fires; after having ſo mangled the body that it is all but one wound; after having mutilated his face in ſuch a manner that it carries nothing human in it; after having peeled the ſkin from the head, and poured a heap of red-hot coals or boiling water on the naked ſkull, they once more unbind the wretch, who, blind and ſtaggering with pain and weakneſs, aſſaulted and pelted upon every ſide with clubs and ſtones, now up, now down, falling into their fires at every ſtep, reels hither and thither, until one of the chiefs, whether out of compaſſion, or weary of cruelty, puts an end to his life with a club or dagger. The body is then put into a kettle, and this atrocious employment is ſucceeded by a feaſt as atrocious.

The women, forgetting the human as well as the female nature, and transformed into ſomething worſe than furies, even outdo the men in this ſcene of horror; while the principal perſons of the country ſit round the ſtake, ſmoking and looking on without the leaſt emotion. What is moſt extraordinary, the ſufferer himſelf, in the little intervals of his torments, ſmokes too, appears unconcerned, and converſes with his torturers about indifferent matters. Indeed, during the whole time of his execution, there ſeems a conteſt which ſhall exceed, they in inflicting the moſt horrid pains, or he in enduring them, with a firmneſs and conſtancy almoſt incredible: not a groan, not a ſigh, not a diſtortion of countenance eſcapes him; he poſſeſſes his mind entirely in the midſt of his torments; he recounts his own exploits; he informs them what cruelties he has inflicted upon their countrymen, and threatens them with the revenge that will attend his death; and, though his reproaches exaſperate them to a perfect madneſs of rage and fury, he continues his inſults even of their ignorance in the art of tormenting, pointing out more exquiſite methods, and more ſenſible parts of the body to be afflicted. The women have this part of courage as well as the men; and it is as rare for an Indian to behave otherwiſe, as it would be for any European to ſuffer as an Indian.

Such

Such is the wonderful power of an early inſtitution, and a ferocious thirſt of glory. *I am brave and intrepid*, exclaims the ſavage in the face of his tormentors; *I do not fear death, nor any kind of tortures; thoſe who fear them are cowards; they are leſs than women; life is nothing to thoſe that have courage: may my enemies be confounded with deſpair and rage! Oh! that I could devour them, and drink their blood to the laſt drop.*

Theſe circumſtances of cruelty, which ſo exceedingly degrade human nature, ought not, however, to be omitted, becauſe they ſerve to ſhew, in the ſtrongeſt light, to what an inconceivable degree of barbarity the paſſions of men may be carried, when let looſe from the government of reaſon, and uninfluenced by the dictates of Chriſtianity; a religion that teaches compaſſion to our enemies, which is neither known nor practiſed in other inſtitutions; and it will make us more ſenſible, than ſome appear to be, of the value of commerce, the arts of a civilized life, and the light of literature; which, if they have abated the force of ſome of the natural virtues, by the luxury which attends them, have taken out likewiſe the ſting of our natural vices and ſoftened the ferocity of the human race.

Nothing in the hiſtory of mankind, as I have already obſerved, forms a ſtronger contraſt than this cruelty of the ſavages towards thoſe with whom they are at war, and the warmth of their affection towards their friends, who conſiſt of all thoſe who live in the ſame village, or are in alliance with it: among theſe all things are common; and this, though it may in part ariſe from their not poſſeſſing very diſtinct notions of ſeparate property, is chiefly to be attributed to the ſtrength of their attachment; becauſe in every thing elſe, with their lives as well as their fortunes, they are ready to ſerve their friends. Their houſes, their proviſion, even their young women, are not enough to oblige a gueſt. Has any one of theſe ſucceeded ill in his hunting? Has his harveſt failed? or is his houſe burned? He feels no other effect of his misfortunes than that it gives him an opportunity to experience the benevolence and regard of his fellow-citizens; but to the enemies of his country, or to thoſe who have privately offended, the American is implacable. He conceals his ſentiments, he appears reconciled, until by ſome treachery or ſurpriſe he has an opportunity of executing an horrible revenge. No length of time is ſufficient to allay his reſentment; no diſtance of place great enough to protect the object; he croſſes the ſteepeſt mountains, he pierces the moſt impracticable foreſts, and traverſes the moſt hideous bogs and deſerts for ſeveral hundreds of miles; bearing the inclemency of the ſeaſons, the fatigue of the expedition, the extremes of hunger and thirſt, with patience and cheerfulneſs, in hopes of ſurpriſing his enemy, on whom he exerciſes the moſt ſhocking barbarities, even to the eating of his fleſh. To ſuch extremes do the Indians puſh their friendſhip or their enmity; and ſuch indeed, in general, is the character of all ſtrong and uncultivated minds.

But what we have ſaid reſpecting the Indians would be a faint picture, did we omit obſerving the force of their friendſhip, which principally appears by the treatment of their dead. When any one of the ſociety is cut off, he is lamented by the whole: on this occaſion a thouſand ceremonies are practiſed, denoting the moſt lively ſorrow. Of theſe, the moſt remarkable, as it diſcovers both the height and continuance of their grief, is what they call the feaſt of the dead, or the feaſt of ſouls. The day of this ceremony is appointed by public order; and nothing is omitted, that it may be celebrated with the utmoſt pomp and magnificence. The neighbouring tribes are invited to be preſent, and to join in the ſolemnity. At this time, all who have died ſince the laſt ſolemn occaſion (which is renewed every ten years among ſome tribes, and every eight among others), are taken

out of their graves: thoſe who have been interred at the greateſt diſtance from the villages are diligently ſought for, and brought to this great rendezvous of carcaſſes.

It is not difficult to conceive the horror of this general diſinterment. I cannot deſcribe it in a more lively manner than it is done by Lafitau, to whom we are indebted for the moſt authentic account of thoſe nations.

Without queſtion, ſays he, the opening of theſe tombs diſplays one of the moſt ſtriking ſcenes that can be conceived: this humbling portrait of human miſery, in ſo many images of death, wherein ſhe ſeems to take a pleaſure to paint herſelf in a thouſand various ſhapes of horror, in the ſeveral carcaſſes, according to the degree in which corruption has prevailed over them, or the manner in which it has attacked them. Some appear dry and withered; others have a ſort of parchment upon their bones; ſome look as if they were baked and ſmoked, without any appearance of rottenneſs; ſome are juſt turning towards the point of putrefaction; whilſt others are all ſwarming with worms, and drowned in corruption. I know not which ought to ſtrike us moſt, the horror of ſo ſhocking a ſight, or the tender piety and affection of theſe poor people towards their departed friends; for nothing deſerves our admiration more than that eager diligence and attention with which they diſcharge this melancholy duty of their tenderneſs; gathering up carefully even the ſmalleſt bones; handling the carcaſſes, diſguſtful as they are with every thing loathſome, cleanſing them from the worms, and carrying them upon their ſhoulders through tireſome journeys of ſeveral days, without being diſcouraged by the offenſiveneſs of the ſmell, and without ſuffering any other emotions to ariſe than thoſe of regret for having loſt perſons who were ſo dear to them in their lives, and ſo lamented in their death.

They bring them into their cottages, where they prepare a feaſt in honour of the dead; during which their great actions are celebrated, and all the tender intercourſes which took place between them and their friends are piouſly called to mind. The ſtrangers, who have come ſometimes many hundred miles to be preſent on the occaſion, join in tender condolence; and the women, by frighful ſhrieks, demonſtrate that they are pierced with the ſharpeſt ſorrow. Then the dead bodies are carried from the cabins for the general reinterment. A great pit is dug in the ground, and thither, at a certain time, each perſon, attended by his family and friends, marches in ſolemn ſilence, bearing the dead body of a ſon, a father, or a brother. When they are all convened, the dead bodies, or the duſt of thoſe which were quite corrupted, are depoſited in the pit: then the torrent of grief breaks out anew. Whatever they poſſeſs moſt valuable is interred with the dead. The ſtrangers are not wanting in their generoſity, and confer thoſe preſents which they have brought along with them for the purpoſe. Then all preſent go down into the pit, and every one takes a little of the earth, which they afterwards preſerve with the moſt religious care. The bodies, ranged in order, are covered with entire new furs, and over theſe with bark, on which they throw ſtones, wood and earth. Then taking their laſt farewel, they return each to his own cabin.

We have mentioned, that in this ceremony the ſavages offer, as preſents to the dead, whatever they value moſt highly. This cuſtom, which is univerſal among them, ariſes from a rude notion of the immortality of the ſoul. They believe this doctrine moſt firmly, and it is the principal tenet of their religion. When the ſoul is ſeparated from the body of their friends, they conceive that it ſtill continues to hover around it, and to require and take delight in the ſame things with which it formerly was pleaſed. After a certain time, however, it forſakes this dreary manſion, and departs far weſtward into the land of ſpirits. They have even gone ſo

far as to make a diſtinction between the inhabitants of the other world; ſome they imagine, particularly thoſe who in their life-time have been fortunate in war, poſſeſs a high degree of happineſs, have a place for hunting and fiſhing, which never fails, and enjoy all ſenſual delights, without labouring hard in order to procure them. The ſouls of thoſe, on the contrary, who happen to be conquered or ſlain in war, are extremely miſerable after death.

Their taſte for war, which forms the chief ingredient in their character, gives a ſtrong bias to their religion. Areſkoui, or the god of battle, is revered as the great god of the Indians. Him they invoke before they go into the field; and according as his diſpoſition is more or leſs favourable to them, they conclude they will be more or leſs ſucceſsful. Some nations worſhip the ſun and moon; among others there are a number of traditions, relative to the creation of the world, and the hiſtory of the gods: traditions which reſemble the Grecian fables, but which are more inconſiſtent and infinitely leſs agreeable. But religion is not the prevailing character of the Indians; and except when they have ſome immediate occaſion for the aſſiſtance of their gods, they pay them no ſort of worſhip. Like all rude nations, however, they are ſtrongly addicted to ſuperſtition. They believe in the exiſtence of a number of good and bad genii or ſpirits, who interfere in the affairs of mortals, and produce all our happineſs or miſery. It is from the evil genii, in particular, that our diſeaſes proceed; and it is to the good genii we are indebted for a cure. The miniſters of the genii are the jugglers, who are alſo the only phyſicians among the ſavages. Theſe jugglers are ſuppoſed to be inſpired by the good genii, moſt commonly in their dreams, with the knowledge of future events; they are called in to the aſſiſtance of the ſick, and are ſuppoſed to be informed by the genii whether they will get over the diſeaſe, and in what manner they muſt be treated. But theſe ſpirits are extremely ſimple in their ſyſtem of phyſic, and in almoſt every diſeaſe, direct the juggler to the ſame remedy. The patient is incloſed in a narrow cabin, in the midſt of which is a ſtone red hot; on this they throw water, until he is well ſoaked with the warm vapour and his own ſweat. Then they hurry him from the bagnio, and plunge him ſuddenly into the next river. This coarſe method, which deſtroys many lives, often performs very extraordinary cures. The jugglers have likewiſe the uſe of ſome ſpecifics of wonderful efficacy; and all the ſavages are dextrous in curing wounds by the application of herbs. But the power of theſe remedies is always attributed to the magical ceremonies with which they are adminiſtered.

It ſhould be obſerved by the reader, that the particulars which have juſt been mentioned concerning the manner of the Americans, chiefly relate to the inhabitants of North America. The manners and general characteriſtics of great part of the original inhabitants of South America, were very different. On the firſt appearance of the inhabitants of the New World, their diſcoverers found them to be in many particulars very unlike the generality of the people of the ancient hemiſphere. They were different in their features and complexions; they were not only averſe to toil, but ſeemed incapable of it; and when rouſed by force from their native indolence, and compelled to work, they ſunk under taſks which the inhabitants of the other continent would have performed with eaſe. This feebleneſs of conſtitution ſeemed almoſt univerſal among the inhabitants of South America. The Spaniards were alſo ſtruck with the ſmallneſs of their appetite for food. The conſtitutional temperance of the natives far exceeded, in their opinion, the abſtinence of the moſt mortified hermits; while, on the other hand, the appetite of the Spaniards appeared to the Americans inſatiably voracious; and they affirmed, that one Spaniard devoured more food in a day than was ſufficient for ten

Americans. But though the demands of the native Americans for food were very ſparing, ſo limited was their agriculture, that they hardly raiſed what was ſufficient for their own conſumption. Many of the inhabitants of South America confined their induſtry to rearing a few plants, which, in a rich and warm climate, were eaſily trained to maturity; but if a few Spaniards ſettled in any diſtrict, ſuch a ſmall addition of ſupernumerary mouths ſoon exhauſted their ſcanty ſtores, and brought on a famine. The inhabitants of South America, compared with thoſe North America, are generally more feeble in their frame, leſs vigorous in the efforts of their minds, of a gentle, but daſtardly ſpirit, more enſlaved by pleaſure, and ſunk in indolence.

A general Deſcription of AMERICA.

THIS great weſtern continent, frequently denominated the NEW WORLD, extends from the 80th degree North, to the 56 degree South latitude; and where its breadth is ſtnown, from the 35th to the 136th degree Weſt longitude from London; ſtretching between 8 and 9000 miles in length, and in its greateſt breadth 3690. It ſees both hemiſpheres, has two ſummers, and a double winter, and enjoys all the variety of climates which the earth affords. It is waſhed by the two great oceans. To the eaſtward it has the Atlantic, which divides it from Europe and Africa. To the weſt it has the Pacific, or great South-Sea, by which it is ſeparated from Aſia. By theſe ſeas it may, and does, carry on a direct commerce with the other three parts of the world. It is compoſed of two great continents, one on the North, the other on the South, which are joined by the kingdom of Mexico, which forms a ſort of iſthmus 1500 miles long, and in one part, at Darien, ſo extremely narrow, as to make the communication between the two oceans by no means difficult, being only 60 miles over. In the great gulf, which is formed between the iſthmus and the northern and ſouthern continents, lie a multitude of iſlands, many of them large, moſt of them fertile, and denominated the Weſt Indies, in contradiſtinction to the countries and iſlands of Aſia, beyond the Cape of Good Hope, which are called the Eaſt Indies.

Before we begin to treat of ſeparate countries in their order, we muſt, according to juſt method, take notice of thoſe mountains and rivers, which diſdain, as it were, to be confined within the limits of particular provinces, and extendover a great part of the continent. For though America in general be not a mountainous country, it has the greateſt mountains in the world *. In South America, the Andes, or Cordilleras, run from north to ſouth along the coaſt of the Pacific ocean. They exceed in length any chain of mountains in the other parts of the globe; extending from the iſthmus of Darien to the ſtraits of Magellan, they

* Dr. Robertſon obſerves, that "the mountains of America are much ſuperior in height to thoſe in the other diviſions of the globe. Even the plain of Quito, which may be conſidered as the baſe of the Andes, is elevated farther above the ſea than the top of the Pyrenees. This ſtupendous ridge of the Andes, no leſs remarkable for extent than elevation, riſes in different places more than one third above the Pike of Teneriffe once thought to be the higheſt land in the ancient hemiſphere. The Andes may literally be ſaid to hide their heads in the clouds; the ſtorms often roll, and the thunder burſts below their ſummits, which though expoſed to the rays of the ſun in the centre of the torrid zone, are covered with everlaſting ſnows."

divide the whole ſouthern parts of America, and run a length of 4300 miles. Their height is as remarkable as their length, for though in part within the torrid zone, they are conſtantly covered with ſnow †. In North America, which is chiefly compoſed of gentle aſcents, or level plains, we know of no conſiderable mountains, except thoſe towards the pole, and that long ridge which lies on the back of the American States, ſeparating them from Canada and Louiſiana, which we call the Apalachian, or Alligany mountains; if that may be conſidered as a mountain, which upon one ſide is extremely lofty, but upon the other is nearly on a level with the reſt of the country.

America is, without queſtion, that part of the globe which is beſt watered; and that not only for the ſupport of life, and all the purpoſes of fertility, but for the convenience of trade and the intercourſe of each part with the others. In North America, ſuch is the wiſdom and goodneſs of the Creator of the univerſe, thoſe vaſt tracts of country, ſituated beyond the Apalachian mountains, at an immenſe and unknown diſtance from the ocean, are watered by inland ſeas, called the Lakes of Canada, which not only communicate with each other, but give riſe to ſeveral great rivers, particularly the Miſſiſippi, running from north to ſouth till it falls into the gulf of Mexico, after a courſe, including its turnings, of 4500 miles, and receiving in its progreſs the vaſt tribute of the Illinois, the Miſaures, the Ohio, and other great rivers, not inferior to the Rhine, or the Danube; and on the north, the river St. Laurence, running a contrary courſe from the Miſſiſippi, till it empties itſelf into the ocean near Newfoundland; all of them being almoſt navigable to their heads, lay open the immenſe receſſes of this great continent, and afford ſuch an inlet for commerce, as muſt produce the greateſt advantage, whenever the country adjacent ſhall come to be fully inhabited, and by an induſtrious and civilized people: The eaſtern ſide of North America, beſides the noble rivers Hudſon, Delaware, Suſquehana, and Potowmack, ſupplies ſeveral others of great depth, length, and commodious navigation; hence many parts of the ſettlements are ſo advantageouſly interſected with navigable rivers and creeks, that the planters, without exaggeration, may be ſaid to have each a harbour at his door.

South America is, if poſſible, in this reſpect even more fortunate. It ſupplies the two largeſt rivers in the world, the river of Amazons, and the Rio de la Plata, or Plate river. The firſt riſing in Peru, not far from the South Sea, paſſes from Weſt to Eaſt, and falls into the ocean between Braſil and Guiana, after a courſe of more than 3000 miles, in which it receives a prodigious number of great and navigable rivers. The Rio de la Plata riſes in the heart of the country, and having its ſtrength gradually augmented, by an acceſſion of many powerful ſtreams, diſcharges itſelf with ſuch vehemence into the ſea, as to make its taſte freſh for many leagues from land. Beſides theſe, there are other rivers in South America, of which the Oronoque is the moſt conſiderable.

A country of ſuch vaſt extent on each ſide of the equator, muſt neceſſarily have a variety of ſoils as well as climates. It is a treaſury of Nature, producing moſt of the metals, minerals, plants, fruits, trees, and wood, to be met with in the other parts of the world, and many of them in greater quantities and higher perfection. The gold and ſilver of America have ſupplied Europe with ſuch immenſe quantities of thoſe precious metals, that they are become vaſtly more common,

† Chimborazo, the higheſt of the Andes, is 20,608 feet; of this about 2400 feet from the ſummit are always covered with ſnow. Carazon was aſcended by the French aſtronomers, and is ſaid to be 15,800 feet high.

ſo that the gold and ſilver of Europe now bears little proportion to the high price ſet upon them before the diſcovery of America.

This country alſo produces diamonds, pearls, emeralds, amethyſts, and other rare ſtones, which, by being brought in great quantities into Europe, have alſo fallen in value. To theſe, which are chiefly the production of Spaniſh America, may be added a great number of other commodities, which, though of leſs price, are of much greater uſe, and many of them make the ornament and wealth of the Britiſh empire in this part of the world. Of theſe are the plentiful ſupplies of cochineal, indigo, anatto, logwood, brazil, fuſtic, pimento, lignum vitæ, rice, ginger, cocoa, or the chocolate nut, ſugar, cotton, tobacco, banillas, red-wood, the balſams of Tolu, Peru, and Chili, that valuable article in medicine the Jeſuit's bark, mechoacan, ſaſſaffras, ſarſaparilla, caſſia, tamarinds, hides, furs, ambergriſe, and a great variety of woods, roots, and plants, to which, before the diſcovery of America, we were either entire ſtrangers, or forced to buy at an extravagant rate from Aſia and Africa, through the hands of the Venetians and Genoeſe, who then engroſſed the trade of the eaſtern world.

This continent has alſo a variety of excellent fruits, which here grow wild to great perfection; as pine-apples, pomegranates, citrons, lemons, oranges, malicatons, cherries, pears, apples, figs, grapes, great numbers of culinary, medicinal, and other herbs, roots, and plants; and ſo fertile is the ſoil, that many exotic productions are nouriſhed in as great perfection as in their native ground.

Though the Indians ſtill live in the quiet poſſeſſion of many large tracts, America, ſo far as known, is chiefly claimed, and divided into colonies, by three European nations, the Spaniards, Engliſh, and Portugueſe. The Spaniards, as they firſt diſcovered it, have the largeſt and richeſt portion, extending from New Mexico and Louiſiana, in North America, to the ſtraits of Magellan in the South Sea, except the large province of Braſil, which belongs to Portugal; for though the French and Dutch have ſome forts upon Surinam and Guiana, they ſcarcely deſerve to be conſidered as proprietors of any part of the ſouthern continent.

Next to Spain, the moſt conſiderable proprietor of America was Great Britain, who derived her claim to North America, from the firſt diſcovery of that continent, by Sebaſtian Cabot, in the name of Henry VII. anno 1497, about ſix-years after the diſcovery of South America by Columbus, in the name of the king of Spain. This country was in general called Newfoundland, a name which is now appropiated ſolely to an iſland upon its coaſt. It was a long time before we made an attempt to ſettle this country. Sir Walter Raleigh, an uncommon genius, and a brave commander, firſt ſhewed the way by planting a colony in the ſouthern part, which he called Virginia, in honour of his miſtreſs queen Elizabeth.

The French, indeed, from this period until the concluſion of the late war, laid a claim to, and actually poſſeſſed Canada and Louiſiana, comprehending all that extenſive inland country, reaching from Hudſon's Bay on the north, to Mexico, and the gulf of the ſame name on the ſouth: regions which all Europe could not people in the courſe of many ages: but no territory, however extenſive, no empire, however boundleſs, could gratify the ambition of that aſpiring nation; hence, under the moſt ſolemn treaties, they continued in a ſtate of hoſtility, making gradual advances upon the back of our ſettlements, and rendering their acquiſitions more ſecure and permanent by a chain of forts, well ſupplied with all the implements of war. At the ſame time they laboured inceſſantly to gain the friendſhip of the Indians, by various arts, even by intermarriages, and whom they

they not only trained to the uſe of arms, but infuſed into theſe ſavages the moſt unfavourable notions of the Engliſh. The Britiſh colonies thus hemmed in, and confined to a ſlip of land along the ſea-coaſt, by an ambitious and powerful nation, the rivals and the natural enemies of Great Britian, began in 1755 to take the alarm. The Britiſh empire in America, yet in its infancy, was threatened with a total diſſolution. The colonies, in their diſtreſs, called out aloud to the mother-country. The bulwarks, and the thunder of England, were ſent to their relief, accompanied with powerful armies, well appointed, and ably commanded. A long war ſucceeded, which ended gloriouſly for Great Britain: for after much blood was ſpilt, and every inch of ground bravely diſputed, the French were not only driven from Canada, and its dependencies, but obliged to relinquiſh all that part of Louiſiana, lying on the eaſt ſide of the Miſſiſippi.

Thus at an immenſe expence, and with the loſs of many brave men, our colonies were preſerved, ſecured, and extended ſo far, as to render it difficult to aſcertain the preciſe bouuds of our empire in North America, to the northern and weſtern ſides; for to the northward, it ſhould ſeem that we might have extended our claims quite to the pole itſelf, nor did any nation ſeem inclined to diſpute the property of this northernmoſt country with us. If we had choſen to take our ſtand upon the northern extremity, and look towards the ſouth, we had a territory extending in that aſpect, from the Pole to Cape Florida in the gulf of Mexico, North lat. 25, and conſequently near 4000 miles long, in a direct line; which was the more valuable, as it included the moſt temperate climates of this new world, and ſuch as are beſt ſuited to the Britiſh conſtitutions. But to the weſtward, our boundaries reached to the nations unknown even to the native Indians of Canada. If we might hazard a conjecture, it is nearly equal to the extent of all Europe. But our flattering proſpects reſpecting America, have been greatly abridged by the recent conteſt between the mother-country and the colonies, which, after eight yeats continuance, with a great expence of treaſure and blood, ended in their diſmemberment from the Britiſh empire, and in the eſtabliſhment of a new Republic, ſtyled "The thirteen United States of America." This country is waſhed by the Atlantic ocean on the eaſt, and on the ſouth by the gulf of Mexico. We have already taken notice of the river St. Laurence, the Miſſiſippi, the lakes of Canada, and other great bodies of water, which fertilize and enrich its northern and weſtern boundaries, as well as the interior parts.

In deſcribing the ſituation, extent, and boundaries of the numerous colonies which now compoſe that great empire, we have totally rejected the accounts given us by partial French writers, as well as thoſe of Salmon and other Engliſh geographers, if men deſerve that name, who have wandered ſo widely from the truth, and who ſeem either unacquainted with the ſubject, or have been at no pains to conſult the lateſt and moſt authentic materials. This we thought neceſſary to premiſe, that the reader may be prepared for the following Tables, which he will find to differ widely from any book of geography hitherto publiſhed, being compoſed from the lateſt treaties, and partitions, and the beſt maps and drawings; the ſureſt guides in giving the geography of theſe important provinces.

The multitude of iſlands, which lie between the two continents of North and South America, are divided among the Spaniards, Engliſh, and French. The Dutch indeed poſſeſs three or four ſmall iſlands, which, in any other hands, would be of no conſequence; and the Danes have one or two, but they hardly deſerve to be named among the proprietors of America. France is ſaid to have lately ceded the ſmall iſland of St. Bartholomew to Sweden. We ſhall now proceed to the particular provinces, beginning, according to our method, with the north; but as Labrador,

brador, or New Britain, and the country round Hudſon's Bay, with thoſe vaſt regions towards the pole, are little known, we can only include within the following Table, the colonies that have been formed into regular governments, which bring us to the 50th degree of north latitude.

A SUMMARY VIEW of the FIRST SETTLEMENTS of NORTH AMERICA.

Names of Places.	When ſettled.	By whom.
Quebec	1608	By the French.
Virginia	June 10, 1609	By Lord de la War.
Newfoundland	June 1610	By governor John Guy.
New York, New Jerſey	about 1614	By the Dutch.
Plymouth	1620	By part of Mr. Robinſon's congregation.
New Hampſhire	1623	By a ſmall Engliſh colony near the mouth of Piſcataqua river.
Delawar, Pennſylvania	1627	By the Swedes and Fins.
Maſſachuſet's Bay	1628	By capt. John Endicot and company.
Maryland	1633	By lord Baltimore, with a colony of Roman catholics.
Connecticut	1635	By Mr. Fenwickat Saybrook, near the mouth of Connecticut river.
Rhode Iſland	1635	By Mr. Roger Williams and his perſecuted brethren.
New Jerſey	1664	Granted to the duke of York by Charles II. and made a diſtinct government, and ſettled ſome time before this by the Engliſh.
South Carolina	1669	By governor Sale.
Pennſylvania	1682	By William Penn, with a colony of Quakers.
North Carolina	about 1728	Erected into a ſeparate government, ſettled before by the Engliſh.
Georgia	1732	By general Oglethorpe.
Kentucky	1773	By col. Daniel Boon.
Vermont	1777	By emigrants from Connecticut and other parts of New-England.
Territory N. W. of Ohio river	1787	By the Ohio and other companies.

BRITISH ISLANDS in NORTH AMERICA and the WEST INDIES, = 46,930 Sq. Miles.

* Lately ceded to Sweden by France.

NEW

NEW BRITAIN.

Situation and Extent.

Miles.		Degrees.	Sq. Miles.
Length 850 Breadth 750	between	50 and 70 north latitude 50 and 100 weſt longitude.	318,750.

NEW BRITAIN, or the country lying round Hudſon's Bay, and commonly called the country of the Eſquimaux, comprehending Labrador, now North and South Wales, is bounded by unknown lands, and frozen ſeas, about the pole, on the North; by the Atlantic ocean, on the Eaſt; by the Bay and river of St. Laurence and Canada, on the South; and by unknown lands on the Weſt. Its length is computed at 850 miles, and 750 broad.

Mountains.] The tremendous high mountains in this country towards the north, their being covered with eternal ſnow, and the winds blowing from thence three quarters of the year, occaſion a degree of cold in the winter, over all this country, which is not experienced in any other part of the world in the ſame latitude.

Rivers, bays, straits, and capes.] Theſe are numerous and take their names generally from the Engliſh navigators and commanders by whom they were firſt diſcovered; the principal bay is that of Hudſon, which includes ſeveral others; the principal ſtraits are thoſe of Hudſon, Davis, and Belleiſle; and the chief rivers are the Mooſe, Severn, Rupert, Nelſon, and Black River.

Soil and produce.] This country is extremely barren; to the northward of Hudſon's Bay, even the hardy pine-tree is ſeen no longer, and the cold womb of the earth is incapable of any better production than ſome miſerable ſhrubs. Every kind of European ſeed, which we have committed to the earth, in this inhoſpitable climate, has hitherto periſhed; but, perhaps, we have not tried the ſeed of corn from the northern parts of Sweeden and Norway, which might be more congenial to the climate. All this ſeverity, and long continuance of winter, and the conſequent barrenneſs of the earth, is experienced in the latitude of fifty-one; in the temperate latitude of Cambridge.

Animals.] Theſe are the mooſe deer, ſtags, rein deer, bears, tygers, buffaloes, wolves, foxes, beavers, otters, lynxes, martins, ſquirrels, ermins, wild cats, and hares. Of the feathered kind they have geeſe, buſtards, ducks, partridges, and all manner of wild fowls. Of fiſh, there are whales, morſes, ſeals, cod-fiſh, and a white fiſh preferable to herrings; and in their rivers and freſh waters, pike, perch, carp, and trout. There have been taken at Port Nelſon, in one ſeaſon, ninety thouſand partridges, which are here as large as hens, and twenty-five thouſand hares.

All the animals of theſe countries are clothed with a cloſe, ſoft, warm fur. In ſummer there is here, as in other places, a variety in the colours of the ſeveral animals; when that ſeaſon is over, which holds only for three months, they all aſſume the livery of winter, and every ſort of beaſts, and moſt of their fowls, are of the colour of the ſnow; every thing animate and inanimate is white. This is

a ſurpriſing phenomenon. But what is yet more ſurpriſing, and what is indeed one of the many ſtriking things, that draw the moſt inattentive to an admiration of the wiſdom and goodneſs of Providence, is, that the dogs and cats from England that have been carried into Hudſon's Bay, on the approach of winter, have entirely changed their appearance, and acquired a much longer, ſofter, and thicker coat of hair, than they had originally.

Before we advance farther in the deſcription of America, it may be proper to obſerve in general, that all the quadrupeds of this new world are leſs than thoſe of the old; even ſuch as are carried from hence to breed there, are often found to degenerate, but are never ſeen to improve. If, with reſpect to ſize, we ſhould compare the animals of the new and the old world, we ſhall find the former greatly inferior to the latter. The Aſiatic elephant, for inſtance, often grows to above fifteen feet high, while the tapurette, one of the largeſt natives of America, is not bigger than a calf of a year old. The lama, which ſome alſo call the American camel, is ſtill leſs. Their beaſts of prey are quite diveſted of that courage, which is ſo often fatal to man in Africa or Aſia. They have no lions, nor, properly ſpeaking, either leopard, or tyger. Travellers, however, have affixed thoſe names to ſuch ravenous animals as are there found moſt to reſemble thoſe of the ancient continent. The conjar, the taquar, and the taquaretti among them, are deſpicable in compariſon of the tyger, the leopard, and the panther of Aſia. The tyger of Bengal has been known to meaſure ſix feet in length, without including the tail; while the congar, or American tyger, as ſome affect to call it, ſeldom exceeds three. All the animals therefore in the ſouthern parts of America, are different from thoſe in the ſouthern parts of the ancient continent; nor does there appear to be any common to both, but thoſe which, being able to bear the colds of the North, have travelled from one continent to the other. Thus the bear, the wolf, the rein-deer, the ſtag, and the beaver, are known as well in New Britain and Canada as in Ruſſia; while the lion, the leopard, and the tyger, which are natives of the ſouth with us, are utterly unknown in South America. But if the quadrupeds of America be ſmaller than thoſe of the ancient continent, they are in much greater abundance; for it is a rule that obtains through nature, and evidently points out the wiſdom of the author of it, that the ſmalleſt animals multiply in the greateſt proportion. The goat, exported from Europe to Southern America, in a few generations, becomes much leſs; but then it alſo becomes more prolific, and inſtead of one kid at a time, or two at the moſt, generally produces five, ſix, and ſometimes more. The wiſdom of Providence in making formidable animals unprolific is obvious; had the elephant, the rhinoceros, and the lion, the ſame degree of fecundity with the rabbit, or the rat, all the arts of man would ſoon be unequal to the conteſt, and we ſhould ſoon perceive them become the tyrants of thoſe who call themſelves the maſters of the creation.

PERSONS AND HABITS.] The men of this country ſhew great ingenuity in their manner of kindling a fire, in clothing themſelves, and in preſerving their eyes from the ill effects of that glaring white which every where ſurrounds them, for the greateſt part of the year; in other reſpects they are very ſavage. They are of a tawny complexion, and lead a vagrant life, moving from place to place, ſpending their time in hunting and fiſhing. In their ſhapes and faces they do not reſemble the Americans who live to the ſouthward; they are much more like the Laplanders and the Samoeids of Europe already deſcribed, from whom they are probably deſcended. Theſe on the coaſt appear to be peaceable and inoffenſive, and are dexterous in managing their kiacks or boats. The other Americans ſeem to be of a Tartar original.

DISCOVERY AND COMMERCE.] The knowledge of theſe northern ſeas and countries was owing to a project ſtarted in England for the diſcovery of a north-weſt paſſage to China and the Eaſt Indies, as early as the year 1576. Since then it has been frequently dropped, and as often revived, but never yet completed; and from the late voyages of diſcovery it ſeems manifeſt, that no practicable paſſage ever can be found. Frobiſher only diſcovered the main of New Britain, or Terra de Labrador, and thoſe ſtraits to which he has given his name. In 1585, John Davis ſailed from Portſmouth, and viewed that and the more northerly coaſts, but he ſeems never to have entered the bay. Hudſon made three voyages on the ſame adventure, the firſt in 1607, the ſecond in 1608, and his third and laſt in 1610. This bold and judicious navigator entered the ſtraits that lead into this new Mediterranean, the bay known by his name, coaſted a great part of it, and penetrated to eighty degrees and a half, into the heart of the frozen zone. His ardour for the diſcovery not being abated by the difficulties he ſtruggled with in this empire of winter, he ſtaid here until the enſuing ſpring, and prepared, in the beginning of 1611, to purſue his diſcoveries; but his crew, who ſuffered equal hardſhips, without the ſame ſpirit to ſupport them, mutinied, ſeized upon him and ſeven of thoſe who were moſt faithful to him, and committed them to the fury of the icy ſeas, in an open boat. Hudſon and his companions were either ſwallowed up by the waves, or, gaining the inhoſpitable coaſt, were deſtroyed by the ſavages; but the ſhip and the reſt of the men returned home.

Other attempts towards a diſcovery were made in 1612 and 1667; and a patent for planting the country, with a charter for a company, was obtained in the year 1670. In 1746 captain Ellis wintered as far north as 57 degrees and a half, and captain Chriſtopher attempted farther diſcoveries in 1761. But beſides theſe voyages, which ſatisfy us that we muſt not look for a paſſage on this ſide of the latitude 67 degrees North, we are indebted to the Hudſon's Bay Company for a journey by land; which throws much additional light on this matter, by affording, what may be called demonſtration, how much farther North, at leaſt in ſome parts of their voyage, ſhips muſt go, before they can paſs from one ſide of America to the other. The northern Indians, who come down to the Company's factories to trade, had brought to the knowledge of our people a river, which, on account of much copper being found near it, had obtained the name of the Copper-mine river. The Company, being deſirous of examining into this matter with preciſion, directed Mr. Hearne, a young gentleman in their ſervice, and who having been brought up for the navy and ſerved in it the war before laſt, was extremely well qualified for the purpoſe, to proceed over land, under the convoy of thoſe Indians, for that river; which he had orders to ſurvey, if poſſible, quite down to its exit into the ſea, to make obſervations for fixing the latitudes and longitudes; and to bring home maps and drawings, both of it and the countries through which he ſhould paſs.

Accordingly Mr. Hearne ſet out from Prince of Wales's Fort, on Churchill river, latitude 58° 47½′ North, and longitude 94° 7½′ Weſt from Greenwich, on the 7th of December, 1770. Mr. Hearne on the 13th of June reached the Copper-mine river, and found it all the way, even to its exit into the ſea, incumbered with ſhoals and falls, and emptying itſelf into it over a dry flat of the ſhore, the tide being then out, which ſeemed, by the edges of the ice, to riſe about 12 or 14 feet. This riſe, on account of the falls, carries the ſea but a very ſmall way within the river's mouth, ſo that the water in it had not the leaſt brackiſh taſte. Mr. Hearne is, nevertheleſs, ſure that it empties itſelf into the ſea, or a branch of it, by the quantity of whalebone and ſeal ſkins which the Eſquimaux had at their tents; and alſo by the number of ſeals which he ſaw upon the ice. The ſea, at the river's mouth, was full of

iſlands

iſlands and ſhoals, as far as he could ſee, by the aſſiſtance of a pocket teleſcope; and the ice was not yet (July 17th) broken up, but thawed away only for about three quarters of a mile from the ſhore, and for a little way round the iſlands and ſhoals. But he had the moſt extenſive view of the ſea when he was about eight miles up the river, from which ſtation the extreme parts of it bore N. W. by W. and N. E.

By the time Mr. Hearne had finiſhed his ſurvey of the river, which was about one o'clock in the morning on the 18th, there came on a very thick fog and drizzling rain; and as he had found the river and ſea, in every reſpect unlikely to be of any utility, he thought it unneceſſary to wait for fair weather, to determine the latitude more exactly by obſervation; but by extraordinary care he took in obſerving the courſes and diſtances, walked from *Congecathawhachaza*, where he had two very good obſervations, he thinks the latitude may be depended on within 20′ at the utmoſt. It appears from the map which Mr. Hearne conſtructed of this ſingular journey, that the mouth of the Copper-mine river lies in latitude 72° N. and longitude 25° W. from Churchill river; that is, about 119° W. of Greenwich. Mr. Hearne's journey back from the Copper-mine river to Churchill laſted till June 30th, 1772; ſo that he was abſent almoſt a year and ſeven months. The unparalleled hardſhips he ſuffered, and the eſſential ſervice he performed, have met with a ſuitable reward from his maſters. He has been ſeveral years governor of Prince of Wales's Fort, on Churchill river, where he was taken priſoner by the French in 1782; and, after the peace in 1783, he returned to his ſtation.

The conſequences reſulting from this extenſive diſcovery are obvious. We now ſee that the continent of North America ſtretches from Hudſon's Bay, ſo far to the North-Weſt, that Mr. Hearne travelled near 1300 miles before he arrived at the ſea; and that the whole of his track to the northward of 61° of North latitude, lay near 600 miles due Weſt of the weſtern coaſt of Hudſon's Bay, at the ſame time that his Indian guides were well aware of a vaſt track of land, ſtretching farther in the ſame direction. Futile, therefore, are the arguments of thoſe, who, about 40 years ago, ſtickled ſo much for a North-weſt paſſage through Hudſon's Bay.

Though the adventurers failed in the original purpoſe for which they navigated this bay, their project, even in its failure, has been of great advantage to this country. The vaſt countries which ſurround Hudſon's Bay, as we have already obſerved, abound with animals, whoſe fur and ſkins are excellent. In 1670, a charter was granted to a company, which does not conſiſt of above nine or ten perſons, for the excluſive trade to this bay, and they have acted under it ever ſince with great benefit to themſelves. The fur and peltry trade might be carried on to a much greater extent, were it not entirely in the hands of this excluſive company, whoſe intereſted, not to ſay iniquitous ſpirit, has been the ſubject of long and juſt complaint. The company employ four ſhips, and 130 ſeamen. They have ſeveral forts, viz. Prince of Wales's fort, Churchill river, Nelſon, New Severn, and Albany, which ſtand on the weſt ſide of the bay, and are garriſoned by 186 men. The French in May 1782, took and deſtroyed theſe forts, and the ſettlements, &c. valued at 500,000l. They export commodities to the value of 16,000l. and bring home returns to the value of 29,340l. which yield to the revenue 3,734l. This includes the fiſhery in Hudſon's Bay. This commerce, ſmall as it is, affords immenſe profits to the company, and even ſome advantages to Great Britain in general; for the commodities we exchange with the Indians for their ſkins and furs, are all manufactured in Britain; and as the Indians are not very nice in their choice, ſuch things are ſent, of which we have the greateſt plenty, and which, in the mercantile phraſe, are drugs with us. Though the workmanſhip too happens to be in many reſpects ſo deficient,

deficient, that no civilized people would take it off our hands, it may be admired among the Indians. On the other hand, the ſkins and furs we bring from Hudſon's Bay, enter largely into our manufactures, and afford us materials for trading with many nations of Europe, to great advantage. Theſe circumſtances tend to prove inconteſtibly the immenſe benefit that would redound to Great Britain, by throwing open the trade to Hudſon's Bay, ſince even in its preſent reſtrained ſtate it is ſo advantageous. This company, it is probable, do not find their trade ſo advantageous now as it was before we got poſſeſſion of Canada. The only attempt made to trade with Labrador, has been directed towards the fiſhery. Great Britain has no ſettlement here, though the annual produce of the fiſhery, amounting to upwards of 49,000l. and the natural advantages of the country, ſhould encourage us to ſet about this deſign.

CANADA, or the PROVINCE OF QUEBEC.

SITUATION AND EXTENT.

Miles.		Degrees.	Sq. Miles.
Length 600 Breadth 200	between	61 and 81 weſt longitude. 45 and 52 north latitude.	100,000.

BOUNDARIES.] THE French comprehended, under the name of Canada, a very large territory, taking into their claim part of Nova Scotia, New England, and New York, on the Eaſt; and, to the Weſt, extending it as far as the Pacific Ocean. That part, however, which they had been able to cultivate, and which bore the face of a colony, lay chiefly upon the banks of the river St. Laurence, and the numerous ſmall rivers falling into that ſtream. This being reduced by the Britiſh arms in the war of 1756, was formed into a Britiſh colony, called the Province of Quebec, which is now bounded by New Britain and Hudſon's Bay on the North and Eaſt; by Nova Scotia, New England, and New York, on the South, and by unknown lands on the Weſt.

AIR AND CLIMATE.] The climate of this extenſive province is not very different from the colonies mentioned above; but as it is much farther from the ſea, and more northerly than a great part of theſe provinces, it has a much ſeverer winter, though the air is generally clear; but like moſt of the American tracts that do not lie too far to the northward, the ſummers are very hot and exceedingly pleaſant.

SOIL AND PRODUCE.] Though the climate be cold, and the winter long and tedious, the ſoil is in general very good, producing wheat, barley, rye, with many other ſorts of grains, fruits, and vegetables; tobacco, in particular, thrives well and is much cultivated. The iſle of Orleans near Quebec, and the lands upon the river St. Laurence and other rivers, are remarkable for fertility. The meadow-grounds in Canada, which are well watered, yield excellent graſs, and breed vaſt numbers of great and ſmall cattle. As we are now entering upon the cultivated provinces of Britiſh America, and as Canada is upon the back of the United States, and contains almoſt all the different ſpecies of wood and animals that

are found in theſe colonies, we ſhall, to avoid repetitions, ſpeak of them here at ſome length.

TIMBER AND PLANTS.] The uncultivated parts of North America contain the greateſt foreſts in the world. They are a continued wood, not planted by the hands of men, and in all appearance as old as the world itſelf. Nothing is more magnificent to the ſight; the trees loſe themſelves in the clouds; and there is ſuch a prodigious variety of ſpecies, that even among thoſe perſons who have taken moſt pains to know them, there is not one perhaps that knows half the number. The province we are deſcribing produces, amongſt others, two ſorts of pines, the white and the red; four ſorts of firs; two ſorts of cedar, and oak, the white and the red; the male and female maple; three ſorts of aſh-trees, the free, the mungrel, and the baſtard; three ſorts of walnut-trees, the hard, the ſoft, and the ſmooth; vaſt numbers of beech-trees, and white wood; white and red elms, and poplars. The Indians hollow the red elms into canoes, ſome of which, made out of one piece, will contain twenty perſons; others are made of the bark, the different pieces of which they ſew together with the inner rind, and daub over the ſeams with pitch, or rather a bituminous matter reſembling pitch, to prevent their leaking; and the ribs of theſe canoes are made of boughs of trees. About November the bears and wild cats take up their habitations in the hollow elms, and remain there till April. Here are alſo found cherry-trees, plum-trees, the vinegar-tree, the fruit of which, infuſed in water, produces vinegar; an aquatic plant, called alaco, the fruit of which may be made into a confection; the white thorn; the cotton tree, on the top of which grow ſeveral tufts of flowers, which, when ſhaken in the morning, before the dew falls off, produce honey, that may be boiled up into ſugar, the ſeed being a pod, containing a very fine kind of cotton; the ſun-plant, which reſembles a marigold, and grows to the height of ſeven or eight feet; Turkey corn; French beans; gourds, melons, capillaire, and the hop-plant.

METALS AND MINERALS.] Near Quebec is a fine lead mine, and in ſome of the mountains, we are told ſilver has been found, though we have not heard any great advantage made of it as yet. This country alſo abounds with coals.

RIVERS.] The rivers branching through this country are very numerous, and many of them large, bold, and deep. The principal are, the Outtauais, St. John's, Seguinay, Deſprairies, and Trois Rivieres, but they are all ſwallowed up by the river St. Laurence. This river iſſues from the lake Ontario, and, taking its courſe north-eaſt, waſhes Montreal, where it receives the Outtauais, and forms many fertile iſlands. It continues the ſame courſe, and meets the tide upwards of 400 miles from the ſea, where it is navigable for large veſſels; and below Quebec, 320 miles from the ſea, it becomes broad, and ſo deep, that ſhips of the line contributed, in the laſt war, to reduce that capital. After receiving in its progreſs innumerable ſtreams, this great river falls into the ocean at Cape Roſieres, where it is 90 miles broad, and where the cold is intenſe, and the ſea boiſterous. In its progreſs it forms a variety of bays, harbours, and iſlands, many of them fruitful, and extremely pleaſant.

LAKES.] The great river St. Laurence is that only upon which the French (now ſubjects of Great Britain) have ſettlements of any note; but if we look forward into futurity it is not improbable that Canada, and thoſe vaſt regions to the weſt, will be enabled of themſelves to carry on a conſiderable trade upon the great lakes of freſh water, which theſe countries environ. Here are five lakes, the ſmalleſt of which is a piece of ſweet water, greater than any in the other parts of the world; this is the lake Ontario, which is not leſs than 200 leagues in circumference; Erie,

or Oſwego, longer but not ſo broad, is about the ſame extent. That of the Huron ſpreads greatly in width, and is in circumference not leſs than 300, as is that of Michigan, though, like the lake Erie, it is rather long and comparatively narrow. But the lake Superior, which contains ſeveral large iſlands, is 500 leagues in circuit. All of theſe are navigable by any veſſels, and they all communicate with one another, except that the paſſage between Erie and Ontario is interrupted by a ſtupendous fall or cataract, which is called the Falls of Niagara. The water here is about half a mile wide, where the rock croſſes it, not in a direct line, but in the form of a half moon. When it comes to the perpendicular fall, which is 150 feet, no words can expreſs the conſternation of travellers at ſeeing ſo great a body of water falling, or rather violently thrown, from ſo great a height, upon the rocks below; from which it again rebounds to a very great height, appearing as white as ſnow, being all converted into foam, through thoſe violent agitations. The noiſe of this fall is often heard at the diſtance of 15 miles, and ſometimes much farther. The vapour ariſing from the fall may ſometimes be ſeen at a great diſtance, appearing like a cloud, or pillar of ſmoke, and in the appearance of a rainbow, whenever the ſun and the poſition of the traveller favours. Many beaſts and fowls here loſe their lives, by attempting to ſwim, or croſs the ſtream in the rapids above the fall, and are found daſhed in pieces below; and ſometimes the Indians through careleſſneſs or drunkenneſs, have met with the ſame fate; and perhaps no place in the world is frequented by ſuch a number of eagles as are invited hither by the carnage of deer, elks, bears, &c. on which they feed. The river St. Laurence, as we have already obſerved, is the outlet of theſe lakes; by this they diſcharge themſelves into the ocean. The French, when in poſſeſſion of the province, built forts at the ſeveral ſtraits, by which theſe lakes communicate with each other, as well as where the laſt of them communicates with the river. By theſe they effectually ſecured to themſelves the trade of the lakes, and an influence upon all the nations of America which lay near them.

ANIMALS.] Theſe make the moſt curious, and hitherto the moſt intereſting part of the natural hiſtory of Canada. It is to the ſpoils of theſe that we owe the materials of many of our manufactures, and moſt of the commerce as yet carried on between us and that province. The animals that find ſhelter and nouriſhment in the immenſe foreſts of Canada, and which indeed traverſe the uncultivated parts of all this continent, are ſtags, elks, deer, bears, foxes, martins, wild cats, ferrets, weaſels, ſquirrels of a large ſize and greyiſh hue, hares, and rabbits. The ſouthern parts in particular breed great numbers of wild bulls, deer of a ſmall ſize, divers ſorts of roebucks, goats, wolves, &c. The marſhes, lakes, and pools, which in this country are very numerous, ſwarm with otters, beavers or caſtors, of which the white are highly valued, being ſcarce, as well as the right black kind. The American beaver, though reſembling the creature known in Europe by that name, has many particulars which render it the moſt curious animal we are acquainted with. It is near four feet in length, and weighs ſixty or ſeventy pounds; they live from fifteen to twenty years, and the females generally bring forth four young ones at a time. It is an amphibious quadruped, that continues not long at a time in the water, but yet cannot live without frequently bathing in it. The ſavages, who waged continual war with this animal, believed it to be a rational creature, that it lived in ſociety, and was governed by a leader, reſembling their own ſachem or prince. It muſt indeed be allowed, that the curious accounts given of this animal by ingenious travellers, the manner in which it contrives its habitation, provides food to ſerve during the winter, and always in proportion to the continuance and ſeverity of it, are ſufficient to ſhew the near approaches of inſtinct to reaſon, and even in ſome

inſtances the ſuperiority of the former. Their colours are different; black, brown, white, yellow, and ſtraw-colour; but it is obſerved, that the lighter their colour, the leſs quantity of fur they are clothed with, and live in warmer climates. The furs of the beaver are of two kinds, the dry and the green; the dry fur is the ſkin before it is applied to any uſe; the green are the furs that are worn, after being ſewed to one another, by the Indians, who beſmear them with unctuous ſubſtances, which not only render them more pliable, but give the fine down, that is manufactured into hats, that oily quality which renders it proper to be worked up with the dry fur. Both the Dutch and Engliſh have of late found the ſecret of making excellent cloths, gloves, and ſtockings, as well as hats, from the beaver fur. Beſides the fur, this uſeful animal produces the true caſtoreum, which is contained in bags in the lower part of the belly, different from the teſticles: the value of this drug is well known. The fleſh of the beaver is a moſt delicious food, but when boiled, it has a diſagreeable reliſh.

The muſk rat is a diminutive kind of beaver (weighing about five or ſix pounds), which it reſembles in every thing but its tail; and it affords a very ſtrong muſk.

The elk is of the ſize of a horſe or mule. Many extraordinary medicinal qualities, particularly that of curing the falling-ſickneſs, are aſcribed to the hoof of the left foot of this animal. Its fleſh is very agreeable and nouriſhing, and its colour a mixture of light-grey and dark-red. They love the cold countries; and when the winter affords them no graſs, they gnaw the bark of trees. It is dangerous to approach very near this animal when he is hunted, as he ſometimes ſprings furiouſly on his purſuers, and tramples them to pieces. To prevent this, the hunter throws his cloaths to him, and while the deluded animal ſpends his fury on theſe, he takes proper meaſures to diſpatch him.

There is a carnivorous animal here, called the carcajou, of the feline or cat kind, with a tail ſo long, that Charlevoix ſays he twiſted it ſeveral times round his body. Its body is about two feet in length, from the end of the ſnout to the tail. It is ſaid, that this animal, winding himſelf about a tree, will dart from thence upon the elk, twiſting his ſtrong tail round his body, and cut his throat in a moment.

The buffaloe, a kind of wild ox, has much the ſame appearance with thoſe of Europe: his body is covered with a black wool, which is highly eſteemed. The fleſh of the female is very good; and the buffaloe hides are ſoft and pliable as chamois leather, but ſo very ſtrong, that the bucklers which the Indians make uſe of are hardly penetrable by a muſket ball. The Canadian roebuck is a domeſtic animal. Wolves are ſcarce in Canada, but they afford the fineſt furs in all the country: their fleſh is white, and good to eat; and they purſue their prey to the tops of the talleſt trees. The black foxes are greatly eſteemed, and very ſcarce; but thoſe of other colours are more common; and ſome on the upper Miſſiſippi are of a ſilver colour, and very beautiful. They live upon water-fowls, which they decoy with their clutches by a thouſand antic tricks, and then ſpring upon, and devour them. The Canadian pole-cat has a moſt beautiful white fur, except the tip of his tail, which is as black as jet. Nature has given this animal no defence but its urine, the ſmell of which is nauſeous and intolerable; this, when attacked, it ſprinkles plentifully on its tail, and throws it on the aſſailant. The Canadian wood-rat is of a beautiful ſilver colour, with a buſhy tail, and twice as big as the European: the female carries under her belly a bag, which ſhe opens and ſhuts at pleaſure; and in that ſhe places her young when purſued. Here are three ſorts of ſquirrels; that called the flying-ſquirrel will leap forty paces and more, from one tree

tree to another. This little animal is eaſily tamed, and is very lively; he puts up wherever he can find a place, in one's ſleeve, pocket, or muff; he firſt pitches on his maſter, whom he will diſtinguiſh among twenty perſons. The Canadian porcupine is leſs than a middling dog; when roaſted he eats full as well as a ſucking pig. The hares and rabbits differ little from thoſe in Europe, only they turn grey in winter. There are two ſorts of bears here, one of a reddiſh, and the other of a black colour; but the former is the moſt dangerous. The bear is not naturally fierce, unleſs when wounded, or oppreſſed with hunger. They run themſelves very poor in the month of July, when it is ſomewhat dangerous to meet them; and they are ſaid to ſupport themſelves during the winter, when the ſnow lies from four to ſix feet deep, by ſucking their paws. Scarcely any thing among the Indians is undertaken with greater ſolemnity than hunting the bear; and an alliance with a noted bear-hunter, who has killed ſeveral in one day, is more eagerly ſought after than that of one who has rendered himſelf famous in war. The reaſon is, becauſe this chace ſupplies the family with both food and raiment.

Of the feathered creation, they have eagles, falcons, goſhawks, tercols, partridges, grey, red, and black, with long tails, which they ſpread out as a fan, and make a very beautiful appearance; woodcocks are ſcarce in Canada, but ſnipes, and other water-game, are plentiful. A Canadian raven is ſaid by ſome writers to eat as well as a pullet, and an owl better. Here are black-birds, ſwallows, and larks; no leſs than twenty-two different ſpecies of ducks, and a great number of ſwans, turkeys, geeſe, buſtards, teal, water-hens, cranes, and other large waterfowl; but always at a diſtance from houſes. The Canadian wood-pecker is a beautiful bird. Thruſhes and goldfinches are found here; but the chief Canadian bird of melody is the white-bird, which is a kind of ortolan, very ſhowy, and remarkable for announcing the return of ſpring. The fly-bird is thought to be the moſt beautiful of any in nature; with all his plumage, he is no bigger than a cock-chafer, and he makes a noiſe with his wings like the humming of a large fly.

Among the reptiles of this country, the rattle-ſnake only deſerves attention. Some of theſe are as big as a man's leg, and they are long in proportion. What is moſt remarkable in this animal is the tail, which is ſcaly like a coat of mail, and on which it is ſaid there grows every year one ring, or row of ſcales; ſo that they know its age by its tail, as we do that of a horſe by its teeth. In moving, it makes a rattling noiſe, from which it has its name. The bite of this ſerpent is mortal, if a remedy is not applied immediately. In all places where this dangerous reptile is bred, there grows a plant, which is called rattle-ſnake herb, the root of which (ſuch is the goodneſs of Providence) is a certain antidote againſt the venom of this ſerpent, and that with the moſt ſimple preparation, for it requires only to be pounded or chewed, and applied like a plaſter to the wound. The rattle-ſnake ſeldom bites paſſengers, unleſs it is provoked; and never darts itſelf at any perſon without firſt rattling three times with its tail. When purſued, if it has but little time to recover, it folds itſelf round, with the head in the middle, and then darts itſelf with great fury and violence againſt its purſuers: nevertheleſs, the ſavages chace it, and find its fleſh very good; and being alſo of a medicinal quality, it is uſed by the American apothecaries in particular caſes.

Some writers are of opinion that the fiſheries in Canada, if properly improved, would be more likely to enrich that country than even the fur trade. The river St. Laurence contains perhaps the greateſt variety of any in the world, and theſe in the greateſt plenty and of the beſt ſorts.

Beſides a great variety of other fiſh in the rivers and lakes, are ſea-wolves, ſea-cows, porpoiſes, the lencornet, the goberque, the ſea-plaiſe, ſalmon, trout, turtle,

lobſters, the chaouraſou, ſturgeon, the achigau; the gilthead, tunny, trout, turtle, prey, ſmelts, conger-eels, mackarel, ſoals, herrings, anchovies, and pilchards. The ſea-wolf, ſo called from its howling, is an amphibious creature; the largeſt are ſaid to weigh two thouſand pounds; their fleſh is good eating; but the profit of it lies in the oil, which is proper for burning, and currying of leather; their ſkins make excellent coverings for trunks, and though not ſo fine as Morocco leather, they preſerve their freſhneſs better, and are leſs liable to cracks. The ſhoes and boots made of thoſe ſkins let in no water, and, when properly tanned, make excellent and laſting covers for ſeats. The Canadian ſea-cow is larger than the ſea-wolf, but reſembles it in figure: it has two teeth of the thickneſs and length of a man's arm, which, when grown, look like horns, and are very fine ivory, as well as its other teeth. Some of the porpoiſes of the river St. Laurence are ſaid to yield a hogſhead of oil; and of their ſkins waiſt coats are made, which are muſket proof. The lencornet is a kind of cuttle-fiſh, quite round, or rather oval; there are three ſorts of them, which differ only in ſize; ſome being as large as a hogſhead, and others but a foot long; they catch only the laſt, and that with a torch; they are excellent eating. The goberque has the taſte and ſmell of a ſmall cod. The ſea-plaiſe is good eating; they are taken with long poles armed with iron hooks. The chaouraſou is an armed fiſh, about five feet long, and as thick as a man's thigh, reſembling a pike; but is covered with ſcales that are proof againſt a dagger: its colour is a ſilver grey; and there grows under his mouth a long bony ſubſtance, ragged at the edges. One may readily conceive, that an animal ſo well fortified is a ravager among the inhabitants of the water; but we have few inſtances of fiſh making prey of the feathered creation, which this fiſh does, however, with much art. He conceals himſelf among the canes and reeds, and in ſuch a manner that nothing is to be ſeen beſides his weapon, which he holds raiſed perpendicularly above the ſurface of the water: the fowls, which come to take reſt, imagining the weapon to be only a withered reed, perch upon it; but they are no ſooner alighted, than the fiſh opens his throat, and makes ſuch a ſudden motion to ſeize his prey, that it ſeldom eſcapes him. This fiſh is an inhabitant of the lakes. The ſturgeon is both a freſh and ſalt water fiſh, taken on the coaſts of Canada and the lakes, from eight to twelve feet long, and proportionably thick. There is a ſmall kind of ſturgeon, the fleſh of which is very tender and delicate. The achigau, and the gilthead, are fiſh peculiar to the river St. Laurence. Some of the rivers breed a kind of crocodile, that differs but little from thoſe of the Nile.

INHABITANTS AND PRINCIPAL TOWNS.] Before the late war, the banks of the river St. Laurence, above Quebec, were vaſtly populous; but we cannot preciſely determine the number of French and Engliſh ſettled in this province, who are undoubtedly upon the increaſe. In the year 1783, Canada and Labrador were ſuppoſed to contain about 130,000 inhabitants *. The different tribes of Indians in Canada are almoſt innumerable; but theſe people are obſerved to decreaſe in population where the Europeans are moſt numerous, owing chiefly to the immoderate uſe of ſpirituous liquors, of which they are exceſſively fond. But as liberty is the ruling paſſion of the Indians, we may naturally ſuppoſe that as the Europeans advance, the former will retreat to more diſtant regions.

Quebec, the capital, not only of this province, but of all Canada, is ſituated at the confluence of the rivers St. Laurence and St. Charles, or the Little River, about 320 miles from the ſea. It is built on a rock, partly of marble and partly

* In 1784, general Haldimand ordered a cenſus of the inhabitants to be taken, when they amounted to 113,012 Engliſh and French, excluſive of 10,000 loyaliſts ſettled in the upper parts of the province.

of ſtate. The town is divided into an upper and a lower; the houſes in both are of ſtone, and built in a tolerable manner. The fortifications are ſtrong, though not regular. The town is covered with a regular and beautiful citadel, in which the governor reſides. The number of inhabitants are computed at about 15,000. The river, which from the ſea hither is four or five leagues broad, narrows all of a ſudden to about a mile wide. The haven, which lies oppoſite to the town, is ſafe and commodious, and about five fathom deep. The harbour is flanked by two baſtions, that are raiſed 25 feet from the ground, which is about the height of the tides at the time of the equinox.

From Quebec to Montreal, which is about 170 miles, in ſailing up the river St. Laurence, the eye is entertained with beautiful landſcapes, the banks being in many places very bold and ſteep, and ſhaded with lofty trees. The farms lie pretty cloſe all the way; ſeveral gentlemen's houſes, neatly built, ſhew themſelves at intervals, and there is all the appearance of a flouriſhing colony, but there are few towns or villages. It is pretty much like the well-ſettled parts of Virginia and Maryland, where the planters are wholly within themſelves. Many beautiful iſlands are interſperſed in the channel of the river, which have an agreeable effect upon the eye. After paſſing the Richlieu iſlands, the air becomes ſo mild and temperate, that the traveller thinks himſelf tranſported to another climate; but this is to be underſtood in the ſummer months.

The town called Trois Rivieres, or the Three Rivers, is about half way between Quebec and Montreal, and has its name from three rivers which join their currents here, and fall into the river St. Laurence. It is much reſorted to by ſeveral nations of Indians, who, by means of theſe rivers, come hither and trade with the inhabitants in various kinds of furs and ſkins. The country is pleaſant, and fertile in corn, fruit, &c. and great numbers of handſome houſes ſtand on both ſides the rivers.

Montreal ſtands on an iſland in the river St. Laurence, which is ten leagues in length and four in breadth, at the foot of a mountain which gives name to it, about half a league from the ſouth ſhore. While the French had poſſeſſion of Canada, both the city and iſland of Montreal belonged to private proprietors, who had improved them ſo well, that the whole iſland was become a moſt delightful ſpot, and produced every thing that could adminiſter to the conveniences of life. The city forms an oblong ſquare, divided by regular and well-formed ſtreets; and when taken by the Engliſh, the houſes were built in a very handſome manner; and every houſe might be ſeen at one view from the harbour, or from the ſouthernmoſt ſide of the river, as the hill on the ſide of which the town ſtands falls gradually to the water. This place is ſurrounded by a wall and a dry ditch; and its fortifications have been much improved by the Engliſh. Montreal is nearly as large as Quebec; but ſince it fell into the hands of the Engliſh it hath ſuffered much by fires.

GOVERNMENT.] Before the late war, the French lived in affluence, being free from all taxes, and having full liberty to hunt, fiſh, fell timber, and to ſow and plant as much land as they could cultivate. By the capitulation granted to the French, when this country was reduced, both individuals and communities were entitled to all their rights and privileges.

It was enacted by parliament in the year 1774, that it ſhould be lawful for his majeſty, his heirs, and ſucceſſors, by warrant under his or their ſignet or ſign manual, and with the advice of the privy-council, to conſtitute and appoint a council for the affairs of the province of Quebec, to conſiſt of ſuch perſons reſident there, not exceeding twenty-three, nor leſs than ſeventeen, as his majeſty, his heirs, and ſucceſſors, ſhall be pleaſed to appoint; and upon the death, removal, or abſence of any

any of the members of the ſaid council, in like manner to conſtitute and appoint others to ſucceed them. And this council, ſo appointed and nominated, or the majority of them, are veſted with power and authority to make ordinances for the peace, welfare, and good government of the province, with the conſent of the governor, or in his abſence of the lieutenant-governor, or commander in chief for the time being. The council, however, are not impowered to lay taxes, except for the purpoſe of making roads, reparation of public buildings, or ſuch local conveniencies. By this act, all matters of controverſy relative to property and civil rights are to be determined by the French laws of Canada; but the criminal law of England is to have force in the province. The inhabitants of Canada are alſo allowed by this act not only to profeſs the Romiſh religion, but the Popiſh clergy are inveſted with a right to claim their accuſtomed dues from thoſe of the ſame religion.

This act, however equitable and laudable, occaſioned a great alarm both in England and America, and appears to have contributed much towards ſpreading a ſpirit of diſaffection to the Britiſh government in the colonies. The city of London petitioned againſt the bill before it received the royal aſſent; declaring, that they apprehended it to be entirely ſubverſive of the great fundamental principles of the Britiſh conſtitution, as well as of the authority of various ſolemn acts of the legiſlature. And in one of the petitions of the American congreſs to the king, they complained, that by the Quebec act, "the limits of that province were extended, the Engliſh laws aboliſhed, and the French laws reſtored, whereby great numbers of Britiſh freemen were ſubjected to the latter; and that an abſolute government, and the Roman catholic religion, were alſo eſtabliſhed by that act, throughout thoſe vaſt regions, that border on the weſterly and northerly boundaries of the free Proteſtant Engliſh ſettlements."

TRADE AND COMMERCE.] By expelling the French from the back of our then ſettlements, we ſecured them from the danger of being moleſted or attacked by an active and formidable enemy, and enabled our people to attend, with proper ſpirit and induſtry, to agriculture, and the improvements of that country. While the important conqueſt of Canada removed a rival power from that part of North America, it put us in the ſole poſſeſſion of the fur and peltry trade, the uſe and importance of which are well known to the manufacturers of Great Britain.

The nature of the climate, ſeverely cold in winter, and the people manufacturing nothing, ſhews what Canada principally wants from Europe, wine, or rather rum, cloths, chiefly coarſe linen, and wrought iron. The Indian trade requires rum, tobacco, a ſort of duffil blankets, guns, powder, balls, and flints, kettles, hatchets, toys, and trinkets of all kinds.

While this country was poſſeſſed by the French, the Indians ſupplied them with peltry; and the French had traders, who, in the manner of the original inhabitants, traverſed the vaſt lakes and rivers in canoes, with incredible induſtry and patience, carrying their goods into the remoteſt parts of America, and among nations entirely unknown to us. Theſe again brought the market home to them, as the Indians were thereby habituated to trade with them. For this purpoſe, people from all parts, even from the diſtance of 1000 miles, came to the French fair at Montreal, which began in June, and ſometimes laſted three months. On this occaſion, many ſolemnities were obſerved, guards were placed, and the governor attended to preſerve order, in ſuch a concourſe, and with ſo great a variety of ſavage nations. But ſometimes great diſorder and tumults happened; and the Indians, being fond of brandy, frequently gave for a dram all they were poſſeſſed of. It is remarkable, that many of theſe nations actually paſſed by our ſettlement of Albany in New York, and travelled 250 miles farther to Montreal, though they might have purchaſed

chaſed the goods cheaper at the former. So much did the French exceed us in the arts of winning the affections of theſe ſavages!

Since we became poſſeſſed of Canada, our trade with that country is computed to employ about 60 ſhips and 1000 ſeamen. Their exports, at an average of three years, in ſkins, furs, ginſeng, ſnake-root, capillaire, and wheat, amount to 105,500l. Their imports from Great Britain, in a variety of articles, are computed at nearly the ſame ſun. It is unneceſſary to make any remarks on the value and importance of this trade, which not only ſupplies us with unmanufactured materials, indiſpenſably neceſſary in many articles of our commerce, but alſo takes in exchange the manufactures of our own country, or the production of our other ſettlements in the Eaſt and Weſt Indies *.

But whatever attention be paid to the trade and peopling of Canada, it will be impoſſible to overcome certain inconveniences, proceeding from natural cauſes; I mean the ſeverity of the winter, which is ſo exceſſive from December to April, that the greateſt rivers are frozen over, and the ſnow lies commonly from four to ſix feet deep on the ground, even in thoſe parts of the country which are three degrees ſouth of London, and in the temperate latitude of Paris. Another inconvenience ariſes from the falls in the river St. Laurence, below Montreal, which render it difficult for very large ſhips to penetrate to that emporium of inland commerce; but veſſels from 300 to 400 tons arrive there annually. Our communication therefore with Canada, and the immenſe regions beyond it, will always be interrupted during the winter ſeaſon, until roads are formed, that can be travelled with ſafety. For it may be here obſerved, that the Indians often commence hoſtilities againſt us, without any provocation, and commit the moſt horrid ravages. But when at laſt their barbarities have rouſed the ſtrength of our people, they are not aſhamed to beg a peace: they know we always grant it readily; they promiſe it ſhall endure as long as the ſun and moon; and then all is quiet till ſome incident, too often co-operating with ill uſage received from our traders, gives them a freſh opportunity of renewing their cruelties.

HISTORY.] See the general account of America.

NOVA SCOTIA.

SITUATION AND EXTENT.

Miles.		Degrees.		Sq. Miles.
Length 350 Breadth 250	between	43 and 49 north latitude. 60 and 67 weſt longitude.		57,000.

BOUNDARIES.] BOUNDED by the river St. Laurence on the North; by the gulf of St. Laurence, and the Atlantic ocean, Eaſt; by the ſame ocean, South; and by Canada and New England, Weſt. In the year 1784, this province was divided into *two governments*.

The province and government, now ſtyled NEW BRUNSWICK, is bounded on the weſtward of the mouth of the river St. Croix, by that river to its ſource, and by

* The amount of the exports from this province, in the year 1786, was 343,263l. Amount of imports the ſame year was 325,116l.

a line

a line drawn due north from thence to the ſouthern boundary of the province of Quebec, to the northward by that boundary as far as the weſtern extremity of the Bay de Chaleurs, to the eaſtward by the ſaid bay to the gulf of St. Laurence to the bay called Bay Verte, to the ſouth by a line in the centre of the Bay of Fundy, from the river St. Croix to the mouth of the Muſquat River, by the ſaid river to its ſource, and from thence by a due eaſt line acroſs the iſthmus into the Bay Verte, to join the eaſtern lot above deſcribed, including all iſlands within ſix leagues of the coaſt.

RIVERS.] The river of St. Laurence forms the northern boundary. The rivers Riſgouche and Nipiſiguit run from weſt to eaſt, and fall into the bay of St. Laurence. The rivers of St. John, Paſſamagnadi, Penobſcot, and St. Croix, which run from north to ſouth, fall into Fundy Bay, or the ſea a little to the eaſtward of it.

SEAS, BAYS, AND CAPES.] The ſeas adjoining to it are, the Atlantic ocean, Fundy Bay, and the gulf of St. Laurence. The leſſer bays are, Chenigto and Green Bay upon the iſthmus, which joins the north part of Nova Scotia to the ſouth; and the Bay of Chaleurs on the north-eaſt; the bay of Chedibucto on the ſouth-eaſt; the bay of the Iſlands, the ports of Bart, Chebucto, Proſper, St. Margaret, La Heve, port Maltois, port Roſignol, port Vert, and port Joly, on the ſouth; port La Tour, on the ſouth-eaſt; port St. Mary, Annapolis, and Minas, on the ſouth ſide of Fundy Bay, and port Roſeway, now the moſt populous of all.

The chief capes are, Cape Portage, Ecoumenac, Tourmentin, Cape Port and Epis, on the eaſt. Cape Fogeri, and Cape Canceau, on the ſouth-eaſt. Cape Blanco, Cape Vert, Cape Theodore, Cape Dore, Cape La Heve, and Cape Negro, on the ſouth. Cape Sable, and Cape Fourche, on the ſouth-weſt.

LAKES.] The lakes are very numerous, but have not yet received particular names.

CLIMATE.] The climate of this country, though within the temperate zone, has been found rather unfavourable to European conſtitutions. They are wrapt up in the gloom of a fog during great part of the year, and for four or five months it is intenſely cold. But though the cold in winter and the heat in ſummer are great, they come on gradually, ſo as to prepare the body for enduring both.

SOIL AND PRODUCE.] From ſuch an unfavourable climate little can be expected. Nova Scotia, or New Scotland, was, till lately, almoſt a continued foreſt; and agriculture, though attempted by the Engliſh ſettlers, has hitherto made little progreſs. In moſt parts the ſoil is thin and barren, the corn it produces, of a ſhrivelled kind like rye, and the graſs intermixed with a cold ſpungy moſs. However, it is not uniformly bad; there are tracts in the peninſula to the ſouthward, which do not yield to the beſt land in New England; and, in general, the ſoil is adapted to the produce of hemp and flax. The timber is extremely proper for ſhip-building, and produces pitch and tar. Flattering accounts have been given of the improvements making in the new ſettlements and the bay of Fundy. A great quantity of land hath been cleared which abounds in timber, and ſhip-loads of excellent maſts and ſpars have been ſhipped for England.

ANIMALS.] This country is not deficient in the animal productions of the neighbouring provinces, particularly deer, beavers, and otters. Wild fowl, and all manner of game, and many kinds of European fowls and quadrupeds, have, from time to time, been brought into it, and thrive well. At the cloſe of March, the fiſh begin to ſpawn, when they enter the rivers in ſuch ſhoals as are incredible. Herrings come up in April, and the ſturgeon and ſalmon in May. But the moſt valu-

able

able appendage of New Scotland, is the Cape Sable coaſt, along which is one continued range of cod-fiſhing banks, and excellent harbours.

HISTORY, SETTLEMENT, CHIEF TOWNS, AND COMMERCE. Notwithſtanding the forbidding appearance of this country, it was here that ſome of the firſt European ſettlements were made. The firſt grant of lands in it was given by James I. to his ſecretary ſir William Alexander, from whom it had the name of Nova Scotia, or New Scotland. Since then, it has frequently changed hands, from one private proprietor to another, and from the French to the Engliſh nation backward and forward. It was not confirmed to the Engliſh till the peace of Utrecht, and their deſign in acquiring it does not ſeem to have ſo much ariſen from any proſpect of direct profit to be obtained by it, as from an apprehenſion that the French, by poſſeſſing this province, might have had it in their power to annoy our other ſettlements. Upon this principle, 3000 families were tranſported in 1749, at the charge of the government, into this country. The town they erected is called Halifax, from the earl of that name, to whoſe wiſdom and care we owe this ſettlement. The town of Halifax ſtands upon Chebucto Bay, very commodiouſly ſituated for the fiſhery, and has a communication with moſt parts of the province, either by land carriage, the ſea, or navigable rivers, with a fine harbour, where a ſmall ſquadron of ſhips of war lies during the winter, and in ſummer puts to ſea, under the command of a commodore, for the protection of the fiſhery, and to ſee that the articles of the peace, relating thereto, are duly obſerved by the French. The town has an entrenchment, and is ſtrengthened with forts of timber. Three regiments of men are ſtationed in it to protect the inhabitants from the Indians, whoſe reſentment, however excited or fomented, has been found implacable againſt the Engliſh. The number of inhabitants is ſaid to be 15 or 16,000, who live very comfortably by the trade they carry on in furs and naval ſtores, by their fiſheries, and by ſupplying the wants of the governor and the garriſon already mentioned.

The other towns of leſs note are Annapolis Royal, which ſtands on the eaſt ſide of the bay of Fundy, and though but a ſmall wretched place, was formerly the capital of the province. It has one of the fineſt harbours in America, capable of containing a thouſand veſſels at anchor, in the utmoſt ſecurity. This place is alſo protected by a fort and garriſon. St. John's is a new ſettlement at the mouth of the river of that name, that falls into the bay of Fundy on the weſt ſide. Since the concluſion of the American war, the emigration of loyaliſts to this province from the United States, hath been very great. By them new towns have been raiſed, but particularly at Port Roſeway, where is now a city named *Shelburne*, which extends two miles on the water ſide, and one mile back, with wide ſtreets croſſing each other at right angles. It is ſaid to have above 9000 inhabitants, excluſive of what is ſtyled the *Black Town* (containing 1200 free blacks, who ſerved on the royal ſide during the war), which ſtands about a mile from Shelburne, and ſeparated from it by a ſmall freſh-water river. The harbour here is deep, capacious, and ſecure, and the tide hath a great riſe and fall. Such of the loyaliſts as apply for lands have in proportion to the property they poſſeſſed before the troubles in America commenced, allowing for ſuch as have large families to provide for. And it is ſaid that the new appointed governor of New Brunſwick has it in his inſtructions to "grant, without fee or reward, to ſuch reduced officers as ſerved in provincial corps during the late war in North America, and ſhall perſonally apply for the ſame, the following quantities of lands, ſubject at the expiration of ten years to the ſame quit rents as other lands are ſubject in the province of Nova Scotia, as alſo

ſubject to the ſame conditions of cultivation and improvement. To every perſon having the rank of a field officer, three thouſand acres; to every captain two thouſand acres; and to every ſubaltern one thouſand acres." The reduced officers of the navy are entitled to land in the ſame proportion.

The exports from Great Britain to this country conſiſt chiefly of woollen and linen cloth, and other neceſſaries for wear, of fiſhing tackle, and rigging for ſhips. The amount of our exports, at an average of three years, before the new ſettlements, was about 26,500 l. The only articles we can get in exchange are timber, and the produce of the fiſhery, which, at a like average, amounts to 38,000 l. But from the late increaſe of inhabitants, it is ſuppoſed that they will now erect ſaw-mills, and endeavour to ſupply the Weſt India iſlands with lumber of every kind, as well as with the produce of the fiſhery, which will be a profitable article to both countries. The whole population of Nova Scotia and the iſland adjoining is eſtimated at 50,000. Recent accounts of theſe ſettlements repreſent them at preſent in a declining ſtate, great numbers of the houſes in the new towns being uninhabited, and conſiderably reduced in value.

UNITED STATES OF AMERICA.

OF the riſe, progreſs, and moſt remarkable events of the war between Great Britain and her American colonies, abetted by France, which at length terminated in the eſtabliſhment of the "United States of America," we have already given an account, in our view of the principal tranſactions in the hiſtory of Great Britain. It was on the 4th of July, 1776, that the congreſs publiſhed a ſolemn declaration, in which they aſſigned their reaſons for withdrawing their allegiance from the king of Great Britain. In the name, and by the authority, of the inhabitants of the united colonies of New Hampſhire, Maſſachuſet's Bay, Rhode Iſland, and Providence Plantations, Connecticut, New York, New Jerſey, Pennſylvania, Delaware, Maryland, Virginia, North-Carolina, South-Carolina, and Georgia, they declared, that they then were, and of right ought to be, Free and Independent States; and that, as ſuch, they had full power to levy war, conclude peace, contract alliances, eſtabliſh commerce, and do all other acts which independent ſtates may of right do. They alſo publiſhed articles of confederation, and perpetual union, between the colonies, in which they aſſumed the title of "The United States of America;" and by which each of the colonies contracted a reciprocal treaty of alliance and friendſhip for their common defence, for the maintenance of their liberties, and for their general and mutual advantage; obliging themſelves to aſſiſt each other againſt all violence that might threaten all, or any one of them, and to repel, in common, all the attacks that might be levelled againſt all, or any one of them, on account of religion, ſovereignty, commerce, or under any other pretext whatſoever. Each of the colonies reſerved to themſelves alone, the excluſive right of regulating their internal government, and of framing laws on all matters not included in the articles of confederation.

But for the more convenient management of the general intereſts of the United States, it was determined, that delegates ſhould be annually appointed in ſuch manner

ner as the legiſlature of each ſtate ſhould direct, to meet in congreſs on the firſt Monday of November of every year, with a power reſerved to each ſtate to recall its delegates, or any of them, at any time within the year, and to ſend others in their ſtead, for the remainder of the year. No ſtate is to be repreſented in congreſs by leſs than two, nor more than ſeven members; and no perſon is capable of being a delegate for more than three years, in any term of ſix years; nor is any perſon being a delegate, capable of holding any office under the United States, for which he, or any other for his benefit, ſhall receive any ſalary, fees, or emolument of any kind. In determining queſtions in the United States, in congreſs aſſembled, each ſtate is to have one vote. Every ſtate is to abide by the determinations of the United States in congreſs aſſembled, on all queſtions which are ſubmitted to them by the confederation. The articles of confederation are to be inviolably obſerved by every ſtate, and the union is to be perpetual; nor is any alteration, at any time hereafter, to be made in any of them, unleſs ſuch alteration be agreed to in a congreſs of the United States, and be afterwards confirmed by the legiſlature of every ſtate.

It was on the 30th of January, 1778, that the French king concluded a treaty of amity and commerce with the thirteen United Colonies of America, as independent ſtates. Holland acknowledged them as ſuch April 19th, 1782; and on the 30th of November, 1782, proviſional articles were ſigned at Paris, by the Britiſh and American commiſſioners, in which his Britannic majeſty acknowledged the thirteen colonies to be Free, Sovereign, and Independent States; and theſe articles were afterwards ratified by a definitive treaty. Sweden acknowledged them as ſuch February 5th, 1783; Denmark, the 25th February; Spain, in March, and Ruſſia, in July 1783.

According to the report of the committee appointed for that purpoſe, *the Foreign Debt* of the United States incurred by the late war for obtaining their independence, amounted to 7,885,085 dollars, and the *Domeſtic Debt* to 34,115,290; total, at 4s. 6d. each, equal to 9,450,084 l. ſterling, the intereſt of which at 6 *per cent.* is 567,005 l. But the coſt of the war to Great Britain is moderately computed at 115,654,914 l. and the additional annual burden by it 4,557,575 l. ſince January 1775. As to the loſs of men during the unhappy war, the ſtates of America, according to authentic eſtimates, loſt by the ſword and in priſon near 80,000 men; and by the Britiſh returns at New York, the number of ſoldiers killed in the ſervice amounted to 43,633.

The following Calculations were made from actual Meaſurement of the beſt Maps, by THOMAS HUTCHINS, *Eſq. Geographer to the United States.*

The territory of the United States contains by computation a million of ſquare miles, in which are	-	-	640,000,000 of acres.
Deduct for water	-	-	51,000,000
Acres of land in the United States	-	-	589,000,000

That part of the United States comprehended between the weſt temporary line of Pennſylvania on the eaſt, the boundary line between Britain and the United States extending from the river St. Croix to the north-weſt extremity of the Lake of the Woods on the North, the river Miſſiſſipi to the mouth of the Ohio on the weſt, and the river Ohio on the ſouth to the aforementioned bounds of Pennſylvania,

nia, contains by computation about four hundred and eleven thouſand ſquare miles, in which are - - - - 263,040,000 of acres.

Deduct for water - - -	43,040,000
To be diſpoſed of by order of Congreſs -	220,000,000

The whole of this immenſe extent of unappropriated weſtern territory, containing, as above ſtated, 220,000,000 of acres, has been, by the ceſſion of ſome of the original Thirteen States, and by the treaty of peace transferred to the fœderal government, and is pledged as a fund for ſinking the continental debt. It is in contemplation to divide it into new ſtates, with republican conſtitutions ſimilar to the old ſtates near the Atlantic ocean.

Eſtimate of the Number of Acres of Water, north and weſtward of the River Ohio, within the Territory of the United States.

	Acres.
In Lake Superior - - - -	21,952,780
Lake of the Woods - - - -	1,133,800
Lake Rain, &c. - - -	165,200
Red Lake - - - -	551,000
Lake Michigan - - - -	10,368,000
Bay Puan - - - -	1,216,000
Lake Huron - - - -	5,009,920
Lake St. Clair - - - -	89,500
Lake Erie, weſtern part - - -	2,252,800
Sundry ſmall lakes and rivers - - -	301,000
	43,040,000

Eſtimate of the Number of Acres of Water within the Thirteen United States.

In Lake Erie, weſtward of the line extended from the north-weſt corner of Pennſylvania, due north to the boundary between the Britiſh territory and the United States - - -	410,000	
In Lake Ontario - - -	2,390,000	
Lake Champlain - - -	500,000	
Cheſapeak Bay - - -	1,700,000	
Albemarle Bay - - - -	330,000	
Delawar Bay - - - -	630,000	
All the rivers within the thirteen ſtates including the Ohio - - -	2,000,000	
		7,950,000
Total —		51,000,000

NEW

NEW ENGLAND.

Situation and extent.

Miles.			Degrees.	Sq. Miles.
Length	550	between	41 and 49 north latitude.	87,000.
Breadth	200		67 and 74 weſt longitude.	

Boundaries.] BOUNDED on the North-Eaſt by Nova Scotia; on the Weſt, by Canada; on the South, by New York; and on the Eaſt by the Atlantic.

Diviſions.	Provinces.	Chief towns.
The northern diviſion, or government	New Hampſhire ——	Portſmouth
The middle diviſion —	Maſſachuſet's Colony	Boston, N. Lat. 42-25. W. Lon. 70-37.
The ſouth diviſion ——	Rhode Iſland, &c.	Newport
The weſt diviſion ——	Connecticut ——	New London Hertford.

Rivers.] Their rivers are, 1. Connecticut; 2. Thames; 3. Patuxent; 4. Merimac; 5. Piſcataway; 6. Saco; 7. Caſco; 8. Kinebeque; and 9. Penobſcot, or Pentagonet.

Bays and capes.] The moſt remarkable bays and harbours are thoſe formed by Plymouth, Rhode Iſland, and Providence Plantations; Monument-Bay; Weſt-Harbour, formed by the bending of Cape-Cod, Boſton-harbour; Piſcataway; and Caſco-Bay.

The chief capes are, Cape-Cod, Marble-Head, Cape-Anne, Cape-Netic, Cape-Porpus, Cape-Elizabeth, and Cape-Small-Point.

Air and climate.] New England, though ſituate almoſt ten degrees nearer the ſun than the mother-country, has an earlier winter, which continues longer, and is more ſevere than with us. The ſummer again is extremely hot, and much beyond any thing known in Europe, in the ſame latitude. The clear and ſerene temperature of the ſky, however, makes amends for the extremity of heat and cold, and renders the climate of this country ſo healthy, that it is reported to agree better with Britiſh conſtitutions, than any other of the American provinces. The winds are very boiſterous in the winter ſeaſon, and naturaliſts aſcribe the early approach, the length and ſeverity of the winter, to the large freſh-water lakes lying on the north-weſt of New England, which being frozen over ſeveral months, occaſion thoſe piercing winds, which prove ſo fatal to mariners on this coaſt.

The ſun riſes at Boſton, on the longeſt day, at 26 minutes after four in the morning, and ſets at 34 minutes after ſeven in the evening; and on the ſhorteſt day, it riſes at 35 minutes after ſeven in the morning, and ſets at 27 minutes after four in the afternoon: thus their longeſt day is about fifteen hours, and the ſhorteſt about nine.

Soil and produce.] We have already obſerved, that the lands lying on the eaſtern ſhore of America are low, and in ſome parts ſwampy, but farther back they riſe into hills. In New England, towards the north-eaſt, the lands become rocky and mountainous. The ſoil here is various, but beſt as you approach the ſouthward. Round Maſſachuſet's bay the ſoil is black, and ſaid to be as rich as in any part of England; and here the firſt planters found the graſs above a yard high. The uplands are leſs fruitful, being for the moſt part a mixture of ſand and gravel, inclining to clay. The low grounds abound in meadows and paſture land. The European grains have not been cultivated here with much ſucceſs; the wheat is ſubject to be blaſted; the barley is a hungry grain, and the oats are lean and chaffy. But the Indian corn flouriſhes in high perfection, and makes the general food of the lower ſort of people. They likewiſe malt and brew it into a beer, which is not contemptible. However, the common table-drink is cyder and ſpruce beer: the latter is made of the tops of the ſpruce fir, with the addition of a ſmall quantity of molaſſes. They likewiſe raiſe in New England a large quantity of hemp and flax. The fruits of Old England come to great perfection here, particularly peaches and apples. Seven or eight hundred fine peaches may be found on one tree, and a ſingle apple-tree has produced ſeven barrels of cyder in one ſeaſon.

But New England is chiefly diſtinguiſhed for the variety and value of its timber, as oak, aſh, pine, fir, cedar, elm, cypreſs, beech, walnut, cheſnut, hazel, ſaſſafras, ſumach, and other woods uſed in dying or tanning leather, carpenter's work, and ſhip-building. The oaks here are ſaid to be inferior to thoſe of England; but the firs are of an amazing bulk, and formerly furniſhed the royal navy of England with maſts and yards. They draw from their trees conſiderable quantities of pitch, tar, reſin, turpentine, gums, and balm; and the ſoil produces hemp and flax. A ſhip may here be built and rigged out with the produce of their foreſts; and indeed ſhip building forms a conſiderable branch of their trade.

Metals.] Rich iron mines, of a moſt excellent kind and temper, have been diſcovered in New England, which, if improved, may become very beneficial to the inhabitants.

Animals.] The animals of this country furniſh many articles of New England commerce. All kinds of European cattle thrive here, and multiply exceedingly; the horſes of New England are hardy, mettleſome, and ſerviceable, but ſmaller than ours, though larger than the Welch. They have few ſheep; and the wool, though of a ſtaple ſufficiently long, is not near ſo fine as that of England. Here are alſo elks, deer, hares, rabbits, ſquirrels, beavers, otters, monkies, minks, martens, raccons, ſabbs, bears, wolves, which are only a kind of wild dogs, foxes, ounces, and a variety of other tame and wild quadrupeds. But one of the moſt ſingular animals, of this and the neighbouring countries, is the moſe or mooſe deer, of which there are two ſorts; the common light grey mooſe, which reſembles the ordinary deer; theſe herd ſometimes thirty together: and the large black mooſe, whoſe body is about the ſize of a bull; his neck reſembles a ſtag's, and his fleſh is extremely grateful. The horns, when full grown, are about four or five feet from the head to the tip, and have ſhoots or branches to each horn, which generally ſpread about ſix feet. When this animal goes through a thicket, or under the boughs of a tree, he lays his horns back on his neck, to place them out of his way: and theſe prodigious horns are ſhed every year. This animal does not ſpring or riſe in going, like a deer; but a large one, in his common walk, has been ſeen to ſtep over a gate five feet high. When unharboured, he will run a courſe

of

of twenty or thirty miles before he takes to bay; but when chaſed, he generally takes to the water.

There is hardly any where greater plenty of fowls, as turkeys, geeſe, partridges, ducks, widgeons, dappers, ſwans, heathcocks, herons, ſtorks, blackbirds, all ſorts of barn-door fowl, vaſt flights of pigeons, which come and go at certain ſeaſons of the year, cormorants, ravens, crows, &c. The reptiles are rattleſnakes, frogs, and toads, which ſwarm in the uncleared parts of theſe countries, where, with the owls, they make a moſt hideous noiſe in the ſummer evenings.

The ſeas round New England, as well as its rivers, abound with fiſh, and even whales of ſeveral kinds, ſuch as the whalebone whale, the ſpermaceti whale, which yields ambergris, the fin-backed whale, the ſcrag whale, and the bunch whale, of which they take great numbers, and ſend beſides ſome ſhips every year to fiſh for whales in Greenland, and as far as Falkland iſlands. A terrible creature, called the whale-killer, from 20 to 30 feet long, with ſtrong teeth and jaws, perſecutes the whale in theſe ſeas; but, afraid of his monſtrous ſtrength, they ſeldom attack a full grown whale, or indeed a young one, but in companies of ten or twelve. At the mouth of the river Penobſcot, there is a mackrel fiſhery; they likewiſe fiſh for cod in winter, which they dry in the froſt.

POPULATION, INHABITANTS, AND FACE OF THE COUNTRY. } There is not one of the colonies which can be compared in the abundance of people, the number of conſiderable and trading towns, and the manufactures that are carried on in them, to New England. The moſt populous and flouriſhing parts of the mother-country hardly make a better appearance than the cultivated parts of this province, which reach above ſixty miles back. There are here many gentlemen of conſiderable landed eſtates; but the greateſt part of the people is compoſed of a ſubſtantial yeomanry, who cultivate their own freeholds, without a dependence upon any but Providence and their own induſtry. Theſe freeholds generally paſs to their children in the way of gavelkind: which keeps them from ever emerging out of their original happy mediocrity. In no part of the world are the ordinary ſort ſo independent, or poſſeſs more of the conveniencies of life; they are uſed from their infancy to the exerciſe of arms; and before the conteſt with the mother-country, they had a militia, which was by no means contemptible; but their military ſtrength is now much more conſiderable. The population of the four provinces, of which New England is comprized, was proportioned by Douglas, ſome years paſt, as follows:

		But in 1783
Maſſachuſet's bay	- - -	200,000 — 350,000
Connecticut	- - -	100,000 — 206,000
Rhode Iſland	- - -	30,000 — 50,400
New Hampſhire	- -	24,000 — 82,200

Thus the number ſince his time has ſo greatly increaſed, that the four provinces now contain nearly 700,000 ſouls, including a ſmall number of negroes and Indians.

Connecticut is ſaid, in proportion to its extent, to exceed every ſtate of America in populouſneſs and plenty. The men, in general, throughout the province, are robuſt, ſtout, and tall. The greateſt care is taken of the limbs and bodies of infants, which are kept ſtraight by means of a board; a practice learnt of the Indian women, who abhor all crooked people; ſo that deformity is here a rarity. The women are fair, handſome, and genteel, and modeſt and reſerved in their manners and behaviour. They are not permitted to read plays, nor can they converſe

about

about whiſt, quadrille, or operas; but it is ſaid that they will talk freely upon the ſubjects of hiſtory, geography, and other literary ſubjects. The inhabitants of Connecticut are extremely hoſpitable to ſtrangers.

RELIGION.] The church of England, in this part of America, is far from being in a flouriſhing condition; in ſeveral places, the number of auditors do not amount to twelve perſons. In the year 1768, the four provinces contained upwards of 700 religious aſſemblies; of which 36 only obſerved the forms of the church of England. Every particular ſociety among them is independent of all other eccleſiaſtical juriſdiction; nor does there lie any appeal from their puniſhments or cenſures. The miniſters of Boſton depend entirely on the generoſity of their hearers for ſupport; a voluntary contribution being made for them, by the congregation, every time divine ſervice is celebrated. It is not long ſince they ſuffered any member of the church of England to have a ſhare in the magiſtracy, or to be elected a member of the Commons, or houſe of Repreſentatives. Their laws againſt quakers were formerly very ſevere, that ſect giving the firſt ſettlers and government great uneaſineſs and diſturbance. To bring one in was a forfeiture of 100l. to conceal one 40s. an hour, to go to a quaker's meeting 10s. to preach there 5s. If a quaker was not an inhabitant, he was ſubject to baniſhment, and if he returned, death; but theſe and ſome other ſevere eccleſiaſtical laws are now repealed, in conſequence of the diffuſion of more humane and equitable principles. Calviniſm, from the principles of the firſt ſettlers, hath been very prevalent in New England, many of the inhabitants alſo formerly obſerved the ſabbath with a kind of Jewiſh rigour; but their bigotry of late hath been much diminiſhed. Since their independence, there is no one eſtabliſhed religion in the province, but every ſect is allowed the free exerciſe of his own, and is equally under the protection of the laws *. The Connecticut province hath alſo provided a biſhop for the Epiſcopalians among them, by ſending one of their number to Scotland to be ordained by the nonjuring biſhops of the epiſcopal church in that kingdom, which ceremony was performed at Aberdeen.

CHIEF TOWNS.] Boſton, the capital of New England, ſtands on a peninſula at the bottom of Maſſachuſet's bay, about nine miles from its mouth. At the entrance of this bay are ſeveral rocks, which appear above water, and upwards of a dozen ſmall iſlands, ſome of which are inhabited. There is but one ſafe channel to approach the harbour, and that ſo narrow, that two ſhips can ſcarcely ſail through abreaſt; but within the harbour there is room for 500 ſail to lie at anchor, in a good depth of water. On one of the iſlands of the bay ſtands Fort William, the moſt regular fortreſs in all the plantations. This caſtle is defended by 100 guns, twenty of which lie on a platform level with the water, ſo that it is ſcarcely poſſible for an enemy to paſs the caſtle. To prevent ſurpriſe, they have a guard placed on one of the rocks, at two leagues diſtance, from whence they make ſignals to the caſtle, when any ſhips come near it. There is alſo a battery of guns at each end of the town. At the bottom of the bay is a noble pier, near 2000 feet in length; along which, on the north ſide, extends a row of warehouſes for the merchants, and to this pier, ſhips of the greateſt burden may come and unload, without the help of boats. The greateſt part of the town lies round the harbour, in the ſhape of a half moon; the country beyond it riſing gradually, and affording a delightful proſpect from the ſea. The head of the pier joins the principal ſtreet of the town, which is like moſt of the others, ſpacious and well built. Boſton contains at preſent about 18,000

* By a late account there are 400 Independent and Preſbyterian churches in this province, 84 Baptiſts, and 31 of other denominations.

inha-

inhabitants; fifty years ago they were more numerous. The ſurpriſing increaſe of Newbury port, Salem, Marblehead, Cape Anne, Plymouth, Dartmouth, and the iſland of Nantucket, hath checked the growth and trade of the capital. The trade of Boſton was, however, ſo very conſiderable, that, in the year 1768, 1200 ſail entered or cleared at the Cuſtom-houſe there. Both the town and trade of Boſton greatly ſuffered during the war with Great Britain; but ſince, the trade of Boſton has again conſiderably increaſed.

Cambridge, in the ſame province, four miles from Boſton, has an univerſity, containing two ſpacious colleges, called by the names of Havard college, and Stoughton Hall, with a well-furniſhed library. It conſiſts of a preſident, five fellows, a treaſurer, three profeſſors, four tutors, and a librarian. The college charter was firſt granted in 1650, and renewed in 1692, and is held under the colony ſeal.

The other towns in New England, the chief of which have already been mentioned, are generally neat, well built, and commodiouſly ſituated upon fine rivers, with capacious harbours.

COMMERCE AND MANUFACTURES.] The trade of New England is great, as it ſupplies a large quantity of goods from within itſelf; but it is yet greater, as the people of this country are in a manner the carriers for all the colonies of North America, and even for ſome parts of Europe. The commodities which the country yields are principally pig and bar iron, which were imported to Great Britain duty-free; alſo maſts and yards, pitch, tar, and turpentine, for which they contracted largely with the royal navy; pot and pearl aſhes, ſtaves, lumber, boards; all ſorts of proviſions, which they ſent to the French and Dutch ſugar iſlands, and formerly to Barbadoes, and the other Britiſh iſles, as grain, biſcuit, meal, beef, pork, butter, cheeſe, apples, cyder, onions, mackarel and cod-fiſh dried. They likewiſe ſend thither cattle, horſes, planks, hoops, ſhingles, pipe-ſtaves, oil, tallow, turpentine, bark, calf-ſkins, and tobacco. Their peltry trade is not very conſiderable. They have a moſt valuable fiſhery upon their coaſts in mackarel and cod, which employs vaſt numbers of their people; with the produce of which they trade to Spain, Italy, the Mediterranean, and Weſt Indies, to a conſiderable amount. Their whale-fiſhery has been already mentioned. The arts moſt neceſſary to ſubſiſtence, are thoſe which the inhabitants of New England have been at the greateſt pains to cultivate. They manufacture coarſe linen and woollen cloth for their own uſe; hats are made here, which find a good vent in all the other colonies. Sugar-baking, diſtilling, paper-making, and ſalt-works, are upon the improving hand. The buſineſs of ſhip building is one of the moſt conſiderable, which Boſton, Newbury, and the other ſea-port towns in New England carry on. Ships are ſometimes built here upon commiſſion; but frequently the merchants of New England have them conſtructed upon their own account; and loading them with the produce of the colony, naval ſtores, fiſh, and fiſh oil principally, they ſend them out upon a trading voyage to Spain, Portugal, or the Mediterranean; where, having diſpoſed of their cargo, they make what advantage they can by freight, until ſuch time as they can ſell the veſſel herſelf to advantage, which they ſeldom fail to do in a reaſonable time.

It was computed, that, before the late revolution, the value of Engliſh manufactures, and India goods ſent into this colony from Great Britain, amounted, at an average of three years to 395,000 l. Our imports from the ſame were calculated at 370,500 l.

HISTORY AND GOVERNMENT.] New England is at preſent divided into the four provinces of New Hampſhire, Maſſachuſet's, Rhode Iſland, and Connecticut. As early as 1606, king James I. had by letters patent erected two companies, with a

power to ſend colonies into thoſe parts, then comprehended under the name of Virginia. No ſettlements, however, were made in New England by virtue of this authority. The companies contented themſelves with ſending out ſome ſhips to trade with the Indians for their furs, and to fiſh upon their coaſt. This continued to be the only ſort of correſpondence between Great Britain and this part of America, till the year 1620. By this time the religious diſſentions, by which England was torn to pieces, had become warm and furious. Archbiſhop Laud perſecuted all ſorts of nonconformiſts with an unrelenting ſeverity. Thoſe men, on the other hand, were ready to ſubmit to all the rigour of perſecution rather than give up their religious opinions, and conform to the ceremonies of the church of England, which they conſidered as abuſes of a moſt dangerous tendency. There was no part of the world into which they would not fly, in order to obtain liberty of conſcience. America opened an extenſive field. There they might tranſport themſelves, and eſtabliſh whatever ſort of religious policy they were inclined to. The deſign, beſides, had ſomething in it noble, and admirably ſuited to the enterpriſing ſpirit of reformers in religion. With this view, having purchaſed the territory, which was within the juriſdiction of the Plymouth Company, and having obtained from the king the privilege of ſettling it in whatever way they had a mind, 150 perſons embarked for New England, and built a city, which, becauſe they had ſailed from Plymouth, they called by that name. Notwithſtanding the ſeverity of the climate, the unwholeſomeneſs of the air, and the diſeaſes to which, after a long ſea voyage, and in a country which was new to them, they were expoſed; notwithſtanding the want of all ſort of conveniences, and even of many of the neceſſaries of life, thoſe who had conſtitutions fit to endure ſuch hardſhips, not diſpirited or broken by the death of their companions, and ſupported by the vigour then peculiar to Engliſhmen, and the ſatisfaction of finding themſelves beyond the reach of the ſpiritual arm, ſet themſelves to cultivate this country, and to take the beſt ſteps for the advancement of their infant colony. New adventurers, encouraged by their example, and finding themſelves, for the ſame reaſons, uneaſy at home, paſſed over into this land of religious and civil liberty. By the cloſe of the year 1630, they had built four towns Salem, Dorcheſter, Charles Town, and Boſton, which laſt has ſince become the capital of New England. But as neceſſity is the natural ſource of that active and frugal induſtry, which produces every thing great among mankind, ſo an uninterrupted flow of proſperity and ſucceſs occaſions thoſe diſſenſions, which are the bane of human affairs, and often ſubvert the beſt founded eſtabliſhments.

The inhabitants of New England, who had fled from perſecution, became in a ſhort time ſtrongly tainted with this illiberal vice, and were eager to introduce an uniformity in religion, among all who entered their territories. Many of them were bigotted Calviniſts; and though they had felt the weight of perſecution themſelves, they had no charity for thoſe who profeſſed ſentiments different from their own. It was not the general idea of the age, that men might live comfortably together in the ſame ſociety, without maintaining the ſame religious opinions; and wherever theſe were at variance, the members of different ſects kept at a diſtance from each other, and eſtabliſhed ſeparate governments. Hence ſeveral ſlips torn from the original government of New England by religious violence, planted themſelves in a new ſoil, and ſpread over the country. Such was that of New Hampſhire, which continues to this day a ſeparate juriſdiction; ſuch too was that of Rhode Iſland, whoſe inhabitants were driven out from the Maſſachuſet's colony (for that is the name by which the goverment firſt erected in New England was diſtinguiſhed), for ſupporting the freedom of religious ſentiments, and maintaining that the civil magi-

magiſtrate had no right over the ſpeculative opinions of mankind. Theſe liberal men founded a city, called Providence, which they governed by their own principles; and ſuch is the connection between juſtneſs of ſentiment and external proſperity, that the government of Rhode Iſland, though ſmall, became extremely populous and flouriſhing. Another colony, driven out by the ſame perſecuting ſpirit, ſettled on the river Connecticut, and received frequent reinforcements from England, of ſuch as were diſſatisfied either with the religious or civil government of that country.

America indeed was now become the main reſource of all diſcontented and enterpriſing ſpirits; and ſuch were the numbers which embarked for it from England, that in 1637, a proclamation was publiſhed, prohibiting any perſon from ſailing thither, without an expreſs licence from the government. For want of this licence, it is ſaid, that Oliver Cromwell, Mr. Hampden, and others of that party, were detained from going into New England, after being a ſhipboard for that purpoſe.

Theſe four provinces, though always confederates for their mutual defence, were at firſt, and ſtill continue, under ſeparate juriſdictions. They were all of them by their charters originally free colonies, having the choice of their own magiſtrates, the governor, the council, the aſſembly, and the power of making laws not contradictory to thoſe of Great Britain. Towards the latter end of the reign of Charles II. when he and his miniſters wanted to deſtroy all charters and liberties, the Maſſachuſet's colony was accuſed of violating their charter, in like manner as was the city of London, and by a judgment in the King's Bench of England was deprived of it. From that time to the Revolution, they remained without any charter. Soon after that period, they received a new one, which, though very favourable, was much inferior to the extenſive privileges of the former. The appointment of a governor, lieutenant-governor, ſecretary, and all the officers of the admiralty, was veſted in the crown; the power of the militia was wholly in the hands of the governor, as captain-general; all judges, juſtices, and ſheriffs, to whom the execution of the law was entruſted, were nominated by the governor, with the advice of the council; the governor had a negative on the choice of counſellors, peremptory and unlimited; and he was not obliged to give a reaſon for what he did in this particular, or reſtrained to any number; authentic copies of the ſeveral acts paſſed by this colony, as well as others, were to be tranſmitted to the court of England, for the royal approbation; but if the laws of this colony were not repealed within three years after they were preſented, they were not repealable by the crown after that time; no laws, ordinances, election of magiſtrates, or acts of government whatſoever, were valid without the governor's conſent in writing; and appeals for ſums above 300l. were admitted to the king and council. Notwithſtanding theſe reſtraints, the people had ſtill a great ſhare of power in this colony; for they not only choſe the aſſembly, but this aſſembly, with the governor's concurrence, choſe the council, reſembling our houſe of lords; and the governor depended upon the aſſembly for his annual ſupport.

By the laws of this province no perſon can be arreſted, if there are any means of ſatisfaction; nor impriſoned, unleſs there be a concealment of effects. Adultery was formerly death to both parties.

To the Maſſachuſet's government is united the ancient colony of Plymouth, and the territory called Main.

New Hampſhire was ſtill more under the influence of Great Britain. The council itſelf was appointed by the crown, but in other reſpects it agreed with the former.

The colonies of Connecticut and Rhode Iſland preſerved their ancient charters, and enjoyed the ſame privileges which the Maſſachuſet's did formerly.

There were originally three ſorts of governments eſtabliſhed by the Engliſh on the continent of America, viz. royal governments, charter-governments, and proprietary governments.

A royal government was properly ſo called, becauſe the colony was immediately dependent on the crown, and the king remained ſovereign of the colony; he appointed the governor, council, and officers of ſtate, and the people only elected the repreſentatives, as in England; ſuch were the governments of Canada, Nova Scotia, Virginia, New Hampſhire, New York, New Jerſey, Georgia, Eaſt and Weſt Florida, the Weſt Indies, and the iſland of St. John's.

A charter government was ſo called, becauſe the company, incorporated by the king's charter, were in a manner veſted with ſovereign authority, to eſtabliſh what ſort of government they thought fit; and theſe charter governments have generally transferred their authority to the people; for in ſuch governments, or rather corporations, the freemen did not only chooſe their repreſentatives, but annualy choſe their governor, council, and magiſtrates, and made laws without the concurrence, and even without the knowledge, of the king; and were under no other reſtraint than this, that they enacted no laws contrary to the laws of England; if they did, their charters were liable to be forfeited. Such, as we have already obſerved, were, the governments of Rhode Iſland and Connecticut, in New England, and ſuch was that of the Maſſachuſet's formerly, though ſome alterations were afterwards made in it. Such likewiſe were thoſe of the two Carolinas.

The third kind of government was the proprietary, properly ſo called, becauſe the proprietor was inveſted with ſovereign authority: he appointed the governor, council, and magiſtrates, and the repreſentatives were ſummoned in his name; and by their advice he enacted laws, without the concurrence of the crown; but by a late ſtatute, the proprietor was to have the king's conſent in the appointing a governor, when he did not reſide in the plantation in perſon, and of a deputy-governor, when he did. And all the governors of the plantations were liable to be called to an account for their adminiſtration, by the court of King's Bench. The only proprietary governors lately ſubſiſting, were thoſe of Pennſylvania and Maryland.

But the government of New England has been entirely changed, in conſequence of the revolt of the colonies from the authority of Great Britain; of the origin and progreſs of which an account hath been given in another place. It was on the 25th of July, 1776, that, by an order from the council at Boſton, the declaration of the American Congreſs, abſolving the United Colonies from their allegiance to the Britiſh crown, and declaring them free and independent, was publicly proclaimed from the balcony of the ſtate-houſe in that town.

A conſtitution, or form of government, for the commonwealth of Maſſachuſets, including a declaration of rights, was agreed to, and eſtabliſhed by the inhabitants of that province, and took place in October 1780. In the preamble to this it was declared, that the end of the inſtitution, maintenance, and adminiſtration of government, is to ſecure the exiſtence of the body politic; to protect it, and to furniſh the individuals who compoſe it, with the power of enjoying, in ſafety and tranquillity, their natural rights, and the bleſſings of life; and that whenever theſe great objects are not obtained, the people have a right to alter the government, and to take meaſures neceſſary for their proſperity and happineſs. They expreſſed their gratitude to the great Legiſlator of the univerſe, for having afforded them, in the courſe of his providence, an opportunity, deliberately and peaceably, without fraud,

fraud, violence, or ſurpriſe, of entering into an original, explicit, and ſolemn compact with each other; and of forming a new conſtitution of civil government, for themſelves and their poſterity. They declared that it was the right, as well as the duty, of all men in ſociety, publicly, and at ſtated ſeaſons, to worſhip the Supreme Being; and that no ſubject ſhould be hurt, moleſted or reſtrained, in his perſon, liberty, or eſtate, for worſhipping God in the manner and ſeaſon moſt agreeable to the dictates of his own conſcience; or for his religious profeſſion or ſentiments; provided he did not diſturb the public peace, or obſtruct others in their religious worſhip.

It was alſo enacted, that the ſeveral towns, pariſhes, precincts, and other bodies politic, or religious ſocieties, ſhould, at all times, have the excluſive right of electing their public teachers, and of contracting with them for their ſupport and maintenance. That all monies paid by the ſubject to the ſupport of public worſhip, and of the public teachers, ſhould, if he required it, be uniformly applied to the ſupport of the public teacher or teachers of his own religious ſect or denomination, provided there were any on whoſe inſtructions he attended; otherwiſe it might be paid towards the ſupport of the teacher or teachers of the pariſh or precinct in which the ſaid monies ſhould be raiſed. That every denomination of Chriſtians, demeaning themſelves peaceably, and as good ſubjects of the commonwealth, ſhould be equally protected by the law: and that no ſubordination of any ſect or denomination to another, ſhould ever be eſtabliſhed.

It was likewiſe declared, that as all power reſided originally in the people, and was derived from them, the ſeveral magiſtrates and officers of government, veſted with authority, whether legiſlative, executive, or judicial, are their ſubſtitutes and agents, and are at all times accountable to them. That no ſubject ſhould be arreſted, impriſoned, deſpoiled, or deprived of his property, immunities, or privileges, put out of the protection of the law, exiled or deprived of his life, liberty, or eſtate, but by the judgment of his peers, or the law of the land. That the legiſlature ſhould not make any law, ſubjecting any perſon to a capital or infamous puniſhment, except for the government of the army or navy, without trial by jury. That the liberty of the preſs is eſſential to the ſecurity of freedom in a ſtate; and that it ought not, therefore, to be reſtrained in that commonwealth. That the people have a right to keep, and to bear arms, for the common defence; but that as in times of peace armies are dangerous to liberty, they ought not to be maintained without the conſent of the legiſlature; and that the military power ſhould always be held in an exact ſubordination to the civil authority, and be governed by it.

It was likewiſe enacted, that the department of legiſlation ſhould be formed by two branches, a ſenate, and a houſe of repreſentatives; each of which ſhould have a negative on the other. That the ſenators, and the members of the houſe of repreſentatives, ſhould be elected annually; and that every male perſon, being twenty-one years of age, or upwards, who had reſided in any particular town in the commonwealth for the ſpace of one year, and having a freehold eſtate within the ſaid town, of the annual income of three pounds, or any eſtate of the value of ſixty pounds, have a right to vote for ſenators and repreſentatives of the diſtrict of which he was an inhabitant. The ſenators are forty, choſen in this proportion; county of Suffolk 6, Eſſex 6, Middleſex 5, Hampſhire 4, Plymouth 3, Barnſtable 1, Briſtol 3, York 2, Duke's and Nantucket 1, Worceſter 5, Cumberland 1, Lincoln 1, Berkſhire 2. The houſe of repreſentatives is choſen alſo in certain proportions, and paid by the conſtituent body. It was likewiſe enacted, that there ſhould be a ſupreme executive magiſtrate, who ſhould be ſtyled, the governor of the commonwealth of Maſſachuſets, and alſo a lieutenant-governor, both of whom

ſhould

ſhould be choſen annually, by the whole body of electors in the commonwealth, and aſſiſted by nine counſellors, choſen by ballot, out of the ſenate. The ſecretary, treaſurer, receiver-general, notaries public, and naval officers, are choſen annually by the ſenators and repreſentatives. The judiciary power to be ſeptennial, and the delegates to congreſs ſhall be annually elected by and out of the ſenate and houſe of repreſentatives, or general court. The governor has a negative on bills ſent to him for aſſent from the general court, but has no control on their choice of officers.

The ſtate of Rhode Iſland continues to admit their original charter as the rule of their government, it containing an ample grant of all powers legiſlative, executive, and judicial. New Hampſhire and Connecticut have not yet finally eſtabliſhed their forms of government, but have chiefly adopted that of Maſſachuſets Bay.

It is worthy of notice that during the war with Great Britain, an act was paſſed, on the 4th of May 1780, by the council and houſe of repreſentatives of Maſſachuſets Bay, for incorporating and eſtabliſhing a ſociety for the cultivation and promotion of the arts and ſciences. It is entitled, "The American Academy of Arts and Sciences:" the firſt members were named in the act; and they were never to be more than two hundred, nor leſs than forty. It was declared in the act, that the end and deſign of the inſtitution of the ſaid academy, was to promote and encourage the knowledge of the antiquities of America, and of the natural hiſtory of the country; and to determine the uſes to which its various natural productions might be applied; to promote and encourage medicinal diſcoveries; mathematical diſquiſitions; philoſophical inquiries and experiments; aſtronomical, meteorological, and geographical obſervations; and improvements in agriculture, arts, manufactures, and commerce: and, in ſhort, to cultivate every art and ſcience, which might tend to advance the intereſt, honour, dignity, and happineſs, of a free, independent, and virtuous people.

NEW YORK.

SITUATION AND EXTENT.

Miles:		Degrees.	Sq. Miles.
Length 300 Breadth 150	between	40 and 46 north latitude. 72 and 76 weſt longitude.	24,000.

BOUNDARIES.] NEW YORK is bounded on the South and South-weſt, by Hudſon's and Delaware rivers, which divide it from New Jerſey and Pennſylvania; on the Eaſt and North-eaſt, by New England and the Atlantic Ocean; and on the North-weſt, by Canada.

This province, including the Iſland of New York, Long Iſland, and Staten Iſland, is divided into the following counties:

Counties.	Chief Towns.	
New York — — —	NEW YORK	40-40 N. lat. 74-00 W. lon.
Albany — — —	Albany	

7 Ulſter

Counties.	Chief Towns.
Ulſter	Kingſton
Ducheſs	Poughkeepſie
Orange	Orange
Weſt-Cheſter	Bedford, White-plains
King's	Flatbuſh, Brooklyn
Queen's	Jamaica
Suffolk	Eaſt Hampton, Huntingdon
Richmond	Richmond
Waſhington	Salem
Montgomery	Johnſtown
Columbia	Hudſon
Clinton	Plattſburgh.

RIVERS.] The principal of theſe are Hudſon's and the Mohawk; the former abounds with excellent harbours, and is well ſtored with great variety of fiſh: on this the cities of New York and Albany are ſituated. On the Mohawk is a large cataract, called the Cohoes, the water of which is ſaid to fall 70 feet perpendicular, where the river is a quarter of a mile in breadth.

CAPES.] Theſe are Cape May on the Eaſt entrance of Delaware river; Sandy-Hook, near the entrance of Raritan river; and Montock Point, at the eaſt end of Long Iſland.

CLIMATE, SOIL, AND PRODUCE.] This province, lying to the South of New England, enjoys a more happy temperature of climate. The air is very healthy, and agrees well with all conſtitutions. The face of the country, reſembling that of the other American colonies, is low, flat, and marſhy towards the ſea. As you recede from the coaſt, the eye is entertained with the gradual ſwelling of hills, which become large in proportion as you advance into the country. The ſoil is extremely fertile, producing wheat, rye, Indian corn, oats, barley, flax, and fruits, in great abundance and perfection. The timber is much the ſame with that of New England. A great deal of iron is found here.

CITIES, POPULATION, AND COMMERCE.] The city of New York ſtands on the South-weſt end of York-Iſland, which is twelve miles long, and near three in breadth, extremely well ſituated for trade, at the mouth of Hudſon's river, where it is three miles broad, and proves a noble conveyance from Albany, and many other inland towns towards Canada, and the lakes. The city is in length above a mile, and its mean breadth a quarter of a mile. The city and harbour are defended by a fort and battery; in the fort is a ſpacious manſion-houſe for the uſe of the governor. Many of the houſes are very elegant; and the city, though irregularly built, affords a fine proſpect. In the year 1776, when the king's troops took it, ſome incendiaries attempted to deſtroy it by fire, and one fourth part of it was burnt down. A great part of the inhabitants, now computed about 15,000, are deſcended from the Dutch families, who remained here after the ſurrender of the New Netherlands to the Engliſh, and the whole province in 1786, was numbered at 238,897; of which 18,889 were negroes. The better ſort are rich and hoſpitable, and the lower ranks are eaſy in their circumſtances; at leaſt this was the caſe before the commencement of the civil war; and both claſſes are endowed with a generous and liberal turn of mind, which renders their ſociety and converſation very agreeable.

The commerce of this province does not materially differ from that of New England. The commodities in which they trade are wheat, flour, barley, oats, beef, and

and other kinds of animal food. Their markets are the ſame with thoſe which the New Englanders uſe; and they have a ſhare in the log-wood trade, and that which is carried on with the Spaniſh and French plantations. They uſed to take almoſt the ſame commodities from England with the inhabitants of Boſton. At an average of three years, their exports were ſaid to amount to 526,000 l. and their imports from Great Britain to 531,000 l.

RELIGION AND LEARNING.] All religious denominations, except Jews and Papiſts, enjoyed equal privileges here, as there is no eſtabliſhed church, unleſs the eighth article of capitulation made on the ſurrender of the place ("The Dutch ſhall enjoy the liberty of their conſciences in divine worſhip and church diſcipline"), may be termed an eſtabliſhment. Judaiſm was tolerated, but popery was not. The inhabitants of the province conſiſt chiefly of Dutch, Engliſh, and Scotch preſbyterians, German Calviniſts, Lutherans, quakers, baptiſts, &c. who have their reſpective houſes of worſhip. The Dutch preſbyterians being in ſubordination to the Claſſis of Amſterdam, uſed to ſend all their youth, who are intended for the miniſtry, to Holland for ordination, as the epiſcopalians do theirs to England*. But by the late conſtitution of New York ſince its independence, it is ordained, that the free exerciſe and enjoyment of religious profeſſion and worſhip, without diſcrimination or preference, ſhall *for ever* be allowed within that ſtate to all mankind.

A college was erected in New York, by act of parliament, about the year 1755; but as the aſſembly was at that time divided into parties, it was formed on a contracted plan, and has for that reaſon never met with the encouragement which might naturally be expected for a public ſeminary in ſo populous a city.

HISTORY AND GOVERNMENT.] The Swedes and Dutch were the firſt Europeans who formed ſettlements on this part of the American coaſt. The tract claimed by theſe two nations, extended from the 38th to the 41ſt degree of latitude, and was called the New Netherlands. It continued in their hands till the time of Charles II. who gained it by right of conqueſt in 1664, and it was confirmed to the Engliſh by the treaty of Breda, 1667. The New Netherlands were not long in our poſſeſſion, before they were divided into different provinces. New York took that name from the king's brother, James, duke of York, to whom the king granted it, with full powers of government, by letters patent, dated March 20, 1664. On James's acceſſion to the throne, the right to New York became veſted in the crown, ſince which time it became a royal government. The king appointed the governor and council; and the people, once in ſeven years, elected their repreſentatives to ſerve in general aſſemblies. Theſe three branches of the legiſlature (anſwering to

* In the year 1740, the number of places for public worſhip in the city of New York ſtood as follows:

Dutch Preſbyterians	3	Baptiſts	1
Engliſh ditto	2	Moravians	1
Scotch ditto	1	German Calviniſts	2
Epiſcopalians	3	Lutherans	1
French refugees	1	Methodiſts	1
Quakers	1	Jews	1

The various religious denominations in the ſtate of New York, with the number of their reſpective congregations, are as follows:

Engliſh Preſbyterian	87	German Lutheran	12
Dutch Reformed, including ſix of the German language	66	Moravians	2
		Methodiſts	1
Baptiſts	30	Roman Catholic	1
Epiſcopalians	26	Jews	1
Quakers	20		

thoſe

thoſe of Great Britain), had power to make any laws not repugnant to thoſe of England; but to render them valid, the royal aſſent was required.

By the conſtitution of the ſtate of New York, eſtabliſhed in 1777, the ſupreme legiſlative power was veſted in two ſeparate and diſtinct bodies of men; the one to be called, "The Aſſembly of the States of New York," to conſiſt of 70 members annually choſen by ballot; and the other, "The Senate of the State of New York"; to conſiſt of 24 for four years, who together are to form the legiſlature, and to meet once, at leaſt, in every year, for the diſpatch of buſineſs. The ſupreme executive power is to be veſted in a governor, who is to continue in office three years, aſſiſted by four counſellors choſen by and from the ſenate. Every male inhabitant of full age, who ſhall poſſeſs a freehold of the value of twenty pounds, or have rented a tenement of the yearly value of forty ſhillings, and ſhall have paid taxes to the ſtate for ſix months preceding the day of election, is entitled to vote for members of the aſſembly; but thoſe who vote for the governor, and the members of the ſenate, are to be poſſeſſed of freeholds of the value of one hundred pounds. The delegates to the congreſs, the judges, &c. are to be choſen by ballot of the ſenate and aſſembly.

NEW JERSEY.

SITUATION AND EXTENT.

Miles.		Degrees.	Sq. Miles.
Length 160 Breadth 60	between	39 and 43 north latitude. 74 and 76 weſt longitude.	10,000.

BOUNDARIES. NEW JERSEY is bounded on the Weſt and South-weſt by Delaware river and bay; on the South eaſt and Eaſt, by the Atlantic Ocean; and by the Sound which ſeparates Staten Iſland from the continent, and Hudſon's river, on the North.

Diviſions.	Counties.	Chief Towns.
Eaſt Diviſion contains	Middleſex	Perth-Amboy and New-Brunſwick
	Monmouth	Shrewſbury and Freehold
	Eſſex	Elizabeth and Newark
	Somerſet	Boundbrook
	Bergen	Hakkenſaak
Weſt Diviſion contains	Burlington	BURLINGTON 40-8 N. lat. 75-0 W. lon.
	Glouceſter	Glouceſter
	Salem	Salem
	Cumberland	Hopewell, Bridgetown
	Cape May	None
	Hunterdon	Trenton
	Morris	Morriſtown
	Suſſex	Newtown.

RIVERS.] Theſe are the Delaware, Raritan, and Paſſaick, on the latter of which is a remarkable cataract; the height of the rock from which the water falls is ſaid to be about 70 feet perpendicular, and the river there 80 yards broad.

CLIMATE, SOIL, AND PRODUCE.] The climate is much the ſame with that of New-York; the ſoil is various, at leaſt one-fourth part of the province is barren ſandy land, producing pines and cedars; the other parts in general are good, and produce wheat, barley, rye, Indian corn, &c. in great perfection.

HISTORY, GOVERNMENT, POPULATION, CHIEF TOWNS, AND COMMERCE.] New Jerſey is part of that vaſt tract of land, which we have obſerved was given by king Charles II. to his brother, James duke of York: he ſold it to lord Berkley and ſir George Carteret (from which it received its preſent name, becauſe ſir George had eſtates in the iſland of Jerſey), and they again ſold it to others, who in the year 1702 made a ſurrender of the powers of government to queen Anne, which ſhe accepted: after which it became a royal government. By an account publiſhed in 1765, the number of inhabitants appears to have been about 100,000, but the number is ſuppoſed to have increaſed ſince to 130,000. Perth-Amboy and Burlington were the ſeats of government; moſt frequently the latter, which is pleaſantly ſituated on the fine river Delaware, within twenty miles of Philadelphia. The former is among the beſt ports on the continent; and the harbour is ſafe and capacious enough to contain many large ſhips. Both have been lately made free ports for 25 years. This province has no foreign trade worth mentioning, owing to its vicinity to the large trading cities of New York and Philadelphia, by which it is ſupplied with merchandiſes of all kinds, and makes returns for them in lumber, wheat, flour, &c. In Bergen county is a very valuable copper mine.

By the new charter of rights eſtabliſhed by the provincial congreſs, July 2, 1776, the government of New Jerſey is now veſted in a governor, legiſlative council, and general aſſembly. The members of the legiſlative council are to be freeholders, and worth at leaſt one thouſand pounds real and perſonal eſtate; and the members of the general aſſembly to be worth five hundred pounds. All inhabitants worth fifty pounds are entitled to vote for repreſentatives in council and aſſembly, and for all other public officers. The elections of the governor, legiſlative council, and general aſſembly, are to be annual; the governor and lieutenant-governor to be choſen out and by the general aſſembly and council. The judges of the ſupreme court are choſen for ſeven years, and the officers of the executive power for five years.

RELIGION AND LEARNING.] The former ſtate of religion here may be ſeen by the following liſt of the houſes for public worſhip throughout the province, which was made in 1765 by a member of the council for the province *. According to the preſent conſtitution of this province, all perſons are allowed to worſhip God in that manner that is moſt agreeable to their own conſciences; nor is any perſon obliged to pay tithes, taxes, or any other rates, for the purpoſe of building or repairing any other church or churches, or for the maintenance of any miniſter or miniſtry, contrary to what he believes to be right, or has deliberately or voluntarily engaged himſelf to perform. There is to be no eſtabliſhment of any one religious

Lutherans	7		

ſect

ſect in this province, in preference to another; and no proteſtant inhabitants are to be denied the enjoyment of any civil right, merely on account of their religious principles.

A college was eſtabliſhed at the town of Princeton, by governor Belcher, in 1746, which has a power of conferring the ſame degrees as Oxford or Cambridge. There was generally, before the war between Great Britain and the colonies, between 80 and 100 ſtudents here, who came from all parts of the continent, ſome even from the extremities of it. The damages it ſuſtained during the late war are computed at 5000 l. There is another college at Brunſwick, called Queen's college, founded a little before the laſt war, and in great repute.

PENNSYLVANIA AND DELAWARE.

SITUATION AND EXTENT.

Miles.		Degrees.	Sq. Miles.
Length 300 Breadth 240	between	74 and 81 weſt longitude. 39 and 44 north latitude.	15,000.

BOUNDARIES.] BOUNDED by the country of the Iroquois, or Five Nations, on the North; by Delaware river, which divides it from the Jerſeys, on the Eaſt; and by Maryland, on the South and Weſt; and contains the following counties.

Counties.	Chief Towns.
Philadelphia	PHILADELPHIA { N. lat. 40. W. long. 75-20.
Cheſter	Cheſter
Bucks	Newtown
Berks	Reading
Northampton	Eaſton
Lancaſter	Lancaſter
York	York
Cumberland	Carliſle
Montgomery	Norriſton
Dauphin	Louiſburg
Luzerne	Wilkſborough
Northumberland	Sunbury
Franklin	Chamberſtown

Weſtmoreland	Greenſburgh
Fayette	Union
Waſhington	Waſhington
Allegany	Pittſburg.

Bedford, a country weſtward of the mountains upon the Ohio, purchaſed from the Indians in 1768, by Mr. Penn, and eſtabliſhed in 1771.

Beſides theſe there are the three following:

Counties.		Chief Towns.
Newcaſtle, Kent and Suſſex	on Delaware	Newcaſtle, Wilmington; Dover; Leweſtown, Milford

which formed in ſome meaſure a diſtinct government, having an aſſembly of their own, though the ſame governor with the province of Pennſylvania: but is now diſtinct, and called the "Delaware State," having a preſident, council, and houſe of aſſembly. The preſident is choſen out of the general aſſembly by ballot, and the executive power lodged in him and a privy-council of two of the legiſlative council of nine, and two of the houſe of aſſembly, which conſiſts of 21 repreſentatives, ſeven for each county. The judges and other officers of ſtate, civil and military, are choſen by the preſident and general aſſembly.

RIVERS.] The rivers are Delaware, which is navigable more than 200 miles above Philadelphia. Suſquehanna and Schuylkill are alſo navigable a conſiderable way up the country. Theſe rivers, with the numerous bays and creeks in Delaware bay, capable of containing the largeſt fleets, render this province admirably ſuited to carry on an inland and foreign trade.

CLIMATE, AIR, SOIL, AND FACE OF THE COUNTRY.] The face of the country, air, ſoil, and produce, do not materially differ from thoſe of New York. If there be any difference, it is in favour of this province. The air is ſweet and clear. The winters continue from December till March, and are ſo extremely cold and ſevere, that the river Delaware, though very broad, is often frozen over. The months of July, Auguſt, and September, are moſt intolerably hot, but the country is refreſhed by frequent cold breezes. It may be remarked in general, that in all parts of the Britiſh plantations, from New York to the ſouthern extremity, the woods are full of wild vines of three or four ſpecies, all different from thoſe we have in Europe. But, whether from ſome fault in their nature, or in the climate, or the ſoil where they grow, or, what is much more probable, from a fault in the planters, they have not yet produced any wine that deſerves to be mentioned, though the Indians from them make a ſort of wine, with which they regale themſelves. It may alſo be obſerved of the timber of theſe colonies, that towards the ſouth it is not ſo good for ſhipping, as that of the more northern provinces. The farther ſouthward you go, the timber becomes leſs compact, and rives eaſily; which property, as it renders it leſs ſerviceable for ſhips, makes it more uſeful for ſtaves.

HISTORY, GOVERNMENT, SETTLEMENT, POPULATION CHIEF TOWNS AND COMMERCE.] This country, under the name of the New Netherlands, was originally poſſeſſed by the Dutch and Swedes. When theſe nations, however, were expelled from New York by the Engliſh, admiral Penn, who in conjunction with Venables, had conquered the iſland of Jamaica (under the auſpices of Cromwell), being in favour with Charles II. obtained the promiſe of a grant of this country from that monarch. Upon the admiral's death, his ſon, the celebrated quaker, availed himſelf of this promiſe, and after much court ſolicitation, obtained the performance of it. Though as an author and a divine, Mr. Penn be little known but to thoſe of his own perſuaſion, his reputation in a character no leſs reſpectable is univerſal among all civilized nations. The circumſtances of the times engaged vaſt numbers to follow him into his new ſettlement, to avoid the perſecutions to which the quakers, like other ſectaries, were then expoſed; but it was to

his own wiſdom and ability they are indebted for that charter of privileges, which placed this colony on ſo reſpectable a footing. Civil and religious liberty, in the utmoſt latitude, was laid down by that great man, as the foundation of all his inſtitutions. Chriſtians of all denominations might not only live unmoleſted, but have a ſhare in the government of the colony. No laws can be made but by the conſent of the inhabitants. Even matters of benevolence, to which the laws of few nations have extended, were by Penn ſubjected to regulations. The affairs of widows and orphans were to be inquired into by a court conſtituted for that purpoſe. The cauſes between man and man were not to be ſubjected to the delay and chicanery of the law, but decided by wiſe and honeſt arbitrators. His benevolence and generoſity extended alſo to the Indian nations: inſtead of taking immediate advantage of his patent, he purchaſed of theſe people the lands he had obtained by his grant, judging that the original property, and eldeſt right was veſted in them. William Penn, had he been a native of Greece, would have had his ſtatue placed next to thoſe of Solon and Lycurgus. His laws, founded on the ſolid baſis of equity, ſtill maintain their force; and as a proof of their effects, it is only neceſſary to mention that land was lately granted at twelve pounds an hundred acres, with a quit-rent of four ſhillings reſerved; whereas the terms on which it was formerly granted, were at twenty pounds the thouſand acres, with one ſhilling quit-rent for every hundred. Near Philadelphia before the commencement of the war with the mother-country, land rented at twenty ſhillings the acre, and even at ſeveral miles diſtance from that city, ſold at twenty years purchaſe.

In ſome years, more people tranſported themſelves into Pennſylvania than into all the other ſettlements together. In ſhort, this province has increaſed greatly from the time of its firſt eſtabliſhment. Upon the principal rivers, ſettlements are made, and the country has been cultivated 150 miles above Philadelphia. The preſent number of inhabitants are eſtimated at 320,000. The people are hardy, induſtrious, and moſt of them ſubſtantial, though but few of the landed people can be conſidered as rich; but before the commencement of the civil war, they were all well lodged, well fed, and, for their condition, well clad: and this at the more eaſy rate, as the inferior people manufactured moſt of their own wear, both linens and woollens.

This province contains many very conſiderable towns, ſuch as German-Town, Cheſter, Oxford, Radnor, all which, in any other colony, would deſerve being taken notice of more particularly. But here the city of Philadelphia, containing upwards of 30,000 inhabitants, beautiful beyond any city in America, and in regularity ſcarcely equalled by any in Europe, totally eclipſes the reſt. It was built after the plan of the famous Penn, the founder and legiſlator of this colony. It is ſituated 100 miles from the ſea, between two navigable rivers, the Delaware, above a mile in breadth, on the north, and the Schuylkill, on the ſouth, by running in a line of two miles between them. It is intended that every quarter of the city, ſhould form a ſquare of eight acres, and that in the middle a ſquare of ten acres, ſurrounded by the town-houſe, and other public buildings. The high ſtreet is 100 feet wide, and runs the whole breadth of the town: parallel to it run nineteen other ſtreets, which are croſſed by eight more at right angles, all of them 30 feet wide, and communicating with canals, from the two rivers, which contribute not only to the beauty, but to the wholeſomeneſs of the city. According to the original plan, every man in poſſeſſion of 1000 acres in the province, had his houſe either in one of the fronts, facing the rivers, or in the High Street, running from the

the middle of one front to the middle of the other. Every owner of 5000 acres, beſides the above mentioned privilege, was entitled to have an acre of ground in the front of the houſe, and all others might have half an acre for gardens and court yards. The proprietor's ſeat, which is the uſual place of the governor's reſidence, and is about a mile above the town, is the firſt private building, both for magnificence and ſituation, in all Britiſh America. The barracks for the troops, the market, and other public buildings, are proportionably grand. The quays are ſpacious and fine; and the principal quay is 200 feet wide.

There were in this city a great number of very wealthy merchants; which is no way ſurpriſing, when we conſider the great trade which it carried on with the Engliſh, Spaniſh, French, and Dutch colonies in America; with the Azores, the Canaries, and the Madeira iſlands; with Great Britain and Ireland; with Spain, Portugal, and Holland. Beſides the Indian trade, and the quantity of grain, proviviſions, and all kinds of the produce of this province, which is brought down the rivers upon which this city is ſo commodiouſly ſituated, the Germans, who are ſettled in the interior parts of this province, employ ſeveral hundred waggons, drawn each by four horſes, in bringing the product of their farms to this market. In the year 1749, 303 veſſels entered inwards at this port, and 291 cleared outwards.

The commodities formerly exported into Pennſylvania, at an average of three years, amounted to the value of 611,000 l. Thoſe exported to Great Britain and other markets, beſides timber, ſhips built for ſale, copper ore, and iron in pigs and bars, conſiſted of grain, flour, and many ſorts of animal food; and at an average of three years, were calculated at 705,500 l. But ſuch was the ſpirit of adventuring in trade, after the concluſion of the late war, the duty in Philadelphia upon imported goods of 2½ per cent. *ad valorem*, produced from the firſt of March 1784, to the firſt of December, 132,000 l.; which, ſuppoſing that their value was not under rated, nor any ſmuggled to ſave the duty, makes their value amount to 3,168,000 l.

There was an academy eſtabliſhed at Philadelphia greatly encouraged by contributions from England and Scotland, and which, before the civil war broke out, bid fair to become a bright ſeminary of learning. It is now ſtiled an UNIVERSITY; its funds were partly given by the ſtate and partly taken from the old college. And in 1787 a college was founded at Lancaſter, and in honour to Dr. Franklin, called Franklin-College.

Beſides ſeveral other very improving inſtitutions in this city, there is one which deſerves a particular notice, which is THE AMERICAN PHILOSOPHICAL SOCIETY, HELD AT PHILADELPHIA, FOR PROMOTING USEFUL KNOWLEDGE. This ſociety was formed January 2, 1769, by the union of two other literary ſocieties that had ſubſiſted for ſome time in Philadelphia; and were created one body corporate and politie, with ſuch powers, privileges, and immunities as are neceſſary for anſwering the valuable purpoſes which the ſociety had originally in view, by a charter, granted by the commonwealth of Pennſylvania, on the 15th of March, 1780. This ſociety has already publiſhed two very valuable volumes of their Tranſactions, one in 1771, the other in 1786. In 1771, this ſociety conſiſted of nearly 300 members; and upwards of 120 have ſince been added; a large proportion of which are foreigners of the firſt diſtinction in Europe. This is an evidence of the increaſing reſpectability and improvement of the ſociety.

It was in Philadelphia that the general congreſs of America met in September 1774; and their meetings continued to be chiefly held there, till the king's troops

made themſelves maſters of that city, on the 26th of September 1777. But in June 1778, the Britiſh troops retreated to New York, and Philadelphia again became the reſidence of the congreſs.

In 1776, the repreſentatives of the freemen of Pennſylvania met in a general convention at Philadelphia, and agreed upon the plan of a new conſtitution of government for that colony. They determined, that the commonwealth, or ſtate of Pennſylvania, ſhould be governed hereafter by an aſſembly of the repreſentatives of the freemen, and a preſident and council. That the ſupreme legiſlative power ſhould be veſted in the houſe of repreſentatives. That the ſupreme executive power ſhould be veſted in the preſident and council of twelve. That every freeman of twenty-one years of age, having reſided in Pennſylvania one year before the day of election for repreſentatives, and paid public taxes during that time, ſhould enjoy the right of an elector; and that the ſons of freeholders, of twenty-one years of age, ſhould be entitled to vote, although they had not paid taxes. That the houſe of repreſentatives ſhould conſiſt of perſons moſt noted for wiſdom and virtue, to be choſen by the freemen of every city and county of this commonwealth reſpectively. And that no perſon ſhould be elected, unleſs he had reſided in the city or county for which he ſhould be choſen two years before the election; and that no member, while he continued ſuch, ſhould hold any other office except in the militia. That no perſon ſhould be capable of being elected a member to ſerve in the houſe of repreſentatives more than four years in ſeven. That the members ſhould be choſen annually by ballot, and ſhould be ſtyled, "The general aſſembly of repreſentatives of the freemen of Pennſylvania," and ſhould have power to chooſe their ſpeaker, the treaſurer of the ſtate, and their other officers to prepare bills and enact them into laws, to redreſs grievances, impeach ſtate crimiminals, and have all other powers neceſſary for the legiſlature of a free ſtate or commonwealth. That delegates to repreſent Pennſylvania in congreſs ſhould be annually choſen by ballot, in the general aſſembly of repreſentatives.

That the ſupreme executive council of this ſtate ſhould conſiſt of twelve perſons, to be choſen by the freemen of Philadelphia, and the ſeveral counties of Pennſylvania. That a preſident, and vice-preſident, of this council, ſhould be choſen annually. That the preſident, and in his abſence the vice-preſident, with the council, five of whom are to be a quorum, ſhould have power to appoint judges, naval officers, judge of the admiralty, attorney-general, and other officers civil and military. That the preſident ſhall be commander in chief of the forces of the ſtate, but ſhall not command in perſon, except adviſed thereto by the council, and then only ſo long as they ſhall approve. That all trials ſhall be by jury; and that freedom of ſpeech, and of the preſs, ſhall not be reſtrained. That all perſons in public offices ſhould declare their belief in one God, the creator, and governor of the univerſe, the rewarder of the good, and the puniſher of the wicked; and alſo acknowledge the Scriptures of the Old and New Teſtament to be given by divine inſpiration. A variety of other particulars were contained in this plan of government, particularly that the freemen, and their ſons, ſhould be trained and armed for the public defence, under ſuch regulations, reſtrictions, and exceptions, as the general aſſembly ſhould by law direct, preſerving always to the people the right of chooſing their colonel, and all commiſſioned officers under that rank, in ſuch manner, and as often as by the ſaid laws ſhould be directed. Two perſons alſo are to be choſen by ballot every year for each county and city by the freemen to be called "the Council of Cenſors," who are to examine into the conduct of the legiſlative and executive powers.

Rivers.] This country is indented with a vaſt number of valuable creeks and rivers. The chief are Patowmac, Pocomoac, Patuxent, Cheptonk, Severn, and Saſſafras.

Face of the country, air, soil, and produce. In theſe particulars this province has nothing remarkable by which it may be diſtinguiſhed from thoſe already deſcribed. The hills in the inland country are of ſo eaſy aſcent, that they rather ſeem an artificial than a natural production. The vaſt number of rivers diffuſes fertility through the ſoil, that is admirably adapted to the rearing of tobacco, which is the ſtaple commodity of that country, and hemp, Indian corn and grain, which they now begin to cultivate in preference to tobacco.

Population and commerce.] The number of inhabitants have of late years greatly increaſed, and are ſuppoſed to be about 254,050; which is 18 for every ſquare mile. The commerce of Maryland depends on the ſame principles with that of

of Virginia, and is ſo cloſely connected with it, that any ſeparation of them would rather confuſe than inſtruct. It will be conſidered therefore under that head.

History and government.] It ſeems as if all the provinces of North America were planted from motives of religion. Maryland, like thoſe we have formerly deſcribed, owes its ſettlement to religious conſiderations. As the neighbouring diſtricts, however, were peopled by proteſtants, and even ſectaries, Maryland was originally planted by Roman-catholics. This ſect, towards the cloſe of Charles the Firſt's reign, was the object of great hatred to the bulk of the Engliſh nation; and the laws in force againſt the Roman-catholics were executed with great ſeverity. This in part aroſe from an opinion, that the court was too favourably diſpoſed towards this form of religion. It is certain, that many marks of favour were conferred on the Roman-catholics. Lord Baltimore was one of the moſt eminent, one in greateſt favour with the court, and on that account moſt odious to the generality of Engliſhmen. This nobleman, in 1632, obtained a grant from Charles of that country which formerly was conſidered as a part of Virginia, but was now called Maryland, in honour of queen Henrietta Mary, daughter to Henry IV. and ſpouſe to king Charles. The year following, about 200 popiſh families, ſome of conſiderable diſtinction, embarked with lord Baltimore, to enter into poſſeſſion of this new territory. Theſe ſettlers, who had that liberality and good breeding which diſtinguiſhes gentlemen of every religion, bought their land at an eaſy price from the native Indians; they even lived with them for ſome time in the ſame city; and the ſame harmony continued to ſubſiſt between the two nations until the Indians were impoſed on by the malicious inſinuations of ſome planters in Virginia, who envied the proſperity of this popiſh colony, and inflamed the Indians againſt them by ill-grounded reports, but ſuch as were ſufficient to ſtir up the reſentment of men naturally jealous, and who from experience had reaſon to be ſo.

The colony, however, was not wanting to its own ſafety on this occaſion. Though they continued their friendly intercourſe with the natives, they took care to erect a fort, and to uſe every other precaution for their defence againſt ſudden hoſtilities; the defeat of this attempt gave new ſpring to the activity of this plantation; which was likewiſe receiving frequent reinforcements from England of thoſe who found themſelves in danger by the approaching revolution. But during the protectorſhip of Cromwell, every thing was overturned in Maryland. Baltimore was deprived of his rights; and a new governor, appointed by the Protector, ſubſtituted in his room. At the Reſtoration, however, the property of this province reverted to its natural poſſeſſor. Baltimore was reinſtated in his rights, and fully diſcovered how well he deſerved that favour. He eſtabliſhed a perfect toleration in all religious matters: the colony increaſed and flouriſhed, and diſſenters of all denominations, allured by the proſpect of gain, flocked into Maryland. But the tyrannical government of James II. again deprived this noble family of their poſſeſſion, acquired by royal bounty, and improved by much care and expence.

At the Revolution, lord Baltimore was again reſtored to all the profits of the government, though not to the right of governing, which could not conſiſtently be conferred on a Roman-catholic. But after the family changed their religion, they obtained the power as well as the intereſt. The government of this country exactly reſembled that in Virginia, except that the governor was appointed by the proprietor, and only confirmed by the crown. The cuſtoms too were reſerved to the crown, and the officers belonging to them were independent of the government of the province. At length, as the proteſtants became far more numerous, they excluded the papiſts from all offices of truſt and power, and even adopted the

penal laws of England againſt them. The church of England was by law eſtabliſhed here, and the clergy were paid in tobacco: a tax for this purpoſe was annually levied, and every male white perſon above the age of ſixteen was obliged to pay 40 lb. of tobacco, (or if he raiſed no tobacco, he muſt take an oath that he did not, and pay the value in caſh); diſſenting clergy were not exempted. But ſince the civil war, by the declaration of rights and the conſtitution agreed to in the convention of delegates at Annapolis, Auguſt 14, 1776, the legiſlature is now to conſiſt of two diſtinct branches, the ſenate and the houſe of delegates; the latter to be annually choſen, *viva voce*, by the freeholders in each county, viz. St. Mary's, Charles, Calvert, Prince-George, Anne-Arundel, Baltimore, Frederick, Harford, Cecil, Kent, Queen-Anne, Talbot, Dorſet, Caroline, Somerſet, and Worceſter, four delegates each, and the city of Annapolis and Baltimore-town two each; delegates for the ſenate to be elected in like manner every five years, two for each county, out of whom are to be choſen fifteen ſenators, by ballot, i. e. nine for the Weſtern ſhore and ſix for the Eaſtern. The executive power is veſted in a governor and council of five, choſen annually by the joint ballot of the general aſſembly, who appoint the chancellor, judges, field-officers, &c. but the ſheriffs and juſtices of the peace are choſen by the freeholders in each county. All freemen above twenty-one years of age, having a freehold of fifty acres, or property to the value of thirty pounds, have a right of ſuffrage in the election of delegates. All perſons appointed to any office of profit or truſt, are to ſubſcribe a declaration of their belief in the Chriſtian religion.

In 1782, a college was founded at Cheſter-town in this province, under the name of WASHINGTON COLLEGE, in honour of General Waſhington.

VIRGINIA.

SITUATION AND EXTENT.

Miles.		Degrees.		Sq. Miles.
Length 750 Breadth 240	between	75 and 90 weſt longitude. 36 and 40 north latitude.		80,000.

BOUNDARIES.] BOUNDED by the river Potowmac, which divides it from Maryland, on the North-eaſt; by the Atlantic Ocean, on the Eaſt; by Carolina on the South; and the river Miſſiſippi, on the Weſt.

It may be divided into 75 counties, of very unequal ſize and population. Of theſe 35 are on the tide waters, or in that parallel; 23 are in the midlands, between the Tide-waters, and Blue Ridge of mountains; 8 between the Blue Ridge and Allegany; and 8 weſtward of the Allegany. The following table is taken from Morſe's American Geography, printed at Elizabeth Town, 1789.

CAPES, BAYS, AND RIVERS.] In ſailing to Virginia or Maryland, you paſs a ſtrait between two points of land, called the Capes of Virginia, which opens a paſſage into the bay of Cheſapeak, one of the largeſt and ſafeſt in the world; for it enters the country near 300 miles from the ſouth to the north, is about 18 miles broad for a conſiderable way, and ſeven where it is narroweſt, the water in moſt places being nine fathoms deep. This bay, through its whole extent, receives a vaſt number of navigable rivers from the ſides of both Maryland and Virginia. From the latter, beſides others of leſs note, it receives James River, York River, the Rappahannock, and the Potowmack: theſe are not only navigable for large ſhips

into the heart of the country, but have ſo many creeks, and receive ſuch a number of ſmaller navigable rivers, that Virginia is unqueſtionably the country in the world of the moſt convenient navigation. It has been obſerved, and the obſervation is not exaggerated, that every planter has a river at his door. To the weſtward of the province, is the Ohio, a large river, which after a long courſe falls into the Miſſiſſippi.

FACE OF THE COUNTRY.] The whole face of this country is ſo extremely low towards the ſea, that you are very near the ſhore, before you can diſcover land from the maſt-head. The lofty trees, which cover the ſoil, gradually riſe as it were from the ocean, and afford an enchanting proſpect. You travel 100 miles into the country, without meeting with a hill, which is nothing uncommon on this extenſive coaſt of America.

AIR AND CLIMATE.] In ſummer the heats here are exceſſive, though not without refreſhing breezes from the ſea. The weather is changeable, and the changes ſudden and violent. To a warm day there ſometimes ſucceeds ſuch an intenſe cold in the evening, as to freeze over the largeſt rivers.

The air and ſeaſons here depend very much upon the wind, as to heat and cold, dryneſs and moiſture. In winter they have a fine clear air, and dry, which renders it very pleaſant. Their ſpring is about a month earlier than in England; in April they have frequent rains; in May and June, the heat increaſes; and the ſummer is much like ours, being refreſhed with gentle breezes from the ſea, that riſe about nine o'clock, and decreaſe and increaſe as the ſun riſes or falls. In July and Auguſt theſe breezes ceaſe, and the air becomes ſtagnant, and violently hot; in September the weather generally changes, when they have heavy and frequent rains, which occaſion all the train of diſeaſes incident to a moiſt climate, particularly agues and intermitting fevers. They have frequently thunder and lightning, but it rarely does any miſchief.

SOIL AND PRODUCE.] Towards the ſea-ſhore, and the banks of the rivers, the ſoil of Virginia conſiſts of a dark rich mould, which, without manure, returns plentifully whatever is committed to it. At a diſtance from the water there is a lightneſs and ſandineſs in the ſoil, which, however, is of a generous nature, and helped by a kindly ſun, which yields corn and tobacco in abundance.

From what has been ſaid of the ſoil and climate, it is eaſy to infer the variety and perfection of the vegetable productions of this country. The foreſts are covered with all ſorts of lofty trees; and no underwood or bruſhes grow beneath; ſo that the people travel with eaſe through the foreſts on horſeback, under a fine ſhade to defend them from the ſun; the plains are enamelled with flowers and flowering ſhrubs of the richeſt colours and moſt fragrant ſcent. Silk grows ſpontaneous in many places, the fibres of which are ſtrong as hemp. Medicinal herbs and roots, particularly the ſnake-root, and the ginſeng of the Chineſe, are here in great plenty. There is no ſort of grain but might be cultivated to advantage. The inhabitants, however, are ſo engroſſed with the culture of the tobacco plant, which is here of a ſuperior quality to what any other country affords, that they think, if corn ſufficient for their ſupport can be reared, they do enough in this way. But flax and hemp are produced, not only for their own conſumption, but for exportation, though not in ſuch quantities as might be expected from the nature of the ſoil, admirably fitted for producing this commodity.

ANIMALS.] We ſhall here obſerve, that there were neither horſes, cows, ſheep, nor hogs in America, before they were carried thither by the Europeans; but now they are multiplied ſo extremely, that many of them, particularly in Virginia, and the ſouthern colonies, run wild. Before the war between Great Britain and the

colonies, beef and pork were ſold here from one penny to two pence a pound; their fatteſt pullets at ſix-pence a-piece; chickens at three or four ſhillings a dozen; geeſe, at ten pence; and turkeys, at eighteen pence a-piece. But fiſh and wild fowl were ſtill cheaper in the ſeaſon, and deer were ſold from five to ten ſhillings a-piece. This eſtimate may ſerve for the other American colonies, where proviſions were equally plentiful and cheap, and in ſome ſtill lower. Beſides the animals tranſported from Europe, thoſe natural to the country are deer, of which there are great numbers, a ſort of panther or tiger, bears, wolves, foxes, and racoons. Here is likewiſe that ſingular animal, called the opoſſum, which ſeems to be the wood-rat, mentioned by Charlevoix, in his hiſtory of Canada. It is about the ſize of a cat; and beſides the belly common to it with other animals, it has another peculiar to itſelf, and which hangs beneath the former. This belly has a large aperture, towards the hinder legs, which diſcovers a large number of teats on the uſual parts of the common belly. Upon theſe, when the female of this creature conceives, the young are formed, and there they hang like fruit upon the ſtalk, untill they grow in bulk, and weigh to the appointed ſize; when they drop off, and are received into the falſe belly, from which they go out at pleaſure, and in which they take refuge when any danger threatens them. In Virginia there are all ſorts of tame and wild fowl. They have the nightingale, called from the country, whoſe plumage is crimſon and blue; the mocking bird thought to excell all others in its own notes, and including that of every one; the humming bird, the ſmalleſt of all the winged creation, and by far the moſt beautiful, all arrayed in ſcarlet, green and gold. It ſips the dew from the flowers, which is all its nouriſhment, and is too delicate to be brought alive into England.

HISTORY, GOVERNMENT, POPULATION, TOWNS, AND COMMERCE. This is the firſt country which the Engliſh planted in America. We derived our right, not only to this, but to all our other ſettlements, as has been already obſerved, from the diſcovery of Sebaſtian Cabot, who, in 1497, firſt made the northern continent of America, in the ſervice of Henry VII. of England. No attempts, however, were made to ſettle it till the reign of queen Elizabeth. It was then that ſir Walter Raleigh, a man of the moſt enterprifing genius of any in that age, applied to court, and got together a company, which was compoſed of ſeveral perſons of diſtinction, and ſeveral eminent merchants, who agreed to open a trade, and ſettle a colony, in that part of the world, which, in honor of queen Elizabeth, he called Virginia. Towards the cloſe of the ſixteenth century, ſeveral attempts were made for ſettling this colony, before any proved ſucceſsful. The three firſt companies who ſailed into Virginia, periſhed through hunger and diſeaſes, or were cut off by the Indians. The fourth was reduced to almoſt the ſame ſituation; and being dwindled to a feeble remainder, had ſet ſail for England, in deſpair of living in ſuch an uncultivated country, inhabited by ſuch hoſtile and warlike ſavages. But in the mouth of Cheſapeak bay they were met by lord Delawar, with a ſquadron loaded with proviſions, and with every thing neceſſary for their relief and defence. At his perſuaſion they returned: by his advice, his prudence, and winning behaviour, the internal government of the colony was ſettled, and its defence provided for. This nobleman who had accepted the government from the nobleſt motives, was compelled, by the decayed ſtate of his health, to return into England. He left behind him, however, his ſon, as deputy; with ſir Thomas Gates, ſir George Summers, the honourable George Piercy, and Mr. Newport, for his council. By them James-Town, the firſt town built by the Engliſh in the New World, was erected.

The colony continued to flouriſh, and the true ſources of its wealth began to be diſcovered and improved. The firſt ſettlers, like thoſe of Maryland, were gene-

rally perſons of conſideration and diſtinction. It remained a ſteady ally to the royal party during the troubles of Great Britain. Many of the cavaliers, in danger at home, took refuge here; and under the government of ſir William Berkely, held out for the crown, until the parliament, rather by ſtratagem than force, reduced them. After the reſtoration there is nothing very intereſting in the hiſtory of this province. Soon after this time, a young gentleman, named Bacon, a lawyer, availing himſelf of ſome diſcontents in the colony, on account of reſtraints in trade, became very popular, and ſet every thing in confuſion. His natural death, however, reſtored peace and uanimity; and the inhabitants of Virginia ceaſed to deſtroy themſelves.

The government of this province was not at firſt adapted to the principles of the Engliſh conſtitution, and to the enjoyment of that liberty to which a ſubject of Great Britain thinks himſelf entitled in every part of the globe. It was governed by a governor and council, appointed by the king of Great Britain. As the inhabitants increaſed, the inconveniency of this form became more grievous; and a new branch was added to the conſtitution, by which the people, who had formerly no conſideration, were allowed to elect their repreſentatives from each county, into which this country is divided, with privileges reſembling thoſe of the repreſentatives of the commons of England. Thus two houſes, the upper and lower houſe of aſſembly, were formed. The upper houſe, which was before called the council, remained on its former footing; its members were appointed, during pleaſure, by the crown; they were ſtyled Honourable, and anſwered in ſome meaſure to the houſe of peers in the Britiſh conſtitution. The lower houſe was the guardian of the people's liberties. And thus, with a governor repreſenting the king, an upper and lower houſe of aſſembly, this government bore a ſtriking reſemblance to our own. When any bill had paſſed the two houſes, it came before the governor, who gave his aſſent or negative as he thought proper. It now acquired the force of a law, until it was tranſmitted to England, and his majeſty's pleaſure known on that ſubject. The upper houſe of aſſembly acted not only as a part of the legiſlature, but alſo as privy-council to the governor, without whoſe concurrence he could do nothing of moment; it ſometimes acted as a court of Chancery.

The preſent government of this province as ſettled in convention at Williamſburg, July 5th, 1776, is, that the legiſlature, executive, and judiciary departments be ſeperate and diſtinct; that the houſe of delegates be choſen annually by the freeholders, two for each county, and for the diſtrict of Weſt Auguſta; and one repreſentative for the city of Williamſburg and town of Norfolk. The ſenate to conſiſt of 24 members, alſo choſen by the freeholders of the ſtate, divided into 20 diſtricts. The executive is a governor and privy-council of eight members, choſen annually by the joint ballot of the general aſſembly of the ſtate, who alſo choſe the delegates to congreſs, the judges and other law officers, preſident, treaſurer, ſecretary, &c. juſtices, ſheriffs, and coroners, commiſſioned by the governor and council.

The inhabitants of Virginia were eſtimated in 1782 at 567,614; of whom 270,762 are negroes. So much do they increaſe under the mild treatment they receive. In the very firſt ſeſſion after their independence of Great Britain, the aſſembly paſſed a law for the perpetual prohibition of the importation of ſlaves. The inhabitants of Virginia are a cheerful, hoſpitable, and in general a well-bred people: ſome of them are accuſed of vanity and oſtentation. Here are only two towns which deſerve that name; the largeſt of which, and the capital of the province, is WILLIAMSBURG, 37-12 N. lat. 76-48 W. long. containing about ſixty houſes, and ſome ſpacious public buildings. It is about 40 miles from the mouth of James' River,

River, and ſeven from James-town, which was formerly the capital, and before the preſent war, contained many taverns and public houſes, for the entertainment of mariners.

In the following account of the commerce of Virginia, is alſo included that of Maryland. Theſe provinces were ſuppoſed to export, of tobacco alone, to the annual value of 768,000 l. into Great Britain. This, at eight pounds per hogſhead, makes the number of hogſheads amount to 96,000. Of theſe, it is computed, that about 13,500 hogſheads were conſumed at home, the duty on which, at 26 l. 1 s. per hogſhead, came to 351,675 l. the remaining 82,500 hogſheads were exported by our merchants to the other countries of Europe, and their value returned to Great Britain. The advantages of this trade appear by the bare mention of it. It may not be improper to add that this ſingle branch employed 330 ſail of ſhips, and 7960 ſeamen. Not only our wealth, therefore, was promoted, but the very ſinews of our national ſtrength were powerfully braced by it. The other commodities of theſe colonies, of which naval ſtores, wheat, Indian corn, iron in pigs and bars, are moſt conſiderable, made the whole exportation, at an average of three years, amount to 1,040,000l. The exports of Great Britain, being the ſame as to our other colonies, at a like average, came to 865,000l.

Though an entire tolleration was alowed to all religions in this country, there were, before the commencement of the civil war, few diſſenters from the church of England. The biſhop of London uſed to ſend over a ſuperintendent to inſpect the characters of clergymen, who lived comfortably here (a prieſt to each pariſh) with about 100l. per annum, paid in tobacco.

Here is alſo a college, founded by king William, called William and Mary college, who gave 2000l. towards it, and 20,000 acres of land, with power to purchaſe and hold lands to the value of 2000l. a year, and a duty of one penny per pound on all tobacco exported to the other plantations. There is a preſident, ſix profeſſors, and other officers, who are named by the governors or viſitors. The honorable Mr. Boyle made a very large donation to the college for the education of Indian children. The preſbyterian denomination of chriſtians is the moſt numerous in this province; for though the firſt ſettlers were Epiſcopalians, yet through the indolence of the clergy, two thirds of the people had become diſſenters at the commencement of the late revolution.

NORTH AND SOUTH CAROLINA WITH GEORGIA.

SITUATION AND EXTENT.

Miles.		Degrees.	Sq. Miles.
Length 700 Breadth 380	between	76 and 91 weſt longitude. 30 and 37 north latitude.	110,000.

BOUNDARIES.] BOUNDED by Virginia on the North; by the Atlantic Ocean on the Eaſt; by the river St. John, which ſeparates Georgia from Florida, on the South; and by the Miſſiſſippi, on the Weſt.

RIVERS.] Theſe are the Roanoke, or Albemarle river; Pamtico; Neus; Cape Fear, or Clarendon river; Pedee; Santee; Savannah; Alatamaha, or George river, and St. Mary's, which divide Georgia from Florida: all which rivers riſe in the Apalachian mountains, and running eaſt, fall into the Atlantic ocean. The back parts are watered by the Cherokees, Yaſous, Mobile, Apalachicola, the Pearl river, and many other noble ſtreams which fall into the Miſſiſſippi or the gulf of Mexico.

SEAS, BAYS, AND CAPES.] The only ſea bordering on this country is that of the Atlantic ocean; which is ſo ſhallow near the coaſt, that a ſhip of any great burden cannot approach it, except in ſome few places. There has not yet been found one good harbour in North Carolina; the beſt are thoſe of Roanoke, at the mouth of Albemarle river, Pamtico and Cape Fear. In South Carolina, there are the harbours of Winyaw or George-Town, Charles-Town, and Port-Royal. In Georgia, the mouths of the rivers Savannah and Alatamaha form good harbours.

The moſt remarkable promontories, are, Cape Hattaras, in 35 degreees odd minutes north latitude, Cape Fear to the ſouth of it, and Cape Carteret ſtill farther ſouth.

CLIMATE AND AIR.] There is not any conſiderable difference between the climate of theſe countries. In general it agrees with that of Virginia; but, where they differ it is much to the advantage of Carolina. The ſummers, indeed, are of a more intenſe heat than in Virginia, but the winters are milder and ſhorter. The climate of Carolina, like all American weather, is ſubject to ſudden tranſitions, from heat to cold, and from cold to heat. The winters are ſeldom ſevere enough to freeze any conſiderable water, affecting only the mornings and evenings; the

froſts have never ſufficient ſtrength to reſiſt the noon-day ſun; ſo that many tender plants which do not ſtand the winter of Virginia, flouriſh in Carolina, for they have oranges in great plenty near Charles-Town, and excellent in their kinds, both ſweet and ſour.

SOIL, PRODUCE, AND FACE OF THE COUNTRY. In this reſpect, too, there is a conſiderable coincidence between theſe countries and Virginia: the Carolinas, however, in the fertility of nature, have the advantage; but Georgia hath not ſo good a ſoil as the other provinces. The whole country is covered with trees, except where our planters have cleared it. The trees are almoſt the ſame in every reſpect with thoſe produced in Virginia; and by the different ſpecies of theſe, the quality of the ſoil is eaſily known. The land in Carolina is eaſily cleared, as there is little or no underwood, and the foreſts moſtly conſiſt of tall trees at a conſiderable diſtance. Thoſe grounds which bear the oak, the walnut, and the hickory, are extremely fertile; they are of a dark ſand intermixed with loam; and as all their land abounds with nitre, it is a long time before it is exhauſted; for here they never uſe any manure. The pine barren is the worſt of all; this is an almoſt perfect white ſand: yet it bears the pine tree, and ſome other uſeful plants, yielding good profit in pitch, tar, and turpentine. When this ſpecies of land is cleared, for two or three years together it produces very good crops of Indian corn and peaſe; and, when it lies low, and is flooded, it even anſwers for rice. But what is moſt fortunate for this province is, that this worſt part of its land is favourable to a ſpecies of the moſt valuable of all its products, to one of the kinds of indigo. The low, rich, ſwampy grounds bear their great ſtaple, rice. The country near the ſea is much the worſt, in many parts little better than an unhealthy ſalt marſh; for Carolina is all an even plain for 80 miles from the ſea, not a hill nor a rock, nor ſcarcely even a pebble to be met with. But the country, as you advance in it improves continually; and at 100 miles diſtance from Charles Town, where it begins to grow hilly, the ſoil is of a prodigious fertility, fitted for every purpoſe of human life; nor can any thing be imagined more pleaſant to the eye than the variegated diſpoſition of this back-country. Here the air is pure and wholeſome, and the ſummer heat much more temperate than in the flat ſandy coaſt.

In Carolina, the vegetation of every kind of plant is incredibly quick. The climate and ſoil have ſomething in them ſo kindly, that the latter, when left to itſelf, naturally throws out an immenſe quantity of flowers and flowering ſhrubs. All the European plants arrive at perfection here beyond that in which their native country affords them. With proper culture and encouragement, ſilk, wine, and oil, might be produced in theſe colonies: of the firſt we have ſeen ſamples equal to what is brought to us from Italy. Wheat grows extremely well in the back parts, and yields a prodigious increaſe.

From what we have obſerved of theſe valuable provinces, their productions appear to be, vines, wheat, rice, Indian corn, barley, oats, peaſe, beans, hemp, flax, cotton, tobacco, indigo, olives, oranges, citron, cypreſs, ſaſſafras, oak, walnut, caſſia, and pine trees; white mulberry-trees for feeding ſilk-worms, ſarſaparilla, and pines which yield turpentine, roſin, tar, and pitch. There is a kind of tree from which runs an oil of extraordinary virtue for curing wounds; and another, which yields a balm, thought to be little inferior to that of Mecca. There are other trees beſide theſe, that yield gums. The Carolinas produce prodigious quantities of honey, of which they make excellent ſpirits, and mead as good as Malaga ſack. Of all theſe, the three great ſtaple commodities at preſent are, indigo, rice, and the produce of the pine. Nothing ſurpriſes an European more

more at firſt ſight, than the ſize of thet rees here, as well as in Virignia and other American countries. Their trunks are often from 50 to 70 feet high, without a branch or limb; and frequently above 36 feet in circumference. Of theſe trunks when hollowed, the people of Charles-Town as well as the Indians make canoes, which ſerve to tranſport proviſions and other goods from place to place; and ſome of them are ſo large, that they will carry 30 or 40 barrels of pitch, though formed of one entire piece of timber. Of theſe are likewiſe made curious pleaſure-boats.

ANIMALS.] The original animals of this country do not differ much from thoſe of Virginia; but in Carolina they have ſtill a greater variety of beautiful fowls. All the animals of Europe are here in plenty; black cattle are multiplied prodigiouſly: to have 2 or 300 cows is very common, but ſome have a 1000 or upwards. Theſe ramble all day at pleaſure in the foreſts; but their calves being ſeparated and kept in fenced paſtures, the cows return every evening to them. The hogs range in the ſame manner, and return like the cows: theſe are very numerous, and many run quite wild, as well as horned cattle and horſes, in the woods. It is ſurpriſing that the cattle ſhould have increaſed ſo quickly ſince their being firſt imported from Europe, while there are ſuch numbers of wolves, tygers, and panthers, conſtantly ranging the woods and foreſts. We have already obſerved that the animals are leſs ravenous than the beaſts of Africa and Aſia; they very ſeldom attempt to kill either calves or foals in America, and when attacked, their dams make a vigorous defence.

HISTORY, GOVERNMENT, POPULATION, CHIEF TOWNS, AND COMMERCE. The firſt Engliſh expeditions into Carolina were unfortunate. Nothing ſucceſsful was performed till the year 1663, in the reign of Charles II. At that time ſeveral Engliſh noblemen, and others of great diſtinction, obtained a charter from the crown, which inveſted them with the property and juriſdiction of this country. They parcelled out the lands to ſuch as were willing to go over into the new ſettlement, and to ſubmit to a ſyſtem of laws, which they employed the famous Locke to compoſe for them.

They began their firſt ſettlement at a point of land towards the ſouthward of their diſtrict, between two navigable rivers. Here they laid the foundation of a city called Charles-Town, which was deſigned to be, what it now is, the capital of the province. In time, however, the diſputes between the church of Englandmen and diſſenters cauſed a total confuſion in the colony. This was rendered ſtill more intolerable by the incurſions of the Indians, whom they had irritated by their inſolence and injuſtice. In order to prevent the fatal conſequences of theſe inteſtine diviſions and foreign wars, an act of parliament was paſſed, which put this colony under the immediate protection of the crown. The lords proprietors accepted a recompence of about 24,000l. for both the property and juriſdiction; and the conſtitution of this colony, in thoſe reſpects in which it differed from the royal colonies, was altered. Earl Granville, however thought fit to retain his ſeventh ſhare, which continued in the poſſeſſion of his family. For the more convenient adminiſtration of affairs, too, Carolina was divided into two diſtricts, and two ſeparate governments. This happened in 1728, and from that time, peace being reſtored in the internal government, as well as with the Cherokees and other Indian tribes, theſe provinces began to breathe; and their trade advanced with wonderful rapidity.

The ſettlement of Georgia was projected in 1732, when ſeveral public-ſpirited noblemen and others, from compaſſion to the poor of theſe kingdoms, ſubſcribed a conſiderable ſum, which, with 10,000 l. from the government, was given to

provide neceſſaries for ſuch poor perſons as were willing to tranſport themſelves into this province, and to ſubmit to the regulations impoſed on them. In proceſs of time, new ſums were raiſed, and new inhabitants ſent over. Before the year 1752, upwards of 1000 perſons were ſettled in this province. It was not however to be expected that the inhabitants of Georgia, removed as they were at a great diſtance from their benefactors, and from the check and control of thoſe who had a natural influence over them, would ſubmit to the magiſtrates appointed to govern them. Many of the regulations, too, by which they were bound, were very improper in themſelves, and deprived the Georgians of privileges which their neighbours enjoyed, and which, as they increaſed in numbers and opulence, they thought it hard that they ſhould be deprived of. From theſe corrupt ſources aroſe all the bad humours which tore to pieces this conſtitution of government. Diſſenſions of all kinds ſprung up, and the colony was on the brink of deſtruction, when in 1752, the government took it under their immediate care, removed their particular grievances, and placed Georgia on the ſame footing with the Carolinas.

The method of ſettling in Carolina, and indeed in other provinces of Britiſh America, was to pitch upon a void ſpace of ground, and either to purchaſe it at the rate of 20l. for a 1000 acres, and one ſhilling quit rent for every 100 acres; or otherwiſe, to pay a penny an acre quit-rent yearly to the proprietors, without purchaſe-money: the former method is the moſt common, and the tenure a freehold. The people of Carolina live in the ſame eaſy, plentiful, and luxurious manner with the Virginians already deſcribed. Poverty is here almoſt an entire ſtranger; and the planters are the moſt hoſpitable people that are to be met with to all ſtrangers, and eſpecially to ſuch as by accidents or misfortunes are rendered incapable to provide for themſelves.

The only place in either of the Carolinas worthy of notice is Charles-Town, the metropolis, in South Carolina, which for ſize, beauty, and trade, may be conſidered as one of the firſt in America. It is admirably ſituated at the confluence of two navigable rivers, one of which is navigable for ſhips 20 miles above the town, and for boats and large canoes near 40. The harbour is good in every reſpect, but that of a bar, which hinders veſſels of more than 200 tons burden, loaded, from entering. The town is regularly and pretty ſtrongly fortified by nature and art; the ſtreets are well cut; the houſes are large and well built; ſome of them are of brick, and others of wood, but all of them handſome and elegant, and rent is extremely high. The ſtreets are wide and ſtraight, interſecting each other at right angles; thoſe running eaſt and weſt extend about a mile from one river to the other. It contains about 1000 houſes, and was the ſeat of the governor, and the place of meeting of the aſſembly. Its neighbourhood is beautiful beyond deſcription. Several handſome equipages are kept here. The planters and merchants are rich and well bred; and before the war between Great Britain and the colonies, the people were ſhewy and expenſive in their dreſs and way of living; ſo that every thing conſpired to make this by much the livelieſt, and politeſt place, as well as the richeſt in all America. It ought alſo to be obſerved, for the honour of the people of Carolina, that when, in common with the other colonies, they reſolved againſt the uſe of certain luxuries, and even neceſſaries of life; thoſe articles which improve the mind, enlarge the underſtanding, and correct the taſte, were excepted: the importation of books was permitted as formerly.

North and South Carolina joined with the other colonies in their revolt againſt Great Britain; and in 1780, Charles-Town being beſieged by the king's troops, ſurrendered on capitulation, with 6000 men in arms, priſoners, on the 11th of May in that year, after the ſiege had continued ſeven weeks.

As

As South-Carolina has met with infinitely more attention than the neighbouring provinces, the commerce of this country alone employed 140 ſhips, while that of the other two did not employ 60. Its exports to Great Britain of native commodities, on an average of three years, amounted to more than 395,000l. annual value; and its imports 365,000l. The exports of North-Carolina were computed at about 70,000l. and its imports 18,000l. The trade of Georgia is likewiſe in its infancy; the export amounted to little more than 74,000l. and the imports to 49,000 l.

The trade between Carolina and the Weſt-Indies was the ſame in all reſpects with that of the reſt of the colonies, and was very large; their trade with the Indians was in a very flouriſhing condition; and they formerly carried Engliſh goods on pack-horſes 5 or 600 miles into the country weſt of Charles-Town.

The mouths of the rivers in North-Carolina form but ordinary harbours, and do not admit, except one at Cape Fear, veſſels of above 70 or 80 tons. This lays a weight upon their trade, by the expence of lighterage. Edenton is the capital of North Carolina, but little more than a trifling village; they were lately projecting a town farther ſouth, which would be more centrical.

Georgia has two towns already known in trade. Savannah, the capital, is commodiouſly ſituated for an inland and foreign trade, about ten miles from the ſea, upon a noble river of the ſame name, which is navigable for 200 miles farther for large boats, to the ſecond town, called Auguſta, which ſtands in a country of the greateſt fertility, and carries on a conſiderable trade with the Indians. From the town of Savannah you ſee the whole courſe of the river towards the ſea; and on the other hand, you ſee the river for about 60 miles up into the country. Here the Rev. Mr. George Whitefield (who uſed to croſs the Atlantic every ſecond year) founded an orphan houſe, which is now converted to a very different uſe, into a college for the education of young men, deſigned chiefly for the miniſtry.

In October 1779, the town of Savannah being in poſſeſſion of the king's troops, was beſieged by 8000 of the American and French troops, in conjunction; but they were bravely repulſed by the king's troops, with a great ſlaughter of the French and Americans. But Savannah and Charles-Town, with the reſt of the provinces, were afterwards evacuated and reſtored to the Americans.

By a late eſtimate of their population, the number of inhabitants in North Carolina, is 270,000 of which 60,000 are negroes; in South Carolina, 80,000 whites, and about 100,000 negroes; and in Georgia, about 40,000 excluſive of Indians.

The government of North Carolina ſettled in convention at Halifax, December 18th, 1776 is, in a legiſlature of two ſeparate bodies, the ſenate and houſe of commons. One ſenator and two repreſentatives to be choſen by ballot annually, by the freemen and freeholders of each county, and one commoner for each of the towns of Edenton, Newbern, Wilmington, Saliſbury, and Halifax. The executive power is a governor and ſeven counſellors, annually choſen by and out of the general aſſembly by joint ballot, who alſo appoint the judges, field-officers, ſecretary, treaſurer, &c. The juſtices are recommended by the people, as alſo the ſheriffs; and the delegates to congreſs are elected annually out of the general aſſembly by joint ballot.

In the year 1785, the inhabitants of the counties of Sullivan, Waſhington, and Green, in North Carolina, which lie directly weſt of the mountains in this ſtate, convened in committees—appointed and held a convention—framed a conſtitution—elected their governor—and in ſhort erected themſelves into a ſeparate, independent ſtate, by the name of the *New State of Franklin*. This premature ſtate was to comprehend all that tract of country which lies between the mountains, and the *Suck* or *Whirl*, in the Tenneſſee river. Theſe proceedings occaſioned great con-

fuſion and warm diſputes in North Carolina, which continued to rage till the year 1788, when all pretenſions to independency were relinquiſhed, and tranquillity was reſtored to the ſtate *.

The conſtitution eſtabliſhed by the council and aſſembly, March 28th, 17-8, for South Carolina, is, that the legiſlative authority be veſted in the general aſſembly, conſiſting of the ſenate and houſe of repreſentatives ſeparately, each being elected by the freemen and freeholders of the ſeveral pariſhes and diſtricts in the ſtate, every two years, in certain proportions; the former of 23 and the latter of 202 members. The executive power is that of a governor, lieutenant-governor, and eight privy-counſellors, elected out of the general aſſembly by joint ballot every two years, who alſo chooſe delegates to congreſs annually. Juſtices of the peace, ſheriffs, and other judicial, military, and revenue officers, are nominated by the aſſembly, and commiſſioned by the governor.

The conſtitution agreed to in convention for Georgia, February 5, 1777, is, the legiſlative, executive, and judiciary departments ſhall be diſtinct and ſeparate bodies. The legiſlative to conſiſt of repreſentatives elected by the freemen and freeholders annually, by ballot, in each county, viz. Wilkes, Richmond, Burke, Effingham, Chatham, ten members each; Liberty, fourteen; Glynn and Camden one each; the town of Savannah four, and Sunbury two. Theſe 72 repreſentatives to conſtitute the houſe of aſſembly, out of whom are choſen, by ballot, the governor and executive council of two from each of the firſt ſix counties; and alſo the delegates to congreſs, annually. The ſubordinate officers of the ſtate are appointed by the reſpective bodies, and the ſeveral courts they depend on.

NEW STATES FORMED IN NORTH AMERICA.

THE *New State of Franklin*, of which we have taken notice in our account of North Carolina, was formed by the union of three counties in this laſt ſtate. But after much confuſion, all pretenſions to independency were at length relinquiſhed, and it is now reunited with its parent ſtate. Beſides this, two other ſtates have lately ariſen, thoſe of KENTUCKE and VERMONT; of theſe we ſhall give ſome account in this place.

KENTUCKE, [belonging at preſent to the ſtate of Virginia.]

THIS country was firſt diſcovered by one Macbride, in 1754. Its central part is ſituated near the latitude 38. N. and 85. W. long. It is bounded on the North by Sandy Creek, by the Ohio on the N. W. by North Carolina on the South, and by Cumberland mountains on the Eaſt.

KENTUCKE, is divided into ſeven Counties.

Counties.	Chief Towns.	Counties.	Chief Town.
Jefferſon, at the falls of the Ohio, - -	Louiſville	Nelſon - - - -	Bardſtown.
Fayette - - - -	Lexington	Madddiſon	
Bourbon		Lincoln	
Mercer - - - -	Harrodſtown		

In all theſe, as well as in many other places, are houſes for the inſpection of tobacco.

* Morſe's American Geography, p. 423.

The

The Ohio bounds Kentucke in its whole length. This ſtate is watered by many rivers, and the greateſt part of the ſoil is amazingly fertile, and is more temperate and healthy than any part in America.

Near a place called Licking river is found a pure ſalt rock. The Ohio (the great reſervoir of all the numerous rivers that flow into it from both ſides), has many fine vallies, oppoſite to each of which there is a hill, the valley and the hills changing ſides alternately.

Here are buffalos, bears, deer, elks, and many other animals, common to the United States, and others entirely unknown to them.

In the rivers are the fineſt fiſh, and abundant. Salmon, roach, perch, eel, and all kinds of hook fiſh.

The warbling tenants of the grove are here numerous, and exhibit all the variety of feathered beauty, as well as the melody of ſylvan ſong. The paroquet is common here, as is the ivory-bill wood-cock, of a whitiſh colour, with a white plume: the bill is pure ivory. Here is an owl like ours, but different in vociferation; it makes a ſurpriſing noiſe like a man in diſtreſs.

Its natural curioſities are aſtoniſhing and innumerable: caves are found amazingly large, in ſome of which you may travel ſeveral miles under a fine limeſtone rock, ſupported by curious arches and pillars; in moſt of them run ſtreams of water. Near Lexington are to be ſeen curious ſepulchres, full of human ſkeletons.

There are three ſprings or ponds of bitumen near Green river, which diſcharge themſelves into a common reſervoir, and when uſed in lamps, anſwer all the purpoſes of the fineſt oil *.

There are many alum banks, and different places abounding with copper, which, when refined, is equal to any in the world.

At a ſalt ſpring near the Ohio river, very large bones have been found, far ſurpaſſing the ſize of any ſpecies of animals now in America, the head appears to have been conſiderably above three feet long.

Dr. Hunter ſaid it could not be the elephant, and that from the form of the teeth it muſt have been carnivorous, and belonging to a race of animals now extinct. Specimens have been ſent both to France and England.

What animal this is, and by what means its ruins are found in theſe regions, where none ſuch now exiſt, are very difficult queſtions, and variouſly reſolved. The variety of conjectures ſerves only to prove the futility of all.

Among the natural curioſities of this place, the winding banks or rather precipices of Kentucke river, are particularly deſerving to be recorded. The aſtoniſhed eye there beholds almoſt every where three or four hundred feet of a ſolid perpendicular limeſtone rock. In ſome parts a fine white marble. Theſe precipices are like the ſides of a deep trench or canal, the land above, level and crowned with fine groves of red cedar.

The Miſſiſſipi and Ohio, are the keys to the northern parts of the weſtern continent. The uſual route to Kentucke is from Philadelphia or Baltimore, by the way of Peterſburg. From the mouth of the Ohio to New Orleans, (a diſtance not exceeding 460 miles in a ſtraight line) is 856 by water. The mouth empties itſelf by ſeveral channels into the gulf of Mexico.

An idea may be formed of the aſtoniſhing emigrations to this country, from the following account taken by the adjutant of the troops ſtationed at Fort Harmer, at the mouth of the Muſkingum.

From the 10th of October 1786, to the 12th of May 1787, 177 boats, con-

* Morſe's American Geography, p. 407.

taining

taining 2689 ſouls, 1353 horſes, 766 cattle, 112 waggons and two phaetons, beſides a very conſiderable number that paſſed in the night unobſerved.

It is at preſent peopled by above one hundred and fifty thouſand ſettlers. From the interior ſettlements of this vaſt country, America will derive her future greatneſs, and eſtabliſh new empires to rival, and perhaps outdo the ancient world.

VERMONT.

THE ſtate of Vermont is a vaſt country, ſituated eaſtward of New-Hampſhire, ſouth of Maſſachuſets, and weſt of New York. It is 155 miles in length, and 60 in breadth. The capital of the ſtate is Bennington.

The Allens are the chiefs or head men of the country. It is governed by its own laws, independent of Congreſs and the States. Hitherto it has been an object of contention between the ſtates of New York and New Hampſhire. The people had for a long time, no other name than Green Mountain Boys, which they gallicized into Verdmont, and ſince corrupted into the eaſier pronunciation of Vermont.

The antique foreſts, into which the arm of man is juſt carrying the deſtructive axe, every where afford the moſt grand and ſublime proſpects. Little of the land of this ſtate is yet cleared, but the emigrations to it from other ſtates are great, and it will ſoon become well cultivated, and equal in fertility to the ſtates it approximates. Its population is ſaid already to amount to 150,000.

The declaration which they made by their repreſentatives in convention, at Windſor, on the 25th of December 1777, and which makes a part of their conſtitution; breaths as high a ſpirit of liberty as that of any of their neighbours.

They aſſert that all men are born equally free, with equal rights, and ought to enjoy liberty of conſcience—freedom of the preſs—trial by jury—power to form new ſtates in vacant countries, and to regulate their own internal police—that all elections ought to be free—that all power is originally in the people—that government ought to be inſtituted for the common benefit of the community—and that the community have a right to reform or aboliſh government—that every member of ſociety hath a right to protection of life, liberty, and property—and in return, is bound to contribute his proportion of the expence of that protection, and yield his perſonal ſervice when neceſſary—that he ſhall not be obliged to give evidence againſt himſelf—that the people have a right to bear arms—but no ſtanding army ſhall be maintained in time of peace—that the people have a right to hold themſelves their houſes, papers, and poſſeſſions free from ſearch or ſeizure, and therefore warrants, without oaths firſt made, affording ſufficient foundation for them, are contrary to that right, and ought not to be granted—that no perſon ſhall be liable to be tranſported out of this ſtate, for trial for any offence committed in the ſtate, &c *.

The ſtates of New York and Penſylvania have large tracts of fertile land, extending to the lakes, proper for the forming of ſettlements, and very capital ones have lately been made. This country will in future prove one of the moſt advantageous commercial ſituations in America, having in a manner the key of Canada, and of all the northern Indian trade; the navigation extending from the weſtern ſea to the lakes, has no other obſtruction than ſmall portages, which in time, will be converted into canals. The fur trade will chiefly centre in this country.

* Morſe's American Geography, p. 472.

In

In the inland country of Virginia and North Carolina, the ſettlements, in many parts extend to the mountains. In the eaſtern parts of Virginia, ſettlements have been made in the mountains themſelves, where ſome induſtrious Germans (who found the land in the vallies taken up,) have eſtabliſhed conſiderable plantations.

South Carolina has immenſe tracts of fertile land unſettled.

The ſtate of Virginia, poſſeſſing lands on the other ſide the mountains, (and having more immediate communication with the Ohio country on the river) many thouſands have paſſed over them, and ſettled themſelves in that tract which lies between the mountains and the river. It is ſaid ſome emigrants have croſſed that river, and ſettled in the country bordering on the lakes.

By a late ſettlement, the country to the ſouthward of the Ohio is included in the ſtate of Virginia. All the country to the northward of this great river, extending from Pennſylvania to the eaſt, the lakes on the north, and the Miſſiſſipi on the weſt, are intended to be divided by congreſs into ten new ſtates, viz. WASHINGTON, METROPOTAMIA, PESILIPPA, MICHIGANIA, ILLINOIA, CHERSONESUS, SARATOGA, SYLVANIA, ASSENIPI, POLYPOTAMIA.

Theſe ten ſtates (ſpreading over an immenſe tract of land) are traverſed by the great river Ohio, in a courſe of 1200 miles, receiving into its waters the innumerable rivers which are ſcattered over the whole country. On the North they are bounded by the five great lakes, Superior, Michigan, Huron, Erie, and Ontario; which empty themſelves into the river St. Laurence. On the eaſt they have the ſtates of New York, Penſylvania, and Virginia, whoſe navigation (as well as the St. Laurence) affords them a direct communication with the Atlantic Ocean. On the ſouth they are partly bounded by the mountains, and on the weſt by the vaſt river Miſſiſſipi, (whoſe ſource is unknown) and which after flowing through the great continent of America, (admitting into its ſwelling waves the tributes of a thouſand waters) falls into the gulf of Mexico.

WEST INDIES.

WE have already obſerved, that between the two continents of America, lie a multitude of iſlands, which we call the Weſt Indies, and which, ſuch as are worth cultivation, now belong to five European powers, Great Britain, Spain, France, Holland, and Denmark. As the climate and ſeaſons of theſe iſlands differ widely from thoſe of Europe, we ſhall, to avoid repetitions, ſpeak of them in general, as well as mention ſome other particulars peculiar to the Weſt Indies.

The climate in all our Weſt India iſlands is nearly the ſame, allowing for thoſe accidental differences which the ſeveral ſituations and qualities of the lands themſelves produce. As they lie within the tropics, and the ſun never recedes farther from any of them than about 30 degrees to the ſouth, they are continually ſubjected to the extreme of an heat, which would be intolerable, if the trade-wind, riſing gradually as the ſun gathers ſtrength, did not blow in upon them from the ſea, and refreſh the air in ſuch a manner as to enable the inhabitants to attend their concerns even under the meridian ſun. On the other hand, as night advances, a breeze begins to be perceived, which blows ſmartly from the land, as it were from the centre, towards the ſea, to all points of the compaſs at once.

By the ſame remarkable providence in the diſpoſing of things, it is, that when the ſun has made a great progreſs towards the tropic of Cancer, and becomes in a

manner vertical, he draws after him ſuch a vaſt body of clouds, as ſhield them from his direct beams; and diſſolving into rain, cool the air, and refreſh the country, thirſty with the long drought, which commonly reigns from the beginning of January to the latter end of May.

The rains in the Weſt Indies are far more violent than with us. Our heavieſt rains are but dews comparatively. They are rather floods of water, poured from the clouds with prodigious impetuoſity; the rivers riſe in a moment; new rivers and lakes are formed, and in a ſhort time all the low country is under water *. Hence it is, that the rivers which have their ſource within the topics, ſwell and overflow their banks at a certain ſeaſon: but ſo miſtaken were the ancients in their idea of the torrid zone, that they imagined it to be dryed and ſcorched up with a continual and fervent heat, and to be for that reaſon uninhabitable; when in reality, ſome of the largeſt rivers of the world have their courſe within its limits, and the moiſture is often one of the greateſt inconveniences of the climate.

The rains make the only diſtinction of ſeaſons in the Weſt Indies; the trees are green the whole year round; they have no cold, no froſts, no ſnows, and but rarely ſome hail; the ſtorms of hail are, however, very violent when they happen, and the hailſtones very great and heavy. Whether it be owing to this moiſture which alone does not ſeem to be a ſufficient cauſe, or to the greater quantity of a ſulphureous acid, which predominates in the air, metals of all kinds, that are ſubject to the action of ſuch cauſes, ruſt and canker in a very ſhort time; and this cauſe, perhaps as much as the heat itſelf, contributes to make the climate of the Weſt Indies unfriendly and unpleaſant to European conſtitutions.

It is in the rainy ſeaſon (principally in the month of Auguſt, more rarely in July and September) that they are aſſaulted by hurricanes; the moſt terrible calamity to which they are ſubject from the climate; this deſtroys, at a ſtroke, the labours of many years, and proſtrates the moſt exalted hopes of the planter, and often juſt at the moment when he thinks himſelf out of the reach of fortune. It is a ſudden and violent ſtorm of wind, rain, thunder, and lightning, attended with a furious ſwelling of the ſeas, and ſometimes with an earthquake; in ſhort with every circumſtance, which the elements can aſſemble, that is terrible and deſtructive. Firſt they ſee as the prelude to the enſuing havock, whole fields of ſugar-canes whirled into the air, and ſcattered over the face of the country. The ſtrongeſt trees of the foreſt are torn up by the roots, and driven about like ſtubble; their wind-mills are ſwept away in a moment; their utenſils, the fixtures, the ponderous copper boilers, and ſtills of ſeveral hundred weight, are wrenched from the ground, and battered to pieces; their houſes yield no protection; the rooſs are torn off at one blaſt; whilſt the rain, which in an hour riſes five feet, ruſhes in upon them with an irreſiſtible violence.

The hurricanes come on either in the quarters, or at the full or change of the moon. If it comes at the full moon, the ſky is very turbulent, the ſun more red than at other times; a dead calm prevails, and the hills are clear of all thoſe clouds and miſts which uſually hover about them. In the clefts of the earth, and the wells, you hear a hollow rumbling ſound, like the ruſhing of a great wind. At night the ſtars ſeem much larger than uſual, and ſurrounded with a ſort of burs; the north-weſt ſky has a black and menacing look; the ſea emits a ſtrong ſmell, and riſes into vaſt waves, often without any wind; the wind itſelf now forſakes its uſual ſteady eaſterly ſtream, and ſhifts about to the weſt from whence it ſometimes blows with intermiſſions, violently and irregularly for about two hours at a time. The moon herſelf is ſurrounded with a great bur, and ſometimes the ſun has the ſame

* See Wafer's Journey acroſs the Iſthmus of Darien.

appearance.

appearance. Theſe are ſigns which the Indians of theſe iſlands taught our planters, by which they can prognoſticate the approach of a hurricane.

The grand ſtaple commodity of the Weſt Indies is ſugar; a commodity not at all known to the Greeks and Romans, though it was made in China in very early times, from whence we had the firſt knowledge of it; but the Portugueſe were the firſt who cultivated it in America, and brought it into requeſt, as one of the materials of very univerſal luxury in Europe. It is not ſettled whether the cane, from which this ſubſtance is extracted, be a native of America, or brought thither to their colony of Braſil, by the Portugueſe, from India and the coaſt of Africa; but, however that matter may be, in the beginning they made the moſt, as they ſtill do the beſt, ſugars which come to market in this part of the world. The juice within the ſugar cane is the moſt lively, elegant and leaſt cloying ſweet in nature; and which, ſucked raw, has proved extremely nutritive and wholeſome. From the molaſſes rum is diſtilled, and from the ſcummings of the ſugar a meaner ſpirit is procured. Rum finds its market in North America, where it is conſumed by the inhabitants, or employed in the African trade, or diſtributed from thence to the fiſhery of Newfoundland, and other parts, beſides what comes to Great Britain and Ireland. However, a very great quantity of molaſſes is taken off raw, and carried to New England to be diſtilled there. The tops of the canes, and the leaves which grow upon the joints, make very good provender for their cattle; and the refuſe of the cane, after grinding, ſerves for fire; ſo that no part of this excellent plant is without its uſe.

They compute that, when things are well managed, the rum and molaſſes pay the charges of the plantation, and the ſugars are clear gain. However, by the particulars we have ſeen, and by others which we may eaſily imagine, the expences of a plantation in the Weſt Indies are very great, and the profits at the firſt view precarious; for the chargeable articles of the windmill, the boiling, cooling, and diſtilling houſes, and the buying and ſubſiſting a ſuitable number of ſlaves and cattle, will not ſuffer any man to begin a ſugar plantation of any conſequence, not to mention the purchaſe of the land, which is very high, under a capital of at leaſt 5000l. Neither is the life of a planter, if he means to acquire a fortune, a life of idleneſs and luxury; at all times he muſt keep a watchful eye upon his overſeers, and even overſee himſelf occaſionally. But at the boiling ſeaſon, if he is properly attentive to his affairs, no way of life can be more laborious, and more dangerous to the health; from a conſtant attendance day and night, in the extreme united heats of the climate, and ſo many fiery furnaces; add to this, the loſſes by hurricanes, earthquakes, and bad ſeaſons; and then conſider when the ſugars are in the caſk, that he quits the hazard of a planter, to engage in the hazards of a merchant, and ſhips his produce at his own riſk. Notwithſtanding all this, there are no parts of the world, in which great eſtates are made in ſo ſhort a time, from the produce of the earth, as in the Weſt Indies. The produce of a few good ſeaſons, generally provides againſt the ill effects of the worſt, as the planter is ſure of a ſpeedy and profitable market for his produce, which has a readier ſale than perhaps any other commodity in the world.

Large plantations are generally under the care of a manager, or chief overſeer, who has commonly a ſalary of 150l. a year, with overſeers under him in proportion to the greatneſs of the plantation, one to about 30 negroes, with a ſalary of about 40l. Such plantations too have a ſurgeon at a fixed ſalary, employed to take care of the negroes which belong too it. But the courſe which is leaſt troubleſome to the owner of the eſtate is, to let the land, with all the works, and the ſtock of cattle and ſlaves, to a tenant, who gives ſecurity for the payment of the rent,

and the keeping up repairs and ſtock. The eſtate is generally eſtimated to ſuch a tenant at half the neat produce of the beſt years; ſuch tenants, if induſtrious and frugal men, ſoon make good eſtates for themſelves.

The negroes in the plantations are ſubſiſted at a very eaſy rate. This is generally by allotting to each family of them a ſmall portion of land, and allowing them two days in the week, Saturday and Sunday, to cultivate it; ſome are ſubſiſted in this manner, but others find their negroes a certain portion of Guinea or Indian corn, and to ſome a ſalt herring, or a ſmall portion of bacon or ſalt pork, a day. All the reſt of the charge conſiſts in a cap, a ſhirt, a pair of breeches, and a blanket; and the profits of their labour yield 10 or 12 l. annually. The price of men negroes upon their firſt arrival is from 30 to 36l. women and grown boys 50s. leſs; but ſuch negro families as are acquainted with the buſineſs of the iſland generally bring above 40l. upon an average one with another; and there are inſtances of a ſingle negro man expert in buſineſs bringing 150 guineas; and the wealth of a planter is generally computed from the number of ſlaves he poſſeſſes.

To particulariſe the commodities proper for the Weſt India market, would be to enumerate all the neceſſaries, conveniences, and luxuries of life; for they have nothing of their own but cotton, coffee, tropical fruits, ſpices, and the commodities already mentioned.

Traders there make a very large profit upon all they ſell; but from the numerous ſhipping conſtantly arriving from Europe, and a continual ſucceſſion of new adventurers, each of whom carry out more or leſs as a venture, the Weſt India market is frequently overſtocked; money muſt be raiſed, and goods are ſometimes ſold at prime coſt or under. But thoſe who can afford to ſtore their goods, and wait for a better market, acquire fortunes equal to any of the planters. All kinds of handicraftſmen, eſpecially carpenters, bricklayers, braziers, and coopers, get very great encouragement. But it is the misfortune of the Weſt Indies, that phyſicians and ſurgeons even outdo the planter and merchant, in accumulating riches.

Before the late war, there were allowed to be in our Weſt Indies at leaſt 230,000 negro ſlaves; and upon the higheſt calculation, the whites therein did not amount to 90,000 ſouls. This diſproportion between the freemen and negroes, which grows more viſible every day, ſome writers have endeavoured to account for, by alledging, that the enterpriſing ſpirit, which the novelty of the object, and various concurrent cauſes, had produced in the laſt century, has decayed very much. That the diſpoſition of the Weſt Indians themſelves, who, for cheapneſs chooſe to do every thing by negroes which can poſſibly be done by them, contributes greatly to the ſmall number of whites of the lower ſtation. Such indeed is the powerful influence of avarice, that though the whites are kept in conſtant terror of inſurrections and plots, many families employ 25 or 30 negroes as menial ſervants, who are infinitely the moſt dangerous of the ſlaves, and in caſe of any inſurrection, have it more in their power to ſtrike a ſudden and fatal blow; and the cruelty with which the negroes are often treated, gives the white inhabitants too much reaſon for their apprehenſions.

The firſt obſervation that has been mentioned, in order to account for the preſent diſproportion between the freemen and the negroes in the Weſt Indies, we think is not well founded; that enterpriſing ſpirit which firſt led Britons out to diſcovery and colonization, ſtill animates in a very conſiderable degree the people of this nation; but the field has been lately more ample and enlarged, and emigrants have had greater ſcope whereon to range. Beſides the vaſt continent of North America, which takes in ſuch a variety of climates, and diſcovers ſuch a

richneſs of ſoil; the Eaſt Indies, an inexhauſtible mine of riches, have in ſome degree drawn the attention of mankind from that of the Weſt. Many of the beſt families of this nation are ambitious of procuring places for their ſons in the Eaſt Indies. Here is an ample field for all adventurous ſpirits, who diſdaining an idle life at home, and ambitious of becoming uſeful to themſelves, their connections or community, boldly venture into the immenſe regions of the Eaſtern world.

The iſlands of the Weſt Indies lie in the form of a bow, or ſemicircle, ſtretching from north to ſouth from the coaſt of Florida, to the river Oronoque, in the main continent of South America. Some call them the Caribbees, from the firſt inhabitants; though this is a term that moſt geographers confine to the Leeward iſlands. Sailors diſtinguiſh them into the Windward and Leeward iſlands, with regard to the uſual courſes of ſhips, from Old Spain, or the Canaries, to Carthagena or New Spain and Portobello. The geographical tables and maps diſtinguiſh them into the Great and Little Antilles.

JAMAICA.] The firſt that we come to belonging to Great Britain, and alſo the moſt important, after leaving Florida, is Jamaica, which lies between the 75th and 79th degrees of weſt longitude from London, and between 17 and 18 north latitude. From the eaſt and weſt it is in length about 140 miles, and in the middle about 60 in breadth, growing leſs towards each end, in the form of an egg. It lies near 4500 miles ſouth-weſt of England.

This iſland is interſected by a ridge of ſteep rocks tumbled by the frequent earthquakes in a ſtupendous manner upon one another. Theſe rocks, though containing no ſoil on their ſurface, are covered with a great variety of beautiful trees, flouriſhing in a perpetual ſpring; being nouriſhed by the rains, which often fall, or the miſts which contiunally brood on the mountains, and which their roots penetrating the crannies of the rocks, induſtriouſly ſeek out for their own ſupport. From the rocks iſſue a vaſt number of ſmall rivers of pure wholeſome water, which tumble down in cataracts, and together with the ſtupendous height of the mountains, and the bright verdure of the trees through which they flow, form a moſt delightful landſcape. On each ſide of this chain of mountains are ridges of lower ones, which diminiſh as they remove from it. On theſe coffee grows in great plenty. The vallies or plains between theſe ridges, are level beyond what is ordinary in moſt other countries, and the ſoil is prodigiouſly fertile.

The longeſt day in ſummer is about 13 hours, and the ſhorteſt in winter about eleven; but the moſt uſual diviſions of the ſeaſon in the Weſt Indies are into the dry and wet ſeaſons. The air of this iſland is, in many places, exceſſively hot, and unfavourable to European conſtitutions; but the cold ſea-breezes, which ſet in every morning at ten o'clock, render the heat more tolerable; and the air upon the high ground is temperate, pure and cooling. It lightens almoſt every night, but without much thunder, which when it happens is very terrible, and the lightning in theſe violent ſtorms frequently does great damage. In February or March they expect earthquakes, of which we ſhall ſpeak hereafter. During the months of May and October, the rains are extremely violent, and continue ſometimes for a fortnight together. In the plains are found ſeveral ſalt fountains; and in the mountains, not far from Spaniſh Town, is a hot bath, of great medicinal virtues. It gives relief in the dry belly-ach, which excepting the bilious and yellow fever, is one of the moſt terrible endemial diſtempers of Jamaica.

Sugar is the greateſt and moſt valuable production of this iſland. Cocoa was formerly cultivated in it to great extent. It produces alſo ginger, and the pimento

or,

or, as it is called, Jamaica pepper; the wild cinnamon-tree, whoſe bark is ſo uſeful in medicine; the manchineel, whoſe fruit, though uncommonly delightful to the eye, contains one of the worſt poiſons in nature; the mahogany, in ſuch uſe with our cabinet makers, and of the moſt valuable quality; but this wood begins to wear out, and of late is very dear. Excellent cedars, of a large ſize, and durable; the cabbage-tree remarkable for the hardneſs of its wood, which when dry is incorruptible, and hardly yields to any kind of tool; the palma affording oil, much eſteemed by the ſavages, both in food and medicine; the ſoap-tree, whoſe berries anſwer all the purpoſes of waſhing; the mangrove and olive bark, uſeful to tanners; the fuſtic and redwood for dying; and lately the logwood. The indigo plant was formerly much cultivated; and the cotton tree is ſtill ſo. No ſort of European grain grows here; they have only maize, or Indian corn, Guinea corn, peaſe of various kinds, but none of them reſembling ours, with variety of roots. Fruits are produced in great abundance; citrons, Seville and China oranges, common and ſweet lemons, limes, ſhadocks, pomegranates, mamees, ſourſops, papas, pine-apples, cuſtard-apples, tar-apples, prickly pears, allicada pears, melons, pompions, guavas, and ſeveral kinds of berries; alſo garden ſtuffs in great plenty, and good. The cattle bred on this iſland are but few; their beef is tough and lean; the mutton and lamb are tolerable; they have great plenty of hogs; many plantations have hundreds of them, and their fleſh is exceedingly ſweet and delicate. Their horſes are ſmall, mettleſome and hardy, and often ſell for 30 or 40l. ſterling. Jamaica likewiſe ſupplies the apothecary with guaiacum, ſarſaparilla, china, caſſia, and tamarinds. Among the animals are the land and ſea turtle, and the alligator. Here are great variety of fowl, wild and tame, and in particular more parrots than in any of the other iſlands; beſides parroquets, pellicans, ſnipes, teal, Guinea hens, geeſe, ducks, and turkies; the humming-bird, and many others. The rivers and bays abound with fiſh. The mountains breed numberleſs adders, and other noxious animals, as the fens and marches do the guana and gallewaſp, but theſe laſt are not venomous. Among the inſects are the ciror, or chego, which eat into the nervous and membranous parts of the fleſh of the negroes, and the white people are ſometimes infeſted with them. Theſe inſects get into any part of the body, but chiefly the legs and feet, where they breed in great numbers, and ſhut themſelves up in a bag. As ſoon as the perſon feels them, which is not perhaps till a week after they have been in the body, they pick them out with a nedle, or the point of a penknife, taking care to deſtroy the bag entirely, that none of the breed, which are like nits, may be left behind. They ſometimes get into the toes, and eat the fleſh to the very bone.

This iſland was originally a part of the Spaniſh empire in America. Several deſcents had been made upon it by the Engliſh, prior to 1656; but it was not till that year that Jamaica was reduced under our dominion. Cromwell had fitted out a ſquadron, under Penn and Venables, to reduce the Spaniſh iſland of Hiſpaniola, but there this ſquadron was unſucceſsful. The commanders, of their own accord, to attone for this misfortune, made a deſcent on Jamaica, and having carried the capital, St. Jago, ſoon compelled the whole iſland to ſurrender. Ever ſince it has been ſubject to the Engliſh, and the government of it is one of the richeſt places, next to that of Ireland, in the diſpoſal of the crown, the ſtanding ſalary being 2,500l. per annum, and the aſſembly commonly voting the governor as much more; which, with other perquiſites, make it on the whole little inferior to 10,000l. per annum.

We have already obſerved, that the government of all the American iſlands is the ſame, namely, that kind which we have formerly deſcribed under the name of a royal

a royal government. Their religion too is univerſally of the church of England; though they have no biſhop, the biſhop of London's commiſſary being the chief religious magiſtrate in thoſe parts.

About the beginning of this century, it was computed, that the number of whites in Jamaica amounted to 60,000, and that of the negroes to 120,000. It appears at preſent that Jamaica is rather on the decline, as is the number of inhabitants, the whites not exceeding 25,000, and the blacks 90,000. Beſides theſe, a number of fugitive negroes have formed a ſort of colony among the Blue Mountains, independent of the whites, with whom they make treaties, and to whom they ſend back run-away ſlaves.

Indigo was once much cultivated in Jamaica, and enriched the iſland to ſuch a degree, that in the pariſh of Vere, where this drug was chiefly cultivated, they are ſaid to have had no leſs than 300 gentlemen's coaches; a number perhaps the whole iſland exceeds not at this day; and there is great reaſon to believe, that there were many more perſons of property in Jamaica formerly, than are now, though they had not thoſe vaſt fortunes which dazzle us in ſuch a manner at preſent. However, the Jamaicans were undoubtedly very numerous, until reduced by earthquakes, and by terrible epidemical diſeaſes, which treading on the heels of the former calamities, ſwept away vaſt multitudes. Among the cauſes of their decline, the Weſt Indians complain of being deprived of the moſt beneficial part of their trade, the carrying of negroes and dry goods to the Spaniſh coaſt; of the low value of their produce, which they aſcribe to the great improvements the French make in their ſugar colonies, who are enabled to underſell them, owing to the comparative ſmallneſs of their duties; of the trade carried on from Ireland and the northern colonies to the French and Dutch iſlands, where they pay no duties, and are ſupplied with goods at an eaſier rate. Some of theſe complaints have been heard, and ſome remedies applied; others remain unredreſſed. Both the logwood trade, and the contraband, have been the ſubject of much contention, and the cauſe of a war between Great Britain and the Spaniſh nation. The former we always avowed, and claimed as our right, and at the peace of 1763, it was confirmed to us, the latter was permitted; becauſe we thought, and very juſtly, that if the Spaniards found themſelves aggrieved by any contraband trade, it lay upon them, and not upon us, to put a ſtop to it, by their guarda coſtas, which cruiſe in thoſe ſeas, purpoſely to ſeize and confiſcate ſuch veſſels and cargoes as are found in this trade. In this manner did the Britiſh court argue, till the politics of this nation, in compliance with the court of Spain, thought proper to ſend Engliſh cruiſers to the American coaſt, effectually to cruſh that lucrative trade, of which the whole body of Britiſh ſubjects in America loudly complained, as it put a ſtop to the principal channel which hitherto enabled them to remit ſo largely to Great Britain.

Port Royal was formerly the capital of Jamaica. It ſtood upon the point of a narrow neck of land, which, towards the ſea, formed part of the border of a very fine harbour of its own name. The conveniency of this harbour, which was capable of containing a thouſand ſail of large ſhips, and of ſuch depth as to allow them to load and unload at the greateſt eaſe, weighed ſo much with the inhabitants, that they choſe to build their capital on this ſpot, though the place was a hot dry ſand, and produced none of the neceſſaries of life, not even freſh water. But the advantage of its harbour, and the reſort of pirates, made it a place of great conſideration. Theſe pirates were called Buccaneers; they fought with an inconſiderate bravery, and then ſpent their fortune in this capital with an inconſiderate diſſipation. About the beginning of the year 1692, no place, for its ſize, could be compared to this town for trade, wealth, and an entire corruption of manners. In the month of

June, in this year, an earthquake, which ſhook the whole iſland to the foundations, totally overwhelmed this city, ſo as to leave, in one quarter, not even the ſmalleſt veſtige remaining. In two minutes, the earth opened and ſwallowed up nine tenths of the houſes, and two thouſand people, the water guſhed out from the openings of the earth, and tumbled the people on heaps; but ſome of them had the good fortune to catch hold of beams and raſters of houſes, and were afterwards ſaved by boats. Several ſhips were caſt away in the harbour; and the Swan frigate, which lay in the dock to careen, was carried over the tops of ſinking houſes, and did not overſet, but afforded a retreat to ſome hundreds of people, who ſaved their lives upon her. An officer, who was in the town at this time, ſays, the earth opened and ſhut very quick in ſome places, and he ſaw ſeveral people ſink down to the middle, and others appeared with their heads juſt above ground, and were ſqueezed to death. At Savannah, above a thouſand acres were ſunk, with the houſes and people in them; the place appearing for ſome time like a lake, was afterwards dried up, but no houſes were ſeen. In ſome parts, mountains were ſplit; and at one place a plantation was removed to the diſtance of a mile. They again rebuilt the city; but, ten years after it was deſtroyed by a great fire. The extraordinary convenience of the harbour tempted them to build it once more; and once more, in 1722, it was laid in rubbiſh by a hurricane, the moſt terrible on record. Such repeated calamities ſeemed to mark out this place as a devoted ſpot; the inhabitants therefore reſolved to forſake it for ever, and to reſide at the oppoſite bay, where they built Kingſton, which is lately become the capital of the iſland.

Kingſton conſiſts of upwards of one thouſand houſes, many of them handſomely built, and in the taſte of theſe iſlands, as well as the neighbouring continent, one ſtory high, with porticoes, and every conveniency for a comfortable habitation in that climate. Not far from Kingſton, ſtands St. Jago de la Vega, or Spaniſh town, which though at preſent inferior to Kingſton, was once the capital of Jamaica, and is ſtill the ſeat of government, and the place where the courts of juſtice are held.

On the third of October, 1780, a dreadful hurricane almoſt overwhelmed the little ſea-port-town of Savannah-la-Mer, and part of the adjacent country. Very few houſes were left ſtanding, and a great number of people were killed. Much damage was alſo done, and many lives loſt, in other parts of the iſland.

The whole product of the iſland may be reduced to theſe heads. Firſt, ſugars, of which they exported in 1753, twenty thouſand three hundred and fifteen hogſheads, ſome of them a ton in weight; which cannot be worth leſs in England than 424,725l. Moſt of this goes to London, Briſtol, and Glaſgow, and ſome part of it to North America, in return for the beef, pork, cheeſe, corn, peas, ſtaves, planks, pitch, and tar, which they have from thence. Second, rum, of which they export about four thouſand puncheons. The rum of this iſland is generally eſteemed the beſt, and is the moſt uſed in Great Britain. Third, molaſſes, in which they made a great part of their returns for New England, where there are vaſt diſtilleries. All theſe are the produce of the grand ſtaple, the ſugar cane. According to the late teſtimony of a reſpectable planter in Jamaica, that iſland hath 280,000 acres in canes, of which 210,000 are commonly cut, and make from 68 to 70,000 tons of ſugar, and 4,200,000 gallons of rum. Fourth, cotton, of which they ſend out two thouſand bags. The indigo, formerly much cultivated, is now inconſiderable; but ſome cocoa and coffee are exported, with a conſiderable quantity of pepper, ginger, drugs for dyers and apothecaries, ſweet-meats, mahogany, and manchineel planks. But ſome of the moſt conſiderable articles of their trade are with the Spaniſh continent of New Spain and Terra Firma; for in the former they cut great quantities of logwood, and both in the former and latter they carry on a very profitable trade

in

in negroes, and all kinds of European goods. And even in time of war with Spain, this trade between Jamaica and the Spaniſh Main goes on, which it will be impoſſible for Spain entirely to ſtop, while it is ſo profitable to the Britiſh merchant, and while the Spaniſh officers, from the higheſt to the loweſt, ſhew ſo great a reſpect to preſents properly made. Upon the whole, many of the people of Jamaica, whilſt they appear to live in ſuch a ſtate of luxury, as in moſt other places leads to beggary, acquire great fortunes. Their equipages, their cloaths, their furniture, their tables, all bear the tokens of the greateſt wealth and profuſion.

On Sundays, or court time, gentlemen wear wigs, and appear very gay in coats of ſilk, and veſts trimmed with ſilver. At other times they generally wear only thread ſtockings, linen drawers, a veſt, a Holland cap, and a hat upon it. Men ſervants wear a coarſe linen frock, with buttons at the neck and hands, long trowſers of the ſame, and a check ſhirt. The negroes, except thoſe who attend gentlemen, who have them dreſſed in their own livery, have once a year Oſnaburghs, and a blanket for clothing, with a cap or handkerchief for the head. The morning habit of the ladies is a looſe night-gown, careleſsly wrapped about them: before dinner they put off their diſhabille, and appear with a good grace in all the advantage of a rich and becoming dreſs.

The common drink of perſons in affluent circumſtances is Madeira wine mixed with water. Ale and claret are extravagantly dear; and London porter ſells for a ſhilling per bottle. But the general drink, eſpecially among thoſe of an inferior rank, is rum-punch, which they call Kill-Devil, becauſe, being frequently drank to exceſs, it heats the blood, and brings on fevers, which in a few hours ſend them to the grave, eſpecially thoſe who are juſt come to the iſland, which is the reaſon that ſo many die here upon their firſt arrival.

Engliſh money is ſeldom ſeen here, the current coin being entirely Spaniſh. There is no place where ſilver is ſo plentiful, or has a quicker circulation. You cannot dine for leſs than a piece of eight, and the common rate of boarding is three pounds per week; though in the markets, beef, pork, fowl, and fiſh, may be bought as cheap as in London; but mutton ſells at nine pence per pound.

Learning is here at a very low ebb; there are indeed ſome gentlemen well verſed in literature, and who ſend their children to Great Britain, where they have the advantage of a polite and liberal education; but the bulk of the people take little care to improve their minds, being generally engaged in trade or riotous diſſipation.

The miſery and hardſhips of the negroes are truly moving; and though great care is taken to make them propagate, the ill treatment they receive ſo ſhortens their lives, that inſtead of increaſing by the courſe of nature, many thouſands are annually imported to the Weſt Indies, to ſupply the place of thoſe who pine and die through hard uſage. It is ſaid, they are ſtubborn and untractable, for the moſt part, and that they muſt be ruled with a rod of iron; but they ought not to be cruſhed with it, or to be thought a ſort of beaſts, without ſouls, as ſome of their maſters, or overſeers do at preſent, though ſome of theſe tyrants are themſelves the dregs of this nation, and the refuſe of the jails of Europe. Many of the negroes, however, who fall into the hands of gentlemen of humanity, find their ſituation eaſy and comfortable; and it has been obſerved that in North America, and other countries, where in general theſe poor wretches are better uſed, there is a leſs waſte of negroes, they live longer, and propagate better. And it ſeems clear, from the whole courſe of hiſtory, that thoſe nations who have behaved with the greateſt humanity to their ſlaves, were always beſt ſerved, and ran the leaſt hazard from their rebellions. The ſlaves, on their firſt arrival from the coaſt of Guinea, are expoſed naked to ſale; they are then generally very ſimple and innocent creatures, but they

ſoon become roguiſh enough; and when they come to be whipped, excuſe their faults by the example of the whites. They believe every negro returns to his native country after death. This thought is ſo agreeable, that it cheers the poor creatures, and renders the burthen of life eaſy, which would otherwiſe, to many of them, be quite intolerable. They look on death as a bleſſing, and it is ſurpriſing to ſee with what courage and intrepidity ſome of them meet it. When a negro is about to expire, his fellow ſlaves kiſs him, and wiſh him a good journey, and ſend their hearty good wiſhes to their relations in Guinea. They make no lamentations; but with a great deal of joy inter his body, believing he is gone home and happy.—When will the voice of humanity be properly attended to, and this opprobrium of cultivated nations ceaſe!

BARBADOES.] This iſland, the moſt eaſterly of all the Caribbees, is ſituated in 59 degrees weſt lon. and 13 degrees north lat. It is 21 miles in length, and in breadth 14. When the Engliſh, ſome time after the year 1625, firſt landed here, they found it the moſt ſavage and deſtitute place they had hitherto viſited. It had not the leaſt appearance of ever having been peopled even by ſavages. There was no kinds of beaſts of paſture or of prey, no fruit, no herb, nor root, fit for ſupporting the life of man. Yet as the climate was ſo good, and the ſoil appeared fertile, ſome gentlemen of ſmall fortunes in England reſolved to become adventurers thither. The trees were ſo large, and of a wood ſo hard and ſtubborn, that it was with great difficulty they could clear as much ground as was neceſſary for their ſubſiſtence. By unremitting perſeverance, however, they brought it to yield them a tolerable ſupport; and they found that cotton and indigo agreed well with the ſoil, and that tobacco, which was beginning to come into repute in England, anſwered tolerably. Theſe proſpects, together with the ſtorm between the king and parliament, which was beginning to break out in England, induced many new adventurers to tranſport themſelves to this iſland. And what is extremely remarkable, ſo great was the increaſe of people in Barbadoes, 25 years after its firſt ſettlement, that in 1650, it contained more than 50,000 whites, and a much greater number of negro and Indian ſlaves; the latter they acquired by means not at all to their honour; for they ſeized upon all thoſe unhappy men, without any pretence, in the neighbouring iſlands, and carried them into ſlavery. A practice, which has rendered the Caribbee Indians irreconcileable to us ever ſince. They had begun, a little before this, to cultivate ſugar, which ſoon rendered them extremely wealthy. The number of the ſlaves therefore was ſtill augmented; and in 1676, it is ſuppoſed that their number amounted to 100,000, which, together with 50,000 whites, make 150,000 on this ſmall ſpot, a degree of population unknown in Holland, in China, or any other part of the world moſt renowned for numbers.

At this time Barbadoes employed 400 ſail of ſhips, one with another of 150 tons, in their trade. Their annual exports in ſugar, indigo, ginger, cotton, and citron-water, were above 350,000l. and their circulating caſh at home was 200,000l. Such was the increaſe of population, trade, and wealth, in the courſe of 50 years. But ſince that time, this iſland has been much on the decline, which is to be attributed partly to the growth of the French ſugar-colonies, and partly to our own eſtabliſhments in the neighbouring iſles. Their numbers at preſent are ſaid to be 20,000 whites, and 100,000 ſlaves. Their commerce conſiſts in the ſame articles as formerly, though they deal in them to leſs extent. Their capital is Bridgetown, where the governor reſides, whoſe employment is ſaid to be worth 5000l. per annum. They have a college founded and well endowed by colonel Codrington, who was a native of this iſland. Barbadoes, as well as Jamaica, has ſuffered much by

by hurricanes, fires, and the plague. On the 10th of October 1780, a dreadful hurricane occaſioned vaſt devaſtation in Barbadoes, great numbers of the houſes were deſtroyed, not one houſe in the iſland was wholly free from damage, many perſons were buried in the ruins of the buildings, and great numbers were driven into the ſea, and there periſhed.

ST. CHRISTOPHER'S.] This iſland, commonly called by the ſailors St. Kitt's, is ſituated in 62 degrees weſt lon. and 17 degrees north lat. about 14 leagues from Antigua, and is twenty miles long, and ſeven broad. It has its name from the famous Chriſtopher Columbus, who diſcovered it for the Spaniards. That nation, however, abandoned it as unworthy of their attention; and in 1626, it was ſettled by the French and Engliſh conjunctly; but entirely ceded to us by the peace of Utrecht. Beſides cotton, ginger, and the tropical fruits, it generally produces near as much ſugar as Barbadoes, and ſometimes quite as much. It is computed that this iſland contains 6000 whites, and 36,000 negroes. In February 1782, it was taken by the French, but reſtored to England by the late treaty of peace.

ANTIGUA.] Situated in 61 degrees weſt lon. and 17 degrees north lat. is of a circular form, near 20 miles over every way. This iſland, which was formerly thought uſeleſs, has now got the ſtart of the reſt. It has one of the beſt harbours in the Weſt Indies, and its capital St. John's, which before the fire in 1769, was large and wealthy, is the ordinary ſeat of the governor of the Leeward Iſlands. Antigua is ſuppoſed to contain about 7000 whites, and 30,000 ſlaves.

NEVIS AND MONTSERRAT.] Two ſmall iſlands, lying between St. Chriſtopher's and Antigua, neither of them exceeding 18 miles in circumference, and together contain 5000 whites, and 10,000 ſlaves. The ſoil in theſe four iſlands is pretty much alike, light and ſandy, but notwithſtanding fertile in a high degree; and their principal exports are derived from the ſugar-cane. Both theſe iſlands were taken by the French in 1782, but were reſtored at the peace.

BARBUDA.] Situated in 17 degrees 49 min. north lat. 61 deg. 50 min. weſt lon. 35 miles north of Antigua, is 20 miles in length, and 12 in breadth. It is fertile, and has a good road for ſhipping, but no direct trade with England. The inhabitants are chiefly employed in huſbandry, and raiſing freſh proviſions for the uſe of the neighbouring iſles. It belongs to the Codrington family, and the inhabitants amount to about 1500.

ANGUILLA.] Situated in 18 degrees north lat. 60 miles north-weſt of St. Chriſtopher's, is about 30 miles long, and 10 broad. This iſland is perfectly level, and the climate nearly the ſame with that of Jamaica. The inhabitants, who are not numerous, apply themſelves to huſbandry, and feeding of cattle.

DOMINICA.] Situated in 16 deg. N. lat. and 62 W. lon. lies about half way between Guadaloupe and Martinico. It is near 28 miles in length, and thirteen in breadth: it got its name from being diſcovered by Columbus on a Sunday. The ſoil of this iſland is thin, and better adapted to the rearing of cotton than ſugar; but the ſides of the hills bear the fineſt trees in the Weſt Indies, and the iſland is well ſupplied with rivulets of fine water. The French have always oppoſed our ſettling here, becauſe it muſt cut off their communication, in the time of war, between Martinico and Guadalupe. However, by the peace of Paris, in 1763, it was ceded in

expreſs terms to the Engliſh; but we have derived little advantage from this conqueſt, the iſland being, till lately, no better than a harbour for the natives of the other Caribbees, who being expelled their own ſettlements, took refuge here. But, on account of its ſituation between the principal French iſlands, and Prince Rupert's Bay, being one of the moſt capacious in the Weſt Indies, it has been judged expedient to form Dominica into a government of itſelf, and to declare it a free port. It was taken by the French in 1778, but was reſtored again to Great Britain by the late peace.

ST. VINCENT.] Situated in 13 deg. N. lat. and 61 deg. W. lon. 50 miles north-weſt of Barbadoes, 30 miles ſouth of St. Lucia, is about 24 miles in length, and 18 in breadth. It is extremely fruitful, being a black mould upon a ſtrong loam, the moſt proper for the raiſing of ſugar. Indigo thrives here remarkably well, but this article is leſs cultivated than formerly throughout the Weſt Indies. Many of the inhabitants are Caribbeans, and there are many fugitives from Barbadoes and the other iſlands. The Caribbeans are ſaid to have been treated with ſo much injuſtice and barbarity, after this iſland came into poſſeſſion of the Engliſh, to whom it was ceded by the peace, in 1763, that they greatly contributed towards enabling the French to get poſſeſſion of it again in 1779; but it was reſtored to Great Britain by the late treaty of peace.

GRANADA AND THE GRANADINES.] Granada is ſituate in 12 deg. north lat. and 62 deg. weſt lon. about 30 leagues ſouth-weſt of Barbadoes, and almoſt the ſame diſtance north of New Andaluſia, or the Spaniſh Main. This iſland is ſaid to be 30 miles in length, and 15 in breadth. Experience has proved, that the ſoil is extremely proper for producing ſugar, coffee, tobacco, and indigo; and upon the whole it carries with it all the appearance of becoming as flouriſhing a colony as any in the Weſt Indies, of its dimenſions. A lake on the top of a hill, in the middle of the iſland, ſupplies it plentifully with fine rivers, which adorn and fertilize it. Several bays and harbours lie round the iſland, ſome of which may be fortified with great advantage, which renders it very convenient for ſhipping; and it is not ſubject to hurricanes. St. George's Bay has a ſandy bottom, and is extremely capacious, but open. In its harbour, or careening place, 100 large veſſels may be moored with perfect ſafety. This iſland was long the theatre of bloody wars between the native Indians and the French, during which this handful of Caribbees defended themſelves with the moſt reſolute bravery. In the laſt war but one, when Granada was attacked by the Engliſh, the French inhabitants, who were not numerous, were ſo amazed at the reduction of Guadalupe and Martinico, that they loſt all ſpirit, and ſurrendered without making the leaſt oppoſition; and the full property of this iſland together with the ſmall iſlands on the North, called the Granadines, which yield the ſame produce, were confirmed to the crown of Great Britain by the treaty of Paris in 1763. In July, 1779, the French made themſelves maſters of this iſland, which was reſtored to Great Britain by the late treaty of peace.

NEWFOUNDLAND.] Excluſive of the Weſt India ſugar iſlands lying between the two continents of America, Great Britain claims ſome others, that are ſeated at the diſtance of ſome thouſand miles from each other, upon the coaſt of this quarter of the globe, of which we ſhall ſpeak according to our method, beginning with the north.

Newfoundland is ſituated to the eaſt of the gulf of St. Laurence, between 46 and 52 degrees north lat. and between 53 and 59 weſt lon. ſeparated from Labrador, or

New Britain, by the ſtraits of Belleiſle; and from Canada, by the Bay of St. Laurence, being 350 miles long, and 200 broad. The coaſts are extremely ſubject to fogs, attended with almoſt continual ſtorms of ſnow and ſleet, the ſky being uſually overcaſt. From the ſoil of this iſland, which is rocky and barren, we are far from reaping any ſudden or great advantage, for the cold is long-continued and ſevere; and the ſummer heat, though violent, warms it not enough to produce any thing valuable. However, it is watered by ſeveral good rivers, and hath many large and good harbours. This iſland, whenever the continent ſhall come to fail of timber (which on the ſea-coaſt is perhaps no very remote proſpect), will afford a large ſupply for maſts, yards, and all ſorts of lumber for the Weſt India trade. But what at preſent it is chiefly valuable for, is the great fiſhery of cod, carried on upon thoſe ſhoals which are called the Banks of Newfoundland. Great Britain and North America, at the loweſt computation, annually employed 3000 ſail of ſmall craft in this fiſhery; on board of which, and on ſhore to cure and pack the fiſh, are upwards of 10,000 hands; ſo that this fiſhery is not only a very valuable branch of trade to the merchant, but a ſource of livelihood to many thouſands of poor people, and a moſt excellent nurſery for the royal navy. This fiſhery is computed to increaſe the national ſtock 300,000l. a year in gold and ſilver, remitted to us for the cod we ſell in the North, in Spain, Portugal, Italy, and the Levant. The plenty of cod, both on the great bank and the leſſer ones, which lie to the eaſt and ſouth-eaſt of this iſland, is inconceivable; and not only cod, but ſeveral other ſpecies of fiſh, are caught there in abundance; all of which are nearly in an equal plenty along the ſhores of Newfoundland, Nova Scotia, New England, and the iſle of Cape Breton; ſo that where our colonies are thinly peopled, or ſo barren as not to produce any thing from their ſoil, their coaſts make us ample amends, and pour in upon us a wealth of another kind, and no way inferior to that ariſing from the moſt fertile ſoil.

This iſland, after various diſputes about the property, was entirely ceded to England by the treaty of Utrecht, in 1713; but the French were left at liberty to dry their nets on its northern ſhores; and by the treaty of 1763, they were permitted to fiſh in the gulf of St. Laurence, but with this limitation, that they ſhould not approach within three leagues of any of the coaſts belonging to England. The ſmall iſlands of St. Pierre and Miquelon, ſituated to the ſouthward of Newfoundland, were alſo ceded to the French, who ſtipulated to erect no fortifications on them, nor to keep more than 50 ſoldiers to enforce the police. By the laſt treaty of peace, the French are to enjoy the fiſheries on the north and the weſt coaſts of the iſland; and the Americans are allowed the ſame privileges in fiſhing as before their independence. The chief towns in Newfoundland are Placentia, Bonaviſta, and St. John: but not above 1000 families remain here in the winter. A ſmall ſquadron of men of war are ſent out every ſpring to protect the fiſheries and inhabitants, the commander of which is governor of the iſland.

CAPE BRETON.] This iſland, ſeated between Newfoundland and Nova-Scotia, is in length about 110 miles. The ſoil is barren, but it has good harbours, particularly that of Louiſburgh, which is near four leagues in circumference, and has every where ſix or ſeven fathoms water.

The French began a ſettlement in this iſland, in 1714, which they continued to increaſe, and fortified it in 1720. They were, however, diſpoſſeſſed in 1745, by the inhabitants of New England, with little aſſiſtance from Great Britain; but it was again, by the treaty of Aix-la-Chapelle, ceded to the French, who ſpared no expence to fortify and ſtrengthen it. Notwithſtanding which, it was again reduced, in 1758, by the Britiſh troops under general Amherſt and admiral Boſcawen, together

gether with a large body of New England men, who found in that place two hundred and twenty-one pieces of cannon, and eighteen mortars, together with a large quantity of ammunition and ſtores; and it was ceded to the crown of Great Britain by the peace of 1763, ſince which the fortifications have been blown up, and the town of Louiſburgh diſmantled.

ST. JOHN'S.] Situated in the gulf of St. Laurence, is about 60 miles in length, and 30 or 40 broad, has many fine rivers, and though lying near Cape Breton and Nova Scotia, has greatly the advantage of both in pleaſantneſs and fertility of ſoil. Upon the reduction of Cape Breton, the inhabitants of this iſland, amounting to 4000, ſubmitted quietly to the Britiſh arms; and, to the diſgrace of the French governor, there were found in his houſe ſeveral Engliſh ſcalps, which were brought there to market by the ſavages of Nova Scotia; this being the place where they were encouraged to carry on that barbarous and inhuman trade. This iſland was ſo well improved by the French, that it was ſtyled the granary of Canada, which it furniſhed with great plenty of corn, as well as beef and pork.

BERMUDAS, or SUMMER ISLANDS.] Theſe received their firſt name from their being firſt diſcovered by John Bermudas a Spaniard; and were called the Summer Iſlands, from ſir George Summers, who was ſhipwrecked on their rocks in 1609, in his paſſage to Virginia. They are ſituated at a vaſt diſtance from any continent, in 32 degrees north lat. and in 65 degrees weſt long. Their diſtance from the Land's End is computed to be near 1500 leagues, from the Madeiras about 1200, and from Carolina 300. The Bermudas are but ſmall, not containing in all above 20,000 acres; and are very difficult of acceſs, being, as Waller the poet, who reſided ſome time there, expreſſes it, "walled with rocks." The air of theſe iſlands, which Waller celebrates in one of his poems, has been always eſteemed extremely healthful; and the beauty and richneſs of the vegetable productions are delightful. Though the ſoil of theſe iſlands is admirably adapted to the cultivation of the vine, the chief and only buſineſs of the inhabitants, who conſiſt of about 10,000, is the building and navigating of the light ſloops and brigantines, which they employ chiefly in the trade between North America and the Weſt Indies. Theſe veſſels are remarkable for their ſwiftneſs; as the cedar, of which they are built, is for its hard and durable quality.

The town of St. George, which is the capital, is ſeated at the bottom of a haven in the iſland of the ſame name, and is defended with ſeven or eight forts and ſeventy pieces of cannon. It contains above 1000 houſes, a handſome church, and other elegant public buildings.

LUCAY'S, or BAHAMA ISLANDS.] The Bahamas are ſituated to the ſouth of Carolina, between 22 and 27 degrees north lat. and 73 and 81 degrees weſt long. They extend along the coaſt of Florida quite down to the iſle of Cuba; and are ſaid to be 500 in number, ſome of them only mere rocks; but twelve of them are large, fertile, and in nothing different from the ſoil of Carolina: all are, however, uninhabited, except Providence, which is 200 miles eaſt of the Floridas; though ſome others are larger and more fertile, on which the Engliſh have plantations. Between them and the continent of Florida is the gulf of Bahama, or Florida, through which the Spaniſh galleons ſail in their paſſage to Europe.

Theſe iſlands were the firſt fruits of Columbus's diſcoveries; but they were not known to the Engliſh till 1667, when captain Seyle, being driven among them in his paſſage to Carolina, gave his name to one of them; and being a ſecond time driven upon it, gave it the name of Providence. The Engliſh, obſerving the ad-

vantageous ſituation of theſe iſlands as a check on the French and Spaniards, attempted to ſettle them in the reign of Charles II. Some unlucky accidents prevented this ſettlement from being of any advantage; and the Iſle of Providence became an harbour for the buccaneers, or pirates, who for a long time infeſted the American navigation. This obliged the government, in 1718, to ſend out captain Woodes Rogers, with a fleet, to diſlodge the pirates, and to make a ſettlement. This the captain effected; a fort was erected, and an independent company was ſtationed in the iſland. Ever ſince this laſt ſettlement, theſe iſlands have been improving, though they advance but ſlowly. In time of war, people gain conſiderably by the prizes condemned there; and at all times by the wrecks, which are frequent in this labyrinth of rocks and ſhelves. The Spaniards and Americans captured theſe iſlands during the laſt war, but they were retaken by a detachment from St. Auguſtine, April 7, 1783.

FALKLAND ISLANDS.] Leaving the Bahama and Weſt India iſlands, we ſhall now proceed along the ſouth-eaſt coaſt of America, as far as the 52d degree of ſouth lat. where the reader, by looking into the map, will perceive the Falkland iſlands, ſituated near the Straits of Magellan, at the utmoſt extremity of South America. King Charles II. of England thought the diſcovery of this coaſt of ſuch conſequence, that ſir John Narborough was purpoſely fitted out to ſurvey the Straits of Magellan, the neighbouring coaſt of Patagonia, and the Spaniſh ports in that neighbourhood; with directions, if poſſible, to procure ſome intercourſe with the Chilian Indians, who are generally at war, or at leaſt on ill terms, with the Spaniards; and to eſtabliſh a commerce and a laſting correſpondence with them. Though ſir John, through accidental cauſes, failed in this attempt, which, in appearance, promiſed many advantages to this nation, his tranſactions upon that coaſt, beſides the many valuable improvements he furniſhed to geography and navigation, are rather an encouragement for farther trials of this kind, than any objection againſt them. It appeared by the precautions and fears of the Spaniards, that they were fully convinced of the practicability of the ſcheme he was ſent to execute, and extremely alarmed with the apprehenſion of its conſequences. It is ſaid, that his majeſty Charles II. was ſo far prepoſſeſſed with the belief of the emoluments which might redound to the public from this expedition, and was ſo eager to be informed of the event of it, that having intelligence of ſir John Narborough's paſſing through the Downs, on his return, he had not patience to attend his arrival at court, but went himſelf in his barge to Graveſend to meet him.

"As therefore it appears (ſays the author of Anſon's Voyage) that all our future expeditions to the South Seas muſt run a conſiderable riſk of proving abortive, whilſt in our paſſage thither we are under the neceſſity of touching at the Portugueſe ſettlement of Braſil (where we may certainly depend on having our ſtrength, condition, and deſigns betrayed to the Spaniards), the diſcovery of ſome place more to the ſouthward, where ſhips might refreſh, and ſupply themſelves with the neceſſary ſea-ſtock for their voyage round Cape Horn, would be an expedient that would relieve us from theſe embarraſſments, and would ſurely be a matter worthy the attention of the public. Nor does this ſeem difficult to be effected; for we have already the imperfect knowledge of two places, which might, perhaps, on examination, prove extremely convenient for this purpoſe; one of them is Pepys' Iſland, in the latitude of 47° ſouth, and laid down by Dr. Halley, about 80 leagues to the eaſtward of Cape Blanco, on the coaſt of Patagonia; the other is *Falkland's Iſles*, in the latitude of 51 and a half, lying nearly ſouth of Pepys' Iſland. The laſt of theſe have been ſeen by many ſhips, both French and Engliſh. Woodes Rogers,

Rogers, who ran along the north-eaſt coaſt of theſe iſles in the year 1708, tells us that they extended about two degrees in length, and appeared with gentle deſcents from hill to hill, and ſeemed to be good ground, interſperſed with woods, and not deſtitute of harbours. Either of theſe places, as they are iſlands at a conſiderable diſtance from the continent, may be ſuppoſed, from their latitude, to lie in a climate ſufficiently temperate. This even in time of peace, might be of great conſequence to this nation; and, in time of war, would make us maſters of thoſe ſeas."

Falkland iſlands were firſt diſcovered by ſir Richard Hawkins in 1594; the principal of which he named Hawkins' Maidenland, in honour of queen Elizabeth. The preſent Engliſh name Falkland was probably given them by captain Strong, in 1689, and being adopted by Halley, it has from that time been received into our maps.

In the year 1764, the late lord Egmont, then firſt lord of the admiralty, revived the ſcheme of a ſettlement in the South-Seas, and commodore Byron was ſent to take poſſeſſion of Falkland Iſlands in the name of his Britannic majeſty, and in his journal repreſents them as a valuable acquiſition. On the other hand, they are repreſented by captain M'Bride, who in 1766 ſucceeded that gentleman, as the outcaſts of nature. "We found, ſays he, a maſs of iſlands and broken lands, of which the ſoil was nothing but a bog, with no better proſpect than that of barren mountains, beaten by ſtorms almoſt perpetual. Yet this is ſummer; and if the winds of winter hold their natural proportion, thoſe who lie but two cables length from the ſhore, muſt paſs weeks without any communication with it." The plants and vegetables which were planted by Mr. Byron's people, and the fir-trees, a native of rugged and cold climates, had withered away; but goats, ſheep, and hogs, that were carried thither, were found to thrive and increaſe as in other places. Geeſe, of a fiſhy taſte, ſnipes, foxes, ſea-lions, penguins, plenty of good water, and, in the ſummer months, wild celery and ſorrel, are the natural luxuries of thoſe iſlands.

But though the ſoil be barren, and the ſea tempeſtuous, an Engliſh ſettlement was made here, of which we were diſpoſſeſſed by the Spaniards in 1770. That meaſure was, however, diſavowed by the Spaniſh ambaſſador, and ſome conceſſions were made to the court of Great Britain; but the ſettlement was finally abandoned in 1774, in order to avoid giving umbrage to the court of Spain.

Miles.		Degrees.		Sq. Miles.
Length 500 Breadth 440	between	80 and 91 weſt longitude. 25 and 32 north latitude.		100,000.

BOUNDARIES.] THIS country, which was ceded by Great Britain to Spain by the late treaty of peace, and includes a part of Louiſiana, is bounded by Georgia on the North; by the Miſſiſſippi on the Weſt; by the gulf of Mexico on the South; and by the Bahama ſtraits on the Eaſt.

RIVERS.]

RIVERS.] Theſe are the Miſſiſſippi, which forms the weſtern boundary of Florida, and is one of the fineſt in the world, as well as the largeſt; for including its turnings and windings, it is ſuppoſed to run a courſe of 4500 miles; but its mouths are in a manner choaked up with ſands and ſhoals, which deny acceſs to veſſels of any conſiderable burthen; there being, according to Mitchel's map, only twelve feet water over the bar (captain Pitman ſays ſeventeen) at the principal entrance. Within the bar there is 100 fathom water, and the channel is every where deep, and the current gentle, except at a certain ſeaſon, when like the Nile, it overflows and becomes extremely rapid. It is, except the entrance already mentioned, every where free from ſhoals and cataracts, and navigable for craft of one kind or other almoſt to its ſource. The Mobille, the Apalachicola, and St. John's rivers, are alſo large and noble ſtreams.

BAYS AND CAPES.] The principal bays are, St. Bernard's, Aſcenſion, Mobille, Penſacola, Dauphin, Joſeph, Apalaxy, Spiritu Sancto, and Charles Bay.

The chief capes are, Cape Blanco, Sambles, Anclote, St. Auguſtine, and Cape Florida, at the extremity of the peninſula.

AIR AND CLIMATE.] Various accounts have been given of theſe particulars. The people who obtained grants of lands in Florida, when belonging to England, and were deſirous to ſettle or ſell them, repreſented the whole country as a Canaan, and St. Auguſtine, in Eaſt Florida, as the Montpelier of America: they told us that the climate of Florida is an exceedingly agreeable medium betwixt the ſcorching heat of the tropics, and the pinching cold of the northern latitudes; that there is indeed a change of the ſeaſons, but it is a moderate one: in November and December, many trees looſe their leaves, vegetation goes on ſlowly, and the winter is perceived, but ſo mild, that ſnow is never ſeen there; and the tendereſt plants of the Weſt Indies, ſuch as the plantain, the alligator pear-tree, the banana, the pine-apple, the ſugar-cane, &c. remain unhurt during the winter in the gardens of St. Auguſtine; that the fogs and dark gloomy weather, ſo common in England, are unknown in this country; and though at the equinoxes, eſpecially the autumnal, the rains fall very heavy every day for ſome weeks together: yet when the ſhower is over, the ſky immediately clears up, and all is calm and ſerene.

Others have repreſented this very coaſt as the grave and burying-place of all ſtrangers who are ſo unhappy as to go there, alleging the well-known ſtory propagated ſoon after the laſt peace, that upon the landing of our troops to take poſſeſſion of Florida, the Spaniards aſked them, "What crimes have you been guilty of at home?" We ſhall take the liberty to obſerve on this head, that though the air is here very warm, the heats are much allayed by cool breezes from the ſeas which environ and waſh a conſiderable part of this country. The inland countries towards the north feel a little of the roughneſs of the north-weſt wind, which, more or leſs, diffuſes its chilling breath over the whole continent of North America, carrying froſt and ſnow many degrees more to the ſouthward in theſe regions, than the north-eaſt wind does in Europe. That the air of Florida is pure and wholeſome, appears from the ſize, vigour, and longevity of the Floridian Indians, who in theſe reſpects far exceed their more ſouthern neighbours, the Mexicans; and when the Spaniards quitted St. Auguſtine, many of them were of great age, ſome above ninety.

SOIL, PRODUCTIONS, AND FACE OF THE COUNTRY. Many of the diſadvantages indiſcriminately imputed to the ſoil of the whole country ſhould be confined to Eaſt-Florida, which indeed, near the ſea, and 40 miles back, is flat and ſandy. But even the country round St. Auguſtine, in all appearance the worſt in the province, is far from being unfruitful; it produces two crops of Indian

corn a year; the garden vegetables are in great perfection; the orange and lemon trees grow here, without cultivation, to a larger ſize, and produce better fruit than in Spain or Portugal. The inland country towards the hills is extremely rich and fertile, producing ſpontaneouſly the fruits, vegetables, and gums, that are common to Georgia and the Carolinas; and is likewiſe favourable to the rearing of European productions. There is not, on the whole continent of America, any place better qualified by nature to afford not only all the neceſſaries of life, but alſo all the pleaſures of habitation, than that part of this country which lies upon the banks of the Miſſiſſippi.

From the climate of Florida, and ſome ſpecimens ſent to England, there is reaſon to expect, that cotton, ſugar, wine, and ſilk, will grow here as well as in Perſia, India, and China, which are in the ſame latitudes. This country alſo produces rice, indigo, ambergris, cochineal, amethyſts, turquoiſes, lapis lazuli, and other precious ſtones; copper, quick-ſilver, pit-coal, and iron ore: pears are found in great abundance on the coaſt of Florida: mahogany grows on the ſouthern parts of the peninſula, but inferior in ſize and quality to that of Jamaica. The animal creation are here ſo numerous, that you may purchaſe a good ſaddle-horſe in exchange for goods of five ſhillings value prime coſt; and there are inſtances of horſes being exchanged for a hatchet per head. Naval ſtores might be produced in great quantities in Florida; and Weſt Florida has already ſupplied Spain with conſiderable quantities. It is ſaid, that no province can ſo profitably furniſh Madeira with corn and pipe-ſtaves as Weſt Florida, and in return ſupply itſelf and other provinces with wines. The fiſheries might likewiſe be rendered here very profitable, as might alſo the trade for furs, and various other branches.

POPULATION, COMMERCE, AND CHIEF TOWNS. Notwithſtanding the luxuriancy of the ſoil, the ſalubrity of the air, the cheapneſs and plenty of proviſions, and the encouragement of the Britiſh government, the number of Engliſh inhabitants here was never very conſiderable. Indeed the affairs of the colony appear to have been injudiciouſly managed; and the reduction of Penſacola by the arms of the king of Spain in 1781, deprived us of our flattering proſpects from the poſſeſſion of Florida.

The chief town in Weſt Florida is Penſacola, N. lat. 30-22. W. lon. 87-20, which is ſeated within the bay of the ſame name, on a ſandy ſhore that can only be approached by ſmall veſſels. The road is, however, one of the beſt in all the gulf of Mexico, in which veſſels may lie in ſafety againſt every wind, being ſurrounded by land on all ſides. This place ſent in ſkins, logwood, dying ſtuff, and ſilver in dollars, to the annual value of 63,000 l. and received of our manufactures, at an average of three years, to the value of 97,000l.

St. Auguſtine, the capital of Eaſt Florida, N. lat. 29-45. W. lon. 81-12, runs along the ſhore, and is of an oblong form, divided by four regular ſtreets, croſſing each other at right angles. The town is fortified with baſtions, and encloſed with a ditch. It is likewiſe defended by a caſtle, which is called Fort St. John; and the whole is furniſhed with cannon. At the entrance into the harbour are the north and ſouth breakers, forming two channels, whoſe bars, at low tides, have eight feet water.

NEW MEXICO INCLUDING CALIFORNIA.

SITUATION AND EXTENT.

Miles.		Degrees.		Sq. Miles.
Length 2000 Breadth 1600	between	94 and 126 weſt longitude. 23 and 43 north latitude.		600,000.

BOUNDARIES.] BOUNDED by unknown lands on the North; by Louiſiana, on the Eaſt; by Old Mexico, and the Pacific Ocean, on the South; and by the ſame ocean, on the Weſt.

Diviſions.	Subdiviſions.	Chief Towns.
North-eaſt diviſion	New Mexico Proper	SANTA FE, W. lon. 104. N. lat. 36.
South-eaſt diviſion	Apacheira — —	St. Antonio
South diviſion	Sonora — —	Tuape
Weſt diviſion	California, a peninſula.	St. Juan.

SOIL AND CLIMATE.] Theſe countries lying for the moſt part within the temperate zone, have a climate in many places extremely agreeable, and a ſoil productive of every thing, either for profit or delight. In California, however, the heat is great in ſummer, particularly towards the ſea-coaſt; but in the inland country, the climate is more temperate, and in winter even cold.

FACE AND PRODUCE OF THE COUNTRY.] The natural hiſtory of theſe countries is yet in its infancy. The Spaniards themſelves know little of the matter, and the little they know they are unwilling to communicate, being jealous of diſcovering the natural advantages of theſe countries, which might be an inducement to other nations to form ſettlements there. It is certain, however, that in general the provinces of New Mexico and California are extremely beautiful and pleaſant; the face of the country is agreeably varied with plains, interſected by rivers, and adorned with gentle eminences covered with various kinds of trees, ſome producing excellent fruit. With reſpect to the value of the gold mines, nothing poſitive can be aſſerted. They have undoubtedly enough of natural productions to render them advantageous colonies to any but the Spaniards. In California there falls in the morning a great quantity of dew, which, ſetting on the roſe leaves, candies, and becomes hard like manna, having all the ſweetneſs of refined ſugar, without its whiteneſs. There is alſo another very ſingular natural production; in the heart of the country there are plains of ſalt, quite firm and clear as cryſtal, which, conſidering the vaſt quantities of fiſh found on its coaſts, might render it an invaluable acquiſition to any induſtrious nation.

INHABITANTS, HISTORY, GOVERNMENT, RELIGION AND COMMERCE.] The Spaniſh ſettlements here are comparatively weak; though they are increaſing every day in proportion as new mines are diſcovered. The inhabitants are chiefly Indians, whom the Spaniſh miſſionaries have in many places brought over to Chriſtianity, to a civilized life, and to raiſe corn and wine, which they now export pretty largely to Old Mexico. California was diſcovered by Cortez, the great conqueror of Mexico; our famous navigator, ſir Francis Drake, took poſſeſ-

fion of it in 1578, and his right was confirmed by the principal king, or chief in the whole country. This title, however, the government of Great Britain have not hitherto attempted to vindicate, though California is admirably fituated for trade, and on its coaſt has a pearl fiſhery of great value. The inhabitants and government do not materially differ from thoſe of Old Mexico.

OLD MEXICO OR NEW SPAIN.

SITUATION AND EXTENT.

Miles.		Degrees.		Sq. Miles.
Length 2000	between	83 and 110 weſt longitude.		318,000.
Breadth 600		8 and 30 north latitude.		

BOUNDARIES.] BOUNDED by New Mexico, or Granada, on the North; by the gulf of Mexico, on the North-eaſt; by Terra Firma, on the South-eaſt; and by the Pacific Ocean, on the South-weſt, containing three audiences.

Audiences.	Provinces.	Chief Towns.

	5. Coſta Rica	Nycoya
	6. Veragua	Santa Fe.

BAYS.] On the north ſea are the gulfs or bays of Mexico, Campeachy, Vera Cruz, and Honduras; in the Pacific Ocean, or South-Sea, are the bays Micoya and Amapalla, Acapulco and Salinas.

CAPES.] Theſe are cape Sardo, cape St. Martin, cape Condecedo, cape Catoche, cape Honduras, cape Cameron, and cape Gracias Dios, in the North Sea.

Cape Marques, cape Spirito Santo, cape Corientes, cape Gallero, cape Blanco, cape Burica, cape Prucreos, and cape Mala, in the South-Sea.

WINDS.] In the gulf of Mexico, and the adjacent ſeas, there are ſtrong north winds from October to March, about the full and change of the moon. Trade-winds prevail every where at a diſtance from land, within the tropics. Near the coaſt, in the South-Sea, they have periodical winds, viz. monſoons, and ſea and land breezes, as in Aſia.

SOIL AND CLIMATE.] Mexico, lying for the moſt part within the torrid zone, is exceſſively hot, and on the eaſtern coaſt, where the land is low, is marſhy, and conſtantly flooded in the rainy ſeaſons; it is likewiſe extremely unwholeſome. The inland country, however, aſſumes a better aſpect, and the air is of a milder temperature; on the weſtern ſide the land is not ſo low as on the eaſtern, much better in quality, and full of plantations. The ſoil of Mexico in general has much variety, and would not refuſe any ſort of grain, did the induſtry of the inhabitants correſpond with their natural advantages.

PRODUCE.] Mexico, like all the tropical countries, is rather more abundant in fruits than in grain. Pine-apples, pomegranates, oranges, lemons, citrons, figs, and cocoa-nuts are here in the greateſt plenty and perfection. Mexico produces alſo a prodigious quantity of ſugar, eſpecially towards the gulf of Mexico, and the province of Guaxaca and Guatimala, ſo that here are more ſugar mills than in any other parts of Spaniſh America. Cedar trees and logwood flouriſh much about the bays of Campeachy and Honduras: the Maho tree alſo which hath a bark with ſtrong fibres, which they twiſt and makes ropes of. They have alſo a tree, which is called light-wood, being as light as a cork, of which they make floats to carry their merchandiſe on the ſea-coaſts.

But what is conſidered as the chief glory of the country, and what firſt induced the Spaniards to form ſettlements upon it, are the mines of gold and ſilver. The chief mines of gold are in Veragua and New Granada, bordering upon Darien and Terra Firma. Thoſe of ſilver, which are much more rich, as well as numerous, are found in ſeveral parts, but in none ſo much as in the province of Mexico. The mines of both kinds are always found in the moſt barren and mountainous part of the country; nature making amends in one reſpect for her defects in another. The working of the gold and ſilver mines depends on the ſame principles. When the ore is dug out, compounded of ſeveral heterogeneous ſubſtances, mixed with the

* This city was ſwallowed up by an earthquake on the 7th of June, 1773, when eight thouſand families inſtantly periſhed. New Guatimala is built at ſome diſtance, and is well inhabited.

precious metals, it is broken into ſmall pieces by a mill, and afterwards waſhed, by which means it is diſengaged from the earth, and other ſoft bodies which clung to it. Then it is mixed with mercury, which, of all ſubſtances, has the ſtrongeſt attraction for gold, and likewiſe a ſtronger attraction for ſilver than the other ſubſtances which are united with it in the ore. By means of the mercury, therefore, the gold and ſilver are firſt ſeparated from the heterogeneous matter, and then by ſtraining and evaporation, they are diſunited from the mercury itſelf. Of the gold and ſilver, which the mines of Mexico afford, great things have been ſaid. Thoſe who have enquired moſt into the ſubject, compute the revenues of Mexico at twenty-four millions of our money; and it is well known that this, with the other provinces of Spaniſh America, ſupply the whole world with ſilver.

The other articles next in importance to gold and ſilver are the cochineal and cocoa. After much diſpute concerning the nature of the former, it ſeems at laſt agreed, that it is of the animal kind, and of the ſpecies of the gall inſects. It adheres to the plant called opuntia, and ſucks the juice of the fruit, which is of a crimſon colour. It is from this juice that the cochineal derives its value, which conſiſts in dying all ſorts of the fineſt ſcarlet, crimſon, and purple. It is alſo uſed in medicine as a ſudorific, and as a cordial; and it is computed that the Spaniards annually export no leſs than nine hundred thouſands pounds weight of this commodity to anſwer the purpoſes of medicine and dying. The cocoa, of which chocolate is made, is the next conſiderable article in the natural hiſtory and commerce of Mexico. It grows on a tree of a middling ſize, which bears a pod about the ſize and ſhape of a cucumber, containing the cocoa. The Spaniſh commerce in this article is immenſe; and ſuch is the internal conſumption, as well as the external demand for it, that a ſmall garden of cocoas is ſaid to produce to the owner twenty thouſand crowns a year. At home it makes a principal part of their diet, and is found wholeſome, nutritious, and ſuitable to the climate. This country likewiſe produces ſilk, but not in ſuch abundance as to make any remarkable part of its export. Cotton is here in great abundance, and on account of its lightneſs is the common wear of the inhabitants.

POPULATION, INHABITANTS, GOVERNMENT AND MANNERS. We ſhall place theſe heads under one point of view, becauſe the reader will ſoon be ſenſible they are very nearly connected. We have already deſcribed the original inhabitants of Mexico, and the conqueſt of that country by the Spaniards. The preſent inhabitants may be divided into Whites, Indians, and Negroes. The Whites are either born in Old Spain, or they are creoles, i. e. natives of Spaniſh America. The former are chiefly employed in government or trade, and have nearly the ſame character with the Spaniards in Europe; only a ſtill more conſiderable portion of pride; for they conſider themſelves entitled to great diſtinctions as natives of Europe, and look upon the other inhabitants as many degrees beneath them. The creoles have all the bad qualities of the Spaniards, from whom they are deſcended, without that courage, firmneſs, and patience, which make the praiſe-worthy part of the Spaniſh character. Naturally weak and effeminate, they dedicate the greateſt part of their lives to loitering, and inactive pleaſures. Luxurious without variety or elegance, and expenſive with great parade, and little convenience, their general character is no more than a grave and ſpecious inſignificance. From idleneſs and conſtitution their whole buſineſs is amour and intrigue; and their ladies of conſequence are not at all diſtinguiſhed for their chaſtity or domeſtic virtues. The Indians, who notwithſtanding the devaſtations of the firſt invaders, remain in great numbers, are become, by continual oppreſſion and indignity, a dejected, timourous, and miſerable race of mortals. The blacks here, like all thoſe in other

parts

parts of the world, are ſtubborn, hardy, and as well adapted for the groſs ſlavery they endure as any human creatures can be.

Such is the general character of the inhabitants, not only in Mexico, but the greateſt part of Spaniſh America. The civil government is adminiſtered by tribunals, called Audiences, which bear a reſemblance to the parliaments in France. In theſe courts the viceroy of the king of Spain preſides. His employment is the greateſt truſt and power which his Catholic majeſty has in his diſpoſal, and is perhaps the richeſh government entruſted to any ſubject in the world. The greatneſs of the viceroy's office is diminiſhed by the ſhortneſs of its duration. For as jealouſy is the leading feature of Spaniſh politics, in whatever regards America, no officer is allowed to maintain his power for more than three years, which no doubt may have a good effect in ſecuring the authority of the crown of Spain, but is attended with unhappy conſequences to the miſerable inhabitants, who become a prey to every new governor. The clergy are extremely numerous in Mexico, and it has been computed, that prieſts, monks, and nuns of all orders, make upwards of a fifth of all the white inhabitants, both here and in the other parts of Spaniſh America. It is impoſſible indeed to find a richer field, or one more peculiarly adapted to the purpoſes of eccleſiaſtics. The people are ſuperſtitious, ignorant, rich, lazy, and licentious: with ſuch materials to work upon, it is not remarkable that the church ſhould enjoy one fourth of the revenues of the whole kingdom. It is more ſurpriſing that it has not one half.

COMMERCE, CITIES, AND SHIPPING.] The trade of Mexico conſiſts of three great branches, which extend over the world. It carries on a traffic with Europe, by La Vera Cruz, ſituated on the gulf of Mexico; with the Eaſt Indies, by Acapulco on the South-Sea; and with South America by the ſame port. Theſe two ſea-ports, Vera Cruz and Acapulco, are wonderfully well ſituated for the commercial purpoſes to which they are applied. It is by means of the former that Mexico pours her wealth over the whole world; and receives in return the numberleſs luxuries and neceſſaries, which Europe affords to her, and which the indolence of her inhabitants will never permit them to acquire for themſelves. To this port the fleet from Cadiz, called the Flota, conſiſting of three men of war, as a convoy, and 14 large merchant ſhips, annually arrive about the beginning of November. Its cargo conſiſts of every commodity and manufacture of Europe, and there are few nations but have more concern in it than the Spaniards, who ſend out little more than wine and oil. The profit of theſe, with the freight and commiſſion to the merchants, and duty to the king, are the only advantages which Spain derives from her American commerce. When all the goods are landed and diſpoſed of at La Vera Cruz, the fleet takes in the plate, precious ſtones, and other commodities for Europe. Some time in May they are ready to depart. From La Vera Cruz they ſail to the Havannah, in the iſle of Cuba, which is the rendezvous where they meet the galeons, another fleet which carries on the trade of Terra Firma, by Carthagena, and of Peru by Panama and Porto Bello. When all are collected and provided with a convoy neceſſary for their ſafety, they ſteer for Old Spain.

Acapulco is the ſea-port, by which the communication is kept up between the different parts of the Spaniſh empire in America, and the Eaſt Indies. About the month of December, the great galeon, attended by a large ſhip as a convoy, annually arrives here. The cargoes of theſe ſhips, for the convoy, though in an underhand manner, likewiſe carries goods, conſiſt of all the rich commodities and manufactures of the Eaſt. At the ſame time the annual ſhip from Lima, the capital of Peru, comes in, and is computed to bring not leſs than two millions of pieces of eight in ſilver, beſides quickſilver and other valuable commodities to be laid

laid out in the purchaſe of the galeons cargoes. Several other ſhips, from different parts of Chili and Peru, meet upon the ſame occaſion. A great fair, in which the commodities of all parts of the world are bartered for one another, laſts thirty days. The galeon then prepares for her voyage, loaded with ſilver and ſuch European goods as have been thought neceſſary. The Spaniards, though this trade be carried on entirely through their hands, and in the very heart of their dominions, are comparitively but ſmall gainers by it. For as they allow the Dutch, Great Britain, and other commercial ſtates, to furniſh the greater part of the cargo of the flota, ſo that the Spaniſh inhabitants of the Philippines, tainted with the ſame indolence which ruined their European anceſtors, permit the Chineſe merchants to furniſh the greater part of the cargo of the galeon. Notwithſtanding what has been ſaid of Vera Cruz, and Acapulco, the city of Mexico, the capital of the empire, ought to be conſidered as the centre of commerce in this part of the world; for here the principal merchants reſide, and the greateſt part of the buſineſs is negociated. The Eaſt India goods from Acapulco, and the European from Vera Cruz alſo paſs through this city. Hither all the gold and ſilver come to be coined, here the king's fifth is depoſited, and here are wrought all thoſe utenſils and ornaments in plate which are every year ſent into Europe. The city itſelf breathes the air of the higheſt magnificence, and according to the beſt accounts contains about 80,000 inhabitants.

SPANISH DOMINIONS IN SOUTH AMERICA.

TERRA FIRMA, OR CASTILE DEL ORO.

SITUATION AND EXTENT.

Miles.		Degrees.	Sq. Miles.
Length 1400 Breadth 700	between	60 and 82 weſt longitude, the equator, and 12 north latitude.	700,000.

BOUNDARIES.] BOUNDED by the North Sea (part of the Atlantic ocean), on the North; by the ſame ſea and Surinam, on the Eaſt; by the country of the Amazons and Peru, on the South; and by the Pacific Ocean and New Spain, on the Weſt.

Diviſions.	Subdiviſions.	Chief Towns.
The north diviſion contains the provinces of	1. Terra Firma Proper, or Darien —	Porto Bello PANAMA, W. lon. 80-21 N. lat. 8-47.
	2. Carthagena —	Carthagena
	3. St. Martha —	St. Martha
	4. Rio de la Hacha —	Rio de la Hacha
	5. Venezuela ——	Venezuela
	6. Comana ——	Comana
	7. New Andaluſia, or Paria — —	St. Thomas
The ſouth diviſion contains the provinces of	1. New Granada	Santa Fè de Bagota
	2. Popayan	Popayn.

RIVERS,

RIVERS, BAYS, CAPES, &c.] The Iſthmus of Darien, or Terra Firma Proper, joins North and South America. A line drawn from Porto Bello in the North, to Panama on the South Sea, or rather a little weſt of theſe two towns, is the proper limit between North and South America, and here the Iſthmus, or neck of land, is only 60 miles over. The principal rivers are the Rio Grande, Darien, Chagre, and the Oronoque.

The principal bays in Terra Firma are, the bay of Panama, and the bay of St. Michael's in the South-Sea; the bay of Porto Bello, the gulf of Darien, Sino bay, Carthagena bay and harbour, the gulf of Venezuela, the bay of Maracaibo, the gulf of Trieſto, the bay of Guaria, the bay of Curiaco, and the gulf of Paria, or Andaluſia, in the North-Sea.

The chief capes are, Samblas point, Point Canoa, Cape del Agua, Swart point, Cape de Vela, Cape Conquibacoa, Cape Cabelo, Cape Blanco, Cape Galera, Cape Three Points, and Cape Naſſau; all on the north ſhore of Terra Firma.

CLIMATE.] The climate here, particularly in the northern diviſions, is extremely hot; and it was found by Ulloa, that the heat of the warmeſt day in Paris is continual at Carthagena; the exceſſive heats raiſe the vapour of the ſea, which is precipitated in ſuch rains as ſeem to threaten a general deluge. Great part of the country, therefore, is almoſt continually flooded; and this, together with the exceſſive heat, ſo impregnates the air with vapours, that in many provinces, particularly about Popayan and Porto Bello, it is extremely unwholeſome.

SOIL AND PRODUCE.] The ſoil of this country, like that of the greater part of South America, is wonderfully rich and fruitful. It is impoſſible to view, without admiration, the perpetual verdure of the woods, the luxuriancy of the plains, and the towering height of the mountains. This, however, only applies to the inland country, for the coaſts are generally barren ſand, and incapable of bearing any ſpecies of grain. The trees, moſt remarkable for their dimenſions, are the caobo, the cedar, the maria, and balſam tree. The manchineel tree is particularly remarkable. It bears a fruit reſembling an apple, but which, under this ſpecious appearance, contains the moſt ſubtile poiſon, againſt which common oil is found to be the beſt antidote. The malignity of this tree is ſuch, that if a perſon only ſleeps under it, he finds his body all ſwelled, and racked with the ſevereſt tortures. The beaſts from inſtinct alone avoid it. The Habella de Carthagena is the fruit of a ſpecies of willow, and contains a kernel reſembling an almond, but leſs white, and extremely bitter. This kernel is found to be an excellent and never failing remedy for the bite of the moſt venomous vipers and ſerpents, which are very frequent all over this country. There were formerly in Terra Firma rich mines of gold, which are now in a great meaſure exhauſted. The ſilver, iron, and copper mines have been ſince opened; and the inhabitants find emeralds, ſapphires, and other precious ſtones.

ANIMALS.] In treating of North America, we have taken notice of many of the animals that are found in the ſouthern parts. Among thoſe peculiar to the South, the moſt remarkable is the ſloth, or as it is called by way of deriſion, the ſwift Peter. It bears a reſemblance to an ordinary monkey in ſhape and ſize, but is of a moſt wretched appearance, with its bare hams and feet, and its ſkin all over corrugated. He ſtands in no need of either chain or hutch, never ſtirring unleſs compelled by hunger; and he is ſaid to be ſeveral minutes in moving one of his legs, nor will blows make him mend his pace. When he moves, every effort is attended with ſuch a plantive, and at the ſame time, ſo diſagreable a cry, as at once produces pity and diſguſt. In this cry conſiſts the whole defence of this wretched animal. For on the firſt hoſtile approach it is natural for him to be in motion,

which is always attended with diſguſtful howling, ſo that his purſuer flies much more ſpeedily in his turn, to be beyond the reach of this horrid noiſe. When this animal finds no wild fruits on the ground, he looks out with a great deal of pains for a tree well loaded, which he aſcends with a world of uneaſineſs, moving, and crying, and ſtopping by turns. At length having mounted, he plucks off all the fruit, and throws it on the ground, to ſave himſelf ſuch another troubleſome journey; and rather than be fatigued with coming down the tree, he gathers himſelf in a bunch, and with a ſhriek drops to the ground.

The monkeys in theſe countries are very numerous; they keep together 20 or 30 in company, rambling over the woods, leaping from tree to tree, and if they meet with a ſingle perſon, he is in danger of being torn to pieces by them; at leaſt they chatter, and make a frightful noiſe, throwing things at him; they hang themſelves by the tail, on the boughs, and ſeem to threaten him all the way he paſſes, but where two or three people are together, they uſually ſcamper away.

NATIVES.] Beſides the Indians in this country, who fall under our general deſcription of the Americans, there is another ſpecies of a fair complexion, delicate habit, and of a ſmaller ſtature than the ordinary Indians. Their diſpoſitions too are more ſoft and effeminate; but what principally diſtinguiſhes them is their large weak blue eyes, which, unable to bear the light of the ſun, ſee beſt by moon-light, and from which they are called Moon-eyed Indians.

INHABITANTS, COMMERCE, AND CHIEF TOWNS. } We have already mentioned how this country fell into the hands of the Spaniards. The inhabitants therefore do not materially differ from thoſe of Mexico. To what we have already obſerved, therefore, it is only neceſſary to add, that the original inhabitants of Spain are variouſly intermixed with the negroes and Indians. Theſe intermixtures form different gradations, which are carefully diſtinguiſhed from each other, becauſe every perſon expects to be regarded, in proportion as a greater ſhare of the Spaniſh blood runs in his veins. The firſt diſtinction, ariſing from the intermarriage of the whites with the negroes, is that of the mulattoes, which is well known. Next to theſe are the Tercerones, produced from a white and mulatto. From the intermarriage with theſe and the whites, ariſe the Quarterones, who, though ſtill nearer the former, are diſgraced with a tint of the negro blood. But the produce of theſe and the whites are the Quinterones, who, it is ſaid, are not to be diſtinguiſhed from the real Spaniards, but by being of a ſtill fairer complexion. The ſame gradations are formed in a contrary order, by the intermixture of the mulattoes and the negroes, and beſides theſe, there are a thouſand others, hardly diſtinguiſhable by the natives themſelves. The commerce of this country is chiefly carried on from the ports of Panama, Carthagena, and Porto Bello; which are three of the moſt conſiderable cities in Spaniſh America. In them are held the annual fairs for American, Indian, and European commodities. Among the natural merchandiſe of Terra Firma, the pearls found on the coaſt, particularly in the bay of Panama, are not the leaſt conſiderable. The fiſhing for theſe, employs a great number of negro ſlaves, who have arrived at wonderful dexterity in this occupation. They are ſometimes, however, devoured by fiſh, particularly the ſharks, while they dive to the bottom, or are cruſhed againſt the ſhelves of the rocks. The government of Terra Firma is on the ſame footing with that of Mexico.

P E R U.

Situation and Extent.

	Miles.		Degrees.	Sq. Miles.
Length	1800	between	the equator and 25 ſouth latitude.	970,000.
Breadth	600		60 and 81 weſt longitude.	

Boundaries. BOUNDED by Terra Firma, on the North; by the mountains or Cordeleirias des Andes, Eaſt; by Chili, South; and by the Pacific Ocean, Weſt.

Diviſions.	Provinces.	Chief Towns.
The North diviſion,	Quito — —	Quito Payta
The Middle diviſion,	Lima, or Los Reyes	Lima, 76-49 W. lon. 12-11 S. lat. Cuſco, and Callao
The South diviſion,	Los Charcos —	Potoſi Porco.

Seas, bays, and harbours.] The only ſea which borders on Peru is the Pacific Ocean, or South Sea. The principal bays and harbours are Payta, Malabrigo, Cuanchaco, Coſma, Vermeio, Guara, Callao the port town to Lima, Ylo, and Arica.

Rivers.] There is a river whoſe waters are as red as blood. The rivers Granada, or Cagdalena, Oronoque, Amazon, and Plate, riſe in the Andes. Many other rivers riſe alſo in the Andes, and fall into the Pacific Ocean, between the equator and eight degrees S. lat.

Petrifying waters.] There are ſome waters, which, in their courſe, cover whatever they touch or paſs over, with ſtone; and here are fountains of liquid matter called coppey, reſembling pitch and tar, and uſed by the ſeamen for the ſame purpoſes.

Soil and climate.] Though Peru lies within the torrid zone, yet having on one ſide the South-Sea, and on the other the great ridge of the Andes, it is not ſo ſtifled with heat as the other tropical countries. The ſky too, which is generally cloudy, ſhields them from the direct rays of the ſun: but what is extremely ſingular, it never rains in Peru. The defect, however, is ſufficiently ſupplied by a ſoft kindly dew, which falls gradually every night on the ground, and ſo refreſhes the plants and graſs, as to produce in many places the greateſt fertility. Along the ſea-coaſt, Peru is generally a dry barren ſand, except near the banks of rivers, where it is extremely fertile, as are all the low lands in the inland country.

Animal, vegetable, and mineral productions.] There are many gold mines in the northern part, not far from Lima. Silver too is produced in great abundance in various provinces; but the old mines are continually decaying, and new ones continually opening. The towns ſhift with the mines. That of

Potoſi, which is now much exhauſted, once contained 90,000 ſouls, Spaniards and Indians, of which the latter were ſix to one. The northern part of Peru produces wine in great plenty. Wool is another article of its produce, and is no leſs remarkable for its fineneſs than for the animals on which it grows; theſe they call Lamas and Vicunnas. The lama has a ſmall head, reſembling that of a horſe and a ſheep at the ſame time. It is about the ſize of a ſtag, its upper lip is cleft like that of a hare, through which, when enraged, it ſpits a kind of venomous juice, which inflames the part it falls on. The fleſh of the lama is agreeable and ſalutary, and the animal is not only uſeful in affording wool and food, but alſo as a beaſt of burden. It can endure amazing fatigue, and will travel over the ſteepeſt mountains with a burden of ſixty or ſeventy pounds. It feeds very ſparingly, and never drinks. The vicunna is ſmaller and ſwifter than the lama, and produces wool ſtill finer in quality. In the vicunna is found the bezoar ſtone, regarded as a ſpecific againſt poiſons. The next great article is the Peruvian bark, known better by the name of Jeſuits bark. The tree which produces this invaluable drug, grows principally in the mountainous parts of Peru, and particularly in the province of Quito. The beſt bark is always produced in the high and rocky grounds: the tree which bears it, is about the ſize of a cherry-tree, and produces a kind of fruit reſembling the almond. But it is only the bark which has thoſe excellent qualities that render it ſo uſeful in intermitting fevers, and other diſorders, to which daily experience extends the application of it. Guinea pepper, or Cayenne pepper, as we call it, is produced in the greateſt abundance in the vale of Arica, a diſtrict in the ſouthern parts of Peru, from whence it is annually exported, to the value of 600,000 crowns. Peru is likewiſe the only part of South America which produces quickſilver; an article of immenſe value, conſidering the various purpoſes to which it is applied, and eſpecially the purification of gold and ſilver. The principal mine is at a place called Guancavelica, diſcovered in 1567, where it is found in a whitiſh maſs, reſembling brick ill burned. This ſubſtance is volatiliſed by fire, and received in ſteam by a combination of glaſs veſſels, where it condenſes by means of a little water at the bottom of each veſſel, and forms a pure heavy liquid.

MANUFACTURES, TRADE, AND CITIES.] We join thoſe articles, becauſe of their intimate connection; for, except in the cities we ſhall deſcribe, there is no commerce worth mentioning. Lima is the capital of Peru; its ſituation, in the middle of a ſpacious and delightful valley, was fixed upon by the famous Pizarro, as the moſt proper for a city, which he expected would preſerve his memory. It is ſo well watered by the river Rimac, that the inhabitants, like thoſe of London, command a ſtream, each for his own uſe. There are many very magnificent ſtructures, particularly churches, in this city; though the houſes in general are built of ſlight materials, the equality of the climate, and want of rain, rendering ſtone houſes unneceſſary; and beſides, it is found that theſe are more apt to ſuffer by ſhocks of the earth, which are frequent and dreadful all over this province. Lima is about two leagues from the ſea, extends in length two miles, and in breadth one and a quarter. It contains about 60,000 inhabitants, of whom the whites amount to a ſixth part. One remarkable fact is ſufficient to demonſtrate the wealth of the city. When the viceroy, the duke de la Palada, made his entry into Lima in 1682, the inhabitants, to do him honour, cauſed the ſtreets to be paved with ingots of ſilver, amounting, it is ſaid, to ſeventeen millions ſterling. All travellers ſpeak with amazement of the decorations of the churches with gold, ſilver, and precious ſtones, which load and ornament even the walls. The merchants of Lima may be ſaid to deal with all the quarters of the world,

and

and that both on their own accounts, and as factors for others. Here all the products of the ſouthern provinces are conveyed, in order to be exchanged at the harbour of Lima, for ſuch articles as the inhabitants of Peru ſtand in need of; the fleet from Europe, and the Eaſt Indies, land at the ſame harbour, and the commodities of Aſia, Europe, and America, are bartered for each other. What there is no immediate vent for, the merchants of Lima purchaſe on their own accounts, and lay up in warehouſes, knowing that they muſt ſoon find an outlet for them, ſince by one channel or other they have a communication with almoſt every commercial nation. But all the wealth of the inhabitants, all the beauty of the ſituation, and fertility of the climate of Lima, are not ſufficient to compenſate for one diſaſter which always threatens, and has ſometimes actually befallen them. In the year 1747, a moſt tremendous earthquake laid three-fourths of this city level with the ground, and entirely demoliſhed Callao, the port-town belonging to it. Never was any deſtruction more terrible or complete, not more than one of three thouſand inhabitants being left to record this dreadful calamity, and he by an accident the moſt extraordinary.—This man, who happened to be on a fort which overlooked the harbour, perceived in one minute the inhabitants running from their houſes in the utmoſt terror and confuſion; the ſea, as is uſual on ſuch occaſions, receding to a conſiderable diſtance, returned in mountainous waves, and buried the inhabitants for ever in its boſom; but the ſame wave which deſtroyed the town drove a little boat to the place where the man ſtood, into which he threw himſelf, and was ſaved.

Cuſco, the ancient capital of the Peruvian empire, has already been taken notice of. As it lies in the mountainous country, and at a diſtance from the ſea, it has been long on the decline. But it is ſtill a very conſiderable place, and contains above 40,000 inhabitants, three parts Indians, and very induſtrious in manufacturing baize, cotton, and leather. They have alſo, both here and at Quito, a particular taſte for painting; and their productions in this way, ſome of which have been admired in Italy, are diſperſed all over South America. Quito is next to Lima in populouſneſs, if not ſuperior to it. It is like Cuſco, an inland city, and having no mines in its neighbourhood, is chiefly famous for its manufactures of cotton, wool, and flax, which ſupply the conſumption over all the kingdom of Peru.

INHABITANTS, MANNERS, AND GOVERNMENT. It would be in vain to pretend ſaying any thing deciſive with regard to the number of the inhabitants of Peru. The Spaniards themſelves are remarkably ſilent on this head. It has been gueſſed by ſome writers, that in all Spaniſh America there are about three millions of Spaniards and Creoles of different colours; and undoubtedly the number of Indians is much greater; though neither in any reſpect proportionable to the wealth, fertility, and extent of the country. The manners of the inhabitants do not remarkably differ over the whole Spaniſh dominions. Pride and lazineſs are the two predominant paſſions. It is ſaid, by the moſt authentic travellers, that the manners of Old Spain have degenerated in its colonies. The Creoles, and all the other deſcendants of the Spaniards, according to the above diſtinctions, are guilty of many mean and pilfering vices, which a true born Caſtilian regards with deteſtation. This, no doubt, in part ariſes from the contempt in which all but the real natives of Spain are held in the Indies, mankind generally behaving according to the treatment they meet with from others. In Lima the Spaniſh pride has made the greateſt deſcents; and many of the firſt nobility are employed in commerce. It is in this city that the viceroy reſides, whoſe authority extends over all Peru, except Quito, which has lately been detached from it. The

viceroy

viceroy is as abſolute as the king of Spain; but as his territories are ſo extenſive, it is neceſſary that he ſhould part with a ſhare of his authority to the ſeveral audiences or courts eſtabliſhed over the kingdom. There is a treaſury court eſtabliſhed at Lima, for receiving the fifth of the produce of the mines, and certain taxes paid by the Indians, which belong to the king of Spain.

CHILI.

SITUATION AND EXTENT.

Miles.		Degrees.	Sq. Miles.
Length 1200	between	25 and 45 ſouth latitude.	206,000.
Breadth 500		65 and 85 weſt longitude.	

BOUNDARIES.] BOUNDED by Peru, on the North; by La Plata, on the Eaſt; by Patagonia, on the South; and by the Pacific Ocean, on the Weſt.

Diviſions.	Provinces.	Chief Towns.
On the weſt ſide of the Andes	Chili Proper — —	St. Jago, W. lon. 77. S. lat. 34.
		Baldivia.
		Imperial.
On the eaſt ſide of the Andes	Cuyo, or Cutio —	St. John de Frontieræ.

LAKES.] The principal lakes are thoſe of Tagatagua near St. Jago, and that of Paren. Beſides which, they have ſeveral ſalt-water lakes, that have a communication with the ſea, part of the year. In ſtormy weather the ſea forces a way through them, and leaves them full of fiſh; but in the hot ſeaſon the water congeals, leaving a cruſt of fine white ſalt a foot thick.

SEAS, RIVERS, BAYS, AND HARBOURS.] The only ſea that borders upon Chili, is that of the Pacific Ocean on the weſt. The principal rivers are, the Salado, or Salt River, Guaſco, Caquimbo, Bohio, aud the Baldivia, ſcarcely navigable but at their mouths; they fall into the Pacific Ocean.

The principal bays, or harbours, are Copiapo, Coquimbo, Govanadore, Valpariſo, Iata, Conception, Santa Maria, La Moucha, Baldivia, Brewer's-haven, and Caſtro.

CLIMATE, SOIL, AND PRODUCE.] Theſe are not remarkably different from the ſame in Peru; and if there be any difference, it is in favour of Chili. There is indeed no part of the world more favoured than this is, with reſpect to the gifts of Nature. For here, not only the tropical fruits, but all ſpecies of grain, of which a conſiderable part is exported, come to great perfection. Their animal productions

tions are the ſame with thoſe of Peru; and they have gold almoſt in every river, ſuppoſed to be waſhed down from the hills.

INHABITANTS.] This country is very thinly inhabited. The original natives are ſtill in a great meaſure unconquered and uncivilized; and leading a wandering life, attentive to no object but their preſervation from the Spaniſh yoke, are in a very unfavourable condition with reſpect to population. The Spaniards do not amount to above 20,000; and the Indians, negroes, and mulattoes, are not ſuppoſed to be thrice that number. However, there have lately been ſome formidable inſurrections againſt the Spaniards, by the natives of Chili, which greatly alarmed the Spaniſh court.

COMMERCE.] The foreign commerce of Chili is entirely confined to Peru, Panama, and ſome parts of Mexico. To the former they annually export corn ſufficient for 60,000 men. Their other exports are hemp, which is raiſed in no other part of the South-Seas; hides, tallow, and ſalted proviſions; they receive in return the commodities of Europe and the Eaſt Indies, which are brought to the port of Callao.

PARAGUAY, OR, LA PLATA.

SITUATION AND EXTENT.

Miles.		Degrees.	Sq. Miles.
Length 1500 Breadth 1000	between	12 and 37 ſouth latitude. 50 and 75 weſt longitude.	1,000,000.

BOUNDARIES.] BOUNDED by Amazonia, on the North; by Braſil, Eaſt; by Patagonia, on the South; and by Peru and Chili, Weſt.

Diviſions.	Provinces.	Chief Towns.
Eaſt diviſion contains	Paraguay — — Parana — — Guaira — — Uragua — —	Aſſumption St. Anne Cividad Real Los Royes
South diviſion	Tucuman — — Rio de la Plata —	St. Jago BUENOS AYRES, Weſt lon. 57-54. S. lat. 34-35.

BAYS AND LAKES.] The principal bay is that at the mouth of the river La Plata, on which ſtands the capital city of Buenos Ayres; and Cape St. Antonio, at the entrance of that bay, is the only promontory. This country abounds with lakes, one of which, Carocoroes, is 100 miles long.

RIVERS.] This country, beſides an infinite number of ſmall rivers, is watered by three principal ones, the Paragua, Uragua, and Parana, which, united near the ſea, form the famous Rio de la Plata, or Plate River, and which annually overflow their

their banks; and, on their receſs, leave them enriched with a ſlime, that produces the greateſt plenty of whatever is committed to it.

AIR, SOIL, AND PRODUCE.] This vaſt tract is far from being wholly ſubdued, or planted by the Spaniards. There are many parts in a great degree unknown to them, or to any other people of Europe. The principal province of which we have any knowledge, is that which is called Rio de la Plata, towards the mouth of the above mentioned rivers. This province, with all the adjacent parts, is one continued plain for ſeveral hundred miles, extremely fertile, and produces cotton in great quantities; tobacco, and the valuable herb called Paraguay, with a variety of fruits, and the prodigious rich paſtures, in which are bred ſuch herds of cattle, that it is ſaid the hides of the beaſts are all that is properly bought, the carcaſe being in a manner given into the bargain. A horſe ſome time ago might be bought for a dollar; and the uſual price of a bullock, choſen out of a herd of two or three hundred, was only four rials. But contrary to the general nature of America, this country is deſtitute of woods. The air is remarkable ſweet and ſerene, and the waters of La Plata are equally pure and wholeſome.

FIRST SETTLEMENT, CHIEF CITY, AND COMMERCE. The Spaniards firſt diſcovered this country, by ſailing up the river La Plata in 1515, and founded the town of Buenos Ayres, ſo called on account of the excellence of the air, on the ſouth ſide of the river, fifty leagues within its mouth, where it is ſeven leagues broad. This is one of the moſt conſiderable towns in South America, and the only place of traffic to the ſouthward of Brazil. Here we meet with the merchants of Europe and Peru, but no regular fleet comes hither as to the other parts of South America; two, or at moſt three, regiſter ſhips make the whole of their regular intercourſe with Europe. Their returns are very valuable, conſiſting chiefly of the gold and ſilver of Chili and Peru, ſugar, and hides. Thoſe who have carried on a contraband trade to this city, have found it more advantageous than any other. The benefit of this contraband is now wholly in the hands of the Portugueſe, who keep magazines for that purpoſe in ſuch parts of Braſil, as lie near this country. The trade of Paraguay, and the manners of the people, are much the ſame with thoſe of the reſt of the Spaniſh colonies in South America, ſo that nothing farther need be ſaid on thoſe articles.

But we cannot quit this country without mentioning that extraordinary ſpecies of commonwealth, which the Jeſuits erected in the interior parts, and concerning which theſe crafty prieſts have endeavoured to keep all ſtrangers in the dark.

About the middle of the laſt century, thoſe fathers repreſented to the court of Spain, that the want of ſucceſs in their miſſions was owing to the ſcandal which the immorality of the Spaniards never failed to give, and to the hatred which their inſolent behaviour cauſed in the Indians. They inſinuated that, were it not for thoſe obſtacles, the empire of the goſpel might, by their labours, have been extended into the moſt unknown parts of America; and that all thoſe countries might be ſubdued to his Catholic majeſty's obedience, without expence, and without force. This remonſtrance met with ſucceſs; the ſphere of their labours was marked out, and the governors of the adjacent provinces had orders, not to interfere, nor to ſuffer any Spaniards to enter into this pale, without licences from the fathers. They on their part, agreed to pay a certain capitation tax, in proportion to their flock; and to ſend a certain number to the king's works whenever they ſhall be demanded, and the miſſions ſhould become populous enough to ſupply them.

On theſe terms the Jeſuits gladly entered upon the ſcene of action, and opened their ſpiritual campaign. They began by gathering together about 50 wandering families, whom they perſuaded to ſettle; and they united them into a little townſhip.

ſhip. This was the ſlight foundation upon which they built a ſuperſtructure which has amazed the world, and added much power, at the ſame time that it occaſioned much envy againſt their ſociety. For when they had made this beginning, they laboured with ſuch indefatigable pains, and ſuch maſterly policy, that, by degrees they mollified the minds of the moſt ſavage nations; fixed the moſt rambling, and ſubdued thoſe to their government who had long diſdained to ſubmit to the arms of the Spaniards and Portugueſe. They prevailed upon thouſands of various diſperſed tribes to embrace their religion, and theſe ſoon induced others to follow their example, magnifying the peace and tranquillity they enjoyed under the direction of the Fathers.

Our limits do not permit us to trace with preciſion all the ſteps which were taken in the accompliſhment of ſo extraordinary a conqueſt over the bodies and minds of men. The Jeſuits left nothing undone that could confirm their ſubjection, or that could increaſe their number; and it is ſaid that above 340,000 families lived in obedience and expreſſed an awe, bordering upon adoration, yet procured without any violence or conſtraint: that the Indians were inſtructed in the military art, and could raiſe 60,000 men well armed: that they lived in towns; were regularly clad; laboured in agriculture, exerciſed manufactures; ſome even aſpired to the elegant arts; and that nothing could equal their ſubmiſſion to authority, except their contentment under it. Some writers have treated the character of theſe jeſuits with great ſeverity; accuſing them of ambition, pride, and of carrying their authority to ſuch an exceſs, as to cauſe not only perſons of both ſexes, but even the magiſtrates, who were always choſen from among the Indians, to be corrected before them with ſtripes, and by ſuffering perſons of the higheſt diſtinction, within their juriſdictions, to kiſs the hem of their garments, as the greateſt honour. The prieſts themſelves poſſeſſed large property, all manufactures were theirs, the natural produce of the country was brought to them, and the treaſures annually remitted to the ſuperior of the order, ſeemed to evince that zeal for religion was not the only motive for forming theſe miſſions. The Fathers would not permit any of the inhabitants of Peru, whether Spaniards, Meſtizos, or even Indians, to come within their miſſions in Paraguay. In the year 1757, when part of this territory was ceded by Spain to the crown of Portugal in exchange for Saint Sacrament, to make the Uragua the boundary of their poſſeſſions, the Jeſuits refuſed to comply with this diviſion, or to ſuffer themſelves to be transferred from one hand to another, like cattle, without their own conſent. We were informed by the Spaniſh Gazette, that the Indians actually took up arms; but notwithſtanding the exactneſs of their diſcipline, they were eaſily, and with conſiderable ſlaughter, defeated by the European troops, who were ſent to quell them; and in 1767, the Jeſuits were removed from America, by royal authority, and their late ſubjects were put upon the ſame footing with the reſt of the inhabitants of the country.

SPANISH ISLANDS IN AMERICA.

CUBA.] The iſland of Cuba is ſituated between 19 and 23 degrees north lat. and between 74 and 87 degrees weſt lon. 100 miles to the ſouth of Cape Florida, and 75 north of Jamaica, and is near 700 miles in length, and generally about 70 miles in breadth. A chain of hills runs through the middle of the iſland from eaſt to weſt: but the land near the ſea is in general level, and flooded in the rainy

ſeaſon, when the ſun is vertical. This noble iſland is ſuppoſed to have the beſt ſoil, for ſo large a country, of any in America. It produces all the commodities known in the Weſt Indies, paricularly ginger, long-pepper, and other ſpices, caſſia, fiſtula, muſtic, and aloes. It alſo produces tobacco and ſugar; but from the want of hands, and the lazineſs of the Spaniards, not in ſuch quantities as might be expected. It is ſaid that its exports do not equal in quantity thoſe of our ſmall iſland of Antigua.

The courſe of the rivers is too ſhort to be of any conſequence; but there are ſeveral good harbours, which belong to the principal towns, as that of St. Jago, facing Jamaica, ſtrongly ſituated and well fortified, but neither populous nor rich. That of the Havannah, facing Florida, which is the capital of Cuba, and a place of great ſtrength and importance, containing about 2000 houſes, with a great number of convents and churches. It was taken, however, by the courage and perſeverance of the Engliſh troops in the year 1762, but reſtored in the ſubſequent treaty of peace. Beſides theſe, there is likewiſe Cumberland harbour, and that of Santa Cruz, a conſiderable town thirty miles eaſt of the Havannah.

HISPANIOLA, or ST. DOMINGO.] This iſland was firſt poſſeſſed by the Spaniards alone; but by far the moſt coſiderable part is now in the hands of the French. However, as the Spaniards were the original poſſeſſors, and ſtill continue to have a ſhare in it, Hiſpaniola is commonly regarded as a Spaniſh iſland.

It is ſituated between the 17th and 21ſt degrees north lat. and 67th and 74th of weſt lon. lying in the middle between Cuba and Porto-Rico, and is 450 miles long, and 150 broad. When Hiſpaniola was firſt diſcovered by Columbus, the number of its inhabitants was computed to be at leaſt one million. But ſuch was the cruelty of the Spaniards, and to ſo infamous a height did they carry their oppreſſion of the poor natives, that they were reduced to ſixty thouſand in the ſpace of fifteen years. The face of the iſland preſents an agreeable variety of hills, vallies, woods, and rivers; and the ſoil is allowed to be extremely fertile, producing ſugar, cotton, indigo, tobacco, maize, and caſſava root. The European cattle have ſo much multiplied here, that they run wild in the woods, and, as in South America, are hunted for the hides and tallow only. In the moſt barren part of the rocks they diſcovered formerly ſilver and gold. The mines, however, are not now worked. The north-weſt parts, which are in poſſeſſion of the French, conſiſt of large fruitful plains, which produce the articles already mentioned in vaſt abundance. This indeed is the beſt and moſt fruitful part of the beſt and moſt fertile iſland in the Weſt Indies, and perhaps in the world.

The moſt ancient town in this iſland, and in all the New World, built by Europeans, is St. Domingo. It was founded by Bartholomew Columbus, brother to the admiral, in 1504, who gave it that name in honour of his father Dominic, and by which the whole iſland is ſometimes named, eſpecially by the French. It is ſituated on a ſpacious harbour, and is a large, well-built city, inhabited, like the other Spaniſh towns, by a mixture of Europeans, creoles, mulattoes, meſtizoes, and negroes.

The French towns are, Cape St. Francois, the capital, which is neither walled nor paled in, and is ſaid to have only two batteries, one at the entrance of the harbour, and the other before the town. It contains about 8000 whites and blacks. Leogane, though inferior in point of ſize is a good port, a place of conſiderable trade, and the ſeat of the French government. They have two other towns conſiderable for their trade, Petit Guaves, and Port Lewis.

It is computed that the exports of the French, from the above mentioned places are not leſs in value than 1,200,000l. They likewiſe carry on a contraband trade with the Spaniards, which is much to their advantage, as they exchange French manufactures for Spaniſh dollars.

"In the night between the 22d and 23d of Auguſt 1791, a moſt alarming inſurrection of the negroes began, on the French plantations upon this iſland. A ſcene of the moſt horrid cruelties enſued. In a little time, no leſs than one hundred thouſand negroes were in rebellion, and all the manufactories and plantations of more than half the northern province appeared as one general conflagration. The plains and the mountains are filled with carnage, and deluged with blood. The coloniſts, ſtupified with fear, know not where to ſeek refuge; one flies for ſafety to the woods; is there betrayed by his negroes and ſtabbed; another confides in the promiſes of his ſlaves; a rebel ring-leader ſteals in among them; the gang riſes and the proprietor is their victim.

Scattered over a ſurface of land; interſected by mountains and deep vallies, the flying inhabitants attempt to rally, and to ſell their lives dearly. The roads are obſtructed, and they are taken and maſſacred.

Thoſe who re-unite, oppoſe but a feeble bulwark, againſt the ſwelling torrent; they are diſperſed and taken; and expiate in tortures their exertions for ſelf preſervation. Theſe horrible ſcenes were acting at the gate of the town of the Cape. Terror and diſmay take poſſeſſion of every mind; yet all feel the urgency of providing for their ſafety, of taking arms, and of acting under the command of the governor.

What the iſſue will be it is impoſſible to ſay. More than one thouſand of the French have already fallen the victims of this cruel revolt, and perhaps fifteen thouſand negroes will be deſtroyed before order and tranquillity be re-eſtabliſhed. But ſhould they ſucceed in their projects, St. Domingo will become the tomb of fifty thouſand Frenchmen."

Only one reflection we ſhall make from the above facts, which is that the ſituation of theſe unhappy negroes; men as well as their maſters, and who have as good a right to the liberty of independence as they have, will very much extenuate ſome of the enormities which they committed; enormities which will not bear a mention with thoſe which theſe poor ſufferers have received from their tyrants in their firſt captivity, and in the ſubſequent hard treatment they have had. Let the proprietors of theſe ſlaves aſk themſelves, whether, had theſe negroes carried them as ſlaves into Africa, they would not have thought it a noble effort to endeavour to regain their freedom. Every man feels the anſwer which would be given: and that anſwer will place the conduct of theſe Africans in its proper point of light.

PORTO-RICO.] Situated between 64 and 67 degrees weſt lon. and in 18 degrees north lat. lying between Hiſpaniola and St. Chriſtopher's, is 100 miles long, and 40 broad. The ſoil is beautifully diverſified with woods, vallies, and plains; and extremely fertile, producing the ſame fruits as the other iſlands. It is well watered with ſprings and rivers; but the iſland is unhealthful in the rainy ſeaſons. It was on account of the gold that the Spaniards ſettled here; but there is no longer any conſiderable quantity of this metal found in it.

PORTO-RICO, the capital town, ſtands in a little iſland on the north ſide, forming a capacious harbour, and joined to the chief iſland by a cauſey, and defended by forts and batteries, which render the town almoſt inacceſſible. It was, however, taken by ſir Francis Drake, and afterwards by the earl of Cumberland. It is better inhabited than moſt of the Spaniſh towns, becauſe it is the centre of the contraband trade carried on by the Engliſh and French with the king of Spain's ſubjects.

VIRGIN ISLANDS.] Situated at the eaſt end of Porto Rico, are extremely ſmall.

TRINIDAD.] Situated between 59 and 62 degrees weſt lon. and in 10 degrees north lat. lies between the iſland of Tobago and the Spaniſh Main; from which it is ſeparated by the ſtraits of Paria. It is about 90 miles long, and 60 broad; and is an unhealthy, but fruitful ſoil, producing ſugar, fine tobacco, indigo, ginger, variety of fruit, ſome cotton trees, and Indian corn. It was taken by ſir Walter Raleigh, in 1595, and by the French in 1676, who plundered the iſland, and extorted money from the inhabitants.

MARGARETTA.] Situate in 64 degrees weſt lon. and 11-30 north lat. ſeparated from the northern coaſt of New Andaluſia, in Terra Firma, by a ſtrait of 24 miles, is about 40 miles in length, and 24 in breadth; and being always verdant, affords a moſt agreeable proſpect. The iſland abounds in paſture, in maize, and fruit; but there is a ſcarcity of wood and water. There was once a pearl fiſhery on its coaſt, which is now diſcontinued.

There are many other ſmall iſlands in thoſe ſeas, which the Spaniards have neglected. We ſhall therefore proceed round Cape Horn into the South Seas, where the firſt Spaniſh iſland of any importance is CHILOE, on the coaſt of Chili, which has a governor, and ſome harbours well fortified.

JUAN FERNANDES.] Lying in 83 degrees weſt lon. and 33 ſouth lat. 300 miles weſt of Chili. This iſland is uninhabited; but having ſome good harbours, it is found extremely convenient for the Engliſh cruiſers to touch at and water; and here they are in no danger of being diſcovered, unleſs when, as is generally the caſe, their arrival in the ſouth ſeas, and their motions have been made known to the Spaniards by our good friends at Braſil. This iſland is famous for having given riſe to the celebrated romance of Robinſon Cruſoe. It ſeems one Alexander Selkirk, a Scotſman, was left aſhore in this ſolitary place by his captain, where he lived ſome years, until he was diſcovered by captain Woodes Rogers, in 1709; when taken up he had forgotten his native language, and could ſcarcely be underſtood, ſeeming to ſpeak his words by halves. He was dreſſed in goat's ſkins, would drink nothing but water, and was ſome time before he could reliſh the ſhip's victuals. During his abode in this iſland, he had killed 500 goats, which he caught by running them down; and he marked as many more on the ear, which he let go. Some of theſe were caught, 30 years after, by lord Anſon's people; their venerable aſpect and majeſtic beards diſcovered ſtrong ſymptoms of antiquity.

Selkirk, upon his return to England, was adviſed to publiſh an account of his life and adventures in his little kingdom. He is ſaid to have put his papers into the hands of Daniel Defoe, to prepare them for publication. But that writer, by the help of thoſe papers, and a lively fancy, transformed Alexander Selkirk into Robinſon Cruſoe, and returned Selkirk his papers again; ſo that the latter derived no advantage from them. They were probably too indigeſted for publication, and Defoe perhaps derived little from them, but thoſe hints which gave riſe to his own celebrated performance.

The other iſlands that are worth mentioning are, the Gallipago iſles, ſituated 400 miles weſt of Peru, under the equator; and thoſe in the bay of Panama, called the King's or Pearl Iſlands.

PORTU-

PORTUGUESE AMERICA.

CONTAINING BRASIL.

SITUATION AND EXTENT.

Miles.		Degrees.	Sq. Miles.
Length 2500 Breadth 700	between	the equator and 35 ſouth latitude. 35 and 60 weſt longitude.	940,000.

BOUNDARIES.] BOUNDED by the mouth of the river Amazon, and the Atlantic Ocean, on the North; by the ſame ocean, on the Eaſt; by the mouth of the river Plata, South; and by a chain of mountains, which divided it from Paraguay and the country of Amazons, on the Weſt.

On the coaſt are three ſmall iſlands, where ſhips touch for proviſions in their voyage to the South Seas, viz. Fernando, St. Barbara, and St. Catherine's.

	St. Vincent — —	St. Vincent
	Del Rey — —	St. Salvador.

SEAS, BAYS, HARBOURS, AND CAPES. The Atlantic Ocean waſhes the coaſt of Braſil on the north-eaſt and eaſt, upwards of 3000 miles, forming ſeveral fine bays and harbours; as the harbours of Pernambuco, All-Saints, Porto Seguro, the port and harbour of Rio Janeiro, the port of St. Vincent, the harbour of St. Gabriel, and the port of St. Salvador, on the north ſhore of the river La Plata.

The principal capes are, Cape Roque, Cape St. Auguſtine, Cape Trio, and Cape St. Mary, the moſt ſoutherly promontory of Braſil.

FACE OF THE COUNTRY, AIR, CLIMATE, AND RIVERS. The name of Braſil was given to this country, becauſe it abounded with a wood of that name. To the northward of Braſil, which lies almoſt under the equator, the climate is hot, boiſterous, and unwholeſome, ſubject to great rains and variable winds, particularly in the months of March and September, when they have ſuch deluges of rain, with ſtorms and tornadoes, that the country is overflowed. But to the ſouthward, beyond

yond the tropic of capricorn, no part of the world enjoys a more ſerene and wholeſome air, refreſhed with the ſoft breezes of the ocean on one hand, and the cool breath of the mountains on the other. The land near the coaſt is in general low, but exceedingly pleaſant, interſperſed with meadows and woods; on the weſt, far within land, are mountains from which iſſue many noble ſtreams, that fall into the great rivers Amazon and La Plata, others running acroſs the country from eaſt to weſt till they fall into the Atlantic Ocean, after meliorating the lands which they annually overflow, and turning the ſugar mills belonging to the Portugueſe.

SOIL AND PRODUCE.] In general the ſoil is extremely fruitful, producing ſugar, which being clayed, is whiter and finer than our muſcovado, as we call our unrefined ſugar. Alſo tobacco, hides, indigo, ipecacuanha, balſam of Copaiba, Braſil wood, which is of a red colour, hard and dry, and is chiefly uſed in dying, but not the red of the beſt kind; it has likewiſe ſome place in medicine, as a ſtomachic and reſtringent.

The animals here are the ſame as in Peru and Mexico. The produce of the ſoil was found very ſufficient for ſubſiſting the inhabitants, until the mines of gold and diamonds were diſcovered; theſe with the ſugar plantations, occupy ſo many hands, that agriculture lies neglected; and, in conſequence, Braſil depends upon Europe for its daily food.

INHABITANTS, MANNERS, AND CUSTOMS.] The portrait given us of the manners and cuſtoms of the Portugueſe in America, by the moſt judicious travellers, is very far from being favourable. They are deſcribed as a people, who, while ſunk in the moſt effeminate luxury, practiſe the moſt deſperate crimes. Of a temper hypocritical and diſſembling; without ſincerity in converſation, or honeſty in dealing; lazy, proud, and cruel. In their diet penurious; for, like the inhabitants of moſt ſouthern climates, they are much more fond of ſhew, ſtate, and attendance, than of the pleaſures of free ſociety, and of a good table; yet their feaſts, which are rare, are ſumptuous to extravagance. When they appear abroad, they cauſe themſelves to be carried in a kind of cotton hammocks, called ſerpentines, which are borne on the negroes ſhoulders, by the help of a bamboo, about twelve or fourteen feet long. Moſt of theſe hammocks are blue, and adorned with fringes of the ſame colour; they have a velvet pillow, and above the head a kind of teſter, with curtains; ſo that the perſon carried cannot be ſeen, unleſs he pleaſes; but may lie down or ſit up, leaning on his pillow. When he has a mind to be ſeen, he pulls the curtains aſide, and ſalutes his acquaintance whom he meets in the ſtreets; for they take a pride in complimenting each other in their hammocks, and will even hold long conferences in them in the ſtreets; but then the two ſlaves who carry them, make uſe of ſtrong rods, forked above and pointed below with iron; theſe they ſtick faſt in the ground, and on them reſts the bamboo, to which the hammock is fixed, till their maſter's buſineſs or compliment is over. Scarcely any man of faſhion, or any lady will paſs the ſtreets without being carried in this manner.

TRADE AND CHIEF TOWNS.] The trade of Portugal is carried on upon the ſame excluſive plan on which the ſeveral nations of Europe trade with their colonies of America; and it more particularly reſembles the ancient Spaniſh method, in not ſending out ſingle ſhips, as the convenience of the ſeveral places, and the judgment of the European merchants, may direct; but by annual fleets, which ſail at ſtated times from Portugal, and compoſe three flotas, bound to as many ports in Braſil; namely, to Pernambuco, in the northern part; to Rio Janeiro, at the ſouthern extremity; and to the Bay of All-Saints, in the middle.

In this laſt is the capital, which is called St. Salvador, and ſometimes the city of Bahia, and where all the fleets rendezvous on their return to Portugal. This city com-

commands a noble, ſpacious, and commodious harbour. It is built upon a high and ſteep rock, having the ſea upon one ſide, and a lake forming a creſcent, inveſting it almoſt wholly ſo as nearly to join the ſea, on the other. The ſituation makes it in a manner impregnable by nature; and they have beſides added to it very ſtrong fortifications. It is populous, magnificent, and beyond compariſon the moſt gay and opulent city in all Braſil.

The trade of Braſil is very great, and increaſes every year; which is the leſs ſurpriſing, as the Portugueſe have opportunities of ſupplying themſelves with ſlaves for their ſeveral works, at a much cheaper rate than any other European power that has ſettlements in America; they being the only Europeans who have eſtabliſhed colonies in Africa, and from hence they import between 40 and 50,000 negroes annually, all of which go into the amount of the cargo of the Braſil fleets for Europe. Of the diamonds there is ſuppoſed to be returned to Europe to the value of 130,000l.

This, with the ſugar, the tobacco, the hides, the valuable drugs for medicine and manufactures, may give ſome idea of the importance of this trade, not only to Portugal, but to all the trading powers of Europe.

The chief commodities the European ſhips carry thither in return, are not the fiftieth part the produce of Portugal; they conſiſt of woollen goods, of all kinds, from England, France, and Holland; the linens and laces of Holland, France, and Germany; the ſilks of France and Italy; ſilk and thread ſtockings, hats, lead, tin, pewter, iron, copper, and all ſorts of utenſils wrought in theſe metals, from England; as well as ſalt fiſh, beef, flour and cheeſe. Oil they have from Spain; wine, with ſome fruit, is nearly all they are ſupplied with from Portugal. England is at preſent moſt intereſted in the trade of Portugal, both for home conſumption and the uſe of the Braſils. However, the French have become very dangerous rivals to us in this, as in many other branches of trade.

Braſil is a very wealthy and flouriſhing ſettlement. Their export of ſugar, within 40 years, is grown much greater than it was, though anciently it made almoſt the whole of their exportable produce, and they were without rivals in the trade. Their tobacco is remarkable good, though not raiſed in ſuch large quantities as in the American colonies. The northern and ſouthern parts of Braſil abound with horned cattle: theſe are hunted for their hides only, of which no leſs than 20,000 are ſent annually to Europe.

The Portugueſe had been long in poſſeſſion of Braſil before they diſcovered the treaſures of gold and diamonds, which have ſince made it ſo valuable. Their fleets rendezvous in the bay of All-Saints, to the amount of 100 ſail of large ſhips, in May or June, and carry to Europe a cargo little inferior in value to the treaſures of the Spaniſh flota and galeons. The gold alone, great part of which is coined in America, amounts to near four millions ſterling; but part of this is brought from their colonies in Africa, together with ebony, and ivory.

HISTORY AND GOVERNMENT.] This country was firſt diſcovered by Americus Veſpuſio, in 1498, but the Portugueſe did not plant it till 1549, when they fixed themſelves at the Bay of All-Saints, and founded the city of St. Salvador. They met with ſome interruption at firſt from the court of Spain, who conſidered the whole continent of South America as belonging to them. However, the affair was at length made up by treaty; and it was agreed that the Portugueſe ſhould poſſeſs all the country lying between the two great rivers Amazon and La Plata, which they ſtill enjoy. The French alſo made ſome attempts to plant colonies on this coaſt, but were driven from thence by the Portugueſe, who remained without a rival till the year 1580, when, in the very meridian of their proſperity, they were ſtruck by one of thoſe blows, which inſtantly decides the fate of kingdoms: Don Sebaſtian, the

king of Portugal, loſt his life and army, in an expedition againſt the Moors in Africa, and by that event the Portugueſe loſt their independance, being abſorbed into the Spaniſh dominions.

The Dutch ſoon after this, having thrown off the Spaniſh yoke, and not ſatisfied with ſupporting their independency by a ſucceſsful defenſive war, and fluſhed with the juvenile ardor of a growing commonwealth, they purſued the Spaniards into the remoteſt receſſes of their extenſive territories, and grew rich, powerful, and terrible, by the ſpoils of their former maſters. They particularly attacked the poſſeſſions of the Portugueſe; they took almoſt all their fortreſſes in the Eaſt Indies, and then turned their arms upon Braſil, where they took ſeven of the captainſhips or provinces; and would have ſubdued the whole colony, had not their career been ſtopt by the archbiſhop, at the head of his monks, and a few ſcattered forces. The Dutch were, however, about the year 1654, entirely driven out of Braſil; but their Weſt-India company ſtill continuing their pretenſions to this country, and harraſſing the Portugueſe at ſea, the latter agreed, in 1661, to pay the Dutch eight tons of gold, to relinquiſh their intereſt in that country, which was accepted; and the Portugueſe have remained in peaceable poſſeſſion of all Braſil from that time, till about the end of 1762, when the Spaniſh governor of Buenos Ayres, hearing of a war between Portugal and Spain, took, after a month's ſiege, the Portugueſe frontier fortreſs called St. Sacrament; but, by the treaty of peace, it was reſtored.

FRENCH AMERICA.

THE poſſeſſions and claims of the French before the war of 1756, as appears by their maps, conſiſted of almoſt the whole continent of North America; which vaſt country they divided into two great provinces, the northern of which they called Canada, comprehending a much greater extent than the Britiſh province of that name, ſince it included a great part of the provinces of New York, New England, and Nova Scotia. The ſouthern province they called Louiſiana, in which they included a part of Carolina. This diſtribution, and the military diſpoſitions, which the French made to ſupport it, formed the principal cauſe of the war between Great Britain and France, in the year 1756, the iſſue of which is well known. While the French were rearing their infant colonies, and with the moſt ſanguine hopes forming vaſt deſigns of an extenſive empire, one wrong ſtep in their politics loſt them the whole, for by commencing hoſtilities many years too ſoon, they were driven from Canada, and forced to yield to Great Britain, all that fine country of Louiſiana eaſtward of the Miſſiſſippi. At the treaty of peace, however they were allowed to keep poſſeſſion of the weſtern banks of that river, and the ſmall town of New Orleans, near the mouth of it; which territories in 1769, they ceded to Spain, for reaſons unknown to the public.

The French, therefore, from being one of the greateſt European powers in that quarter, and to the American colonies a very dangerous neighbour and rival, have now loſt all footing in North America; but on the ſouthern continent they have ſtill a ſettlement which is called

CAYENNE, OR EQUINOCTIAL FRANCE.

IT is ſituated between the equator and fifth degree of north latitude, and between the 50th and 55th of weſt longitude. It extends 240 miles along the coaſt of Guiana, and near 300 miles within land; bounded by Surinam, on the North; by the Atlantic Ocean, Eaſt; by Amazonia, South; and by Guiana, Weſt. The chief town is Caen.

All the coaſt is very low, but within land there are fine hills very proper for ſettlements; the French have, however, not yet extended them ſo far as they might; but they raiſe the ſame commodities which they have from the Weſt India iſlands, and in no inconſiderable quantity. They have alſo taken poſſeſſion of the iſland of Cayenne, on this coaſt, at the mouth of the river of that name, which is about 45 miles in circumference. The iſland is very unhealthy; but having ſome good harbours, the French have here ſome ſettlements, which raiſe ſugar and coffee.

FRENCH ISLANDS IN AMERICA.

THE French were among the laſt nations who made ſettlements in the Weſt Indies; but they made ample amends by the vigour with which they purſued them, and by that chain of judicious and admirable meaſures which they uſed in drawing from them every advantage that the nature of the climate affords; and in contending againſt the difficulties which it threw in their way.

They are ſenſible that as the mother country is ultimately to receive all the benefit of their labours and acquiſitions, the proſperity of their plantations muſt be derived from the attention with which they are regarded at home. For this reaſon, the plantations are particularly under the care and inſpection of the council of commerce, a board compoſed of twelve of the moſt conſiderable officers of the crown, aſſiſted by the deputies of all the conſiderable trading towns and cities in France, who are choſen from the richeſt and moſt intelligent of their traders, and allowed a handſome ſalary for their attendance at Paris, from the funds of their reſpective cities. This council ſits once a week, when the deputies propoſe plans for the redreſſing every grievance of trade, for raiſing the branches that are fallen, for extending new ones, and, in fine, for every thing that may improve the work, or promote the vent, of their manufactures. When they are all ſatisfied of the uſefulneſs of any regulation, they propoſe it to the royal council, where their report is always received with particular attention. An edict to inforce it accordingly iſſues; and is executed with a punctuality that diſtinguiſhes their government.

The internal government of their colonies is intruſted to a governor, an intendant, and a royal council. The governor is inveſted with a great deal of power; which, however, on the ſide of the crown, is checked by the intendant, who has the care of the king's rights, and whatever relates to the revenue: and on the ſide of the people, it is checked by the royal council, whoſe office it is to ſee that the people are not oppreſſed by one, nor defrauded by the other: and they are all checked by the conſtant and jealous eye which the government at home keeps over them; the officers of all the ports of France being charged, under the ſevereſt penalties, to interrogate all captains of ſhips coming from the colonies, what reception they met with at the ports to which they ſailed? how juſtice was adminiſtered to them? what charges they were made liable to, and of what kinds?

That the colonies may be as little burthened as poſſible, and that the governor may have leſs temptation to ſtir up troubleſome intrigues, or favour factions in his government, his ſalary is paid by the crown: he has no perquiſites, and is ſtrictly forbidden to carry on any trade, or to have any plantations in the iſlands or on the continent; or any intereſt whatever, in goods or lands, within his government, except the houſe he lives in, and a garden for his convenience and recreation. All the other officers are paid by the crown, out of the revenues of the mother country. The fortifications are built and repaired, and the ſoldiers paid out of the ſame funds.

In general, their colonies pay no taxes; but when, upon any extraordinary emergency, taxes are raiſed, they are always very moderate. The duties upon the export of their produce at the Weſt-India iſlands, or at its import into France, are next to nothing; in both places hardly making two per cent. The commodities ſent to the iſlands pay no duties at all. Their other regulations, reſpecting the judges of the admiralty, law-ſuits, recovery of debts, lenity to ſuch as have ſuffered by earthquakes, hurricanes, or bad ſeaſons, the peopling their colonies, number of whites to be employed by the planters, and laſtly, the management of negroes, cannot be ſufficiently admired; and might be imitated with great advantage by their neighbours.

We have already mentioned the French colony upon the Spaniſh iſland of Hiſpaniola, or St. Domingo, as the moſt important and valuable of all their foreign ſettlements, and which they poſſeſs through the indolence of the Spaniards on that iſland, or the partiality of their court to the French nation. We ſhall next proceed to the iſlands of which the French have the ſole poſſeſſion, beginning with the large and important one of

MARTINICO.] Which is ſituated between 14 and 15 degrees of north lat. and in 61 degrees weſt lon. lying about 40 leagues north-weſt of Barbadoes, is about 60 miles in length, and half as much in breadth. The inland part of it is hilly, and pours out on every ſide, a number of agreeable and uſeful rivers, which adorn and enrich this iſland in a high degree. The produce of the ſoil is ſugar, cotton, indigo, ginger, and ſuch fruits as are found in the neighbouring iſlands. But ſugar is here, as in all the Weſt India iſlands, the principal commodity, of which they export a conſiderable quantity annually. Martinico is the reſidence of the governor of the French iſlands in thoſe ſeas. Its bays and harbours are numerous, ſafe, and commodious; and ſo well fortified, that they often bade defiance to the Engliſh, till the war of 1756, when the Britiſh arms being triumphant in every quarter of the globe, this iſland was added to the Britiſh empire, but it was given back at the treaty of peace.

GUADALUPE.] So called by Columbus, from the reſemblance of its mountains to thoſe of that name in Spain, is ſituated in 16 degrees north lat. and 62 weſt lon. about 30 leagues north of Martinico, and almoſt as much ſouth of Antigua; being 45 miles long, and 38 broad. It is divided into two parts by a ſmall arm of the ſea, or rather a narrow channel, through which no ſhips can venture; but the inhabitants paſs it in a ferry-boat. Its ſoil is equally fertile with that of Martinico, producing ſugar, cotton, indigo, ginger, &c. This iſland is in a flouriſhing condition, and its exports of ſugar almoſt incredible. Like Martinico, it was formerly attacked by the Engliſh, who gave up the attempt; but in 1759, it was reduced by the Britiſh arms, and was given back at the peace of 1763.

ST. LUCIA.] Situated in 14 deg. north lat. and in 61 deg. weſt lon. 80 miles north-weſt of Barbadoes, is 23 miles in length, and 12 in breadth. It received its name from being diſcovered on the day dedicated to the virgin martyr St. Lucia. The Engliſh firſt ſettled here in 1637. From that time they met with various misfortunes from the natives and French; at length it was agreed on between the latter and the Engliſh, that St. Lucia, with Dominica and St. Vincent, ſhould remain neutral But the French, before the war of 1756 broke out, began to ſettle theſe iſlands; which by the treaty of peace were yielded up to Great Britain, and this iſland to France. The ſoil of St. Lucia, in the vallies, is extremely rich. It produces excellent timber, and abounds with pleaſant rivers, and well ſituated harbours; and is now declared a free port under certain reſtrictions. The Engliſh made themſelves maſters of it in 1778; but it was reſtored again to the French in 1783.

TOBAGO.] This iſland is ſituated in 11 degrees odd minutes, north lat. 120 miles ſouth of Barbadoes, and about the ſame diſtance from the Spaniſh Main. It is about 32 miles in length, and nine in breadth. The climate here is not ſo hot as might be expected ſo near the equator; and it is ſaid that it lies out of the courſe of thoſe hurricanes, that have ſometimes proved ſo fatal to the other Weſt India iſlands. It has a fruitful ſoil, capable of producing ſugar, and indeed every thing elſe that is raiſed in the Weſt Indies, with the addition (if we may believe the Dutch) of the cinnamon, nutmeg, and gum copal. It is well watered with numerous ſprings; and its bays and creeks are ſo diſpoſed as to be very commodious for all kind of ſhipping. The value and importance of this iſland appears from the expenſive and formidable armaments ſent thither by European powers in ſupport of their different claims. It ſeems to have been chiefly poſſeſſed by the Dutch, who defended their pretenſions againſt both England and France with the moſt obſtinate perſeverance. By the treaty of Aix-la-Chapelle, in 1748, it was declared neutral; though by the treaty of peace in 1763, it was yielded up to Great Britain; but in June 1781, it was taken by the French, and ceded to them by the treaty of 1783.

ST. BARTHOLOMEW, DESEADA, AND MARIEGALANTE. } Are three ſmall iſlands lying in the neighbourhood of Antigua and St. Chriſtopher's; and of no great conſequence to the French, except in time of war, when they give ſhelter to an incredible number of privateers, which greatly annoy our Weſt India trade. It would therefore be good policy in Great Britain, upon the breaking out of a war with France, immediately to take poſſeſſion of theſe iſlands, which would ſeem to be a matter of no great difficulty, as they have been frequently reduced by the Engliſh, and as frequently given back to the French; who have often experienced the generoſity of the Britiſh court. St. Bartholomew is now to be conſidered as belonging to the crown of Sweden, being ceded to it by France, 1785.

The ſmall iſlands of ST. PIERRE and MIQUELON, ſituated near Newfoundland, belonging to France, have been already mentioned with that iſland.

DUTCH AMERICA.

Containing SURINAM, on the Continent of SOUTH AMERICA.

AFTER the Portugueſe had diſpoſſeſſed the Dutch of Braſil in the manner we have ſeen; and after they had been entirely removed out of North America, they were obliged to conſole themſelves with their rich poſſeſſions in the Eaſt Indies, and to ſit down content in the Weſt with Surinam; a country once poſſeſſed by the Engliſh, but of no great value whilſt we had it, and which we ceded to them in exchange for New York; with two or three ſmall and barren iſlands in the north ſea, not far from the Spaniſh Main.

Dutch Guiana, is ſituate between five and ſeven degrees north lat. extending 100 miles along the coaſt from the mouth of the river Oronoque, north, to the river Maroni, or French Guiana, ſouth. The climate of this country is generally reckoned unwholeſome; and a conſiderable part of the coaſt is low, and covered with water. The chief ſettlement is Surinam, a town built on a river of the ſame name; and the Dutch have extended their plantations 30 leagues above the mouth of this river. This is one of the richeſt and moſt valuable colonies belonging to the United Provinces; but it is in a leſs proſperous ſituation than it was ſome years ſince, owing, among other cauſes, to the wars with the fugitive negroes, whom the Dutch treated with great barbarity, and who are become ſo numerous, having increaſed from year to year, that they have formed a kind of colony in woods almoſt inacceſſible, along the rivers of Surinam, Saramaca, and Copename, and are become very formidable enemies to their former maſters. Under the command of chiefs, whom they have elected among themſelves, they have cultivated lands for their ſubſiſtence, and make frequent incurſions into the neighbouring plantations. The chief trade of Surinam conſiſts in ſugar, a great deal of cotton, coffee of an excellent kind, tobacco, flax, ſkins, and ſome valuable dying drugs. The North American colonies bring hither horſes, live cattle, and proviſions; and take home a large quantity of molaſſes.

Connected with Surinam, we ſhall mention the two Dutch colonies of Demerary and Iſſequibo on the Spaniſh Main, which ſurrendered to the Engliſh in the year 1781, and were repreſented as a very valuable acquiſition, which would produce more revenue to the crown than all the Britiſh Weſt India iſlands united. But the report was either not believed or ſlighted, for theſe places were left defenceleſs, and ſoon retaken by a French frigate.

Dr. Bancroft obſerves, that the inhabitants of Dutch Guiana, are either whites, blacks, or the reddiſh brown aboriginal natives of America. The promiſcuous intercourſe of theſe different people, has likewiſe generated ſeveral intermediate caſts, whoſe colours immutably depend on their degree of conſanguinity to either Whites, Indians, or Negroes. Theſe are divided into Mulattoes, Tercerones, Quarterones, and Quinterones, with ſeveral intermediate ſubdiviſions, proceeding from their retrograde intercourſe.

There are ſo great a number of birds, of various ſpecies and remarkable for the beauty of their plumage, in Guiana, that ſeveral perſons in this colony have employed themſelves advantageouſly, with their ſlaves and dependents, in killing and preſerving birds for the cabinets of naturaliſts in different parts of Europe. The torporific eel is found in the rivers of Guiana, which, when touched either by the hand, or by a rod of iron, gold, ſilver, copper, or by a ſtick of ſome particular

kinds

kinds of heavy American wood, communicates a ſhock reſembling that of electricity. There are an immenſe number and variety of ſnakes in this country, which form one of its principal inconveniences. A ſnake was killed ſome years ſince, on a plantation which had belonged to Peter Amyatt, eſq. which was upwards of thirty-three feet in length, and in the largeſt place, near the middle, was three feet in circumference. It had a broad head, large prominent eyes, and a very wide mouth, in which was a double row of teeth. Among the animals of Dutch Guiana, is the Laubba, which is peculiar to this country. It is a ſmall amphibious creature, about the ſize of a pig four months old, covered with fine ſhort hair; and its fleſh, by the Europeans who reſide here, is preferred to all other kinds of meat.

DUTCH ISLANDS IN AMERICA.

ST. EUSTATIUS, OR EUSTATIA.] SItuated in 17° 29′ N. lat. 63° 10′ W. lon. and three leagues north-weſt of St. Chriſtopher's, is only a mountain, about 29 miles in compaſs, riſing out of the ſea, like a pyramid, and almoſt round. But, though ſo ſmall, and inconveniently laid out by nature, the induſtry of the Dutch have made it turn to very good account; and is ſaid to contain 5000 whites, and 15,000 negroes. The ſides of the mountain are diſpoſed in very pretty ſettlements; but they have neither ſprings nor rivers. They raiſe here ſugar and tobacco; and this iſland, as well as Curaſſou, is engaged in the Spaniſh contraband trade; and both places generally profited by their neutrality. But when hoſtilities were commenced by Great Britain againſt Holland, admiral Rodney and general Vaughan were ſent with a conſiderable land and ſea force againſt St. Euſtatius, which being incapable of defence, ſurrendered at diſcretion, on the 3d of February 1781. The private property of the inhabitants was confiſcated with a degree of rigour very uncommon among civilized nations, and very inconſiſtent with the humanity and generoſity by which the Engliſh nation uſed to be characteriſed. The reaſon aſſigned was, that the inhabitants of St. Euſtatius had aſſiſted the revolted colonies with naval and other ſtores. But on the 27th of November, the ſame year, St. Euſtatius was retaken by the French, under the command of the marquis de Bouillé, though their force conſiſted of only three frigates and ſome ſmall craft, and about 300 men.

CURASSOU.] Situated in 12 degrees north lat. 9 or 10 leagues from the continent of Terra Firma, is 30 miles long, and 10 broad. The iſland is not only barren, and dependent upon the rains for its water, but the harbour is naturally one of the worſt in America: yet the Dutch have entirely remedied that defect; they have upon this harbour one of the largeſt, and at the ſame time the moſt elegant and cleanly towns in the Weſt Indies. The public buildings are numerous and handſome; the private houſes commodious; and the magazines large, convenient, and well filled. All kind of labour is here performed by engines; ſome of them ſo well contrived, that ſhips are at once lifted into the dock.

Though this iſland is naturally barren, the induſtry of the Dutch has brought it to produce a conſiderable quantity both of tobacco and ſugar; it has beſides, good ſalt-works, for the produce of which there is a briſk demand from the Engliſh iſlands, and the colonies on the continent. But what renders this iſland of moſt advantage to the Dutch, is the contraband trade which is carried on between the inhabitants

and

and the Spaniards, and their harbour being the rendezvous to all nations in time of war.

The Dutch ſhips from Europe touch here for intelligence, or pilots, and then proceed to the Spaniſh coaſts for trade, which they force with a ſtrong hand, it being very difficult for the Spaniſh guarda-coſtas to take theſe veſſels; for they are not only ſtout ſhips, with a number of guns, but are manned with large crews of choſen ſeamen, deeply intereſted in the ſafety of the veſſel and the ſucceſs of the voyage. They have each a ſhare in the cargo, proportioned to their reſpective ranks, and ſupplied by the merchants upon credit, and at prime coſt. This animates them with uncommon courage, and they fight bravely, becauſe every man fights in defence of his own property. Beſides this, there is a conſtant intercourſe between this iſland and the Spaniſh continent.

Curaſſou has numerous warehouſes, always full of the commodities of Europe and the Eaſt Indies. Here are all ſorts of woollen and linen cloth, laces, ſilks, ribbands, iron utenſils, naval and military ſtores, brandy, the ſpices of the Moluccas, and the callicoes of India, white and painted. Hither the Dutch Weſt India, which is alſo their African company, annually bring three or four cargoes of ſlaves; and to this mart the Spaniards themſelves come in ſmall veſſels, and carry off not only the beſt of the negroes, at a very high price, but great quantities of all the above ſorts of goods; and the ſeller has this advantage, that the refuſe of warehouſes and mercers ſhops, and every thing that is grown unfaſhionable and unſaleable in Europe, go off here extremely well; every thing being ſufficiently recommended by its being European. The Spaniards pay in gold and ſilver, coined or in bars, cocoa, vanilla, jeſuit's bark, cochineal, and other valuable commodities.

The trade of Curaſſou, even in times of peace, is ſaid to be annually worth to the Dutch no leſs than 500,000 l. but in time of war, the profit is ſtill greater, for then it becomes the common emporium of the Weſt Indies: it affords a retreat to ſhips of all nations, and at the ſame time refuſes none of them arms and ammunition. The intercourſe with Spain being then interrupted, the Spaniſh colonies have ſcarcely any other market from whence they can be well ſupplied either with ſlaves or goods. The French come thither to buy the beef, pork, corn, flour, and lumber, which are brought from the continent of North America, or exported from Ireland; ſo that, whether in peace or in war, the trade of this iſland flouriſhes extremely.

The trade of all the Dutch American ſettlements was originally carried on by the Weſt India company alone: at preſent, ſuch of the ſhips as go upon that trade, pay two and a half per cent. for their licences: the company, however, reſerve to themſelves the whole of what is carried on between Africa and the American iſlands.

The other iſlands, Bonaire and Aruba are inconſiderable in themſelves, and ſhould be regarded as appendages to Curaſſou, for which they are chiefly employed in raiſing cattle and other proviſions.

The ſmall iſlands of Saba and St. Martin's, ſituated at no great diſtance from St. Euſtatius, were both captured by admiral Rodney and general Vaughan, at the time when Euſtatius ſurrendered to the arms of Great Britain, but were afterwards retaken by the French.

DANISH ISLANDS IN AMERICA.

ST. THOMAS.] AN inconſiderable member of the Caribbees, ſituated in 64 degrees weſt lon. and 18 north lat. about 15 miles in circumference, and has a ſafe and commodious harbour.

ST. CROIX, OR SANTA CRUZ.] Another ſmall and unhealthy iſland, lying about five leagues eaſt of St. Thomas, ten or twelve leagues in length, and three or four where it is broadeſt. Theſe iſlands, ſo long as they remained in the hands of the Daniſh Weſt India company, were ill managed, and of little conſequence; but that wiſe and benevolent prince, the late king of Denmark, bought up the company's ſtock, and laid the trade open; and ſince that time the iſland of St. Thomas, as well as this, has been ſo greatly improved, that it is ſaid to produce upwards of 3000 hogſheads of ſugar of 1000 weight each, and other of the Weſt India commodities in tolerable plenty. In time of war, privateers bring in their prizes here for ſale; and a great many veſſels trade from hence along the Spaniſh Main, and return with money in ſpecie or bars, and valuable merchandiſe. As to Santa Cruz, from a perfect deſert a few years ſince, it is beginning to ſettle very faſt. Several perſons from the Engliſh iſlands, ſome of them of conſiderable property have gone to ſettle there, and have received very great encouragement.

Theſe two nations, the Dutch and Danes, hardly deſerve to be mentioned among the proprietors of America; their poſſeſſions there are comparatively nothing. But as they appear extremely worthy of the attention of theſe powers, and as the ſhare of the Dutch is worth to them at leaſt 600,000 l. a year, what muſt we think of our extenſive and valuable poſſeſſions? What attention do they not deſerve from us? and what may not be made of them by that attention?

"There ſeems to be a remarkable providence (ſays an ingenious and polite writer), in caſting the parts, if I may uſe the expreſſion, of the ſeveral European nations who act upon the ſtage of America. The Spaniard, proud, lazy, and magnificent, has an ample walk in which to expatiate; a ſoft climate to indulge his love of eaſe, and a profuſion of gold and ſilver to procure him all thoſe luxuries his pride demands, but which his lazineſs would refuſe him.

"The Portugueſe, naturally indigent at home, and enterpriſing rather than induſtrious abroad, has gold and diamonds as the Spaniards has, wants them as he does, but poſſeſſes them in a more uſeful, though a leſs oſtentatious manner.

"The Engliſh, of a reaſoning diſpoſition, thoughtful and cool, and men of buſineſs rather than of great induſtry, impatient of much fruitleſs labour, abhorrent of conſtraint, and lovers of a country life, have a lot which indeed produces neither gold nor ſilver, but they have a large tract of a fine continent; a noble field for the exerciſe of agriculture, and ſufficient to furniſh their trade without laying them under great difficulties. Intolerant as they are of the moſt uſeful reſtraints, their commerce flouriſhes from the freedom every man has of purſuing it according to his own ideas, and directing his life after his own faſhion.

"The French, active, lively, enterpriſing, pliable, and politic; and though changing their purſuits, always purſuing the preſent object with eagerneſs, are, notwithſtanding tractable, and obedient to rules and laws, which bridle their diſpoſitions, and wind and turn them to proper courſes. Theſe people had a country (when Canada was in their poſſeſſion) where more is to be effected by managing the people than by cultivating the ground; where a peddling commerce, that re-

quires conſtant motion, flouriſhes more than agriculture, or a regular traffic; where they had difficulties which kept them alert by ſtruggling with them, and where their obedience to a wiſe government (meaning the excellent regulations already mentioned reſpecting the French colonies in America) ſerves them for perſonal wiſdom. In the iſlands, the whole is the work of their policy, and a right turn their government has taken.

"The Dutch have a rock or two, on which to diſplay the miracles of frugality and diligence, (which are their virtues) and on which they have exerted theſe virtues, and ſhewn thoſe miracles."

NEW DISCOVERIES.

OUR knowledge of the globe has been conſiderably augmented by the late diſcoveries of the Ruſſians, and ſtill more by thoſe that have been made by Britiſh navigators in the preſent reign, which have been numerous and important: and of theſe diſcoveries we ſhall therefore here give a compendious account.

NORTHERN ARCHIPELAGO.

THIS conſiſts of ſeveral groups of iſlands, lying between the eaſtern coaſt of Kamtſchatka and the weſtern coaſt of the continent of America*. Mr. Muller divides theſe iſlands into four principal groups, the two firſt of which are ſtyled the Aleutian iſlands. The firſt group, which is called by ſome of the iſlanders Safignan, comprehends, 1. Beering's Iſland. 2. Copper Iſland. 3. Otma. 4. Samyra, or Shemiya. 5. Anakta. The ſecond group is called Khao, and comprizes eight iſlands, viz. 1. Immak, 2. Kiſka, 3. Tchetchia, 4. Ava, 5. Kavia, 6. Tſchangulak, 7. Ulagama, 8. Amtchidga. The third general name is Negho, and comprehends the iſlands known to the Ruſſians under the name of Andreanoffſki Oſtrova: ſixteen of which are mentioned under the following names; 1. Amatkinak; 2. Ulak; 3. Unalga; 4. Navotſha; 5. Uliga; 6. Anagin; 7. Kagulak; 8. Illaſk, or Illak; 9. Takavanga, upon which is a volcano; 10. Kanaga, which has alſo a volcano; 11. Ieg; 12. Skeſhuna; 13. Tagaloon; 14. Goreloi; 15. Otchu; 16. Amla. The fourth group is called Kavalang, and comprehends ſixteen iſlands; which are called by the Ruſſians *Lyſſie Oſtrova* or the *Fox Iſlands*; and which are named, 1. Amuchta; 2. Tſchigama; 3. Tſchegula; 4. Uniſtra; 5. Ulaga; 6. Tanagulana; 7. Kagamin; 8. Kigalga; 9. Skelmaga; 10. Umnak; 11. Agun-Alaſhka; 12. Unimga; 13. Uligan; 14. Anturo-Leiſſume; 15. Semidit; 16. Senagak.

* Mr. Coxe obſerves, that, "the firſt project for making diſcoveries in that tempeſtuous ſea, which lies between Kamtſchatka and America, was conceived and planned by Peter I." Voyages with that view were accordingly undertaken at the expence of the crown: but when it was diſcovered, that the iſlands in that ſea abounded with valuable furs, private merchants immediately engaged with ardour in ſimilar expeditions: and, within a period of ten years, more important diſcoveries were made by theſe individuals, at their own private coſt, than had hitherto been effected by all the efforts of the crown. The inveſtigation of uſeful knowledge has alſo been greatly encouraged by the preſent empreſs of Ruſſia; and the moſt diſtant parts of her vaſt dominions, and other countries and iſlands, have been explored, at her expence, by perſons of abilities and learning, in conſequence of which conſiderable diſcoveries have been made.

Some of theſe iſlands are only inhabited occaſionally, and for ſome months in the year, and others are very thinly peopled; but others have a great number of inhabitants, who conſtantly reſide in them. Copper Iſland receives its name from the copper which the ſea throws upon its coaſts. The inhabitants of theſe iſlands are, in general, of a ſhort ſtature, with ſtrong and robuſt limbs, but free and ſupple. They have lank black hair, and little beard, flattiſh faces, and fair ſkins. They are for the moſt part well made, and of ſtrong conſtitutions, ſuitable to the boiſterous climate of their iſles. The inhabitants of the Aleutian iſles live upon roots which grow wild, and ſea-animals. They do not employ themſelves in catching fiſh, though the rivers abound with all kinds of ſalmon, and the ſea with turbot. Their cloaths are made of the ſkins of birds, and of ſea-otters.

The Fox iſlands are ſo called from the great number of black, grey and red foxes with which they abound. The dreſs of the inhabitants conſiſts of a cap and a fur coat, which reaches down to the knee. Some of them wear common caps of a party-coloured bird ſkin, upon which they leave part of the wings and tail. On the fore-part of their hunting and fiſhing-caps, they place a ſmall board like a ſkreen, adorned with the jaw-bones of ſea-bears, and ornamented with glaſs beads, which they receive in barter from the Ruſſians. At their feſtivals and dancing-parties they uſe a much more ſhewy ſort of caps. They feed upon the fleſh of all ſorts of ſea-animals, and generally eat it raw. But if at any time they chooſe to dreſs their victuals, they make uſe of a hollow ſtone; having placed the fiſh or fleſh therein, they cover it with another, and cloſe the interſtices with lime or clay. They then lay it horizontally upon two ſtones, and light a fire under it. The proviſions, intended for keeping are dried without ſalt in the open air. Their weapons conſiſt of bows, arrows, and darts, and for defence they uſe wooden ſhields.

The moſt perfect equality reigns among theſe iſlanders. They have neither chiefs nor ſuperiors, neither laws nor puniſhments. They live together in families, and ſocieties of ſeveral families united, which form what they call a race, who, in caſe of an attack, or defence, mutually help and ſupport each other. The inhabitants of the ſame iſland always pretend to be of the ſame race; and every perſon looks upon this iſland as a poſſeſſion, the property of which is common to all the individuals of the ſame ſociety. Feaſts are very common among them, and more particularly when the inhabitants of one iſland are viſited by thoſe of the others. The men of the village meet their gueſts beating drums, and preceded by the women, who ſing and dance. At the concluſion of the dance, the hoſts ſerve up their beſt proviſions, and invite their gueſts to partake of the feaſt. They feed their children when very young with the coarſeſt fleſh, and for the moſt part raw. If an infant cries, the mother immediately carries it to the ſea-ſide, and, whether it be ſummer or winter, holds it naked in the water until it is quiet. This cuſtom is ſo far from doing the children any harm, that it hardens them againſt the cold, and they accordingly go barefooted through the winter without the leaſt inconvenience. They ſeldom heat their dwellings; but, when they are deſirous of warming themſelves, they light a bundle of hay, and ſtand over it; or elſe they ſet fire to train oil, which they pour into a hollow ſtone. They have a good ſhare of plain natural ſenſe, but are rather ſlow of underſtanding. They ſeem cold and indifferent in moſt of their actions; but let an injury, or even a ſuſpicion only rouſe them from this phlegmatic ſtate, and they become inflexible and furious, taking the moſt violent revenge, without regard to conſequences. The leaſt affliction prompts them to ſuicide, the apprehenſion of even an uncertain evil often leads them to deſpair, and they put an end to their days with great apparent inſenſibility.

The Diſcovery of an INLAND SEA, containing a great Number of ISLANDS in NORTH AMERICA.

FROM the obſervations made by captain Cook on the inhabitants of the weſtern part of America, about the latitude of 64° north, it appeared that a ſtrong ſimilarity appeared between them and the Eſquimaux on the Eaſtern coaſt. Hence it was even then conjectured, that a communication by ſea exiſted between the eaſtern and weſtern ſides of that continent.

In this part of America, however, a moſt ſurpriſing diſcovery has lately been made, which, when properly authenticated, cannot fail to be of the utmoſt utility, not only to ſcience in general, but to the commercial and political intereſts of mankind; not to ſay, that it will undoubtedly contribute, by giving an opportunity for the advancement of civilization, to their moral intereſts alſo. This, though not made by captain Cook himſelf, took place in conſequence of his diſcoveries on the northweſt continent of America. In theſe parts he found that ſuch quantities of valuable furs might be purchaſed from the inhabitants, as promiſed to be a very profitable article of commerce, provided any regular connection could be eſtabliſhed between that part of the world, and the Britiſh ſettlements in the Eaſt Indies. This taſk was quickly undertaken by ſome ſpirited adventurers, who unluckily have found themſelves oppoſed both by *friends* and *foes*, viz. the Eaſt India company, and the Spaniards; the former pretending that they had no right to diſpoſe of furs in the Eaſt Indies, and the latter, that they had none to bring them from the weſtern coaſt of America. By one Mr. Etches, who fitted out ſhips for this purpoſe, it was diſcovered that all the weſtern coaſt of America, from the latitude of 48° to 57° north, was no continued tract of land, but a chain of iſlands which had never been explored, and that theſe concealed the entrance to a vaſt inland ſea like the Baltic, or Mediterranean in Europe, and which ſeems likewiſe to be full of iſlands *. Among theſe, Mr. Etches' ſhip, the Princeſs Royal, penetrated ſeveral hundred leagues in a north-eaſt direction, till they came within 200 leagues of Hudſon's Bay; but as the intention of their voyage was merely commercial, they had not time fully to explore the Archipelago, juſt mentioned, nor did they arrive at the termination of this new Mediterranean ſea. From what they really did diſcover, however, it is probable, that there may this way be a communication with Hudſon's-bay, in which caſe, the northweſt paſſage to the Eaſt Indies will be found through ſeas much more navigable than thoſe in which it has hitherto been attempted. The iſlands, which they explored, were all inhabited by tribes of Indians, who appeared very friendly, and well diſpoſed to carry on a commerce. Of theſe iſlands upwards of fifty were viſited, and we are informed, that ſome ſhips are now fitting out at one of the ports of England for the ſame place, ſo that farther diſcoveries may ſoon be expected.

* In our map of North America, an iſland is laid down at the entrance of the river of the weſt, north latitude 45°, and weſt longitude 130°, the place where this diſcovery is ſaid to have been made.

THE

THE PELEW ISLANDS.

THE exiſtence and ſituation of theſe iſlands were probably known to the Spaniards at a diſtant period; but from a report among the neighbouring iſlands of their being inhabited by a ſavage race of cannibals, it appears that there had never been the leaſt communication between them and any of the Europeans, till the Antelope packet (belonging to the Eaſt India Company) was wrecked on one of them, in Auguſt 1783. From the accounts given of theſe iſlands, by captain Wilſon, who commanded the packet, it appears that they are ſituated between the 5th and 9th degrees north latitude, and between 130 and 136 degrees of eaſt longitude from Greenwich, and lie in a N. E. and S. W. direction; they are long but narrow, of a moderate height, and well covered with wood; the climate temperate and agreeable; the lands produce ſugar-cane, yams, cocoa-nuts, plaintains, bananas, oranges and lemons; and the ſurrounding ſeas abound with the fineſt and greateſt variety of fiſh.

The natives of theſe iſlands are a ſtout, well made people, above the middle ſtature; their complexions are of a far deeper colour than what is underſtood by the Indian copper, but not black. The men go entirely naked, and the women wear only two ſmall aprons, one behind, and one before, made of the huſks of the cocoa nut, dyed with different ſhades of yellow.

The government is monarchical, and the king is abſolute, but his power is exerciſed more with the mildneſs of a father than a ſovereign. In the language of Europeans, he is the fountain of honour; he occaſionally creates his nobles, called Rupacks or Chiefs, and confers a ſingular honour of knighthood, called the *Order of the Bone*, the members of which are diſtinguiſhed by wearing a bone on their arm.

The idea, which the account publiſhed by captain Wilſon gives us of theſe iſlanders, is that of a people, who, though naturally ignorant of the arts and ſciences, and living in the ſimpleſt ſtate of nature, yet poſſeſs all that genuine politeneſs, that delicacy, and chaſtity of intercourſe between the ſexes, that reſpect for perſonal property, that ſubordination to government, and thoſe habits of induſtry, which are ſo rarely united in the more civilized ſocieties of modern times.

It appears that when the Engliſh were thrown on one of theſe iſlands, they were received by the natives with the greateſt humanity and hoſpitality; and, till their departure, experienced the utmoſt courteſy and attention. "They felt our people were diſtreſſed, and in conſequence wiſhed they ſhould ſhare whatever they had to give. It was not that worldly magnificence that beſtows and ſpreads its favours with a diſtant eye to retribution. It was the pure emotion of native benevolence. It was the love of man to man. It was a ſcene that pictures human nature in triumphant colouring, and whilſt their liberality gratified the ſenſe, their virtue ſtruck the heart."

THE MARQUESAS ISLANDS

ARE five in number, firſt diſcovered by Quiros in 1595; and their ſituation better aſcertained by captain Cook in 1774. St. Dominica is the largeſt, about 16 leagues in circuit. The inhabitants, their language, manners, and cloth ing with the vegetable productions, are nearly the ſame as at the Society Iſles.

OTAHEITE, or KING GEORGE'S ISLAND.

THIS iſland was diſcovered by captain Wallis, in the Dolphin *, on the 19th of June, 1767. It is ſituated between the 17th degree 28 minutes, and the 17th degree 53 minutes, ſouth latitude; and between the 149th degree 11 minutes, and the 149 degree 39 minutes, weſt longitude. It conſiſts of two peninſulas, of a ſomewhat circular form, joined by an iſthmus, and is ſurrounded by a reef of coral rocks, which form ſeveral excellent bays and harbours, where there is room and depth of water for almoſt any number of the largeſt ſhips. The face of the country is very extraordinary, for a border of low land almoſt entirely ſurrounds each peninſula, and behind this border the land riſes in ridges that run up into the middle of theſe diviſions, and theſe form mountains that may be ſeen at ſixty leagues diſtance. The ſoil, except upon the very tops of the ridges, is remarkably rich and fertile, watered by a great number of rivulets, and covered with fruit-trees of various kinds, forming the moſt delightful groves. The border of low land that lies between the ridges and the ſea, is in few places more than a mile and a half broad, and this, together with ſome of the vallies, are the only parts that are inhabited. Captain Wallis made ſome ſtay at this iſland; and it was afterwards viſited again by captain Cook in the Endeavour, in April, 1769. That commander was accompanied by Mr. now ſir Joſeph, Banks and Dr. Solander; and thoſe gentlemen, together with the captain, made a very accurate ſurvey of the iſland. He again viſited it in 1773 and 1777.

* The Dolphin was ſent out, under the command of captain Wallis, with the Swallow, commanded by captain Carteret, at the expence of the Britiſh government, in Auguſt 1766, in order to make diſcoveries in the ſouthern hemiſphere. Theſe veſſels proceeded together, till they came within ſight of the South Sea, at the weſtern entrance of the ſtrait of Magellan, and from thence returned by different routes to England. On the 6th of June 1767, captain Wallis diſcovered an iſland, about four miles long, and three wide, to which he gave the name of *Whitſun Iſland*, it being diſcovered on Whitſun-eve. Its latitude is 19° 26′ S. and its longitude, 137° 56′ W. The next day he diſcovered another iſland, to which he gave the name of *Queen Charlotte's Iſland*. The inhabitants of this iſland, captain Wallis ſays, were of a middle ſtature, and dark complexion, with long black hair, which hung looſe over their ſhoulders. The men were well made, and the women handſome. Their clothing was a kind of coarſe cloth or matting, which was faſtened about their middle, and ſeemed capable of being brought up round their ſhoulders. This iſland is about ſix miles long, and one mile wide, and lies in latitude 19° 18′ S. longitude 138° 4′ W. In the ſpace of a few days after, he alſo diſcovered ſeveral other ſmall iſlands, to which he gave the names of *Egmont Iſland*, *Glouceſter Iſland*, *Cumberland Iſland*, *Prince William Henry's Iſland*, and *Oſnaburgh Iſland*.

On the 19th of the ſame month he diſcovered the iſland of Otaheite; and after he had quitted that iſland, he diſcovered, on the 28th of July 1767, another iſland about ſix miles long, which he called *Sir Charles Saunders' Iſland*; and on the 30th of the ſame month, another about ten miles long, and four broad, which he called *Lord Howe's Iſland*. After having diſcovered ſome other ſmall iſlands, one of which was named *Wallis's Iſland*, he arrived at Batavia on the 30th of November, at the Cape of Good Hope on the 4th of February 1768, and his ſhip anchored ſafely in the Downs on the 20th of May following.

Captain Carteret, in the Swallow, after he had parted with captain Wallis, in the Dolphin, having paſſed through the ſtrait of Magellan, and made ſome ſtay at the iſland of Maſafuero, diſcovered, on the 2d of July 1767, an iſland about five miles in circumference, to which he gave the name of *Pitcairn's Iſland*. It lies in latitude 25° 2′ S. longitude 133° 21′ W. and about a thouſand leagues to the eaſtward of the continent of America. The 11th of the ſame month he diſcovered another ſmall iſland, to which he gave the name of the *Biſhop of Oſnaburgh's Iſland*. The next day, he diſcovered two other ſmall iſlands, which he called *the Duke of Glouceſter's Iſlands*. The following month he diſcovered a cluſter of ſmall iſlands, to which he gave the name of *Queen Charlotte's Iſlands*, and alſo three others, which he named *Gower's Iſland*, *Simpſon's Iſland*, *Carteret's Iſland*. On the 24th of the ſame month, he diſcovered *Sir Charles Hardy's Iſland*, which lies in lat. 4° 50′ S. and the next day *Winchelſea's Iſland*, which is diſtant about ten leagues, in the direction of S. by E. He afterwards diſcovered ſeveral other iſlands, and then proceeded round the Cape of Good Hope to England, where he arrived in March 1769.

Some

Some parts of the iſland of Otaheite are very populous: and captain Cook was of opinion, that the number of inhabitants on the whole iſland amounted to 204,000, including women and children. They are of a clear olive complexion; the men are tall, ſtrong, well-limbed, and finely ſhaped; the women are of an inferior ſize, but handſome, and very amorous, and indeed generally ſomewhat licentious. Their clothing conſiſts of cloth or matting of different kinds; and the greateſt part of the food eaten here is vegetable, as cocoa-nuts, bananas, bread-fruit, plantains, and a great variety of other fruit. Their houſes, thoſe which are of a middling ſize, are of an oblong ſquare, about 24 feet long, and eleven wide, with a ſhelving roof ſupported on three rows of poſts, parellel to each other, one row on each ſide, and one in the middle. The utmoſt height within it is about nine feet, and the eaves on each ſide reach to within about three feet and a half from the ground. All the reſt is open, no part being incloſed with a wall. The roof is thatched with palm-leaves, and the floor covered ſome inches deep with ſoft hay, over which they lay mats; and upon theſe they ſit in the day, and ſleep in the night. They have no tools among them made of metal; and thoſe they uſe are made of ſtone, or ſome kind of bones. The inhabitants of Otahiete are remarkable for their cleanlineſs; for both men and women conſtantly waſh their whole bodies in running water three times every day. Their language is ſoft and melodious, and abounds with vowels.

There were no tame animals on the iſland but hogs, dogs, and poultry, and the only wild animals are tropical birds, paroquets, pidgeons, ducks, a few other birds, rats, and a very few ſerpents. The ſea, however, ſupplies the inhabitants with a great variety of the moſt excellent fiſh, and by the kindneſs of the Engliſh and the Spaniards they have now bulls and cows, ſheep, goats, a horſe and mare, geeſe, ducks, peacocks, and turkeys, and alſo cats.

In other countries, the men cut their hair ſhort, and the women pride themſelves on its length; but here the women always cut it ſhort round their ears, and the men (except the fiſhers, who are almoſt continually in the water) ſuffer it to ſpread over their ſhoulders, or tie it up in a bunch on the top. They have the cuſtom of diſcolouring the ſkin, by pricking it with a ſmall inſtrument, the teeth of which are dipped into a mixture of a kind of lamp-black, and this is called tattowing. This is performed upon the youth of both ſexes, when they are about twelve or fourteen years of age, on ſeveral parts of the body, and in various figures. Their principal manufacture is their cloth, of which there are three kinds, made of the bark of three different trees. The fineſt and whiteſt is made of the Chineſe paper mulberry tree; and this is chiefly worn by the principal people. Another conſiderable manufacture is matting, ſome of which is finer, and in every reſpect better than any we have in Europe. The coarſer ſort ſerves them to ſleep upon, and the finer to wear in wet weather. They are likewiſe very dexterous in making wicker-work: their baſkets are of a thouſand different patterns, and many of them exceedingly neat. The inhabitants of Otaheite believe in one ſupreme Deity, but at the ſame time acknowledge a variety of ſubordinate Deities: they offer up their prayers without the uſe of idols, and believe the exiſtence of the ſoul in a ſeparate ſtate, where there are two ſituations, of different degrees of happineſs. Among theſe people a ſubordination is eſtabliſhed, which ſomewhat reſembles the early ſtate of the European nations, under the feudal ſyſtem. If a general attack happens to be made upon the iſland, every diſtrict is obliged to furniſh its proportion of ſoldiers for the common defence. Their weapons are ſlings, which they uſe with great dexterity, and clubs of about ſix or ſeven feet long, and made of a hard heavy wood. They have a great number of boats, many of which are conſtructed for warlike operations. Otaheite is ſaid to be able to ſend out 1720 war canoes, and 68,000 fighting men.

Eimeo,

Eimeo, Mataia or Oſnaburgh Iſland, and Tethuroa are conſidered as iſlands dependent on Otaheite; the cuſtoms of the inhabitants of the two former nearly agreeing with the Otaheitans.

THE SOCIETY ISLANDS.

OF the ſeveral iſlands ſo called in honour of the Royal Society, which were diſdiſcovered by captain Cook *, in the year 1769, the principal are, HUAHEINE, ULITEA, OTAHA, and BOLABOLA. HUAHEINE is about 31 leagues to the northweſt

* At the cloſe of the year 1767, it was reſolved by the Royal Society, that it would be proper to ſend perſons into ſome part of the South Sea, to obſerve a tranſit of the planet Venus over the ſun's diſk, which, according to aſtronomical calculation, would happen in the year 1769: and that the iſlands called Marqueſas de Mendoza, or thoſe of Rotterdam, or Amſterdam, were the propereſt places then known for making ſuch obſervation. In conſequence of theſe reſolutions, it was recommended to his majeſty, in a memorial from the Society, dated February, 1768, that he would be pleaſed to order ſuch an obſervation to be made; upon which his majeſty ſignified to the lords commiſſioners of the admiralty his pleaſure, that a ſhip ſhould be provided to carry ſuch obſervers as the Society ſhould think fit to the South Seas; and accordingly a bark of three hundred and ſeventy tons was prepared for that purpoſe. It was named the Endeavour, and commanded by captain James Cook, who was ſoon after, by the Royal Society, appointed with Mr. Charles Green, a gentleman who had been long aſſiſtant to Dr. Bradley, at the Royal Obſervatory at Greenwich, to obſerve the tranſit. But while this veſſel was getting ready for her expedition, captain Wallis returned; and it having been recommended to him by lord Morton, when he went out, to fix on a proper place for his aſtronomical obſervation, he by letter, dated on board the Dolphin, the 18th of May 1768, the day before he landed at Haſtings, mentioned Port Royal harbour, in the iſland of Otaheite: the Royal Society, therefore, by letter dated the beginning of June, in anſwer to an application from the Admiralty, to be informed whither they would have their obſervers ſent, made choice of that place. Captain Cook ſet ſail from Plymouth, in the Endeavour, on the 26th of Auguſt 1768. He was accompanied in his voyage by Joſeph Banks, eſq. and Dr. Solander. They made no diſcovery till they got within the tropic, where they fell in with Lagoon iſland, Two Groups, Bird iſland, and Chain iſland; and they arrived at Otaheite on the 13th of April 1769. During their ſtay there, they had an opportunity of making very accurate enquiries relative to its produce and inhabitants: and on the 4th of June, the whole paſſage of the planet Venus over the ſun's diſk was obſerved by them with great advantage. The reſult of their obſervations may be found in the Philoſophical Tranſactions. After his departure from Otaheite, captain Cook diſcovered and viſited the Society Iſlands and Oheteroa, and thence proceeded to the ſouth till he arrived in the latitude of 40 degrees 22 minutes; longitude 147 degrees 29 minutes W.; and afterwards made an accurate ſurvey of the coaſt of New Zealand. In November, he diſcovered a chain of iſlands, which he called *Barrier Iſlands*. He afterwards proceeded to New Holland, and from thence to New Guinea: and in September 1770, arrived at the iſland of Savu, from thence he proceeded to Batavia, and from thence round the Cape of Good Hope to England, where he arrived on the 12th of June 1771.

Soon after captain Cook's return home in the Endeavour, it was reſolved to equip two ſhips in order to make ſome farther diſcoveries in the ſouthern hemiſphere. Accordingly the Reſolution and the Adventure were appointed for that purpoſe; the firſt was commanded by captain Cook, and the latter by captain Tobias Furneaux. They ſailed from Plymouth Sound, on the 13th of July 1772, and on the 29th of the ſame month arrived at the iſland of Madeira. From thence they proceeded to the Cape of Good Hope; and in February 1773, arrived at New Zealand, having ſought in vain for a ſouthern continent. In that month the Reſolution and the Adventure ſeparated, in conſequence of a thick fog, but they joined company again in Queen Charlotte's ſound, on the 18th of May following. In Auguſt, they arrived at Otaheite; and in September they diſcovered Hervey's iſland. On the 2d of October, they came to Middleburgh, one of the Friendly Iſlands; and about the cloſe of the month, the Reſolution and the Adventure were ſeparated, and did not join company any more. Captain Cook, however, proceeded in the Reſolution, in order to make diſcoveries in the ſouthern polar regions, but was ſtopped in his progreſs by the ice, in the latitude of 71 degrees 10 minutes ſouth; longitude 106 degrees 54 minutes weſt. He then proceeded to Eaſter Iſland, where he arrived in March 1774, as he did alſo in the ſame month at the Marqueſas Iſlands. He afterwards diſcovered four iſlands, which he named Palliſer's iſlands, and again ſteering for Otaheite, where he arrived on the 22d of April, and made ſome ſtay, and alſo viſited the neighbouring iſles. In Auguſt, he came to the New Hebrides, ſome of which were firſt diſcovered by him. After leaving

weſt of Otaheite, and its productions are exactly the ſame, but it appears to be a month forwarder. The inhabitants ſeem to be larger made, and more ſtout, than thoſe of Otaheite. Mr. Banks meaſured one of the men, and found him to be ſix feet three inches and a half high; yet they are ſo indolent, that he could not perſuade one of them to go up the hills with him; for they ſaid, if they were to attempt it the fatigue would kill them. The women are fairer than thoſe of Otaheite, and both ſexes appear leſs timid and leſs curious; though in their dreſs, language, and almoſt every other circumſtance, they are the ſame. Their houſes are neat, and they have boat-houſes that are remarkably large. *Ulitea* is about ſeven or eight leagues to the ſouth-weſt of Huaheine, and is a much larger iſland, but appears neither ſo fertile nor ſo populous. The principal refreſhments to be procured here are plantains, cocoa-nuts, yams, and fowls; but the two laſt are rather ſcarce. *Otaha* is divided from Ulitea by a ſtrait, that, in the narroweſt part, is not above two miles broad. This iſland affords two good harbours, and its produce is of the ſame kind as that of the other iſlands. About four leagues to the north-weſt of Otaha lies *Bolabola*, which is ſurrounded by a reef of rocks, and ſeveral ſmall iſlands, all of which are no more than eight leagues in compaſs. To theſe iſlands, and thoſe of Marua, which lie about fourteen miles weſtward of Bolabola, containing ſix in all, captain Cook gave the name of Society Iſlands. *Tabooyamanoo*, or Saunders's Iſland, may be here mentioned alſo, being ſubject to Huaheine.

OHETEROA.

THIS iſland is ſituated in the latitude of 22 deg. 27 min. ſouth, and in the longitude of 150 deg. 47 min. weſt from Greenwich. It is thirteen miles in circuit, and rather high than low, but neither ſo populous nor fertile as ſome of

leaving theſe iſlands, he ſteered to the ſouthward a few days, and diſcovered New Caledonia. Having ſurveyed the ſouth-weſt coaſt of this iſland, captain Cook ſteered again for New Zealand, in order to refreſh his crew, and put his ſhip into a condition to encounter the dangers attending the navigation in the high ſouthern latitudes. Directing his courſe to the ſouth and eaſt, after leaving New Zealand, till he arrived in the latitude of 55 degrees 6 minutes ſouth, longitude 138 degrees 56 minutes weſt, without meeting with any continent, captain Cook gave up all hopes of diſcovering any in this ocean; and therefore came to a reſolution to ſteer directly for the weſt entrance of the ſtraits of Magellan, with a view of coaſting and ſurveying the uttermoſt or ſouth-ſide of Terra del Fuego. Keeping accordingly in latitude from 53 to 55, and ſteering nearly eaſt, he arrived off the weſtern mouth of the ſtraits of Magellan, without meeting with any thing remarkable in this new route. In January 1775, he diſcovered a large and dreary iſland, to which he gave the name of *South Georgia*. He afterwards diſcovered various capes and elevated ſnow-clad coaſts, to the moſt ſouthern part of which he gave the name of the *Southern Thule*, as being the neareſt land to that pole, which has yet been diſcovered. In February, he diſcovered *Sandwich Land*, and ſeveral iſlands covered with ſnow. He then proceeded round the Cape of Good Hope to England, where he arrived on the 30th July, 1775. Captain Furneaux had returned to England, in the Adventure, a year before, having proceeded home round the Cape of Good Hope, without making any remarkable diſcovery. Ten of his men, a boat's crew, had been murdered and eaten by ſome of the ſavages of New Zealand; ſo that this voyage afforded a melancholy proof that cannibals really exiſt; and, indeed, in the courſe of theſe voyages of diſcovery, other evidence appeared of this fact. As to captain Cook, in the courſe of his voyage in the Reſolution, he had made the circuit of the ſouthern ocean, in a high latitude, and had traverſed it in ſuch a manner, as to leave not the leaſt room for believing the exiſtence of a ſouthern continent, unleſs it were near the pole, and out of the reach of navigation. It deſerves alſo to be remembered, in honour of that able commander, that, with a company of an hundred and eighteen men, he performed this voyage of three years and eighteen days, throughout all the climates, from fifty-two degrees north, to ſeventy-one degrees ſouth, with the loſs of only one man by ſickneſs; and this appears in a conſiderable degree, to have ariſen from the great humanity of the commander, and his uncommon care and attention to adopt every method for preſerving the health of his men.

the

the other iſlands in theſe ſeas. The inhabitants are luſty, and well made, but are rather browner than thoſe of Otaheite. Their principal weapons are long lances made of etoa-wood, which is very hard, and ſome of them are near twenty feet long.

THE FRIENDLY ISLANDS.

THESE iſlands were ſo named by captain Cook in the year 1773, on account of the friendſhip which appeared to ſubſiſt among the inhabitants, and from their courteous behaviour to ſtrangers. Abel Janſen Taſman, an eminent Dutch navigator, firſt touched here in 1643, and gave names to the principal iſlands. Captain Cook laborioufly explored the whole cluſter, which he found to conſiſt of more than ſixty. The three iſlands which Taſman ſaw, he named New Amſterdam, Rotterdam, and Middleburg. The firſt is the largeſt, and extends about 21 miles from eaſt to weſt, and about 13 from north to ſouth. Theſe iſlands are inhabited by a race of Indians, who cultivate the earth with great induſtry. The iſland of Amſterdam is interſected by ſtraight and pleaſant roads, with fruit-trees on each ſide, which provide ſhade from the ſcorching heat of the ſun.

The chief iſlands are Annamooka, Tangataboo (the reſidence of the ſovereign and the chiefs), Lefooga, and Eooa. Lefooga is about ſeven miles long and in ſome places not above two or three broad. It is in many reſpects ſuperior to Annamooka.

The plantations are both more numerous and more extenſive; and incloſed by fences which, running parallel to each other, form fine ſpacious public roads, which would appear beautiful in countries where rural conveniences have been carried to the greateſt perfection. They are, in general, highly cultivated, and well ſtocked with the ſeveral roots and fruits which theſe iſlands produce, and captain Cook endeavoured to add to their number by planting Indian corn, and the ſeeds of melons, pumpkins, and the like.

Eooa, when viewed from the ſhip at anchor, formed one of the moſt beautiful proſpects in nature; and very different from the others of the Friendly Iſles; which being low and perfectly level, exhibit nothing to the eye but the trees which cover them: whereas here, the land riſing gently to a conſiderable height, preſents us with an extenſive proſpect, with groves of trees interſperſed at irregular diſtances, in beautiful diſorder; the reſt is covered with graſs, except near the ſhores, where it is entirely covered with fruit and foreſt trees; amongſt which are the habitations of the natives. In order to have a view of as great a part of the iſland as poſſible, captain Cook and ſome of his officers walked up to the higheſt point of the iſland. From this place they had a view of almoſt the whole, which conſiſted of beautiful meadows of prodigious extent, adorned with tufts of trees, and intermixed with plantations. "While I was ſurveying this delightful proſpect," ſays captain Cook, "I could not help flattering myſelf with the pleaſing idea that ſome future navigator may, from the ſame ſtation, behold theſe meadows ſtocked with cattle, brought to theſe iſlands by the ſhips of England; and that the completion of this ſingle benevolent purpoſe, independent of all other conſiderations, would ſufficiently mark to poſterity, that our voyages had not been uſeleſs to the general intereſts of humanity. The next morning," ſays our benevolent commander, "I planted a pine-apple, and ſowed the ſeeds of melons, and other vegetables, in Taoofa's plantation. I had indeed ſome encouragement to flatter myſelf that my endeavours of this kind alſo would not be fruitleſs; as I had this day a diſh of turnips ſerved up at my dinner, which was the produce of ſeeds I left here in my former voyage."

We are informed that the bulk of the people of theſe iſlands are ſatisfied with one wife; but the chiefs have commonly ſeveral women, though it appeared as if one only was looked on as miſtreſs of the family. Though female chaſtity was frail enough in ſome, it is highly probable that conjugal fidelity is ſeldom violated: as it does not appear that more than one inſtance of it was known to our voyagers; and in that the man's life, who was the cauſe of it, paid the forfeit of his crime. Nor were thoſe of the better ſort, who were unmarried, more liberal of their favours; thoſe who were, being obviouſly proſtitutes by profeſſion. When they are afflicted with any diſorder which they deem dangerous, they cut off a joint of one of their little fingers; fondly believing that the Deity will accept of that as a ſort of ſacrifice, efficacious enough to procure the recovery of their health. It was ſuppoſed from ſome circumſtances, that though they believe in a future ſtate, they have no notion of future rewards or puniſhments for the things done here. They believe in a Supreme Being; but they believe alſo in a number of inferior ones; for every iſland has its peculiar god, as every Europern nation has its peculiar ſaint. Captain Cook thinks he can pronounce that they do not worſhip any thing which is the work of their own hands, or any viſible part of the creation. They make no offering of hogs, dogs, or fruit, to the *Otooa*, as at Otaheite; but is abſolutely certain that even this mild, humane, and beneficent people uſe *human ſacrifices*. The government, as far as our people could learn, appears to approach nearly to the feudal ſyſtem, formerly eſtabliſhed all over Europe. When any perſon of conſequence dies, his body is waſhed and decorated by ſome woman, or women, who are appointed on the occaſion; and theſe women are not, according to their cuſtoms, to touch any food with their hands for many months afterwards; and it is remarkable, that the length of the time they are thus proſcribed, is the greater in proportion to the rank of the chief whom they had waſhed. Their great men are fond of a ſingular piece of luxury; which is to have women ſit beſide them all night, and beat on different parts of their body untill they go to ſleep; after which they relax a little of their labour, unleſs they appear likely to awake; in which caſe they redouble their drumming until they are again faſt aſleep.

NEW ZEALAND.

THIS country was firſt diſcovered by Taſman, the Dutch navigator, in the year 1642, who gave it the name of Staten Land, though it had been generally diſtinguiſhed, in our maps and charts, by the name of New Zealand, and was ſuppoſed to be part of a ſouthern continent: but it is now known, from the late diſcoveries of captain Cook, who ſailed round it, to conſiſt of two large iſlands, divided from each other by a ſtrait four or five leagues broad. They are ſituated between the latitudes of 34 and 48 degrees ſouth, and between the longitudes of 166 and 180 degrees eaſt from Greenwich. One of theſe iſlands is for the moſt part mountanious, rather barren, and but thinly inhabited; but the other is much more fertile, and of a better appearance. In the opinion of ſir Joſeph Banks, and of Dr. Solander, every kind of European fruits, grain, and plants would flouriſh here in the utmoſt luxuriance. From the vegetables found here, it is ſuppoſed that the winters are milder than thoſe of England, and the ſummers not hotter, though more equably warm; ſo that it is imagined, that if this country was ſettled by people from Europe, they would with moderate induſtry, be ſoon ſupplied, not only with neceſſaries, but the luxuries of life, in great abundance. Here are foreſts of vaſt extent, filled with

very large timber trees; and near four hundred plants were found here that had not been deſcribed by the naturaliſts. The inhabitants of New Zealand are ſtout and robuſt, and equal in ſtature to the largeſt Europeans. Their colour in general is brown, but in few deeper than that of a Spaniard who has been expoſed to the ſun, and in many not ſo deep; and both ſexes have good features. Their dreſs is very uncouth, and they mark their bodies in a manner ſimilar to the inhabitants of Otaheite, which is called tattowing. Their principal weapons are lances, darts, and a kind of battle-axes; and they have generally ſhewn themſelves very hoſtile to the Europeans who have viſited them. As to their religious principles, they believe that the ſouls of ſuch as are killed in battle, and their fleſh afterwards eaten by the enemy, are doomed to perpetual fire; while the ſouls of thoſe who die a natural death, or whoſe bodies are preſerved from ſuch ignominious treatment, aſcend to the habitations of the gods. The common method of diſpoſing of their dead is by interment in the earth; but if they have more of their ſlaughtered enemies than they can eat, they throw them into the ſea. They have no ſuch things as *morais*, or other places of public worſhip; nor do they ever aſſemble together with this view: but they have prieſts who alone addreſs the Deity in prayer for the proſperity of their temporal affairs, ſuch as an enterpriſe againſt a hoſtile tribe, a fiſhing party, or the like. Polygamy is allowed; and it is not uncommon for a man to have two or three wives.

THE NEW HEBRIDES.

THIS name was given by capt. Cook to a cluſter of iſlands, the moſt northerly of which was ſeen by Quiros, the Spaniſh navigator, in 1606, and by him named Tierra del Eſpiritu Santo. From that time, till Bougainville's voyage in 1768, and capt. Cook's voyage in the Endeavour, in 1769, this land was ſuppoſed to be part of a great ſouthern continent, called *Terra Auſtralis Incognita*. But when capt. Cook had ſailed round New Zeland, and along the eaſtern coaſt of New Holland, this opinion was fully confuted. On his next voyage, in the Reſolution, he reſolved to explore thoſe parts accurately; and accordingly, in 1774, beſides aſcertaining the extent and ſituation of theſe iſlands, he diſcovered ſeveral in the group, which were before unknown. The New Hebrides, are ſituated between the latitudes of 14 deg. 29 min. and 20 deg. 4 min. ſouth; and between 165 deg. 41 min. and 170 deg. 21 min. eaſt longitude. They conſiſt of the following iſlands, ſome of which have received names from the different European navigators, and others retain the names which they bear among the natives, viz. Tierra del Eſpiritu Santo, Mallicollo, St. Bartholomew, Iſle of Lepers, Aurora, Whitſuntide, Ambrym, Immer, Apee, Three Hills, Sandwich, Montagu, Hinchinbrook, Shepherd, Eorromanga, Irronan, Annatom, and Tanna.

Not far diſtant from the New Hebrides, and ſouth-weſtward of them, lies NEW CALEDONIA, a very large iſland, firſt diſcovered by capt. Cook, in 1774. It is about eighty-ſeven leagues long, but its breadth is not conſiderable, nor any where exceeds ten leagues. It is inhabited by a race of ſtout, tall, well-proportioned Indians, of a ſwarthy or dark cheſnut brown. A few leagues diſtant are two ſmall iſlands called the Iſlands of Pines, and Botany Iſland.

NEW HOLLAND,

THE largeſt iſland in the world, and formerly ſuppoſed to be a part of that imaginary continent, called Terra Auſtralis Incognita, lies between 10° 30′ and 43° ſouth latitude, and between 110° and 153° 30′ eaſt longitude; extending in all as much as the whole continent of Europe, the eaſtern coaſt running no leſs than 2000 miles in length from north-eaſt to ſouth-weſt. Its dimenſions from eaſt to weſt have not been ſo exactly aſcertained, as we are obliged to take our information concerning them from the accounts of navigators of different nations, who viſited this part of the world at a time when the method of making obſervations, and finding the latitudes and longitudes of places, was leſs accurate than it is now. Different parts of the country have been called by the names of theſe diſcoverers, as Van Diemen's Land, Carpentaria, &c.; and though the general appellation of the whole was New Holland, it is now applied by geographers to the north and weſt parts of the country. The eaſtern part, called New South Wales, was taken poſſeſſion of in his majeſty's name by captain Cook, and now forms a part of the Britiſh dominions, a colony being very lately formed there chiefly of the convicts ſentenced to tranſportation.

The accounts of the climate and ſoil of this extenſive country, now become an object of importance to Great Britain, are very various, and indeed it cannot be expected otherwiſe, as different parts have been explored at different times, and at different ſeaſons of the year. In general, however, the relations are by no means favourable; the ſea-coaſt, the only place on which any inhabitants have been diſcovered, appearing ſandy and barren, and as for the inland parts, which might reaſonably be ſuppoſed more fertile, they are now thought to be wholly uninhabited; but whether this proceeds from the natural ſterility of the ſoil, or the barbarity of the inhabitants, who know not how to cultivate it, is not yet diſcovered.

One thing we are aſſured of by all who have ever viſited this country, that its coaſt is ſurrounded by very dangerous ſhoals and rocks, ſo that it is by no means eaſy to effect a landing upon it. A ſhoal called Houtman's Abrolhos, or ſhoal, from Frederic Houtman, commander of a fleet of Dutch Indiamen in 1618, lies on the weſtern coaſt, on which commodore Pelſart, a Dutch navigator, was wrecked in 1629. When his ſhip, the Batavia, having on board 330 men, ſtruck on this ſhoal, there was no land in ſight, excepting ſome ſmall rocky iſlands, and one conſiderably bigger, about three leagues diſtant. All theſe were explored in ſearch of freſh water, but none being found, they were obliged to ſail in their ſkiff to the continent, which they ſoon after diſcovered. But on their approach, they found the coaſt ſo exceſſively rocky, that it was impoſſible to land. Continuing their courſe northward for two days, they found themſelves in 27 degrees of ſouth latitude; but ſtill the ſhore was ſo extremely ſteep, that there was no poſſibility of approaching it. It preſented the ſame appearance as far north as 24 degrees; but the men being now reſolved to get on ſhore at any rate, ſix of them who were expert ſwimmers, threw themſelves into the ſea, and with much ado got to land. Here they employed themſelves in ſearching for freſh water, but finding none, they were obliged to ſwim back again to their ſkiff. Next day they diſcovered a cape, from the extreme points of which ran a ridge of rocks for about a mile into the ſea, with another behind it; but ſtill no paſſage was found to the continent. Another opening appeared about noon the ſame day, into which they ventured, though the paſſage was extremely dangerous, even for a ſkiff, having only two feet water, with a rugged ſtony bottom. Here, however, they effected a landing, but though they made the moſt diligent ſearch for

freſh water, they could find neither rivulets, ſprings, nor even water that could be drank by digging of wells. The ſhoal on which commodore Pelſart was wrecked, is placed by Dampier in 27 degrees ſouth latitude.

This navigator explored the coaſt of New Holland in 1688 and 1699. In the laſt of theſe voyages he fell in with the land in 26° ſouth latitude; but could not land on account of the ſteepneſs of the ſhore. In 22° 22′, he found another ſhoal, which was the firſt he had met with ſince leaving the Abrolhos in 27°. In 20° 21′, he fell in with ſome rocky iſlands, which, from the nature of the tides, he ſuppoſed to extend in a range as far ſouth as Shark's bay, in 25° and nine or ten leagues in breadth from eaſt to weſt. In 18° 21′ he effected a landing, but the ſhore here, as in all other places viſited by this navigator, was exceſſively rocky at low water, ſo that it is then impoſſible to land. At high water, however, the tides riſe ſo high, that boats may get over the rocks to a ſandy beach which runs all along the coaſt.

The ſouthern part of this iſland, viſited by captain Taſman in 1642, was found leſs difficult of acceſs. He purſued the coaſt as far ſouth as 44 degrees, where it begins to run to the eaſtward; and from his time the country appears not to have been viſited by any Europeans, till the year 1770, when captain Furneaux of the Adventure, reached the point we ſpeak of, lying in 43° 17′ ſouth, 145° 36′, and by account 143° 10′ eaſt from Greenwich. Several iſlands appeared to the north-weſt, one of which was named by captain Cook, Eddyſtone, from its reſemblance to the light-houſe of that name; and he obſerves that Nature ſeems to have left theſe two rocks for the ſame purpoſe that the Eddyſtone lighthouſe was built by man, viz. to give navigators warning of their danger; for they are the conſpicuous ſummits of a ledge of rocks under water, on which the ſea in many places breaks very high. Their ſurface is white with the dung of ſea-fowls, which makes them conſpicuous at a conſiderable diſtance.

This celebrated navigator, capt. Cook, ſpent upwards of four months in ſurveying the eaſtern coaſt, the extent of which, as has already been mentioned, is nearly 2000 miles. The bay in which he anchored, from the great quantity of herbs found on ſhore, was called *Botany Bay*, and is the place for which the convicts were originally deſtined; though now they are ſettled in another part of the iſland about 15 miles to the northward, named, by capt. Cook, *Port Jackſon*, the principal ſettlement being called *Sydney Cove*.

This was not viſited or explored by captain Cook; it was ſeen at the diſtance of between two and three miles from the coaſt, but had fortune conducted him into the harbour, he would have found it much more worthy of his attention as a ſeaman than Botany Bay, where he paſſed a week. From an entrance not more than two miles broad, Port Jackſon gradually extends into a noble and capacious baſon, having ſoundings ſufficient for the largeſt veſſels, and ſpace to accommodate in perfect ſecurity, any number that could be aſſembled. It runs chiefly in a weſtern direction about 13 miles into the country, and contains no leſs than 100 ſmall coves formed by narrow necks of land, whoſe projections afford ſhelter from the winds.

Sydney Cove lies on the ſouth ſide of the harbour, between five and ſix miles from the entrance. The neck of land that forms this cove is moſtly covered with wood, yet ſo rocky, that it is not eaſy to comprehend how the trees could have found ſufficient nouriſhment, to bring them to ſo conſiderable a magnitude. The ſoil in other parts of the coaſt, immediately about Port Jackſon, is of various qualities. This neck of land, which divides the ſouth end of the harbour from the ſea, is chiefly ſand. Between Sydney Cove and Botany Bay the firſt ſpace is occupied by a wood, in ſome parts a mile and a half, in others three miles broad. Beyond that is a kind

of

of heath, poor, ſandy, and full of ſwamps; but, as far as the eye can reach to the weſtward, the country is one continued wood.

There are ſeveral parts of the harbour in which the trees ſtand at a greater diſtance from each other than in Sydney Cove; ſome of theſe, which have ſmall runs of water, and a promiſing ſoil, the governor propoſed to cultivate, as ſoon as hands could be ſpared; but the advantage of being able to land the ſtores and proviſions, with ſo much eaſe, immediately determined the choice of a place for the principal ſettlement; for, if they had but one mile to remove the ſtores from the ſpot where they were landed, the undertaking would probably have been fruitleſs; ſo many were the obſtacles to land-carriage at the head of Sydney Cove, where governor Philip fixed the ſeat of his government. The 7th of February, 1788, was the memorable day on which a regular form of government was eſtabliſhed on the coaſt of New South Wales. For obvious reaſons, all poſſible ſolemnity was given to the proceedings neceſſary on this occaſion.

On a ſpace previouſly cleared, the whole colony was aſſembled; the military drawn up under arms; the convicts ſtationed apart; and near the perſon of the governor thoſe who were to hold the principal offices under him. The royal commiſſion was then read by Mr. David Collins the judge-advocate. By this inſtrument, Arthur Philip was conſtituted and appointed captain-general and governor in chief, in and over the territory called New South Wales, extending from the extremity of the north coaſt, called Cape York, ſouth latitude 10° 30′, to the ſouthern extremity of the South Cape, ſouth latitude 43° 30′, and all the inland country to the weſtward, as far as eaſt longitude 135°, including all the iſlands adjacent in the Pacific Ocean within the latitudes aforeſaid; and of all the towns, garriſons, caſtles, forts, and fortifications, which may be hereafter erected in the ſaid territory. The act of parliament, eſtabliſhing the courts of judicature, was next read; and laſtly, the patents under the great ſeal, empowering the proper perſons to convene and hold their courts, whenever the exigency ſhould require. A triple diſcharge of muſquetry concluded this part of the ceremony.

The 4th of June was not ſuffered to paſs without due celebration. It was a day of remiſſion from labour, and a general feſtivity took place through the whole ſettlement. At ſun-riſe, the Sirius and Supply tranſports, fired each a ſalute of 21 guns; and again, at one o'clock, the marines on ſhore ſaluted with three vollies; at ſun-ſet, the ſame honours were a third time repeated from the ſhips; large bonfires were lighted, and the whole camp afforded a ſcene of joy. That there might not be any exception to the happineſs of this day, four convicts, who had been reprieved from death, and baniſhed to an iſland in the middle of the harbour, received a full pardon, and were ſent to bear their part in the general exultation. The governor ſaid, he hoped there was not a ſingle heavy heart in this part of his majeſty's dominions. His houſe was the centre of conviviality to all who could be admitted to that ſociety; it was at this time that the name of Cumberland county was given by the government to this part of the territory. It is above 50 miles in length, and 30 broad. The boundaries fixed for Cumberland county were, on the weſt, Carmarthen and Landſdown hills; on the north, the northern part of Broken-Bay; and to the ſouthward, the ſouthern parts of Botany-Bay. Thus including completely theſe three principal bays, and leaving the chief place of ſettlement at Sydney-Cove, nearly in the centre.

At the very firſt landing of governor Philip on the ſhore of Botany-Bay, an interview took place with the natives. They were all armed, but on ſeeing the governor approach with ſigns of friendſhip, alone and unarmed, they readily returned his confidence by laying down their arms.

They

They were perfectly devoid of clothing, yet ſeemed fond of ornaments, putting the beads and red baize that were given them on their heads or necks, and appearing pleaſed to wear them.

There was no kind of diſagreement between the natives and the Britiſh while the ſhips remained at Botany-Bay. The governor, immediately after landing, examined the bay itſelf; when it appeared, that, though extenſive, it afforded no ſhelter from the eaſterly winds; and that, in conſequence of its ſhallowneſs, ſhips of a moderate draught would always be obliged to anchor at the entrance of the bay, where they muſt be expoſed to a heavy ſea that rolls in whenever it flows from the eaſtward. Several runs of freſh water were found in different parts of the bay; but there did not appear to be any ſituation to which there was not ſome very ſtrong objections. In the northern part of it is a ſmall creek, which runs a conſiderable way into the country, but it has water only for a boat; the ſides of it are frequently overflown, and the low lands near it are a perfect ſwamp.

The weſtern branch of the bay is continued to a great extent, but the officers ſent to examine it could not find any ſupply of freſh water, except in ſmall quantities. Point Sutherland afforded the moſt eligible ſituation, having a run of good water, though not in very great abundance. But to this part of the harbour the ſhips could not approach; and the ground near it, even in the higheſt parts, was in general damp and ſpungy. Smaller numbers might, indeed, in ſeveral ſpots have found a comfortable reſidence; but no place was found in the whole of Botany-Bay which ſeemed at all calculated for the reception of ſo large a ſettlement. Theſe circumſtances, viz. the ſhallowneſs of the harbour, the ſcarcity of freſh water, the openneſs of the bay, and the dampneſs of the ſoil, by which the people would probably, be rendered unhealthy, made the governor determine to ſeek another ſituation.

That Botany-Bay ſhould have appeared to captain Cook in a more advantageous light than to governor Philip, is not by any means extraordinary. The objects were very different; the one requited only ſhelter and refreſhment for a ſmall veſſel, and for a ſhort time; but the other had great numbers to provide for, and was neceſſitated to find a place to which ſhips of conſiderable burthen might approach.

The different coves of Port Jackſon were examined with all expedition, and the preference was given to one which had the fineſt ſpring of water; and in which ſhips can anchor ſo cloſe to the ſhore, that at a very ſmall expence quays may be conſtructed at which the largeſt veſſels may unload.

After they had all landed at Sydney Cove, a plan was laid down for building a town, according to which were traced out the principal ſtreets, the governor's houſe, main-guard, hoſpital, church, ſtore-houſes, and barracks. In ſome parts of this ſpace temporary barracks are erected, but no permanent building will be allowed, except in conformity to the plan laid down. Should the town be farther extended in future, the form of other ſtreets are alſo marked out, in ſuch a manner as to enſure a free circulation of air. The principal ſtreets, according to this deſign, will be 200 feet wide; the ground to the ſouthward propoſed for them is nearly level, and is an excellent ſituation for buildings. It is propoſed by the governor that no more than one houſe is to be built on one allotment, which is to conſiſt of 60 feet in front, and 150 in depth. Theſe regulations will preſerve a kind of uniformity in the buildings, prevent narrow ſtreets, and exclude many inconveniencies, which a rapid increaſe of inhabitants might otherwiſe occaſion. It has been alſo an object of the governor's attention to place the public buildings in ſituations that will be eligible at all times, and particularly to give the ſtorehouſes and hoſpital ſufficient ſpace for future enlargement, ſhould it be found neceſſary.

The

The firſt huts that were erected here were compoſed of very periſhable materials, the ſoft wood of the cabbage palm; being only deſigned for immediate ſhelter. The neceſſity of uſing the wood quite green made it alſo the leſs likely to prove durable. The huts of the convicts were ſtill more ſlight, being compoſed only of upright poſts, wattled with ſlight twigs, and plaiſtered up with clay. Barracks and huts were afterwards formed of materials rather more laſting. Buildings of ſtone might eaſily have been raiſed, had there been any means of procuring lime for mortar. The ſtone which has been found is of three ſorts: a fine free-ſtone, reckoned equal in goodneſs to that of Portland; an indifferent kind of ſand ſtone, or fire-ſtone; and a ſort which appears to contain a mixture of iron. But neither chalk, nor any ſpecies of lime-ſtone have yet been diſcovered. In building a ſmall houſe for the governor on the eaſtern ſide of the Cove, lime was made of oyſter-ſhells, collected in the neighbouring Coves; but until the diſcovery of chalk or lime-ſtone, the public buildings muſt go on very ſlowly, unleſs care be taken to ſend out thoſe articles as ballaſt in all the ſhips deſtined for Port Jackſon. The clay is very good, and ſome bricks have been made of it, but in uſing it for building, the walls muſt be made very thick.

In a country expoſed to frequent ſtorms of thunder and lightning, it was rather an uneaſy ſituation to have all the proviſions and other neceſſaries lodged in wooden buildings, covered with thatch of the moſt combuſtible kind. Inſtead of thatch, however, they now uſe ſhingles, made from a tree in appearance like fir, but producing a wood not unlike the Engliſh oak; but this, though more ſecure than thatching, is not enough for ſtore-houſes. For theſe, if ſlate-ſtone ſhould not be found, tiles muſt be made of the clay which has been uſed for bricks.

The principal farm is ſituated in the next Cove to the eaſt of the town, and leſs than half a mile from it. When the plan was drawn, it contained about nine acres laid down in corn of different kinds. Later accounts ſpeak of ſix acres of wheat, eight of barley, and ſix of other grain, as raiſed on the public account, and in a very promiſing way.

It is ſuppoſed that metals of various kinds abound in the ſoil on which the town is placed. A convict, who had formerly been uſed to work in the Staffordſhire lead-mines, declared very poſitively, that the ground which they were now clearing, contains a large quantity of that ore: and copper is ſuppoſed to lie under ſome rocks which were blown up, in ſinking a cellar, for the public ſtock of ſpirituous liquors. It is the opinion of the governor himſelf, that there are ſeveral metals in the earth thereabout, and that mines may hereafter be worked to great advantage; but at preſent he ſtrongly diſcourages any ſearch of this kind, very judiciouſly diſcerning, that in the preſent ſituation of his people, which requires ſo many exertions of a very different nature, the diſcovery of a mine would be the greateſt evil that could befal the ſettlement. In ſome places where they dug in making wells, they found a ſubſtance which they concluded to be black lead. The kind of pigment, called by the painters Spaniſh brown, is found in great abundance; and the white clay, with which the natives paint themſelves, is ſtill in greater plenty. The Abbe le Receveur was of opinion, that this clay, if cleaned from the ſand, which might eaſily be done, would make excellent porcelain.

The climate at Sydney-Cove is conſidered, on the whole, as equal to the fineſt in Europe. The rains are never of long duration, and there are ſeldom any fogs. The ſoil, though in general light, and rather ſandy in this part, is full as good as uſually is found ſo near the ſea-ſide. All the plants and fruit-trees brought from Braſil and the Cape, which were not damaged in their paſſage, thrive exceedingly; and vegetables have now become plentiful; both the European ſorts, and ſuch as

are

are peculiar to New South Wales. In the governor's garden are excellent cauliflowers and melons, very fine of their kinds. The orange-trees flouriſh, and the fig-trees and vines are improving ſtill more rapidly. In a climate ſo favourable, the cultivation of the vine may, doubtleſs be carried to any degree of perfection; and ſhould not other articles of commerce divert the attention of the ſettlers from this point, the wines of New South Wales may, perhaps, hereafter be ſought with avidity, and become an indiſpenſable part of the luxury of European tables.

The rank graſs under the trees unfortunately proved fatal to all the ſheep purchaſed by governor Philip, on his own and on the public account. Thoſe which private individuals kept cloſe to their own tents were preſerved. Hogs and poultry increaſed very faſt; and black cattle will, doubtleſs, ſucceed as well. It was very unfortunate, that two bulls and four cows, belonging to government and the governor, having been left for a time by the man who was appointed to attend them, ſtrayed into the woods, and though they were traced to ſome diſtance, never could be recovered. This was a loſs which muſt be for ſome time irreparable.

The natives of New Holland, in general, ſeem to have no great averſion to the new ſettlers: the only acts of hoſtility they ever committed were on account of their occupying the fiſhing-grounds, which the New Hollanders juſtly ſuppoſed to belong to themſelves. They appear, however, to be in too ſavage a ſtate to be capable as yet of deriving any inſtruction from their new neighbours. They are ſo ignorant of agriculture, that it ſeems moſt probable, they do not even know the uſe of corn, and, therefore, perhaps more from ignorance than malice, ſet fire to that which the coloniſts had raiſed for their own uſe. To avoid ſuch diſagreeable incidents, a new ſettlement was begun on a ſmall uninhabited iſland, named *Norfolk Iſland*, lying in ſouth latitude 29°, and eaſt longitude 168° 10′, at the diſtance of 1200 miles from New Holland. The party ſent out to form this ſettlement conſiſted only of 26 perſons, who took poſſeſſion on the 14th of February 788. This ſettlement was found ſo eligible, that, in October 1788, another party was ſent thither, ſo that the new colony at the time the laſt advices were received, conſiſted of 44 men and 16 women; who being ſupplied with 18 months proviſions, will, probably, be able to cultivate the ſoil in ſuch a manner, as to enable them to form a granary, which will put thoſe who ſettled on New Holland entirely out of danger from their barbarous neighbours.

For a more particular account of this new ſettlement, we refer our readers to the Voyage of Governor Philip to Botany-Bay, publiſhed by Stockdale.

NEW GUINEA,

UNTIL the late diſcoveries, was thought to be the north-coaſt of an extenſive continent, and to be joined to New Holland; but captain Cook diſcovered a ſtrait between them, which runs north-eaſt, through which he ſailed. Thus it was found to be a long narrow iſland, extending north-eaſt, from the ſecond degree of ſouth latitude to the twelfth, and from one hundred and thirty-one to one hundred and fifty degrees eaſt longitude; but in one part it does not appear to be above fifty miles broad. The country conſiſts of a mixture of very high hills and vallies, interſperſed with groves of cocoa-nut trees, plantains, bread-fruit, and moſt of the trees, ſhrubs, and plants, that are found in the other South-ſea iſlands. It affords from the ſea a variety of delightful proſpects. The inhabitants make nearly the ſame appearance as the New Hollanders on the other ſide the ſtraits.

To

To the north of New Guinea is NEW BRITAIN, which is ſituated in the 4th degree of ſouth latitude, and 152 deg. 19 min. eaſt longitude from Greenwich. It was ſuppoſed to be part of an imaginary continent till captain Dampier found it to be an iſland, and ſailed through a ſtrait which divides it from New Guinea. Captain Carteret, in his voyage round the world, in 1767, found that it was of much leſs extent than it was till then imagined to be, by ſailing through another ſtrait to the north, which ſeparates it from a long iſland, to which he gave the name of New Ireland. There are many high hills in New Britain, and it abounds with large and ſtately trees. To the eaſtward of New Britain, and in both the above ſtraits, are many iſlands, moſt of which are ſaid to be extremely fertile, and to abound with plantains and cocoa-nut trees.

NEW IRELAND extends in length, from the north-eaſt to the ſouth-eaſt, about two hundred and ſeventy miles, but is in general very narrow. It abounds with a variety of trees and plants, and with many pigeons, parrots, rooks, and other birds. The inhabitants are black, and wooly-headed, like the negroes of Guinea, but have not their flat noſes and thick lips. North-weſtward of New Ireland a cluſter of iſlands was ſeen by captain Carteret, lying very near each other, and ſuppoſed to conſiſt of twenty or thirty in number. One of theſe, which is of very conſiderable extent, was named NEW HANOVER; and the reſt of the cluſter received the name of the ADMIRALTY ISLANDS.

SANDWICH ISLANDS.

BESIDES the voyages of diſcovery already mentioned, another voyage was performed by capt. Cook and capt. Clerke, in the Reſolution and Diſcovery, during the years 1776, 1777, 1778, and 1779, in ſearch of a north-weſt paſſage between the continents of Aſia and America. After they had arrived at the Cape of Good Hope, they proceeded from thence to New Holland: in this courſe they diſcovered two iſlands, which capt. Cook called Prince Edward's Iſles. The largeſt about 15 leagues in circuit is in lat. 46-53 ſouth, lon. 37-46: the other about 9 leagues in circuit, lat. 46-40 and long. 38-8, E. both barren and almoſt covered with ſnow. From New Holland they ſailed to New Zealand, and afterwards viſited the Friendly and Society Iſles. In January 1777, they arrived at the Sandwich iſles, which are twelve in number, and are ſituated between 22 deg. 15 min. and 18 deg. 53 min. N. latitude. The air of theſe iſlands is in general ſalubrious, and many of the vegetable productions are the ſame with thoſe of the Society and Friendly Iſles. The inhabitants are of a middle ſize, ſtout and well-made, and their complexion in general a brown olive. O'why'hee is in circumference about 300 Engliſh miles, and the number of inhabitants is computed at 150,000. The others are large and well peopled; for their names we refer to our map. The natives are deſcribed as of a mild and friendly temper and carriage, and in hoſpitality to ſtrangers not exceeded by the inhabitants of the Friendly Iſles. On the 7th of February, being nearly in lat. 44. deg. 33 min. north, and lon. 235 deg. 36 min. eaſt, they ſaw part of the American continent, bearing north-eaſt.

Capt. Cook afterwards diſcovered King George's Sound, which is ſituated on the north-weſt coaſt of America, and is extenſive: that part of it where the ſhips under his command anchored, is in lat. 49 deg. 36 min. north, and lon. 233 deg. 28 min. eaſt. The whole ſound is ſurrounded by high land, which in ſome places appears

very broken and rugged, and is in general covered with wood to the very top. They found the inhabitants here rather below the middle ſize, and their complexions approaching to a copper colour. On the 12th of May, they diſcovered Sandwich Sound, in lat. 59 deg. 54 min. north. The harbour in which the ſhips anchored, appeared to be almoſt ſurrounded with high land, which was covered with ſnow; and here they were viſited by ſome of the Americans in their canoes. They afterwards proceeded to the iſland of Unalaſchka, and after their departure from thence ſtill continued to trace the coaſt. They arrived on the 20th of Auguſt 1778 in lat. 70 deg. 54 min. lon. 194 deg. 55 min. where they found themſelves almoſt ſurrounded with ice, and the farther they proceeded to the eaſtward, the cloſer the ice became compacted. They continued labouring among the ice till the 25th; when a ſtorm came on, which made it dangerous for them to proceed; and a conſultation was therefore held on board the Reſolution, as ſoon as the violence of the gale abated, when it was reſolved, that as this paſſage was impractible for any uſeful purpoſe of navigation, which was the great object of the voyage, it ſhould be proſecuted no farther; and eſpecially on account of the condition the ſhips were in, the approach of winter, and their great diſtance from any known place of refreſhment. The voyage, indeed, afforded ſufficient evidence, that no practicable paſſage exiſts between the Atlantic and Pacific oceans towards the North; and this voyage alſo aſcertained the weſtern boundaries of the great continent of America. On their return it unfortunately happened, that the celebrated and able navigator, capt. Cook, was killed in an affray with the natives, by an act of ſudden reſentmeut and fear, rather than from a bad diſpoſition, on the iſland of O'why'hee, the largeſt of the Sandwich iſles, on the 14th of February 1779: and his death was univerſally regretted, not only in Great Britain, but alſo in other parts of Europe, by thoſe to whom his merits and public ſervices were known. In his laſt voyage he had explored the coaſt of America, from 42 deg. 27 min. to 70 deg. 40 min. 57 ſec. north. After the death of capt. Cook, the command devolved on capt. Clerke, who died at ſea on his return to the ſouthward on the 22d day of Auguſt 1779. The two ſhips returned home by the Cape of Good Hope, and on the 5th of October 1780, anchored at the Nore.

We cannot conclude this article, without inſerting the following character of capt. Cook, to perpetuate the memory and ſervices of ſo excellent a navigator and commander.

Perhaps no ſcience ever received greater additions from the labours of a ſingle man, than geography has done from thoſe of capt. Cook. In his firſt voyage to the South Seas, he diſcovered the Society Iſlands; determined the inſularity of New Zealand; diſcovered the ſtraits which ſeparate the two iſlands, and are called after his name; and made a complete ſurvey of both. He afterwards explored the Eaſtern coaſt of New Holland, hitherto unknown; an extent of twenty-ſeven degrees of latitude, or upwards of two thouſand miles.

In his ſecond expedition, he reſolved the great problem of a ſouthern continent, having traverſed that hemiſphere between the latitude of 40 and 70°, in ſuch a manner as not to leave a poſſibility of its exiſtence, unleſs near the pole, and out of the reach of navigation. During this voyage he diſcovered New Caledonia, the largeſt iſland in the Southern Pacific, except New Zealand; the iſland of Georgia; and an unknown coaſt, which he named Sandwich Land, the *Thule* of the Southern hemiſphere; and having twice viſited the tropical ſeas, he ſettled the ſituations of the old, and made ſeveral new diſcoveries.

But the laſt voyage is diſtinguiſhed above all the reſt by the extent and importance of its diſcoveries. Beſides ſeveral ſmaller iſlands in the Southern Pacific, he diſco-

diſcovered, to the North of the Equinoctial Line, the group called the Sandwich Iſlands, which, from their ſituation and productions, bid fairer for becoming an object of conſequence in the ſyſtem of European navigation, than any other diſcovery in the South-Sea. He afterwards explored what had hitherto remained unknown of the Weſtern coaſt of America, from the latitude of 43° to 70° North, containing an extent of 3,500 miles, aſcertained the proximity of the two great continents of Aſia and America; paſſed the ſtraits between them, and ſurveyed the coaſt on each ſide, to ſuch a height of northern latitude, as to demonſtrate the impracticability of a paſſage, in that hemiſphere, from the Atlantic into the Pacific ocean, either by an Eaſtern or a Weſtern courſe. In ſhort, if we except the Sea of Amur, and the Japaneſe Archipelago, which ſtill remain imperfectly known to Europeans, he has compleated the hydrography of the habitable globe.

As a navigator his ſervices were perhaps not leſs ſplendid, certainly not leſs important and meritorious. The method which he diſcovered, and ſo ſucceſsfully purſued, of preſerving the health of ſeamen, forms a new æra in navigation, and will tranſmit his name to future ages, among the friends and benefactors of mankind.

Thoſe who are converſant with naval hiſtory need not be told at how dear a rate the advantages which are ſought, through the medium of long voyages at ſea, had hitherto been purchaſed. That dreadful diſorder which is peculiar to their ſervice, and whoſe ravages have marked the tracks of diſcoverers with circumſtances almoſt too ſhocking to relate, muſt, without exerciſing an unwarrantable tyranny over the lives of our ſeamen, have proved an inſuperable obſtacle to the proſecution of ſuch enterprizes. It was reſerved for capt. Cook to ſhew the world, by repeated trials, that voyages might be protracted to the unuſual length of three or even four years, in unknown regions, and under every change and rigour of the climate, not only without affecting the health, but even without diminiſhing the probability of life, in the ſmalleſt degree.

Having pointed out the numerous and important advantages which have ariſen, and may ariſe from theſe voyages, both to the diſcoverers and diſcovered; the learned editor of the laſt voyage, enquires into the origin of the inhabitants who people this myriad of iſlands that are ſcattered over the great Pacific Ocean, and proves, by incontrovertible arguments, founded on the affinity of their language, manners, and cuſtoms, that they have all originally ſprung from one common ſtock, and that ſtock is the Aſiatic nation called *Malayans*. He alſo traces another of the large families of the earth, but whoſe lot has fallen in far leſs hoſpitable climes: we mean the Eſquimaux; known hitherto only on the coaſts of Greenland, Labrador, and Hudſon's Bay; and who differ in ſeveral characteriſtic marks from the inland inhabitants of North America. Mr. Hearne, as our readers have already ſeen, traced this unhappy tribe farther back toward that part of the globe from which, no doubt, they had originally migrated; but it was reſerved for capt. Cook to ſhew that it is the ſame race which peoples the bays and iſlands on the Weſt coaſt of North America, and that they are extended over a ſpace of at leaſt 1500 leagues from eaſt to weſt, and from the latitude of 60°, to the latitude of 72° north.

TERRA-INCOGNITA, or unknown Countries.

NOTWIHTSTANDING the amazing diſcoveries of navigators, and the progreſs made in geography, ſince the firſt voyage of Columbus, anno 1492, there ſtill remain ſome countries, either abſolutely unknown, or very ſuperficially ſurveyed.

IN AFRICA.

OF this quarter of the globe the moderns are acquanted with little more than the ſea-coaſts, and theſe very imperfectly; the internal parts being unexplored, nor have we any ſatisfactory accounts of their inhabitants, their productions, or their trade. It is well known, however, that the rivers of Africa bring down large quantities of gold, and it is equally certain that the ancients drew prodigious riches from a country bleſſed with a variety of climates, ſome of them the fineſt in the world.

IN AMERICA.

IN North America, towards the pole, are Labrador, or New Britain, New North and South Wales, New Denmark, &c. very little known. The inhabitants, like thoſe of Nova Zembla, Greenland, Groenland, and the northern parts of Siberia, are few, and theſe ſavage; low in ſtature, and of an ugly appearance. They live upon the raw fleſh of whales, bears, foxes, &c. and go muffled up in ſkins, the hairy ſides next their bodies. In theſe inhoſpitable regions, their nights (as may be ſeen in the table of climates in the Introduction), are from one to ſix months, and the earth bound up in impenetrable ſnow; ſo that the miſerable inhabitants live under ground great part of the year. Again, when the ſun makes his appearance, they have a day of equal length.

All that vaſt tract on the back of the Britiſh ſettlements, from Canada and the lakes to the Pacific Ocean, which waſhes America on the weſt, is altogether unknown to us, no European having ever travelled thither. From the climate and ſituation of the country, it is ſuppoſed to be fruitful; it is inhabited by innumerable tribes of Indians, many of whom uſed to reſort to the great fair of Montreal, even from the diſtance of 1000 miles, when that city was in the hands of the French.

In South America, the country of Guiana, extending from the equator to the eighth degree of north latitude, and bounded by the river Oronoque on the north, and the Amazons on the ſouth, is unknown, except a ſlip along the coaſt, where the French at Cayenne, and the Dutch at Surinam, have made ſome ſettlements; which, from the unhealthfulneſs of the climate, almoſt under the equator, and other cauſes, can hardly be extended any conſiderable way back.

The country of Amazonia is ſo called from the great river of that name, which riſes in Quito, in 76 degrees W. lon. and diſcharges itſelf into the Atlantic Ocean: it is computed, that with all its turnings and windings it runs near 5000 miles, and is generally two or three leagues broad: 500 leagues from the mouth it is 30 fathoms deep,

deep, and near 100 rivers fall into it on the North and the South. The country has never been throughly explored, though it is ſituated between the European colonies of Peru and Braſil, and every where acceſſible by the means of that great river and its branches. Some attempts have been made by the Spaniards and Portugueſe; but always attended with vaſt difficulties, ſo that few of the adventurers ever returned back; and no gold being found in the country as they expected, no European nation has hitherto made any ſettlement there.

Patagonia, at the ſouthern extremity of America, is ſometimes deſcribed as part of Chili: but as neither the Spaniards, nor any other European nation, have any colonies there, it is almoſt unknown, and is generally repreſented as a barren, inhoſpitable country. Some of the inhabitants are certainly very tall, to 6¼ and 7 feet high, but others, and the greater part, are of a moderate and common ſtature. Here, in 52½ degrees ſouth lat. we fall in with the ſtraits of Magellan, having Patagonia on the north, and the iſlands of Terra del Fuego on the ſouth. Theſe Straits extend from eaſt to weſt 110 leagues, but the breadth in ſome places falls ſhort of one. They were firſt diſcovered by Magellan, or Magelhaens, a Portugueſe, in the ſervice of Spain, who ſailed through them in the year 1520, and thereby diſcovered a paſſage from the Atlantic to the Pacific or Southern Ocean. He has been ſince conſidered as the firſt navigator that ſailed round the world, but having loſt his life in a ſkirmiſh with ſome Indians before the ſhips returned to Europe, the honour of being the firſt circumnavigator has been diſputed in favour of the brave ſir Francis Drake, who, in 1574, paſſed the ſame Strait in his way to India, from which he returned to Europe by the Cape of Good Hope. In 1616, La Maire, a Dutchman, keeping to the ſouthward of theſe Straits, diſcovered in lat. 54½ another paſſage, ſince known by the name of the Straits La Maire, and this paſſage, which has been generally preferred by ſucceeding navigators, is called doubling Cape Horn. The author of Anſon's voyage, however, from fatal experience, adviſes mariners to keep clear of theſe ſtraits and iſlands, by running down to 61 or 62 deg. ſouth lat. before they attempt to ſet their face weſtward, towards the South Seas; but the extreme long nights, and the intenſe cold in thoſe latitudes, render that paſſage practicable only in the months of January and February, which is there the middle of ſummer.

A NEW

GEOGRAPHICAL TABLE.

Containing the Names and Situations of the chief Cities, Towns, Seas, Gulfs, Bays, Straits, Capes, and other remarkable Places, in the known World. Collected from the moſt authentic Charts, Maps, and Obſervations.

A

MODERN UNIVERSAL TABLE;

The moſt Copious and Authentic that ever was publiſhed, of the preſent State of the Real and Imaginary Monies of the World.

Divided into Four Parts, viz.

EUROPE, ASIA, AFRICA, AND AMERICA:

Which are ſubdivided into fifty-five Parts, containing the Names of the moſt Capital Places, the Species whereof are inſerted, ſhewing how the Monies are reckoned by the reſpective Nations; and the Figures ſtanding againſt the Denomination of each foreign Piece, is the Engliſh intrinſic Value thereof, according to the beſt Aſſays made at the Mint of the Tower of London.

EXPLANATION.

By real Money, is underſtood an effective Specie, repreſenting in itſelf the Value denominated thereby, as a Guinea, &c.

* This Mark is prefixed to the imaginary Money, which is generally made Uſe of in keeping Accounts, ſignifying a fictitious Piece which is not in being, or which cannot be repreſented but by ſeveral other Pieces, as a Pound Sterling, &c.

All Fractions in the Value Engliſh are Parts of a Penny.

= This Mark ſignifies, *is*, *make*, or *equal to*.

Note, for all the Spaniſh, Portugueſe, Dutch, and Daniſh Dominions, either on the Continent, or in the Weſt Indies, ſee the Monies of the reſpective Nations.

A

NEW CHRONOLOGICAL TABLE

OF

REMARKABLE EVENTS, DISCOVERIS, AND INVENTIONS;

ALSO,

The Æra, the COUNTRY, and WRITINGS of LEARNED MEN:

The whole comprehending in one View, the Analyſis or Outlines of General Hiſtory, from the Creation to the preſent Time.

Bef. Chriſt.

4004 THE creation of the world, and Adam and Eve.
4003 The birth of Cain, the firſt who was born of a woman.
3017 Enoch, for his piety, is tranſlated to Heaven.
2348 The old world is deſtroyed by a deluge, which continued 377 days.
2247 The Tower of Babel is built about this time by Noah's Poſterity, upon which God miraculouſly confounds their language, and thus diſperſes them into different nations.
About the ſame time, Noah is, with great probability, ſuppoſed to have parted from his rebellious offspring, and to have led a colony of ſome of the more tractable into the Eaſt, and there either he or one of his ſucceſſors to have founded the ancient Chineſe monarchy.
2234 The celeſtial obſervations are begun at Babylon, the city which firſt gave birth to learning and the ſciences.
2188 Miſraim, the ſon of Ham, founds the kingdom of Egypt, which laſted 1663 years, down to its conqueſt by Cambyſes, in 525 before Chriſt.
2059 Ninus, the ſun of Belus, founds the kingdom of Aſſyria, which laſted above 1000 years, and out of its ruins were formed the Aſſyrians of Babylon, thoſe of Nineveh, and the kingdom of the Medes.
1921 The covenant of God made with Abram, when he leaves Haran to go into Canaan, which begins the 430 years of ſojourning.
1897 The cities of Sodom and Gomorrah are deſtroyed for their wickedneſs, by fire from Heaven.
1856 The kingdom of Argos, in Greece, begins under Inachus.
1822 Memnon, the Egyptian, invents the letters.
1715 Prometheus firſt ſtruck fire from flints.
1635 Joſeph dies in Egypt, which concludes the book of Geneſis, containing a period of 2369 years.
1574 Aaron born in Egypt; 1490, appointed by God firſt high-prieſt of the Iſraelites.
1571 Moſes, brother to Aaron, born in Egypt, and adopted by Pharaoh's daughter, who educates him in all the learning of the Egyptians.

1556 Cecrops.

1556 Cecrops brings a colony of Saites from Egypt into Attica, and begins the kingdom of Athens, in Greece.
1546 Scamander comes from Crete into Phrygia, and begins the kingdom of Troy.
1493 Cadmus carried the Phœnician letters into Greece, and built the citadel of Thebes.
1491 Moſes performs a number of miracles in Egypt, and departs from that kingdom, together with 600,000 Iſraelites, beſides children, which completed the 430 years of ſojourning. They miraculouſly paſs through the Red Sea, and come to the deſert of Sinai, where Moſes receives from God, and delivers to the people, the Ten Commandments, and the other laws, and ſets up the tabernacle, and in it the ark of the covenant.
1485 The firſt ſhip that appeared in Greece was brought from Egypt by Danaus, who arrived at Rhodes, and brought with him his fifty daughters.
1453 The firſt Olympic games celebrated at Olympia, in Greece.
1452 The Pentateuch, or five firſt books of Moſes, are written in the land of Moab, where he died the year following, aged 120.
1451 The Iſraelites, after ſojourning in the Wilderneſs forty years, are led under Joſhua into the land of Canaan, where they fix themſelves, after having ſubdued the natives; and the period of the ſabbatical year commences.
1406 Iron is found in Greece, from the accidental burning of the woods.
1372 The Mileſians arrived from Spain into Ireland.
1263 Argonautic expedition.
1198 The rape of Helen by Paris, which, in 1193, gave riſe to the Trojan war, and ſiege of Troy by the Greeks, which continued ten years, when that city was taken and burnt.
1048 David is ſole king of Iſrael.
1004 The Temple is ſolemnly dedicated by Solomon.
896 Elijah, the prophet, is tranſlated to Heaven.
894 Money firſt made of gold and ſilver at Argos.
869 The city of Carthage, in Africa, founded by queen Dido.
814 The kingdom of Macedon begins.
786 Trireme galleys invented by the Corinthians.
776 The firſt Olympiad begins.
753 Æra of the building of Rome in Italy by Romulus, firſt king of the Romans.
720 Samaria taken, after three years ſiege, and the kingdom of Iſrael finiſhed, by Salmanaſar, king of Aſſyria, who carries the ten tribes into captivity.
The firſt eclipſe of the moon on record.
658 Byzantium (now Conſtaninople), built by a colony of Athenians.
604 By order of Necho, king of Egypt, ſome Phœnicians ſailed from the Red Sea round Africa, and returned by the Mediterranean.
600 Thales, of Miletus, travels into Egypt, conſults the prieſts of Memphis, acquires the knowledge of geometry, aſtronomy, and philoſophy; returns to Greece, calculates eclipſes, gives general notions of the univerſe, and maintains that one ſupreme Intelligence regulates all its motions.
Maps, globes and the ſigns of the Zodiac, invented by Anaximander, the ſcholar of Thales.
597 Jehoiakin, king of Judah, is carried away captive, by Nebuchadnezzar, to Babylon.
587 The city of Jeruſalem taken, after a ſiege of 18 months.
562 The firſt comedy at Athens acted upon a moveable ſcaffold.
559 Cyrus, the firſt king of Perſia.
538 The kingdom of Babylon finiſhed; that city being taken by Cyrus, who, in 536, iſſues an edict for the return of the Jews.
534 The firſt tragedy was acted at Athens, on a waggon, by Theſpis.
526 Learning is greatly encouraged at Athens, and a public library firſt founded.
515 The ſecond temple at Jeruſalem is finiſhed under Darius.
509 Tarquin, the ſeventh and laſt king of the Romans, is expelled, and Rome is governed by two conſuls, and other republican magiſtrates, till the battle of Pharſalia, being a ſpace of 461 years.
504 Sardis taken and burnt by the Athenians, which gave occaſion to the Perſian invaſion of Greece.
486 Æſchylus, the Greek poet, firſt gains the prize of tragedy.
481 Xerxes the Great, king of Perſia, begins his expedition againſt Greece.

458 Ezra

458 Ezra is ſent from Babylon to Jeruſalem, with the captive Jews and the veſſels of gold and ſilver, &c. being ſeventy weeks of years, or 490 years before the crucifixon of our Saviour.
454 The Romans ſend to Athens for Solon's laws.
451 The Decemvirs created at Rome, and the laws of the Twelve Tables compiled and ratified.
430 The hiſtory of the Old Teſtament finiſhes about this time.
Malachi the laſt of the prophets.
401 Retreat of 10,000 Greeks under Xenophon.
400 Socrates, the founder of moral philoſophy among the Greeks, believes the immortality of the ſoul and a ſtate of rewards, and puniſhments, for which, and other ſublime doctrines, he is put to death by the Athenians, who ſoon after repent, and erect to his memory a ſtatue of braſs.
398 Catapultæ invented by Dionyſius.
379 Bæotian war commences in Greece, finiſhed in 366, after the death of Epaminondas, the laſt of the Grecian heroes. After his death, Philip, brother to the king of Macedon, who had been educated under him, privately ſet out for that country, ſeized the kingdom, and after a continual courſe of war, treachery and diſſimulation, put an end to the liberty of the Greeks by the battle of Cheronea.
336 Philip, king of Macedon, murdered, and ſucceeded by his ſon Alexander the Great.
332 Alexandria in Egypt built.
331 Alexander the Great, king of Macedon, conquers Darius, king of Perſia, and other nations of Aſia.
323 Dies at Babylon, and his empire is divided by his generals into four kingdoms, after deſtroying his wives, children, brother, and ſiſters.
291 Darkneſs at Rome at noon-day.
290 Solar quadrants introduced at Rome.
285 Dionyſius, of Alexandria, began his aſtronomical æra on Monday June 26, being the firſt who found the exact ſolar year to conſiſt of 365 days, 5 hours, and 49 minutes.
284 Ptolemy Philadelphus, king of Egypt, employs ſeventy-two interpreters to tranſlate the Old Teſtament into the Greek language, which is called the Septuagint.
269 The firſt coinage of ſilver at Rome.
264 The firſt Punic war begins, and continues 23 years. The chronology of the Arundelian marbles compoſed.
260 The Romans firſt concern themſelves in naval affairs, and defeat the Carthaginians at ſea.
237 Hamilcar, the Carthaginian, cauſes his ſon Hannibal, at nine years old, to ſwear eternal enmity to the Romans.
218 The ſecond Punic war begins and continues 17 years. Hannibal paſſes the Alps, and defeats the Romans in ſeveral battles, but being amuſed by his women, does not improve his victories by the ſtorming of Rome.
190 The firſt Roman army enters Aſia, and from the ſpoils of Antiochus, brings the Aſiatic luxury firſt to Rome.
170 Eighty thouſand Jews maſſacred by Antiochus Epiphanes.
168 Perſeus defeated by the Romans, which ends the Macedonian kingdom.
167 The firſt library erected at Rome, of books brought from Macedonia.
163 The government of Judea under the Maccabees begins, and continues 126 years.
146 Carthage, the rival to Rome, is razed to the ground by the Romans.
145 An hundred thouſand inhabitants of Antioch maſſacred in one day by the Jews.
135 The hiſtory of the Apocrypha ends.
125 Colcheſter built.
65 Catiline's conſpiracy againſt the liberties of his country detected.
52 Julius Cæſar makes his firſt expedition into Britain.
47 The battle of Pharſalia between Cæſar and Pompey, in which the latter is defeated.
The Alexandrian library, conſiſting of 400,000 valuable books, burnt by accident.
45 The war of Africa, in which Cato kills himſelf.
The ſolar year introduced by Cæſar.
44 Cæſar, the greateſt of the Roman conquerors, after having fought fifty pitched battles, and ſlain 1,192,000 men, and overturned the liberties of his country, is killed in the ſenate-houſe.
43 Brutus, one of the conſpirators againſt Cæſar, and chief of the republicans, being vanquiſhed in the battle of Philippi, kills himſelf.
41 The battle of Actium fought, in which Mark Anthony and Cleopatra are totally defeated by Octavius, nephew to Julius Cæſar.

30 Alexandria, in Egypt, is taken by Octavius, upon which Anthony and Cleopatra put themſelves to death, and Egypt is reduced to a Roman province.
27 Octavius, by a decree of the ſenate, obtains the title of Auguſtus Cæſar, and an abſolute exemption from the laws, and is properly the firſt Roman emperor.
25 Coin firſt uſed in Britain.
8 Rome at this time is fifty miles in circumference, and contains 463,000 men fit to bear arms.
The temple of Janus is ſhut by Auguſtus, as an emblem of univerſal peace; and JESUS CHRIST is ſuppoſed to have been born on Monday, December 25, but according to many, in September, during the Jewiſh feaſt of tabernacles.

A. C.
12 CHRIST hearing the Doctors in the Temple, and aſking them queſtions *.
27 ——— is baptiſed in the Wilderneſs;
33 JESUS CHRIST is crucified on Friday, April 3, at 30'clock P. M.
His Reſurrection on Sunday, April 5; his Aſcenſion, Thurſday May 14.
36 St. Paul converted.
39 St. Mathew writes his Goſpel.
Pontius Pilate kills himſelf.
40 The name of Chriſtians firſt given at Antioch to the followers of Chriſt.
43 Claudius Cæſar's expedition into Britain.
44 St. Mark writes his Goſpel.
49 London is founded by the Romans; 368, ſurrounded by ditto with a wall, ſome parts of which are ſtill obſervable.
51 Caractacus, the Britiſh king, is carried in chains to Rome.
52 The council of the apoſtles at Jeruſalem.
55 St. Luke writes his Goſpel.
59 The emperor Nero puts his mother and brothers to death.
——— perſecutes the Druids in Britain.
61 Boadicea, the Britiſh queen, defeats the Romans; but is conquered ſoon after by Suetonius, governor of Britain.
62 St. Paul is ſent in bonds to Rome, writes his Epiſtles between 51 and 66.
63 The Acts of the Apoſtles written.
Chriſtianity is ſuppoſed to be introduced into Britain by St. Paul, or ſome of his diſciples about this time.
64 Rome ſet on fire, and burned for ſix days; upon which began (under Nero) the firſt perſecution againſt the Chriſtians.
67 St. Peter and St. Paul put to death.
70 Whilſt the factious Jews are deſtroying one another with mutual fury, Titus, the Roman general, takes Jeruſalem, which is razed to the ground, and the plough made to paſs over it.
79 Herculaneum overwhelmed by an eruption of Mount Veſuvius.
83 The philoſophers expelled Rome by Domitian.
85 Julius Agricola, governor of South-Britain, to protect the civiliſed Britons from the incurſions of the Caledonians, builds a line of forts between the rivers Forth and Clyde; defeats the Caledonians under Galgacus on the Grampian hills; and firſt ſails round Britain, which he diſcovers to be an iſland.
96 St. John the Evangeliſt wrote his Revelation—his Goſpel in 97.
121 The Caledonians reconquer from the Romans all the ſouthern parts of Scotland; upon which the emperor Adrian builds a wall between Newcaſtle and Carliſle; but this alſo proving ineffectual, Pollius Urbicus, the Roman general, about the year 144, repairs Agricola's forts, which he joins by a wall four yards thick, ſince called Antoninus's wall.
135 The ſecond Jewiſh war ends, when they were all baniſhed Judea.

* "I have often thought (ſays a judicious commentator) that it is a great injury to the character of our bleſſed redeemer, to repreſent this ſtory, whether in pictures or words, as if Chriſt, at his tender age, went up into the ſeats of the Doctors and there diſputed with them. Not one word is ſaid of his diſputing by the Evangeliſt, but only of his hearing them and aſking them queſtions, which was a very uſual thing in theſe aſſemblies, and indeed the very end of them. All was conducted with the utmoſt modeſty and decorum."

139 Juſtin

139 Juſtin writes his firſt Apology for the Chriſtians.
140 Dublin built.
141 A number of hereſies appear about this time.
152 The emperor Antoninus Pius ſtops the perſecution againſt the Chriſtians.
211 Gold and ſilver coin firſt uſed in Scotland.
The emperor Severus, after having conquered the Scots, and pent them up by a new wall between the Forth and Clyde, (ſince called Graham's Dyke) having alſo conquered the Parthians in the Eaſt, and extended the Roman empire to its utmoſt bounds, dies at York.
217 The Septuagint ſaid to be found in a caſk.
222 About this time the Roman empire begins to ſink under its own weight. The Barbarians begin their eruptions, and the Goths have annual tribute not to moleſt the empire.
260 Valerian is taken priſoner by Sapor, king of Perſia, and flayed alive.
274 Silk firſt brought from India: the manufacture of it introduced into Europe by ſome monks, 551; firſt worn by the clergy of England, 1534.
291 Two emperors and two Cæſars, march to defend the four quarters of the empire.
306 Conſtantine the Great begins his reign.
308 Cardinals firſt began.
313 The tenth perſecution ends by an edict of Conſtantine, who favours the Chriſtians, and gives full liberty to their religion.
314 Three biſhops, or fathers, are ſent from Britain to aſſiſt at the council of Arles.
325 The firſt general council at Nice, when 318 fathers attended, againſt Arius, where was compoſed the famous Nicene Creed.
328 Conſtantine removes the ſeat of empire from Rome to Byzantium, which is from that time called Conſtantinople.
331 Conſtantine orders all the heathen temples to be deſtroyed.
363 The Roman Emperor Julian, ſurnamed the Apoſtate, endeavours in vain to rebuild the temple of Jeruſalem.
364 The Roman empire is divided into the eaſtern (Conſtantinople the capital) and weſtern (of which Rome continued to be the capital), each being now under the government of different emperors.
400 Bells invented by biſhop Paulinus, of Campagnia.
404 The kingdom of Caledonia or Scotland revives under Fergus.
406 The Vandals, Alans, and Suevi, ſpread into France and Spain, by a conceſſion of Honorius, emperor of the Weſt.
410 Rome taken and plundered by Alaric, king of the Viſi-Goths.
412 The Vandals begin their kingdom in Spain.
420 The kingdom of France begins upon the Lower Rhine, under Pharamond.
426 The Romans reduced to extremities at home, withdraw their troops from Britain, and never return; adviſing the Britons to arm in their own defence, and truſt to their own valour.
446 The Britons now left to themſelves, are greatly haraſſed by the Scots and Picts, upon which they once more make their complaint to the Romans, but receive no aſſiſtance from that quarter.
447 Attila (ſurnamed the Scourge of God) with his Huns ravage the Roman empire.
449 Vortigern, king of the Britons, invites the Saxons into Britain, againſt the Scots and Picts.

524 Boetius, the Roman poet and Platonic philoſopher. *Bellamy. Preſton.*
529 Procopius of Cæſarea, the Roman hiſtorian. *Holcroft.*

Here ends the illuſtrious liſt of ancient, or, as they are ſtyled, claſſic authors, for whom mankind are indebted to Greece and Rome, thoſe two great theatres of human glory; but it will ever be regretted, that a ſmall part only of their writings have come to our hands. This was owing to the barbarous policy of thoſe fierce illiterate pagans, who, in the fifth century, ſubverted the Roman empire, and in which practices they were joined ſoon after by the Saracens, or followers of Mahomet. Conſtantinople alone had eſcaped the ravages of the Barbarians; and to the few literati who ſheltered themſelves within its walls, is chiefly owing the preſervation of thoſe valuable remains of antiquity. To learning, civility, and refinement, ſucceeded worſe than Gothic ignorance—the ſuperſtition and buffoonery of the church of Rome; Europe therefore produces few names worthy of record during the ſpace of a thouſand years; a period which hiſtorians, with great propriety, denominate the dark or Gothic ages.

The invention of printing contributed to the revival of learning in the ſixteenth century, from which memorable æra a race of men have ſprung up in a new ſoil, France, Germany, and Britain; who, if they do not exceed, at leaſt equal the greateſt geniuſes of antiquity. Of theſe our own countrymen have the reputation of the firſt rank, with whoſe names we ſhall finiſh our liſt.

A. C.
735 Bede, a prieſt of Northumberland; hiſtory of the Saxons, Scots, &c.
901 King Alfred; hiſtory, philoſophy, and poetry.
1259 Matthew Paris, monk of St. Alban's; hiſtory of England.
